WARNING

Every effort has been made to ensure that the information contained in this *Guide* is correct. However, it will be clearly understood that this book is intended as a guide only, that the information cannot be *Guaranteed* correct and that final responsibility must (as always) rest with the Shipmaster.

At certain ports, items of navigational routeings and aids have been included as a means of general guidance only. Shipmasters should have in mind that full and due reference MUST ALWAYS be made to corrected charts of the area, to the appropriate Notices to Mariners, and all or any other navigational notices, warnings or amendments issued by proper Authorities and/or navigational aid services.

The sketch maps are for general assistance and must not be used for navigational purposes. In particular, the shapes of buoys should be disregarded since these are indicated by varying symbols which may be consequent upon local usage and without resemblance to internationally applied symbols.

PLANS

All plans, unless otherwise stated, are reproduced by kind permission of the Port Authority.

All rights reserved. No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photo-copying, recording or otherwise without the prior permission of the publishers.

LATE REPORTS: See Volume 2

LATE PLANS: See Volume 2

FOREWORD

Shipmasters, Shipowners or Managers, Port Authorities, Administrators and Agents, are earnestly requested to assist our work in up-dating the Guide *by providing written comment, information, amendments or corrections, plus additional details of any ports or terminals, to the following address:*

SHIPPING GUIDES LIMITED,
SHIPPING GUIDES HOUSE,
75 BELL STREET,
REIGATE,
SURREY,
ENGLAND

All communications will be acknowledged and will be most useful, since it is only by this means that the *Guide* will remain of great value to the user and will be up to date and thoroughly professional in content.

For assistance and guidance in the submission of information, a reprint of the items presently covered by the *Guide* is placed hereunder. Additional items will also be most welcome.

N.B. PLANS, DIAGRAMS, DRAWINGS AND SKETCHES: As you will note, this 1987/88 edition of "Guide to Port Entry" contains over two thousand six hundred port plans and mooring diagrams that have been reproduced from plans and drawings very kindly sent to us by numerous Port Authorities, Agents and shipboard personnel. We hope that the special plan section will prove interesting and useful.

Presently however, the special plan section is to an extent incomplete, since there are many ports and mooring facilities for which we have not yet received the necessary plans for reproduction purposes. We are anxious to secure plans, diagrams, drawings or sketches of ports and facilities not presently shown in our special plan section, and therefore request that Port Authorities and/or Agents at the places concerned be kind enough to pass us this data together with the necessary permission for reproduction. We would also be very grateful if ship's officers calling at ports not already covered in our special plan section, could find it possible to provide us with diagrams or sketches of the facilities which would be suitable for reproduction in our later editions and/or which might be re-drawn as required by our own art department prior to reproduction.

PORT INFORMATION KINDLY REQUESTED

PORT LIMITS: The seaward boundaries of the port within which a vessel is considered to be an "arrived ship" and (subject to Charter-Party Terms) laytime will commence.

DOCUMENTS: The matter of documentation is one of the most important items to be included in the *Guide,* and we would like to be sure that ALL requirements are included in order that Masters will be in a position to prepare all necessary documentation before arrival and thus ensure speedy clearance. (E.g. Number of Crew Lists, Passenger Lists, Customs Documents, Health Documents, Manifests, Bills of Lading, Ship's Papers, Ship's Certificates, etc., etc.)

PILOTAGE: Manner in which vessel approaching the port applies for a Pilot. That is, telegraphic address, telephone number or telex number of Pilot Station, amount of advance notice of ETA required, and VHF channel or frequency to be used when contacting Pilot Boat or Pilot Station. If possible, a description of Pilot Boat; particular light or sound signals to be made by vessels requiring a Pilot; the *exact* area where the Pilot Boat is located or where the Pilot has to be taken on board and also any alternative area in the event of bad weather and when Pilot Boat not on usual station; details of any specific requirements on the part of Pilots with respect to boarding and safety measures; location of anchorage for vessel awaiting a Pilot.

ANCHORAGES: Boundaries, areas and depths of safe anchorages.

RESTRICTIONS: Details of any restrictions imposed upon entry, for example at night time, or in accordance with state of tide and draft restriction.

MAX. SIZE: Maximum permissible length, breadth, and draft for any vessel entering the port or for oil-carriers proceeding to installations outside the main port area, also state of tide governing these dimensions.

HEALTH: Pratique procedure and action necessary to obtain Pratique. Also action necessary in the event of any suspected disease or fever on board. Also when Pratique is automatic, for example vessels entering after calling at another port in the same country.

RADIO: Name and call sign of radio station through which it is best for a vessel to route ETA cables to Agent, Receivers, etc. Availability of telex communication with vessels equipped with telex.

VHF: Fullest possible data concerning VHF Radio communication facilities in operation at the port including advices required from vessels approaching the port, arriving at the port, when manoeuvring within the port area, and when sailing. Details of standard communication procedures and numbers of Channels used in calling, further communication and safety, as may be applicable with respect to Pilotage, Tugs, Port Authority, Quarantine or other craft or shore-stations.

RADAR: Details of existing Port Radar Service, also if the Master may contact the Radar Service by means of ship's radio or by VHF, and the frequency or Channel number to be used. Details of Vessel Traffic Management Service (V.T.S.).

TUGS: Number and capacity of tugs available. Minimum number of tugs required for berthing and unberthing. Position where tugs normally join the vessel. Also whether usual for ship's lines or tug's lines to be used, and if optional, the usual charge for use of tug's lines.

BERTHING: Details of available berths, including length of quay, depth alongside, maximum permissible ship-draft at Low Water (indicating whether Salt or Fresh Water), whether load/discharge is by shore equipment or by ship's own gear, and other relevant data, together with advice of cargoes handled at respective berths.

CRANES: Fullest possible information concerning type, safe working loads and numbers of shore-cranes available at respective berths for cargo handling. Details of heavy-lift cranes ashore or afloat, with lifting capacities. It is also helpful to know at which ports, or berths within a port, that cranes are *not* available and a vessel is required to use her own gear.

BULK CARGO FACILITIES: Details of berths and cargoes handled, length of quay, depth alongside, maximum permissible draft (indicating Salt or Fresh) at Low Water, berth equipment, maximum height of discharging-gear above High Water Level, and maximum Loading/Discharge rates. Cargoes intended to be covered by this heading are, Grain, Ores, Coal, Fertilisers, Sulphurs, Copra, etc.

SPECIALISED CARGO-HANDLING FACILITIES: Details of berths, specially equipped for handling containers or Roll-on/Roll-off traffic; berths handling liquid chemicals or LPG carriers. Please note that it is also useful to know if the port does *not* have any of these facilities.

BRIDGES: Details of any particular arrival times required in order to pass through particular bridges, and maximum clearances, that is height of bridge to waterline.

STEVEDORES: Any particular ETA advices required in order to arrange gangs. Details of main commodities and average load or discharge rates. Normal working hours for general and bulk cargoes, also hours that overtime is possible.

MEDICAL: Whether necessary for Agents to receive advance notice of required medical attention and the amount of notice required; also if hospital and dental facilities are available; also any other relevant medical information such as particular inoculations required, vaccination/fever certificates, etc., and if inoculations and vaccinations can be carried out.

TANKERS: Diameter of load/discharge lines in order that Masters may know whether or not it is necessary to fit reducing pieces before arrival; slop (residue) discharge facilities, capacities, and maximum receiving rate; S.G., A.P.I. and temperatures of local types of oil (loading ports only). Number of tanker berths, depth alongside and maximum permitted drafts at these berths, average load/discharge rates. Prevailing wind on berth. If special moorings required. Are shore gangways available? Are facilities available to combat oil spills, if so what equipment available? Availability of shore steam. Ship to ship transfer facilities.

DENSITY: (SALINITY): Average salinity of water in the port.

FRESH WATER: Availability, method of delivery, rate of delivery and approximate cost per ton.

FUEL: Grades (viscosities) available, amount of advance notice required, and method of delivery. If bunkers supplied by vessel/barge, minimum/maximum quantity to be ordered.

FIRE PRECAUTIONS: Any specific precautions particularly respecting tankers (that is, other than usual non-smoking precautions, etc.).

CONSULS: Names of countries having Consuls at the port.

REPAIRS: Whether all types of deck and engine repairs are possible, and if not then what types of repairs are able to be carried out.

DRY DOCKS: Dimensions of largest dry dock and also the number of smaller docks.

SURVEYORS:

(1) Availability of Cargo Inspectors, such as Saybolt, Caleb Brett, Superintendents, etc.
(2) Availability of Surveyors, such as Lloyd's Register, American Bureau, Bureau Veritas, etc., also Salvage Association or U.S. Salvage.

GANGWAY/DECK WATCHMEN: Whether service of watchmen necessary or to be recommended and if so, the cost of watchmen.

HATCHES: Whether opening/closing is normally carried out by crew or stevedores.

CUSTOMS ALLOWANCES: (Tobacco/Wine, Spirits). Quantity permitted for each crew member to be held out of Bond.

CARGO GEAR: Whether load/discharge effected by shore gear or by ship's gear, and details of any special cargo equipment, e.g. heavy lift cranes, etc.

REPATRIATION: If facilities exist for effecting crew changes and arranging any necessary repatriation.

AIRPORT: Distance from airport and whether airport is served by regular airlines; otherwise number of flights per day or week and destinations.

TIME: Local time in relation to GMT and dates/details of any alterations made to clocks during the year (summertime).

HOLIDAYS: Dates and details of official and local holidays and advice whether or not cargo work can be arranged on those days.

POLICE/AMBULANCE/FIRE: Telephone numbers of these three services, that is, the nearest departments.

EMERGENCY CO-ORDINATION CENTRE: Nearest Emergency Co-ordination Centre and details of telephone and telex numbers (e.g. U.S. Coast Guard, U.K. Coast Guard, S.A.R. etc.). This information is necessary because local Port Agents may not be suited to emergency matters and may not be contactable.

TELEPHONES: Whether arrangements exist for placing telephones on board and if so the approximate cost for this connection.

SERVICES: Details of any special services available, e.g. tank-cleaning equipment, facilities for discharge of tank-washings, compass adjusting, radio and radar repairs, supply of charts, nautical publications, sounding paper, course recorder paper, availability of Notice to Mariners, availability of safety equipment, possibility of extension of certificates.

BANKS: Names, addresses and telex numbers of any banks in the area.

STORING:
(1) Can vessel be stored by barge or truck?
(2) Regulations concerning barge storing, such as, can vessel store from barges during loading or discharging? If not, what are the regulations concerning storing?
(3) Can trucks proceed alongside at the berth? If not, what is the approximate distance the truck is to remain from the ship?
(4) Can fork lift trucks be used on the jetty to handle stores?
(5) Customs Regulations in force regarding storing.
(6) Can local Riggers be employed to assist with storing?

SHIP SUPPLY SERVICE: Name, address, telephone no., telex no., etc., of ship supply service operators who are able to supply craft or helicopters for transfer of stores, crew and sick personnel. Also range, capacity and rendezvous points of supply craft and helicopters.

SHORE LEAVE: Whether crew members are allowed ashore or not.

IDENTIFICATION CARDS: Whether shore passes issued or whether seaman's book is sufficient.

REGULATIONS: Any particular or unusual regulations for the port.

DELAYS: What delays in berthing, loading, discharging or bunkering can normally be expected.

DEVELOPMENTS: Details of expected draft increases, new installations, berths, etc., expected in the foreseeable future together with expected dates of completion.

SHIPMASTER'S/SHIP'S OFFICERS REPORTS: Information is earnestly sought from Shipmasters and other serving officers giving corrections, amendments and additions to existing information, together with their professional advices or comment upon recommended or required procedures for entering or sailing port, including advice of their experience of the port either generally or specifically. Useful items of experience and suggestions of other Shipmasters are of great value, and will be printed under a special heading.

GENERAL: Any other information that you feel may be of value to the Shipmaster that is not already covered by the previous questions.

AUTHORITY: Name, address, and other details of local Port Authority.

AGENT: At the foot of many of the ports in this *Guide* we have an additional heading entitled "Agent". The purpose of including this item has been to provide Shipowners, Managers, and Operators with prompt access to the name, address, telephone, telex numbers, and cable addresses, etc., of an experienced Agent at the port concerned.

Of course, it will be understood that the Agents named in the *Guide* are not necessarily the only Agent at that port; however, demands on available space preclude the inclusion of other reputable Agency companies and we trust that other such companies will understand and appreciate the position. We have been obliged therefore to include details of one Agency company only, but by so doing we hope to have provided a further service to the user of the *Guide*.

ROBERT PEDLOW, *Editor*,
Shipping Guides Ltd.

PUBLISHER'S NOTE

"GUIDE TO PORT ENTRY" – 1987/88 EDITION

With this 1987/88 edition of "Guide to Port Entry" we again wish to express our very sincere thanks to all those serving seafarers, Port Authorities, Agents, Pilots and others who have so kindly updated our existing data and have also passed us much additional information. The results of their assistance and guidance are contained within these two volumes and we hope that by this presentation they will consider their efforts to have been thoroughly worthwhile.

Regular users of "Guide to Port Entry" will note that we have reverted to the style of production first established with our 1977 edition, that is, the inclusion of maps and diagrams together with information within the same volume. This form of production has enabled us to divide the overall content approximately equally between the two volumes thereby minimising the difficulties associated with the binding of large books. The volumes are alphabetically split between countries A–L and M–Z and have the relevant index immediately following upon information and plans respectively.

In producing these volumes we have again made every possible effort to ensure that the information contained within them is up-to-date and accurate and should there be any instance where this is found not to be the case, we trust that those concerned will advise us immediately, having in mind that all advice and assistance given is to the benefit of serving Shipmasters of every nationality.

In the interests of continuing professionalism and the need to maintain an on-going relevance to current shipping requirements we have recently engaged another ex-seafarer to join our editorial staff which is now composed entirely of ex-seafarers. A Master Mariner, Charles Watson is fresh from active service and is thereby able to assist in maintaining the practicality and relevance of our work.

We should take this opportunity to mention that the new edition of "The Ships Atlas" is now available and may be obtained either from marine booksellers throughout the world or direct from ourselves. In addition, we would remind Operators, Masters, Brokers and Charterers of tanker tonnage that our "Guide to Tanker Ports", which is a loose-leaf and regularly up-dated publication and which is already aboard over one thousand tankers belonging to the world's major tanker operators, may also be obtained through the same suppliers.

Our very best wishes go to all users of these volumes. We are confident that they will prove to be extremely useful and of real value.

Reigate 1987

COLIN PIELOW

Albania

DURRES: 41.19 N. 19.28 E.

DOCUMENTS: Completed on arrival.
PILOTAGE: Compulsory. Arriving vessels should anchor and await Pilot in position Lat. 41° 15′ 08″ N., Long. 19° 26′ E. Pilot available in daylight hours only.
RESTRICTIONS: Vessels arriving from ports in Yugoslavia, Italy and Greece must give Notice of Arrival 48 hours in advance. Vessels arriving from ports in other countries must give notice of arrival 5 days in advance. Notice of Arrival is sent by radio to "Adetare Durres" with following information: Vessel's name and flag; name of last port; draft on arrival; cargo description and distribution; particulars of vessel's tonnage and length.

Entrance is through buoyed channel, depth 27 ft.
MAX. SIZE: Controlled by berth depth. Max. draft 28 ft. 6 in.

Also see "Shipmaster's Report".
HEALTH: Free Pratique given when Pilot boards provided vessel's Health Declaration is satisfactory.
RADIO: Vessels should maintain regular contact with Durres Radio up until time of entry into Albanian territorial waters, which extend 10 miles off shore.
TUGS: Port Authority supplies tugs for mooring and unmooring on Pilot's recommendations.
BERTHING: General cargo wharf No. 5, depth 26 ft. All other berths, depth 21 ft.
MEDICAL: Doctor and hospital facilities available.
TANKERS: One oil berth, at the East Mole, depth 23 ft. Tank cleaning facilities available.
FRESH WATER: Available ex-wharf at all berths.
FUEL: Limited quantity available for emergency only.
OPENING/CLOSING HATCHES: Carried out by stevedores.
IDENTIFICATION CARDS: Shore passes issued by local police.
REPAIRS: State shipyard can effect limited hull and engine repairs.
AIRPORT: Rinas Airport, distance 35 km.
TIME: GMT plus 1 hour.
HOLIDAYS: New Year (January 1st and 2nd); Proclamation of the Republic (January 11th); Labour Day (May 1st); October Revolution (November 7th); Independence Day (November 28th); Liberation Day (November 29th). No work performed on Sundays and holidays.
SHORE LEAVE: Crew may use seamen's club in port area.

SHIPMASTER'S REPORT: 1979
Navigation: Incoming vessels are to anchor in position Lat. 41° 15′ N., Long. 19° 27′ E. (2.5 miles from breakwater) and await orders. The Danger Area shown on B.A. Chart No. 2701 is reportedly non-existent.
Communications: The local radio station call sign ZAD is to be contacted on anchoring. The radio transmitter is sealed on berthing. The Agents have a telex machine which works intermittently. Telephone calls to Northern Europe possible but subject to delay.
Pilot: Equipped with VHF Channel 16, boards at anchorage.
Tugs: Two medium size tugs available for docking. One salvage tug stationed in port.
Draft: Pilots advised 27 ft. 6 in. max. draft alongside and in approaches.
Cargo Facilities: Loaded 14,000 tonnes of cement in 50 kg. bags from rail and road trucks. 3 shift system. Used both shore cranes and ships derricks. As cargo comes from cement factory in interior by rail, presentation is very intermittent, and vessel rarely informed of working prospects more than a few hours in advance. Sundays are normally holidays. Loading rate averaged 1,000 tons approx. per working day but ranged from 200 to 1,700 tons depending on labour and cargo availability.
Formalities: ETA's required 5 and 2 days in advance, also include length, tonnage, flag, state of health, etc.

Documents required: 6 crew lists, 2 lists of foreign currency, 2 personal effects lists, 1 health declaration, 3 stores lists. Bond is sealed but Customs will open on request.
Repair Facilities: Small shipyard for minor repairs available.
Surveys: Agents advise that Government Surveyor available for radio surveys, etc. No Classification Society Surveyor available.
Cash: Lek is currency – 1 Lek = approx. 14 US cents (7 Leks = $1). Foreign currency may be exchanged (approx. 5 days notice).
Provisions: Government ship chandler. Fresh vegetables good, fish available at moderate prices, meat not recommended.
Laundry: Available. Reasonable price, average standard.
Crew: Repatriation is reportedly possible, however it takes 3 days to get an exit visa.

Shore leave is permitted to seaman's club only until 2300 hrs. A special pass has to be obtained to visit the town (1500 to 1900 hrs. only). Tours to Tirana can be arranged by car, if one day's notice is given. Casual dress (jeans) also long hair prohibited outside dock gates.

Gangway guards in attendance throughout stay.

Considerable difficulty experienced in arranging tour for Chinese ratings.
Port Facilities: Berthing facilities for 10 ocean-going vessels. Sufficient 5 ton shore cranes available. Railway tracks to most quays. Main imports coal/coke. Exports, low grade chrome ore. Priority for Albanian vessels. One floating crane. Lack of mechanisation reduces work rate. No fork lifts or proper palletisation observed.
Agency: Adtare (Government Agency) in port area. The Agents visit vessel twice daily and speak adequate English and are reasonably helpful.
Fresh Water: Available from barge at $1.50 per ton approx.
Fuel Oil: Prices January 1st, 1979: Heavy oil $98 per ton and diesel $141 per ton delivered by road tankers (limited amounts).
Local Regulations: Permission to immobilise engines must be obtained. Garbage is collected (compulsorily) daily in plastic sacks. Permission required prior to de-ballasting.
Watchmen: Not required as gangway guards provided.
AUTHORITY: Drejtorija e Portit Durres.

SARANDE: 39.52 N. 20.02 E.

DOCUMENTS, RESTRICTIONS: Refer to "Durres".
PILOTAGE: Compulsory. On arrival vessels should anchor and wait for Pilot in position Lat. 39° 51′ 50″ N., Long. 20° 10′ 10″ E. Pilot available only during daylight hours.
HEALTH: Free Pratique given when Pilot boards provided vessel's Health Declaration is satisfactory.
RADIO: Durres Radio.
BERTHING: Larger vessels work cargo at anchor only. Ship's gear used.
FRESH WATER: Not available.
FUEL: Not available.
GENERAL: See "Durres" for General Information.
AUTHORITY: See "Durres".

SHENGJIN: 41.49 N. 19.35 E.

DOCUMENTS, RESTRICTIONS: Refer to "Durres".
PILOTAGE: Compulsory. On arrival vessels should anchor and await Pilot in position Lat. 41° 48′ N., Long. 19° 35′ E. Pilot available only during daylight hours.
MAX. SIZE: Draft 18 ft.
HEALTH: Free Pratique given when Pilot boards provided vessel's Health Declaration is satisfactory.
RADIO: Durres Radio.
TUGS: One small tug available.
BERTHING: Two piers in harbour, one of which is used for larger vessels.
FRESH WATER: Limited supply by barge.
FUEL: Not available.
GENERAL: See "Durres" for general information.
AUTHORITY: See "Durres".

NOTES

Please also advise Shipping Guides Ltd.

Algeria

ALGIERS (El Djazair): 36.50 N. 03.00 E. (See Plan)

DOCUMENTS:

1 Cargo Manifest required for all cargo including that in transit for non-Algerian ports.
8 Crew Lists.
2 Crew and Passenger Personal Effects Lists.
1 Stores List, including Bonded Stores.
1 Currency Manifest.
2 Lists of arms, ammunitions or Military Stores (or "Nil" Declaration).
1 Private Bond and Beer List.
1 Declaration of Health.
1 Vaccination List.

Immigration officials may require to inspect all discharge books or passports. Customs regulations are strictly interpreted. Care should be taken to ensure that all ships' papers are perfectly in order. Vessels arriving with incomplete or inaccurate documentation have been subjected to severe delays and penalties.

PILOTAGE: Compulsory. Available day or night. Pilot boards vessel about 0.5 miles from end of Wattier Jetty. Pilot boat is black with insignia of 2 white anchors.

ANCHORAGE: Algiers Bay is crescent-shaped with Cape Caxine on the West and Cape Matifon on the East. Depth 25 m. – 30 m. Bottom is good holding ground, and vessels are sheltered from West and Northwest.

RESTRICTIONS: None if Port Authority is advised by Radio Algiers or by Agent.

MAX. SIZE: Vessels of 25,000 tons proceed normally. Length not restricted; maximum draft 38 ft.

HEALTH: Health Officer boards vessel on arrival.

RADIO: Algiers Radio, operates continuously.

VHF: Harbour Master on Channels 16 and 12.

TUGS: Three available of 600 to 800 h.p. and also one of 1,000 h.p. for towing in harbour; two larger available for open sea, 1,500-1,300 h.p.

BERTHING: 54 berths available, total length of 9,519 m. plus 2 berths of 250 m. each for tankers. All general cargo berths have cranes with lift of 3-6 tons.

STEVEDORES: Available.

MEDICAL: All assistance available.

TANKERS: Quay de Lorient: 2 berths, with depth alongside 11.50 m. Deballasting facilities available.

"LPG vessels" – See "Shipmaster's Report".

DENSITY: Salt water.

FRESH WATER: Delivered by pipe-line to quay, or by water barges.

FUEL: Deliveries by pipe-line on most quays or by barge. Large vessels are supplied by barge in the roads.

FIRE PRECAUTIONS: A special notice with instructions is delivered to tankers. Fire station established within port area.

GANGWAY/DECK WATCHMEN: Service by three experienced companies arranged by Agent.

OPENING/CLOSING HATCHES: Normally opened by crew, or by port workers.

IDENTIFICATION CARDS: Not required.

CONSULS: All principal countries are represented in Algeria.

REPAIRS: All repairs available.

DRY DOCKS: Two: one of 136 m. long, 18.50 m. width, and 8 m. depth. The second of 74.30 m. long, 15.50 m. width and 5 m. depth.

REPATRIATION: Frequent departures for Europe by ship or plane.

AIRPORT: Dar-el-Beida at a distance of 20 km. from Algiers; several flights daily.

TIME: GMT (Winter). GMT plus 1 hour (May-October).

HOLIDAYS: 1st January; 5th July; 1st November; Labour Day; Proclamation Day; plus religious holidays – Aid Seghir; Aid Kebir; New Year's Day (Egira); Achoura, and Mouloud. Friday is now considered as the weekly rest day in Algeria.

POLICE/AMBULANCE/FIRE: Police 63.01.61; Fire Brigade Service 63.71.22.

SHORE LEAVE: Allowed.

DEVELOPMENTS: The port is to be extended to the East to provide 700 m. of container berths with a depth of 19 m. Work is to commence in 1985.

SHIPMASTER'S REPORT: January 1981.

Approaches: BA. Chart Nos. 855 and 2555.

Prominent land features clearly visible both visually and by radar. At night-time, anchored or underway, vessels are very difficult to identify due to background of shore lights.

No. 2 buoy marking Western extremity of prohibited anchorage area (Lat. 36° 49.3′ N., Long. 03° 07.2′ E.) unlit at time of visit.

Anchorage: Anchorage prohibited East of line drawn from No. 2 buoy to East of beacon on coastline at 03° 10′ E. Reasonable anchorage obtained two miles N.E. of Qk.Fl. light at end of Northern breakwater in approximately 40 fathoms. No separate tanker or small vessel anchorages although small vessels generally appeared to anchor either between main breakwaters immediately East of Jettee de L'Est or close offshore with little regard to Eastern harbour entrance. Anchorage completely exposed to prevailing winds from N.E. and swells that accompany wind.

Wind: Prevailing wind is from North to N.E. and is strongest during Winter months. Swell builds up quickly and causes harbour to be virtually untenable with many ships breaking loose from berths. Authorities close port and all ships leave berths generally when weather conditions have started to abate. Forecasts difficult to obtain.

VHF: Call "Algiers Harbourmaster" Channel 16, working on Channel 12. Range limited to about six miles. On arrival, vessel's information required and details of cargo to be loaded or discharged. French speaking is an advantage in which case call "Capitainerie du Port". Very little warning of berthing instructions given. Agents can, apparently, be contacted through Harbour Master.

Berthing: Berthing and unberthing only during the hours of daylight unless in extreme emergency.

Pilot: Upon receipt of berthing instructions, vessel proceeds to a position approximately half mile East of Southern breakwater entrance. Pilot boards by pilot ladder, side appropriate to weather conditions but generally on port side, from pilot launch. Pilot ladder about 1 m. above water.

Pilot also boards by launch when unberthing.

Tugs: Two used for berthing and three for unberthing (bad weather). Two good ship's ropes to each tug. For berthing, forward tug taken on port bow and aft tug on starboard quarter, similar arrangement for unberthing. These positions to enable vessel to swing short round to port immediately after entering breakwater.

Berth: Berth 37: Port side alongside "Brise lames Est" jetty in Area 9. Depth alongside 10.0 m. forward and 10.5 m. aft. Little or no tidal effect. Straight jetty with protruding dolphins of concrete construction and fendered by tyres mounted on timber and suspended from quayside by chains.

Berth affected by swell from North/N.E. and vessels can surge up and down the quayside alarmingly. It is essential to have out as many moorings as possible and in particular good stern lines and forward back-springs. On this visit, five moorings parted and eventually necessary to have mooring winches manned continuously to counteract vessel's surging. This vessel (31,296 cu.m.) was largest gas vessel to have entered Algiers.

Port gangway initially used but later replaced by "Board of Trade" gangway. It is advisable not to rig gangway before berthing due to quayside obstructions.

Density: Density alongside 1026.

Cargo: Butane discharge. Receiver's Sonatrach cannot accept cargo below +5°C, therefore heater required. Booster pump not required after initial problems resolved. Shore tank capacity is small and adjacent to gas-bottling/distribution plant. At first, Receivers were asking for maximum rate of discharge and then stopping cargo every two/three hours. After contacting Commercial Manager of Sonatrach, arrangement was made whereby shore plant emptied tanks before resumption of discharge and then discharge maintained at slow rate for several hours. Cargo discharged = 4,000 tonnes in five days.

Contacts: Mr. Larbi-Cherif – Sonatrach Manager LPG Operations, Marketing Division – Gas Exports, 46 Boulevard Mohamed V, Algiers. *Tel:* 61-12-24.

This person is responsible for all gas import/export contracts, works closely with Trammogas.

Mr. Brahim Ouerdane – Sonatrach Commercial Manager, Commercial Division, 46 Boulevard Mohamed V, Algiers. *Tel:* 61-12-24.

Commercial Manager who works closely with Mr. Larbi-Cherif.

Mr. Dadoux (Dardoo) – Manager for gas movements inside Algeria.

Authorities: Algerian requirements are now well established and particularly applicable to this port. All items contained within the Bond are carefully checked and counted and any single discrepancy can result in large fine. All money (all currencies) collected in, declared on Currency Declaration and locked in safe. Customs did not rummage on this visit because all paper-work exactly to their requirements.

No cargo documentation was in the vessel's possession for berthing. Customs satisfied with Master's Declaration that cargo papers were in transit between U.K. and Algeria.

Agent: Compagnie Nationale Algerienne de Navigation (C.N.A.N.). Cable Address: CNAN, Algiers. Tel: 62–64–00 and 62–88–00. Representative: Mr. A. Cpaoui. Home No. 64–34–24.

Chandler: Provided excellent quality fresh provisions at short notice and at reasonable price. Method of payment is by Cash Requisition through Agent.

Fresh Water: Good quality and available on quayside. Shore meter inoperative.

Bunkers: Available by barge.

General: Repatriation can be easily arranged through Agents. Airport about 10 km. away with five daily flights to Paris and one to London. Disembarking personnel hand in Discharge Book plus two photographs to Agent a few hours before disembarking to clear Immigration formalities.

Reasonable communication links with the U.K. and people most helpful.

Rate of exchange (Jan. 1981) £1.00 = 9.3082 Dinars.

Shore leave unrestricted – personnel to carry Identity Cards.

AUTHORITY: Capitainerie du Port.

ANNABA: 36.58 N. 07.47 E.

DOCUMENTS: Refer to "Algiers".
PILOTAGE: Compulsory when entering, leaving or shifting in harbour, vessels arriving during night and wishing to enter the basin must anchor at 2 nautical miles to East of Southern Lighthouse at main entrance (red occulting light) on steady sand bottom of 65 ft. to 100 ft. depth.
ANCHORAGE: Quite good anchorage well protected against West or North winds at about 3 nautical miles to North of harbour with depths of 40 ft. to 60 ft. on rocky and sandy steady bottom.
MAX. SIZE: Length 656 ft. draft 33 ft., breadth no restriction. Tankers Max. draft 39 ft.
RADIO: Cable Agents giving ETA or to Harbour Master by cable or radio telephone via Annaba Radio Station which is permanently watching on 2182 kHz.
VHF: Harbour Master's Office can be contacted on Channels 16 and 14.
TUGS: Two tugs available each of 700 h.p. both fitted with radio telephone and two fire appliances.
BERTHING: Harbour is open to merchant navigation every day from 0500 hrs. to 2200 hrs. In case of necessity vessel will be handled at any time.

21 general cargo berths with depths 6.2 m. to 10.0 m.

BRIDGES: No bridges or power cables crossing port area.
CRANES: 18 electric or diesel shore cranes with lifting capacities from 3 to 6 tons; 1 electric shore sheers of 110 tons and 1 diesel-electric sheers hulk of 80 tons.
STEVEDORES: Available. Working hours (whole days), normal hours: 0700 – 1020/1400 – 1720. Shifts: 0630 – 1230/1300 – 1900/2000 – 0200. Working night and holidays, overtime 50%.
TANKERS: Two tanker berths in outer port, entrance 43 ft. The first is at Lyon's Jetty consists of two dolphins 180 ft. apart, depth 33 ft. Second at South Jetty consists of two dolphins 180 ft. apart, depth 43 ft. Pipe-lines of 8 in. and 10 in. supply the oil installations.
FRESH WATER: Plentiful supply of water alongside wharves at a rate of 8 to 14 t.p.h. By barge at the tanker berths.
FUEL: Bunkering available. No coal.
GANGWAY/DECK WATCHMEN: Performed by ship's crew.
OPENING/CLOSING HATCHES: Performed by stevedores.
IDENTIFICATION CARDS: Required.
SHORE LEAVE: Allowed.
REPAIRS: One graving dock fitted with two rolling cradles on slipways, lifting capacity 100 and 200 tons. Divers and frogmen available.
GENERAL: Prevailing winds generally of N.W. and West. Storms from these directions are blocked by mountains which lie behind harbour. Harbour is only exposed to storms from East and N.E. which are very rare. There is practically no swell or surf into harbour. Tidal variation about 1 ft. and water level ranges about 31 in. dependent on season. Low waters from February to June and high waters from June to February.

SHIPMASTER'S REPORT: September 1982.
Position: 36° 54′ N., 07° 46′ E.
Name: Formally named Bone, in most of the charts is mentioned as Bone.
Radio: Annaba Radio keeps watch also on VHF Channel 16 and working Channels 24, 25, 26, 27.
Gangway/Deck Watchmen: Shore watchman is compulsory by Port Authorities.
Opening/Closing Hatches: Performed by crew.
Identification Cards: Shore passes are issued by Immigration Office and shore leave is allowed on presentation of the issued pass and Passport or Seaman's Book.
Restrictions at Port: As soon as vessel anchors in Annaba Roads, Coast Guard comes on board and collects all documents and seals all Bonded Stores. Attention is to be paid on the correct counting of Bonded Stores, such as cigarettes, spirits, etc. Beer is not sealed and crew allowed 200 cigarettes plus one bottle of spirits each.

(a) It is strictly forbidden for ships to use their whistles or sirens in the harbour, exceptions when vessel being under way for preventing collisions. Strictly forbidden to call Pilot by means of whistle between 2000 hrs. and 0600 hrs.
(b) All ships must keep on board sufficient crew in order to carry out all ship's handling, especially shiftings of vessel. Normally Master is informed by Port Authority and signs notice, but many times happened to inform vessel at any time to shift immediately.
(c) It is strictly forbidden to carry out deballasting operations in the harbour waters, except after a systematic control has been made by the Master, the Dock Master or a Surveyor appointed by them, to prove that ballast water is clean.
(d) Any repairs being made to the hull of the vessel, scraping, painting, painting of Load Line marks must be authorised by the Captaincy.
(e) Trials of the engines can only be done with an authorisation from Port Captain.

Maximum Draft Allowed: 31 ft. for the berth of minerals – "Iron and Coke".

AUTHORITY: Directeur du Port.

ARZEW (including Arzew El Djedid): 35.50 N. 00.08 W.

(See Plan)

LOCATION: The Port of Arzew extends between Lat. 35° 50′ N. and 35° 52′ N. and Long. 0° 08′ W. and 0° 17′ W., at the N.W. end of the Gulf of Arzew.

The Port of Arzew El Djedid is located in position Lat. 35° 48′ 06″ N., Long. 00° 12′ 30″ W.

DOCUMENTS:

3 copies – Manifest
4 copies – Crew List
2 copies – Vaccination List
2 copies – Arms & Ammunition List

All Log Books, Certificates and Registers will be inspected.

Sailing: The sailing declaration must be made 2 hours at least prior to sailing time.
APPROACHES: *Landfall:* By day recognition of Arzew is made easy by the high ground of Cape Ferrat. On entering the Gulf the lighthouse of the Island of Arzew is seen and in clear weather it is possible to distinguish to the East, the town of Mostaganem. The Arzew mountain (225 m.) dominates the Bay of Arzew and the port.

The storage tanks for hydrocarbons are visible from a long way offshore. At night, vessels see firstly the oil flares of the different units in the industrial zone. These flares are visible in good weather for a distance of 25 miles.

LNG Flare "4Z"	Lat. 35° 50′ 31″ N.	Long. 0° 18′ 42″ W.
Refinery Flare	Lat. 35° 49′ 40″ N.	Long. 0° 19′ 15″ W.
L.P.G. Flare	Lat. 35° 49′ 58″ N.	Long. 0° 18′ 12″ W.
LNG Flare "1Z"	Lat. 35° 49′ 07″ N.	Long. 0° 16′ 20″ W.
	Lat. 35° 49′ 04″ N.	Long. 0° 16′ 26″ W.
LNG Flare "2Z"	Lat. 35° 48′ 32″ N.	Long. 0° 15′ 23″ W.
	Lat. 35° 48′ 47″ N.	Long. 0° 15′ 21″ W.

Port Lights: Lighthouse on Arzew Island: Lat. 35° 52′ 34″ N., Long. 0° 17′ 20″ W.
Buoys: Junction Buoy (vertical red and white stripes), white light, position: Lat. 35° 50′ 29″ N., Long. 0° 16′ 03″ W.

Madrague Buoy, East cardinal mark ("A" System), white light, position: Lat. 35° 51′ 40″ N., Long. 0° 16′ 20″ W.

Sea Water Intake Buoy (CEAZ complex): North cardinal mark ("A" System), white light, position: Lat. 35° 50′ 06″ N., Long. 0° 16′ 55″ W.

Working Buoy on Offshore Jetty: Black (starboard characteristics) with fixed green light, position: Lat. 35° 50′ 51″ N., Long. 0° 17′ 16″ W.

Lights of the Port of Arzew: Breakwater: Green light, position: Lat. 35° 51′ 06″ N., Long. 0° 17′ 04″ W.

Head of Offshore Jetty: White light, position: Lat. 35° 50′ 27″ N., Long. 0° 17′ 22″ W.

Secondary Jetty: Red light, flash every 3 secs., position: Lat. 35° 50′ 59″ N., Long. 0° 17′ 45″ W.

South Jetty: Red light, position: Lat. 35° 51′ 17″ N., Long. 0° 17′ 55″ W.

Mole IV: Fixed green light (S.W.), position: Lat. 35° 51′ 28″ N., Long. 0° 17′ 44″ W.

Mole III: Fixed red light (S.E.), position: Lat. 35° 51′ 32″ N., Long. 0° 17′ 57″ W.

Lights of the Port of Arzew El Djedid:
West Jetty: Green light, position: Lat. 35° 49′ 26″ N., Long. 0° 15′ 22″ W.

East Jetty: Red light, position: Lat. 35° 49′ 05″ N., Long. 0° 14′ 32″ W.

ANCHORAGE: Vessels requiring to anchor on arrival normally use services of the Pilot. Anchorage fees are charged whether the Pilot is used or not. Sea bottom of rocks, sand and mud.

The operations in the roads and the safeguard of accesses have brought about the reserved zones, forbidden areas, waiting and anchoring zones.

The position of these zones is shown on the chart.

a) The forbidden zone corresponds to the S.W. sector included between the parallel of Arzew Island (Lat. 35° 52′ 28″ N.) and a straight line running at 45° from the land and passing through the following geographical point: Lat. 35° 50′ 27″ N., Long. 0° 15′ 55″ W.

b) The waiting zone corresponds to the N.E. sector included between the North of the breakwater of the New Port and a straight line running at 45° to the West from the land, passing through the above geographical point.

Vessels which have to anchor on arrival can request the services of a Pilot.

The bottom is firm, constituted by sand, pebbles, and muddy shale.

Use of Anchors for Manoeuvring: This is forbidden in the port except under conditions of force majeure. It is strictly prohibited in the passages and fairways, and in the vicinity of the pipelines.

RESTRICTIONS: Vessels may enter or sail by day or night, weather conditions permitting. Tankers berthing on the sea-line berths may be restricted by bad weather, heavy wind or swell.

Vessels sailing have priority over vessels entering.

Port Closure: In case of accident or unfavourable weather conditions the port may be closed for entry, for leaving or in both directions at the same time. Notice of closure is broadcast on VHF Channel 16.

In general, the port of Arzew may be closed for entry if:

1. The swell is greater than 2 m.
2. Winds are force 6 (Beaufort) or greater.

The port of Arzew El Djedid may be closed for entry if:

1. The swell is greater than 2 m.
2. Winds are force 5 (Beaufort) or greater.

State of Vessel: Prior to entry into port, Masters must sign a declaration in which they state that the navigability of their vessel is perfect and that they are in possession of all certificates and documents required.

Vessels which are required to operate at the sea-line must arrange their loading derricks prior to the manoeuvre. The strength of these loading derricks must be equal to or greater than 5 tonnes, their safety certificate is required on arrival.

MAX. SIZE: See "Berths".

PILOTAGE: Pilotage is compulsory. The limit of the pilotage zone out to sea is the parallel of the lighthouse on Arzew Island.

Pilots may ensure that anchoring is carried out in the roads for large vessels. The Pilot embarks in the waiting zone. The pilot ladder must be rigged on the lee side at a height of 1 m. above the water. For large vessels in ballast, the pilot ladder must give access to an accomodation ladder rigged at a height of 5 m. (approx.) above the water.

Communications from tankers will be via the international radio station at St. Lys, which is in telex communication with the Arzew Terminal. Contact with the Arzew Terminal can be made on VHF Channel 16. Vessel will then be informed by the control room of the frequency to use, either Channel 12 or 14 for mooring purposes.

HEALTH: Free Pratique is not granted by radio. For tankers berthing at the sea line, Pratique may be granted by a visiting sanitary officer or by the Pilot when he boards, providing the health declaration is satisfactory. For vessels berthing inside the harbour, the Health Officer will board on arrival.

Vessels calling at Arzew must give their ETA 48 and 24 hours prior to arrival, naming the ports called within the last 10 days.

Crew must be vaccinated against cholera. Vaccination books must be valid and a check is made before free pratique is granted.

RADIO: Oran Radio and Algiers Radio both listen on international frequencies. Tankers normally use St. Lys Radio.

Notice of Arrival: Vessels destined for Arzew must send to the Port Captaincy a message at least 48 hours in advance through a coastal station stating, date and time in GMT of their arrival in the port roads.

The notice of arrival is to be confirmed 12 hours prior to arrival of the vessel in the port roads.

VHF: *Port Radio Service:*

Call-up Frequency:

156.8 MHz., Channel 16, listening-out frequency.

Working Frequencies:

156.7 MHz., Channel 14, Arzew Port Captaincy.
156.5 MHz., Channel 12, Arzew El Djedid Captaincy.
156.65 MHz., Channel 13, Pilotage Station.
156.6 MHz. Channel 10, Tug Station.
156.55 MHz., Channel 11, Sea-Line.
156.7 MHz., Channel 14, Tug Station.

Vessels arriving at Arzew, and waiting in the roads, must listen out continuously on Channel 16.

Vessels with their Pilot aboard must listen out on Channels 14 (Arzew), 12 (Arzew El Djedid), 11 (sea-line):

a) From the time the Pilot comes on board until arrival at the quay.
b) From the departure from the quay until the Pilot disembarks.
c) During the whole time the vessel is at the sea-line.

TUGS: Tug service is compulsory for vessels of more than 1,500 g.r.t. 8 tugs are operational with power ranging from 2,000 h.p. to 3,500 h.p.

It is compulsory for tankers of up to or larger than 50,000 metric tonnes (d.w.t.) to use at least 3 tugs on entry.

The tow lines, supplied by the ship, must be in perfect condition and appropriate for the manoeuvre.

The route programme is drawn up by the Pilot, in agreement with the ship's Master.

BERTHS:

Arzew:

Mole III: 258 m. long and 100 m. wide, with 5 berths for various cargoes with depths of water varying from 5 m. to 8 m.

Specialist port.

Berth (Name/No.)	*Depth (m.)*	*Max. d.w.t.*	*Products Handled*	*Loading Arms (Diameter)*
Methane Terminal:				
North Berth	9.80	40,000 cu.m.	methane	12 in.
			methanol	8 in.
South Berth	9.80	40,000 cu.m.	methane	12 in.
Jetee Secondaire:				
"S1" (Inner West)	10.0	30,000	ammonia	3×10 in.
		15,000 cu.m.	refined products	3×8 in.
			LPG	3×12 in.
			residue and deballasting facilities	
"S2" (Outer East)	11.0	60,000	refined products	3×12 in.
		25,000 cu.m.	LPG	3×12 in.
			bitumen	3×12 in.
			deballasting facilities	
Jetty Large:				
P1 (Middle Berth)	13.50	50,000	crude, gas oil, fuel oil, condensate	12 in.
P2 (Seaward/Outer Berth)	15.50	100,000	crude, gas oil, fuel oil,	12 in.
P0 (Inner Berth)	10.0	30,000	LPG, fuel oil, gas oil	8 in.
Sea-line	26.0	100,000	crude, condensate	28 in. hoses

Arzew El Djedid:

Berth	*Depth (m.)*	*Max. Size*	*Products Handled*
M1	13.5	125,000 to 200,000 cu.m.	LNG
M2, M3 (2 berths)	13.5	125,000 to 200,000 cu.m.	LNG
M4, M5 (2 berths)	13.5	125,000 cu.m.	LNG
M6	13.5	125,000 to 200,000 cu.m.	LNG
B1	23.5	25,000 to 100,000 cu.m.	crude, condensate
B2	23.5	50,000 to 150,000 tons	crude, condensate
B3	26.5	100,000 to 250,000 tons	crude, condensate
D1	13.0	35,000 to 70,000 cu.m.	LPG (See "Shipmaster's Report" dated March 1984)

Berths M2/M3 and M4/M5 are operational, a hydraulic gangway with a crane (3 tonnes) is available on the service platform of these berths.

The berths are equipped with a battery of 5 loading arms for LNG of 16 in. × 66 in. of which one is for vapour return. Pumping rate is 2,500 cu.m.p.h. A bunker arm of 8 in. × 66 in. is provided.

Nitrogen: Supply of nitrogen on M2/M3 is by tanker lorry.

BERTHING:

Coming Alongside and Mooring: Except in exceptional cases, vessels must be berthed bow facing out to sea. Each vessel is moored with its own lines.

The number lines per vessel must in no event be less than 14, i.e. 7 forward and 7 aft: 3 head lines (stern lines), 2 breast lines, 2 springs.

Mooring lines of rope should be used preferably unless abnormal conditions prevail.

Lines of steel wire, if used, must not be secured on tanker working decks, except if they are on constant tension winches, and pass through roller leads.

It is recommended that mixed moorings be avoided. In particular, springs must be lines of the same material.

The moorings must be suitably tightened, be inspected constantly, and adjusted every time it is necessary.

Fire Wires: Towlines of steel wire, the so-called "fire wires" must be positioned on the seaward side on the forecastle and the poop, with the eye of the wires being maintained 1.50 m. above water level by a watchman. On each fire wire a length of wire of 10.0 m. must be arranged on deck between the bollards and the lead.

Gangways, Gangway Ladders, Pilot Ladders: The gangway or gangway ladder must be easily accessible under all circumstances and provided with a safety net, being well lit at night.

At the port of Arzew El Djedid, at Berths M2/M3 and M4/M5, vessels are connected to shore by automatic gangways.

The positioning of the pilot ladder or the gangway ladder on the opposite side to the quay is forbidden.

Vessel's Stay at Berth: Any stay at a berth outside that of commercial operations must be authorised by the Port Captain.

All vessels must only stay in port for the minimum time required.

In the event of commercial operations not commencing immediately, or are stopped for any reason, the Port Captaincy may decide to call for the vessel to go out to the roads.

Departure formalities may be required to be carried out in the roads. Masters must report any machinery damage which reduces their capability. Repair works of any kind are forbidden except where specially permitted by the Port Captain.

Sealine: Use of ship's anchors will not be permitted when manoeuvring into berth. Two tugs are available to assist in berthing. On arrival vessels should have ready 8 mooring lines, 4 forward and 4 aft and a tow rope at each end as it will be necessary to position the vessel with her own gear before securing to the heavy wires. Good rope messengers should be ready at each end of the vessel to pick up these wires.

There are 3 mooring buoys at the bow and 3 at the stern. All buoys are fitted with 5 in. wire ropes. Ships of moderate tonnage may be moored using 2 bow buoys and 2 quarter buoys only. Hoses will be lifted from both sides of the vessel using ship's gear and crew.

The port and starboard derricks must be ready for use before berthing. The safe working-load must be at least 5 tons. The Loading Master can refuse to berth a tanker whose lifting tackle is not correctly rigged or in good working condition.

Three 12 in. hoses are connected for loading, 2 on one side and 1 on the other. Loading rates up to 5,500 t.p.h.

Also see "Shipmaster's Report" dated March 1983.

TANKERS: See "Berths" and "Berthing".

BALLAST: Pilots are empowered to refuse to berth a vessel if in their opinion the vessel has insufficient ballast, or her trim is such that it would prevent safe loading.

STEVEDORES: Vessels must cable their ETA at least 24 hours before arrival and confirm before 1700 hrs. on day prior to arrival or before 1000 hrs. if vessel will arrive in the afternoon of the same day. Gangs are ordered before 0700 hrs. for mornings and at 1030 hrs. for afternoons. Shifts are from 0730 – 1050 hrs. and 1530 – 1650 hrs. Extra shifts from 0730 – 1330 hrs. and from 1330 – 1930 hrs.

DENSITY: 1030.

MEDICAL: All treatment of ship's crew is arranged by private doctors through ship's Agent. No hospital facilities at Arzew. Seriously injured crew are taken to Oran, 45 km. away, for hospitalisation. Vessels arriving with sick crew on board should notify Agents well in advance to make arrangements for hospitalisation on arrival. No patient is to be disembarked without notification to the Health Officer for his agreement.

FRESH WATER: Provided by fresh water hydrants on M2/M3 (El Djedid), Moles III and IV. Elsewhere fresh water can be supplied by a tug.

FUEL: Two barges of 2,000 tons each are available. They deliver at a rate of 350 cu.m.p.h. These barges are intended for bunkering vessels with fuel oil (1000 sec. redwood, 0.924), bunker "C" (3000 sec. redwood, 0.960), gas oil and diesel oil (40 sec. redwood, 0.810 to 0.840) and lubricants, both in the roads and at the quays.

WATCHMEN: Shore watchmen are compulsory for vessels loading fertiliser or discharging LPG or refined crude in the harbour area. For tankers loading at the sea line berth, watchmen are at Master's discretion.

CUSTOMS ALLOWANCES: 200 cigarettes and an opened bottle of spirits per man.

IDENTITY CARDS: On arrival, the immigration control inspect all passports or seamen's books. Shore passes are given at the harbour gate in exchange for passports, seaman's book, or in the case of French seamen, their identity cards.

CONSULS:

France (Consul-General), Tel: 33.10.13.
Italy (Vice-Consul), Tel: 35.51.96.
U.S.A. (Consul), Tel: 35.26.65.
Spain (Consul-General), Tel: 33.21.65.
U.S.S.R. (Consul).
The Netherlands are also represented.

AIRPORT: International Airport at Es-Senia (Oran), distance 50 km.
TIME: GMT plus 1 hour all year.
TELEPHONES: Available only at methane berths. At the sea line berths tankers may communicate using VHF Channel 16 to Arzew Terminal.
SERVICES: *Launch Service:* Available for ship's crew for transportation to the roads.

GENERAL: *Measures to be taken in the event of deterioration in weather conditions:* In the event of a warning of high winds and bad weather, the Master must be prepared to stop loading and to make arrangements for suitable *ballasting.*

In the event of high wind or the threat of it, particularly from the North to the East, the following measures should be considered:

Reinforcement of moorings.
Ballasting.
Taking a Pilot on board.
Requesting aid of tugs.
Stop loading – disconnection of arms.
Sailing of the vessel.

Light and Flag Signals: From their arrival in the Roads until they leave, all tankers not degassed or vessels carrying hazardous goods must exhibit the following signals:

By day: A red flag.
By night: A fixed red light visible all around the horizon, apart from regulation navigation lights.

Wind: In Winter winds predominantly from the West.

In Summer the main winds are those from the East to North sectors.

Seasonal variations define two periods: the one of a windy Winter (October to April) and the other, the Summer, more calm (May to September). The average frequency of winds in excess of 10 m./sec. from the N.E. quadrant varies from 3.5% during the Winter to 2% during Summer, whilst that of winds from the S.W. quadrant varies from 5.1% to 1.3% between the same periods.

Tide: The variation in water level arise from the superimposition of a half-daily lunar tide of low amplitude (15 cm. – 30 cm.), fluctuations in general level during the year and long period oscillations (tidal waves).

Swell: Swell from North to East direction is preponderant, whilst that from other directions is negligible.

79% of the time the amplitude is less than 1 m.
3% of the time the amplitude is greater than 3 m.

The bad weather period is from December to April, with the maximum risk in December.

Currents: General Currents: Centre of current from East to West, −0.25%.

Surface Currents: With N.E. wind between 30 km./h. and 35 km./h. currents in the same direction (0.8 km./h.) as far as the Madrague area where they turn to the South and even S.E. (0.3 km./h.). With S.W. wind at 25 km./h., the currents have the same direction as the wind and can reach speeds of the order of 1.2 km./h.

Bottom Currents: There is a bottom current coming from Mostaganem (0.35 km./h.) which follows the coast.

Accident on Board or in Port – Principal Steps to be Taken:

In the event of accident, all fire-fighting means installed permanently on the moles, quays and in the port area are immediately placed at the disposal of Masters.

If there is fire on board the vessel, the Master must, as soon as the source of the fire has been established, take every measure to extinguish it.

If the Master considers that he cannot achieve this, he draws the attention of the port services by making a series of long blasts on his vessel's whistle, and requests that all possible available means be put at his disposal. At the same time he must:

(1) Stop commercial operations.
(2) Disconnect loading arms and hoses.
(3) Close all openings leading to the tanks, pump room, bunkers, etc.
(4) Place his vessel immediately in a position to sail so as to get away from the berth should the Port Authorities so request.

Other vessels, as soon as they hear the siren of the vessel in trouble, must:

(1) Stop commercial operations.
(2) Disconnect loading arms and hoses.
(3) Close all openings leading to the tanks, pump room, bunkers, etc.
(4) Place the vessel immediately in a position to sail.
(5) Prepare all means for fire-fighting.

Fire-fighting means:

These comprise:

First strike means (foam, powder) installed at the loading points
Fire-fighting network.
A pump vessel equipped for fighting hydrocarbon fires.
Tugs fitted for fighting fires of all kinds.

SHIPMASTER'S REPORT: March 1983.
Vessel – 140,000 d.w.t. tanker.

Documents: 2 Immigration officials boarded and their launch circled the vessel first. They required 2 Shore Declarations each in quadruplicate, 2 Arms and Ammunition Lists, 2 Narcotics Lists, 2 Crew Lists, 1 Crew Declaration and 1 Stores List.

Agent required 2 Crew Lists, 1 Crew Declaration and 1 Stores List. Customs do not always board at Sea Berth but when they do are very strict.

Cargo documents usually arrive on board before vessel leaves berth, otherwise vessel drifts off berth until documents delivered.

Pilotage: There are 5 Pilots for the harbour. When a vessel is at the Sea Berth then 1 Pilot lives on board all the time. They change watches between 1400 hrs. and 1500 hrs. each day.

Anchorages: Anchored in position with Ilot d'Arzew bearing 291°(T)×4.0 nautical miles. Bottom mud, good holding ground. Had a Force 8 WxS Wind and did not drag, with 10 shackles out. According to British vessel there, ships frequently do drag.

Restrictions: Berthing daytime only, unberth anytime.

Tugs: 3 tugs; 1 forward, 1 aft with ship's lines and 1 pushing which does not make fast.

Berthing: Went to Sea Berth and moored heading N'ly. Mooring buoys are referred to by Pilots as No. 1 (starboard bow) round to port bow and from port quarter to buoy on starboard quarter which is No. 6. Require two ropes at each end as ship's first lines to buoys. Wires with nylon tails not allowed as the buoy quick release hooks do not work and they say they cannot get the eyes off the buoys due to the weight. 2 mooring boats.

Method of mooring in good weather with no wind was:

1 ship's rope to No. 3 buoy, then 1 ship's rope to No. 1 buoy, then 1 ship's rope to No. 4 buoy, then 1 ship's rope to No. 6 buoy. Vessels are then positioned transversely and shore wires are taken onboard from No. 2 and 5 buoys to position the vessel longitudinally. Then shore wires are taken from No. 3 and 4 buoys, then No. 1 and 6 buoys; when these are fast, ship's ropes are let go. Final moorings are 2 wires from No. 1, 3, 4 and 6 buoys and 1 wire from No. 2 and 5 buoys.

According to echo sounder depth of water was about 21.5 m. forward and about 18.5 m. aft.

5 riggers board with Carpenter's stoppers and assist in mooring, unmooring and with hoses. They also live onboard and require accommodation and feeding. Riggers change shifts about 1000 hrs. daily.

Loading: If loading condensate then 1 hose from each side with average loading rate of about 2,600 tonnes/hour. There is another hose on starboard side which is apparently used for crude oil.

Ballast: Ballast is pumped to sea.

Time: GMT plus 1 hour all year.

SHIPMASTER'S REPORT: March 1984.
Arzew el Jadid – Bethioua: LPG Berth No. D1.

Berthing: Two tugs make fast close to East Entrance to the port – at the time of berthing the wind was from the N.N.E. at 20 knots gusting to 25 knots and the tugs were secured with great difficulty with the vessel positioned virtually in the entrance.

Whilst berthing a third tug pushes amidships to hold the ship on the berth.

Two tugs are used for unberthing.

Tugs are secured using two lines (ship's lines).

Manoeuvring area inside the breakwater is tight and I would not recommend berthing or unberthing operations in wind speeds exceeding 15 knots.

The max. length of vessel permitted on Berth D1 is 220 m. and the max. permitted draft is 12 m., – understand the first ship to use the jetty touched the bottom during berthing (35,000 tonnes shipment) no record of draft available.

Moorings: Three head/stern lines, two breast lines and two back springs.

Gangway: No shore gangway.

Chiksans: 3×12 in. liquid loading arms, 1×12 in. vapour return line, 1×8 in. bunker loading arm. Quick release clamps are fitted on chiksan arms. Disposition from West to East is; Bunker loading arm; Liquid loading arm; Liquid loading arm; Vapour return arm; Liquid loading arm.

There is a facility for purging loading arms with nitrogen prior to disconnecting which was unproven during our call due to low nitrogen pressure.

Cargo Pumps: 1×500 cu.m. circulating pump. 3×1,650 cu.m. loading pumps.

Vapour Return: Capacity unknown.

AUTHORITY: Entreprise Portuaire D'Arzew, 45 Rue Aissat Idir, B.P. 46, Arzew, Algeria. *Tel:* 377527, 377491, 377970. *Telex:* 12819, 12990, 12982.

BEJAIA (Bougie): 36.45 N. 05.05 E. (See Plan)

DOCUMENTS: Refer to Algiers.
PILOTAGE: Compulsory within pilotage zone between Cap Carbon to the West and Ras Attia to the East. Contact pilot station by VHF Channel 16 or Telex 83940. Tel. 92.35.03 (night). International code signals used to call Pilot who boards at the limit of pilotage zone. Pilot ladder should always be placed on port side.
ANCHORAGE: Suitable anchorage in all weathers will be indicated by the Pilot.
RESTRICTIONS: No night movements for tankers with LPG or refined petroleum cargoes.
MAX. SIZE: Tankers: Length 260 m. Draft up to 13 m. Waiting zone for vessels in ballast; depth 10 m.
Commercial Port: Draft between 7 m. to 9 m.
HEALTH: Free Pratique given by Brigade Maritime on arrival, unless suspected disease on board when Port Doctor will visit the ship. Pratique is automatic after calling at another Algerian Port.
RADIO: Alger Radio.
TUGS: Available under direction of Pilot by VHF contact. Ship's lines always used. 2 tugs required for berthing and unberthing.
BERTHING: 23 berths with depths 5.5 m. to 10.0 m.
TANKERS: *Sonatrach Oil Terminal:* 3 loading piers for crude oil.

Pier No. 1 for vessels up to 11.50 m. draft. 4×10 in. hoses.
Pier No. 2 for vessels up to 12.50 m. draft. 4×12 in. hoses.
Pier No. 3 for vessels up to 13.00 m. draft. 4×12 in. hoses.
Maximum pressure allowed 3 kgs.
Loading rates up to 4,000 t.p.h.

BALLAST: All dirty ballast to be discharged ashore; 2 hoses available at each berth, can receive ballast up to 2,000 t.p.h.

Vessels berthed at Piers No. 2 and 3 cannot discharge ballast simultaneously.

Clean ballast may be discharged to sea, only if vessel is in gas-free condition.

Thick slop residues may only be accepted subject to terminal operator's approval, but only in quantities of less than 100 tons.

FRESH WATER: Available at berths No. 2 and 3 only, subject to 24 hours' notice. Loading rate about 15 t.p.h.

FUEL: Available at all Sonatrach berths, subject prior arrangements. No barges.

REPAIRS: Very limited facilities. No dry docks. No possibility for radio/radar repairs.

No repairs may be carried out on board a tanker without first obtaining the Harbour Master's permission.

FIRE PRECAUTIONS: Anchors must be hove-up while vessel is moored in berth. A fire wire must be provided fore and aft for tug's use if necessary.

Tanker's fire-fighting equipment must be ready for use on fore and main deck.

3 tugs are equipped with fire-fighting apparatus.

DENSITY: 1025.

WATCHMEN: Not compulsory but recommended. The Port Commandant may impose a guard on vessels carrying certain cargoes.

CUSTOMS ALLOWANCES: 3 packets cigarettes and 1 bottle of wine or alcohol per man per day.

CONSULS: France.

REPATRIATIONS: Can be arranged via Algiers.

AIRPORT: Dar-el-Beida International Airport at Algiers, 240 km. from Bejaia.

POLICE/FIRE/AMBULANCE: Police, tel. 92.04.22. Ambulance/Fire, tel. 92.00.02 or 14.

TELEPHONES: None on board, but telephone exists at each tanker berth.

SHORE LEAVE: Allowed, provided seamen carry identity cards or shore passes.

DEVELOPMENTS: Port to be expanded to accept vessels of 30,000 d.w.t.

AUTHORITY: Office National des Ports, Mole Casbah, B.P.94, Bejaia. *Tel:* 92.18.04/05, 92.35.03. *Telex:* 83055, 83940.

GHAZAOUET (Nemours): 35.06 N. 01.52 W. (See Plan)

PILOTAGE: Pilotage is compulsory and is provided day and night, unless the port is closed. Whilst awaiting the Pilot the vessel must keep watch on Channel 14 or 16 VHF.

Pilotage Area: To the East: meridian passing through the Touent Coastguard Station. To the West: the meridian passing through the village of El Amadra.

ANCHORAGE: Limit of the anchorage area: To the East meridian 01° 51′ 00″ Long. West as far as its intersection with parallel 35° 07′ 22″ Lat. North.

To the North: Parallel 35° 07′ 22″ between its intersections with meridians 01° 51′ 00″ and 01° 52′ 42″.

To the West: Meridian 01° 52′ 42″ of Long. West to half a mile to the West of the head of the North Jetty as far as its intersection with parallel 35° 08′ 22″.

The port of Ghazaouet offers roads with good holding ground, but by virtue of its position, vessels are exposed to all weather.

APPROACHES: From seaward and during daytime the best landfalls for the roads is Tadjera mountain (861 m.) or the square mountain of Trara 18 km. to the East of Ghazaouet and the summit of the mountain chain of Djebel Fillaoucene visible at over a distance of more than 20 miles offshore in clear weather.

The outer channel is 225 m. wide and 12 m. – 20 m. deep and the inner channel 166 m. wide and 11 m. – 12 m. deep. There are 5 lights; 1 at the Two Brothers' Rock (Les Deux Freres), one at the end of the West jetty, one at the head of the old West jetty, one at the West end of the North jetty and one on the pier of the North jetty.

MAX. SIZE: Max. length 170 m.

TUGS: One tug, 1,800 h.p. Available through CNAN (Algerian National Navigation Co.).

SPECIAL CARGO HANDLING FACILITIES: Inflammable goods are handled at Quay No. 1, cereals are handled at Quay No. 8 (4 suction pumps available, 2×50 t.p.h. and 2×100 t.p.h.), also 3 mechanical shovels, loading of acid at Quay No. 9 and ore is handled at Quay No. 10.

CRANES: There are 3 electric cranes on rails fitted with scoops. 2×10 tonnes and 1×12 tonnes. There are also 6 mobile cranes fitted with hooks, 2×2 tonnes, 2×10 tonnes, 1×28 tonnes and 1×40 tonnes. Nineteen fork-lift trucks, 12×3 tonnes, 5×8 tonnes, 1×10 tonnes and 1×28 tonnes.

STEVEDORES: Carried out by SONAMA (national company for handling). Work carried out in two shifts and from time to time a night gang is available. Working hours from 0700–1900. Port Director can extend working hours beyond 1900 hrs. for vessels to complete operations and sail. 160 stevedores available.

FRESH WATER: Available from 17 hydrants along the quays.

FUEL: This is not provided on a regular basis, however, small quantities are sometimes supplied by road tankers.

POLICE/AMBULANCE/FIRE: Police tel. 22.12.76, Fire Brigade tel. 22.10.14.

WEATHER: The strongest and most frequent winds are from the N.W. and with the entrance channel aligned East-West passage is dangerous since the currents generally follow the direction of the winds.

SERVICES: No deballasting facilities available. Stores available through CNAN.

BANKS: B.E.A., Bd. Du 1er Novembre, Ghazaouet. Tel: 22.11.68, 22.13.50.

C.P.A., Rue de la Republique, Ghazaouet. Tel: 22.10.51.
B.N.A., Rue de la Republique, Ghazaouet. Tel: 22.12.80, 22.12.68.

GENERAL: *Lights:*

Ghazaouet Lighthouse: Lat. 35° 05′ 09″ N., Long. 01° 52′ 03″ W.

Passage Lights: Light on the Two Brothers (02), light on end of the West jetty, light on the West jetty head, light at the West end of the North jetty and a light on the mole of the North jetty.

Max. Tide: 40 cms.

Dominant Winds: Northeasterly and Northwesterly.

Visibility: Excellent.

DEVELOPMENTS: The following works are planned: the moles are to be re-surfaced and the fendering to be improved, a ro/ro ramp is to be built at Quay No. 9. Dredging work to take place.

SHIPMASTER'S REPORT: 1982.

Name: Ghazaouet (ex Nemours), Lat. 35° 06′ 00″ N., Long. 01° 52′ 21″ W.

Port Limits: As anchorage, a suitable one is within 1 mile of the port. The limits are observed around that area.

Documents: Same as for Algiers. Also every vessel must have copies of Manifest and Bills of Lading, minimum 3 copies of each.

Pilotage: Pilotage is compulsory for all vessels except those who comply with Article 178 of Maritime Code. Agents arrange for Pilot, who can be contacted on VHF Channels 16 and 14. On calling Channel 16 call "Ghazaouet Port Control". Pilot boards in fair weather at anchorage or 2 to 3 cables from the entrance. Pilot boat has a black hull. Pilot station is located at Quay "D".

Anchorages: No anchorage boundaries described. However anchorage in fair weather can be obtained in 15 to 20 fathoms of water which is about 3 to 5 cables North of Northern breakwater. Bottom is sand. Anchorage is not protected, it is mostly open and dangerous to winds from Northern semi-circle.

Restrictions: Vessels can berth or sail any time of day or night.

Max. Size: It was not stated clearly. This vessel's LOA is 147.5 m., and max. breadth of 21.5 m. Berthing and unberthing was quite safe. Max. permissible draft as stated by Port Control is 10 m., but alongside this ship depth in places was 32 ft. Max. length stated which is possible for berthing is 170 m.

Health: Pratique is granted after berthing. Two crew vaccination lists are to be submitted along with Maritime Declaration of Health (Algerian Form).

Radio: At present there is no coast radio station.

VHF: At Port Control VHF watch is kept during daytime and berthing/unberthing. Calling Channel 16, working Channel 14.

Radar: No radar facilities available.

Tugs: There is 1 tug at present. The details could not be obtained about its horse power. Ship's lines are used. Tug joins the vessel outside the breakwater during fair weather.

BERTHING:

Quay	*Berth No.*	*Basin*	*Depth (m.)*	*Length (m.)*	*Usage*	*Priority Usage*	*Equipment*

	3	Macherek	10	100	Minerals, Cereal Discharge	Minerals	

Berthing: There are 5 moles in Ghazaouet details as follows:

Mole Alger (A) – Quay No. 1. Depth alongside 7.5 m. to 8 m.

Mole De Batna (B) – Quay Nos. 2 and 3. Depth alongside 7 m. to 8 m.

Mole Constantine (C) – Quay Nos. 4, 5, 6 and 7. Depth alongside 8 m. to 9 m.

Mole Djanet (D) – Quay No. 8. Depth alongside 8 m. to 9 m.

Mole Tlemcen (E) – Quay Nos. 9 and 10. Depth alongside 9 m. to 10 m.

Specialities:

Quay No. 1 – Dangerous Cargo.
Quay No. 8 – Cereals.
Quay No. 9 – Loading Acids.
Quay No. 10 – Minerals.

Cranes: As per available data. There are 2 cranes of SWL 10 tonnes, 1 of 12 tonnes and 1 of 14 tonnes. Also there are 4 mobile cranes available, capacities are 2×2.5 tonnes, 1×5 tonnes and 1×24 tonnes.

Bulk Cargo Facilities: The vessel carried corn in bulk. The cargo was discharged either into rail wagons or into trucks. Rate of discharge variable. If sufficient trucks or wagons available rate can reach up to 600 tonnes per shift (approx).

Bridges: No bridges at Ghazaouet.

Stevedores: Stevedores are arranged either by Agents or Receivers. No separate notice necessary by vessel.

Medical: Doctors and hospital available at Ghazaouet. Agents to be informed in writing prior to anybody seeing the doctor.

Density: Density was observed to be 1028.

Fuel: None available. Gas oil may be supplied in barrels if sufficient notice given.

Fresh Water: Available alongside each pier. Rate of delivery about 7 to 10 tonnes per hour.

Consuls: None.

Surveyors: None.

Gangway/Deck Watchmen: Agents arrange for same. As long as vessel is in port she must have shore watchman. Usual recommendation given in port is to lift gangway at night, if vessel not working cargo, at about 2300 hrs.

Customs Allowances: 200 cigarettes per man per week, 1 bottle of alcohol per man per week.

Time: GMT plus 1 hour.

Telephone: Telephones are not available on board.

Agents: Compagnie Nationale Algerienne de Navigation (CNAN).

Telephone Numbers: The following important telephone numbers were obtained:

Fire Brigade 22.10.14, Police 22.12.76, Pilots 22.13.45, Port Director 22.12.20.

AUTHORITY: Port de Ghazaouet, Rue de la Marine, B.P.17, Ghazaouet, Algeria. *Tel:* 22.12.20, 22.12.55 and 22.12.35. *Telex:* 18086. *Contact:* K. Mehabi, Port Commandant.

JIJEL: 36.50 N 05.47 E.

SHIPMASTER'S REPORT: October 1984.

DOCUMENTS: Same as "Algiers".

PILOTAGE: Pilot boards vessel off the breakwaters. Pilot working daytime only. Call Pilot on VHF Channel 16.

ANCHORAGE: Off the breakwaters at a distance of 0.5 miles – 1 mile, depths from 12 fathoms to 20 fathoms. Anchorage not sheltered.

TUGS: One tug available.

BERTHS: There are two berths. The South Quay 200 m. long and the North Quay 400 m. long. Max. draft 10 m.

CRANES: At the North Quay two cranes under construction. All other equipment available.

STEVEDORES: Work in two shifts from 0730 hrs. to 1330 hrs. and 1400 hrs. to 2000 hrs. Fridays and holidays not worked.

CARGO GEAR: Stevedores use ship's cargo gear.

FRESH WATER: Available from quay but not good for drinking water.

REPATRIATION: Can be arranged via Agent.

TIME: GMT in Winter. GMT plus 1 hour May to October.

CUSTOMS ALLOWANCES: 200 cigarettes and an opened bottle of spirits. Customs are very strict.

IDENTIFICATION CARDS: On arrival Immigration Control inspect all passports and seamen's books. Shore passes are given at the harbour gate in exchange for passports, seamen's books.

SHORE WATCHMEN: At Master's discretion.

AUTHORITY: Capitainerie du Port.

AGENT: CNALNAV (State Agent), Jijel. Office at South Quay.

MOSTAGANEM (Mestaghanem): 35.56 N. 00.04 E.

(See Plan)

DOCUMENTS:

7 Crew Lists.
1 Passenger List.
1 Health Declaration.
2 Store Lists, including Bonded Stores.
2 Crew Personal Effects Lists.
2 Lists of Arms and Ammunitions.
1 List of Currencies.

Certificates: All certificates are required in the case of an inspection from the Maritime Authorities or in the case of arrest.

Coastguards & Customs: Visit by the Coastguards in the Roads.

Visit by the Customs Officials at the quay. Manifests must be accurate.

PILOTAGE: Compulsory. There are 3 Algerian Pilots; 24 hour service. Pilot boat is black with a white stripe. Vessels arriving after sunset, if no cargo work at night, will be kept in the Roads until 0600 hrs. next morning. Vessels sail at any time during the night.

ANCHORAGE: Vessels anchor about 0.5 miles from the Sea Jetty, recognisable by a lighthouse with a white light at its top (3 flashes, 1 pause, 3 flashes, 1 pause).

MAX. SIZE: Max. LOA 180 m. Max. depth of water 27 ft.

HEALTH: Free Pratique is granted easily upon berthing and producing Health Declaration and Vaccination List. If any Vaccination Certificates have expired, Free Pratique will be granted and Health Authorities will arrange, on request, the vaccinations.

RADIO: Alger Radio, receiving on 2182 kHz., and working on 1792 kHz., on 24 hours basis. Also Oran Radio, listening on 2182 kHz., and working on 1735 kHz., on 24 hours service. Advisable to use the latter.

VHF: At the Harbour Master's Office, working on Channel 16, officially 24 hour service, English, French and Arabic spoken.

TUGS: Two tugs available, request to be made to Pilot. 24 hour service.

BERTHING: Eight berths available. Total length of quays, 1,100 m.

Berth No.	*Length* (m.)	*Depth* (ft.)
0	115	23
1	140	24
2	140	24
3	132	24
4	135	25
5	135	25
6	140	26
7	140	27
X, Y	Service Quays	

CRANES: 2×6 tons and 3×15 tons. Also 5 additional cranes.

STEVEDORES: Supplied by Port Authority. 3 shifts of 6 hours each from 0700 hrs. – 0100 hrs. Ship's gear to be used if cranes not available.

MEDICAL: All facilities available.

DENSITY: 1025.

FRESH WATER: Available at certain quays, otherwise by tug.

FUEL: No facilities. Vessels must proceed to Oran or Arzew for bunkering.

GANGWAY/DECK WATCHMEN: Not compulsory, but strongly recommended by Port Authorities and Agent.

OPENING/CLOSING HATCHES: Can be performed by ship's crew or by stevedores.

CUSTOMS ALLOWANCES: 1 bottle of spirits and 1 carton of cigarettes are allowed for every Crew member. Anything in excess of this amount will be sealed.

IDENTIFICATION CARDS: On leaving the vessel, Crew members to carry their passports, which will be kept at the harbour gate, whilst ashore.

CONSULS: None.

REPATRIATION: It is possible and easily arranged by Agent (CNAN).

REPAIRS: Only minor repairs can be carried out by workshop. Repairs on board with Port Captain's permission.

AIRPORT: At Oran, La Seine Airport, 80 km. distance, with 3 daily domestic flights to Algiers.

HOLIDAYS: See "Algiers".

TIME: GMT plus 1 hour in Summer.

PORT REGULATIONS: No repairs to main engine, no lifeboat practices, no work on hull and anchors without prior permission from Port Captain. Offenders will be heavily fined.

SHORE LEAVE: No restrictions, except for some nationals.

DEVELOPMENTS: A ro/ro berth and a general cargo berth will be available in 1986. Depth of water 30 ft.

AUTHORITY: Entreprise Portuaire de Mostaganem, P.O.Box 131, Mostaganem. *Tel:* 26.81.85, 26.04.07. *Telex:* 14036, 14086. *Contact:* M. Tahar, Director General.

ORAN (Wahran): 35.43 N. 00.39 W.

DOCUMENTS: Refer to Algiers.

PILOTAGE: Compulsory. Arranged by Agents' basis vessels ETA. International Code signals used. Pilot boards at port entrance.

ANCHORAGE: In depths over 40 ft. available in the roads.

MAX. SIZE: Length 800 ft. Draft 38 ft.

HEALTH: Free Pratique given by Brigade Maritime on arrival, unless suspected disease on board when port doctor will visit the ship. Pratique is automatic after calling at another Algerian Port.

RADIO: Alger Radio.

TUGS: Available to assist berthing and unberthing.

BERTHING: Mole 1: tankers, depth alongside 39 ft. Mole 2: tankers, depth alongside 33 ft. Cargo vessels: Twenty berths at quays with depths from 20 ft. to 33 ft. alongside.

MEDICAL: Doctors and hospital facilities available.
FRESH WATER: Available by barge.
FUEL: All grades available by pipe-line at the oil berths.
REPAIRS: Only minor repairs can be effected.
WATCHMEN: Not compulsory but recommended. The Port Commandant may impose a guard on vessels carrying certain cargoes.
CUSTOMS ALLOWANCES: Three packets cigarettes and one bottle of wine or alcohol per man per day.
AIRPORT: La Senia, 7 km. away. Daily flights to Algiers for international connections.
AUTHORITY: Entreprise Portuaire d'Oran, Direction Generale, 6 Avenue Mimouni Lahcene, B.P. 106, Oran, Algeria. *Tel:* 39.56.01, 39.57.10, 39.53.52. *Telex:* 22422. *Contact:* The General Manager.

SKIKDA: 36.53 N. 6.54 E. (See Plan)

DOCUMENTS: The Harbour Master or his representative board on vessel's arrival alongside. The following are required:

Certificate of Registry.
Safety Construction Certificate.
Safety Equipment Certificate.
Load Line Certificate.
Safety Radio/Telephony Certificate.
Fire Extinguisher Certificate.
International Oil Pollution Prevention Certificate.
1 Copy Crew List for Port Office (Harbour Control).

All ships' Masters must have ready the relevant declarations for the cargo, currency, state of health of the crew – and these should be ready before arrival in the Roads. Customs will open the shipboard bond every 8 days on request of the ship's Master.

PILOTAGE: Compulsory.

RESTRICTIONS: Mooring and unmooring permitted at night. Also see "General".

If vessel required to swing inside harbour, turning basin is 360 m. diameter provided draft not more than 11 m.

MAX. SIZE: New Port: Berth No. 3 – Depth 16.0 m. Max. draft 14.8 m. Max. LOA 260 m.

Tankers up to 50,000 d.w.t. acceptable at No. 3 berth.

VHF: Station-Radio Skikda. Channel 16 (Calling and Safety), Channel 12 (Working – Port Captaincy), Channel 14 (Working – Port Manoeuvres).

The above Channels are to be used from arrival till departure when within the port limits.

Information on berthing times may be obtained between 1100 hrs. and 1200 hrs.

TUGS: 4 tugs, 1,500 h.p. – 2,300 h.p. Tug assistance available for berthing and unberthing.

DENSITY: 1023.

TANKERS: New Port:

NP. 1 & 2: Max. LOA 230 m. Depth 14 m. Max. draft 12.8 m.

NP. 3: Max. LOA 260 m. Depth 16.0 m. Max. draft 14.8 m. Also see "Shipmaster's Report" dated May 1984.

NP. 5: Max. LOA 140 m. Depth 11.5 m. Max. draft 10.5 m. Butane and propane handled.

A.1: Max. LOA 140 m. Depth 11.5 m. Max. draft 10.5 m. Ethylene handled.

M.1 and M. 2: Max. LOA 220 m. Depth 11 m. and 12 m. respectively. Max. draft 11 m.

FRESH WATER: Available in very limited quantities by pipe-line at the berths.

FUEL: Available.

AIRPORT: Constantine (Ain El Bey Airport) 100 km. from Skikda. Annaba (Les Salines Airport) 130 km. from Skikda.

MEDICAL: Medical services and hospital available.

CONSULS: None.

REPAIRS: All arrangements made by Agent (C.N.A.N. – Skikda Agency).

SAFETY: Harbour Office issue Port Regulations on arrival.

GENERAL:

Wind Limits in Port: Old Port 7/8 on Beaufort Scale, New Port 4/5 on Beaufort Scale.

Repair Work/Maintenance: Whilst the vessel is alongside, all work (painting, scraping, welding, chipping) is forbidden before obtaining permission from the Harbour Master's Office.

Engine repairs are also forbidden and Master must declare all defects engine/deck.

Dirty Ballast: Only clean ballast or ballast having less than 10 p.p.m. of oil may be discharged at the anchorage or in new or old port.

Legislation: All Masters of vessels are under obligation to conform to all legislation in force, to operating regulations, to the Police and Security Regulations for the ports and to the instructions of any Authority charged with the supervision of their enforcement.

Movements: Current Combined Port: Departures 24 hours, entry Winter 0500 – 1900 hrs., entry Summer 0500 – 2100 hrs.

New Port: Departure 0600 – 2400 hrs., entry Winter 0600 – 1600 hrs., entry Summer 0600 – 1900 hrs.

The modernisation of the Port lighting currently being undertaken will permit a greater range of movement.

SHORE LEAVE: Crew wishing to go ashore must obtain a pass from the Frontier Police.

SHIPMASTER'S REPORT: 1979.

Pilotage: Pilotage is compulsory. When entering the port Pilot is arranged with the Harbour Control. When leaving, the ship contacts Harbour Control on VHF radio once all documentation has been completed and the vessel is ready to leave. There are 5 Pilots attached to the port.

Anchorage: The anchorage is sheltered from the South through West to N.N.W. by hills, but is open from the North through to the East.

During our stay at the anchorage the wind varied from S.W. to North, and at times a large swell built up, obviously from a disturbance away from the coast. I found secure holding ground in 30 m. to 40 m. of water 1 mile North of the main breakwater of Skikda harbour for the 3 times we had to anchor, with 4.5 shackles of cable out on the starboard anchor. Our vessel rode out several severe squalls when other ships in the vicinity were dragging their anchors.

Radio: There is a local radio station working VHF only, call sign "Skikda Radio", calling frequency Channel 16 and working frequency Channel 26. Local telephone calls to Skikda are handled very quickly, but overseas telephone calls can be subject to long delays, this is because they first have to go on the land line to Alger (Algiers) and this line can be congested, the same delay is also experienced when telephoning overseas from ashore.

There is a local Port Control radio, Call sign "Skikda Port Control", calling frequency Channel 16 VHF, and working frequencies Channels 12 or 14 VHF. When approaching the port ships should call the "Port Control" and give the following:

(a) Ships Name.
(b) Nationality.
(c) Gross tonnage.
(d) Draft.
(e) Length overall.
(f) Tonnage and type of cargo for discharge at Skikda.
(g) Last port.

After which stand-by on Channel 16 for instructions. When at the anchorage it is a good idea to contact the Port Control each day to see if they have any instructions. Control seem to give the ships as much prior notice of movement as they can, and the Pilot will call on Channel 16 when he is on his way to the vessel.

Tugs: Tugs are compulsory for vessels over 1,500 g.r.t., the number used depending on the size of the vessel. There are 5 tugs attached to the port, all of at least 3,000 h.p. in order to handle the large tankers and gas tankers that use the port in what is called the "New Port", which is a new port complex built 1 mile to the East of Skikda to handle the export of natural gas. The tugs are really too big for use with vessels of the size of our vessel (3,200 d.w.t., 1,597 g.r.t.).

Stevedoring/Port Facilities: The stevedores are part of a nationalised concern. General cargo discharge or loading is carried out by a combination of shore cranes and ships gear. Dangerous cargo is discharged directly on to trucks. The main grain discharge berth is by the silo, this berth is out of action for grain at present as the machinery is under repair. Once the machinery is in full working order they expect to be able to produce figures of up to 3,000 tonnes per day.

We lay at the other grain berth on the outer harbour wall where discharge was commenced with a mobile sucker into a hopper, however, on the second day of work the machine became inoperative. They did try to work with a mobile crane, but the condition of the quay was such that the crane was unable to find a secure platform for work so we had to wait for another berth to become vacant and discharge by shore crane with a grab into hopper then into lorries. Once on the final berth the discharge progressed quickly taking 3 working days. Working hours: 0600 – 1220 hrs., 1300 – 1900 hrs. and 2000 – 0300 hrs.

The port is well equipped with mobile machinery, i.e., forklifts large and small, mobile cranes of different types, however, maintainance appears to be a problem. There is a floating crane of unknown lifting capacity, there was no safe working load marked on any of the cranes.

There is a firefighting launch in the harbour equipped with several nozzles, the tugs are also fitted for firefighting.

Stores: A limited amount of fresh provisions can be obtained, including fresh meat, however, it is expensive. We found that items such as cooking oil, butter and flour simply could not be obtained. The ship chandler is part of the Agency so once again is part of a nationalised concern. Fresh water is laid on to most quays, but whilst we were at Skikda it was only available for 3 hours each morning each day, and at one stage the water supply system stopped functioning for 4 days. The Harbour Master seems to do his best to find ships a berth inside when they reach the desperate stage for fresh water and stores.

Authorities: Skikda is unique in the ports of Algeria in the fact that when at anchor ships come under the jurisdiction of the local Algerian Coastguard. This means that Coastguard officers board when the ships have anchored, examine the crew declaration, stores list, bonded stores list, currency declaration, crew cabins, and then seal the Bond. If laying at anchor for a long time they will come out and give an issue from the Bond if the Agents contact them.

Once inside the port the local Customs Authorities take over. They visit on arrival alongside and also require, crew declaration, stores list, bonded stores list, currency declaration; dangerous drugs list and crew lists. They will give an issue from the bond, but only sufficient for use whilst the ship is in port.

The Port Health and Immigration Officers also board on arrival alongside. Port Health requires the usual Maritime Declaration of Health and a list of vaccination dates, and Immigration require a crew list. If going out of the dock gate crew need passport, Seamens I.D. card or discharge book for presentation at the gate where they are issued with a shore pass and book is left in Police care until crew member returns to the dock area.

It is a Police regulation that a shore watchman is employed day and night. The Agency arrange this, deal with the paperwork and present the bill for signature.

Agency: There is only one agency in the port. The agency is Compagnie Nationale Algerienne de Navigation (CNAN), a copy of their instructions to Masters is presented below. One man being appointed to look after each vessel.

Notice:
Compagnie Nationale Algerienne de Navigation:
Agency of Skikda.

Notice:

Dear Captain,

In order to fix all necessary arrangements for your call and give the best possible turn-around, you are kindly requested to follow the instructions hereunder stated:

1. ETA to be addressed to: Trafiic Department. Cable: CNALNAV SKIKDA. Telex: 92.815. Telephone: 95-57-51; 95-57-52; 95-50-29.

1st ETA: 72 hrs., 2nd ETA: 48 hrs. and confirm via Skikda Radio definite ETA 24 hrs. before arrival (and to Harbour Control).

2. Specify nature and quantity of cargo on board for Skikda together with dangerous goods if any, and name and address of receivers of dangerous cargo.

3. State details of heavy cargo and clarify whether to be unloaded with ship's gear or shore cranes.

4. Bunkers: Should be ordered from the Agent 24 hrs. before arrival and must be received from suppliers at latest 24 hrs. before sailing. This is very important in order to avoid delay.

5. Shipchandler: Requirements should be ordered from the Agent or direct from the suppliers immediately on arrival and delivered latest 12 hrs. before sailing. The bills should be signed by Master before ship's departure.

6. Medical Assistance: Medical visits are fixed twice a day: 0900 hrs. and 1500 hrs. Emergencies excepted.

Master should declare Crew members for doctor, morning for afternoon visit. Afternoon for next morning.

All medicine should be ordered only by Master by letter addressed to the Agent.

7. Disembarking/Embarking: All Customs and Immigration formalities should be arranged 24 hrs. before sailing.

Master should declare Crew members for repatriation latest 24 hrs. before sailing, otherwise no disembarking will be arranged.

8. Custom's Fine: All penalties for whatever should be the reason must be paid by Master to Customs 24 hrs. before ship's departure.

Working hours of Customs office as follows:

Morning	0800 – 1100 hrs.
Afternoon	1430 – 1700 hrs.
Thursday	0800 – 1100 hrs.
Friday	No work

on Friday and holidays office is closed.

9. (a) Discharging and/or loading operations must be carefully checked by Master and all remarks should be mentioned on stevedoring time sheets out-turn reports.

(b) Watchmen in holds are recommended in order to avoid pilferage. Expenses involved for watching will be Owners or Charterers account.

10. The Agent will deliver to Master on arrival, "forms of call's report". These documents should be carefully filled in and returned before sailing.

SHIPMASTER'S REPORT: May 1984.

New Port, Berth No. 3.

Pilotage: 8 Pilots, 4 of whom are Algerian. Foreign Pilots have difficulty when communicating with tugs as tug skippers speak French or Arabic.

Documents:

5 Crew Lists (indicate Nationality and Seamen's Book Number).
1 Health Declaration.
4 Stores Lists.
3 Personnel Effects Declarations.
3 Arms and Ammunition Lists.
3 Narcotics Lists.
3 Foreign Currency Lists (including Crew's personal currency).

Restrictions: Vessels are able to berth between 0600 hrs. and 2100 hrs. and unberth up until midnight.

Vessels to have propeller immersed and be trimmed less than 3.0 m. by the stern.

Entrance channel: 1 Green buoy at the entrance, with plenty water on both sides. Channel dredged to 18 m. There is a sandbank on the port side of the inner entrance with less than 8 m. depth. Care is needed when leaving berth without Pilot (which seems normal practice here in Winter time.).

Tugs: 4 tugs from 2,500 h.p. – 3,500 h.p. (2 tugs forward and 2 tugs aft). Ship's ropes used.

Berthing: Vessel berthed at No. 3 "Jetee du Large", port side to. Depth of water 16.0 m. 4×16 in. loading arms, but only one available, rate 2,200 cu.m.p.h. 1×12 in. arm for bunkers.

The use of wire ropes for mooring is very difficult, some Pilots require rope moorings.

VHF: Channels 16 and 14.

Time: UTC plus 1 hour. From June 15th until end of December. UTC plus 2 hours.

AUTHORITY: Office National des Ports – Port Office of Skikda, B.P. 65, Skikda. *Tel:* 95.68.66 (direct line), 95.57.29/41 and 45 (switchboard). *Telex:* OPSKI 87840 DZ. *Contact:* Port Director.

Port Captaincy: Traverse Sud (South Road) Combined Port. *Tel:* 95.51.42. *Telex:* 87907 CASKI.

NOTES

Please also advise Shipping Guides Ltd.

Angola

CABINDA: 05.32 S. 12.11 E. (See Plan)

DOCUMENTS:

- 7 Manifests for each port of origin of cargo for Cabinda, plus 1 copy of each Bill of Lading.
- 8 Passenger Lists (Disembarking/in transit) even if nil.
- 7 Crew Lists.
- 8 Lists of ports previously visited.
- 2 Lists of Crew vaccinations.
- 3 Lists of Ships Stores.
- 3 Personal Effects Lists.

Other forms intended for Customs, Health, etc., can be filled in on arrival.

PILOTAGE: Government Pilots' service is obligatory. Radiograms giving ETA to be sent to Agents via Luanda Radio (or by telegram from previous port), and anchorage to be used which is the closest to Cabinda, provided locations permit. The vessel is visited by port authorities, and, if necessary, the vessel may shift to another anchorage.

When the cargo is for the account of Cabinda Gulf Oil, the vessel must be moved closer to Malongo where the oil companies have their own berth for discharge of various cargo into barges.

Tankers: The Mooring Master, from Cabgoc, moves arriving tankers 1 to 2 miles to the West, and assists in mooring to buoy. Assistance from a tug is unnecessary. Vessels may moor and unmoor during hours of daylight and darkness. Attention must be paid to oil wells and pipe-lines in that area. All platforms have lights which emit the letter "U" in Morse Code. Approach must be made from the West.

It is requested that vessels have on their port side and at the stern a properly equipped and illuminated accommodation and/or pilot ladder.

On the forecastle there must be 4 mooring cables. 1 steel cable of 0.75 in. diameter with an eye and an appropriate shackle must be rigged on the derrick.

ANCHORAGE: For vessels bound for Malongo, the anchorage is restricted where Cabinda Gulf Oil is operating. See "Single Buoy Moorings".

MAX. SIZE: Cargo vessels, in the anchorage, with 32 ft. draft, may work at will. Vessels with greater draft can be accommodated further seaward but there is always the risk of swell hampering operations.

Also see "Single Buoy Moorings".

CLEARANCE: After arrival, official authorities will board the vessel for rapid clearance so that preparations may be made to berth.

In the event of arrival during the night, clearance will not be made before 0800 hrs.

RADIO: A HF radio telephone is installed in the Malongo Terminal, call sign "Malongo", listening out throughout 24 hours, on the international frequency 2182 kHz.

For communications up to approximately 50 miles, a VHF system is installed at Malongo, which uses the same call sign (Malongo Terminal) and is also manned throughout 24 hours.

Initial contact on VHF, must be made on 156.8 MHz (Channel 16) and then by mutual agreement traffic can be passed on one of the following frequencies: 156.6 MHz (Channel 12); 156.45 MHz (Channel 9); 156.7 MHz (Channel 14).

Masters of vessels are requested to advise "Cabgoc Cabinda" 72 and 24 hours in advance of the ETA, giving the name of the vessel, date and time of expected arrival, name of Master, and any other special information.

SINGLE BUOY MOORINGS (OIL):

Berth M:

This terminal is called Berth "M" and is located about 8 miles W.S.W. of the Cabinda Gulf Oil Co. Terminal at Malongo.

Position: Lat. 05° 26′ 11″ S., Long. 12° 04′ 44″ E.

Water Depth: 75 ft.

Identification: White light, 5 miles range, flashing every 20 secs. Morse Code Letter B (Bravo).

Berthing: Night berthing only in an emergency. Unberthing day and night.

Anchorage Area Position: Lat. 05° 27′ 21″ S., Long. 12° 02′ 26″ E. Water depth 130 ft.

Pilot Boarding Area: As above.

Arrival Message: Masters are requested to advise Cabgoc-Luanda (Angola) 7 days, 48 hours and 24 hours in advance of ETA. Export tankers with Telex facilities should contact Telex No. 3160 Malongo AN or 3948 Malongo AN.

Radio: A Racon beacon is installed on Juliet Platform transmitting code signal "G". Juliet platform's co-ordinates are Lat. 05° 24′ 50″ S., Long. 11° 59′ 29″ E. and the Anchorage and Pilot Boarding Area is approximately 4.5 miles S.E. from Juliet Platform.

Communications: HF radio telephone is installed in the Malongo Terminal, call sign "Malongo Terminal", listening out throughout 24 hours on the international frequency 2182 kHz. A VHF system is installed at Malongo Terminal, and is also manned throughout 24 hours. Initial contact must be made on Channel 16.

Berth T:

This terminal is called Berth "T" and is located about 25 miles W.N.W. from Cabinda Gulf Oil Co. Terminal. At this berth, a storage tanker named "Afran Ocean" is permanently moored and export tankers will berth alongside this vessel with the assistance of two tugs.

Position: Lat. 05° 13′ 12″ S., Long. 11° 47′ 13″ E.

Water Depth: Approx. 225 ft.

Identification: White light, 5 miles range, flashing every 20 secs. Morse Code Letter F (Foxtrot).

Berthing: Berthing operations are carried out from 0600 hrs. to 1600 hrs. Unberthing operations during day and night time assisted by two tugs.

Anchorage Area: The Cabgoc Mooring Master on board the storage tanker "Afran Ocean" will instruct the Master of export tanker, but usual anchorage area is 2 miles North of the storage tanker.

Pilot Boarding Area: Anchorage area.

Arrival Messages: As per Berth "M".

Radio: A Racon beacon is installed on Lima Platform transmitting code signal "L". Lima Platform co-ordinates are: Lat. 05° 14′ 30″ S., Long. 11° 49′ 44″ E.

Communications: As per berth "M".

Incoming tankers should also contact storage tanker "Afran Ocean" via telex facilities (Telex No. 581-1240757).

Max Size: The SMB is designed for 2×300,000 d.w.t. vessels. However the fendering system in use limits the size of the export tanker to 155,000 d.w.t.

BERTHING (SBM 715 or Berth M): The berthing equipment is passed on board the vessel when the Berthing Master comes on board the tanker. Berthing is available during 24 hours.

Handling of Hoses: 2×12 in. hoses at Berth "M" (1×16 in. at Berth "T") are connected to the manifold of the vessel on the port side. The handling of hoses is effected by the ship's crew, under the direction of a deck officer, in accordance with instructions of the Berthing Master.

The derrick on the port side must be prepared with a wire of 0.75 in. diameter (minimum), with a minimum of 5 tons safe working load.

The weight of hose is 5 tons.

Ballast: There are no facilities for receiving dirty ballast. At both terminals vessels must arrive with clean ballast sufficient for safe manoeuvring. Deballasting operations will be constantly checked by a representative of "Cabgoc", and the slightest evidence of pollution will cause permission for deballasting to be withdrawn.

Cargo: The crude oil at Cabinda has densities varying from 26.3 API. to 34.6 API. Blend loaded has average of 32 API at Berth "M" (API 33.0 at Berth "T") . Some of this oil contains appreciable percentages of hydrogen sulphide, namely 8 p.p.m., which can cause a toxic atmosphere during loading.

Loading: This is done by gravity, at times assisted by pumps at a rate of 25,000 bbls.p.h. at Berth "M" (30,000 bbls.p.h. by pumps at Berth "T"). About 30 minutes prior to completion, the representative of Cabgoc must be advised so that the "Shutdown" between the vessel and the terminal may be co-ordinated.

When the vessel has completed loading, the valves on the terminal must be closed. Only then may the vessel's manifold valves be closed.

In an emergency the vessel may suspend loading operations.

After completion of loading, the vessel will carry out a comparison between its own load measurements and those of the terminal. The verified quantity will be transmitted by radio and lists prepared and distributed – Bill of Lading and Manifest.

Cargo documentation will be delivered to the Master of the vessel by the ship's Agents and as quickly as possible, normally by mail.

Tankers must be cleared very quickly so that there is no delay in departure. It is imperative that the Master declares prior to loading the tonnage required. Accurate meters ashore and on the storage tanker ensure that the ordered tonnage is supplied.

SINGLE BUOY MOORING (LPG): LPG Berth.

Pilotage: All manoeuvring of ships within the "Berge Sisar" mooring area is to be done only in accordance with the advice of the Cabgoc Berthing Master, subject to the understanding that in all cases and circumstances the Master of the vessel being manoeuvred shall remain solely responsible on behalf of his vessel's Owner for the safety and proper manoeuvring of the vessel.

Anchorages: Same as Berth M.

Upon arrival at Anchorage/Pilot Boarding Area, the vessel's Master shall tender Notice in writing that the vessel is in all respects ready to load. Such readiness shall include adequate cool down of and no contamination in cargo tanks.

Upon receipt of Notice of Readiness, the vessel's agency representative, any Government Officials, together with appropriate Cabgoc and "Berge Sisar" personnel will board the vessel for prompt clearance so that preparation can begin for mooring.

The vessel shall not leave the Anchorage/Pilot Boarding Area until clearance in all respects has been received from the Cabgoc Representative.

Vessels are requested to have a pilot ladder safely and securely rigged in accordance with the requirements of SOLAS as instructed by the Cabgoc Berthing Master. At night, adequate lighting must be rigged overside for the safe approach and boarding of Officials and Cabgoc Representatives.

The (a) Conditions of Entry Into and Use of the Port and (b)Agreement for Hiring of Tugs shall be presented to the Master for signature and shall apply.

Restrictions: In the event of arrival during night, clearance will not usually be effected until 0800 hours. Berthing operations shall commence promptly after clearance is granted while unberthing may be performed at any time.

Max. Size: The SPM buoy is designed to provide a safe mooring for the 55,000 d.w.t. storage ship.Export vessels of 55,000 d.w.t., while moored to the storage ship, may safely load LPG while maintaining alignment of least resistance to wind, current, and waves. The maximum loading allowed on the buoy by a full storage ship and export vessel is 140,000 tons. The maximum allowable working pressure of the centre pipe shaft and valves is 400 p.s.i.g.

Radio: Masters are requested to advise Cabgoc – Luanda (Angola) 7 days , 48 hours and 24 hours in advance of ETA, giving vessel's name, date and hour of expected arrival, Master's name, expected deballasting time, amount of cargo required, information on condition in cargo tanks, and any special requirements.

Export ships with telex facilities should contact Telex No: 3160 Malongo An or 3948 Malongo An.

VHF: A high frequency (H.F.) radiotelephone system is installed at the Malongo Terminal and uses the call sign, "Malongo Terminal". 24 hour watch is maintained on the International Calling frequency of 2182 kHz. After making the initial contact on 2182 kHz, agreement must be reached between the vessel and Malongo to move to any of the following frequencies: 2738, 2638, 2056, 2049 kHz. This facility is for medium range communications and should reach, under normal conditions, 600 miles by day and about double this distance at night.

For short range communications of approximately 50 – 80 miles, a VHF system is in operation at Malongo. It covers Channels 1 through 78. Cabgoc monitors 24 hours a day Channels 16 (156.8 MHz) and 12 (156.6 MHz). The radio call sign is "Malongo Terminal".

Ship to ship communications will be on a separate frequency to be determined at a later date. Two hand-held R/T units will be distributed to both ships' chief officers by the Cabgoc Berthing Master. Receipts for these units must be signed by the chief officers.

Tugs: 2 tugs assist with berthing.

Berthing: LPG is loaded from the storage tanker "Berge Sisar". This vessel has a capacity of 75,000 cu.m. and is moored to a single point mooring buoy located at a position with a minimum depth of water of 100 ft. MLWS.

The geographical location of the buoy is Lat. 5° 25′ 30″ S., Long. 12° 02′ 15″ E.

The "Berge Sisar" receives the LPG at ambient temperature through a bow loading line from the SPM. The LPG is refrigerated and stored aboard the "Berge Sisar". The "Berge Sisar" is equipped with fenders slung from davits on her starboard side; tankers will therefore berth portside alongside the "Berge Sisar" and receive refrigerated cargo from her.

The export tanker will be moored alongside the "Berge Sisar" according to a mooring plan to be agreed between the Master of the "Berge Sisar", the Cabgoc Berthing Master and the Master of the export tanker. Fendering between the two vessels consists of 4 large fenders each 10 ft. in diameter by 20 ft. length at water line level, and 5 secondary fenders positioned close to the freeboard deck. A mooring boat will be provided by Cabgoc in order to run lines between the two ships. Vessels should provide synthetic mooring lines, or failing that, mooring wires with synthetic tails. This is necessary in order to provide sufficient elasticity in the mooring arrangement to take account of differential rolling periods of the two ships. Vessels should have 4 mooring lines forward, 4 aft, 2 backsprings forward and 2 backsprings aft.

The mooring system will be subject to variations.

Storage Ship: The LPG Storage Ship is the Norwegian registered "Berge Sisar". The vessel has the following characteristics.

Length	737 ft.
Breadth	112 ft.
Draft	39 ft.
Freeboard	41 ft.
Dead Weight Tons	55,173 (Summer)
Cargo Capacity	75,684 cu.m./500,000 bbls.
No. Cargo Tanks	4

The ship is equipped with 6×100 ton refrigeration units to chill incoming liquids to −50°C and refrigerate storage tanks to remove heat. The ship is capable of storing propane, butane, and propane-butane mix. The ship has an emergency shutdown capability in the event of equipment failure. The system will shutdown pumps and provide for necessary valve closures to protect the ship.

Determination of "Berge Sisar" onboard quantities will be by the ullage method. The quantities measured will be temperature corrected to give actual amount of each cargo tank. The storage tank will be sampled and analysed by chromatograph at least once per week.

The ship is equipped with a stern thruster mounted aft to maintain relative positive to the SPM buoy.

Hose Connection: Cabgoc will advise on hose connection and will remain on board throughout the vessel's stay on the berth to co-ordinate the loading operation; therefore, adequate accommodation must be provided.

The "Berge Sisar" will present 2×8 in. lines to the manifold of the exporting vessel. Normally, one of these hoses will be for loading of LPG and the second hose string will serve as a standby vapour return line, should this be required. Normally, vapours will not be allowed to be returned to the "Berge Sisar". The vapour return line should be regarded as a safety precaution only. In the event that any vapours are returned no accounting credit will be given. It will be the responsibility of the export tanker to co-operate with the Cabgoc personnel in making the connection of the two hose strings to the manifold.

The "Berge Sisar" is equipped on her starboard side with 2 hydraulic telescopic hose-handling cranes and 1 conventional derrick. The derrick is not considered suitable for hose-handling except under very favourable weather conditions, and under all circumstances only for lifting of the vapour return hose. The telescopic cranes can either lift two 8 in. liquid hoses, or 1 liquid and 1 vapour return hose.

With the agreement of the Cabgoc Berthing Master 2 liquid hoses may be used, in which event they will be connected to the manifold/metering unit by means of one Y-reducer, from 14 in. 150 ASA to 2×8 in. 150 ASA. Each hose is expected to have a flow of approximately 600 tonnes/p.h. If 2 liquid hoses are used the export vessel shall be responsible for the safe handling of any vapours generated during loading.

The hoses will be brought to a landing position on the export vessel approximately 20 ft. forward or aft of the manifold section. The hoses will be connected to the export tanker manifold by means of 90°, 60° or 45° bends, and the 20 ft. of hoses resting on deck will be expected to absorb any normal movements between the 2 ships.

The hoses are equipped with flap-valves as close as possible to the manifold on the export vessel. Normal flanges are 8 in. 150 ASA, but 8 in. 300 ASA flanges can also be matched. Reference should also be made to the OCIMF publication "Standardisation of Manifolds for Refrigerated Liquefied Gas Carried for Cargoes from 0°C to −104°C.

The export vessel will always have to use the manifold on its port side (port side to "Berge Sisar's" starboard side).

Loading: Notice of Readiness will not be accepted at time of arrival, unless the vessel is, in all respects, ready to load. The Master of the export vessel is required to have the blank flanges removed from his vessel's port side loading manifold before mooring in order to expedite the connection of hoses. Two 8 in. connections will be used.

While the vessel is being cleared, the Cabgoc representatives will give the Master of the export vessels written specifications concerning the anticipated loading conditions, i.e. gravity, temperatures, loading rates, etc.

There are no facilities available to discharge excess cargo should the vessel overload. It is, therefore, imperative that the export vessel's Master declare the tonnage he requires prior to loading.

Cargo loading is by "Berge Sisar's" deep well pumps at a rate of approximately 14,000 bbls. (1,175 metric tons) per hour.

Spot lights should be rigged on both wings of the bridge and on the forecastle of the export tanker to supplement the "Berge Sisar's" lighting during transfer operations.

About 30 minutes before the cargo loading is expected to be completed, the Cabgoc Berthing Master should be advised in order to co-ordinate the shutdown between the export ship and the "Berge Sisar".

When the vessel has completed loading the cargo, loading line valves on the "Berge Sisar" will be closed; *only then may the export vessel's manifold valves be closed.* (In an emergency, however, the export vessel may shut down against loading with immediate notification to "Berge Sisar").

After completion of loading operations, both vessels will be ullaged. A Bill of Lading, Cargo Manifest, Ullage Report, Certificate of Quality, Certificate of Quantity, Certificate of Origin, and Time Log will be presented to the export ship Master for his acceptance and signature. The official quantity and quality of the LPG delivered onboard the export vessel shall be determined by Cabgoc equipment on the "Berge Sisar".

The number and size of LPG samples taken will be determined by Cabgoc. "Cabinda LPG" will have varying gravities ranging from 0.505 to 0.595 specific gravity.

Fresh Water: Not available.

Fuel: Not available.

Repairs: Not readily available.

MEDICAL: Arrangements can be made for a doctor to visit the vessel on arrival. There are hospital facilities. Serious cases are sent to Luanda. Crew must have certificates of inoculation against yellow fever.

DENSITY: 1025. Influence of the current of the River Zaire varies according to the time of the year.

FRESH WATER: Supply cannot be guaranteed.

FUEL: None available.

WATCHMEN: Not necessary. The authorities place a port policeman on board.

OPENING/CLOSING HATCHES: By the crew or stevedores.

CERTIFICATES: Ship's register, certificates of deratting (valid) and certificate of life saving equipment.

CUSTOMS ALLOWANCES: Customs normally place no restrictions on the consumption of alcoholic drinks on board, but under no circumstances may alcohol be taken ashore.

IDENTIFICATION CARDS: Supplied by the Agents and stamped by the Immigration police before any person comes ashore.

CONSULS: None.

REPAIRS: Very limited facilities.

REPATRIATION: This can be arranged only when absolutely necessary, but solely via Luanda.

AIRPORT: Small airport about 4 miles from the town served by the internal airline with only 1 flight per day to and from Luanda.

TIME: GMT plus 1 hour.

HOLIDAYS: 1st January, 4th February, 27th March, 1st May, 2nd November, 11th November, 10th December, 25th December.

No work is possible on any of these days.

POLICE/AMBULANCE/FIRE: Police Tel. 22456; Ambulance Tel. 22405; Fire Tel. Port Captain 22160/22159.

SERVICES: None available.

SHORE LEAVE: Shore leave for Crew members limited. Crew members who are not on board when the vessel leaves are detained and repatriated at the cost of the vessel. The vessel may also be fined.

DELAYS: Tankers are not normally delayed, but dry cargo vessels may be delayed if two or more vessels arrive simultaneously, due to a lack of sufficient barges. Also, delay in loading and unloading may be caused by rough seas.

SHIPMASTER'S REPORT: June, 1983.

Malongo LPG Terminal: The m.v. "Berge Sisar" has a storage capacity of 75,000 cu.m., receiving product from "Foxtrot" gathering station at 450 tonnes/day. This LPG mix is received on board at sea temperature and after passing through R22 intercoolers especially fitted on the "Berge Sisar", is dropped into one of the vessel's 4 cargo tanks. The vessel's normal refrigeration machinery is then used to handle the LPG mix. It is hoped to increase production to around 700 tonnes/day when at full capacity. The "Berge Sisar" has been chartered to Gulf for initially 5 years with, it is understood, yearly options after that up to another 5 years. The vessel is fitted with a helicopter landing pad over the poop, has a stern thruster which can be lifted and stowed when at sea and presently accommodates up to 20 plus additional Gulf personnel, who live on board. Export vessels must always berth on the storage vessel's starboard side, "Samson" fenders are either floating at the water line (4 of them) or smaller ones are slung from davits and hang mid-way down the ship's side and also protect the starboard quarter.

Approach: BA Charts are of little use in making a safe approach and great care must be exercised when approaching the area from the West. The Racon on "Juliet" Platform Lat. 05° 24′ 50″ S., Long. 11° 59′ 29″ E. transmits code signal "G" and the area is surrounded by numerous small platforms and flares. At night the flares are of such intensity as to make the sighting of smaller less well lit platforms very difficult.

Pilotage: Pilots are not required for anchoring. They are known at this installation as Mooring Masters and all seemed to be either Portuguese or Italian, most speaking good English. They can be contacted on Channel 9 by calling "Mooring Service". Once the vessel has been cleared by the Angolan authorities and the Tank Analysis has been accepted, the Mooring Masters (normally 2) will board at the Anchorage and take the vessel North for the approach to the "Berge Sisar". During both the berthing operations undertaken by this vessel the Mooring Master did not take over the operation until the Master had proceeded just North of the "Berge Sisar" and was about to turn the vessel to approach the "Berge Sisar". One of the Mooring Masters will remain on board throughout the loading operation and he will be in communication with the Mooring Master on the "Berge Sisar". Their priority duties are to maintain the vessel's head into the swell by the use of either the "Berge Sisar's" stern thruster or the use of a small tug pulling on the "Berge Sisar's" port quarter.

Anchorages: The designated anchorage area is Lat. 05° 27′ 21″ S., Long. 12° 02′ 26″ E. and is some 2 to 2.5 miles to the South of the "Berge Sisar".

The anchorage has a depth of 130 ft. and during the months of May and June the vessel rode to 6 to 7 shackles with no problems. The predominant current during the above months was Northerly with an almost continuous SW'ly swell, sometimes moderating to very little and increasing suddenly to moderate to heavy. As the vessel tends to lie to the current the rolling encountered at anchor can be quite heavy. The current appeared to vary from 0.5 to 3 knots.

Chemical Analysis and Safety Checks are carried out at the anchorage. The Analysis is very comprehensive and lengthy. All carried out by Gulf Chemists who live on board "Berge Sisar", safety check carried out by Officers of both vessels. NOR will not be accepted until Analysis clears vessel for loading. Please note that there must be no contamination and vessel must be cooled down ready to load. Contamination will include presence of Ammonia, Inerts or Oxygen.

Also see "Agent".

VHF: Communications between the 2 vessels is maintained by the use of 2 VHF radios, 1 has a private Channel which is open to only the 2 vessels and the "Foxtrot" gas collecting station which supplies the Product to the "Berge Sisar". The other radio has communications to the Duty Mooring Master who is on either or both of the 2 vessels.

Tugs: 2 tugs are based at Malongo and assist with all Tanker and LPG operations in the area. Once they have been designated for an operation other ship movements are delayed. The tugs, the "Eldergarth" and "Rowengarth" are manned by British personnel. Numerous other "crew boats" are working in the area and are based at Malongo, being owned by "Zapata".

The 2 tugs are made fast on the starboard side, 1 just forward of the accommodation and the other at the break of the fo'c'sle. 2 wires are passed aboard by each tug and must both be made fast on the same bitt (they lead to a single towing rope on the tug's bow). Once the berthing operation is completed the tugs will anchor close S.W. of the "Berge Sisar". At one time one of the tugs had to replace the small tug on the "Berge Sisar's" port quarter as it had been unable to stop the vessels coming beam on to the swell and cargo operations had to cease whilst the larger tug was used to bring the two vessels back to head on to the swell.

Berthing: Once the 2 vessels have been paralleled at a distance of around 50 yards, 2 headlines are sent away by the use of a launch from forward. The 2 tugs and ship's engines are then used to bring the Export ship within heaving line distance (In the future the "Berge Sisar" intends to use air driven line throwing equipment). Once heaving line contact has been made the "Berge Sisar" will send 2 of her breast lines across, 1 forward and 1 aft. These will then be used to pull the export vessel alongside and hold her there whilst other moorings are passed across. The mooring lines used by the "Berge Sisar" have been supplied by Gulf Oil Company and are of the sheathed nylon type and extremely strong and durable (also very expensive). The final mooring consisted of 8 lines forward from the export ship and 6 from the "Berge Sisar", whilst aft there were 6 from the export ship and 4 from the "Berge Sisar". No restriction was placed on the mooring line size as was indicated by the "Transhipment Conditions" received before arrival, wherein it was stated that 16×10 in. lines were required by the export vessel.

The 2 tugs are released after mooring is completed and are on "standby" until the transhipment is completed.

At the beginning of the operation direct communication was via the "Berge Sisar's" gangway which was landed on the rails immediately forward of the 2 vessels' aft superstructure at maindeck level, movement between the 2 vessels was allowed for by allowing the gangway to slide over the lower vessel's rails. Halfway through the operation as the export ship's freeboard decreased and the "Berge Sisar's" increased the export ship's gangway was substituted for the "Berge Sisar's".

Loading: The LPG mix being produced at Malongo (Cabinda) will vary in SG as stated in the Loading Regulations from 0.505 to 0.595, 60/60. At the loadings undertaken in June 1983 it varied from 0.537 to 0.536. The make up was basically 65/35, Propane/Butane supplied at −34°C.

Normal procedure will be to take two 8 in. liquid line anaconda type hoses, and one 8 in. vapour line hose. The hose lengths on the visit in June, 1983, were for 1 hose length of 100 ft. The "Berge Sisar" has a number of "angled" connections which are fitted immediately after the 12 to 8 in. reducer and allow the hose to be led off at angles between 30°, 45°, or 90° from the manifold, this is to allow the hose string to be led off along the deck at the best angle to avoid sharp edges. Connecting and unconnecting of hoses is done by close co-operation between export vessel and personnel on board "Berge Sisar", Gulf personnel are in no way involved in this operation. Before commencing cargo the hose is purged of air by purging with Nitrogen from the "Berge Sisar", this is monitored at the drain connection of the export vessel's manifold until the Oxygen content is acceptable, below 6%. A shut-off valve is fitted at the export vessel end of the hose string and is used to clear the hose back to the "Berge Sisar" after loading is completed, Nitrogen is again used for this purpose. It is understood that the future intention is to fit a drain hose to allow liquid to be drained back to the "Berge Sisar", using her own compressors to supply the pressure to clear the hose of liquid.

The "Berge Sisar" is normally continuously receiving product from the "Foxtrot" gathering station. This liquid is supplied at sea temperature and once on board the "Berge Sisar" passes through R22 intercoolers fitted on top of the Cargo Control Room/LPG housing, the cooled product is then dropped into 1 of the 4 cargo tanks. The vessel's normal reliquification machinery then takes over the cooling process. The "Berge Sisar" is fitted with 3 R22 Howden screw compressors and 3 LPG Howden screw compressors. Production from "Foxtrot" was 450 t.p.d. in June, 1983, but the expected rate is 700 t.p.d.

During the loading operation no water was detected in the condensers on board our vessel. The product is slightly warmer than that normally found at shore based Terminals, loading at an average rate of 500 t.p.h. (the maximum through the one hose allowed at the loading in June, 1983) the tank pressures finally peaked at 200 mbs; considering the vessel had 250 tonnes of cargo already in each tank at a pressure of less than 10 mbs. the incoming cargo could be regarded as on the warm side.

The "Berge Sisar" is fitted with 2 hydraulic cranes in way of the manifold purely for hose handling, these cranes are of the type more usually seen fitted on the trench digging JCBs.

After loading completed vessel will normally wait for documents at anchor for up to 5 hours, however it is expected that as further loadings take place this time will be shortened. Gulf personnel handling the vessel obviously have limited experience with this type of operation, however they were all most helpful and co-operative.

There is obviously no draft problems due to depth of water. The major problem is obtaining an accurate draft due to the continuous swell. The ranging of the tank measuring gauges on both vessels also leads to differences which are understandable and "Protest Noted".

Medical: Doctor is available ashore at the Gulf Base at Malongo, the major obstacle is obtaining a crew boat to take personnel ashore and bring back to ship.

Fresh Water: Not available.

Fuel: Not available.

Customs Allowances: The Bond will be sealed and if the vessel's anchorage is prolonged the Agent and Customs will board for cigarette issue. Boarding of the vessel must be carried out using the pilot ladder combined with the gangway, preferably on the port side as the vessel will lie to the Northerly current with the S.W. swell on starboard bow.

General: "Berge Sisar" has helicopter pad fitted over the poop and a hydraulic crane on the port quarter lifts all personnel on and off any launch delivering stores or personnel. The helicopters are not allowed on the pad whilst another vessel is alongside the "Berge Sisar".

The operation between the 2 ships is in line with I.C.S. Guide. Overall control of the operation whilst alongside is in the hands of the Gulf "Gas Supervisor".

Master of "Berge Sisar" has no radio operator on board. Communications are all carried out by Master through INMARSAT fitted in Master's Cabin.

AUTHORITY: Inspector of Operations for Northern Ports, Cabinda.

Cabinda Gulf Oil Company, C.P. 40, Cabinda, Republica Popular de Angola. *Tel:* Cabinda 22459, 22221. Malonga 22256/7/8/9. *Cables:* Cabgoc, Cabinda. *Telex:* 3160 Malonga, An. *Contact:* T. G. King, Director General. Captain M. Palumbo, Supervisor/Mooring Master.

Capitania do Porto de Cabinda. *Tel:* 22160.

LOBITO: 12.20 S. 13.34 E.

DOCUMENTS: Required on arrival:
Health Certificate.
2 Vaccination Certificates (cholera and yellow fever).
8 Crew Lists.
11 Passenger Lists (each for Landing and Transit).
4 Lists showing Ports of Call.
2 Lists of Articles held by Crew: cameras, binoculars, radio, spirits, cigarettes, etc.
3 Ship's Stores Lists.
6 Dangerous Cargo Lists.
8 Unfreighted Cargo Manifests.
1 Freighted Manifest.
3 Non-negotiable copies Bills of Lading.
3 Cargo Plans (preferably before ship's arrival).
Other necessary official forms prepared by Agent.

PILOTAGE: When Pilot required outside Harbour Entrance, vessel must request via Agent at least 12 hours before arrival. Otherwise Pilot boards inside Lobito Bay. Pilot boat: grey hull, white housing. Max. speed entering Bay – 8 knots.

ANCHORAGE: Lobito Bay excellent holding ground, depths over 33 ft. and easily accessible day and night the year round.

RESTRICTIONS: No restrictions, vessels may enter harbour day and night. Vessels not normally visited by Port Authorities between approximately 1900 hrs. and 0700 hrs.
MAX. SIZE: Length 900 ft., draft 34 ft., max. depth 35 ft. – 37 ft. (normal tidal range: 3 ft. 3 in., maximum: 6 ft.).
WEATHER: March/May rain season. Heavy wind and rain can effect cargo work.
HEALTH: Pratique never given by radio, but granted after Port Authorities (including Doctor) board vessel between 0700–1900 hrs. Pratique granted if no contagious illnesses aboard, otherwise quarantine restrictions imposed. Ships calling from other Angolan Ports – except coasters – subject same procedure.
RADIO: Because Lobito Radio (call sign CQZ) operating MW range 200/400 miles only, all ETA messages, etc., must be routed via Luanda Radio (call sign CQW). Agent uses same routeing.
TUGS: Tug (usually one only) joins vessel for berthing and sailing. Ships' lines used.
BERTHING: Unless Masters indicate preference, Port decides which side alongside. No vessels usually allowed berth after sunset. Sailing after dark allowed at Port Authorities' discretion, up to 2400 hrs. No vessel permitted berth without Pilot. Before berthing, vessel must effectively cover water outlets, prepare accommodation ladder and have anchors "at the ready". (Authority fine any vessel ejecting water or waste on to quays.) Ships carrying explosives not permitted berth before Port Captain inspects cargo.

Passenger and Fruit vessels are given priority regarding berthing.
STEVEDORES: Important that vessel gives accurate ETA at least 24 hours in advance to enable Agent order necessary gangs. (Gangs ordered 0700 and 1500 hrs.) No work usually allowed Sundays.
MEDICAL: Radio before arrival if medical assistance necessary on entry. Good hospital facilities available, but specialised treatment and surgery is not. Yellow Fever and Cholera Vaccination Certificates inspected on arrival.
TANKERS: No oil to be pumped overboard into Territorial waters. Heavy fines imposed for oil pollution, however slight. Three 8 in. diameter pipe-lines discharging into local storage tanks. No slop tanks available. Two Tanker Berths, Nos. 5 and 8, maximum drafts 30 ft. and 35 ft. respectively.
DENSITY: 1024.
FRESH WATER: Normal requirements readily available and delivered by 3 in hose. Loading rate very slow as pressure usually low.
FUEL: Fuel Oil (Ordinary) available, viscosity up to 1500 sec. Redwood. 24 hours' notice bunker requirements essential. Gas oil available. No Diesel.
GANGWAY/DECK WATCHMEN: Compulsory, both day and night.
OPENING/CLOSING HATCHES: When closed or opened by Stevedores, cost per time per hatch. (Crew allowed to carry out this operation.)
SHIPS' CERTIFICATES: Registered Tonnage Certificate, Derat Certificate to be shown.
CUSTOMS ALLOWANCES: No restrictions. Customs Guard supervises opening and resealing of bond.
CARGO GEAR: Normal routine gear: wire and rope slings, nets, chain-slings, baskets, grabs, and shore-cranes (capacity 3–10 tons) available. Heavy lifts of over 10 tons must be discharged using ship's derricks. Two cranes 10 tons available, but not always accessible. 100 ton floating crane sometimes available.
IDENTIFICATION CARDS: On arrival, all crews' and passengers' passports must be handed to Immigration Police, who retain these and issue shore-passes. Passes must be carried at all times when on shore. If lost, a fine is imposed.
CONSULS: At Lobito, Norwegian and Belgian Consulates and French Consular Agency. At Benguela – 30 km. from Lobito – Italian Vice-Consulate.
REPAIRS: Small, slipway accommodating vessels up to 800 tons available. Limited engine and hull repairs: electric, oxy-acetylene welding, riveting, cleaning, repairs to auxiliary diesel and electric equipment and boilers. Floating dock for vessels up to 2,000 tons displacement.
REPATRIATION: Air communication via Luanda.
AIRPORT: About 4 km. from Port. Airstrip unable to take heavy aircraft.
TIME: GMT plus one hour.
HOLIDAYS: 1st January; March/April Easter; May/June (Corpus Christi); 15th August (Ascension Day); 2nd September (City Day); 5th October; 1st November (All Saints Day); 8th December; 24th December; 25th December.
SHORE LEAVE: Nationals from countries having friendly diplomatic relations with Angola usually granted shore leave, See "I.D. Cards". Shore leave during certain hours only.
DELAYS: Congestion not unusual and berthing delays may vary from one to three days. Ships calling for bunkers have no priority but are sometimes berthed at sunset and fuel during night-shift. Discharging of bulk cargoes can be effected by shortage of suitable wagons.
GENERAL: Ships should not: Dispose of any wastes into harbour or on to quays. Change mooring lines or lower lifeboats or immobilise main engine or use ship's sirens or radio station without prior permission from Authorities. Vessels must use watchmen 24 hours per day on adequately illuminated gangway.
NOTICES: Supplied to Master by Agent.

For your information, the following Regulations are in force at Lobito. Failure to comply with these instructions will result in fines being imposed on the vessel under your command.

Over and above the Regulations listed hereunder, all international Regulations governing a ship's stay in port are also applicable.

1. It is essential that an Angolan Flag be flown during the time the vessel is in Port.
2. Maximum speed for vessels entering or leaving the harbour is set at 8 knots.
3. All sound signals are prohibited excepting regulation signals whilst manoeuvring or in cases of distress.
4. No boat may be lowered until permission for so doing has been received from the competent Authorities (Customs and Port Captain). Any boat thus lowered is allowed to make contact with land at one point only, i.e., the landing steps situated at the junction of the 2 quay walls.
5. No member of the crew may go ashore without a pass signed by the Master and visaed by the Immigration Police. If a member of the crew is found to be ashore without a pass, the ship will be fined £1,315.00 in every instance. All shore passes must be returned to the Immigration Police before vessel's departure.
6. Vessels are not allowed to make any communications by wireless during their stay in Port.
7. Water from ship's condenser outlets or other exhausts may not be ejected onto the quay. A Fine of £1,000 will be applied if this instruction is not complied with.
8. All lavatories on the side adjacent to the quay wall must remain locked and not used during the time the vessel remains alongside.
9. No vessel is permitted to take salt water ballast whilst alongside the wharf.
10. No vessel is permitted to test engines whilst alongside the wharf.
11. No games whatsoever are allowed in the Port area; if members of the crew disrespect this regulation, heavy fines are applied to the vessel.
12. No garbage, oily or petroleum substances, should be thrown in the Bay either at anchorage or alongside otherwise a fine will be imposed on the vessel by the Port Captain, Fine which ranges from £250.00 to £1,250.00
13. The engines may not be put out of use without the authorisation of the Port Captain.
14. No repairs whatsoever may be done on board without the Port Captain's authorisation.
15. The following procedure is to be adopted whenever cargo or vessel suffer damage by Stevedores or Port staff:
    (a) Master or Chief Officer should request the Port Officer in charge of commercial operations to examine the damage.
    (b) The Chief Tally Clerk of our Company should also be present when examination is carried out.
    (c) Written notice must be delivered to the Port Officer and a copy sent to the Agent at the same time.

Kindly take note of the foregoing Regulations and return 1 copy to us duly signed.
Thank you, Agence Maritime Internationale S.A.

SHIPMASTER'S REPORT: June, 1979
VHF: Port Authority not equipped with VHF. Agent (AGENANG) is equipped
Currency: The currency is Kwinzas (Kz)
Shore Leave: Immigration allow shore leave between 1800 hrs and 2200 hrs. The Master however, is allowed to visit agents or carry out official duties outside these hours.

SHIPMASTER'S REPORT: June 1979
Documents: Papers required for clearance:
If these are prepared before arrival Agent will pass to Persons concerned. i.e. Port Health, Customs & Immigration.
1 International Declaration of Health.
(Lobito have no forms, best to use some other Port form that can be altered).
1 List of Crews Vaccinations and date they expire.
10 Crew Lists.
10 Passenger Lists or "Nil" passengers.
4 Arms & Ammunition Lists or "Nil" if none.
2 Livestock Lists.
6 Ports of Call Lists.
Stores Lists. (Provisions, Deck & Engine) 2 lists.
Crew Custom Effects List (Own form or free form) 2 sets.
Narcotic Lists 2 sets or "Nil" Lists.
Small Package Lists to be landed or "Nil" statement 2 copies.
Manifests & Bills of Lading – 3 sets.
Observations:
The Main Lighthouse Light on the end of the Spit, and the 4 Channel Buoys are still lit. But on reduced candle power. Vessel is still required to enter the Bay and anchor without Pilot. Pilot only used when berthing. Caution is required at night as the buoys are difficult to pick up. Both by day and night it is better to only proceed about 1.5 miles into the Bay, as many trawlers are always anchored at the head of the Bay. The Berths consist of a right angled quay, with space for 4/5 ocean-going ships. (Depending on length.) The loading berth for ore cannot be used for general cargo, and as the loader is at present inoperative it is not used for loading ore.

Shore leave is allowed but only from 1800 hrs. to 2200 hrs. daily.
No cargo worked on Sundays.
Pilot will unberth vessels up to 2400 hrs.
The only VHF is located in the Agents office, it is manned during office hours. Calling Channel 16 thence Channel 11.
Two Tugs are now used for berthing.
Lobito Radio Station is not manned, all traffic sent through Luanda.
Continuous soundings give at least 26 m. from the entrance to the anchorage.
Discharging is very slow, averaging 4 tons per gang man hour.
Vessels swing at anchor twice daily to weak tide, rise about 1 m.
Pilot comes out to anchorage in launch using accommodation ladder for boarding, tug is used for swinging vessels if necessary, as Bay is narrow.
No provisions are available.

AUTHORITY: Port Manager, Port of Lobito.

LUANDA: 08.48 S. 13.14 E.

PORT LIMITS: A vessel to be considered an "arrived ship" should be anchored in the bay past a line drawn between the Ilha Light and across the bay to Fort S. Pedro.

DOCUMENTS:

8 Crew Lists.
8 Passenger Landing and Transit Lists.
2 Crew Lists, showing dates of Vaccinaion and Inoculation.
6 Lists of Ports of Call (with arrival and departure dates).
4 Stores Lists.
4 Personal Effects Lists.
6 Lists of Slop Chest Contents.
3 Photo-copies of Bills of Lading.
6 Cargo manifests.
6 Arms and Ammunitions Lists.
6 Lists of Birds and Animals.
6 Lists of Drugs.
6 Mail Lists.

Copies (if possible) of following Certificates will be taken ashore by Port Authorities:

Loadline Certificate.
Safety Construction Certificate.
Radio-Telegraphy Certificate.
Tonnage Certificate.

All Passports checked and stamped.

PILOTAGE: 72 hours notice of arrival, addressed Agents via Luanda Radio, plus message of arrival at least 6 hours prior arrival received during working hours (0700 – 1700 hrs.). VHF available. Pilot launch comes out from port. Anchorage for Pilot in Luanda Bay. No draft restriction at anchorage. Pilot not required for anchoring in bay. Pilotage compulsory. No special berthing Pilot. Pilot launch white – flying Pilot Flag (H).

Pilot Boarding Station: Lat. 8° 45.36′ S., Long. 13° 16.78′ E.

ANCHORAGES: Luanda Bay offers safe, sheltered anchorage at all times of the year. Good holding ground – sand/mud. No draft restrictions.

RESTRICTIONS: Berthing in daylight only. Unberthing until midnight.

MAX. SIZE: Length 1,000 ft. (alongside); breadth, no restriction; draft, 34 ft. (alongside). Tankers, up to 55 ft. draft at the refinery buoys.

WEATHER: March/May rain season. Heavy wind and rain can affect cargo work.

HEALTH: Pratique may be granted by radio through Radio Luanda, addressed Port Health or via Agents. Accommodation ladder must be rigged for doctor on arrival. Pratique must be granted at each Angolan port. Pratique is *not* automatic. If infectious disease on board inform Port Health/Agents by cable.

RADIO: Addressed "Luandaradio" for ETA, draft and requirements. Call sign CQW on 500 kHz, listening on "odd" hours only throughout 24 hours. Listening between 0600 – 1800 hrs. Call sign CQW3 on 13,023 kHz on "even" hours only. Listening between 1800 – 0600 hrs. Call sign CQW on 8,565 kHz on "even" hours only.

TUGS: Two available (1,500 h.p. and 480 h.p.) and compulsory for berthing and unberthing. Tugs join vessel off berths. Ship lines used (if tug lines requested – extra charges).

BERTHING: Ships taken in strict rotation of arrival for berthing, except that passenger vessels have priority. There are 7 berths for import and export cargoes, all berths are available for oil bunkering.

The quays are divided into 5 zones with depths alongside of 32 ft. maximum.

Zone I.	1,380 ft. of which 900 ft. of quay length suitable for ocean-going vessels.
Zone II.	480 ft. quay length.
Zone III.	900 ft. quay length.
Zone IV.	540 ft. quay length.
Zone V.	574 ft. quay length.

Shoreside cranes of 3 tons and 5 tons, furthermore 2 cranes of 10 tons lifting capacity and also 1 mobile crane of 20 ton capacity for lifting heavy pieces only.

A self-propelled floating crane, capable of lifting 100 tons, was recently commissioned – maximum and minimum reach of 46 ft. 6 in. and 9 ft. respectively, lifting to about 78 ft. approximately.

BULK HANDLING FACILITIES: Ores in bulk are usually loaded at Zone III; no mechanical loading installation.

The ore is shovelled from railway trucks into buckets; daily loading average 4,000 tons per 24 hours.

Grain vessels will also be moored at Zone III alongside the grain shed. Discharging by means of tubes which are lowered into the holds and suck the grain out by an electrically propelled spiral fitted in the tube.

The rate of discharging is about 100 t.p.h. and the grain is loaded into railway wagons, each of 30 ton capacity, via the adjacent warehouse.

STEVEDORES: Gangs arranged by Agent/Shipmaster. Normal port working hours 0700 – 1200 hrs., 1400 – 1730 hrs. (overtime 1730 – 2330 hrs.), Saturday 0700 – 1230 hrs. Sunday/holidays – no work.

TANKERS: Two tanker terminals No. 2 Quay and off-shore terminal. Drafts – No. 2 Quay (Products Berth) 34 ft. Off-shore terminal (Refinery Berth) two sets mooring buoys, one for tankers with max. length 230 m. and max. draft 55 ft. and the other for tankers not exceeding 100 m. with draft 40 ft.

Shore Lines: Products Berth: 1×8 in. fuel oil pipe-line and 1×10 in. line for white products. 6 in. hoses for fuel oil and 10 in. hoses for White products.

Refinery Berth: 12 in. crude oil submarine lines and 8 in. for fuel; 8 in. LPG line and 6 in. hose; 8 in. G.O./Kero line and 8 in. hose; 12 in. G.O. line and 2×8 in. hoses.

Lub Oil: 1×10 in. sphere launching trap connected to ship's manifold, 100 ft. of 8 in. flexible hose between tap and floating pontoon, 0.5 miles of underwater 8 in. line from pontoon to shore tanks.

DENSITY: About 1024.

FRESH WATER: Fresh water available through quay pipe-lines, each hose delivering about 30 t.p.h.

MEDICAL: For serious cases, as much advanced notice as possible should be given with all details available. Minor cases can be treated on arrival within half an hour without previous notice. Apart from Government Hospital, there are a number of private nursing homes with good facilities. Yellow Fever inoculations recommended.

FUEL: Limited number of grades can be obtained subject to nomination well in advance. No barges available.

FIRE PRECAUTIONS: For tankers loading/discharging alongside No. 2 Quay – no vehicles allowed within vicinity and other vessels cannot berth within 40 m. of tanker's stern or bow.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: Can be carried out by crew or stevedores at vessel's option.

SHIP CERTIFICATES: Tonnage and Derat Certificates.

CUSTOMS ALLOWANCES: No restrictions, but sales ashore a serious offence.

CARGO GEAR: No additional requirements provided valid test certificates aboard.

IDENTIFICATION CARDS: Provided by Agents for crew proceeding ashore.

CONSULS:

Austria
Belgium
Brazil
Denmark
France
Germany F.R.
Great Britain
Italy
Netherlands
Norway
South Africa
Spain
Sweden
Switzerland
U.S.A.

REPAIRS: Minor repairs and hull repairs above the water-line can be carried out.

DRY DOCKS: None.

REPATRIATION: Repatriation will not present any difficulties.

AIRPORT: Distance from port 4.5 miles.

TIME: GMT plus 1 hour all year.

HOLIDAYS: Saints Day (1st January), Saints Day (15th August), Saints Day (1st November), Saints Day (8th December), Christmas Day (25th December). No cargo work on these holidays.

POLICE/AMBULANCE/FIRE: Police 7408; Ambulance 25275; Fire 22222.

TELEPHONES: Can be placed on board.

SERVICES: Tank cleaning possible but advance notice required. Radio, radar repairs possible, but spares rarely available.

SHORE LEAVE: Crew members allowed shore leave subject Immigration approval provided inoculation certificates are valid.

REGULATIONS: Mailboats have berthing priority over all other vessels, foreign *passenger* vessels next in precedence.

DELAYS: Congestion rarely exceeds 36 hours.

GENERAL: Ample water in bay for anchoring, and most vessels enter port without Pilot. Pilotage is compulsory for berthing/unberthing on quays, this service being available from 0700 hrs. to midnight. If Master elects to wait for Pilot outside port and another vessel proceeds direct to anchorage, the latter will be first on turn for berth.

DEVELOPMENTS: Plans for reclamation and new berths round to the Forte da S. Pedro da Barra. Container terminal nearing completion. 3×27 ton Hyster lift on order.

AUTHORITY: Servicos de Portos, Caminhos de Ferro, e Transportes.

MOCAMEDES (incl. Porto Saco): 15.11 S. 12.07 E.

(See Plan)

DOCUMENTS:

Health Certificate.
2 Vaccination Lists (yellow fever).
8 Crew Lists.
11 Passenger Lists (for each landing and transit).
4 Lists showing ports of call.
2 Lists of Articles held by crew/passengers, i.e. cameras, binoculars, radios, tobacco, etc.
3 Ships' Stores Lists.
6 Dangerous Cargo Lists, i.e. all types of explosives.

All foregoing to be signed by Master. Other essential official forms prepared by Agent.

PILOTAGE: Pilot boards in Bay – safe, natural bay with no reefs and easily accessible both day and night. Vessel *must* wait for Pilot and instructions before berthing.

ANCHORAGE: No currents in harbour area, but slight prevailing winds constant. Good holding ground with depths over 34 ft. Approaches up to 45 ft. depth. Tidal range about 5 ft.

RESTRICTIONS: Berthing not permitted during hours of darkness. Unberthing permitted up till midnight. Authorities visit between 0700 hrs. and 1900 hrs. (approx.) only.

MAX. SIZE: *Mocamedes:* Governed by berth depth 33 ft. alongside. *Porto Saco:* Vessels up to 14 m. draft. Largest bulk carriers handled.

HEALTH: Pratique granted on arrival after "Health Guard" visit: boarding 0700 – 1900 hrs. Normal quarantine restrictions imposed if contagious diseases aboard. Ships calling from other Angolan ports (except coasters) are subject same procedure.

RADIO: Messages *must* be routed via Luanda Radio (call sign CQW). No ship/shore radio link.

TUGS: Two available of 2,200 h.p., fitted with VHF Channels 16 and 29. Join vessel for berthing. Ship's lines used. Vessel under 5,000 tons use 1 tug only.

BERTHING: Unless Masters indicate preference, port decides berthing-side. No vessels berthed after sunset (except passenger ships), but sailing during nightshift permitted so long as prior warning given before 1700 hrs. No vessel allowed berth without Pilot. Before berthing, important that vessel covers all water outlets, prepares accommodation ladder and has forward anchors ready. Ships carrying explosives not permitted berth before Port Captain surveys cargo.

CARGO FACILITIES: *Mocamedes:* The accommodation consists of 1 concrete quay, length 1,350 ft. providing 3 berths. For the handling of general cargo, there are 4 cranes of 5 tons and 2 cranes of 3 tons, modern cargo handling devices. Also lightening possible. One 10-ton floating crane available, subject ample notice from Lobito. Dangerous cargo is discharged alongside or into lighters, at the Port Captain's discretion.

Porto Saco (Saco Bay): Ore is loaded at the pier in Porto Saco; length is 1,066 ft., width 59 ft. Depth alongside 54 ft. 6 in. at low tide, normal sea water, clear height from water level at ISHW up to unloader 73 ft. 10 in. One mechanical loader of conveyor belt type; capacity often exceeds 3,500 metric t.p.h. Reach 65 ft. 6 in. approx. from fenders. Connections for supply of bunkers and water.

STEVEDORES: Radio accurate ETA 24 hours in advance to enable Agent order required gangs. (Gangs ordered 0700 hrs. and 1500 hrs.) No Sunday work permitted for cargo vessels.

MEDICAL: If medical assistance required on arrival radio to Agent. Adequate hospital facilities available, but no specialised treatment or surgery. Yellow fever certificate inspected on arrival.

TANKERS: No oil or waste products to be pumped overboard. Heavy fines imposed for breach of this regulation. Tankers discharge at Porto Saco – about 10 km. North of general cargo berths, situated Northern end of Mocamedes Bay. Maximum draft 54 ft., length of quay 1,066 ft. No dirty ballast facilities.

Shore Lines: All 1 mile flight to installation.

Benzine: 8 in. line and 8 in. or 6 in. hoses.
Kerosine/Gas Oil: 8 in. line and 8 in. or 6 in. hoses.
Fuel Oil: 10 in. line and 8 in. hoses.

DENSITY: 1024.

FUEL: Available from dockside pipe-line. At Porto Saco, rate 200 t.p.h. Bunkers may be taken during loading operations without delay.

FRESH WATER: Available ex-wharf, rate 15 t.p.h.

FIRE PRECAUTIONS: No special precautions except ships carrying explosives. Fire Brigade standby charge.

GANGWAY/DECK WATCHMEN: Compulsory, day and night.

OPENING/CLOSING HATCHES: When performed by stevedores, costs per hatch per time, but crew allowed to perform this task.

SHIPS' CERTIFICATES: Registered Tonnage Certificate, Derat. Certificate, examined by authorities on arrival.

CUSTOMS ALLOWANCES: No restrictions. Customs' guard supervises opening and resealing of ships' bonded lockers.

IDENTIFICATION CARDS: All crew/passenger passports handed Immigration Police who issue shore passes. Passes must be carried when on shore.

CONSULS: None.

REPAIRS: Only very minor voyage repairs.

DRY DOCKS: None.

REPATRIATION: Air communication via Lobito and Luanda.

AIRPORT: Small airstrip unable to take heavy aircraft.

TIME: GMT plus 1 hour.

HOLIDAYS: See "Lobito".

SERVICES: None available.

SHORE LEAVE: All nationalities from countries having friendly diplomatic relations with permitted shore leave. See "I.D. Cards".

DELAYS: Berthing delays are unusual.

GENERAL: Ships must not dispose of wastes into harbour or on to quays, change mooring lines, lower lifeboats, immobilise main engine, use ship's siren, or ship's radio station without prior permission from authorities. Vessels must use watchmen for 24 hours per day on well-illuminated gangways and hoist Angola flag from 0800 to sunset.

DEVELOPMENTS: Porto Saco (Iron-ore/Tanker berth) anticipated to augment present ore-loading equipment to enable loading ore-carriers up to 10,000 t.p.h. Dredging to projected depth of 65 ft.

PALANCA: 06.57 S. 12.24 E. (See Plan)

LOCATION: The loading terminal is located 230 km. N.W. of Luanda and approximately 20 nautical miles from the nearest coast in position Lat. 6° 57′ S., Long. 12° 24′ E.

PILOTAGE: Pilotage is compulsory and is carried out by a Pilot of Elf Aquitaine Angola who will remain on board during the entire stay of the vessel.

The signals for calling a Pilot are those set out in the International Code; the Pilot may be contacted by VHF Channel 16.

The Pilot will board the vessel approximately 2.5 miles E.N.E. of the loading terminal in position Lat. 6° 56′ S., Long. 12° 26′ E.

ANCHORAGE: Vessels coming to load at Palanca, may anchor in 36 m. of water 2.5 miles E.N.E. from the loading terminal (Lat. 6° 56′ S. and Long. 12° 26′ E.).

It is prohibited to anchor in the prohibited area within 0.5 miles of the line of pipes connecting 'PAL F2' to 'PAL P1' and from 'PAL P1' to the storage vessel and at least 1 mile from the loading terminal.

The sea floor is sandy and of good consistency for anchoring. Certain outcrops of flat rocks can delay holding of the anchor.

MAX. SIZE: The maximum allowable draft at the Palanca Terminal is unlimited, however, the Master of the lifting vessel must comply with international regulations concerning freeboard.

Also see "Loading".

NAVIGATION AIDS: The production facilities of Elf Aquitaine Angola are protected by an area of prohibited navigation which extends 0.5 miles around all fixed installations.

Access to this area is authorised only to vessels working for Elf Aquitaine Angola or authorised by it.

This prohibited area is marked at night by white lights, emitting the letter 'U' every 15 seconds, placed at angles on the platform and in front of the storage tanker.

Average height of the lights – 19 m.

Range – 5 miles.

Production platform 'Palanca PAL P1': Lat. 6° 58′ 23″ S., Long. 12° 22′ 33″ E. Depth 48 m.

Drilling platform 'PAL F2': Lat. 6° 56′ 43″ S., Long. 12° 22′ 35″ E. Depth 41 m.

Floating storage (axis of rotation of the storage vessel): Lat. 6° 57′ S., Long. 12° 23′ 48″ E. Depth 42 m.

A sealine of 3,600 m. lies from the production platform (PAL P1) to the floating storage.

In the event of reduced visibility (less than 1 mile) the floating storage vessel emits audible signals in accordance with the international collision regulations, consisting of the letter 'U' every 30 seconds.

TUGS: Mooring is carried out by a work boat using personnel designated by Elf Aquitaine Angola.

This vessel is at the disposition of the tanker, under the instructions of the Pilot, during the duration of the tanker's manoeuvring and its stay at the loading terminal.

MOORING: Moorings at the loading terminal are furnished by Elf Aquitaine Angola. The vessel should be prepared to take on board 2 hawsers: one at starboard and the other at the port bow, as close as possible to the centre line of the vessel, each mooring line being composed essentially of 45 m. of 14 in. circumference nylon and 6 m. of 64 mm. chain. This chain is intended to hold fast the nip of the hawser at the fairlead; and furthermore, in order to facilitate its taking on board, each hawser is furnished with an "in haul" of 12 in. circumference polypropylene, of approximately 150 m. in length for one and 100 m. in length for the other bow.

The "in hauls" are passed to the vessel by means of a tender. The vessel must prepare 2 hawsers in advance to take these on board. These hawsers should be of the normal type used on board the vessel.

Mooring shall be carried out upon arrival, time and sea permitting; however, the Pilot reserves the right to postpone mooring at night. Unmooring shall take place as soon as loading is completed, whether day or night.

The port derrick should be rigged before arrival and have a minimum lifting capacity of 8 tons.

The port side manifold should be prepared for connecting the 16 in. hose.

BALLAST: Vessels should arrive with sufficient ballast and correct trim in order to be able to manoeuvre with safety; such ballast may not be less than 30% of the dead-weight of the vessel. Deballasting may be carried out only with the agreement of the Pilot.

The storage facility at Palanca is not equipped with an oil separator. The vessel should therefore present itself with clean ballast.

Any vessel presenting itself with dirty ballast may be obliged to depart the loading terminal and any resulting delay shall be entirely for its account; the acceptance of the Notice of Readiness shall be appropriately adjusted.

The Master shall be responsible for overflow or leakage from the tanks or any other situation which can bring about accidental discharge of hydrocarbons.

The scuppers shall be plugged during the duration of loading.

LOADING: The Palanca loading station of Elf Aquitaine Angola is of a type for mooring only by the bow.

The vessel shall moor by the bow with (2) hawsers, as with a SPM.

The storage vessel is connected to a buoy by semi-rigid arms. This buoy is fixed to the sea floor by chains to 6 driven stakes. These anchoring chains extend to a radius of 450 m. around the buoy.

The sea line is 3,600 m. long and 12 in. diameter and connects the floating storage tanker to the production platform, the buoy is connected to the sea line by 1×12 in. hose.

For loading, a 20 in. floating hose ending in 1×16 in. hose connects the bow of the storage vessel to the intake manifold of the lifting vessel at a length of approximately 250 m. from the bow. The loading station is designed for mooring vessels of 40,000 d.w.t. to 280,000 d.w.t. Taking into account the usable capacity of the storage vessel and the rate of production, the quantity which can be loaded at Palanca shall be approximately 40,000 – 120,000 tons.

For vessels whose deadweight is greater than 150,000 tons, prior agreement of the terminal shall be necessary at least 10 days in advance and a partial loading would be carried out for the first voyage.

The depth of water at the buoy is 42 m. The storage tanker is "Licorne Pacifique" 338 m. in length and 53 m. at its greatest width, and has a usable capacity of 211,000 tons.

Notice of Readiness: Notice of Readiness is to be addressed to Elf Aquitaine Angola.

Connections: The loading of vessels is carried out by means of 1×20 in. flexible floating hose of 256 m. in length terminating in 27 m. of 16 in. hose. Connection to the manifold on board is carried out by means of a 16 in. flange (150 ASA.).

The operations to connect and disconnect the hoses will be executed by the ship's crew. During the entire duration of the vessel's stay at the loading terminal, the Pilot shall assure that a safety watch is kept on board, a representative of Elf Aquitaine Angola shall perform the function of chief of loading and remain in permanent contact with the storage vessel.

The work boat shall remain at the disposal of the Pilot and shall make fast at the stern of the tanker. A ladder should be permanently maintained alongside in order to permit access. A preventer brace should be placed close to the ladder, a tow should be furnished to the work boat at the stern of the tanker permitting a pull of approximately 10 – 15 tons.

Loading: Loading can be carried out at a maximum rate of 6,500 t.p.h. The maximum lifting for each loading is 120,000 tons.

Inspection of the tanks after deballasting and of ullage after loading shall be done in the presence of the Chief of Loading, the representative of Elf Aquitaine Angola.

Elf Aquitaine Angola shall place on board the vessel sealed samples representative of the cargo.

20 minutes before the end of loading, personnel on board should make contact by VHF with the storage vessel so as to be able to stop the pumps at the appropriate time.

The Master shall be entirely responsible for the operation of valves and for loading and safety on board.

HEALTH: Health inspection is carried out by the chief doctor of the Border Health Police.

The Health Authority of the Port of Soyo may grant Free Pratique by radio.

In the event of a contagious illness on board, Health Authorities must be advised by radio before arrival.

RADIO: *Arrival Advice:* Vessels should advise their ETA by radio 72, 48 and 24 hours in advance to Elf Aquitaine Angola.

Thereafter, they should give notice of any material changes in their expected hour of arrival.

Vessels shall address their ETA to:

Elf Aquitaine Angola
Rua Marechal Broz Tito, No. 13, CP 2610, Luanda.
Telephone: 90293, 90343, 90393
Telex: 4130-4132 ELFANG

Palanca: Floating storage vessel call sign: FNNO.

Monitors traffic on 500 kHz from 0800 – 0830 hrs. GMT., 1200 – 1230 hrs. GMT and 1600 – 1630 hrs. GMT.

Monitors radio telephone on 6342 kHz permanently.

Monitors VHF Channel 16 permanently.

MEDICAL: In Kwanza (Soyo), there is a doctor who can attend to needs of primary urgency. Urgent health evacuations to Luanda are carried out by Elf Aquitaine Angola at the expense of the vessel.

The Agent of the vessel shall take charge of the evacuee upon his arrival in Luanda.

FRESH WATER: Not available

FUEL: Not available.

REPAIRS: The repair shops at Luanda have limited facilities, information can be obtained from ship's Agents.

AIRPORT: The airport is located 4 km. from the city of Luanda, there is on average 1 flight per day to Europe, except weekends.

TIME: GMT plus 1 hour.

WEATHER: The rainy season predominates in February, March and April.

The dry season and cool season extends two to three months in June, July and August.

Temperature of the Air: In the rainy season, the temperature of the air varies from 23°C to 30°C with a relative humidity of approximately 91%.

In the dry season the temperature varies from 18°C to 22°C with a relative humidity of approximately 86%.

Temperature of the Sea: On the surface, the temperature of the sea varies from 30°C at the start of the year to 20°C in the month of July.

Salinity varies from 28 to 35 grams per litre.

Visibility: During the rainy season, particularly February, March, and April, the rain limits visibility to 0.5 miles.

Tides at Palanca: The tides are diurnal, maximum height at Springs is 1.9 m. The average level is 0.95 m.

Winds: The dominant winds are from the South, generally less than 15 knots on the average. Strong winds have a short duration and blow from the East or S.S.E. in association with gales (70 km./hr.).

Currents: In the Palanca region, currents can be extremely variable in force and direction but the general dominant current, flows toward the N.N.W., its speed on the surface can attain 1.8 knots.

Swell: The predominant direction of the swell is from the S.S.W., the average height varies from 1.5 m. to 2.5 m. with a period of 12 seconds, the surface waves generated by local winds rarely exceed 2 m.

The swell is strongest from May to October and at maximum 2 to 3 days before Spring tide.

GENERAL:

Publications & Charts:

French Chart No. 3357.
American Chart H.O. No. 2203.
French Pilot Book Volume C, West African Coast, Volume 2.
French Light & Fog Signals, Series C.
British Admiralty Africa Pilot Volume 2.
Portuguese Chart No. 305 – 301.

Pollution: It is forbidden to discharge cinders, flammable materials, objects and waste of any kind into the sea.

Any object falling into the sea should be reported to Elf Aquitaine Angola at any time that it may be appropriate, Elf Aquitaine Angola may attempt to remove such objects from the sea. Such removal is done at the expense of the interested parties.

Safety: The Master is solely responsible for safety on board his vessel.

During the entire stay at the loading station, the Master must: maintain on board sufficient personnel so as to be able to manoeuvre the vessel without risk and to put into action appropriate fire fighting equipment; maintain engines so as to be ready to manoeuvre; to attend to the 2 hawsers so as to assure good mooring without abnormal wear; to keep a watch over the floating hose so as not to subject it to any wear or chafing which might cause deterioration. To keep watch so that the vessel does not collide with the storage vessel, whether as a result of a reverse in current or a severe change in wind direction or for any other reason.

Territorial Waters: The sovereignty of the Popular Republic of Angola extends to a distance of 20 nautical miles from the shore line at low tide along the coast.

The Angolan authorities exercise fiscal, customs, health, and immigration control on the high seas contiguous to the territorial waters up to a distance of 200 miles.

Currency: The legal currency is the kwanza. 1 U.S. dollar equals approximately 29 kwanza (1985).

Storing: It is not possible to provision at the terminal.

Transport: The means of transport of Elf Aquitaine Angola cannot be utilised by the crew of vessels coming to load at Palanca. There is no regular transport between Palanca and Luanda.

Notice: The attention of the tanker Masters is drawn to the existence in Popular Republic of Angola to special legislation concerning the relations with the Republic of South Africa.

Ordinance No. 106/83 dated October 11th 1983 first series of "Dario da Republica" (official Newspaper of the Popular Republic of Angola) and chiefly its article 6, which forbids the entrance into Angolan territorial waters, to vessels having a bond with the Republic of South Africa.

AUTHORITY: Elf Aquitaine Angola, Rua Marechal Broz Tito No. 13, C.P. 2610, Luanda, Republique Populaire D'Angola. *Tel:* 90293, 90343, 90393. *Telex:* 4130, 4132 Elfang.

QUINFUQUENA: 06.20 S. 12.14 E. (See Plan)

LOCATION: The Quinfuquena Terminal is located 15 miles South of the Zaire River entrance and consists of 2 loading points. Both loading points are single mooring points.

DOCUMENTS:

5 Lists of passengers disembarking or in transit, even if nil.
5 Crew Lists.
5 Lists giving previous Ports of Call.
5 Lists of Crew Vaccinations.
5 Stores Lists.
5 Personal Effects Lists.
5 No Animal Lists, even if nil.
5 Arms and ammunition Lists, even if nil.
Clearance from last port.

PILOTAGE: Pilotage is compulsory. The pilot boarding area is 2 nautical miles North of the loading points (see "Anchorage").

The Pilot will indicate to the arriving vessel the loading point at which it will be loaded. At this times the Pilot will also confirm the anchoring position.

Masters of vessels are reminded of their obligation to comply with statutory rules and are requested to comply with the following:

The Officer responsible for the embarkation or disembarkation of the Pilot must be a Watchkeeping Officer.

The pilot ladder must be properly secured.

The pilot ladder and immediate areas must be adequately illuminated.

Means must be provided to enable the Pilot to pass safely and conveniently from the head of the ladder into the ship and on to the deck.

The ladder must be in good condition.

The length of the ladder should not exceed 30 ft.

Whenever the distance from sea level to the point of access is more than 30 ft., a combination accommodation ladder/pilot ladder should be used.

Spreaders are to be positioned at intervals of not more than 10 ft.

Two manropes in good condition should be ready but not lowered unless so instructed by the Pilot.

A lifebuoy with safety line must be available at the embarking/disembarking area. The safety line must have a self-lighting light.

The pilot ladder must be rigged on the lee side, clear from all discharges and water outlets.

The ladder must be rigged in such a manner that each step rests firmly on the ship's side.

Nylon pilot ladders must no be used.

The use of pilot hoists is not recommended.

If, in the opinion of the Mooring Master the pilot ladder is not safe, the Mooring Master may refuse to board the vessel and thus cause delay to the ship. Such delay would be for ship's account.

The Master or responsible qualified Deck Officer must be on the bridge at all times when the vessel is manoeuvring.

Vessels are requested to provide food and accommodation for the Loading Master. This accommodation should be equivalent to the minimum standard required for a Senior Officer.

Ship's crew required for mooring operations and connecting/disconnecting of the hose.

APPROACHES: It is essential to be in possession of BA. Chart 3206.

Good radar targets, visible on 24 mile range are:

Moanda Oil Terminal in position Lat. 05° 37.5′ S., Long. 12° 10′ E.

A boring platform in position Lat. 06° 13.5′ S., Long. 12° 10′ E.

The Quinfuquena Oil Terminal, when a ship is alongside, otherwise poor echo. During the night a flare in position Lat. 05° 58′ S., Long. 12° 25′ E. is seen at a distance of about 30 nautical miles.

The Soyo Aero Beacon is of assistance when passing the 100 fathom line.

Other Aero Beacons out of order as well as the lights of Pta. da Moita Seca and Cabeca da Cobra.

ANCHORAGE: Vessels waiting for mooring are requested to anchor along an imaginary line which is 2 nautical miles North of and parallel to a line connecting the SPM and the RMD. This will place all anchoring vessels a minimum of 2 nautical miles from loading points and a minimum of 2 nautical miles South of the Block Two Offshore Essungo Installations.

At times the Pilot may alter the anchorage location for one reason or another. The Pilot requests will always overrule anything written herein.

The sea bottom in the area is sand and mud or fine sand and mud. Strict attention must be paid to all of the offshore installations in the area. In addition to the loading points these installations include the Essungo and Cuntala Platforms, the 18 in. oil sealine from Essungo to shore, the 20 in. oil sealine from shore to the RMD., the 30 in. oil sealine from the RMD to the SPM and the 8 in. oil sealine from Cuntala to shore.

These facilities are all marked on the British Admiralty Charts and all vessels bound for Quinfuquena Terminal must have on board the British Admiralty Chart No. 3206.

Anchoring is prohibited within a distance of 1.5 nautical miles from any of the offshore installations. All traffic is prohibited within a distance of 3 nautical miles of the loading points.

TUGS: One tug, 1,450 h.p. available, also see "Current".

BERTHING: The new oil terminal, built for The FST Association, has been in operation since December 1979 and is situated 7.5 nautical miles offshore.

The first loading point is of the RMD-type (Ready Made Dolphin). This is a rigid structure standing on the seabed.

The second loading point is a Single Point Mooring Buoy (SPM).

The RMD is located in about 72 ft. of water in the following position:

Lat. 6° 19′ 45″ S., Long. 12° 14′ 42″ E.

On the RMD 2 limits have to be observed:

Max. draft 47 ft.

Max. cargo intake 104,500 tonnes

The RMD is equipped with a white navigation light and fog horn.

Identification navigation light: Flash "U" 30 secs. 8.5 nautical miles.

Identification fog horn: "U" 30 secs. 1 nautical mile.

A 20 in. cement coated sea line connects the RMD with the shore in a position: Lat. 6° 14′ 54″ S., Long. 12° 20′ 57″ E.

The SPM is located in about 120 ft. of water in the following position:

Lat. 6° 20′ 18″ S., Long. 12° 09′ 48″ E.

Under normal departing conditions the SPM is designed to accommodate 250,000 d.w.t. tankers.

A 30 in. sea line connects the SPM with the RMD.

The SPM is equipped with a navigation light and fog horn.

Identification navigation light: Flash "A" 15 secs. 5 nautical miles.

Identification fog horn: 2 secs. on, 15 secs. off. 0.5 nautical miles.

MOORING: In principle mooring operations are not carried out at night but unmooring operations are performed day or night. At times, if sea, current and weather conditions permit, night mooring can be considered. The Mooring Master will in all cases decide when mooring and unmooring operations shall be done.

All mooring and unmooring operations are done by the ship's crew as indicated by the Mooring Master.

On arrival, vessels must have the port derrick rigged and ready to be used. The SWL of the derrick should be 10 tons.

A line-boat and a crewboat assist the vessels while mooring and unmooring.

The Mooring Master will accept the Notice of Readiness, providing that the vessel is ready in all respects to receive cargo.

The line-boat will bring the terminal mooring gear alongside, which has to be picked up with the ship's derrick. It consists of: 2×14 m.×56 mm. wire snotters; 2×100 ton SWL Crosby shackles; hoseslings; 2 pelican hook chain stoppers; pressure gauges.

Two messenger lines of minimum 400 ft. length must be ready on the forecastle. The wire snotters must be installed on the bitts as indicated by the Loading Master.

The line-boat brings 2×10 in. pick up lines alongside the bow when the vessel is within a reasonable distance of the loading point. The messenger lines will be connected to the pick-up lines and taken on board until the chaffing chains pass through the fairleads. The chaffing chains are connected to the wire snotters by means of the 100 ton shackles.

The fairlead should be a single Panama lead mounted on the centre line of the vessel suitable for receiving 2×3 in. chaffing chains. The approximate minimum inside dimensions of the inside of the fairlead have to be 40 cm. high and 60 cm. wide. Two sets of mooring bits should be situated at the forward end of the forecastle head.

The bitts are not to be closer to the centre Panama lead than about 3 m. and are to be capable of handling 56 mm. diameter wires.

Once the vessel is moored to the loading point the floating hose is brought alongside and connected to the manifold by the ship's crew. The floating hose is equipped with a camlock connection. The floating hose at the RMD is a 12 in. hose and at the SPM a 16 in. hose.

A pressure recorder will be installed on the ship's manifold. During the whole period that the vessel is moored to the loading point the line-boat will be made fast to the stern of the tanker. The vessel shall supply a good towline for this purpose and keep a second one on stand-by ready to be used. If available, buoyant lines are also preferred in this position.

RESTRICTIONS: Mooring carried out daytime only. Unmooring may be carried out at night.

MAX. SIZE: See "Berthing".

HEALTH: Upon arrival, Government Officials and Agent board the vessel. The party comes by boat from the Kwanda Base near Soyo, which is situated about 20 nautical miles from the Terminal. The Agent is a local clerk, and speaks English. He boards the vessel on arrival and a few hours before departure.

RADIO: *Arrival of Vessels:* Companies intending to lift crude oil from QQ Terminal will have notified by telex 7 days prior to the anticipated arrival date the following information:

Name of tanker.
Flag.
Gross Tonnage.
Nett Tonnage.
Dead Weight Tons.
Length – Overall.
Length – Bow to Manifold.
Nominated cargo quantity.
Shipper.
Agent.
Consignee.
Destination.
ETA QQ Terminal.
Deballasting Time Required.

Vessels bound for Soyo, Quinfuquena Terminal must give their ETA 72 hours/48 hours/24 hours before arrival to Fina Soyo. This can be done via Luanda Radio or via the station tugboat.

The message should contain ETA vessel; Master's name; Vessel's name; Draft on arrival; Last port of call.

24 hours before arrival radio contact can be made with Fina Soyo on SSB 8291.1 kHz at 0930 hrs. GMT.

A 24 hour radiowatch is maintained on VHF Channel 11 in the Mooring Master's Office call sign "Quinfuquena Pilot". Ships are usually able to make contact by VHF at a distance of 20 to 30 miles.

Hours: 6218.6 at 0800 hrs.; 8294.2 at 0900 hrs.; 8291.1 at 0930 hrs.

VHF Channel 11 – 24 hours.

VHF: See "Pilotage" and "Radio".

LOADING: The loading rate is approx. 1,300 cu.m.p.h. Soyo crude oil approx. API 33.7. The temperature varies with the seasons. At the end of May, the loading temperature was 78° F.

Tank Farm has a capacity of 800,000 barrels.

During the whole loading operation, a crew member is stationed on the forecastle and one by the manifold. Forecastle must be in permanent contact with Duty Officer and Loading Master by radio if available.

Also see "Mooring".

MEDICAL: Assistance only available in an emergency.

FRESH WATER: Not available.

FUEL: Not available.

SERVICES: Following are not available: Stores and provisions, cash, laundry service, dirty ballast facilities, national flags and ship supply service.

Charts are not available. Vessels must have B.A. Chart Nos. 638 and 3206 onboard when calling at the terminal.

REPATRIATION: Repatriation is available if absolutely necessary but can only be arranged via Luanda with great difficulty.

The Oil Company and the Authorities are against any crew changes.

MAIL: Mail sent from Europe, usually takes 3 weeks.

SHORE LEAVE: Not allowed.

WEATHER:

Winds: The general direction of the trade winds is E.S.E. to S.S.E. The direction is affected by onshore/offshore breezes.

The onshore breeze appears from the S.W. between 1000 hrs. and 1100 hrs. and falls at sunset. It is then replaced by a light breeze from the S.S.E. to E.S.E. which blows until 0800 hrs. or 0900 hrs.

From December till May thunder squalls from the N.E. occur. During the month of May the trade winds often blow night and day.

From June to September (dry season) the winds are low. S.W. in the daytime and S. to S.W. with calm periods at night. At mid-September a stable S.W. breeze settles until the beginning of December. It then becomes more variable with calms at times.

Hygrometry: The relative humidity is above 80% for 11 months of the year but in June falls to 50%.

Visibility: Fog appears more often during the dry season than during the rainy season. During the rainy season visibility is reduced by heavy showers.

Tides and Current: In general the current flow at Quinfuquena is in a Northerly direction and has an average velocity of 0.8 knots. The current direction and velocity are governed by two significant sources; the Benguela Current flowing North and the outflow of the Zaire River. At most times the Benguela Current is the most influential so the most common current direction is North. However, at times, especially during the rainy season (November to May) the effluent from the Zaire River may be so voluminous that it can over-rule the Benguela Current and reverse the direction of the current at Quinfuquena. At the RMD we have witnessed a 180° change of direction in 10 minutes.

When this happens during the daylight hours it is possible to receive advance notice if the man on watch spots the muddy front from the Zaire River moving South. This notice allows the line handling tug crew and tanker crew to be in the best position to keep the tanker from contacting the protection ring of the RMD or the SPM. When it happens at night, however, the allowable reaction time is greatly reduced and any error or delay may allow contact of the tanker with the loading point. It is for such instances that the watches must be maintained and ready.

Although, as stated previously, this phenomenon is more likely to happen in the rainy season, it can, and has happened in the dry season.

Tidal currents in this area are minimal. They have an average velocity of 0.5 knots and a maximum of 2 knots. The tidal range is about 1.5 m.

Swell: As far as swell is concerned 93% of the waves come from South (S.E. to S.W.). The average height of the swell is 1.5 m. during the rainy season and increases to 3 m. or 4 m. during the dry season.

NOTICE: Notice to Masters

Subject: Forecastle Head Watchman.

Quinfuquena Terminal has certain peculiarities and your attention is drawn to the following.

1. The tower is a "Rigid Mooring Device" and is standing on the sea-bed as opposed to a "Single Mooring Buoy" which is anchored to the sea-bed and therefore has some lateral movement.

2. Normally your vessel will ride to the Benguela Current (S'ly), however the Congo River outfall will occasionally produce an adverse current, which will change heading of your vessel to a Northerly direction in a very short period of time.

Therefore a watchman must be placed on the forecastle head at all times, and at the slightest indication that the vessel is "Riding-up" to the tower, he must not hesitate to call the Mooring Master on board who will take the necessary action.

A line-boat, which has the capacity to tow your vessel astern, clear of the tower, will be tied up to your vessel's stern at all times.

Please ensure that a tow rope of a good quality is passed to the line-boat.

SHIPMASTER'S REPORT: April, 1981.

Location: Lat. 6° 19′ 45″ S., Long. 12° 14′ 42″ E.

Depth: Berth 21 m.

Current: 0.6 knots.

Bottom: Mud and Sand.

Max. Size: Max. draft 14.35 m. Max. Cargo 104,000 tonnes.
Pilotage: Pilot boards 2 miles N.N.E. of Quinfuquena Tower. Vessels can enter at any stage of the tide, day or night.
Tugs: One tug, used for docking and undocking and towing when no current.
Radio: Luanda Radio D3E.
Pratique: Available day and night.
Customs/Immigration: Generally work during daylight only.
Fresh Water: Not available.
Bunkers: Not available.
Doctor: Only available in an emergency.
Charts: B.A. Chart Nos. 604 and 3206.
Documents: Last Port Clearance, 3 Crew Lists, 3 Vaccination Lists, 2 Stores Lists, 2 Crew Customs Declarations, 2 Animal Declarations, 2 Firearms and Ammunition Declarations.
Cargo: Hose connected to port side. Product loaded, crude oil.

Coastal tanker may have priority at loading berth.

Agent: 3 Agents located in Soyo. Compulsory to appoint ship agency.
Anchorage: 2 miles N.N.W. of Quinfuquena Tower. Bottom mud/sand, depth 12 to 18 fathoms.
Characteristics of Loading Point: The Loading Point of Quinfuquena is a tower structure called a "RMD" (Rigid Mooring Device) standing on the sea-bed with a base of 21 sq.m. At water level is an anti-collision ring or fender. The tower is marked by navigation light as follows: White showing Morse letter "U". Also fog-horn Morse letter "U".

Note: This light is unreliable in performance and visibility during operation is less than 1 mile.

A flexible 20 in. hose connects the tower to a 20 in. shore-line.

Moorings: Moorings are from the tower, 2 lines 12 in. (braided) and 2×3 in. chaffing chains leaching to 2×200 m. 8 in. pick-up ropes. The chaffing chains are connected on the ship to 2×12 in. braided "Snotters" made up on the bitts.

The ship must supply 2 messengers, a tug brings the 2 mooring pick-up lines to the ship and makes them fast, always on the port side of the ship even though the moorings are port and starboard. Ship's crew will make moorings fast. The ship shall also provide a mooring line to be used as a tow rope. At all times a tug will be made fast to the stern of the ship.

During loading a member of the ship's crew shall be posted forward to watch the mooring lines and to warn the Loading Master in case of the ship "reaching up to the tower".

Ship's crew will make moorings fast and connect the flexible hose.

From the tower to the ship is 1×16 in. floating hose reducing to 12 in. aboard the ship. Ship's derrick should be made ready, always on the port side. Derrick should have SWL 10 tons. Ship's crew will also rig cargo hoses under the supervision of the Mooring Master.

Loading: Inspection of tanks after de-ballasting made by the Loading Master. Samples taken onboard the ship and 2 samples to remain onboard. Loading rate is about 1,300 cu.m./hr. All cargo paper work is done onboard the ship and a cargo surveyor arrives 1 day prior to completion of loading. Ship will return to anchor during this period.
Weather: Rainy Season: October through March.

Visibility: Good all year round.

Sea: Density 1025 but sometimes 1020 when River Congo outfall arrives.

Tide: Usually not noticable until FULL moon period. Then is semi-daily. 1.20 m. at Springs.

Wind: S.S.W./S.S.E. usually less than force 4.

Swell: S.S.W. usually less than 2.50 m. although during dry season can rise to 6.00 m.

Current: Usually N.N.W. 0.60 knots but changes at periods of FULL moon – unpredictable.

Also liable to change rapidly (in 10 minutes, 180° change) due to the arrival of the River Congo outfall.

Telecommunications: VHF Channel 11 permanent watch while vessel at Quinfuquena Terminal. Call sign "Fina Marine" and "Oil Soyo".

Radio messages addressed to Fina Soyo via Luanda Radio D3E.

As this is not very reliable, it is advised to send all traffic to "Master Tug Oil Retainer" via Portishead Radio GKA. The call-sign of the tug is 2YRZ and is in contact with GKA via radiotelephone. This method is much more reliable and ensures all traffic reaches Petrangol and the Mooring/Loading Master. The tug is always standing by at the Quinfuquena Terminal.

Navigational Warnings: Sub-sea pipe-lines run in the Quinfuquena area and drilling platforms are not marked on the chart.

The most important cautionary notes concerning Quinfuquena area are as follows:

1. Quinfuquena Loading Tower (Lat. 6° 19′ 45″ S., Long. 12° 14′ 42″ E.). From this position a sub-sea pipe-line runs 052° to the beach crossing at Lat. 6° 14′ 50″ S., Long. 12° 21′ 00″ E.

From the same loading tower a second sub-sea pipe-line runs 273° to approximate position: Lat. 6° 20′ 00″ S., Long. 12° 07′ 30″ E., where a new SBM Buoy is expected to be operative in the near future.

2. A production platform exists in approximate position: Lat. 6° 14.2′ S., Long. 12° 10.0′ E. From this position a sub-sea pipe-line runs at 095° to the beach crossing at approximately Lat. 6° 14.5′ S., Long. 12° 21.0′ E.

Recommendations: Vessels calling at Quinfuquena for loading cargo MUST have provisions and fresh water onboard to allow for 45 days stay at the Terminal.

There is no possibility of fresh provisions or crew changes or mail.

OPERATOR: Fina Petroleos de Angola, C.Postal No. 1320, Luanda, Angola. *Tel:* (Admin) 35802, 35815; (Refinery) 70101, 73737, 73738, 70195, 70540. *Telex:* 3033, 3246. *Cables:* Fina, Luanda. *Contact:* Captain B. Diricq, and Captain R. Moeskups, Marine Superintendents.

Capitania do Soyo, Capitania do Porto do Soyo, Soyo, Republica Popular Angola.

NOTES

Antigua

St. JOHN'S: 17.07 N. 61.52 W. (See Plan)

PORT LIMITS: All the waters enclosed by an imaginary straight line running due West from Weatherill's Point forming the Northern boundary by an imaginary straight line running due North from Shipstern Point forming the Western boundary and by the coast line running from Weatherill's Point to Shipstern Point forming the Eastern and Southern boundaries.

DOCUMENTS:
4 Crew Lists.
2 Stores Lists.
4 Passenger Lists.
1 Customs Declaration.
1 Declaration of Health.
4 Copies of Manifest.
Port Clearance from previous port.
3 Copies of B/L.
1 Copy Crew Personnel and Curio List.
Fumigation and Derat Exemption Certificate to be shown.

PILOTAGE: Compulsory. Messages should be received by Agents 48 hours in advance. Pilot boat may be identified by pilot flag.

Pilot boards at entrance of channel if vessel is proceeding to Deep Water Harbour. If vessel proceeding to Oil Berth, Pilot boards 2 miles North of Sandy Island.

ANCHORAGES: Area between Fairway Buoy, South Warrington Buoy and No. 1 Channel Buoy. Approximately 7 cables N.N.W. of Pillar Rock Light. Depths 40 ft. – 45 ft. Anchorage for vessels up to 54 ft., 2 miles N.E. of Sandy Island.

RESTRICTIONS: (a) No vessel is permitted to berth alongside before permission to do so is given by the Port Authority or unless such vessel is under the command of a Pilot.
(b) Tidal variation is negligible.
(c) Channel is 8,000 ft. long and 300 ft. wide.
(d) Draft restriction is 32 ft. at berth.

MAX. SIZE: Vessels of any size, but with a maximum draft of 45 ft. can anchor at the Outer Harbour. At berth max. draft is 32 ft.; length of dock 1,200 ft.; and turning circle 1,200 ft. diameter.

HEALTH: Pratique given at berth. Suspected infectious diseases must be notified to Port Health Inspectors in advance of vessel's arrival.

RADIO: Cable and Wireless (W.I.) Ltd. via Barbados Radio 8PO.

VHF: Port Authority maintains watch on Channel 16 during normal working hours. Watch is also maintained by Pilot and tugs on Channel 16 one hour before ETA of any vessel. Tugs and Oil Terminal Pilot use Channel 6 during berthing operations.

RADAR: Nil.

TUGS: Two harbour tugs, each with 1,500 h.p. engines. Tugs join vessel in Approach Channel. Tugs lines normally used. No charge.

BERTHING: Three berths on pier of length 1,200 ft.; maximum permissible shipdraft 32 ft. in salt water; loading or discharging can be done either by shore equipment or by ship's own gear.

CRANES: Authority owns 1×150 ton H & G mobile crane and 1×10 ton Coles mobile crane.

2×75 ton cranes are available on dockside which are provided by a private contractor.

Lift Trucks: Authority owns 1 large truck with adjustable spreaders capable of lifting fully loaded 40 ft. and 20 ft. containers.
1×15 tons Container lift truck
2 Champion truck tractors
1 GMC truck tractor
6×20 ft. container chassis
2×40 ft. container chassis
1×40 ft. container lift frame
1×20 ft. container lift frame

BULK CARGO FACILITIES: None.

SPECIALISED CARGO-HANDLING FACILITIES: None.

BRIDGES: None.

STEVEDORES: 48 hours notice is required to arrange gangs. Average load or discharge rate is 10 t.p.h.

Working hours: 0700 – 1600 Monday to Friday and 0700 – 1100 on Saturday. Overtime possible weekdays and Sundays.

TANKERS: *Sea Island:* A concrete platform 180 ft. long with 4 mooring dolphins, overall length 750 ft. The jetty platform is protected by 5 foam filled Yokohama type fenders. Depth alongside 35 ft. at MLW. Max. draft 32 ft. (deeper draft subject to Marine Terminal approval). Max. load displacement 22,000 tons. Berthing by tankers on South side only. Port side alongside with the assistance of 2 tugs. Mooring arrangements: 2 head/stern lines, 2 breast lines, 2 springs.

Distance to shore is 4,500 ft.

Pipe-lines: 1×16 in. crude line with 1×12 in. hose; 1×8 in. gasoline line and 1×8 in. distillate line each with 1×6 in.; 1×4 in. LPG line. 1×3 in. fresh water line. One grade at the time with max. throughput of 1,500 bbls.p.h. and max. back pressure of 120 p.s.i.

Sea Buoy: A CBM of 5 mooring buoys (3 head buoys and 2 stern buoys) in 50 ft. of water. Max. draft 43 ft. Distance to shore 7,800 ft. 1×16 in. crude line with 1×12 in. hose (both submarine). No slop residue discharge facilities available.

Hose Connections: Port side amidships on Sea Island and Sea Buoy.

All Bunker grades are available. The blender is on the jetty with meters. Lubricants are available. The bunker line is 10 in. with a 6 in. bunker hose.

There are no slops or dirty ballast facilities. Ships to load are to arrive with clean ballast.

There are always two jetty attendants who are to be provided with meals.

It is possible to arrange a boat service between ship and shore but the ship's motor lifeboat can be used as well for this purpose and can sail in Antiguan waters without restrictions, provided the ship is cleared by the Authorities.

MEDICAL: Agents should have at least 24 hours notice should medical attention be required. Hospital facilities are available and can be arranged by either Ship's Agent or Port Authority.

DENSITY: 1025.

FRESH WATER: Available at Deep Water Harbour, 24 hours' notice required. Also at Oil Refinery Pier and by barge, but only in conjunction with bunker fuel deliveries.

FUEL: All grades of marine fuel available at the Marine Pier. Also available at the Sea Buoy and by barges at Deep Water Harbour.

FIRE PRECAUTIONS: (a) No open fires nor smoking are allowed near the open hatches or in the hold in which flammable or dangerous goods are stored, or at the place of discharge of shipment.

(b) No person may set off or ignite any flare, rocket, explosive device, firework or make any bonfire or barbecue in any port area other than for emergency life saving or ship safety purposes, unless permission has been granted by management.

CONSULS: American, Norwegian, Dutch, French, Danish, Swedish and Venezuelan.

REPAIRS: All types of deck, but only minor engine repairs are possible.

DRYDOCK: None.

SURVEYORS: Lloyd's and ABS.

GANGWAY/DECK WATCHMEN: Services of watchman absolutely necessary.

HATCHES: Opening and closing normally carried out by ship's crew.

CUSTOMS ALLOWANCES: 1 carton of cigarettes, 1 bottle liquor.

CARGO GEAR: Loading and discharging effected both by shore and ship's gear, but mainly by shore gear.

REPATRIATION: Facilities exist for effecting crew changes and arranging for necessary repatriation.

AIRPORT: Airport is 4 miles from the Deep Water Harbour, and is served by such international airlines as Eastern, Pan Am, American Airlines, Air Canada, B.W.I.A., B.A., L.I.A.T., Prinair, Air Guadeloupe, etc.

TIME: Local time is GMT minus 4 hours. No adjustments made to clocks during the year.

HOLIDAYS: 1st January; Good Friday; Easter Monday; Labour Day (1st Monday in May); Whit Monday; 1st Monday and Tuesday in August (Carnival); State Day (1st November); Christmas Day; Boxing Day; Queen's Official Birthday which is either the 1st or 2nd Saturday in June.

POLICE/AMBULANCE/FIRE: Police Tel: 20125-6-7-8; Ambulance Tel: 20251-2-3; Fire Tel: 20044.

TELEPHONES: Arrangements exist for placing telephones on board.

SERVICES: No special services exist e.g. tank-cleaning equipment, discharge of tank washings, compass adjusting, etc. However, arrangements can be made to carry out these services.

SHORE LEAVE: Crew members are permitted to go ashore; there are abolutely no restrictions.

IDENTIFICATION CARDS: Not necessary to show identification cards. However, may be called upon to present seaman's book should the occasion warrant it.

REGULATIONS: Users of the Port should be acquainted with Port Authority Act and Port Regulations. Copies of these can be purchased at the Government printers.

DELAYS: Delays due to unavailability of berth are very infrequent. However, during the months of December to April, 24 hours delay can be expected.

AUTHORITY: Antigua Port Authority, P.O.Box 1052, St. John's, Antigua. *Tel:* 20050, 20053, 21273, 23439. *Telex:* 2179 Anport Ak. *Contact:* G. W. Benjamin, Port Manager.

NOTES

Please also advise Shipping Guides Ltd.

Argentina

Information for ports of Argentina, including drawings of port areas as reproduced in our plan section, have been compiled not only with the assistance of Port Authorities but also with the very kind co-operation of Centro de Navegacion Transatlantica of Buenos Aires to whom we are very much indebted.

Shipowners and Masters wishing to be in possession of more detailed information concerning River Plate ports, Argentina South Atlantic ports and the Strait of Magellan, are advised to obtain a copy of the "C.N.T. Year Book" which is published by Centro de Navegacion Transatlantica, 25 de Mayo 489, Buenos Aires.

N.B. For practical purposes, we have sub-divided information for Argentina into three sections as follows:

I. *GENERAL.*
II. *RIVER PLATE PORTS.*
III. *SOUTH ATLANTIC PORTS.*

I. *GENERAL*

DOCUMENTS: *Required Prior to Arrival:*

(a) At least 24 hours prior to the anticipated arrival of the vessel, a request for berthing must be presented to the General Port Administration in triplicate. There is a special form for this request, indicating the specifications of the vessel and the freight to be handled, for the assignment of the berth.

Upon receipt of the allocation of the berth, the following authorities must be notified:

a. The Chief of the Office of Maritime Health, to whom a request must be made 24 hours in advance for a Health Pratique. This must be made in duplicate, on a special form, to which a copy to the radio request for a Health Pratique must be attached. This is necessary to obtain authorisation to dock in the assigned berth, without a prior boarding by the Health Officer;
b. The Naval Prefecture, to which the request for a Health Pratique must be presented indicating the date and time of arrival from the open seas at the Intersection (in Buenos Aires) and from the intersection at the assigned berth;
c. The Chief of the Office of Overseas and Coastwise Shipping of the Naval Prefecture, to whom a request for pilotage must be made in duplicate, indicating the date and time of arrival, and designation of berth for the vessel.

On Arrival:

Type of Document	Number and Distribution of Documents				
Basic Forms	Prefecture	Customs	Immigration	Health	Total
Additional Documents:					
1. General declaration	1	–	2	1	4
2. Cargo manifest	–	1	–	–	1
3. Crew list	2	–	2	–	4
4. Passenger list	2	–	2	–	4
5. Ship's store list	–	2	–	–	2
6. Crew's effects declaration	–	2	–	–	2
7. Maritime declaration of health	–	–	–	1	1
8. Mail list (a)	–	–	–	–	1
9. Entrance declaration	–	–	–	–	4
10. Standardised manifest cover	–	2	–	–	2
11. Section request	–	2	–	–	2

(a) Delivered directly to Postal Service.

Prior to departure:

Type of Document	Number and Distribution of Documents				
Basic forms	Prefecture	Customs	Immigration	Health	Total
Additional Documents:					
1. General declaration	2	–	2	–	4
2. Cargo manifest	–	2	–	–	2
3. Crew list	2	–	2	–	4
4. Passenger list	2	–	2	–	4
5. Sailing notice	–	–	3	–	3
6. Sailing declaration	–	–	–	–	–

Request for Health Pratique:

At least 24 hours prior to sailing, a request for the Health Pratique must be presented to the Naval Prefecture (4 sets).

Other provisions:

A representative of the Naval Prefecture and a Migrations Inspector board the vessel prior to sailing.

(b) Masters should also have at hand for inspection as required all the various certificates such as Certificate of Registry, Postal Packet Permit, if pertinent, Freeboard, Measurement, Safety Equipment, Radio Installation, Bulk Cargo, Shifting Board Installations or equivalent, and Derat Certificate, or exemption.

None of these documents requires an Argentine Consular visa.

(c) Port Agents should also receive copies for their use and to facilitate any further contacts with the Authorities in case of need. In particular they require a large number of copies of Manifest, and from this they will prepare Spanish manifest, which must be presented to Customs within 48 hours of vessel's entry. A number of extra copies of Crew List are also needed, and 1 extra store list.

(d) Every person figuring on the crew list of a vessel entering an Argentine port must possess documents proving his identity, such as a discharge book, passport or other documents in use in the country of origin, authorised by the competent Authorities.

(e) Vaccination Certificate: Members of crew must be provided with an International Vaccination Certificate, not more than 3 years old, which should be presented on arrival, together with the individual Identity Card. Failing this, the crew will be vaccinated by the boarding doctors.

(f) Identity Cards: On arrival at an Argentine port, Masters of foreign vessels must deliver Identity Cards complete with photographs and finger-prints of each member of the crew, together with 2 copies of Crew List. One set is retained by the Migrations Department, and the other document remains in possession of the individual so that once identified, the crew member may return to the country without the necessity of obtaining new documents. The Master is handed in exchange 1 copy of the Crew List, sealed and signed by the Immigration Officer to enable him to prove at other Argentine ports of call, that he has complied with the corresponding Regulation.

No member of the crew, except the Master, is allowed to land until the Immigration Authorities have checked the crew with the Identity Cards.

Masters may if necessary have the Identity Cards completed with photographs in the Argentine at the first port of arrival. In such cases it is advisable that Agents are advised in advance so that preparations may be made against vessel's arrival. The Authorities will not allow any members of the crew to be disembarked until they have presented their Identity Cards or have had their photographs taken. Agents must present these Identity Cards to the Authorities for stamping within 48 hours of arrival of the vessel. Immigration control is made at whatever hour the vessel arrives, forming part of the normal reception procedure.

(g) The Stores Lists should be completed with great care as a specially trained searchers' brigade has been visiting most ships as soon as Free Pratique is granted.

Particular care must be taken to declare all sizes and measures in the metric system. A plea of a regrettable mistake is not accepted and fines, if legally applicable, can be severe.

FREE PRATIQUE: Vessels take Pratique in port, and may enter and berth if they fulfil the following conditions:

(a) Clean port of sailing and ports of call.

(b) No persons with infectious or contagious diseases or with fever on board.

(c) No cases during the voyage of disease of international concern, or of infectious diseases of an epidemic nature.

To be able to obtain this privilege of taking Pratique in port, it is essential that Masters of all vessels arriving from abroad wireless their Agents, not more than 12 hours before arrival, that vessels under their command are in the sanitary conditions as required by Art. 45 of the regulations to enter port and go alongside.

On receipt of this message, Agents will present to the Health Authorities the request for a berth, accompanied by the telegram sent by the Master, not less than 6 hours (nor more than 12) in advance, detailing sailing port and ports of call, and indicating the approximate hour of arrival. If the wireless message is in code, Agents will give the necessary translation, and be held responsible for any error in such translated version.

The message may be sent either in English or Spanish, and we give specimen texts in both languages, which should be closely followed:

"Addressed to Agency in Buenos Aires (or other port)
solicitamos pedir libre platica telegrafica buque . . . (1), procedente de . . . (2), con escalas en . . . (3), con . . . (4) . . . tripulantes, (5) . . . pasajeros Buenos Aires, (6) . . . pasajeros transito punto. declaro no tener abordo persones afectadas por ninguna enfermedad pestilencial punto estado sanatario bueno.
"captain . . . (7)."

or in English:

"please request Free Pratique ms (or ss) . . . (1), proceeding from . . . (2), with calls at . . . (3), with . . . (4) . . . crews, (5) . . . passengers for Buenos Aires, (6) . . . passengers in transit stop hereby declare that nobody on board affected by any pestilential disease stop sanitary condition good.
"master . . . (7)."

In each case the gaps must be filled in as follows:

1. Port of vessel and flag.
2. Port of commencement of voyage.
3. Full details of all ports of call.
4. Number of crew.
5. Number of passengers for Buenos Aires (or whatever port first entered).
6. Number of passengers in transit.
7. Full name of Master, and also of doctor if there is one on board.

As there have been cases of insufficient information being received from vessels, and "added in" by Agents in the translation, the Authorities have established this standard form which Masters must follow in their messages, and which will accompany the request to the Health Authorities.

This facility now refers to all Argentine ports, the message requesting Free Pratique to be sent to the vessel's Agent at first port of call, after which Free Pratique is automatic in all subsequent Argentine ports. If, however, a non Argentine port is called at en route, Free Pratique must again be requested at what will then become the "first Argentine port".

Agents will confirm to the vessel, by radio, the date and hour of granting of Free Pratique, and with this information in hand, vessel can enter port and go alongside. The Port Authorities will board as soon as the gangway is placed for their routine inspection, and until they have boarded, no one else should be allowed on board.

Vessels which do not meet the sanitary requirements, or come from unclean ports, must fly the yellow flag on entering for the necessary inspection alongside.

River Ports: Vessels proceeding to river ports get Pratique at destination.

Vessels Lightening: Tankers and other ships lightening in River Plate waters, provided they comply with Art. 45, may later continue their voyage and go straight into berth at port of destination to take Free Pratique there.

Sick Crew Members: If there is a sick person aboard, the international sign "W" must be flown on entering, and for Free Pratique, the customary yellow flag.

Masters must report to the boarding Sanitary Authorities those members of the crew having venereal complaints.

Asian and African Ports: In accordance with WHO requests, all vessels proceeding from these ports will be subject to an inspection of all galleys and store rooms.

Infected Ports: Recent Cholera epidemics have caused the Health Authorities to tighten control. All persons on board vessels coming from ports in the countries named below must be in possession of the Anti-Cholera Inoculation Certificate, and from other zones as indicated as International Yellow Fever Vaccination Certificate.

Cholera: The international certificate is valid from the sixth day of inoculation, and for 6 months. The countries at present under control are:

Africa: Algeria, Burkia Faso (formerly Upper Volta), Benin, Cameroon, Chad, Ghana, Ivory Coast, Liberia, Mali, Niger, Nigeria, Senegal, Sierra Leone, Somalia, Togo.

Asia: Burma, India, Indonesia, Malaysia (West), Muscat, Nepal, Pakistan, Philippines, Vietnam.

Epidemics are not officially admitted in the Arab Republic of Egypt and Sudan, but the certificate is advisable as a precautionary measure.

Other zones may be affected at short notice.

Yellow Fever: The vaccination certificate is valid for 10 years, as from the tenth day of inoculation. It is required for all persons coming from:

Africa: Angola, Ghana, Kinshasa, Nigeria, Sierra Leone, Sudan.

South America: Brazil (territories of Roraima and Boa Vista), Colombia (Bolivar, Simiti, Boyaco and Paz de Ariporo).

Inflammables: It should be borne in mind that vessels carrying over 25 tons and under 100 tons of inflammables, explosives, etc., must be inspected in the roads before entering whether they have asked for Free Pratique by radio or not, although this is still advisable as the one inspection is independent from the other.

CLASSIFICATION OF ARGENTINE PORTS: In accordance with Article 31 of the Pan American Sanitary Code, the National Health Department has classified the Argentine ports as follows:

Clean Ports Class A – Buenos Aires, Rosario, Santa Fe, La Plata and Bahia Blanca.

Clean Ports Class B – San Nicolas, San Lorenzo, San Martin, Villa Constitucion and Concepcion del Uruguay.

Clean Ports Under the Vigilance of the Health Department – Mar del Plata, Necochea and Diamante.

A clean port, in general, requires the absence of non-imported cases of cholera, yellow fever, pest, exanthematic typhus or any other contagious disease of a serious epidemic nature, that may be carried through international trade. The clean ports of Class A have competent staff and suitable sanitary equipment, also bacteriological laboratories, registers of disease and deaths, lazarettos, etc.

The clean ports of Class B are those that have not got all the equipment required for Class A.

FLAG: The flag of the Republic is three horizontal and equal bands of which the centre one is white, and the upper and lower, sky blue.

The official colours, flown by Naval vessels and all official entities are distinguished by a rising golden sun in the centre of the white.

All foreign merchant vessels must fly the Argentine flag from the highest mast while in territorial waters and ports, and fly their own national colours from the ensign staff.

PILOTAGE: A. *Ordering:* For Recalada Station, minimum 48 hours in advance, for all other services Agents of the vessels to be piloted must apply, in writing, to the Pilotage Section of the Prefectura at their domicile before 1700 hrs. on the day before the service is to be effected, or on Sundays/holidays, before 1100 hrs. Pilots are obliged to render service in strict turn, in accordance with the register in the zone.

Applications for Pilots presented outside the hours established will be accepted but they will be classed under the headings of "Extraordinary" or "Urgent" applications. Pilots should always be ordered by the Agency; only in exceptional cases may a Pilot be requested direct by a Master, when by reasons of force majeure, or change of destination arrival is unforeseen. Vessels which are unaware of their Agents name may also request a Pilot direct. In such cases the request should be made direct, by radio, to the Prefectura with full explanations of the circumstances.

B. *River Plate Zone:* There are 3 pilot stations in this Zone, namely; Port of Buenos Aires, Intersection and Recalada.

(i) Inwards from sea. Inward vessels for up river ports Buenos Aires or La Plata have to take a Pilot at Recalada, and must give 48 hours advance notice of arrival, both to Agents in Buenos Aires and direct to Recalada, call sign LSR 500 kHz (600 m.) Type A1, A2.

The operator is on duty from 0800 – 1000 hrs., 1200 – 1400 hrs., 1600 – 1800 hrs. and 2000 – to 2200 hrs. Communications can also be made on 462 kHz (649 m.).

The second pilot station is at Intersection Km. 37 measured out of Buenos Aires.

The Recalada Pilot takes all vessels to Intersection only, where another Pilot comes aboard, as follows:

- if bound for Buenos Aires, a Port Pilot.
- if bound for La Plata, a river Pilot to La Plata Roads where a La Plata Port Pilot takes over.
- if bound for upriver, a River Pilot.

(ii) Outwards to Montevideo. Vessels sailing from Argentine Plate ports to Montevideo must take an Argentine Pilot up to Montevideo Roads, not drop him at Recalada.

(iii) Inwards from Montevideo. Vessels arriving from Montevideo come in charge of a Uruguayan Pilot to Intersection, where the second Pilot takes over as above: Uruguayan Pilots, when in Argentine waters are subject to all Argentine laws and regulations.

(iv) Outwards to sea. Outward bound vessels (except for Montevideo) are obliged to disembark their Pilots at Recalada, except when prevented by weather, in which case the Pilot must land at first available port and his travelling expenses back to Buenos Aires are for vessel's account. INSERT. RIVER PLATE PILOTAGE ASSOC. NOTICE

C. *River Parana Zone:* Comprises the River Parana from the port of Parana (Km. 600 from Buenos Aires) down to its mouth, and that part of the River Plate limited to the East by its left bank to Punta Negra (Uruguay), thence to Intersection, to the South by the North bank of the access channel to Buenos Aires Port, to the West the right bank of the River Plate from the entrance to Buenos Aires port to Kilometre 0 of the River Uruguay.

On the River Parana, on distances exceeding 200 km. two special Pilots must be ordered, and therefore there will be 4 Pilots on board (2 special and the 2 on turn), and the vessel has to pay for each of them, i.e. 4 times the tariff.

For distances of less than 200 km., the same ruling applies when continuous navigation is requested, which necessitates the employment of 2 Pilots on turn. However, when only 1 Pilot is asked for, only 1 special Pilot is nominated, if specially asked for, and consequently the tariff is double.

(i) Northbound: Pilots for navigation through this zone go on board, Northbound, at Intersection, whatever the destination. If for Uruguayan ports in the River Uruguay, the Uruguayan Port Pilot comes on board off Parana Bravo.

(ii) From River Uruguay. Vessels from River Uruguayan Ports, either Argentine or Uruguayan, change their River Uruguay Pilot for River Parana Pilot at the mouth of the Parana Bravo. However, if proceeding from a Uruguayan port, it is preferable to send the Parana Pilot to the Uruguayan port, and drop the Uruguayan Pilot off Nueva Palmyra. In certain cases the Argentine Parana Pilot can also come aboard at Nueva Palmyra.

(iii) Inside Parana River. There are 2 stations for despatching Pilots in the River Parana Zone; one at Buenos Aires and the other at Rosario. From the port of Buenos Aires Pilots will be cleared to take vessels to the Northern limits of the Zone, as also for vessels anchored at ports or places South of San Pedro, for any destination.

From the Rosario station, Pilots will be despatched to vessels anchored within the port of San Pedro, and all places to the North of the port, whatever their destination.

At some of the smaller ports in this zone the Prefecture will, to avoid delay to the vessel, authorise the River Pilot to berth the vessel. This request must be made when ordering the Pilot, but Agents at the river port must also apply for a Pilot, and see that he is employed if available.

Draft is ruled by the depth of water at Martin Garcia Bar, which is at present 24 ft. 6 in. at zero. This varies, and from time to time the Prefecture has authorized clearance of vessels up to 27 ft. Occasionally it happens, in spring, that there is less water in the river above Martin Garcia, but the Weekly Bulletin issued by the Authorities covers this and all determining depths on the river routes.

(iv) To Montevideo. Vessels proceeding down river to Montevideo, take a Pilot at Intersection to Montevideo Roads, where a port Pilot boards.

(v) To La Plata. Vessels from up river ports for La Plata drop their River Pilot at Intersection, take another River Pilot to La Plata Roads (optional) and then a Port Pilot there.

D. *River Uruguay Zone:* Comprises the River Uruguay from Concepcion de Uruguay, Km. 188 to its mouth, and that part of the River Plate mentioned under the Parana River Zone. All Pilots for this Zone will be despatched through the Buenos Aires Station.

E. *Bahia Blanca Zone:* Comprises the Bay from a line joining the buoys at Punta Tejada and Punta Lobos, up to the ports. There is no pilot vessel on station. The ordering of Pilots for the Bahia Blanca Zone is effected by the Overseas and Coasting Office at that port. As the official tug for taking Sea Pilots to meet incoming vessels is sometimes out of commission, Masters are requested to advise their Agents of the ETA 48 hours in advance. The cost of a special tug is heavy, and on occasions a saving can be made sharing expenses if the tug can take out Pilots for other incoming vessels, and also embark those from vessels outward bound from Bahia Blanca.

F. *Southern Ports:* South of Bahia Blanca and as far as Rio Grande pilotage is obligatory in port, when a vessel requires a Pilot, application should be made to the Pilots' Office of the Naval Prefecture through vessel's Agents in Buenos Aires with at least 5 days advance notice. They go on board either at Buenos Aires, off Mar del Plata, or at other ports as required, and are authorised to operate in all of the Southern ports: San Antonio del Oeste, Madryn, Commodoro Rivadavia and the adjacent oil berths, Deseado, San Julian, Santa Cruz, Rio Gallegos, San Sebastian, Rio Grande and Ushuaia.

Their duties are to act as Port Pilots for entering, mooring, unmooring and leaving any of these ports.

Vessels from South Atlantic Argentine ports, for Montevideo should pick up an Argentine Pilot from Recalada to Montevideo Roads, but if such vessels pass further than 5 miles away from Recalada Lightship and pass direct to Montevideo Roads, there is no such obligation.

G. *Embarking/Disembarking:* Accommodation ladder. The gangway should be lowered to about 3 m. above the surface of the water, and adjusted in such a way that the Pilot only needs to climb the rope for this distance, in order to step on to the gangway. This rope ladder must have all the steps resting firmly against the side of the ship, in accordance with the requirements of the Safety of Life at Sea Convention. Similarly, the gangway must rest against or be secured to the side of the vessel, and Pilots may refuse to board if these conditions are not complied with.

RADIO: All times are given in GMT unless otherwise specified.

Storm Warning, Met. Situation, Weather Forecasts and Notices to Mariners: Are transmitted in clear (A1) in Spanish and then English, daily, from the following stations:

General Pacheco	LSV	3220.5 kHz	0.5 kW 0130 hrs.	Storm warning
Buenos Aires				Met. resume
	LSV 2	5907.5	0.5 kW	Forecast
	LSV 4	12100	1 kW	
	LSV 5	17520	1 kW	

and again at 1600

while LPD 5 transmits the same information on 512 kHz (5 kW) at 0148 and 1630 hrs.

The weather forecast covers the zone from Rio de Janeiro to Drake Strait and is valid until 1200 hrs. of the next day. The word "nil" is used if there is no information to report, as for example in storm warnings.

Vessels at sea can request a forecast and state of the weather at any time from Meteoro Baires, through Pacheco – LPD on 4177, 4187, 8354, 8374, 11531, 12561, 16708, 16748, 22220 and 22270 kHz.

Radio Trelew	LPZ	20	527 kHz	3 kW	at 1730
Radio Comodoro Rivadavia	LPX	2	474 kHz		at 0400 and 1800 as above.

Vessels at sea in this area can request a forecast from Meteoro Comodoro Rivadavia through LPX 2.

Notices to Mariners and Urgent River Notices: Are transmitted in Spanish and repeated in English by Radio Pacheco and Radio Comodoro Rivadavia.

Radio Pacheco	LPD 5	512 kHz	5 kW	A2 at 0030 hrs. Plate Area
	LPD 6	4268 kHz	0.25 kW	A1 at 1230
Comodoro Rivadavia	LPX 2	474 kHz	3 kW	A2 at 1330 2000
	LPX 27	4428.6 kHz	0.5 kW	A3 at 0400 0800 1200 2100

This station only reports on Lat. 42° S. to 52° S.

In both cases messages are repeated twice at intervals of 1 minute at the times indicated. Notices are repeated daily during 6 days from publication, preceded by the signal TTT, followed by the number of the notice, the letter R and then the text in this sequence:

Zone, sea, river, province, locality, etc.
Lat. and Long. if necessary.
News in question.
Sign off with SHN to indicate the authority (Servicio Hidrografia Naval).

If there is no notice to transmit, the stations will transmit "no hay avisos para navegantes", "no notices for mariners".

Notices to Mariners, and Other Items, in Spanish Only: Notices to Mariners and other special information are given in Spanish only as follows:

Rosario – LSQ 38, 477 kHz, A1, at 1305 hrs.:

Depth of water in the Parana River from Los Pajaros to Los Ratones and also the minimum depth between Santa Fe and Rosario.

Concepcion del Uruguay – LSQ 57, 477 kHz, A1, 0.5 kW at 1300 hrs.:

Information on the Uruguay River from San Javier to Gualeguaychu.

Buenos Aires South Dock (Darsena Sur) – LSQ 9, 477 kHz, A1, 1.5 kW at 0400, 0500, 0600, 0700, 0800, 0900, 1000, 1100, 1200, 1300, 1400, 1500, and 1545 hrs. except on Sundays and holidays.

Depth of water on the gauge at Riachuelo.

Buenos Aires Central de Comunicaciones (Prefectura Naval Argentina) – LSQ 4, 524 kHz, A2, from 05 to 10 minutes each hour:

Depth of water indicated by the semaphores at Puerto La Plata and Riachuelo, and of the El Codillo Zone of the Punta Indio Channel referred to zero on the Oyarbide Tide Gauge which is between pairs of Buoys 24 and 25 in the Main Channel, and the new tide gauges referred to under "Buenos Aires", Tidal Signals.

Buenos Aires, Meteo (All A1) – LSV 3220.4; LSV 2, LSV 6, 5907.5; LSV 4, 12100; LSV 5, 17520 kHz at 1705 hrs.

Depth on the River Plate, River Parana, River Paraguay and River Uruguay zones. Buenos Aires, Radio Nacional LRA 870 kHz, A3, at 0100, 1100, 1500, 1800 and 2100 hrs.

Depths of water and met. forecast for River Plate Zone, this station also transmits tidal forecasts at 0100, 1000, 1315, 1600, 1900 and 2200 hrs.

Intersection River Plate – LOI, 524 kHz, A2:

Continuous information on local depths of water, on request.

Recalada – LSR, 524 kHz, A1:

Same as Intersection.

Buenos Aires, Central de Comunicaciones (Navy) – LOL 457.2, 2162.5, 4856, 8030, 13101, 17180, 22840 kHz, A1, at 0230, 0300, 1300, 1330, 1930 and 2030 hrs.

Urgent Notices to Mariners, and Notices to Mariners covering the Argentine Coast and river systems.

Santiago River (La Plata) – LOM, 524 kHz, A2, from 05 to 10 minutes each hour:

Depth of water on the semaphore at La Plata.

From 10 to 15 minutes each hour:

State of tides in El Codillo Zone of Punta Indio Channel, referred to zero on the Oyarbide Tidal Gauge (between pairs of Buoys 24 and 25).

All Atlantic ports also transmit local Notices to Mariners and weather forecasts in Spanish, but the call signs and frequencies are indicated under each individual port, but between the powerful stations at Pacheco (Buenos Aires) and Comodoro Rivadavia, the whole coast is covered by the regular information given in both Spanish and English.

Facsimile Reports: Buenos Aires also transmits facsimile reports, of which the following correspond to surface forecasts, valid for 24 hours, and weather on Mercator projection.

		0800/0815 and 2000/2015 hrs.
From station	LRO 69	5185 kHz
and	LRB	10720 kHz

both of F4, white and black with a variation in frequency of plus 400 minus 400 – 5 kW and referred to observations made 8 hours earlier.

From the Antarctic, the Argentine Met. Station at the South Orkney Islands transmits an analysis of the Atlantic area at 0300 and 1700 hrs. from LOK on 4250 kHz and 13051.5 kHz.

Traffic Control and Safety at Sea: The Prefectura Naval Argentina, in charge of shipping activities including safety at sea, maintains a control centre at Buenos Aires, and another at Mar del Plata (where several hundred fishing vessels operate).

Objectives are to prevent collisions at sea or groundings and to keep a safe, expedite and orderly flow of traffic, as well as to alert safety and salvage systems when vessels need assistance.

A – The Controlled Area, from Buenos Aires, covers from parallel 57° W passing through pair of Buoys No. 21 in the Main Entrance Channel to a line from San Isidro (Buenos Aires) to the mouth of the Parana Guazu River.

The Centre is on permanent duty in the following VHF-FM channels

16 frequency	156.8	MHz for calls, assistance, urgency and safety.
12	156.6	notices to mariners.
14	156.7	annex to Channel 12.
6 and 8	156.3/4	bridge to bridge use.

Information all vessels in the area, both foreign and national, must inform the Centre of the following:

1. On entering the systems.
2. On leaving the systems.
3. On crossing Km. 57 in the main channel.
4. On arriving at Intersection.
5. On crossing Km. 11 of the Access Channel to/or from Buenos Aires.
6. When anchoring, mooring or unmooring.

In each case, except 2 and 6, they will give the estimated hour of arrival at the next point en route.

Vessels will also report, on Channel 16, the following:

(a) Accident or fire on board.
(b) Sighting another vessel in apparent difficulties.
(c) Sighting any dangerous obstacle to navigation.
(d) Any serious reduction in visibility.

They will also advise, on Channel 12, as soon as possible, if any mark, light or navigational aid is damaged, missing, functioning badly or evidently out of position. Vessels must keep constant watch on Channel 16 from entering the zone to leaving it, and immediately after using any of the other channels will continue to listen on Channel 16. If, for any reason, this is not possible, they will report this to Control Office by Channel 12.

The Centre transmits as routine information urgent Notices to Mariners, ruling weather conditions every 4 hours from 0000 hrs. and depth of water at El Codillo, La Plata Port, Riachuela and Martin Garcia Bar 5 minutes after every hour.

Also tide and met. forecasts at 0900 and 1500 hrs. Storm warnings, visibility reports and obstructions in channels will be transmitted immediately on being reported, and then included in the next routine transmission.

Information can be requested from the Centre at any time.

The Administration procedure is that figuring in the International Union of Telecommunications and/or the Manual for the Use of Mobile services.

Time used in this service is local Argentine time, i.e. GMT minus 3 hours.

Language: Personnel on duty in the Control centre will use only Spanish.

If necessary recourse can be had to the Code groups in the International Signal Code in use, and the spelling and lettering tables therein, or to Code Q.

B – Mar del Plata Centre controls the area from 35° 30′ S. to 41° S. In this zone the system is voluntary for foreign flag vessels. The Centre operates on the following frequencies:

	Coastal Frequency						Ship Frequency	
One:	Type A3	H	2182	kHz	LSO	20	2182	a
			2100		LSO	69	2100	d
			4409.4		LSO	70	4410.8	f
			8754.4		LSO	71	8220.4	g
			13189.5		LSO	72	12410.5	i
	A1	A2	500		LSO	20	500	
	A1		437		LSO	20	437	
			4325		LSO	21	4325	
			12728		LSO	57	12728	

Two: The Mar del Plata Centre maintains a continuous listening watch on:

A1	A2	500 kHz	LSO	20
A1		4325	LSO	21
A3	H	2182	LSO	20
		4110.8	LSO	70
		8220.4	LSO	71

and also listens from 00 to 05 minutes each hour on A1 12728 kHz and from 45 to 50 minutes every hour on A3 H on 2100 and 12410.5 kHz.

Vessels can use any of the frequencies listed under "one" after calling any of the frequencies in "two". In radiotelephony, except for frequencies 2100 kHz and 2182 kHz traffic will be routed in semi-duplex as per frequency pairs as indicated in "one" f, g and i.

In this are Notices to Mariners and Safety information will be transmitted as follows:

A3 H	2100	8754.4	0005 and 0505	Argentine time (GMT −3)
	4409.4	7854.4	0805	Argentine time (GMT −3)
	4409.4	13189.5	1205 and 1605	Argentine time
A1	437	4325	0100 and 0600	Argentine time
	4325	12728	1300 and 1900	Argentine time

Storm warnings or other urgent information will be transmitted in A3H and A1 on 500 kHz and 2182 kHz.

Information: Vessels on entering or leaving the zone will indicate:

1. Position, course, speed, whence proceeding, whither bound.
2. Sailing from or entering ports in the area.
3. Report geographical position every 12 hours counted from time of first advice, giving course and speed.

4. Any change in course or speed which alters the normal route and time at which it occurred.
5. Anchoring in or leaving the area.

Happenings: All vessels will immediately advise the centre of:

(a) Accident or damage to own or another vessel.
(b) Sighting any object dangerous to navigation.
(c) Any serious reduction in visibility, or unfavourable meteorological conditions.
(d) Having observed if any lighthouse, beacon, buoy, etc., is not working properly or is out of its correct position.

Language and Time: As in River Plate Centre.

Time Signals: Time signals are transmitted from LOL Buenos Aires as follows: frequency 475.5, 2162.5, 4856, 8030, 13101, 17180, 22840 kHz, A1. at 0100, 1300 and 2100 hrs. GMT, using the modified modern American system, with dots every second from 54.30 to 54.50, a dash of 8 seconds ending with 4 half-second dashes, every minute to the hour, ending with a dash.

LOL also transmits on 5, 10 and 15 MHz simultaneously in A1, A2, A3. Carrier waves are modulated in 1000 and 440 kHz alternately.

Signal consist of dots every second, omitting the 59th second, and with 1 second interval before the next period commences. Transmissions is from 0800 to 0900, 1100 to 1200, 1400 to 1500, 1700 to 1800, 2000 to 2100, and 2300 to 2400 hrs. Argentine time (GMT minus 3 hours daily), except Sundays and national holidays.

At the end of each period of transmission the call sign is given in morse, and before each period the words Observatorio Naval Argentino are followed by the hour and minute corresponding to the commencement of the next signal.

Modulation on 440 kHz corresponds to the note LA of the fifth octave in the musical scale.

D/F BEACONS: A number of radio beacons specially for shipping have been installed down the coast, in addition to the airbeacons which can also be used, though with less accuracy.

There are 8 beacons, and 18 aerial beacons in use as follows:

Practicos Recalada – Lat. 35° 10′ 06″ S., Long. 56° 15′ 00″ W. range 150 miles (on the lightship) frequency 320 kHz, A2.

Signal PR once 9.7 secs., followed by silence 2.3 secs., a long dash 17 secs., silence 1 sec. dash 17 secs., silence 1 sec. PR repeat the cycle, PR again and final silence 14.3 secs., making a period of 120 secs. (2 mins.).

In good weather there are 2 transmissions every 2 minutes, from 02 to 08 and 32 to 38 minutes each hour.

In fog, one 2-minute transmission every 4 minutes from 02 minutes.

Punta Mogotes – Lat. 38° 05′ 32″ S., Long. 57° 32′ 28″ W. range 120 miles. (On the lighthouse) frequency 295 kHz, A2.

Signal PM once 9.8 secs., followed by silence 2.2 secs., dash 17 secs., silence 1 sec., dash 17 secs., silence 1 sec. PM and repeat cycle. PM again, final silence 14.2 secs., total period 2 mins. of the hour.

In good weather 2 transmissions as from 06 and 36 minutes of the hour.

In fog, continuous commencing on the hour.

Bahia Blanca – (On the Recalda Lighthouse) Lat. 38° 59′ 33″ S., Long. 61° 15′ 38″ W. range 350 miles frequency 310 kHz, A2, 0.2 kW.

Signal BB 9.8 secs., silence 2.2 secs., dash 17 secs., silence 1 sec., dash 17 secs., silence 1 sec. BB and repeat cycle, then BB and final silence 14.2 secs., total period 2 mins.

In good weather 2 transmissions 4 mins. apart from 04 and 34 minutes after the hour.

In fog, 1 transmission every 4 mins. from 04 each hour.

Bahia Blanca – (On the Light Buoy El Rincon) Lat. 39° 23′ 12″ S., Long. 62° 00′ 48″ W. range 200 miles, frequency 310 kHz, A1 and A2, 0.15 kW.

Signal RN once, 7 secs., silence 2 secs., 2 long dashes 41 secs., silence 2 secs. RN repeat cycle, but 1 sec. first silence after signal then as before repeat RN and final silence 250 secs., total 6 mins.

In good weather, 2 transmissions from 02 and another 2 from 32 minutes of each hour.

In fog continuously from 02 each hour.

Bahia Blanca – (On the Segunda Barranca Lighthouse) Lat. 40° 47′ S., Long. 62° 16′ W. approx. range 200 miles, 310 kHz, A2.

Signal SB 9.7 secs., silence 2.3 secs., dash 17 secs., silence 1 sec., dash 17 secs., silence 1 sec. SB and repeat cycle, repeat SB final silence 14.3 secs., total period 2 mins. In good weather, 2 transmissions every 30 mins., at 00/02 06/08 30/32 and 36/38 minutes on the hour, in fog, every 4 mins. 00/02, 06/08, etc.

Punta Delgada-Los – Lat. 42° 46′ 00″ S., Long. 63° 38′ 00″ W. range 200 miles, frequency 315 kHz, modulation 1000 kHz modulated A2 signal PD 9.7 secs., silence 2.3 secs., long dash 17 secs., silence 1 sec., long dash 17 secs., silence 1 sec. PD repeat cycle, PD final silence 14.3 secs. total period 2 mins., good weather 4 transmissions every hour at 04, 10, 34 and 40 minutes after the hour. In fog, 2 mins. transmission and 4 mins. silence from 04 of the hour.

San Gregorio – Lat. 45° 01′ 30″ S., Long. 65° 37′ 51″ W. range 200 miles, frequency 295 kHz, A2, 2 kW.

Signal IL 9 secs., silence 3 secs., long dash 17 secs., silence 1 sec., long dash 17 secs., silence 1 sec., IL repeat cycle. IL final silence 15 secs., 2 mins. period in good weather 4 times every hour, 2 mins. each from 00, 06, 30 and 36 after the hour.

In fog, one 2 minute transmission and 4 silence, from 00 in the hour, but fog transmission temporarily suspended.

Cabo Blanco-Loa – Lat. 47° 12′ 12″ S., Long. 65° 44′ 33″ W. range 200 miles (on the lighthouse) frequency 295 kHz, A1, A2, 0.15 kW signal CB 12 secs., 2 long dashes 37 secs., CB repeat cycle CB final silence 250 secs., total period 6 mins. Good weather, twice from 08 and twice from 38 minutes after the hour; fog, continuously from 02.

Temporarily out of service.

Medical Advice: Medical consultations can be made, without charge, from vessels at sea with urgent illness or accidents on board. Messages should be brief, but clear and concise, describing the symptoms of the illness with all possible details, including age and sex of patient and informing what first aid equipment is available on board.

For priority, messages should be preceded by the urgent signal XXX and be signed by the Master of the vessel.

The Medical section of the International Signals Code, 1931, Volume 2, can be used, as also clear language if it is necessary to amplify the message.

Messages should be radioed to "Consulta Radiomedica" followed by the name of the coastal station used.

All consultations are gratuitous, they must be composed in Spanish, and indicate in this order:

Sex; Age; clinical antecedents; symptoms leading to the consultation; probable cause of the illness or conditions in which accident occurred; any other data which could assist diagnosis and facilitate treatment, such as pulse rate, temperature (in Centigrade) character and appearance of the wound, etc., and informing what first-aid equipment is on board.

The following stations at Buenos Aires give continuous service for this purpose:

LPD	4	44.5	kHz	A1	A2
LPD	68	4268	kHz	A1	
LPD	86	8646	kHz	A1	
LPD	32	13002	kHz	A1	
LPD	46	17045.6	kHz	A1	
LPD	91	22419	kHz	A1	
LPD	44	4434.5	kHz	A3	
LPD	8	8811.5	kHz	A3	
LPD	9	13180	kHz	A3	

TUGS: Use of tugs compulsory. Exceptions may be made to vessels with bow thrusters.

Working Hours at Ports of the Interior: The working hours for towage services during the week are from 0700 – 1700 hrs. Saturdays 0700 – 1100 hrs.

Ordering of Towage Services: For a service to be performed during working hours this must be ordered 3 hours beforehand, and up to 1600 hrs. on working days and 1200 hrs. on Saturdays. In Bahia Blanca and other ports this is up to 1100 hrs.

Commencement of the Service: There is 30 mins. grace without surcharge.

Overtime Rates: Working days from 1900 – 0700 hrs., 40 per cent. extra. Saturdays 0000 – 0700 hrs., 40 per cent. extra. At Buenos Aires and Bahia Blanca 1300 – 2400 hrs., 40 per cent. extra. At other ports 1100 – 2400 hrs., 40 per cent. extra. Sundays and Holidays 0000 – 2400 hrs., 80 per cent.

Surcharges for Delays: These will be applied per hour or fraction of about 15 mins.

Cancellations Without Charges: In Buenos Aires it is possible to cancel a service 3 hours beforehand, and at Bahia Blanca 2 hours beforehand during working days. At other ports 1 hours' notice is required.

Cancellations With Penalty: There is a charge of a minimum of 1 hour for services ordered during working days and cancelled. On Saturdays, Sundays and Holidays, the minimum charge is 2 hours.

The Following Beacons, all on A2, may be of assistance

		Lat.	*Long.*	*Freq.*	*Time*
Bs. Aires, Aeroparque	OP	34° 31′ 18″ S.	58° 29′ 00″ W.	260	kHz continuous

LOAD LINE: Vessels are permitted to load to their Summer marks all year round at all River Plate Ports as well as Atlantic ports as far South as Cape Tres Puntas; inclusive (Lat. 47° 06′ S., Long. 65° 05′ W.) and provided they are Northbound or Eastbound. All ports in the River Parana, River Uruguay and the River Plate proper are fresh water.

With regard to Loaded Draft, the mean draft and not the maximum must be taken into account, and this should not exceed the Load Line marks.

On the mean draft an allowance will be made equal to the weight of the fuel vessel will consume until it reaches the Sea from up-river ports. No allowance is given to vessels leaving Buenos Aires or La Plata.

LIGHTENING ANCHORAGE: Vessels wishing to lighten cargo and perform topping-off operations may do so in the following positions:

Position No. 1	Lat. 34° 42.0′ S.	Long. 57° 57.2′ W.
Position No. 2	Lat. 34° 44.1′ S.	Long. 56° 48.0′ W.
Position No. 3	Lat. 34° 46.0′ S.	Long. 56° 48.0′ W.
Position No. 4	Lat. 34° 43.9′ S.	Long. 57° 57.2′ W.

For ships performing such operations in the River Parana, after passing Martin Garcia, the respective zone is between Km. 172 and Km. 173 in the River Parana Guazu, outside the channel. It is forbidden for ships not lightening or topping off to anchor at these points.

SPEED: Maximum Speed in Ports, Channel and Rivers: Vessels operating in the proximity of an open port, close to quays or loading places where other vessels or barges are operating, will reduce speed to a maximum 6 knots.

In particular this refers to

Rosario	between Saladillo and Punta Barrancos (La Florida)
San Nicolas	between Km. 347 and 351
Ramallo	between Km. 322 and 326
Zarate	between Km. 104 and 111
Campana	between Km. 96 and 98

FUMIGATION: *(a) Exemption:* Vessels of foreign registry will be fumigated when proof is not shewn that fumigation has been effected by competent authority, and in a port duly authorised by the International Office of Public Hygiene, or that they have been exempted from such operation by the Health Ministry at authorised ports, within the last 6 months. Vessels arriving with an expired Fumigation or Exemption Certificate, will be fumigated except where a request of 1 month's grace is made to allow vessel to return to home Country or a request is made for an inspection. Should the vessel be in either case in a sanitary condition and have *no trace of rats,* an Exemption Certificate will be granted.

(b) Certificates are of no value if vessel is not in good sanitary condition. The Authorities will not recognize the validity of any Certificate or issue any Exemption Certificate to those vessels which in the opinion of the National Health Ministry, after inspecting the vessel, are not in a good sanitary condition. Both cyanide and sulphur (Clayton process) Fumigation Certificates are accepted by the Health Ministry.

(c) Permit to Commence Loading of Vessels Ordered to Fumigate: No vessels which have had an annotation on their Free Pratique Certificate to the effect that they must be fumigated or inspected, are permitted to commence loading before these requisites are complied with. To this effect the necessary advice will be passed by the Customs or Port Authorities to the Health Ministry for intervention.

(d) Ports Where Vessels can Fumigate: The sulphur fumigation is exclusively effected by the Health Ministry at the ports of Buenos Aires, La Plata and Rosario. The cyanide process is effected by private companies at practically every port of the Republic, provided sufficient notice is given, as at some ports it is necessary to bring the equipment from other ports.

Masters are recommended to ensure that their vessels are in good sanitary condition and free from traces of rats on arrival. Even although vessels may be given a Free Pratique Certificate, this does not always free vessel from fumigation if on arrival at port of loading, the Authorities discover traces of rats on board. The granting of Free Pratique has, in fact, no relationship to the granting of fumigation exemption, and permission to load.

(e) Weevil: The National Grain Board is very strict on inspecting for weevil on board vessels destined to load grain.

TIDES: Following data indicates the tidal range at Spring and Neaps in feet and tenths of a foot indicating the Argentine chart number on which the respective datum is given, and the height to be added to or deducted from that datum at the various ports, which are given in North/South rotation.

	Springs	*Neaps*	*Chart number*
Martin Garcia	2	0.4	70
Buenos Aires	3.2	0.8	176

DRY DOCKS AND FLOATING DOCKS: There are 2 dry docks at Buenos Aires and 2 at Bahia Blanca, and 6 floating docks at Buenos Aires, with smaller ones available at Rosario and Corrientes.

The 4 dry docks are under the control of the Ministry of Marine as are some of the floating docks, but all are available for merchant vessels, and private repair companies are permitted to carry out work in these Government docks.

(a) Applications for entering either Dry or Floating Docks are the same: Name and class of vessel; flag, characteristics; NRT as per Register; nature of repairs; estimated stay in dock, date when ready to enter dock; vessels' Register number and plans of the hull for docking.

Tank vessels must also supply a "Gas Free" certificate.

(b) Buenos Aires: The 2 dry docks are at right angles in the North Basin, on the Northeast side and have the following dimensions:

No. 1 493 ft. (150 m.), breadth at top of entrance 66 ft. (19.75 m.) gradient 1: 300.

No. 2 590 ft. (180 m.), breadth at top of entrance 92 ft. (22.10 m.).

Vessels with large beam can only enter if their draft does not exceed 20 ft.

(c) Bahia Blanca.—The two dry docks are in the Naval Dockyard base.

No. 1 is 705 ft. (215 m.) in length, width on sill 72 ft. 6 in. (22.12 m.).

No. 2 is 672 ft. 6 in. in length (closed) (205 m.).

(d) Floating Docks: There are 7 in Buenos Aires, as follows:

	Lifting Capacity	*Length*		*Internal Breadth*	
No. 1	3,500 tons	413′	126.10 m.	56.0′	17.10 m.
No. 2	1,500 tons	300′	91.50 m.	41.0′	12.50 m.
No. 3	750 tons	216′	65.79 m.	44.0′	13.32 m.
No. 4	750 tons	216′	65.79 m.	44.0′	13.32 m.
No. A	12,000 tons	565′	172.50 m.	86.0′	26.20 m.
No. B	2,800 tons	397′	110.00 m.	60.7′	18.05 m.
No. C	1,000 tons	246′	75.00 m.	51.4′	15.68 m.

All supply cranes, fire fighting equipment, compressed air, water pumps, electric supply – 380 V. and 110 V. AC or 220 V. DC. Telephone, sanitary discharge for ship's bilges and sanitary services on the dock.

FUEL: Bunker stocks of diesel oil are available in bond at Buenos Aires, Bahia Blanca and Montevideo, thus these ports are the most convenient for taking Diesel bunkers. It is available at other ports, but has to be transported by lorry from Buenos Aires. Lorries are unable to go alongside at some of the elevator berths, and there are no oil barges at Rosario, San Nicolas, or Necochea.

At Buenos Aires there are barges of 150 to 550 tons with tanks to carry all classes of oil. If smaller quantities are required transportation can be effected by lorries from the tanks, the cost being cheaper than barging.

Oil can be transported by lorry to any berth in the port of Buenos Aires.

STEVEDORES: Working hours are officially 0700 – 1300 hrs.; 1300 – 1900 hrs.; 1900 – 0100 hrs. and 0100 – 0700 hrs. From 1900 – 0100 hrs. and 0100 – 0700 hrs. there is a 100% surcharge on Mondays to Fridays, or 200% on Saturdays, Sundays or holidays. On Saturdays the second shift (1300 – 1900 hrs.) and on Sundays/holidays the 2 day shifts (0700 – 1300 hrs. and 1300 – 1900 hrs.) are paid with 100% surcharge.

In Parana River ports, shifts start and finish 1 hour earlier, except at Santa Fe.

It is forbidden for a man to work more than 1 shift daily, unless no other labour is available at the halls, and the Port Captain agrees.

Use of mechanical appliances is encouraged, and when the Port has not sufficient available, the Stevedoring companies hire this to the vessel to speed up operations.

Stevedoring Damage: It is essential that Master and/or Agent leaves on immediate record any damage done to vessel or cargo by the stevedores, in order to assist in recovering the cost of repairs.

Holidays and Non-Working Days: National Holidays: January 1st (New Year's Day), Good Friday, May 1st (National Workers' Day), May 25th (National Independence Day), June 20th (Argentine Flag Day), July 9th (Independence Day), August 17th (Death of Gral. San Martin), December 25th (Christmas Day).

Non-Working Days: Maundy Thursday, December 8th (Catholic Holiday).

Drinking Water. A good supply of drinking water should be available on board, and in hot weather this must be iced.

GRAIN LOADING: On a North/South basis. See Table A overleaf.

WATCHMAN: The use of watchmen is obligatory in all ports, and they are the auxiliary delegates of the Maritime Authority. One man per gangway must be placed. Masters may also place a crew member on watch, but in ports where there is an official service the official watchmen must be used. His duties are to control access to the vessel, control the shipment or discharge of prohibited articles, to revise all packages brought on board or landed, see that the moorings are in order, that the gangway is duly illuminated and that rat guards are in place.

WHARF CLEANING: It is the Master's duty to see that the wharf is properly cleaned up before his vessel vacates a wharf. Port Authorities can do this, and charge the Agents of the vessel last berthed with the cost.

HATCHES: Opening and closing normally carried out by the stevedores in each port. All hatches must be kept closed when vessels are not operating, and when leaving port, must be well battened down and covered with two tarpaulins.

RAT GUARDS: All moorings must be provided with regulation pattern rat guards, 80 cm. diameter.

As part of the rat control gangways must be painted white and fully illuminated at night. Fines are imposed for non-compliance.

FENDERS: At all ports, vessel must be boomed off the quay at least 1 m. 50 cm. Any type of fender meeting this requirement will do, but at San Nicolas, special fenders are supplied.

NIGHT LIGHTS: All vessels when made fast must illuminate that side towards the water with at least one screened light. When vessels are double berthed, the one lying second off must comply with this rule. Similarly, vessels moored with either stern or bows to shore must show a light over the anchor chain to seaward. Vessels laid up or being dismantled are exempt from this, but owners are responsible for any resulting damages.

DESTINATION CHANGE: When at sea if there is any change in destination, within the Argentine, Masters must report this by radio to the Marine Prefecture, indicating the reasons for such change.

DESPATCHES: Once despatch is granted, this is valid for 12 hours only, after which period new despatches must be requested, and reasons given for not sailing. In ports where local conditions impose a longer limit, the maximum allowable is 30 hours.

SEAMEN'S INSTITUTES, HOME AND CHURCHES: There is one hostel for seamen, and five institutes operating in Buenos Aires and one in Rosario, as follows:

Stella Maris (Apostleship of the Sea)
Independencia 20 (corner Ing. Huergo). Tel: 33-0832
Open every day. Vessels visited daily. Hotel – Rooms, Meals, Bar. Information – Port Office, Books, Money Exchange, Souvenirs. Amusements – Dancing, table tennis, billiards, television, excursions. Salon Dance – Wednesdays, Saturdays and Sundays.

Religion – Mass every Sunday at 1930 hrs., and in the morning on board ship by request. Confession at all times. Night prayer for all seamen.

Football games arranged. Books freely exchanged.

The Missions to Seamen
Cochabamba 223. Tel: 33-0326
Open daily from 1900 hrs., with dances on Tuesdays, Thursdays and Saturdays from 2100 hrs. Shop, post office, billiards (three tables), snooker, table tennis, television, bar (beer, no spirits), etc.

There is a service of Holy Communion at 1900 hrs. every Sunday. Football games and excursions arranged. Vessels are visited.

Sjomandskirke
Ing. Huergo 1263. Tel: 33-3861
Open daily from 0800 hrs. Library, billiards, table tennis, sightseeing visits arranged, as also football matches. Vessels visited every day.

Church services every first Sunday at 1030 hrs.

Axel Johnson Minne till Svenska Sjoman
Juan de Garay 80. Tel: 33-7304
Open daily from 1800 hrs. Library, sightseeing arranged.

Details of religious services on board of Swedish Church in Azopardo 1428 (round the corner from the Johnson Foundation).

Dansky Kirke
Carlos Calvo 257. Tel: 33-9154
Danish seamen are welcome at the Norwegian Centre, while at the Church the office is open every Tuesday from 2000 hrs. to 2200 hrs. for assistance, and the Young People meet on Tuesdays and Fridays from 2000 hrs. to 2200 hrs., all being welcome.

Church services are at 1000 hrs. every Sunday, and on third Sunday in every month at 1600 hrs.

Finnska Sjomens-Kyrken. Suommerimien Kirkko
San Juan 234. Tel: 33-6797. Open daily 1800 hrs. to 2200 hrs.
Rosario: The Missions to Seamen at Sarmiento 209.

THE RIVER PLATE

The River Plate, or Rio de la Plata, is formed by the rivers Parana and Uruguay, and is one of the greatest river systems in the world, the Basin covering nearly four million square kms. It is some 150 miles long, and the mud and sand in the waters give a thick brownish colour. Tides are small, but the water level is subject to frequent and sudden fluctuations on account of the weather.

The official depth at zero of the long entrance channel from Recalada to the Port of Buenos Aires is presently (this varies slightly from time to time):

	Width of Channel m.	Depth ft. in.	Alternative Width m.	Depth ft. in.
Punta Indio	110	28 6	200	22
and of the access channel from the Roads (Km. 37 to Km. 9.8)	50	29	80	27
North Channel (Km. 9.8 to Anteport)	50	25	80	18 6
South Channel (Km. 8.2 to Boca)	30	23	50	21 6

From Recalada Lightship West the Bay is all fresh water.

Vessels drawing 31 ft. or even 32 ft. (fresh water marks) frequently navigate safely. The tidal rise and fall is from 3 ft. to 5 ft., but the state of the river is influenced to a far greater extent by the force and direction of the wind. There is no guarantee that a vessel drawing 31 ft. may not be caught by low water caused by a North wind, which carries the water seawards. Just as a North wind will reduce the depth of water, so a Southerly or Southeasterly wind raises it considerably, often several feet.

Winds from S.W. to E.N.E. through North make the level drop, North being the strongest in this sense.

E.N.E. to S.S.W. winds make the water rise, S.S.E. having the greatest influence.

Between S.W. and S.S.W. or N.E. and E.N.E. the influence of the winds is much less.

Vessels often touch bottom, or even bump slightly, but as the bed of the river is soft mud and silt, one never learns of these ships reporting damage. The Plate Pilots, of course, warn Masters of this not infrequent occurrence. The docks and basins in the port also have soft mud bottoms, except for the entrance between North Basin and Dock 4, and it is quite customary to see vessels lying safely aground when loading or discharging.

RECALADA LIGHTSHIP: Vessels enter the Plate system passing the Recalada Lightship, 16.8 miles South of Montevideo at Lat. 35° 10′ 06″ S., Long. 56° 15′ W. At this point it is obligatory to take an Estuary Pilot, if proceeding West, and a minimum 48 hours notice must be given both to Agents in Buenos Aires and to Recalada Lightship.

The Recalada Lightship and pilot station is a small vessel, whose hull is painted in vertical black and white stripes, 2 m. wide, and with an orange/red housing.

Apart from the usual pilot lights (white above red) there is a lantern on the foremast, with a white flash every 8 seconds (1 second light; 7 seconds eclipse) placed at 19 m. above river level, range 12 miles.

The lightship also has a fog signal, period 30 secs. sounding for 3 secs. and silent for 27 secs.

Radio call sign is LSR on 500 kHz type A1, transmitting in clear every hour from 05 to 08 and 35 to 38 minutes. Operator on watch 08–10, 12–14, 16–18 and 20–2200 hrs., also listens on 462 kHz using 437 kHz as working frequency. For ship to ship 468 kHz or 156.3/156.4 MHz. 2182 kHz and 2065 kHz are used in A3 H/J as well as 4125/4239.5 in A1 or 3860.5 in A3, for P 3 156.8 or 156.7 MHz.

Punta Indio Channel

The term "Adjacent Zone" comprises the zones of the main channel of the River Plate which extends 500 m. to either side of the buoy at Km. 57 and Buoy No. 30 at Punta Indio Channel, likewise 300 m. on each side, outwards, of the pairs of buoys marking the Punta Indio Channel between Buoy Nos. 30 and 1.

Vessels navigating in these zones have equal privileges to those navigating the Punta Indio Channel, which comprises the zone of the general channel of the River Plate between Buoy No. 30 and the Recalada Lightship following the route buoyed for ocean going vessels by the Ministry of Public Works.

Vessels drawing over 24 ft. entering or leaving the River Plate are obliged to traverse the Punta Indio Channel from Buoy Nos. 1 to 30, and the Adjacent Zones existing between Buoy No. 30 and Km. 57.

Westbound traffic, after passing Buoy No. 30 will leave Buoy No. 31 on the port side, and continue along the North adjacent zone to Km. 57.

Eastbound, when water level permits, after passing Km. 57 will keep to the South adjacent zone as far as Buoy No. 32, then to the North leaving Buoy No. 31 to starboard and then heading for pair of Buoys No. 30. Should the water level not allow this at Km. 57, vessels will follow the North adjacent zone to Km. 66, then take the South zone to Buoy No. 32 and then as above, leaving Buoy No. 31 to starboard.

Vessels drawing 21 ft. and up to 24 ft. inclusive must follow the route of the general channel and the corresponding Adjacent Zones and may make use of the Punta Indio Channel or not, depending on the depths of the river.

Vessels drawing 19 ft. but under 21 ft. must use the general channel of the River Plate and the corresponding Adjacent Zones, but can only use the Punta Indio Channel between Buoy Nos. 19 and 23 when depth of the river makes this advisable.

Vessels drawing less than 19 ft., wishing to follow the route of the main channel, may do so through the corresponding Adjacent Zones but are forbidden to navigate along the Punta Indio Channel unless there are no other ships in that channel, which by reason of their draft, must navigate there. They must use the adjacent North Zone when Westbound, or South Zone if Eastbound.

Between pairs of Buoys No. 20 and 30 no crossing is permitted in the channel, neither is overtaking allowed. The Eastbound vessel should adjust speed to avoid such crossing with an entering (Westbound) vessel.

INTERSECTION: This pilot station, near Km. 37 and 166 km. West from Recalada is on the South side of the principal channel, at Lat. 34° 41′ 04″ S., Long. 57° 57′ 05″ W.

Call sign is now LSP on 500 kHz or other frequencies as for Recalada. Operator on duty from 0800 – 1000, 1200 – 1400, 1600 – 1800 and 2000 – 2200 hrs.

At this point the estuary Pilot concludes his stint, inwards, or takes over outwards, and Port Pilots for Buenos Aires take over or finish. Similarly up river Pilots for vessels bound for Uruguay or Parana Rivers take over or deliver vessels here.

If, owing to the bad weather or force majeure, the launch cannot transfer Pilots, by day the blue flag with the letter "P" normally flown at the fore will be struck, or by night the red and white pilot lights will be extinguished, and a red light exhibited at the stern.

At Intersection vessels anchor while waiting for draft to proceed to the Parana or Uruguay Rivers, as well as those awaiting berth in Buenos Aires.

The holding ground here is not good, being soft mud. All ships drawing more than 15 ft. must, before leaving Martin Garcia or Interseccion outward bound, ascertain the state of the channel from LSP (Radio Interseccion) who will give the departure time, draft, and speed of vessels navigating in the channel. Only after receiving this dual information can Masters and Pilots decide to proceed, and then must communicate time, draft and speed to Radio Interseccion. Vessels drawing less than 15 ft. can navigate freely between Martin Garcia and Interseccion, but must give way to vessels of deeper draft.

INTERSECTION TO MARTIN GARCIA: No vessel may cross the bar drawing more than 7.92 m. (26 ft.) (often less) and with a minimum speed of 10 knots. For those with less than 10 knots but not below 8 knots, vessels of 5,600 tons or over cannot exceed a draft of 6.70 m. (22 ft.) or those of lesser tonnage, 6.85 m. (22 ft. 6 in.).

If speed is below 8 knots but above 5 knots, the maximum draft admissible is 6.1 m. (20 ft.) but such vessels must request a clear channel. Ships of less than 5 knots, and tug convoys will request special permission from the Naval Prefecture.

From Intersection (Km. 38) to Martin Garcia (Km. 106) vessels will anchor near Km. 37 until there is sufficient water, with 1 ft. under the keel and a rising tide or river. If it is calculated that the vessel will have 3 ft. clear through the whole passage, she may leave, but on a falling or stationary river, she must adjust speed to avoid the difficulties between Km. 37 and Km. 79.

Distance Table

Montevideo and Buenos Aires to Parana and intermediate ports

From Martin Garcia to Intersection, vessels drawing 22 ft. 6 in. or more will leave when conditions assure 1 ft. 6 in. of water under the keel. It is essential to radio LSP as above to check on tides, etc. Such vessels coming down river must also communicate to LSP the passing of Km. 101 and 38, while those going up river must advise passing Km. 38, 72 and 101.

In the sector Intersection/Martin Garcia vessels may anchor in any suitable place until depth of water permits them to go upstream on a rising river.

No vessel drawing over 4.6 m. (15 ft.) may cross or overtake another between Km. 47/52; 57/72; 83.5/95 and 100/106; Should a crossing appear necessary in any of the prohibited zones between Km. 38 and 79, the ship which commenced to navigate with 6.8 m. (22 ft. 6 in.) and with 0.45 m. (1 ft. 5 in.) under keel will hold back or manoeuvre to avoid crossing, except when the vessels which sailed from Intersection did so on a falling tide. If the crossing were to occur between Km. 83.5 and Km. 96 or Km. 100 to Km. 106 the vessel proceeding upriver will manoeuvre or regulate speed. Nevertheless, if crossing appears inevitable, any vessel affected by such a manoeuvre has the right to lodge a protest on arriving in port or at Intersection.

Vessels drawing 6.7 m. (22 ft.) or more are recommended to cross between Km. 72/74, 80/82 and 96/98. Those drawing less than 6.7 m. (22 ft.) may cross between Km. 52/56 and 98/100 provided that they keep 0.9 m. (3 ft.) beneath their keel.

In any case of grounding which may obstruct navigation, totally or partially, owners must take immediate action to remove the obstruction, including immediate lightening of the ship without waiting for any summary report.

MARTIN GARCIA BAR: The Island itself, in Lat. 34° 11′ S., Long. 58° 17′ W. is an almost circular mass of granite, about 26 m. high and some 3 miles in circumference. Shores are muddy but also rocky.

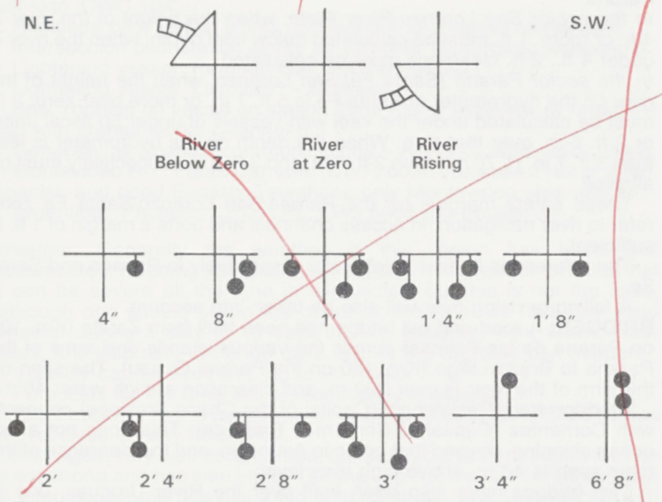
It commands the entrance to the Rivers Parana and Uruguay, and all vessels using these rivers must pass within 0.5 miles of the shore on the South side, or within less than 1 mile by the Northern Channel. There is an Argentine Naval detachment there.

Important: It is always said that Martin Garcia Bar rules the rivers; this is not strictly correct as, usually in the second half of the year, there may be less water in the stretches above Rosario, and at times even below San Nicolas to San Pedro, where new shallows keep forming which have constantly to be watched. Caution should be used, therefore, from July to January in this connection.

Lighthouse: At an elevation of 38 m. a light is shown from a circular stone tower standing 13 m. high in the centre of the island.

Tidal Signals: These are made from a signal mast placed alongside the lighthouse.

Day Signals ← See "PLAN")



The figures given below the corresponding signals indicate the level of the river in feet and inches either above or below zero mark.

To obtain the effective depth in Martin Garcia Channels, 26 cm. (10 in.) should be deducted from the draft of water indicated on the semaphore

Night Signals

(White flash)	Cycle: 30 seconds
(Red flash)	Long flash: 2.5 sec. each.
(Green flash)	Short flash: 6/10 sec. each.
White flashes	Rising tide: One long. Falling tide: Two short.
Red flashes	Above zero: For each m.: One long. For each 10 cm.: One short.
Green flashes	Below zero: For each m.: One long. For each 10 cm.: One short.
Green and red flashes	Zero: One green and one red, both short.

Depth of water here varies from hour to hour, with no pattern, and is not dependant on the depth of water in the Parana. The only relation between the River Parana and Martin Garcia and San Pedro Bars, seems to be that with a full and strong river, the water which is blown into the Plate Estuary by Southerly winds against the strong head of the river, makes deeper water than a similar Southerly wind opposed to a smaller stream from the river. Likewise, the water blown out to sea by Northerly winds causes lower depths when the river is running strongly than when it is low. The effect is almost that of a new or full moon on the lunar tides.

It must always be remembered, therefore, that the dominant factors from Martin Garcia seawards are the direction and force of the wind. A Southerly wind will bank up the water, while a Northerly wind will blow it out. There may be, say, 30 ft. in the Parana, with a strong North wind, and less than 20 ft. on Martin Garcia. With the wind in the S.E., the depth at Martin Garcia can rise in a few hours up to 30 ft.

A prudent course is never to attempt to cross Martin Garcia drawing more than 25 ft. even with the river at its highest.

Martin Garcia lies at Km. 99.4 from Buenos Aires, via Intersection, i.e. at Km. 62.4 from Intersection.

Vessels continue North to Km. 140, at which point the Uruguay and Parana Rivers meet to form the River Plate. This is opposite Nueva Palmira in Uruguay, and at this point the River Uruguay buoy numbers start from Km. 0, while the Parana numbering continues from 140 on through the Parana Bravo, which is the Northerly arm of the extensive Parana Delta.

WEATHER: *The yearly average direction of winds* of Force 7 or more, as observed at Recalada Lightship shows:

N.	N.E.	E.	S.E.	S.	S.W.	W.	N.W.
0.8	1.3	2.7	3.4	5.2	3.7	1.9	1.3

expressed in per cent of winds observed, the least frequent being the North. Division is relatively even over the year, with perhaps August showing a higher incidence of storms.

The average velocity of winds from the various directions, over the year, is 6.8 knots on the coast or 12.5 knots at Recalada Lightship, the highest figures being from S.E., S. and S.W. at 8.3, 9.3 and 9.2 knots respectively.

Percentagewise the direction of the winds through the year is remarkably even:

N.	N.E.	E.	S.E.	S.	S.W.	W.	N.W.	calm
12.7	15.8	14.4	14.2	11.3	9.7	6.8	9.2	5.8

Visibility in the Plate area is normally good; rain storms may temporarily affect it, but these are usually of short duration. Fog (visibility less than 1,000 m.) or mist (visibility 1/2,000 m.) occurs from April to October, with June showing the highest percentage of fogs (13%). North winds seem to favour the forming of fog, as these figures show.

Calm	%fog 11	SE	12
N	24	S	6
NE	17	SW	0
E	5	W	3
		NW	13

Fog on the river forms by a cooling from below of warm air which drifts from E. or N.E., and is formed only when the temperature of the air is greater than that of the water. If the current augments its velocity, the fog lifts and visibility improves at sea level. Shore fogs usually affect only the coast and are of short duration.

Rain falls, on average, 92 days a year, with a total of 1,089 mm. yearly in Buenos Aires, spread evenly through the year with a high in January of 113 mm.

Humidity is high, on average 77% with 82% Winter, and 71% Summer months.

Electric storms are not frequent, and usually limited in extent.

Average yearly temperature is 16.6° C, in Summer 22.2°, Autumn 17.2°, Winter 11.2° and Spring 16°. Extremes correspond to January 43.3° (all-time high) and minus 5.6° in July.

ACTION OF THE WIND ON TIDES: In this large body of enclosed and shallow water winds up and down its axis raise or lower the water level very appreciably.

Cross winds in general have much less effect, and the inner and centre sections of the Plate show greater variations than the outer part. We show below a table as estimated by the Hydrographic Office, based on many years observations showing the variations, in cm., due to speed and direction of the winds. The values quoted must be applied to the astronomic tidal figures to arrive at a net level over datum.

Four new tide-gauges have been installed – 2 in Punta Indio Canal, at Km. 99 and Km. 180, and 2 up-river. Eventually four more will operate at Palermo, Banco Ortiz, Martin Garcia and Atalaya. Connected to the Hydrographic Office, the date will be incorporated into the regular tidal bulletins.

Table showing variations in river level according to force and direction of wind in the River Plate
expressed in centimetres.

	Kilometres/hour

(Source: Naval Hydrographic Service)

The tidal forecasts transmitted regularly over LRA (870 kHz), in telephony, in Spanish are, therefore, a combination of astronomical tide figures and meteorological influences on this basis.

Wind direction also affects the hours of the tide. In general, time of high water is not affected, but low water can be delayed or advanced by the wind force.

MITRE CHANNEL: The new channel, 5 miles off shore and 28 miles long was opened in 1976. It is between Km. 12 of the access channel to Buenos Aires and Km. 56 of the Parana de las Palmas branch of the River Parana, opposite San Fernando.

It was dredged to depth of 32 ft. with a width of 130 m. but silting up and lack of dredging have reduced the depth to 29 ft.

At present, ships going up river are allowed to use the channel but to proceed only as far as Zarate, with a draft of not more than 27 ft. (a maximum draft of 28 ft. is permissible but 2 ft. safety margin must be kept below the keel) and, because of the sharp bends in the river, the length must not exceed 220 m.

All the ships navigating down river can use the channel en route to ports in the Plate or to the sea, and the draft is limited to 27 ft. and the length to 220 m., as above.

The Mitre Channel shortens the distance between Buenos Aires and the grain loading ports up river by 36 miles compared to the Martin Garcia route. Both routes are almost the same distance from Intersection. Campana is brought 95 miles closer to Buenos Aires, and Intersection about 90 miles.

The big advantage of the Mitre Channel is that ships can navigate with a draft of 27 ft. compared to an average 24 ft. via Martin Garcia, and without the risk of having to wait for more water at the bar, especially if drawing over 24 ft. This applies to ships loading grain at up-river ports and to those proceeding to and from Campana.

Vessels proceeding up river to ports beyond Zarate must still use the old Martin Garcia route. It is expected that such vessels drawing up to 27 ft., will soon be allowed to use the Mitre Channel, but some of the bends in the river above Zarate will probably have to be straightened out first.

Ships coming down river from Km. 456, just above San Lorenzo, or further South, if intending to proceed via the Mitre Channel must not draw more than 27 ft. As a point of interest, the depth of the river from Rosario to San Pedro is, on average, more than enough for ships to load to the 27 ft. maximum fixed, at present, from Km. 177 to Zarate. The Hydrographic Office records the river level, and can estimate ahead prospects of the depth of the water, and Owners should consult Agents before committing a vessel.

The regulations state that vessels over 120 m. in length or 18 ft. in draft may navigate only in day-time. The maximum speed is 12 knots, unless expressly agreed with the coastal radio station.

In the stretch between Zarate and Km. 177 (the junction with Parana Guazu) navigation down river is without restrictions but up river it is limited to pushed convoys not more than 225 m. long or 28 m. wide or 9 ft. draft, to ferry boats or to vessels not over 35 m. long or drawing not more than 11 ft. At night time, navigation is permitted to ships with a length or draft not more than 12 m. or 18 ft., respectively, to pushed convoys as above, and towed convoys not over 180 m. long or 28 m. wide

Vessels over 35 m. long which cannot communicate with another by VHF or with the Coastal stations must not cross or overtake in the bends and stretches given below, and in any case, no vessel over 60 m. in length may do so; between Km. 175/177; 156/158; 148/149; 138/142; 134/137; 130/132; 124/128; 118/120; 105/108; 99/101; 89/91; 46/52.4. Any vessel navigating up stream in the Parana de las Palmas and meeting another coming down in the stretch 175/177 (i.e. the fork of the Parana de las Palmas – Parana Guazu), must regulate its speed until the other has cleared the sector. Similarly, if coming down river towards the Parana de las Palmas a vessel sighting another between Km. 230/235 of the Parana Guazu must regulate her speed until the other has left the stretch. Also, any vessel in the River Parana or Parana Guazu about to enter the Parana de las Palmas and sighting another coming up that branch of the river, is obliged to regulate her speed until the other has cleared Km. 177.

Ships over 35 m. long or 11 ft. draft must not anchor outside the waiting zones which are between Km. 62/75; 108/111; 120/123; 149.5/153, and those under 35 m. in length or 11 ft. draft must not anchor in the dredged channel between km 46.5 and 56 or in the bends and stretches between Km. 177 and 46, indicated above, or off Campana between Km. 95/99.

It is prohibited to extract sand or to practice nautical sports and water-skiing along the route.

Ship navigating between the Mitre Channel and the port of Buenos Aires may turn either at Km. 12 (the junction of the Mitre Channel and the Access Channel) or at Intersection depending on the weather, cargo and manoeuvrability of the ship, and with the prior consent of the Traffic Control of Buenos Aires. At Km. 12 at least 1 tug must be used for ships between 120 and 200 m. in length, and 2 tugs, if over 200 m.

Ships over 120 m. long when turning at Campana to come down river, must use one tug. Permission from the Zarate Coastal station is required for berthing and unberthing.

When passing under the Zarate-Brazo Largo Bridges, ships must have an anchor at the ready and an emergency electric generator on stand-by.

Ferries crossing the rivers must coordinate their movements with other vessels navigating, through the Zarate Coastal Station.

In the stretches where crossing is not allowed in the Parana de las Palmas, vessels longer than 60 m., going down river, must blow 3 blasts on the whistle – 1 long, 1 short, 1 long – to indicate that their length is more than 60 m.

All ships must reduce speed, consistent with their steerage-way, in the following stretches: off the ports of Zarate and Campana; when passing under Zarate-Brazo Largo Bridges; between Km. 69/70 (local quay).

Pilotage regulations are that of Buenos Aires port. Pilots take vessels between Intersection and Km. 12 of the Access Channel. However, revised regulations make an exception for Parana Pilots who are now authorised to operate on this stretch when vessels are proceeding to and from the Mitre Channel/Parana de las Palmas. This avoids the inconvenience and expense of having to send out the port Pilot by tug to Km. 12 or to bring him back, and the alternative of having to embark and disembark him at Campana.

When ships are coming to Buenos Aires from up-river ports, the port Pilot is sent out on the tug needed to turn the vessel at Km. 12, and vice versa.

PARANA RIVER: Maximum drafts permitted up to Km. 585 (Santa Fe) are governed by the Martin Garcia Bar, and must also, logically, take into account river conditions.

The River Parana rises in Brazil, and is formed by a junction of a number of rivers, the principal tributary being the Paraguay River.

It is a great river at all times, conveying an immense volume of water to the Atlantic. The Northern bank is comparatively high and rocky, the Southern bank low.

The stretch above Rosario is entirely riverlike in behaviour with an annual flood, rising and falling yearly. From Rosario to Martin Garcia Bar, where the river joins the Uruguay River to form the River Plate, there is also an annual flood, but this part is also influenced by the Plate tides. This section can be divided into two, from San Pedro to Villa Constitucion where the tidal fluctuations are always felt, and from Villa Constitucion to Rosario where the tide makes its influence felt only in periods of low water in the river.

Maximum depth in the river is normally reached in March and the low in September, but it is irregular in behaviour. There is a possibility that the series of dams being built in Brazil for hydro-electric purposes may eventually regularize the river by permitting some control over the seasonal increases.

When the river commences to fall, care must be taken in calculating loaded draft a few days ahead, as the official figures may be reduced one or more feet without warning.

HIGH AND LOW WATER: Maximum and minimum figures registered between Rosario and San Pedro in the last ten years.

		Jan.	*Feb.*	*March*	*April*	*May*	*June*
High	Max.	32′	32′ 8″	33′ 7″	36′ 3″	37′ 9″	30′ 5″

	Min.	23′ 9″	21′ 8″	21′ 7″	23′ 3″	24′ 3″	24′ 3″

MAXIMUM DRAFT UP RIVER: When vessels by reason of their loaded draft have to complete loading at Buenos Aires or La Plata, they should never load deeper than 2 ft. less than the offical draft on the River Parana.

In the sector San Lorenzo/River Plate, when the height of the river is 4 ft. or more, 1 ft. must be calculated below keel depth; when the river is under 4 ft., 2 ft. clearance must be calculated.

In the sector Parana (Santa Fe)/San Lorenzo, when the height of the river on the hydrometer at Santa Fe is 5 ft. 7 in. or more over zero, 2 ft. must be calculated under the keel with vessels of under 50 fiscal units, or 2 ft. 6 in. over that size. When the depth on the hydrometer is less than 5 ft. 7 in. (1.70 m.) then 2 ft. 6 in. and 3 ft. 6 in. respectively must be allowed.

These safety margins for the Parana/San Lorenzo/Santa Fe zone refer to river navigation; in access channels and ports a margin of 1 ft. is sufficient.

The references to river height refer respectively to Rosario and Santa Fe.

A falling or rising river will also be taken into account.

BRIDGES: A road and rail bridge has been built from Zarate (Km. 107 on Parana de las Palmas) across the various islands and arms of the Parana to Brazo Largo (Km. 180 on the Parana Guazu). The span on this arm of the river is over 200 m. and clearance at high water 45 m.

A bridge from Resistencia (Capital of the Chaco Province) connects with Corrientes (Capital of Corrientes Province). This does not affect ocean shipping, beyond that going to Asuncion, and the clearance of the main span is 40 m. above high river level.

Two bridges have also been built over the River Uruguay, one at Paysandu, which will not affect ocean shipping, and another at Puerto Unzue to Fray Bentos, in Uruguay. This latter has a 220 m. span with 36 m. clearance above river level.

SHIPMASTER'S REPORT: 1979.

General: This river and its approaches serve the major ports of Montevideo, Buenos Aires and Rosario and numerous smaller ports.

The hinterland and Pampas of this area is of major importance as a grain exporting market and frozen meat exporter.

For the most part the river is shallow giving a maximum draft depending on suitable tide of 33 ft.

Although Argentina is self sufficient in oil, from her wells in the South, with prices around 70p per gallon (20.7.79) cheap by world standards, she imports about 300,000 tonnes of LPG per annum mainly from the Gulf and Venezuela.

The majority of the LPG is shipped during the Southern Winter with approximately eight 30,000 tonne shipments annually.

Shipments from Venezuela are in smaller vessels of the 15 – 30,000 cu.m. size.

All LPG is for the Account of Gas Del Estado, the state Gas Corporation, who tender for contracts from the major Gas traders generally bi-monthly.

The storage capacity at Doc Sud Buenos Aires is about 20,000 tonnes.

Currency is the Pesos which is very much orientated towards the US dollar. The dollar is used for most commercial transactions.

Approaches to The River Plate:
Chui D/F (ALRS 5046) on Brasilian border is good.

A good longitude is obtained by 200 m. line. On chart BA. 3064 the bank in the region of Lat. 35° 08′ S., Long. 53° 34′ W. is pronounced.

Cape St. Maria comes in at 35 miles on radar.

Punta Jose Ignacio is distinct on radar at 22 miles, light observed at 19 miles.

Isla Lobos observed at 26 miles on radar.

A strong N.E. current set is apparent from the 200 m. line to Isla Lobos, particularly so about 40 miles East of Lobos. Pta Del Este Light is difficult to pick out from the shore lights. This area is an important holiday resort area. A new light has been established: Fl. R. ev. sec. position Lat. 34° 51.8′ S., Long. 54° 44.0′ W. Vis. 25 miles.

Anchorages: On 2 occasions the vessel has anchored well East of Zone Alpha before proceeding to lighten. Once each in position Lat. 35° 10′ S., Long. 55° 32′ W. in 15 m. and Lat. 34° 57.5′ S., Long. 55° 37.5′ W. in 13 m.

It is wise to pay out plenty of cable as the wind can increase quickly.

There are 3 lightening or Topping Off anchorages – Alpha the most commonly used one being 10.5 miles South of Montevideo Pta Brava, Delta 39 miles to East and Bravo 36 miles to S.W. are little used.

Areas as marked on Argentina Charts H. 113 and H. 116 are not rigidly binding and it is as well to take advantage of the deeper water 3 miles to East of Zone Alpha.

There are 3 D/F stations in the area.

Carrasco (CAR) as Admiralty light and Radio signals (ALRS) 5036 good – Montevideo Airport. Continuous Aero 24 hours.

South Airport (CRO) 305.7 m. – Lat. 34° 50.5′ S., Long. 56° 01.5′ W. Aero Cont. 24 hours

Pta Gorda (BC) 340 m. – Lat. 34° 54′ S., Long. 56° 05′ W. Aero Cont. 24 hours.

Banco Ingles North Buoy moved position about 1.2 miles East to Lat. 35° 05.4′ S., Long. 55° 52′ W. light very weak.

The foul areas marked on Argentina Chart H. 113 and BA. 1749 (C) do not exist according to the Masters of local lightening ships and Pilots.

A – Lat. 35° 03.0′ S., Long. 55° 59.0′ W.
B – Lat. 35° 03.0′ S., Long. 56° 04.0′ W.
C – Lat. 35° 08.8′ S., Long. 56° 12.7′ W. BA 1749
D – Lat. 35° 09.0′ S., Long. 56° 15.9′ W.
E – Lat. 35° 11.0′ S., Long. 56° 14.0′ W.

The D/F on Isla Flores (ALRS 5038) is not operating and the light is very weak.

The 2 buoys to S.W. of Zone Alpha to Recalada are in position but no lights observed on passing them (20.7.79)

Communications: VHF: Montevideo Movement Control (ALRS 6-H1010) speaks little English. We tried to contact them on arrival but got no response. The Agents advise vessel to cable anchoring positions to its call sign 'CWC 104'.

Recalada pilot station works on Channel 12, English reasonable.

Interseccion pilot station works on Channel 12, English reasonable.

Lightening vessel "Permian Gas" – Channel 68.

Lightening vessel "Lavoisier" – Channel 8.

Bulk Topping off vessel on station Zone Alpha 'Arylanza' of Argentina flag with cranes works Channel 6.

Generally all Spanish communications – ALRS G 2655, 2670, 2680.

Montevideo R/T: Punta Carretas (CWF) 6020 transmits 2182 or 2768. Spanish and good English. Telephone only Montevideo area. Good.

Argentina: 'Pacheco' LPD, LPL, LPQ 5905 (no English).

Weather: Generally the weather in this region has been well documented. Reading publications one gets the impression at times that it can be severe all the time in mid winter. But this is not the case, although one should be on the guard all the time, we had very good weather during a stay of 16 days in July, generally light winds, clear skies, and little rain. Although quite quickly the opposite can happen.

Visibility can be excellent, up to 20 miles.

Forecasts for the area are predominately in Spanish.

The Fascimile that is published for Buenos Aires LRB, LRO 5910 was not received on any frequency.

Tides: Again very well documented. Generally out at Zone Alpha the tide is not strong and has little effect. Getting into Recalada and farther West to Interseccion the tide has a big effect and can alter very quickly with the wind.

The tides strength is very marked in the shipping channels from Recalada Westwards to Buenos Aires.

Density:			
	At Zone Alpha	:	1019
	At Recalada	:	1012
	At Km. 45	:	1005

Lightening: As previously mentioned there are three Zones for transhipping cargo and topping off. The most commonly used area is Zone Alpha the limits of which are not obligatory.

Before lightening can commence the ship has to be cleared by Customs/Immigration who come from Montevideo after travelling up from Buenos Aires. They either board by tug or by the first lightening tanker.

9 persons board with 4 persons leaving when formalities are complete leaving 5 persons onboard – 6 when Pilot boards at Recalada. They consist of Agency Representative, Immigration, Customs, Prefectura of Police, Gas Del Estado rep. etc. Those that stay being Agent, Police (1), Customs (1), Surveyor (1), Gas Del Estado (1). As long as vessels paper work and passes have been well prepared the formalities are quickly dealt with. Generally vessels proceed to Zone Alpha when the Officials/Lightening Tanker is due otherwise needless standby is required because of the close proximity of other lightening operations and draft.

We anchored with Pta Brava 320°×10.4 miles, depth at HW 12.5 m. Plenty of cable on port anchor is required, say up to 8 shackles to guard against any sudden gusts of wind. On occasions up to 10 shackles have been out.

Ships passing through this area are required by Argentina Law to proceed at slow speed, but rarely do with some narrow scrapes. Zone Alpha is joint Uruguay/Argentina territory.

Pratique: Cable to be sent (in Spanish) to Agent 12 hours before initial arrival. Granted when officials board.

Notice of Readiness: Send cable when vessel has anchored, N.O.R. received when Agent boards at Zone Alpha.

Mail: Agent will bring out mail at Zone Alpha and also give to Interseccion Pilot who boards after lightening at Km. 45 if requested in advance.

Money: If requested well in advance Agent will bring money out at Zone Alpha. This helps when berthing at Doc Sud as people can get ashore quickly without waiting for money.

Time: The Time Zone used at Alpha is Argentina time GMT – 3 hours. Uruguay time is on GMT – 2 hours.

Lightening Tankers: At present there are 2 vessels in this operation, however a 3rd vessel may soon be allocated. In the past numerous LPG ships of different owners have been used.

"LAVOISIER": A small semi-pressurized tanker of Argentina registry owned by Navigas.

Vessel has 3 Yokohama fenders floating and 2 small fenders hanging aft. Very good co-operation maintained – vessel was very efficient. The chief officer speaks little English but Master and one Second Mate spoke very good English. All very helpful.

Lines: 3+1 each end in moderate weather. No STBL lines.

Hose: 6 in. Braided wire (wear gloves) – 18 m. total length – 150 ASA couplings.

Tanks: 6 tanks max. temperature: −6°C 4 bar.

Capacity: Approximately 2,800 tonnes.

Rate: 300 t.p.h. Butane, 90 t.p.h. Propane which has to pass through heater for pressurization.

B.P.: Max. 8 bar.

Gangway: Use STBL gangway aft.

Radio: Use STBL UHF sets.

Vessel will take motors, etc., ashore if she is returning to Doc Sud for repair by Cromwell Engineering.

"PERMIAN GAS": Owned by Maritime Overseas. Liberian Flag – call sign A8UR. Chartered by Gas Del Estado.

Has 2 Yokohama fenders and tyres forward and aft. Not very satisfactory as operations have to be broken off in any type of wind.

Lines: 3+1 plus two from STBL F & A.

Hoses: 6 in. 300 ASA with 300/150 spool piece. Compoflex type with rope lagging. Total length approximately 18 m.

Tanks: 6 semi pressurized – 6 bars 2 grades handled – not together.

Capacity: 5,200 tonnes max.

Rate: 350 t.p.h.

Gangway: From STBL, a short BOT type.

Radio: Motorola UHF sets from 'Permian Gas'.

Navigas are purchasing another LPG vessel about the same size as 'Permian Gas' and should be on station in October 1979. Generally the transferred cargo is taken to the smaller outports up the River Plate and down the coast, the vessel can be away for up to four days.

With a mixed cargo of Butane/Propane of 30,000 tonnes two to three weeks is the normal length of stay in the River Plate.

Pilot: Pilot does not board at Zone Alpha.

Pilot boards at Recalada pilot station at the end of the buoyed channel Canal Indio. Pilot vessel is an old coastal troop transport and has been on station for 10 years. It is painted with red upperworks and black and yellow stripped hull.

Pilots board from small white launches which lie alongside the pilot vessels lee side.

Only 1 ship handled at one time, the launch returns to the pilot vessel. Long delays can occur if ships have got bunched up inwards and outwards.

Will use hoist, but have gangway and fixed pilot ladder arrangement ready. Make good lee otherwise Pilot will not board. Inwards pass to North of pilot vessel. Outwards to the South. Pilots generally speak good English.

Pilot vessel new position: Lat. 35° 10.8′ S., Long. 56° 06′ W.

Racon shows up well at 20 miles. No D/F. No boarding with wind speed above 30 m./sec. No anchoring within 1 mile of pilot vessel. Make arrangements for Pilot through Agent via Recalada or Pacheco Radio Station at least 48 hours in advance.

One Pilot to Interseccion Pilot Station, about 7 hours depending on tide. If stopping at Km. 45 for lightening, Pilot stays on board and changes at Interseccion.

In the vicinity of Recalada numerous vessels are anchored so its a case of having to proceed with caution.

Canal Indio: From Recalada to Interseccion, 95 miles.

This channel is marked by light buoys leads to the deeper water off Banco Chico near La Plata and is 50 miles in length to Canal Intermedio with a bend at Codillo.

Generally the depth is 28 ft. CD but patches of 27 ft. have been found between Recalada Pilot Station and No. 1 buoys.

We attempted to manoeuvre with a draft of 28 ft. 9 in. but constantly grounded near the wreck buoys East of No. 1 buoys.

The channel from Recalada to No. 1 buoys passes South of the wreck buoys, these wreck buoys should not be confused for channel buoys as has happened in the past.

Generally the max. draft is 31 ft. with a tide of 1.20 m.

Pilots always seem to think of drafts in terms of feet and tide heights given out in metres.

Vessels of up to 33 ft. have safely transitted.

Once inside the channel at No. 1 buoys the channel is very marked and steeply shelving.

The wreck at No. 17 buoys is to be lifted by a Japanese crane barge early in 1980. There is no passing at this point.

No dredging has been undertaken for five years in Canal Indio but it is hoped to resume in 1980 after Canal Nord and Sur have been dealt with.

On the day we left (20.7.79) three Spanish built suction dredgers arrived ("Buenos Aires", "Terra Del Fuego" and "La Plata") with three more to follow. It is reported that a total of 20 dredgers have been contracted for, partly Government owned as are the Spanish built dredgers and partly German contract work.

It is hoped dredging will start in Canal Nord and Sur late 1979 moving to Canal Indio in 1980 and Canal Mitre 1981.

The buoys are often missing or the lights out.

24 hours transit of all vessels is undertaken. Vessels of less than 22 ft. navigate outside the channel when deep draft ships approach in channel.

Vessels of less than 18 ft. navigate outside channel at all times.

No overtaking from Codillo Bend to Recalada.

Tides can be strong.

Km. 99-Racon not working (as BA.1749)

Tides given on VHF every hour plus 5 minutes in cms.

As long as no hinderances with ships ahead or draft a speed between manoeuvring full and full sea speed is requested.

La Plata Km. 45 Lightening: Further lightening is undertaken off La Plata in the deep water position: Lat. 34° 44.5′ S., Long. 57° 49.5′ W.

Pilots report that the foul area just South does not exist.

Interseccion: Pilots changed here after lightening at Km. 45.

Canal Accesio Buenos Aires: This channel is 15 miles in length and leads from Interseccion pilot vessel to the junction of Mitre Canal, Canal Nord and Canal Sur.

It has a depth of 31 ft. CD min. and is probably the deepest of all the channels in the area.

It presents no problems after final lightening.

The Beacon at Km. 14 on the North side of the channel has been destroyed.

At Km. 14 a forward tug can be engaged at extra charge. This is well worth the additional expense to get the vessel around the bend into Canal Sur and over the shallows.

Canal Sur: This relatively short length of channel leading to the Doc Sud area is 4 miles in length. It presents the worst problems with regard to draft in all the channels but the bottom is of soft mud and no grounding damage has been reported.

Ships invariably always bottom and the channel is kept open by the dredging action of vessels.

The worst area is the Eastern end between Km. 8.2 and Km. 7 with a poor area continuing to Km. 5.

The after tug is taken at Km. 8.2.

The least depth is 22 ft. CD which means vessels up to 24 ft. 6 in. can normally transit and up to 26 ft. with very high tides.

We had 60 cm. tide with a draft of 24 ft. and had to use full power with the vessel listing 5° to starboard when we got to the edge of the channel – Southern edge. The tugs were invaluable at this point.

Pilots report Southern edge of channel worst area. (One large LPG ship recently aground for 2 days at draft of 25 ft. 6 in. – 60 cm. tide and falling. Vessel aground between Km. 8.2 to 7.6.)

As soon as Canal Accesio is left at Km. 10.1 steep shelving occurs which is very marked on Echo Sounder and vessel is bottoming.

No night movements of LPG carriers.

At Km. 1 another shallow area of 21 ft. 6 in. CD is reported but we experienced no difficulty in this region.

Tugs: As previously stated forward tug can be taken at Km. 14 and after at Km. 8.2. When outward bound forward tug leaves at Km. 11 (extra charge) and after tug at Km. 5.

Tugs power varies from 2,000 h.p. to 3,500 h.p.

2 good lines are given to each tug through centre leads fore and aft, they will need them with large LPG carriers when turning in the narrow confines of Doc Sud.

Ante Puerto Sud: Vessel is swung in this area so as to enter Doc Sud stern first.

Clearance is very tight.

Pilot requires both anchors ready and engines prepared for maximum astern power.

Tide depth gauge on North inner entrance.

In Darsena 2 there are 2 floating dry docks capable of handling ships up to 15,000 d.w.t.

In Darsena 1 a Navy Synchrolift of 10,000 d.w.t. capacity has recently been constructed (vertical hoist type, not ramp type).

The new dock outside at Km. 1 in position: Lat. 34° 38′ S., Long. 58° 20′ W., has been completed but not dredged. This is to be undertaken 1980/81 and is intended for large LPG carriers for Gas Del Estado. The breakwater is completed and extends to Lat. 34° 37.9′ S. – 550 m. in N.E. direction.

Doc Sud: Least depth 33 ft. CD. In section 2 on the East side is the oil complex with Gas Del Estado berth North end section 2, South side of bend, East wall second berth. On West side are grain and frozen meat berths. Ships always berth head out. Starboard side to East wall, port side to West wall.

Narrow entrance which large vessels frequently hit, particularly the knuckle on East side which should be guarded against with fenders. From Interseccion to completion of tie up about 4.5 hours. In all of Doc Sud no engine movements are permitted. This is a new regulation.

If using midship gangway this has to be turned forward before arrival so as to land on small pipe jetty. If gangway is aft vessel has to use fixed section or hire boat on the offshore side.

Mooring: 2 headlines, 2 breastlines and 2 springs each end, the leads are not very good. Springs onto dolphins. Dolphins have poor fenders so advise use ships fenders.

Manifold: 12 in. – 150 ASA liquid, 8 in. – 150 ASA Vapour return, VRL has to be left open.

Tanks: Max. tank pressure on arrival to be 50 mbs.

Pumping: 500 to 700 t.p.h.

Berthing: Daylight hours only.

Labour: Shore labour for connection.

Surveyor: Surveyor from independent firm joins at Zone Alpha and makes survey together with Chief Officer before and after each transhipment and at Doc Sud. Generally paper work after each transfer takes about 1 hour. Ensure that signed statement of complete cargo discharged obtained.

Samples: An attempt is made to take samples at Zone Alpha.

Fresh Water: By Barge.

Stores: Arrange by Barge, very difficult otherwise.

Repairs: Cromwell Engineering: – 'Cromeng' generally good. By boat. As previously stated vessel can land motors etc. by lightening tanker if returning to Doc Sud for Cromwell to pick up.

Taxis: Difficult to obtain. Best obtained via Gas Del Estado office. Doc Sud is outside Buenos Aires municipal boundary so off meter. Meter starts at Boca bridge. Generally about £6 into town in daytime and £10 back at night. No difficulty in getting taxi back at night, try and agree fare. Do not go ashore alone.

Do not take much money with you. Have shore pass. About 20 minutes to town if no delays.

Customs/Immigration: Board at Zone Alpha and again at Doc Sud and on Departure.

Formalities:

2 Store lists per department (Deck and Engine combined) (Argentine Official Papers).

1 copy taken off at Zone Alpha, 1 copy for customs at Doc Sud.

2 Copies International Maritime Declaration Health (Standard Form)
1 copy Zone Alpha, 1 copy Doc Sud.

2 Crew Personnel Declarations – (Argentina Forms)
Both Zone Alpha.

30 Crew lists (Ships form)

One is stamped by Immigration at Zone Alpha for Doc Sud. No officials onboard at Doc Sud.

Crew Passes – Fichas – Argentine Official Forms.

One for each crew member must contain photo. We used ships Polaroid camera. (Two heads to a shot.)

Stamped at Zone Alpha and *must* be handed back before departure Doc Sud for stamping and then given to Master.

2 Vaccination Lists (Ships form)

Each time the vessel shifts/heaves up anchor the Agent onboard has to make out a departure declaration for Master to sign and give to Police onboard.

As long as vessel has Argentina papers and photocopier onboard no difficulties should exist.

Bond: Not sealed, quite in order and usual as long as ships staff only consume liquor.

Publications: These notes are in addition to information contained in: BA Charts 1749, 1751, 3561, 3064. Argentine Charts H 113, 116, 118, – 1979

Publications: NP 5 supp-2/78, NP 275 2 & 6 79/78, "Guide to Port Entry". C.N.T. Year Book 78/79.

SHIPMASTER'S REPORT: July/October 1983.

Navigation on the River Plate and River Parana: INWARD: The Uruguay Traffic Control System and Radar Monitoring now extend from the border with Brazil to the Recalada Pilot. Vessels are required to report course, speed, and ETA on passing each designated control point.

Recalada Pontoon was not heard on M/F radio and all messages were passed through General Pacheco. Recalada was slow to answer on VHF, and probably the watchkeeper has to call a Pilot to speak English (The ability to speak Spanish is a very marked asset trading to Argentina).

It is preferable to keep North of "Zone Alpha" and then to head for the small passenger ship that is the Recalada pilot vessel, Racon only about 8 miles.

The dredged channel is quite narrow with strict limitations about overtaking in certain areas. Averagely ballasted ships can pass outside the line of buoys. Subject to the Pilots advice it may be possible to use heavy oil for the 90 miles (7 hours) to La Plata Anchorage.

The Intersection Pontoon has been withdrawn and the operation is now based ashore in La Plata.

The 2 River Pilots are ordered for a suitable tide time to approach the Martin Garcia Channel. Each Pilot requires a cabin with bathroom en-suite, the Masters sea cabin may be refused. One Pilot had a very few words of English, the other none. Their use of English numbers was uncertain, so the Officer of the Watch must be very vigilant. The Pilots listen to 2 VHF Channels and their own radio, which makes the bridge very noisy.

The vessel proceeds always at Best Full Speed but it was difficult to get any programme from the Pilots because of the language problem.

The vessel anchored at 10 minutes notice at Km. 80 for oncoming ships in narrow channel. Then had to heave up as quickly as possible to get over the bar before tide fell.

Speed was reduced turning into the Rio Parana Guazu at Km. 121. The vessel had to stop and drift for sometime waiting for oncoming ships to clear the bridge at Km. 180. This bridge can only be passed in daylight and had a clearance of 45 m. in the prevailing floods which were estimated to be 4 m. over normal tide. If unable to pass before sunset, it is necessary to anchor and wait till the next day.

The vessel anchored for the night at Km. 243 to avoid a dangerous bend in the dark at about Km. 273. However, had to anchor again at 5 minutes' notice for fog at Km. 270. This later cleared and vessel proceeded to anchorage off San Nicolas.

Two anchors were employed, but the order to let go was given much earlier than the indicated place which caused some surprise (due to language difficulties).

The inspection party of Agent, Customs, Coastguard, Port Health, Grain Surveyor and Photographer boarded shortly after the River Pilots left. The forms had been put onboard on leaving La Plata Anchorage and were only completed in time by exceptional effort. The entry formalities were complete in about 1 hour, while the Grain Surveyor took about 1.5 hours.

A Harbour Pilot put the ship alongside, and took her off on sailing. An anchor was dropped for use on sailing.

The river is quite narrow and sparsely marked. The Pilots navigated by the tops of the trees sticking out of the flood water. Some salient points were marked by a single lighted beacon. Buoys marked critical sections. However, these could be capsized by the accumulated weight of vegetation floating down the river. Progress was erratic and diesel was used throughout the River Pilots guidance.

OUTWARD: The normal route down river is the El Mitre Canal with a draft of 27 ft., however, this had silted up to 21 ft. The vessel loaded to 23 ft. (fresh water) to pass via the Martin Garcia. There is a similar bridge and restrictions on this route.

The vessel anchored at Km. 210 to wait for daylight for the bridge. Then used the River Parana Bravo to pass into the main river. This was very narrow and twisting in places, the Pilot was observed to be using reverse helm on the canal effect from the banks.

The vessel next anchored at Km. 117 to await a suitable height of tide before passing over the Martin Garcia Bars. However, the hourly VHF broadcasts showed that the tide did rise as predicted, and the vessel had to wait for the next tide.

The Regulations are that a minimum clearance of 1 ft. is required with a rising tide. The dredged channel is 100 ft. wide with minimum depths of 20 ft. – 21 ft.

The vessel sailed on the next tide and past the tide gauge at Martin Garcia when it was 1.3 m.

The Pilot watched the forward echo sounder reading and reduced speed whenever it came down to 1.0 m. However near Km. 70 the vessel first took a sheer to port, which hurriedly corrected by starboard helm. Then she took a list to port and the engine was increased to full speed to push through the shallow. Near Km. 69 the vessel again felt the ground and seawead, again the engine was put to full speed to push through.

At Km. 49 the vessel took a list but continued her progress. The crew working on deck at these times reported hearing rubbing noises.

The vessel anchored at La Plata Anchorage and the River Pilots left. The Recalada Pilot boarded almost 4 hours later as the tide was rising and the vessel sailed for Sea Channel.

At 22 ft. 6 in. salt water the vessel was not as unrestricted as when coming in. It was necessary to slow down in order to allow a deep laden vessel to clear the channel before we entered it. I understand that the normal maximum at the top of the tide is 31 ft.

Again subject to the Pilots advice it may be possible to use heavy oil for this passage.

The Pilot spoke good English and readily gave advice on the river and approaches.

We were bound for Bahia Blanca to complete loading. The Pilot advised that the banks had extended Eastward from the land, and Westward from the sea shoals, so that local knowledge was necessary for the most direct route. Tankers from the South lighten at Zone Brava and then come up to No. 1 Buoys on a North-Easterly heading (at 31 ft.) to avoid the encroaching shoals.

It was apparent that the buoys had been moved to new positions to allow for the movement of the shoals.

BAHIA BLANCA ANCHORAGE: The vessel had been warned that there was a delay of 30 days at Bahia Blanca. The Buenos Aires newspaper listed 37 ships at that port. On arrival it was found that there were 15 ships in the Buoy No. 17 Anchorage, 11 ships in the Buoy No. 11 Anchorage and 10 ships between Buoy Nos. 1 and 4. The local Port Control Radio Station speaks no English, however a Spanish speaking Officer keeping anchor watch kindly translated for us and advised that we could anchor off Buoy No. 4. The arrival telegram was sent from that position.

Contacting other company ships already anchored, it appeared that the actual time to wait was nearly 60 days. The ability to speak Spanish is an untold blessing on the Argentine coast. The Sea Pilots appear to be fluent in English, but the River Pilots and Radio Watch Keepers have no English nor French. The ability to consult ships in the nearer anchorages was most helpful.

The chart shows 3 radio beacons off the port, which are supposed to be in continuous synchronised operation. However we could only find one operating from 4 to 10 minutes past the hour and the half hour in clear weather. El Rincon and Recalada Bahia Blanca seemed to alternate day about.

A water boat of 350 tons capacity will come as far as Buoy No. 11 at a flat charge of US$3,500.

BAHIA BLANCA: 28th July, 1983.

The vessel part loaded at San Nicolas where she was advised of 30 days waiting at Bahia Blanca, the completion port.

The vessel was assisted by a Spanish speaking Officer keeping anchor watch to contact the Port Radio Station and permission was given to anchor near Buoy No. 4 due to the congestion. Arrival was reported by cable to the Agents from that position. The initial berthing prospect was quoted as being 8th September, then as time past this was amended to 22nd September and 4th October. The ship did actually berth on the 5th October.

Informatively Lloyds List was found to have shown 57 days delay with 38 ships waiting soon after the ship's arrival. It would seem that the formula should be 2.0 – 2.5 days per ship waiting.

The delays were extended by 'go-slow' strikes, and at least two instances of contaminated cargo ex-silo.

Communications to and from Agents normally only by telegram. The Port Radio Station call sign "L4Z" – "Lima Quatro Zulu", another Control Station is "L2N" – "Lima Dos Novembre", VHF Channel 12 is watched with Channel 14 for working.

The pilot boats are modern fast launches using the call sign "Sierra Papa" 21, 30 etc. If there is a Pilot on board for your ship he may call up in English. The boats work to order and do not stay on station.

For a ship of 25,000 g.r.t. the shift from the Pilot Anchorage (Buoy No. 11) to the Commercial Ships Anchorage (Buoy No. 17) was quoted as US$1,700 in July 1983. However, unless bunkers are needed there is only limited benefit from moving into this anchorage.

The Monacci Agency uses a ferry operator who has large very old white cabin cruisers, the costs were quoted in August 1983 as US$500 per ship visited. In September the cost was quoted as US$700 per ship visited. They operate from Port Rosales which dries out at LW. The Agency appeared to use the boats once a week only.

A water boat also operates from Port Rosales, with a nominal capacity of 350 tons. The cost per trip in July 1983 was quoted at US$3,500 plus the amount of water supplied. In September this was quoted at US$5,200 plus. It normally pumps in with 2 hoses in 3.5 hours. However in this vessel the available ullage was not even and the water boat stopped pumping and disconnected as soon as the first tank was full. Thus it delivered only 250 tons for the same fee! Thus it would seem necessary to ensure that there is at least 175 tons of ullage available for each of the 2 hoses. As the berth dries out where the boat secures, it may be that they will not delay by pumping only 1 hose so that they can get back alongside in the one tide.

The Monacci Agency uses one Shipchandler only, who has to deliver via the same launch described above. There is another Chandler who uses a different boat but the details are not known. All provisions sent to ships have to be cleared by the Customs with quite substantial service fees, quoted as US$100 – $150 per delivery. The Customs also restrict the amount of rice that can be supplied. Of the fresh vegetables and fruit delivered the quality was not good, and condemnations had to be made when they were unpacked. The provisions came only with delivery notes, and the bills for August, September and October were prepared on board after the completion of loading! Those ships who have been to Bahia Blanca before take as much provisions as they can in the river ports, where quality and value are better, and delivery easier.

The Monacci Agency have VHF Channel 9 in their Port Rosales Office for use with their own fleet, and the Bahia Blanca Boarding Agency carries a walkie-talkie, with 60 VHF Channels, but normally on Channel 22A (the U.S. Coastguard Channel). They do not make this information known to the ships under their Agency.

In general they seem very reluctant to talk to ships, probably only a few of their staff speak English. Messages sent only to Monacci were never acknowledged and often not acted upon. Messages sent to Sudocean in Buenos Aires always acknowledged and acted upon. The use of telex numbers is preferred at least for routine messages.

Medical: Three men went to the doctor from the Inner Anchorage and stayed ashore for 6 days until the next weekly ferry trip, the hotel bills being apparently cheaper than the hire of the launch. When the vessel finally berthed after almost 70 days at anchor 12 men were medically treated and prescribed for on board plus additional tests, etc., for 4 ashore. The total fees came to about US$1,000.

Grain Berths: There are 3 berths in use at Engeniro White No. 9 with a sailing draft of 38 ft. 6 in. (port side to, stern in), take bunkers by road tanker. Currently about 800 t.p.h. for 16 hours including overtime from one belt. The plant has been damaged (possibly by a dust explosion), and one belt is out of use at this time. Berth Nos. 5 and 6 are rated at 36 ft. 6 in. sailing draft, port or starboard side to, according to tide when off the berth, bunkers by barge. (Berth Nos. 7 and 8 are shallower, but was in use). This berth loaded 21,750 tonnes in 48 hours into the vessel. However, the subsequent vessel required 5 days for the similar amount due to shortage of cargo in the silos. No. 9 silo seems to be fed by road vehicles, while 5/6, 7/8 are fed by rail.

At both berths the vessels take the ground and dry out up to 10 ft. – 12 ft. at LW. The bottom is said to be soft mud, and every ship loading to the authorised drafts goes aground. The vessel has to wait for the rising tide in order to finish and be certain of the drafts.

On sailing the drafts are read by the Prefectura Naval (Coastguard) and both the Harbour and River Pilots. Thus it is necessary to be very precise when finishing. No surveyor examined the vessel after the initial hold cleanliness inspection by the National Grain Board.

On sailing (head out), with 2 tugs, the ship would not swing to port into the line of the flood tide and the ship came very close to the opposite bank before the port anchor was dropped. The beacons which are charted as being in deeper water are in fact well up on the mud bank and the channels appear much narrower. Two tugs were used inward and outward with twin ships ropes from offshore fairlead forward and centre aft. Swinging in the pilot hoist when berthing was a race against time. There are some floating fenders alongside Berth Nos. 5 and 6 but the upper works of the elevator system are very close to the edge. Bridge wings apparently often touch.

The passage outward depends on the conditions of the day. A ship at 37 ft. 2 in. sailed directly out to sea because of fresh onshore winds. Another of 38 ft. 4 in. took 4 days to reach the sea. She had to anchor at Buoy No. 18 from one daylight tide to the next, then the port was closed for naval movements, then anchor again at Buoy No. 11, before finally clearing the port. The tide predictions can be increased or decreased by as much as 5 ft. due to the weather prevailing.

Anchorages: One ship in the Commercial Ships Anchorage found that she had 4 lengths of her own chain fouled around the anchor when she hove up. She had to hire a barge to lay the chain on so that it could be cleared. The quotation was said to be US$5,000 but the bill presented was for US$18,000. The vessel was arrested when the bill was challenged. It would seem a wise policy to change anchors from time to time. Also when anchored off Buoy No. 18 to wait for the next HW over the bar, another ship's cable and chain was picked up. It was necessary to put a wire onto the other cable and lower the ship's anchor out from under to clear it. The delay was about 45 minutes but the ship was still able to make the tide.

There is a dredged channel between Buoy Nos. 7 and 8 but in fact the shallow area extends from Buoy No. 9 to Buoy Nos. 3 and 4 and speed needs to be restricted to reduce the squat.

At this time British subjects were not allowed ashore.

Outline of Official Argentine Forms:

Personal effects of the crew.

In vertical columns the following items:

Radio sets
Typewriters
Sextant
Gramaphones
Gramaphone discs
Binoculars
Photographic cameras
Spirits

Tobacco
Plug Tobacco
Cigarettes
Packets of cigarette papers
Boxes of matches
Number of caged birds
Soap

Sundry other effects such as musical instruments new or used, new clothes, etc.

All electronic items, such as radios, cassettes, calculators, televisions, declared by type, makers name, model name, serial number on separate sheets which then attached to the original declaration. The original columns for such equipment must be marked "nil" so that no duplicate declaration is made. The ship's electronic items, as above, plus VHF, radars, walkie-talkie sets, the main radio equipment, etc. must all be declared on separate sheets in the above detail.

The authorities require two copies of every declaration, one of which is kept at the Port of Entry and the other travels on the ship with the clearance for landing at each subsequent port. i.e. "travelling manifest". The ship should have its own copy for reference, as neither of the above may be on board while in port.

The Health Declaration is in the standard form and can be filled in quickly, but the Customs forms and the identity cards take a lot of time and it is better to have a rough copy ready for copying out on arrival. The official forms are not available outside Argentina, and are too big for photocopying. Photographs are required for the identity card, but if advised a photographer will board with polaroid 'mini Portrait' outfit and charge accordingly.

Crew lists should be in the IMO format with full details of date and place of birth, plus the type of identity document (passport or seaman's book).

6 copies arrival, and 6 copies each departure! Company crew lists said to be acceptable provided ALL the information required has been inserted.

The identity cards can be photocopied and this would allow them to be prepared at sea before arrival.

The inspection party was 6 strong with Coastguard, Agent, Customs, Grain Surveyor, etc. Formalities including holds took about 1.5 hours with all documents prepared since sailing from La Plata. This was a rush to be avoided. (The vessel was cleared at the loading port up-river.)

British subjects not allowed ashore, all British passports and S.N.I.C.'s taken ashore and not returned until the vessel was cleared outward and Pilots on board.

Store List — Deck Engine Refrigerating

Aluminium Paint
Paint driers
Paints assorted in pastes
Paints assorted in liquid
Enamels assorted
Varnishes assorted
Red lead
White lead
Paint Powder
Coils Manilla rope (new)
Steel cable (new)
Hemp rope (new)
Tarpaulins (new)
Tarpaulins (used)
Burlap (new)
Separation clothes
Oil engine
Oil cylinder
Oil solidified
Packing assorted
Methylated spirit
Binoculars
Nanometers
Typewriters (new or used)
Micrometers
Monographs
Ammunition, firearms, explosives, etc.
  such as:
Deck flares
Rockets
Rockets sticks
Rockets signals
Friction tubes
Blue lights
Lifebuoy lights
Company's signals
Cartridges
Carbines
Guns
Revolvers
Rifles
Rocket Projectors
Gunpowder
Other portable firearms and explosives
(Red Hand flares)
Orange Smoke floats
Deck and Engine Stores considered to be in excess of normal requirements
(Fuel Oil)
(Diesel Oil)

Signed Chief Officer/Chief Engineer/Master.

Cabin Stores:

Bitters
Brandy
Champagne
Gin
Fruit Juices
Liquors Assorted
Rum
Cider
Table Wines
Strong Wines (Sherry, Port)
Sparkling Wines
Vermouth
Whisky
Other beverages (Vodka, Chinese Wine, Beer)
Tobacco (cut)(Chinese)
Tobacco plug
Cigars
Cigarettes
Alcohol (spirits of wine)
Jams (assorted Marmalade,)
Jellies
Caviar
Pickles
Pickles for crew
(Cooking wine)
Tobacco (50 mg./can)
Playing Cards (new)
Typewriters (new and used)
Calculating machines
  (new and used)

Cameras
Wireless sets Portable
Micrometers
Monographs
Binoculars
Perfumes
Thermometers clinic
Alkaloids such as:
Morphine
Cocaine
(Phenobarbital)
(Butobartbitine)
Preserved fruits (in syrup)
Electric vacuum cleaners
Electric irons
Electric toasters
Electric kettles
Electric Rice cooker
Articles said to be in excess of
  normal requirements:
Fruition declared as follows:
White sugar
Cooking oil
Tea
Coffee
Evaporated Milk
Rice
Flour
Cheese
Butter
Fresh eggs
Frozen Meats

Everything must be in units of the metric scale. Items in full time use normally not necessary to declare but extra items in quantities more than for normal use must be declared.

All electronic items were declared on a separate sheet giving type, makers name. Model type, serial number. No item can be declared twice.

Instructions for the Compiling of Argentine Official Port Arrival Forms:

1. Immigration Department – Crew Identity Card: This form is required by all crew members without exception in order to enter and depart from Argentine Ports. As well it is the only document valid for authorities. Therefore, special care must be taken by the bearer in order not to damage or lose said document as, eventually, inconvenience will arise. Furthermore, details in order to complete this form are printed in both Spanish and English. Particulars required of person, family names, status, when/how engaged. Fingerprints. One original card is required for each crew member.

Important: Each form must carry the photograph of the bearer. In this respect, Masters are kindly to inform Agent with anticipation if photographer will be required on arrival.

2. Customs Department – Deck and Engine Stores, Cabin Stores, personal effects of crew: Each form is required in original and 1 copy, the latter will travel with the ship from port to port. The ship will require one for her own records.

Store List (Green form): Instructions and details for filling this form are printed on it in Spanish and English.

Important: Even though items Fuel Oil and Diesel Oil are not listed on the form they must be declared in the blank spaces.

Cabin Store List (Yellow form): Instructions and details for filling this form are on it in Spanish and English.

Important: Even though the item coffee is not included in this form it must be declared in the blank spaces.

Personal Effects of Crew (Pink form): Instructions and details for filling this form are printed on it in Spanish and English.

N.B. Very important. Recently as per terms of local Customs Regulation Number 325/80, every vessel calling Argentine ports is compelled to declare every electronic item to Customs with their respective make, model, and serial number.

Consequently, and in order to avoid confusion, we suggest to declare on both the Pink and Yellow forms all items except electronic equipment (such as TV sets, VHF's, Radars, etc. which must be declared on an additional page (any kind) stating clearly their type, make, model and serial number particulars. The Yellow and Pink forms should be endorsed 'plus sheets declaring electronic items.' These additional sheets will also have to be signed by the owners of the equipment. We believe that the above proceedure will prevent and avoid a possible "double declaration" which is also very important. Therefore everything declared on the additional page is not, must not, be declared on the above Pink/Yellow forms.

3. Coast Guard (Prefectura Naval)

Crew List. 12 copies for first port.

The preferred form is in the IMO format with headings in Spanish. The crew list must be completed according to the following points:

1. Name of ship
2. Port of Arrival/Departure
3. Date of Arrival/Departure
4. Nationality of ship
5. Arrival port (last port)
6. Kind and number of identity document (seaman's book or passport)
7. Given name, family name (not initials)
8. Number as per crew list
9. Rank
10. Nationality
11. Date and place of berth
12. Date, signature and stamp of Master

This form is used for clearance on arrival and again on departure.

4. Sanitary Authorities:
Maritime Health Declaration. One original form, printed in Spanish and English, international format. One Vaccination list to be attached to the above, showing cholera and yellow fever if from Africa.

SHIPMASTER'S REPORT: September 1986.

Report pertaining to recent call at the Rio de la Plata region for discharge of a cargo of approximately 53,000 tonnes of Sahara Blend crude oil.

The discharge operation encompassed two lighterages and subsequent completion at the Navipar Oil Terminal off Zarate. The cargo in question was consigned for Paraguay, and is moved onwards from the storage terminal by flat river barges (barge trains) up-river for distances of over 1,200 miles.

56,000 d.w.tonnes. Product/Crude oil carrier, on voyage charter to European Charterers, and laden with a consignment of crude oil from a North African port, consigned for discharage at Zarate to Navipar Oil Co.

Due to various draft restrictions applicable at the different areas in the Rio de la Plata estuary and the Rio Parana, 2 lighterage operations had to be conducted prior to achieving suitable drafts for passage to the Navipar Oil Terminal, off the port of Zarate.

The vessel arrived at Lighterage Zone designated as "Charlie" on the morning of the 27th, drawing 12.35 m. (40.5 ft.) aft in salt water, (12.63 m. (41 ft. 05 in.) aft in fresh water). This lighterage area lies off Cabo San Antonio and is bound by the following co-ordinates: Latitudes 35° 59′ S. and 36° 05′ S.; Longitudes 56° 30′ W. and 56° 38′ W.

The chartered lighter vessel was found awaiting our arrival and the Master of the lighter undertook the STS berthing operation himself once our vessel was anchored and brought up. The port anchor was used and the lighter was secured on the starboard side. Similarly un-mooring was also undertaken by the Master of the lighter and our vessel weighed anchor only after the lighter was cast off and clear. ICS/OCIMF STS Guidelines were followed in the main. The lighter provided 2 "Yokohama" type pneumatic fenders adequately suited for the purpose.

A quantity of approx. 17,000 tonnes was off-loaded to this lighter to achieve an even keel draft of 9.56 m. (31 ft. 04 in.) and the discharge was carried out using only 1 hose of 8 in. diameter, provided by the lighter. This quantity of 17,000 tonnes was based on the permissible transit drafts for Canal Indio and Intermedio, to reach La Plata Roads. The permissible drafts for these canals at the time was declared as 31 ft. initially but amended by the Pilotage Authorities to an acceptable 31 ft. 06 in. due to higher water available at that time.

The passage from Lightering Zone "Charlie" to Recalada Pilot Station was laid well East of Banco Rouen and Banco Ingles, this being advertised as the only safe route despite the lengthier distance involved. The lighter vessel, even despite drawing a draft of only 26 ft. also utilised these courses.

However, waters in these areas in general are quite shallow, and underkeel clearances of only 1 ft. were experienced (as expected), especially near the approaches to Recalada Light Vessel. Speeds had to be reduced to reduce squat.

The Recalada Pilot boarded the vessel from a small motor cutter when the vessel was about 2 cables from the Light Vessel. It may be noted here that Recalada Pilots insist on boarding vessels only with a combination accommodation ladder and pilot ladder system, irrespective of vessel's freeboard.

The Recalada Pilot demands full sea speeds, even with deep laden drafts and almost no underkeel clearance. On debate, however, it was agreed to proceed at full manoeuvring speed only.

The Pilot was received at Recalada on the early morning of the 29th and the vessel was anchored at the La Plata Lighterage Roads shortly after noon the same day.

The 2nd lighter vessel however failed to arrive till the evening of the 31st and the vessel had to therefore remain at La Plata Roads till that time.

STS operations with the 2nd lighter were also effected as with the first, only this time the starboard anchor was in use and the lighter berthed alongside on the port side. 2 "Yokohama" type rubber pneumatic fenders were again provided by the lighter.

A quantity of approx. 6,000 tonnes was discharged to this lighter at La Plata Roads to achieve a draft of 28 ft. (FW), this being the permissible draft for transiting the Emilio Mitre Access Channel to Rio Parana Las Palmas.

Transfer operations were completed on the night of the 31st but the vessel could leave the anchorage only in the morning of the 1st as transit of the Mitre Canal during hours of darkness is prohibited.

The Parana River Pilot boarded vessel on the morning of the 1st and the vessel duly transited the canal to arrive at a selected anchorage in the river at approx. Kilometre Mark No. 80. The vessel had to anchor in the river mainly due to the berth being occupied by the previous lighter vessel engaged in discharging her cargo at the Terminal.

Communications on the VHF with the Terminal were established and were good (Spanish), and the vessel weighed anchor on the following day to berth almost immediately after the departure of the lighter from the Terminal, the precise timing being attributed to the good communications.

Navipar Oil Terminal: The Terminal belonging to the Navipar Oil Co. lies at Km. No. 111, only a short distance up-river from the port of Zarate. It has 2 berths; one being used for off-loading import cargoes from deep sea vessels and lighters, and the other being used for loading flat river barges for transhipment of the same cargo onwards to Paraguay up-river at a distance of over 1,200 miles.

The berth jetty was a bit fragile and the fendering inadequate for berthing vessels of this size and tonnage.

Use of tugs (expensive) can be dispensed with as steady river currents provide good control of the vessel. Both the berthing and unberthing operations were effected quite satisfactorily by the Pilots.

The berth is located immediately down-river of a bend and this seems to provide a "lee" from the major flow of the river current, the axis of which would be probably hitting off the opposite side of the berth before continuing downstream.

Sufficient water for 28 ft. draft was available at the berth and the vessel never rested upon the bottom. The river tides were also at Neap and this too contributed to prevent sitting on the bottom. Due attention to vessel's trim is also required.

The Navipar Terminal, which is basically a storage facility for import of crude oil for onward shipment by river craft to Paraguay, is provided with only 1 main shore line for crude oil of 14 in. diameter. The storage tanks are located atop a hill at a distance of some 2.5 km. and in the absence of any booster facilities, substantial back-pressure was experienced throughout the discharge operation, causing problems especially towards the end strippings. This is apparently the bane of all vessels calling here for discharge.

Two hoses of 8 in. diameter only were provided for the discharge.

The vessel finally completed all discharge on the night of the 4th, once again being prevented from unberthing due local regulations prohibiting movement during hours of darkness. The vessel could therefore only unberth on the morning of the 5th. Mention must be made here that local coastguards permit a maximum of 2 m. trim on the vessel.

The return passage in ballast was made via the Martin Garcia Channel to Recalada, this route resulting in substantial savings in costs at the sacrifice of some 60 miles additional steaming time.

A point of interest is the rail/road Bridge Spans across the Rio Parana Las Palmas at Km. 105 (slightly down-river from Zarate) and the Rio Parana Guazu at Km. 177. Both these spans can only be crossed during daylight as per local regulations. However, the Martin Garcia Channel can be transited at any time as with Canal Indio and Canal Intermedio.

Drafts available at the Martin Garcia Bar however are less and usually only 20 ft. – 21 ft. at Zero datum. Therefore in order to avoid anchoring to await tide, the draft, if possible could be minimised for the available depth for the transit only.

The vessel cleared the Martin Garcia Channel and arrived La Plata during the night of the 5th, and the Recalada Pilot was finally dropped in the morning on the 6th.

Manoeuvring in the Mitre Channel and in the Rio Parana had its own peculiarities but the Pilots attending the vessel were found to be very professional. A typical pecularity was the failure of the vessel to respond to hard-over helm albeit continue to swing in the opposite direction – the swing itself not having been induced but more of a shearing-off of the vessel's head, caused by the particular flow pattern of the heavily silt laden waters across and over the bulbous bow at high speeds, as reported by the Pilot. To counteract this shear the speed was immediately reduced and the vessel responded to the corrective helm rapidly.

Port Customs, Regulations and Formalities: Whilst requirements to meet the formalities and regulations governing the area in question were very much as described elsewhere in the "Guide", it may be worth mentioning here that for this operation a contingent of 3 Shore Officials boarded the vessel soon after the 1st lighter was fast at Zone "Charlie" on the morning of the 27th (they having travelled aboard that vessel to the lighterage area) and set up residency on board from that time till the vessel was finally fast alongside the Terminal at Zarate on the evening of the 2nd.

These officials comprised of representatives from the Customs, Prefectura, and Immigration. The Customs Official is appointed to oversee cargo quantities on arrival and transferred, and also clear the vessel inwards. The Prefectura Official is appointed to check vessel's movements within the port, anti-pollution watch, etc. The Immigration Official for inward clearance only.

Two Independent Cargo Inspectors appointed for the operation also stayed on board throughout the vessel's stay in the port and were responsible for all gauging, sampling and calculation of cargo quantities on board and that transferred, including effecting gauging of the lighter vessels and finally to determine shore outturn.

Further, two representatives from the Agents were also assigned to the vessel; whilst one remained permanently on board throughout the vessel's stay, the other functioned as a courier between ship and shore, using whatever means of transportation were available to him, even using the returning pilot boats to La Plata.

These representatives from the Agents proved beneficial to the vessel as all liaising, courtesies, translations, co-ordination with the shore including Pilots, and a lot of sundry chores of the like were handled by them. The paperwork here was voluminous besides being all in Spanish and each lighterage area and the berth were to be treated as independent calls as far as clearing papers were concerned, and in this respect the Agent's representatives were valuable.

Pilot offices here require some lengthy notifications; at least 24 hours notice for Recalada Pilots and minimum 12 hours notice for Rio Parana. If the vessel is delayed more than 12 hours from the ETA given to the pilot office in writing by the Agents, the booking stands cancelled and a fresh requisition for Pilot services has to be raised. Since again the minimum notices are incurred, it becomes apparent that if ETAs are not kept updated frequently, unnecessary delays to the vessel can be incurred in awaiting Pilots.

Ship's Radio facilities were abundantly utilised by the shore personnel in liaising with their offices, especially from the lighterage areas, and a substantial Radio bill amounted.

Communications from the Navipar Terminal at Zarate, to the city of Buenos Aires some 60 km. away, were good and the Agents representatives could maintain a good rapport with their offices there.

Permission to effect Crude Oil Washing operations was granted and the vessel effected same through the discharge.

ATUCHA: 33.58 S. 59.16 W.

"C" category port. Km. 132 – River Parana de las Palmas Province of Buenos Aires.

Situated on the left bank of the Parana de Las Palmas at Km. 132, 15 miles upstream from Zarate, and 80 miles by river from Buenos Aires, via Mitre Channel.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

BERTH: A small berth 33 m. long with two dolphins in 40 ft. built especially for the discharge of heavy material for the new Atomic Energy Plant. There is a 300 ton heavy lift crane on the concrete platform. The plant is now in full operation.

AUTHORITY: There is no port authority here, the port comes under the jurisdiction of Zarate.

BUENOS AIRES: 34.36 S. 58.22 W. (See Plan)

"A" category port

Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

APPROACHES: Access is by the "Punta Indio" channel which requires constant dredging and commences just West of the Recalada Lightship, which is situated 30 km. due South of Montevideo. The channel with 28 ft. 6 in. on a width of 100 m. or 23 ft. over 200 m. winds up to the Outer Roads, which are some 37 km. from the Port. Direct entrance is by a channel, dredged to 29 ft 6 in. with a 50 m. width, and 28ft. 6 in. on an 80 m. width, to within 10 km., where the channel divides into North Channel, serving the New Port and Madero Port berths, and South Channel, for the rest of the port. North Channel at present has a depth of 25 ft. with a width of 50 m. or 19 ft. with 80 m. width. South Channel has 23 ft. 6 in. with a width of 35 m., or 21 ft. 6 in. over 50 m. All depths given here and elsewhere refer to the zero of the Riachuelo tidal indicator and semaphore in Buenos Aires port, which practically corresponds to the level of the ordinary lowest water, and is marked 0.72 m. under the average medium level of tides. Tides average 3 ft., but the principal factor is that of wind, which can raise or lower the water by 5 ft. or more.

The Mitre Channel enters the access channel at Km. 12, and under existing regulations the Mitre Pilot ceases his job there, and a Buenos Aires Port Pilot will either take the vessel into Buenos Aires or out to Intersection, or vice versa. This involves use of tugs for the changeover, unless the vessel goes only to Campana or comes from there, when the Buenos Aires Pilot can travel by land.

When large passenger liners or LASH vessels are entering or leaving, it is possible to have the access channel closed to all other traffic for a period of four hours on account of the narrowness of the dredged channel.

ROADS: The Outer Roads are between Buoys 25 and 37, according to draft. The Inner Roads are between Buoys 12 and 15. Intersection Pontoon, or Pilot station, is at Buoy 37, North side.

PORT: The port, which is artificial, comprises:

Puero Madero	North Basin, Docks 4, 3, 2, 1 and South Basin.
New Port	Basin A, B, C, D, E and F.
South Dock	First and Second sections.
Liquid Gas Basin	On the South side of the South Channel before reaching S. Dock
Inflammables Basin	On the South side of the South Channel between Liquid Gas Basin and South Dock.
East Basin	On the North side of the South Channel.
Riachuelo	The Districts known as Boca and Barracas.

BERTHING:

Puerto Madero (Central Zone): This is the oldest part of the Port. Ocean going vessels mainly operate in North Basin, and Docks 4 and 3.

North Basin: Built in the form of an irregular pentagon, with the entrance, 100 m. wide in one angle. The two piers at the entrance are 200 and 225 m. long, respectively. The West side is 390 m. long and the South 377 m., North 335 m., and with a depth presently 22 ft.

As the basin was built for a depth of 21 ft., and later dredged, when vessels load deeper than 20 ft. they should be careful to keep well off the quay wall to prevent grounding. Up to three vessels can discharge at anchor.

There are 2 dry docks in the basin, and a repair shop.

Usually only 1 berth, Section 6, is used for loading/discharging operations and can be used for containers. Sections 1 and 2 are used by vessels repairing or laid up, while Sections 3 and 5 are for Navy use. The warehouse of Section 7 is used by the Custom House.

Dock 4: Connected to North Basin by a lock 197 m. long, and 25 m. wide. The dock itself is 630 m. long and 160 m. wide, with 20 ft. of water.

On the West side there are 4 warehouses, each 4 storeys high and 12×3 ton cranes. Berths, or sections, numbered 1 to 4.

On the East side there are 4 two-storey warehouses and 23×2.5 ton cranes. There are also several sheds behind and parallel with the warehouses which give on to the dock, sections numbered 5 to 8.

Between Berths 6 and 7 on the East side there is a large open space where vessels or lighters can discharge direct to trucks or to railcars. Trucks may also go alongside at the other berths, at all of which there are railway lines, but space is limited.

The dock heads are used for discharging sand and gravel from barges.

Dock 3: South of Dock 4, connected by a cutting 70 m. long by 20 m. wide, with a swing-bridge. This dock is 690 m. long and 160 m. wide, depth also 20 ft.

On the West side, Berths 1 to 5, there are 4 four-storey warehouses, and there are 13×3 ton cranes. There was a fifth warehouse at No. 3, burnt down and not rebuilt; this now forms part of the open space for general discharge and storage of imperishables.

On the East side, which is fitted with 6×3 ton cranes, there are 2 elevators for grain. Unit three, with capacity for 6,000 tons in bulk and 1,200 tons in bags, fitted with 3 tubes and 3 chutes, can load 500 t.p.h. bulk, or 160 bagged, by 1 spout only at a time. It is used for the smaller vessels in the trade with Brazil only. The other elevator in this Dock, No. 5, is used for storage.

Between the elevators, on the East side, there are open spaces where vessels may berth and discharge lumber or drummed cargo, but this section is limited to medium and small vessels only.

Dock 2: This is connected with Dock 3 by a cutting 60 m. long, and 20 m. wide, with a swing-bridge. The Dock is 570 m. long by 160 m. wide and 20 ft. deep at zero.

On the West side there are 4 berths, each with a warehouse, Nos. 1 and 4 being 3-storey, and 2 and 3, 4-storeys high. There are 15×3 ton cranes.

Section 1 is no longer used for the storage of dangerous or noxious cargoes, although Section 2 is in use for parcel storage.

The grain elevators on the East side of the dock are in a state of disuse. Their demolition is envisaged in order to provide an open storage area.

Dock 1: Connects with Dock 2 by a cutting 80 m. long, 20 m. wide, with 19 ft. This dock is chiefly used by Government-owned river craft. On the West side there are 5 warehouses, and 18 cranes. There are also ample open spaces. On the East side there is an elevator, capacity 27,000 tons in bulk, and three sheds between Docks 1 and 2, at about 300 m. from the quay.

At the southern end of this dock a hazardous and inflammable cargo store has been established, known as Shed 0 (zero).

South Basin: This basin is connected with Dock 1 by a lock 184 m. long by 20 m. wide, with a swing-bridge.

None of the lock gates in Docks 1 to 4 are used as water gates, water level is tidal, and the gates are simply means of communication. There are only gates proper into Dock 4 and Dock 1 from the North and South basins respectively. These have not been used for many years, although they were originally functional and formed one lock of all the docks.

The basin is 1,029 m. long and an average width of 110 m. It is used by river craft, cross river passenger ferry boats, coasters, etc. A new ferry boat terminal has been built here, on the land side of the basin, with waiting rooms, Customs section, etc.

New Port: The New Port, lies to the North of Puerto Madero, and entrance is via the Northern Channel. A breakwater extending from the North anteport protects the basin of the New Port from rough seas, and extends as far as Basin D, from which point another breakwater protects Basin E. Between the two, a channel is kept dredged for the movement of coasters to and from upriver. Basin F is used entirely for small coasters and river craft.

The 5 basins of this part (excluding F, coastal) offer good accommodation for the larger vessels entering Buenos Aires, and in all the berths there is sufficient water to float any vessel which can navigate the entrance channels.

Basins are numbered from South/North.

Basin A: Used by passenger vessels as well as general cargo. A landing station for passengers has recently been opened here and all vessels carrying over 50 passengers must land them here, shifting later to another berth if necessary.

The basin is 365 m. long by 140 m. wide, with 870 m. of wharfage. Northern side can accommodate 2 medium/large ships. Western side is frequently reserved for the Argentine Navy. On the S.W., passenger section, there is room for 1 vessel. On the S.E. another berth is available if the vessel operating at the Maritime Station is medium size only.

Pier Head No. 1 is 100 m. long, but is mostly used as waiting berth for river going vessels. There are two railway lines on each side of the basin, and also at the back of the deposits. There are five warehouses and a total of 14×3 ton cranes.

Basin B: Used for general cargo vessels, is 525 m. long on the North side, 464 m. on the South and 151 m. wide at the Western end, with 1,165 m. of wharfage with room for seven medium/large ships.

There are 10 warehouses, and a total of 29 cranes, all 3 tons.

Pier Head No. 2 is 202 m. long. There are 3×3 ton cranes, and as a rule large passenger vessels occupy this berth after shifting from the passenger station.

Section 6 and 7 of this basin are reserved for the State Fleet vessels, or if used by others must be vacated if required by the national vessels.

Basin C: This is 495 m. long on the North, 585 m. on the South and 175 m. wide at its Western end, with 1,284 m. wharfage for 7 medium/large vessels.

On the South side there are 3 warehouses, built 20 m. back from the quay to facilitate operations. There are 13×3 ton cranes.

On the North and West sides there are no sheds, and this is used for operating directly to or from trucks or rail cars.

There are 7×3 ton cranes on the North and 3 on the West side.

On Pier Head No. 3 which is 236 m. long there are 2×3 ton cranes and a 20 ton crane.

Railway tracks are fitted with a third rail for narrow gauge traffic.

The South side of this basin is reserved for ELMA (State Fleet) vessels.

The North side 1/2/3 is used for grain in times of congestion.

Basin D: This is 495 m. long on the North, 585 m. on the South and 194 m. wide at its Western end, with 1,300 m. of wharfage.

Along the Southern side is the Grain Elevator, which occupies all the water front and extends also along Pier Head No. 4 — 295 m. Capacity is at present 150,000 tons, with another 20,000 being added. It can deliver 13,500 t.p.d. to a total of 5 vessels. On the North and Western sides, vessels may work to or from trucks for direct delivery cargo. There are 9×3 ton cranes on the North and 3 on the West, and also 3 cranes capacity 30 tons each.

On the North side a Container yard has been operating with 25,000 sq.m. of pavement and 1 shed, 100 m. long, 10 m. high and 30 m. wide. There are also 2 side loaders for 20/22 tons and 1 for 35 tons. Eventually the flooring will be extended to twice the area. 20 ft or 40 ft. Containers can be handled by 4×35 ton gantry cranes and 1 Liebherr "T 100".

For vessels with a reduced number of Containers, Basin E, North side, can also be employed, using the same concentration area at the Ericson yard.

Basin E: The basin is 495 m. long on the North side, 585 m. on the South and 194 m. at the West end. Coal is discharged on the North side and there is also a warehouse there for other cargoes, although basically this basin is used for coal.

On Pier Head No. 5, which is 523 m. long, the Power plant discharges its coal or oil. There is 1 oil intake and 2 travelling grabs, capacity 4 tons each, and also a 30 ton crane.

On the South side of this Basin vessels operate loading or unloading fruit and generals.

On the West, or shore side of the basin there are 20 tanks (more building) for caustic soda, present capacity 7,400 cu.m. These are all steel tanks, and there are 11 lines to the pier. There are truck loading installations in the plant, and a weighbridge, but no fire-fighting installations. Wine tanks are also being built.

Basin F: This faces North, and is used for river craft only, pusher barges and tugs, while on the land or West side there are discharging facilities for sand hoppers.

Pier Head No. 6, between Basins E and F is 310 m. long, with room for 1 vessel only, and with 2 intakes for fuel oil and a 7.5 ton travelling grab for discharging Coal, capacity 150 t.p.h.

South Dock:
First Section: The first section has continuous quays on both sides, and a width of 90 m., widening to a turning basin before reaching the connecting channel to the second section.

Before the turning basin are 8 steel tanks for chemical or vegetable oil products, total capacity 5,260 cu.m., with 2×6 in. stainless steel lines and 2×4 in. steel lines, maximum discharge rate is 175 t.p.h.

Nearer the basin itself are 28 tanks, capacity 14,494 cu.m. plus 8 more tanks in the installation for use both with caustic soda and other chemicals or alcohol. Only one tank (No. 3) of 320 cu.m. is of stainless steel, the others are all steel.

The West quay is 911 m. long, and the East side 1,109 m., both in use for liquids and general.

The old Freezing plant is inactive and on the East side of the turning basin there is an elevator capacity 6,500 tons, 4 tubes and 3 chutes, plus another storage shed for 19,100 tons grain. Only 1 tube at a time may be used at 400 t.p.h.

At warehouse 10 there are 3 steel tanks capacity 10,600 cu.m. with a 10 in. line used for caustic soda, and by the grain board elevator 11 tanks capacity 23,640 cu.m. for vegetable oils.

On Pier A there are 41 tanks, capacity 18,580 cu.m. with 2 load lines for use with inflammables, handling usually caustic soda, fatty acids, tallow dodecilbencene and vegetable oils.

At Piers E and G there are 19 tanks total capacity 21,058 cu.m. for alcohol and chemical products, with 4 lines to the pier.

At F and G there are also 15 tanks, capacity 8,199 cu.m. for caustic soda, alcohol and chemical products.

Pier G has a further 6 tanks, total 3,259 cu.m. for any kind of chemical products, with 5 lines to the pier.

Second Section: The connecting channel is 90 m. wide, with earth banks. Jetties for discharging petroleum are placed along the East side, while on the West there is a continuous quay 1,000 m. long, on which there are 4×3 ton cranes and 8×1.5 ton cranes for discharging sand.

There are 7 berths, 5 of which are for general use, 1 for the Power plant for discharge of coal, with a 5 ton grab, and 1 elevator berth, Unit 10, capacity 23,500 tons. The loading bridge has 5 turrets, each with 2 tubes and 1 chute. Only 1 can load at a time, rate 400 t.p.h.

There are also 6 tanks, total 4,698 cu.m. for use with Tung oil with 1 line to the pier.

There are 8 petroleum jetties on the East side for the discharge of tankers and loading oil barges ex-shore tanks. The jetties are marked A to H. On reaching a draft of 23 ft. 6 in. vessels must shift to New Port.

The gangways to the mooring dolphins for tankers are in a very precarious state, which may lead to the closing of this sector.

It will be seen that there has been a considerable increase in number and capacity of tanks, all for private companies. In South Dock there are 134 tanks, capacity 87,147 cu.m.

Liquid Gas Basin: The Liquid Gas basin lies on the South side of the channel, immediately East from the Inflammables Basin, and consists of a central mooring platform 356 m. long, with 4 pairs of dolphins and 2 mooring blocks at each end, all joined by a foot gangway. The basin is protected from the S.E. by a breakwater 850 m. long, in the form of an inverted "L". The Gas lines are insulated to carry Liquid gas at minus 45°C.

Only 2 tankers are allowed to use the basin at a time.

As with the Inflammables Basin, all transit to land is by launch.

Inflammables Basin: This is situated outside the South Channel in front of Km. 0.500 and about 300 m. distant from the axis of the Channel and at a right angle. The dimensions are as follows: length: 483 m. on the East side, 323 m. on the West side, 185 m. on the S.W. side and 72 m. on the South side. The dock walls at the entrance are 44 m. long on each side. The entrance is 50 m. wide. All the dock walls of this basin are of cement, as well as the intakes and landing dolphins. It has 6 intakes, 6 dolphins and 12 jetties for mooring vessels. The present tank storage in South Dock lies to the S.E. of this basin at a distance of about 1,000 m. The land lying between the South Dock and the Inflammables Basin is used for erecting tanks.

Ocean going tankers discharge at the piers on the West side. There are no facilities for reaching the city by land and therefore all the transport of officials, crew, stores, etc., must be done by launch.

The oil for the Y.P.F. tanks on the East side of the Basin and the M.O.P. workshops is sent from South Dock by piping under the South Channel.

East Basin: At the entrance to the South Anteport, a breakwater and 2 new basins have been constructed.

Basin No. 1 is used exclusively by the Port Works Department for laying up and repairing dredgers and other maintenance craft. It also contains a dry dock and a shipyard. Depth of water is 24 ft. in the basin but only 16 ft. at the entrance.

Basin No. 2, in form an irregular quadrilateral, is separated from No. 1 by a mole, and is 146 m. wide at the entrance, 170 at the base and with walls 372 m. long to the S.E. and 294 m. long to the West, allowing a number of vessels to berth. Alongside this mole is the SEGBA Power Plant. Depth in the basin varies from 24 ft. to 14 ft. at the entrance.

From No. 2 there is a mole parallel to the South Access Channel, 260 m. long, with a central salient 120 m. long, and 2 side salients 15 m. long each, and at 55 m. from the central mole. This is used by tankers discharging fuel for the Power Plant. There is 1 crane, 16 tons, and a narrow gauge railway line.

The breakwater has been built on the South side of the access channel as a protection for the basins, and commences 100 m. South of the light buoy on Km. 1 of this canal.

South Anteport: The construction of the Inflammables Basin, and of the East Basins, before arriving at the entrance to South Dock, Riachuelo or South Basin has created an Anteport. The North part has a mole 384 m. long from East Basin No. 1 to South Basin. This is used by the Port Works Department for workshops, deposits and offices.

The Prefecture has an office here, on top of which is a mast 2 m. high, used as a signal station. A white-edged red flag by day or a flashing red light by night indicates that a vessel is entering by the Southern Channel from Km. 8 to the Anteport. This signal will remain until the vessel reaches the Anteport, and signifies that the Channel is closed to all except tugs, sand hoppers and river passenger craft, provided draft does not exceed 14 ft.

Riachuelo: This is a narrow, winding stream which flows to the Plate by way of the South Channel. It has a depth in its axis of 21 ft. and from 17 ft. to 19 ft. at the berths, while the banks being sloping can cause trouble with moorings on a falling tide. Ocean-going vessels rarely use this now, except for occasional discharge of timber, and it is used mainly by lighters and coastal craft, as well as by laid up vessels and what are now virtually wrecks.

This is the old-time Boca and Barracas area.

TUGS: From vessels drawing up to 22 ft., service is rendered by a bow tug from Km. 5, and a stern tug from Km. 1, or vice versa, and to or from Kms. 8 and 4 respectively when draft exceeds 22 ft.

Stand-by time will be charged if a vessel is delayed in entering or leaving by bad weather, fog, low water, no berth, etc., plus usual Sunday/holiday surcharge.

Tug hours now coincide with ordinary port working hours and time is counted from the hour they leave their moorings and until they return.

When a vessel is leaving port, and tugs are ordered to accompany her beyond normal limits, an overcharge will be made on an hourly basis.

Once a vessel is moored, all further service in the same section will be charged by hour. If the vessel shifts section, this movement is charged plus the sections traversed.

A special compensation charge is made when tugs are ordered but not used.

For the services of tugs supplying electricity or steam, charges are made per day and per hour, varying with the size of the tug.

If vessels do not use their engines while under tow, a surcharge of 50% is made.

Tow ropes must be supplied by the vessel, but can also be hired. The towage company is not responsible for breakages, fouling of propeller, expenses of diver or any other consequence.

Also see "General" before first port.

DENSITY: Fresh water.

FRESH WATER: There are hydrants at all berths, with very few exceptions, at which vessels can take water at a charge per cu.m.

There are no hydrants in the Inflammable Basin, and only at Berth No. 1 on either side of Basin E in the New Port.

Delivery rate varies from 5 to 10 t.p.h., depending on the number of vessels taking water, time of day, etc. An extra charge is made in overtime.

FUEL: Available, by barge.

CARGO: *Classification of Import Cargo:* Argentina being a tariff protected country, all cargo landed is subject to Customs control.

To facilitate control, there are Custom House warehouses on the city side of the dock zone, on the quays, in the South Dock, and others away from the quays. The Dock Zone is enclosed.

The transport of all goods from vessels is currently effected by State owned vehicles. There are no longer any private warehouses.

All fine cargo, cargo in cases, and most baled cargo must be discharged to Custom House Warehouses, direct from the ship, by means of dock cranes.

Other cargo in cases, barrels, etc., which might be damaged if stowed in the open air, also cargo which from its nature might damage other cargo stowed with it must go to the Custom House warehouses away from the quays, and is conveyed there by port railway wagons that take the cargo from alongside the ship. This same class of cargo can also be sent to private fiscal warehouses and is similarly conveyed there from the ship's side by railway wagons.

Cargo that can be stowed in the open air without risk of damage, such as cases of glass, motor cars, sanitary ware, etc., is also conveyed from the ship's side by railway wagons to open spaces (plazoletas) within the dock zone, reserved for the stowage of such cargo.

Certain classes of cargo, such as bales of gunnies, jute, rice, agricultural implements, and all articles the nature of which can be seen at a glance, can be discharged direct to consignees' carts, motor lorries, etc., from the ship's tackle. Also certain classes of rough cargo, such as coal, lumber, iron, cement, etc., must be discharged direct in this way.

The Custom House, in order to expedite despatch, has enlarged the list of goods that can be discharged in this manner, and also authorises the carrying out of these operations outside ordinary working hours, which has hitherto been prohibited.

Storage of goods in Custom House Deposits is limited to six months, counting from the date of the vessel's entrance to port.

All classes of cargo can be discharged into lighters (by permit from the Custom House).

Discharge to lighters can take place in all sections of the port.

Use of Special Deposit Called "Transit" for Reception of General Cargo: In order to facilitate the discharge of vessels with general cargo for delivery to Fiscal Warehouse, the Custom House Authorities have authorised the direct discharge from vessels to a special warehouse which receives all the cargo as it comes out of the hold, labour being supplied by Agents.

This facility is only available at certain sections of the port and whenever a vessel discharges at a berth where there is a "Transit" deposit, this must be used unless the vessel carried homogeneous cargo or of such a nature that it does not require the use of the "Transit" deposit.

The cargo discharged in these special warehouses must be delivered by the Agents at ship's expense, into the Customs warehouses.

Cargo in transit to or from Paraguay is now stored in sections of Warehouse No. 5 of Dock 4. The goods may remain in the warehouse, once onwards transportation has been arranged, for 3 days, where the ocean carrier is operating, or in a special shed in Section 1 of Dock 2, where the river vessels load for that country.

Cargo in transit for other countries can be deposited in any approved space. In all cases, special permit must be obtained in order not to lose the status of "transit cargo".

Time Limit for the Permanency of "In Transit" Cargo in Lighters: Maximum time limit is set at 90 days, but it is possible to renew this, while on the expiry of such authorisation, the cargo must be discharged to fiscal warehouses, and be subject to all the rules and conditions governing this operation.

The Custom House is authorised to grant an extension of time when the interested party requests this before expiration date, and providing the causes are, in the opinion of the Custom House Authorities, justified.

Cargo in transit that is discharged by mistake to fiscal deposit, has to be removed from there within 48 hours; otherwise it must be added to the cargo manifest as a surplus discharge.

A tariff in the style of railway tariffs is in force with a variety of charges, all depending on the class and nature of the cargo that is being transshipped. Therefore, Shipowners, their Agents and Forwarding Agents should, in every case, communicate with their Agents in Buenos Aires to ascertain the exact cost of these charges. Subsequently to the new tariff being enforced, various increases were declared, so that the extra freight on cargo trans-shipped is now an important item to be considered when accepting through bookings.

Delivery of Cargo: The receiver of the merchandise or holder of the Bill of Lading must deliver this document to the Custom House to clear the goods. The merchandise, whether for deposit of direct despatch is delivered to the Consignees without the intervention of the Master of the vessel or the Agents. The Bill of Lading remains with the Custom House, under whose control the cargo is delivered. The Custom House verifies the legitimacy of ownership, and whether all the import dues or services have been paid on the merchandise before leaving warehouse.

Collection of Freights on Imported Goods: In the Argentine, the Custom House releases the cargo, and not the Agent, therefore the only means of ensuring collection of freight when payable at destination, is for the Agent to place a judicial embargo on the entire cargo. This action necessitates the Consignee first obtaining the Agent's conformity to the documents before the Custom House will accept them and deliver the goods.

Without an embargo the Agent, once he has presented the Cargo Manifest, cannot intervene between the Custom House and Consignee. Not even the retention by Shipper of all the signed original Bills of Lading is a safeguard, because the Custom House, which is only concerned with the delivery of the cargo to the lawful Owner and is in no way concerned with the freight payment, will deliver the cargo against production by consignee of a bank guarantee that the Bills of Lading will be forthcoming in due course.

From the foregoing it may be gathered that freight should always be prepaid when possible.

The Custom House usually does not release the cargo, if the Bills of Lading are claused "Payable at destination", until the importer produces an account for freight, duly receipted by the Agent, but this is not a sufficient cover, as the Customs are not under any legal obligation to effect this control, and therefore cannot be held responsible for the freight of goods delivered without it being paid.

Cargo Discharged to or Loaded from Vehicles: The Custom House Administrator has authorised the access of vehicles of all classes to the quays of this port for the reception or delivery of cargo of any class, size or weight. It is necessary for the importers, exporters or Custom House brokers to obtain a permit for this, and the applicant is held responsible for any damage to port installations caused by said vehicles. Sufficient space must be left between truck and sheds to allow passage of Port Authority vehicles and fire engines.

The authorities will not be responsible for any accidents to the vehicles, their crew or their cargo. The vehicles must be so handled as not to interfere with the railway traffic.

Discharge of Inflammables: This is now permitted in the Port of Buenos Aires under strict security control.

Discharge of Sulphur: It is compulsory to have a motor launch fire extinguisher alongside vessels during the discharge of sulphur. An extra man is also required at each hold for carrying water to the stevedores.

Delivery of Fresh Fruit: The Custom House allows the consignees of fresh fruit to take away their cargo immediately on vessel's arrival, upon presentation of a special permit endorsed by a bank and Agents, and whereby the receivers guarantee presentation of the Bill of Lading in due course.

Placing of Lighters between Vessel and Wharf: When lighters are placed between the vessel and the wharf for the convenience of discharging a vessel's hold, full Port Service Dues are charged.

Lighters may be placed between the vessel and the wharf when the vessel's work to shore is not interfered with thereby. In such cases the vessel will continue to pay full dues. Lighters are, in fact, not considered as occupying any berth unless they are allotted a special berth by the Custom House to load or discharge. It is only when lighters are so commissioned by the Custom House, that a vessel going alongside these lighters would be charged in the category of a vessel lying second off.

Discharge of Heavy Lifts: There are 3 floating cranes, one for lifts of up to 60 tons, another of 100 tons and a new one of 250 tons. The first two may have lost part of their capacity. The 250 ton crane can navigate carrying its cargo, so making special movement of the vessel unnecessary, but the two smaller cranes must operate between ship and shore in swivelling movement.

There is also a floating crane capacity 30 tons belonging to the Navy, and two others, each 75 tons capacity, belonging to the State Fleet.

Hire counts from getting the crane alongside, and in condition to work, until work is completed, plus an extra hour to compensate crews from getting the crane back to its mooring place. Slings must be supplied by the lessee, and no responsibility is accepted for damage or breakage, the charge being on a tonnage/hour basis.

The 250 ton crane is not self propelled, and has a length of 45 m., 23 m. beam and a draft of 5 m., displacing 1,400 tons. If required it can be used in salvage operations, towage being for account of lessee.

Normally these cranes, except for the 250 ton crane, navigate under their own power, but the Craneman has the right to employ a tug or tugs for lessee's account when he considers it necessary and two tugs are also generally employed.

Wharf Cranes: The hire of shore cranes is charged by the Port Administration to the Agents of the vessel requesting their use. Special permission must be obtained for overtime work, and also to have shore cranes handle ship's machinery, ballast, or any other non-commercial commodity.

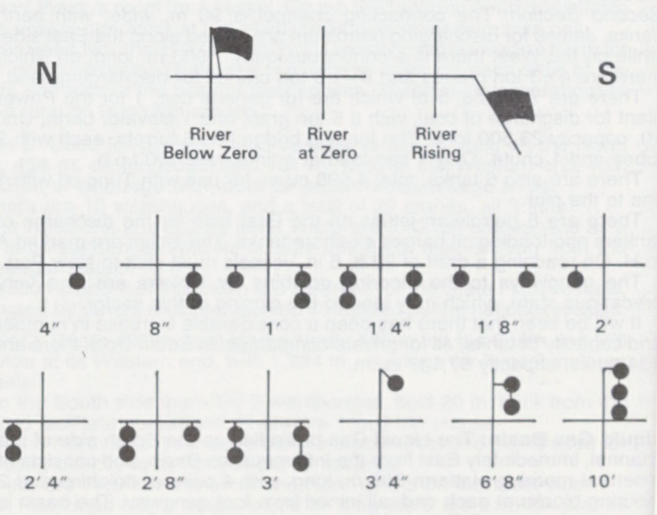
Movable Cranes: Charged per hour from arrival until work finishes. These are used for shifting cargo from one wagon to another, or for shifting cargo for convenience of consignees.

Advertisements: Advices of arrival of vessels with cargo, inspections of general cargo and notices of general average are published in the local press.

Notarial Protest and Extensions: When vessels arrive with cargo it is customary to note protest before a Public Notary, for which there are fixed fees per page to be filled in, plus further fees should an extension be necessary later.

TIDAL SIGNALS: The following tidal signals, shown from a semaphore on the North side of the entrance to South Basin Lat. 34° 38′ S., Long. 58° 21′ W. (approx.), indicate the height of the water above or below zero.

SIGNALS BY DAY



The signals are made with balls and black flags by day and with flashes by night as shown in the diagram below, seen from the Antepor looking out towards the river.

To indicate that no signals are being made at the semaphore, a flag is hoisted to the masthead, and another at the yard-arm.

SIGNALS BY NIGHT

(White flash) Cycle: 30 seconds.
(Red flash) Long flash: 2.5 secs. each.
(Green flash) Short flash: 6/10 secs. each.

White flashes	Rising tide: One long.
	Falling tide: Two short.
	Above zero:
Red flashes	For each metre: One long.
	for each 10 centimetres: One short.
	Below zero:
Green flashes	For each metre: One long.
	For each 10 centimetres: One short.
	Zero:
Green and red flashes	One green and one red, both short.

A weekly bulletin is issued by the public works ministry and widely distributed among Pilots and Agents reports depths referred to the zero of the Riachuelo Indicator in channels, passages, basins and berths and it is possible to know the real depths at that moment in each part of the port area.

GENERAL: *Port Zone:* No one is permitted to enter the port zone on Sundays or holidays, or any working day after 1800 hrs., unless supplied with a pass. Visitors to ships must have cards issued by the Agents and approved by the authorities.

There are several access gates open during day time, but after working hours and on Saturdays/Sundays and holidays only those at Cangallo Street (by Dock 4) and Maipu (New Port) are open on a 24-hour basis.

Allotment of Berths: Vessels to discharge are allotted berths by the Port Authorities in strict turn, as from arrival in the roads, and according to the nature of the cargo to discharge or load and its quantity. A certain time is granted for completing operations, though an extension can usually be obtained, the Port Authority reserving the right to order a vessel out if operations are not completed on time.

Berths are allotted in South Dock when the greater part of a vessel's cargo is for the factories in that zone.

Berths at the Elevators: These are allotted in accordance with the certificate given by the National Grain Board, and in strict order of arrival in the roads.

Time Limit for Occupying Berths and Commencing Operations: Vessels which do not commence operations within 4 hours of the first ordinary period, are liable to have the berth given to others. Similarly those which suspend operations without due cause may lose the berth.

ELMA Berths in New Port: Any vessels may solicit one of the reserved berths, if vacant, but must shift as soon as a State vessel requires the berth.

Discharge of Inflammables: Consignees must take delivery from alongside. Should Customs clearance for such cargo not be ready, it must be discharged into lighters and the authorities will indicate where it must be placed.

Entrance: Vessels can enter or leave at any time of day or night, with advance notice to the authorities.

Movements: Vessels are not allowed to shift if their draft is not at least 10 in. less than the depth of water on the semaphore, with a rising river. No vessel can interrupt the operations of another to shift within the port, but if ready to sail, the other vessel must facilitate its departure whatever the hour may be.

All vessels moored alongside one another, at the quay, must reciprocally facilitate their operations, and open out when the vessel on the inside finishes her operations, and must leave or change berth. They must also make room for lighters with cargo for the vessel next to the quay, outside working hours.

When a vessel has to shift along the quay up to one ship's length to discharge or load from another hatch, neither towage nor pilotage is necessary when the shift is between the forward hatches, or the after hatches. Prior permission must be obtained.

Shifting from North to South or Vice Versa: There is no set rule, but usually vessels going from say, South Dock to New Port, will let tugs go and sail out to Intersection Roads to turn round and take up tugs again in the North Channel. It is also possible to have tugs follow out to Km. 9, where the North and South Channels meet, turn there and come into the new berth with the same tugs, if length of vessel permits.

It is for the Master and Pilot to decide where the vessel will turn, depending on weather, draft, current, etc.

Opening of Dock Bridges: The established time table, twice an hour is not observed, and Agents arrange for this when a vessel is ready to move through. Vessels should not attempt to pass the lock gates if clearance is less than ten cm. and the river is not rising. It must be remembered that the sole of the locks in each case is of concrete.

It is frequent in Madero docks to see vessels resting on the soft muddy bottom.

Prefecture Control: On both entering and leaving the Prefecture Officers may check with the crew list that all members of the crew are on board, particularly on sailing.

Draft on Sailing: Must be checked by the Pilot and Master, and duly recorded in the Pilot's book. Load lines are strictly checked; in case of hogging, drafts fore and aft are taken while in sagging marks will prevail.

Shiftings and Manoeuvres: In port are carried out under the responsibility of the Master, but Pilots are also responsible, at least to the Prefecture, since they are under direct authority and at the same time considered assessors to the Prefecture.

Trim: Also controlled, no list is allowed, and maximum tolerance for difference of draft fore and aft is 6 ft. to 7 ft. according to vessel's length overall. Vessels should not be down by the head.

Hatchways: All hatches must be kept closed when a vessel is not working. If hatches are found open when a vessel is idle, the vessel is fined.

Garbage: A garbage barge goes round the port every morning to take away the garbage, which must be left in drums slung over the stern ready for lowering into the barge. It is also possible to arrange for a barge to take off refuse from holds, old dunnage, bedding, etc. Collection is often a rushed affair, and good watch must be kept for the barge. Fines are imposed if garbage is not removed.

Working Hours: Ordinary working hours are now fixed as from 0700 to 1300 and 1300 to 1900 hrs. Tugs are now also on this same time table.

Overtime can be worked from 1900 to 0100 hrs. and from 0100 to 0700 hrs., but Stevedores are not allowed to take two consecutive shifts.

Custom House guards and other official workers follow the same schedule from Monday to Friday, but earn overtime on Saturdays, Sundays and holidays.

TELEPHONE: There is no special installation for vessels in port. Many Agents have one or more lines of their own, which can be placed on board, if there are connections available in that sector. The telephone company makes a connecting charge each time, at a high cost to the vessel, plus the usual charges for the service.

REPAIRS/DRY DOCKS: Syncrolift with capacity 40,000 d.w.t.

DEVELOPMENTS: Port access to be dredged to 32 ft. for a width of 460 ft. At a later stage dredging of the port to 35 ft. will be undertaken.

SHIPMASTERS' REPORT: September 1980.

Documents: In addition to the papers mentioned in the "Guide" the following papers were requested.

2 Vaccination lists.
3 Arms lists.
2 Crew lists with the numbers of the passports.
1 List of loading ports of the last voyage with dates of arrival and departure.

The I.D. cards were checked before departure and stamped again.

AUTHORITY: Administrador del Puerto Buenos Aires.

CAMPANA: 35.15 S. 58.58 W. (See Plan)

(Province of Buenos Aires) "B" category port.

N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

On the left bank of the Parana de las Palmas arm of the Delta from seaward, 155 miles by river from Buenos Aires, Martin Garcia, or 60 miles via Mitre Channel.

The port is mainly used for receiving and despatching petroleum and its products. There are also facilities for handling timber and general cargo, as well as steel tubes for the petroleum industry, both for internal requirements and for export, which are made here.

PILOTAGE: Compulsory.

RESTRICTIONS: Draft is controlled by depth of water at Martin Garcia Bar. Daily draft forecasts made by local authorities. See "Mitre Channel" (in River Plate section).

MAX. SIZE: Up to 27 ft. draft, dependent on local river conditions.

HEALTH: Free Pratique can be obtained in the usual way, by notifying Buenos Aires Agents. Tankers lightening part of their cargo in Buenos Aires Roads, can take Pratique here, provided that the convoy formed by the tanker and barges follows up to Campana, and no one on board has any contact with shore until after the medical visit. If the vessel is "unclean" however, Pratique is taken before lightening.

RADIO: Use Buenos Aires stations for overseas, but for traffic control this comes under Zarate VHF (Channel 14) LSO 23.

TUGS: See "General" before first port.

BERTHS: From North to South the berths are:

Dalmine: At Km. 98.5 on the Parana de las Palmas, (from Buenos Aires), and 2 km. above Campana port. A newly installed marginal wharf, 185 m. long, in 35 ft., with flashing yellow lights at either end. Discharging of iron ore is by grab to a travelling hopper, working the full length of the wharf, leading to an endless belt at the Western end, and thence to stockpiles ashore; Air draft below the discharging arm is 23 m. (depending on river level) and maximum operating distance off is 22 m. from the line of the rubber fenders on the wharf.

Theoretical discharge rate is 800 t.p.h., but in practice only 4/500 t.p.h. is obtained.

This plant now produces its own steel, for use in making seamless tubing for the petroleum industry; installed capacity is 800,000 tons per annum, shipped over the National Mole at Campana itself.

National Mole: 20 ft. alongside, used for shipment of the steel tubes and movement in general. The mole is 116 m. long, with three electric cranes, 4 ton capacity and two mobile cranes.

Esso Mole H: Concrete pierhead, 16 m. long, over which crude oil is discharged through an 8 in. line. there is deep water at this mole which is mainly used for import cargo. There is also a belt conveyor equipment for loading petroleum coke in bulk.

Esso Mole G: A mile South of Mole H, fitted with an 8 in. line for discharge of crude from smaller tankers, in 18 ft. Length 14 m.

Esso Mole E: 130 m. long, with 24 ft. There are two intakes on this mole, of 6 in. the former being used for shipments of clean products and the latter both for crude and for shipment of clean products.

Esso Mole F: In 26 ft., 16 m. long, with a 10 in. line which can be used crude and for lubricants.

200 m. downstream there is a wharf, 70 m. long, in 14 ft. used for discharge of timber and sand.

There are no facilities for handling of grain or other produce.

MEDICAL: Doctors and hospital available.

DENSITY: Fresh water.

FRESH WATER: Available at Esso Moles and National Mole.

FUEL: Available at Esso berths. No barges.

CONSULS: Italy.

REPAIRS: Can be effected.

DEVELOPMENTS: Studies are now being made for improving the port installations as the Mitre Channel is now operating, as this is the first upriver port, and the zone is highly industrialised, with much movement for export to Buenos Aires by road and rail.

AUTHORITY: Administracion de los Puertos Parana.

CONCEPCION DEL URUGUAY: 32.29 S. 58.12 W. (See Plan)

Km. 183 – River Uruguay (Province of Entre Rios) "B" category port.

N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

On the left bank of the River Uruguay from seaward, 182 miles from Buenos Aires.

APPROACHES: Access to the port is by a channel 1,000 m. long, 45 m. wide, which is now 19 ft. at zero.

The roads of the port extend from the buoy marking the entrance to the channel, and about 2 km. up river, where vessels may anchor if awaiting berth.

Access is governed by the water on the Montana and Altos y Bajos passes, where there is normally no more than 17 ft. and this draft should be taken as a determining factor.

PILOTAGE: Pilots for Uruguay River board off Buenos Aires Entry Channel.

ANCHORAGE: In Uruguay River, about 900 m. North of Entry Channel Buoy.

RESTRICTIONS: Day and night navigation allowed. Channel dredged to 20 ft. LW. Depth on bars, 17 ft. LW.

MAX. SIZE: Maximum permitted draft in Uruguay River is 18 ft. Fresh water, subject to local conditions.

HEALTH: 8 hours before arrival, radio Agent advising last port of call, number passengers and crew on board and health condition of vessel requesting Free Pratique. If this procedure is followed there should be no delay in obtaining Pratique when officials board on arrival, provided vessel's health conditions are satisfactory.

Masters may either advise their Agents in Buenos Aires, or direct to Agents in Concepcion del Uruguay, using station LSQ 57, on 477 kHz A1, and may proceed direct from sea to this port.

RADIO: The port station LSQ 57 transmits daily information at 1300 hrs. GMT on the state of the River Uruguay from San Javier to Gualeguaychu. It operates on 477 kHz, A1 power 0.5 kW.

TUGS: Compulsory both for entering or sailing and for movements in port.

BERTHS: There is a quay frontage of 1,500 m. of which 1,100 m. are for ocean-going vessels, with presently 19 ft. alongside at zero. The other 400 m. is for river traffic.

There are 5 cranes on the quay, 1 of 5 tons, the others of 3 and 1 tons, and there are 2 portable 5 ton cranes.

New elevator capacity 20,000 tons, working with one tube 300 t.p.h.

There are several wharves at the South end of the mole for discharge of tankers.

Due to silting alongside quay, vessel should be prepared to be fendered about 1.5 m. off the quay.

MEDICAL: All medical facilities available.

TANKERS: Two berths for tankers up to 18 ft. draft.

YPF Berth: Eight hose connections, 12 in. and 6 in. diameter.

Esso Berth: Hose connections, 8 in. for naphtha, 6 in. for other products.

DENSITY: Fresh water.

FRESH WATER: Available, there are several hydrants of 1.5 in. diameter on the mole.

FUEL: Available from the State Oil Company at the pier, or by drums from other suppliers.

REPAIRS: National and privately owned workshops for all types of minor repairs.

DRY DOCKS: One, owned by Ministerio de Obras Publicas, length 70 m.

REPATRIATION: Can be arranged subject to Immigration formalities.

AIRPORT: Situated 3 km. away, with daily services to Buenos Aires.

CONSULS: There are Italian, French, Spanish and Uruguayan representatives.

POLICE/AMBULANCE/FIRE: Police Tel: 2222; Fire Service Tel: 2860; Ambulance Tel: 1792; Hospital Tel: 2464.

TELEPHONES: Arrangements can be made for placing telephone on board.

SHORE LEAVE: Permitted subject to Immigration control.

AUTHORITY: Capitania del Puerto Concepcion del Uruguay.

DIAMANTE: 32.05 S. 60.33 W. (See Plan)

Km. 533 – River Parana (Province of Entre Rios) "B" category port.

N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

On the right bank of the River Parana from seaward, above Rosario and 286 miles by river from Buenos Aires.

APPROACHES: There is ample depth of water in the port and approaches, which is governed by the water on the various bars on the river, the shallowest above Rosario being Isla de los Pajaros, at Km. 468 to Km. 473.

PILOTAGE: There is no resident port Pilot, and Pilot has to be ordered from Rosario. Minimum 10 hours notice required. The river Pilot ends his duties in the Outer Roads. Vessel must sail to make Los Pajaros Pass in daylight.

HEALTH: Vessels arriving directly from abroad must take Free Pratique at San Nicolas or Rosario, with the usual pre-advice to Agents there, which is essential for preparation of Notice of Readiness.

RADIO: Nearest station is Rosario LSQ 38, on 477 kHz. A1 LSQ broadcasts daily, at 1305 hrs., the depth of water in the Parana River from Los Ratones to Los Pajaros, and also the minimum depth between Santa Fe and Rosario.

TUGS: None available locally, but 1 tug is required on sailing from the new elevator berth and has to be ordered from Santa Fe.

BERTHS: Grain is loaded from the new elevator at the North end of the port, Section 4, where there is 30 ft. Only one vessel may load at a time. Loading rate is up to 600 tons per tube per hour, work being possible with 2 tubes simultaneously.

It is possible to load a second vessel, lying second off, if the beam of the vessel alongside permits.

Storage capacity in port is about 50,000 tons, of which 20,000 tons are in elevator at section 4.

There are tanks for vegetable oil with a capacity of 4,000 tons. Pumping rate is about 120 t.p.h. to vessels' tanks.

STEVEDORES: Working hours: 0600 – 1200, 1200 – 1800. Overtime if required 1800 – 2400 and 0000 – 0600 hrs.

FRESH WATER: Available at the new elevator berth.

FUEL: Not available.

REPAIRS: Only minor repairs possible.

DENSITY: Fresh water.

MEDICAL: Hospital available.

CONSULS: None. Outward bound consulate despatches should be requested from Rosario or Buenos Aires.

IBICUY: 33.39 S. 59.15 W.

Km. 218 – River Parana (Province of Entre Rios) "B" category port.
N.B. Refer to beginning of Argentina and River Plate Ports.

Situated 3.5 miles up the River Ibicuy, on the right bank of the River Parana Pavon from seaward, 177 miles from Buenos Aires by river.

With the closing of the rail ferry from Zarate this port has now been closed down, and is unlikely to reopen.

LA PLATA: 34.54 S. 57.55 W. (See Plan)

(Province of Buenos Aires) "B" category port.
N.B. Refer to beginning of Argentina and River Plate ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

This port is situated on the left bank of the estuary of the River Plate from seaward, 30 miles South of Buenos Aires. It is the capital of the Province of Buenos Aires and is rapidly becoming industrialised.

APPROACHES: Access to the port is by a channel, which leaves the main entrance channel to Buenos Aires at Km. 57. It can be dredged to 28 ft. maximum. La Plata Roads extend for 3.5 miles from the moles.

PILOTAGE: Coming from the sea, or Montevideo, the Recalada or Uruguayan Pilot will take the vessel to La Plata Roads 27 ft. where a La Plata Port Pilot comes aboard.

From up river to La Plata, the River Pilot is dropped at Intersection, where a new Pilot takes the vessel to La Plata Roads for the Port Pilot to come aboard.

ANCHORAGE: Four miles S.E. of Recalada.

RESTRICTIONS: Vessels navigating in the Entrance Channel have preference over those in the River Santiago, and those which by reason of size must turn at Four Mouths have priority over others in their vicinity.

There must be no crossing or overtaking of vessels over 60 m. long or 9 m. beam, or 20 ft. draft and for this reason vessels ready to sail from Gran Dock will not let go while any vessel is entering by the Entrance Channel.

Vessels over 190 m. in length can only manoeuvre in daytime, with a minimum visibility of 1,500 m. and with a wind not exceeding 10 knots.

On entering or sailing on a rising tide minimum depth cannot exceed vessels draft, and on a falling tide there must be 50 cm. (1 ft. 8 in.) under the keel.

Regulations for the Santiago River Channel prohibit movement between sunset and sunrise for vessels over 140 m. long, or drawing over 24 ft. Vessels over 11 m. beam cannot cross or overtake, and vessels in this channel must not interfere with those moving in Four Mouths (Cuatro Bocas).

MAX. SIZE: Regulations limit length, beam and draft to 215 m., 30 m. and 9.15 m. (30 ft.) respectively.

HEALTH: Free Pratique — radio messages should be sent direct to Agents in La Plata if vessel is entering direct.

RADIO: Station LOM 524 kHz, A2. State oilfields have a VHF service, range 50 km. for communication with their vessels on 156.5 MHz during the first 15 minutes of each hour.

TUGS: Two tugs must be used, each of a minimum 820 h.p. Normally join vessel in entrance channel. Also see "General" before first port.

BERTHS: The port comprises Rio Santiago, Gran Dock and the Propulsora berth, 5 km. up the river Santiago, also known as Port Ingeniero Rocca.

Rio Santiago: The grain elevators on the West side of the Entrance Channel are no longer in use, and their installations would require considerable repair. This berth is 450 m. long, due West of the Four Mouths Turning Basin. Four tanks for reception of liquid chemicals have been installed here, capacity 2,300 tons.

There are no fixed cranes at the berths, but a number of mobile units are in use. No lighters are available, unless brought from Buenos Aires.

Of the two Packing plants, one, Armour, is completely closed down and would need considerable repair to re-open. The other, Swift, is operating at less than capacity, for local demand, and any export meat is trucked to Buenos Aires for shipment.

Gran Dock: Seventeen berths, depth 26 ft. alongside. Also see "Tankers".

Berth No. 11 at the N.W. end of the dock is used for handling Ammonium Nitrate, in 1,000 ton lots. There are no sheds or cranes here, though portable cranes are available. Smoking is prohibited within 25 m. of either end of the ship on shore, and no naked lights are allowed on board.

Maize and sugar is loaded over this berth (slitting bags) and it is also used for discharge of steel in rolls for Propulsora when the one berth at Ing. Rocca is occupied.

Berth No. 10 is used for petroleum coke, about 10,000 tons monthly, which is stockpiled alongside. Vessels should have their own grabs for use on their own gear and normal yield is 4,000 tons in a 12 hour double shift day.

The old grain elevators on the Western head of Gran Dock are no longer in use and the proposal to repair them has been shelved. The wharf here is 380 m., and there are 4 tanks for reception of imported chemicals.

The two old packing plants on the Eastern side of Gran Dock were sold early in 1978, but nothing is yet known of their eventual use. The ex-Armour plant is completely closed down and the ex-Swift plant working for local demand only.

Propulsora: A cold rolling steel mill has been built inland and a 5-km. channel dredged to 30 ft. from "Cuatro Bocas". There is one berth here, 154 m. long, though vessels of up to 205 m. LOA have operated here. The material used in the mill is imported in coils, and exports of cold rolled sheets and wire are also handled. There are two cranes, 30 ton and 32 ton capacity and combined rate of discharge is 500 t.p.h. Work is continuous.

Some 600 m. from the wharf itself, there is a turning basin 300 m. diameter. Vessels go in bow first, as there is less water to the South end of the wharf, and turn in this basin before returning down channel to La Plata proper. Only one vessel can operate at a time here. Vessels are secured to bollards on shore at the bow, and a mooring buoy astern.

TANKERS: *Gran Dock:* There are 11 petroleum intakes in Gran Dock, including one 24 in. line and several of 16 in., 14 in. and 12 in. At No. 5 there is an 8 in. connection from the Petrochemical plant some 6 km. away for loading of benzene and other petrochemicals.

The turning basin at the South end of the Dock is 180 m. in diameter, and for those vessels unable to use this there is turning space in 27 ft. at Cuatro Bocas, the junction of the Santiago River, access channel and Gran Dock. Vessels using this must turn here and reverse to their berth in the Dock, usually for Nos. 11, 10, 4 and 5 only.

Special regulations for Gran Dock permit vessels to moor with bows either inwards or outwards, indiscriminately. Those moored bows inwards (facing South) will be assigned, preferably to intakes 4, 5, 10 and 11, and must sail immediately after finishing operations, taking preference over others about to sail.

Vessels between 175 and 215 m. length, or drawing 22 ft. or more can navigate ahead or astern, and will turn in Four Mouths on entering or sailing as the case may be. When such vessels are moving stern first, the Prefecture will make sure that there are no craft of more than 5 m. beam moored on either side of the Armour Freezer, shifting these if necessary.

Vessels of less than 175 m. length or with a draft of less than 22 ft. must turn in the Turning Basin on entering or sailing.

Turbine steamers of over 140 m. in length will only use the Turning Basin in daylight.

For safety reasons there must be one tug and one fire-fighting craft on service and ready to sail.

No mooring second off is permitted except for tugs and vessels receiving dirty ballast or liquid from cleansing of tanks, or when supplying steam.

Degassing tanks is prohibited in port.

Heated repairs can only be carried out under deck and on special authorization from authorities.

MOORING: Vessels of up to 150 m. length will employ 4 men for mooring, and those over 150 m., 6 men. Mooring hours in ordinary time are from 0600 – 1800 hrs. on week days, 0600 – 1200 hrs. on Saturdays. There is a 50% extra from 1800 – 2400 hrs. on week days or from 1200 – 1800 hrs. Saturdays, and 100% at all other times.

SEMAPHORE: For night signalling of the depth of water in the access channel, the system is similar to that at Martin Garcia and Riachuelo, Buenos Aires. By day signals are hoisted on a tower at Km. 4,460 on the access channel arm if tide is rising. If the river is stationary or falling, no flag is hoisted.

MEDICAL: Doctors and hospital facilities available.

FRESH WATER: Delivery by barge, capacity 300 tons and pumping with barge's own pump, 100 t.p.h. There are also connections at the berth.

FUEL: Available alongside and by barge.

REPAIRS: All repairs can be effected except those requiring a dry dock.

CONSULS: Following countries are represented in La Plata: Belgium, Brazil, Great Britain, Italy, Norway and Spain. All other consuls at Buenos Aires.

SHORE LEAVE: Allowed, provided crew members in possession of Identification Cards.

AUTHORITY: Capitan de Puerto de La Plata.

RAMALLO: 33.32 S. 59.59 W. (See Plan)

Km. 326 – River Parana (Province of Buenos Aires) "B" category port.
N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

APPROACHES: The port is on the left bank of the Parana from seaward, where the river is divided into two by the Isla de las Hermanas. Traffic up river normally keeps to the starboard channel at this point, or the port when downstream and the entrance into Ramallo, although buoyed, is not lighted. No depths are given for the access but as a guide, when the main channel of the Parana is at say 24 ft., then vessels can safely load to 18 ft. in Ramallo. However, with the building of a new elevator, 20,000 tons capacity to replace that damaged some years back, movement has recommenced and the River Bulletin publishes 21 ft. for the elevator mole, and 24 ft. 6 in. for the hardboard mole. Nevertheless, it is advisable to check on access depths.

PILOTAGE: According to the Maritime Digest, port Pilot must bring the vessel in from the main channel, and take her out there again, a distance of 5 miles. The Roads are technically in the main Parana, but it is usual to anchor 150 m. off the wharves. 6 hours notice required for Pilot as he has to come from Rosario.

RADIO: Agents at San Nicolas must be contacted either through Buenos Aires Radio, or via Rosario, LSQ 38, on 477 kHz, A1.

TUGS: See "General" before first port.

BERTHS: Apart from two damaged moles, out of use, there are, from South/North:

Grain Board Mole: There is an elevator, capacity 12,000 tons and two loading belts, load rate 250/300 t.p.h. each. The berth, for one vessel not over 145 m. length, consists of a small jetty and several dolphins and two mooring buoys.

National Mole: Concrete wharf 100 m. long, with 3 sheds on it, used by sand hoppers, and by river craft.

Fiplasto Mole: Used for discharge of fuel to the hardboard factory, from tankers. There are two dolphins with 24 ft. 6 in. water. As the current runs fast here, vessels may roll with any wind, and it is recommended to put out more ropes than usual, both fore and aft.

FUEL: Not available.

FRESH WATER: Not available, except by drums from a tank on the National Mole.

MEDICAL: Attention available, but no hospital.

CONSULS: None, consular clearances can be effected at San Nicolas.

REPAIRS: No repair facilities.

ROSARIO: 32.57 S. 60.33 W. (See Plan)

Km. 420 – River Parana (Province of Santa Fe) "B" category port.

N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

APPROACHES: Outer Roads, between Buoys 410 and 413.

PILOTAGE: The port Pilot will come on board off Km. 411, by launch. Vessel should whistle for him if not here to meet the ship (2 long, 1 short).

ANCHORAGES: Between Km. 410 and 413. Both anchors should be used.

RESTRICTIONS: *Fog:* In thick fog, special permit must be obtained to enter or leave. There is an average of 6 days fog per month in the period April/August but only 1 day per month in the rest of the year. Electric storms are frequent.

Maximum Speed in Zone: From Saladillo stream North, there is a limit of 6 knots, up to Punta Barrancas.

There are no restrictions as to length and breadth of vessels, but draft and size of vessels are subject to river depth, which is very variable and no standard information can be given. Vessels up to 27 ft. draft are permitted to navigate the River Parana up to Rosario and San Lorenzo, provided vessels speed exceeds 10 knots and that there is at least 1 ft. keel clearance. Above Rosario controlling depth 22 ft. Vessels loading in Parana Ports must keep close contact with Agents for daily forecasts of admissible draft crossing Martin Garcia Bar to avoid risk of overloading and consequent delays.

HEALTH: Free Pratique, use Radio LSQ 38, on 477 kHz, or via Buenos Aires Radio.

TUGS: Two tugs are available, controlled by Port Authority. See "General" before first port.

RADIO: All messages through Pacheco Radio, call sign LPD, operating on 425 kHz. Pilots equipped with VHF radio Channel 16.

BERTHING: A new concrete wharf, 616 m. long, is ready just North of Unit 6 (previously Unit 13), and immediately behind this a larger basin is being built, to 30 ft., which will add 4,250 m. of new quay frontage to the port. It is intended to centralise here the movement in fuels, coal, gravel, sand, etc., and to use it for discharge of grain barges which now form a large part of the pusher trains in use on the river, and which have materially changed the type of river transport. Dredging of the basin itself is ready, but the necessary retaining walls or wharves have not been commenced, so that much of the dredging effort is being lost through crumbling of the sides: Work continues on a 80,000 ton elevator (Unit 7) South of the 616 m. wharf, to load either to the river side or into the new basin berths, to the West, but work has also been delayed.

At the present time, the situation from North to South of the various piers is as follows:

Montserrat Wharf: Used by river craft only.

Unit I: Of the 4 jetties, only Nos. 1 and 2 are in use, and can deliver 170 tons of grain per hour each, accommodating one vessel in 21 ft.

Refineria Argentina Mole: In use for discharge of fuel oil only.

Unit II: Only 1 berth in 24 ft. 9 in. with 2 spouts, 200 t.p.h. each or 125 tons by-products.

Unit III: Known previously as Unit IV, can work with 2 tubes, 250 tons each, berth for 1 vessel only. The space between Units II and III is now out of use.

Unit IV: This is still under repair, a belt joining the 3 sheds previously known as Units 5, 6 and 7 is being installed. Eventually there may be 2 loading tubes and berth for 1 vessel.

Old Unit No. 8 has been dismantled and taken to Victoria.

Deposits 3 to 30: These still exist, but the area 3 to 17, originally allotted to Bolivia for use as a Free Zone, has now been replaced by the transfer of Sheds 23 to 30 to the Bolivian zone.

In 1978 only Sheds 23/4 and 25 had been readied for Bolivia, using a frontage of 342 m., with 3 portal cranes. The final transfers will be for a total of 54,667 sq.m., against the present 17,300 sq.m. and a frontage to the river of 998 m. There is no indication as to when this longstanding agreement will be fulfilled, and in the meantime, the area of Sheds 3 to 17 is being used for transhipping cargo to Paraguay.

Sheds 29/30: Have been rented, and the wharf being used in breaking up the navy aircraft carrier.

Unit V: Is the Old Unit X, renumbered. Two vessels can berth here and there are 2 spouts workable per vessel at 200 t.p.h. each spout.

What was Unit XI is now rented for the storage of oilseeds, and Unit XII has been dismantled. Vessels can berth here to load expellers by belts.

New Pier: At this point the new pier, 616 m. long, has been finished, though with no cranes installed as yet, lines being in place for the expected portal cranes. Neither are there any sheds and for the moment the wharf is used for loading expellers, ex truck, over portable conveyors and vegetable oil ex-tank. There is a 30 m. gap between the South end of the wharf and Unit VI, with a slight change in line of the river front. The former petrol storage tanks, behind the elevator, are now used for vegetable oils, load rate 120 t.p.h., one line. Tank capacity total 3,200 tons.

Unit VI: The South Elevator, previously numbered XIII, now has 29 ft. at zero, and can handle 2 vessels, if both under 150 m., or one if over that length. Load rate is 1,200 t.p.h per berth, over 3 tubes to each vessel, or 5 tubes if to 1 vessel only (2,000 t.p.h.). Storage capacity is 125,000 tons. A further 360,000 tons storage capacity in the underground deposits in the cliffs on the far side of the future river basin will eventually be connected to Unit VI. At present their cargo is shifted to truck or rail.

Immediately South of the existing elevator a new 80,000 ton elevator is under construction, and which will form part of the Unit VI complex, which will then have 6 berths to the river front, and possibly others to the river basin.

Entrance to the future river basin will be South of the extended Unit VI, and to the North of the Meat packing plant and cattle ramp, while South of this a shipbuilding yard is under study. The pier at the packing plant is 175 m. long.

The port zone proper ends at Saladillo stream, on the South side of which the Swift Meat Packing plant has a pier, 175 m. long, for the loading of its products. There is also a line here for loading vegetable oils in bulk, capacity 100 t.p.h.

The projected basin will have its entrance between the Inflammables zone and the Cattle berth, and South of the Cattle berth a shipbuilding yard is projected.

Cranes: There are a large number of electric cranes, and the port is built in such a way that with few exceptions all cargo discharged must be handled by shore cranes. If the river is high, and shore cranes cannot operate to the vessel, the ship may discharge to shore, for the shore crane to place on railway cars, etc.

Bills of Lading covering lifts of 2.5 tons or more should be claused in such a manner that any extra expense in landing them is for account of the cargo.

Floating Cranes: There are two, 90 tons and 50 tons.

Allotment of Berths: May depend on the availability of grain to the particular shipper, but normally berths are allotted in order of arrival.

Fenders: Vessels must use fenders for keeping them off, and can use their own or hire from the port.

Ashes, etc.: Arrangements can be made with Agents for daily removal.

STEVEDORES: Gangs supplied according to vessels requirements by private companies under Government supervision.

Normal capacity per gang, per shift:

20 to 25 t.p.h. frozen meat.

120 to 140 tons per shift general cargo.

MEDICAL: Private and state-owned hospitals. All facilities available.

TANKERS: Discharge at Moles 3 and 4.

FRESH WATER: Only available at the berths on the Southern part of the port, except at the new wharf.

FUEL: All grades available, by barge.

REPAIRS: All repairs excluding dry docking, can be effected.

AIRPORT: 16 km. from port. Daily flights to Buenos Aires.

CUSTOMS ALLOWANCES: 60 cigarettes per day, and 2 bottles spirits each man.

CONSULS: The following countries are represented at Rosario:

Belgium
Brazil
Chile
Denmark
Dominican Republic
Ecuador
Finland
France
Germany F.R.
Great Britain
Greece
Italy
Lebanon
Netherlands
Nicaragua
Norway
Panama
Paraguay
Peru
Spain
Sweden
Switzerland
Syria
Uruguay
Yugoslavia

POLICE/AMBULANCE/FIRE: Police 29071; Ambulance 45600; Fire 20147.

TELEPHONES: Can be placed aboard.

SHORE LEAVE: No restrictions.

AUTHORITY: Rosario Port Administration.

ADD S.M.R.

SAN LORENZO: 32.45 S. 60.38 W. (See Plan)

Km. 442 – River Parana (Province of Santa Fe) "B" category port.

N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

On the left bank of the River Parana from seaward, 16 miles above Rosario and 238 miles by river from Buenos Aires or 202 miles via the Mitre Channel.

The port includes the separate sections of Puerto Borghi, Puerto San Lorenzo and Puerto San Martin.

PILOTAGE: Available, six hours notice required.

APPROACHES: Access is controlled by the passes Destileria and Borghi above Rosario.

ANCHORAGE: Vessels may anchor in the roads between buoys 447 and 449.

MAX. SIZE: Up to 27 ft. draft depending on river depths.

HEALTH: Vessels coming in from abroad, should take pratique in Rosario Roads, advising Agents there in good time.

RADIO: Use Radio Rosario LSQ 38, on 477 kHz A1. This broadcasts, in Spanish at 1305 hrs. daily, depth of water in the river between Santa Fe and Rosario.

TUGS: See "General" before first port.

BERTHS: *Puerto Borghi.* Is a privately owned berth used for loading zinc ores, cinders and sulphuric acid. It consists of 3 dolphins each 6×9 m., spaced 21 m. apart, giving 60 m. alongside which vessels can lie. Both anchors must be laid out and moorings taken to shore. There is a conveyor belt, rate 60/80 t.p.h. fixed by a crane to work at an angle of from 20°/25°, so that if vessels are loading both fore and aft they must shift to position their holds. The belt is reversible, and can be used for discharging vessels fixed with bucket dredge gear in each hold. There is ample water alongside.

This port comes under Rosario for Customs, but under San Lorenzo for Maritime Prefecture control, and stevedores are taken from San Lorenzo.

San Lorenzo proper is a third category Custom House and thereby independent of Rosario. There is an important petrochemical complex here which is being extended, which may lead to an improvement in port facilities.

The roads are between buoys 443 and 445 in the main navigation route and within this area vessels may anchor to await entrance to port, without paying dues.

This was originally a grain port but this now takes second place to industrial developments.

At km. 443 there is a short concrete mole 50 m. long, with 21 ft. alongside used for liquids, (Duperial Berth), chemical and petrochemical products.

There is a grain elevator at Unit VIII (ex. 14), with a total storage capacity of 80,000 tons, and 39 ft. alongside. The elevator has one tube, with a load rate of 150/180 t.p.h. Bulk sugar also stored in sheds and loaded over belts at up to 300 t.p.h.

There is also a pipe-line at this berth for loading vegetable oils in bulk, rate from 120 t.p.h.

A line for loading fuel oil has also been installed here.

State Oilfields YPF have a large cracking plant here, with 3 concrete piers of 80, 60 and 80 m. long respectively, in deep water and situated just North of Unit VIII. Piers 1 and 3 operate in the discharge of crude from overseas or coastal tankers and in the loading of products with four 6 in. and 10 in. lines. No. 2, with the same size lines is used for coastal tankers only. Rate 700/800 t.p.h.

Esso have two dolphins here for discharge, with 6 in, and 10 in. lines respectively, but in 23 ft. only.

San Martin port starts after the Esso berth, and at the commencement is the old car ferry, now used for launches only, draft 6 ft.

Next to this is the *Gas Del Estado Mole,* receiving Propane at 200 cu.m. per hour, or Butane at 150 cu.m. per hour. These rates drop appreciably with back pressure in the tanks. Ammonia also handled.

At 400 km. is the *Dempa Mole,* with two lines for loading vegetable oils at 150/230 t.p.h. Expellers are also loaded over belts at 250/300 t.p.h. *El Transito* mole is used for loading linseed or soya oil over a 10 in. line, and there is also a line for discharge of fuel oil. Expellers are loaded at 150/180 t.p.h., one spout.

El Litoral mole takes the place of the old Bellavista wharf, and operates in grain by belts, rate 300/350 t.p.h.

At km. 451 is the *Pasa* petrochemicals installation, with dolphins at either side of the head. Small vessels (under 80 m.) can berth along the arm working to trucks which operate round the base, while for larger vessels, berthed to the dolphins, trucks turn and reverse up the longer arm. At this site only one gang can work, though there are a number of pipe-lines, capacity up to 1,000 t.p.h., for the various products, including ammonia. Hydrocarbons for the plant are received by pipe-line from the refinery at San Lorenzo.

Max. LOA 200 m. – 210 m. Max. sailing draft 23 ft.

STEVEDORES: Working hours – 0600/1200, 1200/1800, in ordinary time, and in overtime, if required, from 1800/2400, 0000/0600.

FUEL: Available.

FRESH WATER: Small quantities available; Masters are recommended to take elsewhere if possible.

MEDICAL: Attention available.

REPAIRS: Small repairs attended to. It is also possible to bring specialists from Rosario if bigger jobs have to be handled.

CONSULS: Consular clearances must be made at Rosario.

AUTHORITY: Administracion de los Puertos Parana Medio.

SAN NICOLAS: 33.20 S. 60.13 W. (See Plan)

Km. 343 – River Parana (Province of Santa Fe) "B" category port.

N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

On the left bank of the Parana River, from seaward, below Rosario, and 188 miles by river from Buenos Aires.

PILOTAGE: Compulsory. 6 hours notice required to bring Pilot from Rosario.

APPROACHES: Between San Nicolas and Rosario are the "Paso Paraguayo" and "Abajo Yaguaron" passes, and below San Nicolas, apart from Martin Garcia, the "Tonelero" and las "Hermanas" passes.

The old-time characteristic of a grain port has been submerged in the industrial complex which has grown up around the steel mill, but grain is still shipped here.

The entrance channel to the port from the river is kept dredged to 24 ft. 6 in. at zero.

MAX. SIZE: Draft up to 24 ft. depending on river conditions.

RADIO: Use LSQ 38, Rosario, on 477 kHz A1.

BERTHS: From North to South the sections of this port are:

Old Port. Out of use.

New Port. Consists of a 287 m. long berth, with ample water alongside, with two dolphins upstream. Here a 250 m. extension is being built to make a total frontage of 537 m. There are no sheds on the dockside, but one railway line exists, and there are 7 portal cranes, one of which is out of use. Two cranes can handle 20 tons each at 15 m. radius or 12 tons at 25 m., three of 1.5 tons and the remaining crane 3 tons.

New Port Administration and Naval Prefecture offices have been installed on the cliff above the berth, they were previously in the old port 4 km. away. Agency offices are in the old town.

Grain Berth: 90 m. downstream is the Grain Berth, which came into operation in 1977. It has 6 telescopic tubes, on a 143 m. length and with 25 m. between tubes. There are four breasting dolphins and a vessel's bows can be moored to the end of the New Port wharf.

With one belt as installed loading rate is 600/800 t.p.h. A second belt is to be installed and then rate will increase to 800/1,000 t.p.h. on each. The existing belt is connected to the new elevator, 14,000 tons capacity, and the former Alcohol factory has been converted to an elevator capacity 45,000 tons and connected with a long overhead conveyor to the new elevator. It will also connect directly to the second belt.

Superusina Mole. This is the last of the sectors of San Nicolas proper, and consists of a concrete mole 200 m. long, with ample water alongside. There is a fixed heavy lift crane here, with a reach of 25 m. and capable of lifting 140 tons out of the square of the hatch of a vessel, or 180 tons from on deck. This part of the mole is reinforced.

There are also a 16 ton and an 8 ton crane for grab discharge of coal to an endless belt system working a coal stacker, handling 1,500 tons daily.

Puerto Buitagro lies South of the Ramallo brook, and comes under the district of Ramallo, although administered by the San Nicolas port authorities. It handles all the movement of the State Steel Mill, Somisa, the capacity of which is presently being increased to produce 2,500,000 tons of steel per year.

Again, from North to South, the moles are:

Ing. Buitagro general mole. 300 m. long, for movement of general cargo. It is 16 m. wide and has 1×30 ton crane and 2×15 ton cranes.

Somisa Wharf (Ex-Gotaas Larsen berth). This berth consists of 4 dolphins, 35 m. apart, with bollards on the 1st and 4th used by the lightening vessels for discharge of coal or iron ores, while ocean carriers discharge direct at the Buitagro Wharf.

Ing. Buitagro Bulk Wharf. 680 m. long, immediately South of the Gotaas Larsen berth. Dredging is carried out continuously and there is 26 ft. at zero alongside. Four vessels of up to 22,000 tons can operate, plus 2 more in second tier. Storage capacity in the yards adjacent to the wharf is 1,370,000 tons iron ore and 300,000 tons of coal. Discharge is by grab, 1×45 tons and 2×12 tons each giving a discharge rate of 4–500 t.p.h. provided hatches are sufficiently wide to permit easy working.

Capacity of the belts is being increased, to meet the requirements of the larger capacity, now raised to 2,500,000 tons installed capacity, and which will be increased to 4 million tons in 1980. These include a new 1,400 t.p.h. discharge unit for ore and/or coal, a new system of conveyor belts 860 m. long, a stock piler capacity 5,000 t.p.h. and belts for moving coal 1,200 m. from stock pile at 3,000 t.p.h. with a transfer tunnel 600 m. long fitted with 13 vibratory screen feeders.

At Puerto Buitagro all discharge or loading is carried out by factory personnel, no outside stevedores engaged.

The bulk wharf has been extended South with a berth for self-discharging ore carriers, or colliers, and also for ore carriers using shore installations. At the moment this berth is used by the Gotaas Larsen lightening vessels only.

TUGS: None needed at the New Port or Buitagro berths, as vessels enter bow upstream, and the current is strong enough to turn them on leaving. Only in the event of high winds should tugs be ordered from Villa Constitucion. Also see "General" before first port.

DENSITY: Fresh water.

FRESH WATER: Available at berths.

FUEL: Available, but must be delivered from Buenos Aires or San Lorenzo by truck.

REPAIRS: Possible.

MEDICAL: Doctor, hospital facilities available.

CONSULS: Italian, Portuguese and Spanish.

SAN PEDRO: 33.42 S. 59.39 W. (See Plan)

Km. 277 – River Parana (Province of Buenos Aires) "B" category port.

N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

On the left bank of the Parana River from seaward, below Rosario and 151 miles from Buenos Aires, by river.

APPROACHES: There are no bars below this port, except Martin Garcia, and vessels can therefore load to the limits of either Martin Garcia or Mitre Channel at its maximum of 30 ft.

The roads are 1,500 m. down-stream from the entrance channel. Also see "Berthing".

PILOTAGE: Pilot sent from Rosario.

ANCHORAGE: Vessels can anchor if necessary about 500 m. from wharf.

HEALTH: Free Pratique can be taken, but it is advisable to radio Agents at Buenos Aires for them to arrange, since there is no radio here and the Doctor must come from San Nicolas.

RADIO: None; use Rosario LSQ 38, 477 kHz A1, or Buenos Aires.

TUGS: See "General" before first port.

BERTHING: Access channel from the roads is kept at over 32 ft. and vessels must order their Pilot 6 hours in advance, since he comes down from Rosario by road. Draft in all the overseas basin is well beyond 30 ft., soundings taken in April 1977 showing 45 ft. in the centre and a minimum of 28 ft. at plumb of the wharf (taken on a river height of 2.48 m.) the loading gallery, at 35 m. high, has 7 tubes, and an overall length of 110 m. Tube radius is 16 m., and extension to the telescopic arms is available. Vessels moor bows to the N.E., swinging in the basin East of the wharf, with a maximum turning length of 225 m., and turn on their engines, use of tugs not being necessary, since wind problems are minimal with the high cliff close in.

Vessels moor port side to with three lines from the bow, two astern and two springs from midships aft. Maximum beam is 32 m.

Elevator capacity is 7,000 tons in one, plus 24,000 tons in a second elevator which came into use in early 1978, and another 90,000 tons in underground chambers connected by belts to the main elevator. At the moment only one belt is working, capacity 500/600 t.p.h. A second belt is to be installed with a similar capacity shortly. Hand trimmers are available if needed and there are also centrifugal trimmers for use on the tube. Any bagging needed must be done on board.

By-products are also loaded over a second berth at the head of the wharf, 88 m. wide at this point, taking vessels of up to 150 m., shifting as needed. Loading is over portable conveyor belts, of which there are three in use, loading 80 t.p.h. each. The by-products are loaded ex-truck onto the conveyors, and can be stored in a shed on the main mole.

There are no cranes or railway lines, in the port, the station being some 4 km. away, and the grain enters by truck from the large hinterland nearby.

The coastal basin, N.W. from the main basin, can only take river barges, maximum depth being 11 ft., and some by-products enter there.

Authorisation has been granted for a second grain berth to be installed on the South side of the overseas basin, which is 100 m. wide. This will be a privately owned berth, with elevators for 150,000 tons, and an estimated yearly tonnage of 500,000 tons.

DENSITY: Fresh water.

FRESH WATER: Available at the berths.

FUEL: Not available.

MEDICAL: All medical assistance can be obtained. Hospital.

REPAIRS: Minor repairs can be effected.

CONSULS: None; consular clearances effected at San Nicolas.

SANTA FE: 31.40 S. 60.37 W. (See Plan)

Km. 585 – River Parana (Province of Santa Fe) "B" category port.

N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

Situated on the Santa Fe river, a tributary of the Parana, 90 miles by river from Rosario and 312 miles from Buenos Aires or 226 miles via Mitre Channel.

APPROACHES: Entrance to the port is through an access channel, 6,085 m. long, and with 24 ft. at zero.

On this section of the river, from Rosario to Santa Fe, vessels must keep 2 ft. under the keel if measuring less than 50 fiscal units, or 2 ft. 6 in. if over. This applies when the hydrometer at Santa Fe indicates over 1.70 m. of water over zero. If the hydrometer measures less than 1.70 m. (5 ft. 7 in.) then vessels must have 2 ft. 6 in. and 3 ft. 6 in. respectively under the keel.

PILOTAGE: Port Pilot comes aboard in the Parana, at the mouth of the entrance channel. 6 hours advance notice is required for the Pilot to be in position.

ANCHORAGE: Although partially dredged in 1975, restrictions have not been lifted and vessels can only enter or sail between 0900 and 1700 hrs., and if unable to enter within this period must wait in Diamante Roads (km. 533) and follow radio instructions from the Prefecture. If the Diamante Roads have already been passed, a vessel may lie below Punta Alvear, or eventually at km. 568 (Animas de Paracao) but must immediately notify the Santa Fe Prefecture.

Vessels sailing must leave with sufficient margin to be able to pass "Los Pajaros" (km. 468/473) in daylight, and avoid anchoring in the sectors indicated above as reserved for Northbound vessels.

Exceptionally vessels under 160 m. LOA may anchor in Diamante Roads, if they leave in daylight and arrive in the roads before sunset, and provided there is no other ship anchored there. These instructions apply under normal hydrological conditions, and with unusual changes in water depth may be changed by the Prefecture.

SIGNALS: There is a signal station on the top of the tower of the new elevator (unit 1) in visual and radio contact with the control station tower at the river end of the access channel, where the signals are hoisted. It is also possible to observe movement in the roads from here.

The signals in the entrance channel are:

By day (shown at both ends of the access channel)	
White globe, 60 cm. diameter	Channel free for overseas vessels.
Red biconic mark	Exit only for overseas vessels.
Green cone	Free movement of coastal vessels.
Yellow cone	Movement of coastal vessels allowed, but with precaution.
By night (interior signal staff only)	
White flashes	Entrance free for overseas vessels.
Red flashes	Exit free for overseas vessels.
Green flashes	Free movement for coastal vessels.
Green and red flashes	Coastal movement only with restrictions.

Absence of signal – signifies port and channel closed.

All vessels will await the corresponding signals, which can be asked for by whistling, repeating 1 long, 3 short, for overseas vessels, or 2 short, 1 long, for coasters.

Should the absence of signals be due to a failure of the system, instructions will be sent by the Authorities.

NAVIGATION: *In the Channel:* Maximum speed in the entrance channel is 5 knots, however, the Pilot can advise on other speeds.

Movement by night is possible, but usually Pilots will not take a vessel out after 1500 hrs., since navigating the passes down river might oblige a vessel to lie in the roads, and turning there would require the use of 2 tugs, it being easier to wait until through transit down stream is possible.

During fog. Usual international precautions must be observed, but if the fog is very thick, entrance or departure of vessels is prohibited without special permission. There are no official statistics as to frequency of fog, but in the period May/August there may be 5 to 6 foggy days a month, and in the rest of the year one or two a month.

HEALTH: As there is no radio station here, Master should radio Agents with the usual request for Free Pratique.

RADIO: Regulations in this port state that Agents or Consignees must give written notice to the Port Authorities 24 hours before ETA, with details of vessel, cargo carried etc., or if in ballast, indicating for account of whom the vessel will load.

ETA should be confirmed if there is any change, since the port Pilot and tugboat must be sent out to the main river to meet the vessel. This will also allow the preparation and presentation of the Notice of Readiness without delay.

Radio LSQ 38, on 477 kHz A1, at Rosario, transmits river depth at 1305 hrs. GMT.

TUGS: One tug is required by all vessels over 20 Fiscal units and up to 165 m. LOA, with a second tug standing by at Km. 592 unless the Pilot calls for its services (high winds, etc.).

Vessels over 165 m. will have a second tug standing by in the roads. Outbound vessels over 20 fiscal units will take two tugs, and let go the stern tug at Km. 592, the bow tug continuing until the roads are reached. However, if sailing from Basins 1 or 2 or the Terminal berth and with no other vessels in the way, one tug only may be taken, provided the wind is below 22 knots.

Also see "General" before first port.

BERTHS: The port is composed of four parts:

Dock No. 1, with stone wharves, 564 m. frontage on the East and 672 m. on the Western side, 120 m. wide and well equipped with cranes, and sheds; 24 ft. at zero.

Between Dock 1 and Dock 2, on the pierhead are tanks for vegetable oil, capacity 5,000 tons and pumping capacity 2/300 t.p.h.

Dock No. 2 lies parallel to Dock 1, and has a piling frontage 900 m. long on the East, 720 m. on the West and 120 m. wide. 22 ft. at zero.

Both docks are served by broad and narrow gauge railway lines.

Derivation Channel. 2,178 m. long, lies to the West of Dock 2. It has open banks, with no stone or wooden frontage. There are a number of dolphins and mooring facilities. It is reserved for Inflammables and there are also two deposits for Quebracho logs and for bones. Although there are railway lines, there are no cranes or facilities for handling cargo. Vessels awaiting orders or effecting repairs can lie up in the Eastern side of the Channel, North of the Esso plant. Shell and YPF plants on the Western side, where vessels may take on bunkers.

Coastal Wharf. Concrete wharf, 810 m. long, lying between the West side of Dock 1 and the Elevator at Unit 1. It has 4 dolphins and can berth and work 2 vessels simultaneously in 24 ft.

Allotment of berths. Allotted by the port by order of arrival. If berthing in the Derivation Channel, spars must be placed to fend the vessel off the bank, and an anchor may also be cast, but this must be done under the direction of the port Pilot.

Loading Grain. There are 2 units, comprising 3 elevators in use. Unit 1 on the South end of the West quay of Dock 1, next to the coastal section, can berth 2 vessels in 24 ft. The elevator has a capacity of 50,000 tons, and the loading gallery has 8 spouts with 3 belts, so that both vessels can operate simultaneously, although no more than 3 spouts can be in use together, with a load rate of 300 tons each, rising to 400 tons in favourable conditions, or when only 1 vessel is loading.

Unit 2 is now composed of the ex-Bunge Elevator on the Northwest of Dock 2, capacity 12,000 tons, and with 6 tubes, loading simultaneously by 2 at a rate of 200 t.p.h. each, and also of the De Ridder Elevator, on the S.W. side of the dock, capacity 6,000 tons, and with 2 tubes, capacity 200 t.p.h. each.

STEVEDORES: Working hours: 0700 – 1300 hrs. and 1300 – 1900 hrs.

FUEL: Available at the pipe-lines in the Derivation Channel. If small quantities only are required, these can be delivered by truck.

FRESH WATER: From hydrants in Docks 1 and 2, or by tug in the Derivation Channel.

REPAIRS: Can be arranged. There are several tugs and lighters equipped to render assistance to vessels.

MEDICAL: Doctors and hospital facilities available.

TANKERS: Berths owned by Esso, Shell, and YPF in Derivation Channel.

CONSULS: At Santa Fe the following countries are represented: Italy, Paraguay, Spain. Other consuls at Rosario and Buenos Aires.

AIRPORT: 17 km. from Santa Fe, regular flights to Buenos Aires and other Argentine cities.

CUSTOMS ALLOWANCES: For consumption on board each man allowed 40 to 60 cigarettes a day and 1 litre of spirits a week.

POLICE/FIRE/AMBULANCE: Police: Tel. 21141; Ambulance: 36220 and 24687; Fire: 21212.

TELEPHONES: On board connection is only made for naval vessels.

SHORE LEAVE: Allowed, provided Crew members in possession of identification cards.

AUTHORITY: Administracion de los Puertos Parana Medio.

VILLA CONSTITUCION: 33.15 S. 60.17 W. (See Plan)

Km. 365 – River Parana (Province of Santa Fe) "B" category port.

N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

On the left bank of the River Parana from seaward, 33 miles below Rosario and 197 miles by river from Buenos Aires.

PILOTAGE: Port Pilot available, and obligatory.

MAX. SIZE: Up to 25 ft. draft depending on river depths.

TUGS: Vessels over 2,000 NRT must use 2 tugs. Also see "General" before first port.

RADIO: Rosario LSQ 38, on 477 kHz, A1.

BERTHS: *In Villa Constitucion* the old overseas moles are closed. The coastal wharf is also being dismantled, but a concrete mole next to it is being used for this trade. There is a proposal to recondition the old railway wharf in view of increasing movement.

At the Elevator berth 2 vessels can operate, in 27 ft., North and South. At each berth there are several loading tubes, but only one can operate at a time, giving 3/400 t.p.h. on each berth.

Capacity of the elevator is 50,000 tons, plus 170,000 tons in underground deposits. There is also a belt for bag loading.

Puerto Acevedo. Two km. South of Villa Constitucion is Acindar Mole, otherwise known as Puerto Acevedo, where a large steel mill is installed. The port is under the jurisdiction of Villa Constitucion and pending a definite resolution as to Villa Constitucion Roads, vessels awaiting berth anchor off the Acindar mole.

The mole is 110 m. long by 34 m. wide, in 29 ft. and is used for the discharge and storage of steel billets. It is fitted with two 45-ton electric cranes on rails. Vessels of any length can moor, but must shift to present distant hatches. Two new cranes are to be installed shortly, and the former cranes retired from service. Discharge rate reaches 400 t.p.h. per crane with steel billets.

Port Pilot from Villa Constitucion attends here, but tugs are not necessary. No facilities are available, except for water, to obtain which a vessel will have to supply a long hose to be coupled up to the factory itself.

FRESH WATER: Obtainable. (See above).

FUEL: Not available.

MEDICAL: Doctor and hospital facilities available.

REPAIRS: Can be effected, if necessary bringing men and equipment from Rosario, or San Nicolas.

CONSULS: Consular despatches must be taken at Rosario.

ZARATE: 34.09 S. 59.05 W. (See Plan)

"B" Category port. Province of Buenos Aires.

Situated on the West bank of Parana River, 150 or 65 miles by river from Buenos Aires, and 5 miles upstream from Campana.

N.B. Refer to beginning of Argentina and River Plate Ports.

Also see "River Plate" – Shipmaster's Report dated July/October 1983.

TUGS: See "General" before first port.

MAX. SIZE: Up to 26 ft. depending on river depths.

BERTHING: The river here is wide and deep, but the old moles are no longer in use, having been silted up, with a maximum of 10 ft. at the National Mole. With the opening in 1978 of the rail road bridge over both branches of the Parana (de las Palmas and Guazu) to the Entre Rios Province the rail ferry has been closed down, and there is no sign of any new port works being undertaken here.

The Naval Prefecture at Zarate remains in charge of transit under the bridges and Pilots must maintain VHF contact with Zarate while in this zone (Channel 14). (LSO 23) Vessels not carrying VHF must use medium wave.

Shipmaster's Report: July 1983.

The river at Zarate is wide and deep but the 8 old wharves are no longer used by oceangoing vessels and have silted up to depths of 10 ft. or less.

TANKERS: *Navipar Oil Terminal:* See "River Plate" – "Shipmaster's Report" dated September 1986.

DEVELOPMENTS: One of the first developments has already been authorized by the Port Authority. This will be a Petroleum storage plant for Paraguay, at Km. 112.6 on the Parana de las Palmas river, just upstream from Zarate. It will be for the exclusive use of Crude imports for Paraguay, where ocean tankers will discharge to tanks, and river tankers continue transport to Medin, near Asuncion. Work is expected to commence shortly, but it is not known yet if the berth will be known as "Zarate" or by some other name although it will come under the Zarate port authority.

FRESH WATER: Available at Smithfield Wharf.

FUEL: Not available.

MEDICAL: Doctor and hospital facilities available.

CONSULS: Italy is represented locally. All other consuls at Buenos Aires.

REPAIRS: Small repairs can be effected.

BAHIA BLANCA: 38.47 S. 62.16 W. (See Plan)

(Incl. Galvan, Ingeniero White, Puerto Belgrano, Puerto Rosales, Punta Ancla and Punta Ciguena.)

(Province of Buenos Aires) "B" category port.

Also see "River Plate" – Shipmaster's report dated July/October 1983.

N.B. Refer to Argentina, Section I.

PORT LIMITS: Berthing priority is fixed when vessel arrives at No. 11 buoy in the channel entrance.

Final berthing marks the commencement of time authorised for loading and/or discharging.

DOCUMENTS: Required by foreign vessels.

Registration Certificate.
International Tonnage Certificate.
International Freeboard Certificate.
International Safety Certificates.
General Declaration, Crew List and List of Passengers (signed by the Master).
Sailing Clearance Certificate from port of origin or from last port of call, whichever the case may be.

APPROACHES/PILOTAGE: *Entrance Channel.* Commences at Rincon Light Buoy, which is a whistling buoy, fitted with radar reflectors and is stationed some 17 miles S.S.W. from the Recalada Lighthouse. It is a large buoy, painted with black and white vertical stripes, it can shift or be extinguished, being rather exposed. In case of doubt vessels are recommended to sound and stay outside the 10 fathom line until daylight or fog has cleared. Pilots must be requested 24 hours in advance. See "VHF".

From this buoy vessels must proceed past buoys 1 to 10, and the Bay Pilot comes aboard near buoy 11 (39° 05′ S. and 61° 48′ W.). There is no pilot ship on station, and vessels arriving at this point after sunset must stand off until daybreak, unless a Pilot has been ordered and is approaching, when vessels can anchor and wait near buoy 11. To avoid delay and waiting time, Masters should keep Agents well advised by radio to station LPW 2, which listens from 0700 to 2400 hrs. on 500 kHz. from 19 to 25 minutes past each hour, every hour. As the coast is shallow here, with South or East winds it is advisable to stand well off at night as there is also a tidal current favoured by these winds.

Locations where the Pilot can be taken on board are: buoy 11, buoy 22 and exceptionally buoy 1 (at Master's request).

Pilot vessels intended for this service are: Launch "Skipper" – length 18.40 m., beam 5.6 m., depth 2.60 m., 85 h.p. engine, capacity 10 persons, steel hull; Launch "Carumbe" – length 18.6 m., beam 3.6 m., depth 1.20 m., 105 h.p. engine, capacity 10 persons, wooden hull; Launch "Alo" – length 10.46 m., beam 2.71 m., depth 1.74 m., 105 h.p. engine, capacity 10 persons, wooden hull.

The Bay Pilot takes the vessel to the Bahia Blanca roads, which commence for Ing. White and Puerto Nacional between Naposta Brook and the South Elevator. For Galvan he takes the vessel as far as the South Elevator. At either of these points the port Pilot comes aboard for actual berthing operations.

Vessels bound for Punta Ciguena, Punta Ancla, Rosales or Puerto Belgrano, take on their port Pilot (ordered in advance through the Agents by radio), at buoy 17.

In the access channel the following regulations must be observed:

(a) in the areas included between the pairs of buoys 07–08, 12–16, and 26–29, it is prohibited to approach or cross in front of any vessel which because of its draft has to remain in the centre of the channel, such vessels always having priority.

(b) in the event of two vessels meeting whose drafts do not permit them to depart from the centre of the channel, the vessel leaving port has priority, the vessel entering having to effect such necessary manoeuvres so as to not interrupt its navigation.

The access channel is 150 m. wide and is marked with light buoys, which permits navigation by night. Between buoys 12–16 the depth is 30 ft. and in the access channel to port Ingeniero White, between pairs of buoys 24 and 29, the depth is 33 ft. with a width of 170 m. The maximum draft for vessels navigating the channel is 35 ft., and dredging operations are in hand to bring the depth to 39–40 ft.

Buoys 01, 02, 03, 04, 05, 06, 09, 18, 19, 20 and 21 are mid-channel, and all illuminated. There is a degaussing buoy between Nos. 18 and 19, conical, painted blue and white checks.

Special warning. At very low neaps, and with strong North winds there may be up to 5 ft. less water than is shown on charts.

Tidal range is 12.6 ft. at springs to 6.4 ft. at neaps, but as much as 19 ft. has been observed with S.W. winds, whose action is similar to the Plate winds.

Inner Roads. From Ing. White to Galvan there is room for two vessels drawing 32 ft. to anchor, as well as a number of vessels drawing 24 ft. The access channel to Galvan has been dredged to 32 ft. for the new Inflammable berths, and a turning basin 400 m. in diameter at 33 ft. dredged due South of Galvan pier. The Inflammable berths are at 40 ft.

ANCHORAGE: *Anchorage for merchant vessels:* Buoy 11, 7. The anchorage area has been rendered suitable for merchant vessels. This area is limited by six lit (white) buoys which mark a zone approx. 6 miles by 1.6 miles. Depth of water in the area is 10.5 m.

Punta Ancla Oil Loading point: Constituted by a revolving buoy of the "Swedish" type, situated 1.25 miles to the East of the mid-channel buoy No. 9. It is recommended that vessels do not navigate in this area nor anchor to the North of the axis of the channel.

Punta Ciguena Oil Loading Point: One mile to the South of Punta Ciguena is the oil loading point; its alignment for anchorage is 036.7° formed by the front and rear buoys.

Ingeniero White Roads: The port roads are considered to be from the mouth of the Naposta stream to the front of the Ingeniero White South Elevators Quays, and roads "B" as far as the quays of Puerto Galvan. At high tide, the banks cannot be seen.

RESTRICTIONS: Port is experiencing silting therefore depths should be checked prior to arrival/fixture. Long delays may be expected.

Puerto Galvan: Night entries are not authorised, sailings being subject to favourable weather conditions.

Shipmasters' Report: 1979.

The Port Authority will not allow vessels with a list to sail.

MAX. SIZE: Entry into the port is allowed for vessels up to 230 m. LOA with a keel clearance of 1 ft.; in the access channels the safety margin is 2.5 ft. In accordance with the current dredging conditions, this allows operation with 34 ft. 9 in. in draft.

In Puerto Galvan, Max. lengths of 195 m. are allowed. In Puerto Ingeniero White, at the Elevators Nos. 7 and 8 berth, operations are limited to length of 200 m. and beam of 30 m.

HEALTH: It is necessary to present:

Crew List.
Derat Certificate.
Inspection Certificate of Maritime Health.

The Ship's Agent carries out all orders for obtaining free pratique. The health inspection takes place normally at the mooring berth, and is effected by the doctor who comes on board. Notice must be given 24 hours in advance of ETA, with indication of the port from which the vessel has recently left together with any intermediate ports of call. Likewise, an indication must be given of any illness on board, particularly anything of an abnormal nature.

The Master of the vessel must indicate the number of crew members, passengers if any, and the non-existence of "plague" diseases: Cholera, Yellow Fever, Exanthematous Typhus, Recurrent Fever and Bubonic Plague. Also there is a requirement for declaration that there is no transmittable illness on board.

RADIO: LPW 2 on 500 kHz. A2, working frequency 431.5 or, LPW 45 on 4415.8. A3.

For weather forecasts in English, use either Radio Pacheco at Buenos Aires LPD 5 on 512 kHz. A2, or Radio Comodoro Rivadavia LPX 2 on 474 kHz. A2.

VHF: Pilots now use VHF, and Channel 12 is set as a "listening channel' during transit of the entrance and the Naval Base at Belgrano acts as receiver/repeater.

Channel 8 is kept for manoeuvring in port, after contacting tugs and walkie-talkies are used by Pilots and tugs in this band.

Any "bridge to bridge" communications will use Channel 6, returning later to Channel 12.

Channel 9 is reserved for oil tankers for Punta Ancla or Punta Ciguena.

Channel 4 is reserved for Navy use in the Navy Base, but may be used in emergency.

RADAR: No service available.

TUGS: No tugs are required at Punta Ancla or Punta Ciguena. For Rosales and Puerto Belgrano tugs are requested from the Naval Base at Puerto Belgrano, and make contact between buoys 24 and 25.

For the other ports (White, etc.) tugs come alongside in the anteport, where the port Pilot boards.

Argentine vessels are berthed by the Bay Pilot at any of the berths, but foreign flag vessels take a Port Pilot, who comes on board at the Inner roads on one of the tugs, regulations for which are as follows:

Vessels over 3,000 tons gross require 2 tugs, those from 500 to 3,000 tons, 1 tug, and under 500 tons none.

For the Iron mole, vessels up to 10,000 tons do not need a tug, from 10,000 to 15,000 gross, 1 tug and over 15,000 tons 2 tugs.

For Puerto Galvan, vessels over 3,000 tons gross take 2 tugs on entering, and one on leaving provided they berth bows outwards, otherwise they need 2 tugs. Between 1,000 and 3,000 tons, vessels take 1 tug when entering and leaving if they berth bow inwards. If mooring bow outwards they must take 2 tugs on berthing, but require none on leaving.

These rules are for normal weather conditions. Masters can ask for more tugs, or alternatively not pass cables to the tugs if this could be dangerous to the vessel or tugs, but in this case, tugs must accompany the vessel during the manoeuvre to act in emergency.

Also see "General" before first port.

BERTHS: N.B. Agents must give 10 days advance notice of arrival of reefer vessels to the Authorities, and check this with 48 hours confirmation of arrival. Tankers are exempt from this rule but must confirm arrival time at buoy No. 11, 48 hours in advance. Precedence for berthing granted in accordance with arrival at buoy 11 at the entrance channel. All requests for free pratique by radio are made in the usual manner to Agents, with 12 hours advance notice.

The ports in the Bahia Blanca area are, from East to West:

Punta Ciguena Puerto Rosales Puerto Belgrano	adjacent to each other between buoys 21 and 22 of the access channel.
Ingeniero White	approx. 14 miles West of Puerto Belgrano.
Puerto Galvan	approx. 2 miles West of Ing. White.

Punta Ciguena and Punta Ancla

There is a rotary buoy with connection on the starboard side of tankers. The oil tanks belonging to the State Oil Company have a capacity of 240,000 cu.m. and are connected by pipe-line to the State Refinery at La Plata.

At Punta Ciguena there is a mooring for tankers with four mooring buoys and port side connection. It is currently out of service, and it is intended to replace it by another rotary buoy. As at Punta Ancla, this mooring belongs to the State Oil Co.

Puerto Rosales

An old grain port which is used by small craft, shortly to be fitted out as a private fishing port. The pilot launches are based here.

Puerto Belgrano (Saluting Base)

The entrance channel, 2 miles West of Punta Ciguena buoys, is 1.7 miles long, 150 m. wide and dredged to 30 ft. at zero.

Being a Naval base, care must be taken to observe regulations. In daytime signals are hoisted at the head of Mole C, and at night lights are shown at a height of 34.5 m. from the signal station, being visible for ten miles. A strong green light prohibits entry, and a white light above green prohibits sailing from the port. Two green lights, vertical, both entry and leaving prohibited.

Gunnery Exercises. Captains are warned that in order to avoid any danger, the greatest care should be taken when navigating or anchoring in the security zone, between the coast and an imaginary broken line which passes through the following:
(A) Lat. 39° 00′ 01″ S. Long. 61° 37′ 01″ W.
(B) Lat. 39° 05′ 02″ S. Long. 61° 40′ 01″ W.
(C) Lat. 39° 02′ 05″ S. Long. 61° 47′ 09″ W.
(D) Lat. 38° 58′ 02″ S. Long. 61° 51′ 00″ W.

Danger Zone. Situation Lat. 38° 53′ S., Long. 62° 06′ W. (approx.).

During gun practice at the Naval Base of Puerto Belgrano, navigation is prohibited in the circular area of 180° from the central point of the Signal Station which extends from 152° to 332°. The boundary of this area passes 9 miles off the Signal Station.

While gun firing is being carried out, the Signal Station will hoist during the day 2 "B" flags of the International Code on the same yard-arm. This signal will be hoisted half an hour before practice commences and will be furled when firing ceases.

At night the signals will be substituted by 3 vertical lights, the top one, red, and the following two, white. In addition a searchlight will sweep the zone every 15 minutes, casting a beam of 3 minutes duration.

The Prefecture of Ingeniero White will notify all ships in good time of the expected hour and date on which firing practice will commence.

Should exercises not commence on the date and hour fixed for same, the fire signal will be hoisted half an hour before the appointed time, and on the other yard-arm, the flag "N" (negative of the International Code). These signals will be shown for half an hour from the time they are hoisted.

During exercises, the firing intervals will be signalled in the following form: during day, by hoisting "N" flag, and at night by 2 vertical lights; the top one white, and the bottom one, green.

Ingeniero White (See Plan)

Berths 1, 2, 3 and 4: Reserved for auxiliary vessels.

Berths 5 and 6: Assigned for loading cereals, length 300 m., dredged to 30 ft. above datum. Berth has 5 tubes and 2 belts of 480 t.p.h. capacity.

Berths 7 and 8: Same as berths 5 and 6.

Berth 9: Assigned for loading cereals. Possibly general cargo using ship's derricks. Length 227 m., dredged to 40 ft. above datum. Berth has 6 tubes with a capacity of 500 t.p.h.

Iron Quay: Its commercial use is restricted. Intended for repair, and waiting at berths 11 and 12, with a length of 400 m., been dredged to 29 ft.

Berths 13 and 14: Reserved for official dredging craft.

Berth 10: Out of service.

Berths 15 and 16: On high level quay (Alto Nivel), out of service.

General Cargo Quay, berths 17, 18 and 19: With a total length of 450 m., dredged to 25 ft. Has 4 cranes of 3,000 kgs. capacity.

Berth 20: Length 211 m., and dredged to 25 ft. (5 m. from the quay). Berth has 3 cranes of 3,000 kgs. capacity. On these quays there is a useful working width of 25 m. on which it is possible to work with wagons and lorries.

Berth 21: Length 60 m., for waiting and repairs to small craft.

Access to the port to be dredged to 35 ft.

Shipmasters Report: February 1982.
Ingeneiro White Elevators:
Documents: 6 Crew Lists.

Approaches & Pilotage: The line of buoys from the Rincon Light Buoy No. 1 cannot be relied upon and a vessel should remain to the South by some miles as the weather is frequently altering the relative positions while shoaling at No. 5 is considerable.

The Outer Bar between the No. 7 and 8 pairs is shoaling from the West but if the tide is low or falling after half tide, it is worth trying to call Bahia Blanca Pilots on Channel 16 VHF for advice on the relative depths prevailing. This bar is not dredged with any regularity and soundings are taken less frequently than with the Canal Principal, hence a vessel entering to anchor with a deep draft from loading "up coast" is cautioned regarding the "alleged" 10 m. prevailing.

The anchorage is not good, being of uncertain bottom nature and dragging is frequent. There is more space near to Buoy 11, the position of which has been altered, but the strongest winds are from the South and South West hence any dragging leaves little margin if in this section.

Pilotage is available from Buoy 6 at DOUBLE fees for both boat and Pilot.

The pilot launch is a large black high speed launch with white wheelhouse and "Prefecturar" in white on the starboard side "Praticos" on port side. The Pilots usually give a call when leaving their base at Puerto Rosales thus affording about 1 hour's warning. The Pilot messages are also sent from the Puerto Rosales Control Centre of the Prefecturar or Coast Guard who will supply the Pilot with tidal information obtained from the radio connected gauge to the East of the Outer Bar and showing a green light. This is essential as, despite the large modern dredger operating almost exclusively in the Canal Principal, there are depths well under the 10 m. claimed, especially near Buoy 13 Red and between 13 and 14 on the East side of the channel where the movement of the bank is not yet controlled.

It is planned to dredge a new channel directly towards Rincon Buoy but parallel to the coast to the East of the inner buoyed anchorage, but this is only now being subjected to surveys for assessing the dredging.

The buoyed channel from Belgrano inwards to the elevators is subject to problems as the buoys shift their positions and dredging has to be frequent to be effective throughout yet the loading berths are reported to require little work to keep their 30 ft. depth.

Stevedores: An 18 hour day can be worked.

Puerto Galvan (See Plan)

Berth 1: Assigned for general cargo, with a length of 150 m., and dredged to 25 ft. No cranes.

Berth 2: Length of 120 m., and dredged to 25 ft. Berth has an obsolete elevator. Can possibly be used for waiting and repairs.

Berth 3: Assigned to general cargo, with a length of 140 m. and dredged to 25 ft. No cranes.

Berth 4: Assigned for waiting and repairs, with a length of 75 m., and dredged to 25 ft. No cranes.

Berth 5: Assigned to general cargo, with a length of 150 m., and dredged to 29 ft. Berth has 2 modern cranes with a capacity of 35 tons at 16 m. radius, and 20 tons at a 27 m. radius.

Berth 6: Assigned to general cargo, with a length of 115 m., and dredged to 27 ft. No cranes.

Berths 7, 8, 9 and 10: Assigned to auxiliary craft and possibly general cargo for small craft with lengths of 60 to 65 m., dredged to between 15 ft. and 20 ft.

Inflammable Quay: 2 berthing fronts of 370.80 m. each, dredged to 40 ft. Each berth has a platform of 30.80 m. length and 20.80 m. width. Berth 1 is intended for oil and its derivates, and berth 2 for gas handling.

CRANES: The Puerto Belgrano Naval Base has a floating crane of 50 ton capacity, which can be hired. Also see "Berthing".

SPECIAL CARGO HANDLING FACILITIES: The cranes located at berth 5 of Puerto Galvan are suitable for handling small containers and have grabs of 8 cu.m. capacity for operation with bulk cargo (minerals, by-products, etc.).

The port has mobile cranes of up to 45 tons capacity. The stevedoring companies have vehicles with automatic elevators and various equipment basically suited for loading boxes of fruit, loading and discharge of boxes of frozen fish, etc. There are no special facilities for ro/ro traffic. The elevator quays have special installations for bulk loading of cereals.

BRIDGES: There are no bridges in the access channel or in the port.

STEVEDORES: Permanent stevedores available, no prior advice being required for their availability. The vessel requiring labour must present their order 45 minutes prior to the contracting time to the Port Captaincy at the Contracting Centre.

Contracting times are 0630, 0930, 1230, 1530 and 1830 hrs. (on this shift contracting is also made for night working).

The usual working period is from 0700 to 1900 hrs. from Monday to Friday, and from 0700 to 1300 hrs. on Saturday. Nevertheless, it is possible to operate 24 hours a day, including Sundays and Holidays, but premium rates for this will apply.

DRY DOCKS: Capacity of the dry docks are:
No. 1 215 m. LOA, width on the sill 22.12 m. or at 34 ft. above the sill, 26.25 m.
No. 2 235.45 m. LOA, afloat, or 205 m. closed there is also a floating dock for smaller vessels 65.8 m. LOA, beam 13.46 m., capacity up to 750 tons.

The dry docks are located at the Puerto Belgrano Naval Base, and vessels of the Argentinian Navy have priority of usage.

SURVEYORS: American Bureau, Norske Veritas, Bureau Veritas, Lloyds (insurance only).

HATCHES: Work on deck is prepared by the stevedores during working hours. Preparation of the gangway to be effected by the ship's crew. Stevedores only will close and open hatches with mechanical means. Covered ways will be closed and opened by the stevedores.

LOAD-LINE: Vessels North- or East-bound may load to Summer Marks all year round.

WEATHER: Average velocity of winds is 11 knots, direction North and N.E. 30%, and West and N.W. 32%.

Rainfall averages 558 mm., with July/August the driest months.

Maximum temperature in Summer about 31° C, with an absolute maximum of 42.5° C, and a minimum of about 15° C. In Winter, maximum of about 15° C, average minimum 3.5° C, and absolute minimum minus 8.8° C.

MEDICAL: All kinds of medical treatment are available, there being various state and private hospitals. For very specialised treatment, in extreme cases, evacuation to the city of Buenos Aires is possible.

DENSITY: The salinity in the external area of the Port of Bahia Blanca is 33.6 – 34% in Autumn and Winter. In the inner area the minimum salinity is 16.53% and the maximum 38.57%.

FRESH WATER: Available at any berth at Ing. White, Galvan and Puerto Belgrano, at 10 t.p.h.

FUEL: All grades available ex-wharf or by barge.

GANGWAY/DECK WATCHMEN: Vessels Agent must ask Port Authority for watchman.

FIRE PRECAUTIONS: Tankers, during loading or discharge operations, whether in port, in the roads, at loading points or to other vessels, will comply with the following requirements:

All conduits for loading or discharge of hydrocarbon oils which are land-based for connection to a tanker vessel, must have insulated installations, or, in the absence of same, non-conductive hoses must be used in such a way as to constitute an insulating circuit between the main pipe-line and the connecting flange with the ship.

Pipe-lines carrying hydrocarbon oils, converging on the quay, must be earthed in an effective manner, in the immediate section adjacent to the existing insulating flange on the quay or in the section of hose which is not electrically conductive.

In the event of pipe-lines being used with cathodic protection connected to the vessel with non-conductive loading hoses, insulating flanges must be fitted at their ends. If the pipe-line does not have cathodic protection, it must be earthed conventionally.

At the commencement of and during operations, tankers must fly the "B" flag during hours of sunlight and during the rest of the day a red light in adequate safety conditions.

It is necessary to check that the connecting hoses for loading and discharge operations are in good condition, do not show any cracks or any signs of deterioration.

It is necessary to check that the connecting flanges, when they are bolt-connected, are fixed with all the bolts which they require, and when they are of another type, they must fulfil also the maximum requirements of mechanical efficiency for prevention of oil leaks.

Beneath each of the connecting flanges must be installed drip trays to prevent product reaching the water or the quay; in the same context, all loading deck scuppers must be blocked.

Loading hoses must be installed in such a way that there are no sharp bends nor sudden changes of direction. In the event that the hoses have to rest on sharp edges, adequate protection must be used, to prevent any possibility of wear.

In the event of excessive movement in the berthing area, either during bad weather or due to the manoeuvring of an adjacent vessel, pumping of the product must be stopped. Likewise, if there is any untoward occurrence, such as fire or explosion on the quay or in the quay safety area, on adjacent vessels, or in the event of electric storms of great intensity, or if leakage of the product is observed, pumping must be stopped.

In the event of operations at loading points with long pipe-lines connected to the land, approved communication systems must be used between vessel and the shore to permit the need to stop operations immediately in the event of damage to the pipe-line or any other untoward occurrence.

Whenever it may be necessary to keep open any observation cover of a tank the flame prevention fabric must be positioned.

Constant vigilance must be maintained at the access to the vessel and on deck to prevent the entry of unauthorised persons.

With the exception of very high frequency equipment, which are safe for use, the vessel's radio/electrical equipment must not be used, the wireless room being sealed.

Loading and discharge of tanks must be effected solely by the corresponding pipe-line, the usage of the integral outlets of the tanks being prohibited.

Double berthing of vessels is not permitted, unless they are carrying out operations of lightening, repairs or in the event of emergency.

A foam extinguisher must be placed next to the connecting flange of a hose, and the fire pump must be maintained operational, except where the latter incorporates a remote control system which is approved.

The hose at the loading point and on the main deck must have a proper sealing joint in its unions.

The sealed doors on the main deck must remain closed.

Tankers effecting operations between one another, in the roads or at suitable anchorages, must have main engines ready to manoeuvre at all times; likewise, the necessary personnel for operations of anchors, chains and mooring equipment.

Masters or Owners are obliged to order cessation of any operation, and to request, if necessary, the collaboration of the Maritime Authorities, whenever at the operations quay or in its safety area, in the vessel operating under their control, the requisite safety stipulations are not being met.

During degassing operations, those involved with cleaning, repairs and maintenance, tankers must comply as follows: during degassing operations, no passengers or other unauthorised persons must be on board the vessel.

Whilst gasses are being liberated during the degassing process, the use of galleys must be reduced to a minimum, and open flame burners must be sealed, except boilers and heaters. Under the same circumstances, openings to quarters on deck must be kept closed, so as to obviate any contamination, and smoking must not be permitted anywhere in the vessel.

Boilers must not be lit up, and the combustion pattern must not be altered.

On decks no rags, or absorbent material impregnated with fuel may be deposited. Such material must be placed in adequate receptacles, with covers, for transporting away from the vessel.

When opening covers, and parts of them have to be struck, only anti-spark tools must be used.

Tankers effecting minor repairs, which do not involve cutting or welding of metals but cause sparks or other risky operations of a similar nature, must carry out such work only at the quays in the oil area appropriately equipped, or outside the oil area. When work of a greater magnitude is carried out, this cannot be effected at the special quays, except where reasons of emergency dictate, and in any case only after prior permission has been obtained from the Prefecture.

All degassing operations or opening of tanks not certified as being gas-free are prohibited in the ports, docks, breakwaters, piers or quays intended for operation with combustible or inflammable products or hydrocarbon derivates.

The tasks of washing or cleaning of tanks in port, docks, breakwaters, piers or quays intended for operation with combustible or inflammable products or hydrocarbon derivates may only be effected when a Certificate for Safety of Work has been issued.

Cleaning or degassing of tanks is prohibited in vessels carrying out movement operations of combustible or inflammable products which are hydrocarbon derivates in ports, docks, breakwaters, piers or quays.

CUSTOMS ALLOWANCES: 60 cigarettes and 1 litre of liquid per day. No cigarettes or alcohol may be taken ashore.

REPATRIATION: Possible.

REPAIRS: All classes of repairs possible including dry-docking.

CONSULS: Belgium, Chile, Denmark, France, Greece, West Germany, Italy, Netherlands, Norway, Peru, Portugal, Spain, Sweden.

AIRPORT: Regular air service with Argentine cities.

TIME: GMT minus 3 hours.

HOLIDAYS: (a) National holidays – January 1st, Good Friday, May 1st, May 25th, June 20th, July 9th, August 17th and December 25th.

(b) Not worked – Holy Thursday – December 8th. Nevertheless, the port can work; The stevedores receive an extra of 75% on their pay.

POLICE/AMBULANCE/FIRE: Argentine Naval Prefecture is responsible for port safety, Tel: 71720/71727/71833. Ingeniero White Volunteer Fire Brigade, Tel: 70115. Ambulance of the Port and Maritime Chamber can be requested from the hospital at Ingeniero White, Tel: 70267.

TELEPHONES: There are no facilities for installation of telephones on vessels at the quay. The offices of Maritime Agents, stevedoring contractors and official bodies have telephones and telex. There are public telephones in cabins at Puerto Ingeniero White and Puerto Galvan.

SERVICES: These can be obtained via private firms.

SHORE LEAVE: No restrictions.

IDENTITY CARDS: Seaman book is sufficient.

REGULATIONS:

a. Owners and Maritime Agents must communicate to the Port Captaincy and Port Administration the intention to position the vessel for loading and/or discharge five days in advance (exception to this is made for tankers and grain ships).

b. ETA at buoy 11 must be confirmed 48 hours in advance (including tankers and grain vessels), indicating overall length, estimated draft on arrival and departure, and type of operation to be effected, with specification of tons, packages or volumes to be loaded or discharged.

c. At anchorage at buoy 11 or on passing it, in the event of direct entry, ETA must be confirmed. This time gives the priority for entry, provided the previous communications have been made.

d. Minimum quantities authorised for loading and discharge are:

Cereals	10,000 tons per day
Fruit	21,000 boxes per day
Loading frozen fish	600 tons per day
Discharge of frozen fish	200 tons per day

Other cargoes: The Port Administration determines this in each individual case.

e. These and other regulations with regard to the operations of loading and discharge, obligation to free quays, etc., are recorded in a Circular issued jointly by the Port Captaincy and the Port Administration.

DELAYS: Normally, there are no delays in berthing of vessels, although occasionally during the peak period for cereal exports grain ships may be delayed. It can be considered that vessels load as quickly as they can receive if the cargo is in port.

DEVELOPMENTS: With the dredging work already carried out in the entry channel, and that which is to be effected in the access to the elevators it is expected that vessels of up to 40 ft. draft can operate. A study carried out under the auspices of the P.N.U.D. is on the point of being implemented, under which a notable improvement will be made in the loading conditions of cereals by means of the construction of a new elevator, remodelling those already in existence, construction of three quays in place of those already there, construction of waiting berths, etc.

SHIPMASTER'S REPORT: July 1980

Documents: See 'Guide to Port Entry'.

Pilotage: Pilot boards at buoy No. 11 and requires 48 hours' notice. Pilotage compulsory. Vessels are not able to dock or undock at berths 19 or 20 without the aid of a Pilot.

Restrictions: Vessels are able to enter and leave during hours of darkness.

Max. Size: LOA 200 m. Max. draft: 36 ft. The mean tidal range is 12 ft. Keel clearance of 1 ft. required.

Tugs: Vessel is required to use tugs. 3×1,250 h.p. and 1×1,200 h.p. available.

Radio: Bahia Blanca Radio (LPW). Telephone Nos. of the radio station are 29347,22418 and 22413.

VHF: Pilot and Port Authority on Channel 16.

Berthing: Vessel berthed at general cargo berth No. 19 which is 21 miles from the entrance. Max. size of vessel that can safely berth is 200 m. LOA and 32 ft. draft. The least depth of water in the channel from sea to berth is 36 ft. and the mean tidal range at the berth is 12 ft. Nature of bottom of the berth is mud/silt.

Consuls: Greece, Germany, Spain, Italy, Sweden, Chile, Norway and Denmark.

Services: The following services are available: Fresh water, fresh provisions, minor repairs, dry dock, machine shop, airport, surveyors, laundry services, bunker fuel oil, gas oil, lubricating oil, doctor and hospital, groceries and meats. There are no slop facilities.

General: Vessel arrived at pilot station at buoy No. 11 at 0800 hrs. as arranged, but had to wait until 0900 hrs. for Pilot to come alongside. Whilst waiting it was very difficult to keep vessel in position between sandbanks with floodtide running.

Approach to port not the best as only one buoy lit and the first two buoys missing completely of the first five approach buoys.

Vessel docked about one hour before high water, starboard side-to at berth No. 19. Draft of vessel, forward 13 ft. 11 ins., Aft 20 ft. 07 ins.

As expected vessel was aground at low water. Vessel was sounded round and it was estimated that water at berth on low water 17 ft. forward and 20 ft. aft (difficult to be accurate as all soundings showed very soft silt).

As loading progressed vessel was aground as much as two hours before low water.

Intakes for this vessel are all on the port-side, but even so the intakes are only just above mud level, which naturally meant that the fire main could not be used at low water (being choked with mud), and the toilets were being flushed with solid mud.

I asked the docking Pilot when he next expected the berth to be dredged (in the past dredging had taken place during the month of January) he stated that "the dredger they have is old and new dredgers are expected", however, the Government is concentrating on developing Puerto Madryn.

Many local trawlers have already moved their home base to the South.

Berth No. 20 has I believe slightly more water. River berth now unusable as the mooring bollards are missing.

AUTHORITY: Capitan de Puerto Bahia Blanca.

INSERT SMR FEB.88

COMODORO RIVADAVIA: 45.51 S. 67.27 W.

(Province of Chubut) "B" category port.

N.B. Refer to Argentina, Section 1.

On the San Jorge Gulf, 947 miles South of Buenos Aires.

ANCHORAGE: Anchorage within the five or six fathom line offers little difficulty for regular work to lighters, but the reserved zone off the YPF Pier must be respected.

RESTRICTIONS: Port should be entered at high water in daylight only. Tidal range from 19 ft. 6 in. to 7 ft. 4 in.

MAX. SIZE: Dry Cargo, Length 150 m., draft 15 ft. Tankers up to 30 ft. draft.

RADIO: For radio regarding free pratique, or reporting ETA call LPX 2, on 474 kHz. This station transmits weather forecasts in English at 0400 hrs. and 1800 hrs. GMT.

TUGS: See "General" before first port.

CARGO: It is advisable to stow inwards cargo aft for this port, as lighters lying at hatches one or two receive little protection from sea and swell, and in any case, owing to the limited number of lighters, vessels usually work with two or three gangs at most.

To avoid loss of time, it is the custom in this port to leave the sling loads "as is" in the lighters and therefore a larger quantity than usual of slings have to be hired from the Agents.

It is advisable to establish in Bills of Lading that lighterage is at the risk of the cargo.

BERTHS: The main part of the port consists of:

National Wharf: At the end of the breakwater built over the Punta Borja reef, and still unfinished. It is L shaped, presently 1,160 m. long with 23 ft. at the extreme. Vessels can only go alongside in the last inner sections, with 15 ft. at zero. The breakwater gives some protection from the S.W. and S.E. winds, but vessels with large superstructure should not go alongside, and it is recommended to leave the pier after work is finished each day in case North or West winds blow strongly.

No export cargo is shipped now, as what wool there is moves from the farms North by road, and port conditions are precarious, except for the oil berths. The Titan crane is restricted to 30 tons, and there are 2×5 ton steam cranes on the wharf. The railway now operates only up to km. 27, in the oil fields, having been dismantled further inland for lack of movement.

YPF Mole: Also known as km. 3, is built over the Coronel Reef a short distance North of the town. It has a length of 956 m. and 21 ft. at low water. It is used exclusively for discharging cargo consigned to YPF and for loading their oil and other products, so that special permission from YPF is required to operate here. There are 2×15 ton cranes and 1×4 ton crane on the mole.

The privileged zone extends 150 m. either side of an imaginary line projected from the mole, and 2,500 m. seawards, reserved for tankers loading YPF products, and other vessels cannot moor in this area. There are 5 mooring buoys, two each side of the mole near to its head, the fifth is 200 m. from the beacon at the sea end of the mole bearing 020°.

Kilometre 5: Three miles North of the town there is a wooden wharf, 75 m. long, with only 3 ft. at low water. Vessels using this wharf for discharge over lighters, anchor 1.25 miles off the coast.

The wharf shows a fixed red light at its head and is used for cargo consigned to the Railways. There is 1×8 ton electric crane and 2×5 ton steam cranes on the wharf. With East or S.E. winds the wharf cannot work.

TANKERS: The oil berths within the Comodoro Rivadavia port area are, from North to South:

Caleta Olivares, at 45° 46′ S. and 67° 22′ W.

A loading berth for crude, which can only operate by day. A minimum of 12 hours advance notice of arrival must be given to Agents in Comodoro Rivadavia. There is a launch which assists in mooring to the 4 buoys, which are cylindrical painted black and clearly numbered. There is another cylindrical buoy, also black, but unnumbered marking the end of the line.

It is necessary to obtain, in advance, from the pumping station the regulations, instructions and signal code in use, signals which are made from a semaphore mast, 13 m, above sea level (land height 7.4 m.) both by day and night. There is a small wharf for landing of passengers, crew, etc., and a floating crane, capacity 30 tons. All supplies, water, etc., must be made through Comodoro Rivadavia.

Caleta Cordova, at 45° 43′ S. and 67° 21′ W. approximately, and some 10 miles North of Comodoro Rivadavia, to which it is connected by phone. This is also a loading berth for crude. Four light beacons on shore indicate the entrance. Astra, showing its light at 40 m. elevation, Loma Blanca at 55 m. (white light). With these two lights in line the concrete block, in 34 ft. which sustains the end of the loading line, is 1,325 m. from Astra. Vessels should enter bearing these two lights or marks on 268° and anchor where the cross bearings of this line intersect with the line from the Novales Beacon, a white light at 79 m. height, and Cordova, also a white light at 53 m.

This point is 300 m. from the block or pillar, in 36 ft. Vessels then swing on their anchor to moor by the stern to the 4 mooring buoys. Anchorage is good, in spite of an uncomfortable sea with winds in the 1st, 2nd or 3rd quadrants. S.E. storms are dangerous, however, and it is necessary then to go out to sea at the first sign thereof.

There are two small wharves for small boats, in the S.W. of the bay, one for high and another for low-water, the latter being covered at half tide.

There is also a floating crane for heavy lifts, but as in Olivares, all supplies, etc., must be taken via Comodoro Rivadavia.

Caleta Olivia, the third oil-loading berth, is South of Comodoro Rivadavia at 46° 26′ S. and 67° 31′ W.

There are two petroleum intakes here, North and South, a mile apart, each well buoyed.

A small wharf, 70 m. long, is used for discharge of lighters or landing boats at high tide only. Stores are available here, and the small town is connected by phone with Comodoro.

An SBM has recently been installed here, lying 2,700 m. off shore in 22 m. It is fitted for deballasting (14 in. discharge line) and with a 30 in. loading line, able to handle vessels of up to 150,000 d.w.t.

WEATHER: Average wind velocity 17 knots, with 79% from S.W., W. or N.W.

The port is open to N.E. and E. winds.

Rainfall is scarce, 189 mm. yearly, evenly distributed.

Temperature: Summer maximum is 25.5° and minimum 13.4° C, while in Winter maximum averages about 11° and minimum 3°.

FRESH WATER: Obtainable at National Wharf and YPF Wharf. Ships supply own hoses.

FUEL: Fuel oil and diesel available at the YPF Pier in Comodoro Rivadavia.

WATCHMEN: Recommended. Normally arranged by Agent.

HATCHES: According to port regulations, stevedores open and close hatches at commencement and end of cargo operations.

MEDICAL: Hospital available.

CUSTOMS ALLOWANCES: Only sufficient for normal daily consumption on board. *Custom House.* Fully authorised for import/export cargo, including reception of explosives for commercial use.

REPAIRS: Urgent repairs can be carried out by the oil companies, and there is a permanent service of divers, equipped to operate to 150 ft.

CONSULS: British, Chilean, Dutch, Greek, Italian, Belgian and Spanish.

AIRPORT: Situated 11 km. from port. Daily services to Argentine cities.

POLICE/FIRE/AMBULANCE: Regional Hospital 2451; Clinica Central 2282; Police 2778; Fire Brigade 2505.

TELEPHONES: No connection aboard vessels.

DEVELOPMENTS: Dredging to increase depth to 26 ft. alongside wharves.

AUTHORITY: Capitania de Puerto de la Patagonia.

MAR DEL PLATA: 38.00 S. 57.32 W. (See Plan)

(Province of Buenos Aires) "B" category port.

N.B. Refer to Argentina, Section 1.

On the Atlantic Coast, 302 miles from Buenos Aires.

APPROACHES: The port is some 3 miles South of the main town, sheltered by 2 breakwaters (Northern arm 1,099 m. long, Southern arm 2,750 m., entrance, facing North 300 m. wide). Both breakwaters carry roads and access is open to all traffific, so that car headlights and street lighting can cause confusion at night on taking the Southern bearing.

DEPTHS: The dredged channel is officially 100 m. wide, but dredging is now only occasional, and the official depth is 26 ft. 9 in. and tidal ranges 3 ft. 8 in. Spring to 1 ft. 2 in. Neaps, with constantly forming sandbanks off the South breakwater.

There is often a heavy swell in this port, causing vessels to range in all berths, fenders being essential. It is safer to lie outside in 36 ft. to 42 ft. if awaiting berth than in the anteport within the breakwaters.

PILOTAGE: Pilotage compulsory. Pilots requested through Agent, or in emergency, direct to Prefecture Maritime Station frequency 500 kHz. ETA by radio to Agent required 24 hours to 48 hours in advance.

Pilot boat about 8 m. long, grey-white in colour. Pilot boards approximately 1 mile from port entrance.

ANCHORAGE: The best anchorage bears 191° on the Southern breakwater light beacon and 313° on the Cape Corrientes buoy, or even farther out. Holding ground is good and strong winds may safely be ridden out here, even with a big swell.

MAX. SIZE: Draft dependent on state of tide. Keel clearance of 2 ft. 6 in. required. Normal maximum draft 27 ft. to 30 ft., or up to 33 ft. maximum in best possible conditions.

BERTHING: Big swell causes vessels to range, therefore Masters recommended have ready fenders for use at berth. Vessels can enter or sail any time day or night.

There are three basins in the commercial port, of which the smaller fishing vessels or inshore craft use the most Southerly, and the trawlers the Coastal basin. Here an extension of the marine railway and dry docking facilities is now ready.

The third basin, or overseas, has an Elevator on its Northern side, capacity 20,000 tons, with 8 tubes and 2 belts, load rate 400 t.p.h. per belt. The berth is 300 m. long, with officially 30 ft. alongside, numbered 12 and 13, berth 11 is at the shore end of the basin, with berths 9, 10 and 8 along the South side, 300 m. long. Berth No. 7 is at the head of the basin, and immediately opposite this a jetty has been built out from the Southern breakwater, for discharge of liquid gas or petroleum products to the tank farm on shore. This also serves to shelter the Coastal and Fishing basins from the constant swell.

Grain shipments are now very infrequent, and the port is quickly becoming a fishing centre. Reefers can only load, however, up to 1,500 tons of deep frozen fish, due to the lack of storage facilities. There is one very small storage shed in the port, and the several factories each have their own storage units. Most of the fish is still landed fresh, for filleting and freezing on shore, and goes to Buenos Aires for the local market. Some of the newer trawlers, however, have their own filleting and freezing facilities and shipments are usually timed to meet their arrival in port and make a direct transhipment. From 300 trawlers and fishing boats in operation here ten years ago, the fleet has grown to nearer 500 trawlers.

On the inside of the Northern breakwater arm, there is a berth for passenger/tourist vessels, admitting vessels up to 220 m. LOA but with no facilities beyond those for landing tourists with vessel's gangway to a paved road. Depth alongside is 30 ft. Vessels at this berth must moor bow to the South, laying out their starboard anchor.

Floating crane. There is a 40 ton floating crane (Navy), present capacity 20 tons, and also 4 mobile 2 ton cranes.

RADIO: For radio regarding free pratique or reporting ETA call LPM 2 on 512 kHz. A2. English weather forecasts from Radio Pacheco, Buenos Aires, LPD 5, on 512 at 0148 and 1630 hrs. GMT.
TUGS: Use of tugs is obligatory; vessels over 1,000 N.R.T. must use 2 tugs.

Also see "General" before first port.
MEDICAL: Assistance obtainable alongside. Captain should telegraph Agent in good time expected date and hour of arrival. Hospitals and sanatoriums.
TANKERS: Only fuel oil discharged at berth No. 7.
DENSITY: Sea water.
FRESH WATER: Available at all berths, delivery from 7 to 10 t.p.h.; at the Northern tourist berth through 3 hydrants, total 60 t.p.h. Being slightly salty it is not recommendable for boiler use.
FUEL: Fuel oil and diesel available at Berth No. 7.
WATCHMEN: Compulsory. Arranged by Agent.
STEVEDORES: Gangs engaged by Port Authority according to vessels requirements.
Normal capacity per gang, per shift:
150 to 175 tons fish (direct transhipment).
70 to 100 tons general cargo.
OPENING/CLOSING HATCHES: Can be performed by crew, but in any case subject to charter party terms.
CARGO: *Loading marks.* Vessels can load to their Summer marks all year round if sailing Northbound.
Import cargo. This is a fully authorised Custom house. Berth 9 in the central basin is the most appropriate berth for handling import cargo, there being little space on shore at the other berths. Berth 7, the pierhead here, has 30 ft. and is also reasonably suitable for discharging, but in the Northern basin there is little or no room for depositing cargo alongside.
Import of Potatoes. Is permitted here, this being near the main potato growing region but permission must be obtained for the discharge of certified seed potatoes.
WEATHER: *Wind.* There is no really predominating wind, 42% being from W., N.E. and N.W., average velocity being 11 knots.
Rain. Rainfall averages 941 mm. evenly distributed.
Temperature. Summer maximum about 25° and 13° minimum, while in Winter the maximum averages 14° and minimum 3.5°. Absolute maximum and minimum are 41.6° and minus 6.7° C.
REPATRIATION: Can be arranged.
IDENTIFICATION CARDS: Compulsory. Arranged on board immediately after arrival.
CONSULS: French, Italian, Portuguese, Spanish, Uruguayan.
REPAIRS: All types of repair possible, except dry-dock repairs. Divers available.
AIRPORT: Six miles distant. Two regular lines: Austral and Aerolineas Argentinas, 2 services/day between Mar del Plata and Buenos Aires.
HOLIDAYS: None. Work every day during year.
TELEPHONES: No telephones are available on board or on the berth.
DELAYS: In accordance grain elevator capacity. Normally none.
DEVELOPMENTS: Dredging to obtain depth of 30 ft. in channel and port.
AUTHORITY: Captain of the port: Port Administrator.

PUERTO DESEADO: 47.46 S. 65.54 W. (See Plan)

(Province of Santa Cruz) "B" category port.
N.B. Refer to Argentina, Section 1.

988 miles South of Buenos Aires. The port is situated on the right bank of the river, and at its mouth. There is a meat packing plant.
APPROACHES: The approaches and entrance to the harbour are determined by two pairs of beacons as range or leading lights. Care must be taken not to confuse the installed portal cranes, each 18 m. high, with the beacons, which are painted the same colour.

There is 27 ft. on the bar, at low water: tidal range is 17 ft. 6 in. to 6 ft. 2 in.
PILOTAGE/ANCHORAGE: The Pilot will be on board, under standard instructions, but if for any reason he has to be picked up here, he will only come out about one mile, for lack of suitable craft. In such cases vessels should anchor in the roads at 47° 47′ 5″ S. and 65° 47′ 8″ W.
RADIO: For radio regarding free pratique, or reporting ETA call LPO 5 on 461 kHz. A1. For weather reports in English, listen to Comodoro Rivadavia LPX 2, on 474 kHz., at 0400 and 1800 hrs. GMT.
TUGS: See "General" before first port.
BERTHING: Vessels moor starboard side. Best time for entering is on an ebb tide and sailing on a rising tide, and for berthing within the hour of high tide. With a narrow entrance channel flow of tides often exceeds 5 knots. There is a mud and gravel bank almost opposite and slightly West of the wharf, some 200 yards out from it, with only 16 ft. at zero. When sailing, a back current runs inside the bank, and assists in opening the bows from the wharf. Vessels then usually steam across the bank, drop anchor on the outer edge and swing on the still rising tide until facing the entrance.
The fiscal wharf has been extended to 129 m. overall, in 27 ft and is being extended to 275 m. There are two portal cranes on it, each 12 tons capacity. West of this, there is a space of 90 m. which is being filled in to extend the wharf, and then a 62 m. concrete wharf also in 27 ft., but bearing 312° while the fiscal wharf is on 284°. Both sections of the wharf have wooden fenders and there is ample storage space. Rail connections have not yet been extended to the more Westerly section, where coastal vessels discharge direct to trucks.
FUEL: Available by truck from Comodoro Rivadavia.
FRESH WATER: Available at the wharf, but in limited supply in Summer.
MEDICAL: Attention available.
REPAIRS: Minor repairs only.
CONSULS: British, Chilean and Spanish.
WEATHER: Conditions are generally good, and winds seldom exceed 40 knots. If anchored awaiting Pilot or berth, care should be taken to watch for strong winds against the current. When a strong W. wind blows there can be heavy dust storms, which impede proper visibility; in such cases it is advisable to keep position by radar and stand off or anchor until the visibility improves.

Yearly average for winds is 14 knots, 63% of the time from W., S.W. or N.W.

Rainfall is low, 202 mm. yearly with an average 74 days a year evenly distributed. Maximum temperature in Summer months is 35.6° C., while in Winter maximum ranges to 15.6° and minimum to minus 8.6°.

PUERTO MADRYN: 42.46 S. 65.02 W. (See Plan)

(Province of Chubut) "B" category port.
N.B. Refer to Argentina, Section 1.

On the Atlantic coast, 767 miles South of Buenos Aires. One of the most sheltered and deepest harbours in Argentina.
PILOTAGE: This is obligatory both on entering and sailing. There is no resident Pilot, and one of the Southern zone group of Pilots is sent from Buenos Aires by air as required, staying on for sailing if stay in port is to be short, 72 hrs. notice required. The Pilot will board at anchorage, unless he has brought the ship in from elsewhere. As there are no tugs it is advisable to berth in the early morning, before the wind rises.
ANCHORAGE: Half mile from pier terminal good anchorage in 60 ft. depth in protected bay. Anchorage used for transhipment cargo to smaller vessels.
RADIO: For free pratique, or reporting ETA call LPZ 20, at Trelew, on 527 kHz. A1, and for weather forecasts to LPX 2, at Comodoro Rivadavia in English, at 0400 and 1800 GMT, on 474 kHz.
TUGS: See "General" before first port.
BERTHING: The new pier for the aluminium plant is 1,477 m. in length, the first viaduct being 1,133 m. long, 12 m. wide, of which 3 m. are for the conveyor belt; there are 2 general cargo berths, on the South side, one for vessels drawing 20 ft.–24 ft., lying in 20 ft.–29 ft. and which consists of a series of 7 mooring dolphins, close to the pier. Any vessel operating here would have to discharge ashore with her own gear.

The main general cargo berth, with 31 ft. at zero at the shore end and 37 ft. at the East end is 130 m. long and can take vessels up to 160 m. in length, drawing 30 ft. There are 2 mooring dolphins, one at each end of the berth, which is ample and wide – a total width of 55 m. at this point, vessels discharge with their own gear, to trucks, the long viaduct having room for 2 trucks to pass easily. There are two 12 ton electric cranes at this point, and two 25 ton cranes are also to be installed.

To seaward, on the North side of the pier, is the bulk berth, with 37 ft. at the shore end and 50 ft. at the East end, 217 m. long and 35 m. wide. There are 2 mooring dolphins, one off each end. Discharge is by grab, on a travelling tower which moves the full length of the berth, and delivers on an endless belt to the stockpiles on shore. Installed capacity is 1,000 t.p.h., but actual yields are much lower. On windy days there is a problem with the dusty Bauxite blowing, and it is advisable to keep the ship's quarters tightly shut.

The old jetty, 458 m. long, with 16 ft. at the head and 12 ft. at 125 m. in, at low water, lies 2,500 m. to the South and is still in use for smaller vessels operating with their own gear. There are no lighters in the port.
MEDICAL: Attention available.
FUEL: By truck from Comodoro Rivadavia or Bahia Blanca.
FRESH WATER: Presently available at the end of the old pier, 5 t.p.h. and on the new jetty at 10/15 t.p.h., vessel supplies hose.
WEATHER: *Winds* mainly West, with a yearly average of 8.3 knots but reaching 15 knots in Summer months.
Rainfall scarce, average 173 mm. evenly distributed throughout the year.
Temperature. Summer maximum is 27° C and minimum 13°, and in the rest of the year maximum 21° minimum 8°.
Tidal range is 18 ft. 8 ins. and 6 ft.
HATCHES: According to Port Regulations, stevedores open and close hatches at commencement and end of cargo operations.
CUSTOMS ALLOWANCES: Sufficient for daily requirements only.
CREW IDENTIFICATION CARDS: Required.
CONSULS: Italian Consular Agent at Madryn. British and Spanish consuls at Trelew.
REPAIRS: Minor emergency repairs only, also divers available.
REPATRIATION: No facilities for effecting crew changes. Repatriation facilities only.
AIRPORT: Trelew distant 64 km. Scheduled flights to Buenos Aires and other cities.
POLICE/AMBULANCE/FIRE: Police and fire tel. 249. Hospital 240.
TELEPHONES: No arrangements for placing telephones on board.
SHORE LEAVE: Crew members allowed ashore but must be provided with identification cards.
DELAYS: Possible delays due congestion owing berth shortage and tide.
DEVELOPMENTS: There are plans in hand for installing a shipyard, to build vessels of up to 150,000 tons, and also for setting up a new Steel mill, but it will be some time before either develops.

SHIPMASTER'S REPORT July 1980:
Pilotage: Compulsory. Pilot requires 24 hours notice. At present the pilot boat is small with only about 1 ft. freeboard therefore vessels do not berth or unberth in any sort of wind, sea or swell.
Restrictions: Vessels can berth and unberth at any state of the tide, day or night.
Tugs: None available. Vessel able to dock and undock without aid of tugs.
Health: Authorities require 72 hrs. notice.

Radio: Bahia Blanca (LWP) and General Pacheco (LPD).
Documents: See "General" before first port.
Services: Fresh water available. Limited amount of fresh provisions available. Minor repairs possible. Airport, Doctor and hospital available. Groceries, meats and laundry services also available. Dry docking facilities, surveyors, fuel and slop facilities not available.
Consuls: No Consular representative. Nearest at Buenos Aires.
Anchorage: In position Lat. 42° 44′ S., Long. 65° 00′ W.
Berthing: Vessel berthed at a general cargo berth in position Lat. 42° 44′ S., Long. 65° 01′ W. Berth being about one mile from the pilot station. Any medium sized vessel able to dock at the southern berth (general cargo berth). Vessel able to dock and undock at any stage of the tide day or night.
Density: 1025.
Cargo Handling Facilities: There is a Bulk Aluminium berth opposite the general cargo berth. Two small cranes of approximately 2.5 tonnes capacity available. No floating cranes or Ro-Ro facilities. No facilities for handling containers or palletised cargoes.

PUNTA COLORADA: 41.41 S. 65.00 W. (See Plan)

PILOTAGE: Pilotage is obligatory, and 72 hours advance notice must be given in Buenos Aires for the Pilot to travel down.
MAX. SIZE: No. 1 Berth: 60,000 dwt (approx.) LOA 220 m. Draft 11.58 m.

No. 2 Berth: 25,000 dwt (approx.) LOA 175 m. Draft 10.05 m.
BERTHING: The mechanical loading arm for iron ore movement from Sierra Grande iron ore mines has finally been placed at Punta Colorada, a small peninsula, mid-way between Point Pozos and Point Porfido, the neck of land often being under water at high tide. After grinding and concentrating at the mines, which are some 25 km. due West from the coast, the slurry is pumped to the pelletizing plant at Punta Colorada, stockpiled there and taken by conveyor some 1,600 m. to a retractable loading arm. This has a loading rate of 2,000 t.p.h., and turns on an arc permitting it to load over a length of 112 m., without shifting position of the vessel. There is 42 ft. at Berth No. 1 at LWST, vessels lying due North/South as shown on the plan and 35 ft. in Berth No. 2 lying East/West.

The port is privately owned and run by the Mining Company.
OPERATOR: Hierros Patagonicos S.A.

PUNTA MEDANOS: About 280 km. South of Buenos Aires.

New deep-water port under construction. On completion, expected to accept vessels up to 50 ft. draft.

PUNTA QUILLA (Santa Cruz): 50.07 S. 68.25 W. (See Plan)

(Province of Santa Cruz) "C" category port.
N.B. Refer to Argentina, Section 1.

On the estuary formed by the Rivers Santa Cruz and Chico, 1,172 miles South of Buenos Aires.
APPROACHES: The entrance to the port is by a channel 10 miles long. The Santa Cruz Lighthouse and 9 other beacons determine 4 pairs of leading lights for the approaches and entrance to the harbour, which can be entered only at HW, as both in the bar, either North or South passage, there are shoals on the leading lines, and also just before taking the anchorage in front of the town.
PILOTAGE: Southern Zone Pilot must be on board.
ANCHORAGE: The port is well sheltered and vessels can lie in up to 30 ft. – 36 ft. 0.5 miles off the town in good holding ground.
RADIO: For radio regarding free pratique or reporting ETA call LPT 2 on 441 kHz. A2. For weather forecasts in English tune to Comodoro Rivadavia LPX 2, on 474 kHz, at 0400 and 1800 hrs. GMT.
TUGS: See "General" before first port.
LOADING: A new wharf at Punta Quilla, 160 m. long, depth 42 ft., but with no services or facilities, and a distance of 18 km. from the town, from which all labour, authorities, etc., must be brought. At the same time, there are no more lighters in service, and unless the old freezer recently sold at auction, reopens movement appears negligible although it is expected that petroleum products will be moved over this wharf to relieve the strain on the pipe-lines.
STEVEDORES: Working hours: 0700 – 1300, and 1300 – 1900.
FUEL: Available in small quantities, in drums, from the local YPF agency.
FRESH WATER: Available in drums, ex-lighter, to be pumped out by the vessel.
WEATHER: A dry zone, with an average of 186 mm. rain, spread over 72 days throughout the year. Wind averages 11 knots.
Tidal range is 39 ft. 8 in. to 9 ft. 4 in.
MEDICAL: Attention available.
CONSULS: None.
REPAIRS: Minor repairs only.

QUEQUEN/NECOCHEA: 38.35 S. 58.42 W. (See Plan)

(Province of Buenos Aires) "B" category port.
N.B. Refer to Argentina, Section 1.

On the Atlantic Coast, 375 miles South of Buenos Aires, Necochea, is on the right bank, and Quequen, on the left bank of the Quequen River. The ports, whose administration is centered in Quequen, are the outlet for a very rich agricultural zone.
APPROACHES: The port is at the mouth of the river, protected by two breakwaters, the Western arm being 1,192 m. long, lying from N.W. to S.E., and the Easterly arm 572 m. long and lying North/South. The passage between the arms is 210 m. wide, and the entrance channel proper 100 m. wide. The channel is at present dredged at 32 ft. but improving constantly.
PILOTAGE: Pilots must be applied for as usual through Agents at least 24 hours ahead, using Radio Pacheco LPD 5 on 512 kHz, A2, since there is no radio station at Quequen. This can be done by phone from Buenos Aires or other ports if vessels are not coming from abroad.

No Pilots will come out in bad weather. The small pilot boat is painted grey, with a yellow deckhead, and the Pilot comes aboard about 1.5 miles off the South end of the breakwater.
ANCHORAGES: Not advisable to anchor in bad weather due extremely dangerous winds from West through South to East. Anchorage in open sea 800 m. – 1,500 m. from cliffs.
RESTRICTIONS: Day and night entry possible. Vessels with length in excess of 175 m. require channel navigation permit obtainable from Maritime Prefecture.
MAX. SIZE: *Admissible Draft.* A dredger has been working at the Necochea Bar (breakwater entrance) deepening the channel edge, and from July 1984 the following official depths apply at the port of Necochea in a channel width of 90 m. at Summer Salt Water zero level:

Up to 175 m. LOA = 31 ft. 02 in.
Up to 180 m. LOA = 30 ft. 02 in.
Up to 185 m. LOA = 29 ft. 02 in.
UP to 190 m. LOA = 28 ft. 02 in.
Up to 195 m. LOA = 27 ft. 02 in.
Up to 200 m. LOA = 26 ft. 02 in.
Up to 205 m. LOA = 25 ft. 02 in.
Up to 210 m. LOA = 24 ft. 02 in.
Up to 215 m. LOA = 23 ft. 02 in.
Up to 220 m. LOA = 22 ft. 02 in.

From these water depths a clearance of 4 ft. to 5 ft. must be deducted to obtain vessels' summer salt water even keel drafts.

However, vessels lying close up to the dolphins often find less depth, as the dredgers could not work too close in. The pool inside the breakwater is at 30 ft. but as there are no buoys for mooring, it is safer for vessels to await their turn outside.

Also see "Shipmaster's Report" – February 1982.
HEALTH: Free Pratique is now given only when alongside, or in the pool. Master should advise agent in advance of health situation aboard. If proceeding from another Argentine port, health inspection not required. Derat Certificate to be shown.
TUGS: Two tugs must be used both on entering and leaving and these come alongside at the entrance, and are also needed for movements in the port. Both are old, however, and with insufficient power for anything other than work inside the port. Ship's lines used.

Two vessels cannot be in the entrance channel at the same time. Should the weather make it imprudent for the safety of the ship and/or tugs to make fast ropes in any position, the tugs will continue at the side of the vessel to be engaged when necessity arises. In every case tugs must be paid for, used or not, and any damage done by the non use or late engagement of the tugs will be attributable to the vessel.

Also see "General" before first port.
BERTHING: Allotment of berths is effected by order of arrival, and vessels awaiting turn to load must do so in the outer roads until the pool inside the breakwater is fully dredged. Shippers consider the Outer roads as open sea, and will not accept Notice of Readiness until a vessel enters port.

There are only eight berths in the port, one of which is not yet in service. No work lying two abreast is possible, since the tubes will not do more than just reach, and with the restricted number of loading points only one vessel could work at a time.

Total storage capacity of grain in the port and anteport can be estimated at 600,000 tons.
Loading marks. Vessels are authorized to load to their Summer marks all year round, provided they are Northbound.
Movement inside the Port. At this port it is customary for the vessel lying second off to pay for the tugs attending her own movements. Vessels lying second off must shift to allow the inside vessel out, and then occupy the vacant berth, effect two movements, as there are only two tugs available. Of these two movements only one is charged to the vessel second off, but if either of the movements is in overtime, the extra is also charged.
Fenders. Good fenders are often needed in this port, although surge has diminished with the extension of the breakwater. It is recommended that these should be at least 3 ft. thick.
QUEQUEN SIDE
Unit 1 National Elevator "Ministro de Tomaso" (Dolphins 3/4/5/6 l.h.)

This elevator, built by the Government, has a capacity of 80,000 tons, a loading bridge with eight tubes but only four conveyor belts. Two vessels can load simultaneously.The berths consist each of two piers 10 m. wide and 70 m. apart, with two railway sidings (broad gauge) running parallel to them. There are twelve mooring bollards distributed between these landing places. A loading bridge has been constructed for the new berth from the Elevator Terminal, while it receives directly from an automatic truck discharging plant at 600 t.p.h., and being at a slight angle it is feared will interfere with a vessel of more than 140 m. long loading at Dolphins 5 and 6.
Unit III (Dolphins 1 & 2 r.h.)

Beyond Unit III, in the direction of the breakwater, there are four sheds with a capacity of 29,750 tons and two piers reinforced concrete, 10 m. wide and 70 m. distant from each other. A pipe line runs alongside the pier for the purpose of eventually discharging tankers. Beyond these two piers, and at right angles to them, a breakwater of 120 m. length has been built as a further protection to ships at this berth.

NECOCHEA SIDE
Unit IV (Coasting vessels: Dolphins 1, 2 & 3 l.h. and 4 & 5 r.h.).

Situated on the western bank of the river and consists of the following berths: (Coasting vessels) A concrete pier 300 m. long with 12 mooring bollards. There are three brick-built sheds known as "Galpones A, B & C" of 5,000 tons each. Two vessels can moor at the same time, and load bagged cargo depth between 18 ft. and 20 ft.

Dolphins 1, 2 & 3 l.h. and 4 & 5 r.h. consists of three piers 18 m. wide and 70 m. apart and two piers 18 m. wide and 70 m. apart respectively. There are two direct discharge lines for Fuel oil for the Power plant.

The right-hand dolphin quays Nos. 1, 2 & 3 are used for fuel discharge, the pipelines are 12 in. diameter.

There are two sheds, Nos. 4 and 5 of 9,750 tons, one at each pier. Vessels can load bags or bulk by cutting bags on board. There are seven mooring bollards distributed between two berths. These, however, are not used now for export movement.

The old railway bridge is now used for road traffic, and the railway crosses higher up the river. The previous road bridge has been cut in the middle, and the area between the two bridges is being converted into a fishing port, which in turn will ease the congestion in port, especially on the Necochea side where trawlers and fishing vessels presently operate.

Importation of cargo. The Custom house here is authorised as a deposit zone, thus permitting the import of cargo.

RADIO: For radio regarding free pratique, or reporting ETA call Radio Pacheco LPD 5, on 512 kHz. There is no station here and advice to Agents can be given by phone or telegraph from Buenos Aires or other ports. also Costera del Mar de Plata (LPM).

WEATHER: *Winds,* average velocity is 7 knots, with 46% from N., N.E. and E., and only 29% from S.W., W. and N.W.

Rainfall. Averages 909 mm., evenly distributed.

Temperature: Summer maximum averages 26° C and minimum 14° with an absolute maximum of 39.9°, while in Winter the maximum is around 13° and the minimum 4° with an absolute recorded minimum of minus 4°. *Tidal range* is 5 ft. 2 in. spring to 2 ft. neaps.

TANKERS: Fuel oil discharged.

DENSITY: Salt water.

FRESH WATER: Obtainable from hydrants on the wharves, vessel must supply hoses.

MEDICAL: Attention available.

FUEL: Advance notice essential as deliveries must be lightened from Buenos Aires, Mar del Plata, or Bahia Blanca.

WATCHMEN: Compulsory.

HATCHES: Opened/closed by stevedores additional charge made.

REPAIRS: Minor repairs only.

REPATRIATION: Through Buenos Aires.

AIRPORT: 5 miles distant. Daily flights to Buenos Aires.

TIME: GMT minus 3 hours.

CONSULS: Danish, Italian and Spanish. Consular clearances for France and Uruguay must be effected in Mar del Plata, and must be done the day the vessel sails. Brazilian clearances have to be taken at La Plata Consular offices.

HOLIDAYS: Vessels worked every day of year.

POLICE/AMBULANCE/FIRE: Police, Necochea 2148 and Quequen 6008; Ambulance, Necochea 2350 and Quequen 6052; Fire, Necochea 4900.

TELEPHONES: No arrangements for placing aboard.

SERVICES: Any special services required, technicians sent from Buenos Aires.

SHORE LEAVE: Not permitted.

DELAYS: Daily cargo work 18 hours/day. One waiting berth available. Delays up to four days can occur in January and February.

DEVELOPMENTS: New quay in operation under the name of Ultramar II operating with 2 tubes of 400 t.p.h. capacity each, for loading cereals. Max. permitted overall length 170 m. Actual depth at foot of quay 40 ft.

Can be used for loading or discharging general cargo.

The dredging has been finished, although not to the target of 40 ft., and the present max. length admissible is 160 m., with an official figure of 26 ft. draft at zero. However, vessels lying close up to the dolphins often find less depth, as the dredgers could not work too close in. The pool inside the breakwater is at 30 ft. but as there are no buoys for mooring, it is safer for vessels to await their turn outside, from 800–1,500 m. from shore, in 50 ft. – 60 ft., but with heavy winds from West through South to East they must put out to sea.

SHIPMASTER'S REPORT: February 1982.

Approaches: The channel is being maintained by a new dredger at 28 ft. 02 in. this allows a sailing draft of 30 ft. 02 in. *providing* the swell on the bar is less than 1.3 m. as decoded by the Pilots from observations.

The pool inside the breakwaters and the swell mole are used for swinging before berthing if the weather is good, and after loading if wind prevents this, hence NO anchoring is permitted in this area.

The tugs meet the vessel just outside the breakwaters and two lines each are the normal requirement (ship's lines), but these have to be sent away quickly when directed or else the vessel cannot swing in favourable weather. A deep sea tug has joined the tug fleet.

Berthing: All vessels wait at anchor in the roads where the holding ground is of mixed type. The strong Southerly winds must be watched and rise of the barometer.

A vessel of some 42,000 tonnes deadweight was accommodated head out at the main elevator berth, while two vessels waiting to sail were accommodated at the Ultramar II berth, each 183 m. overall, and without hindering the berthing and loading operations of a 31,700 ton bulk carrier. It should be noted that the inner vessel took the ground at 29 ft. draft when the tide was low; dredging is planned here when the newly restored berths on the Necochea side are completed and dredged to 10 m. as a lay-by and general cargo wharf. However, the nature of the piling is preventing much increase in depth at this old wharf. The limited number of shoots will prevent much use of this berth when it is again in use.

All linseed oil and similar cargoes are being handled at the berth to the East of the Overseas Wharf on the Quequen side but the lack of water makes taking the ground normal for tankers at low water while the swell effect is marked.

Density: This varies with the season and the flow of water down the River Quequen. A flash flood destroyed the footbridge above the elevator and this is now mainly cleared away but no extension has been planned as yet for the adjacent elevator berth. Thus the density can range from salt to near fresh in season.

Fresh Water: Very slow rate of delivery and very salty (500 parts).

Shore Leave: Permitted as soon as Argentine Identity Cards have been processed.

Developments: The Ultramar I berth has 8 tubes and can pour four at 350 tonnes/h. each. Work now proceeds according to who pays the overtime, but an 18 hour day is available on most weekdays, from 0700 hrs. to 0100 hrs.

AUTHORITY: Capitania de Puertos de Quequen y Mar del Plata.
Contact: Francisco Cesar Gallo, Chief of Operations Division.

RIO GALLEGOS (including Punta Loyola): 51.33 S. 68.59 W.

(Province of Santa Cruz) "B" category port.
N.B. Refer to Argentina, Section 1.

About eight miles up the river, 1,247 sea miles South of Buenos Aires.

PILOTAGE: Access to the channel is well buoyed, and the authorised Southern zone Pilot must be on board. There are 2 channels for entering port, the Southern channel though of less depth is preferred as it is more sheltered and the current is weaker.

ANCHORAGE: Good anchorage when awaiting tide is off Punta Loyola in 30 ft. or on the Northern coast in front of Punta El Gancho or between Punta Bustamante and Isla Deseado, this latter in the case of N.W. storms only.

In the port itself, the town anchorage is the best and is deepest in front of the packing house plant. Vessels discharge to or load from lighters, and ocean going vessels are permitted to use their own launch for connection with shore while in port.

RESTRICTIONS: Entrance to the anchorage is buoyed. The Northern Channel has a shingle bank bar 13 ft. at low water. The Southern Channel is more sheltered and the current not so strong. Rio Gallegos is a tidal port, the height of tide being as much as 40 ft. at times.

The port is characterised by the intensity of the currents, up to six knots, and should be entered on a rising tide there being only 22 ft. in the pool of the port at low water.

RADIO: For radio regarding free pratique, or reporting ETA call LPG 2 on 486 kHz. A2. For weather reports in English tune to Comodoro Rivadavia LPX 2 on 474 kHz. at 0400 and 1800 hrs. GMT.

TUGS: See "General" before first port.

BERTHS: Apart from the freezer wharf, there is the coal wharf, T shaped, fitted with an endless belt capacity 300 t.p.h., for the loading of coal vessels taking coal to Plate ports. There is only 20 ft. at this wharf.

There are nine lighters with varying capacity from 120 to 400 tons, which are usually unloaded or loaded when aground at low water.

FRESH WATER: Available by barge in very limited quantities. Vessel's pumps used.

FUEL: Available in drums or ex-truck from Comodoro Rivadavia.

MEDICAL: Doctor available.

REPAIRS: Workshop facilities for small repairs.

AIRPORT: Daily air service to Buenos Aires.

WEATHER: *Winds.* Characterised by constant winds from W. and S.W. averaging 16 knots during the day. In Spring and Summer 25 knots rising to 75 knots at times. Easterly winds are rare, usually with rain.

Rain. There are usually about 100 days with rain, in total 222 mm. distributed from April to October.

Temperature. Average maximum temperature in Summer is 18° C, maximum recorded being 29°, Summer minimum is 5.8° while in Winter the average maximum is 6.5° and minimum minus 11°.

Tidal range is 39 ft. 4 in. spring and 9 ft. 6 in. neaps, tides of over 40 ft. have been registered.

CONSULS: British, Chilean, Spanish and Italian.

DEVELOPMENTS: Punta Loyola: Coal loading berth under construction. Length 160 m. Depth 12.9 m. Berth will able to receive vessels up to 224 m. LOA and draft 13.29 m.

AUTHORITY: General Ports Administration.

SAN ANTONIO OESTE: 40.49 S. 64.55 W.

PILOTAGE: Pilot boarding position: 40° 54′ S., 64° 59′ W.

ANCHORAGE: There is a natural deep water pool here which will allow vessels of up to 33 ft. draft to lie in complete shelter.

BERTHS: A new pier is being built on the North side of Villarino Point on the opposite side of the bay from the old fishing port, now abandoned.

Plans have been changed slightly from the original, and there will be a viaduct, 290 m. long and 12 m. wide, at an angle of 170° to shore, widening to 18 m. at the end with a 45 m. by 16 m. floating pontoon, for fishing vessels. The viaduct serves a jetty 200 m. in length and 30 m. wide. Max. draft in the initial stages will be 26 ft.

Fresh water, telephone, telex, fuel and other services to be available.

SAN JULIAN: 49.18 S. 67.43 W.

(Province of Santa Cruz) "C" category port.

N.B. Refer to Argentina, Section 1.

In the creek of the same name, 1,111 sea miles South of Buenos Aires.

APPROACHES: Access is well buoyed, but vessels must wait for high tide to enter.

PILOTAGE: Southern Zone Pilot must be on board.

ANCHORAGE: Best anchorage situated in front of the town, in 22 ft. at LWS. When heaving anchor care must be taken as the 3 knot current drives vessels towards the shore. Puerto Scholl is the best of several anchorages.

RADIO: For radio regarding free pratique, or reporting ETA call LPY on 428.5 kHz, A2. For weather forecasts in English, tune LPX 2, Comodoro Rivadavia on 474 kHz, at 0400 and 1800 hrs. GMT.

TUGS: See "General" before first port.

BERTH: A quay has recently been put into use, 62 m. long by 20 m. wide, and in 24 ft. with two mooring dolphins, so ending the previous use of lighters.

FUEL/FRESH WATER: Not available. In emergencies, water could be supplied by lighter in drums.

MEDICAL: Doctor, and hospital available.

CONSULS: None.

NOTES

Please also advise Shipping Guides Ltd.

Ascension Island

NOTES

Please also advise Shipping Guides Ltd.

GEORGETOWN: 07.55 S. 14.20 W. (See Plan)

DOCUMENTS: Crew and Passenger Lists, Health Documents, Manifests and Bills of Lading if discharging cargo.

PILOTAGE: No pilots are available and not required as it is an open anchorage. 48 hours notice of ETA is required. Call Ascension Island Radio on 2182 kHz. or VHF Channel 16.

RESTRICTIONS: Advisable for ships or yachts arriving at night to wait until daylight unless contact is made with "Wideawake" on Channel 16 or 6 and specific instructions are given for berthing. Occasionally a floating pipe-line connects tankers at anchor in Clarence Bay with the Pierhead.

ANCHORAGE: Anchorage positions are available and will be given as bearing and distance in feet from Bates Rock Beacon, available from Harbourmaster by telex or "Wideawake" Channel 6 or 16 (See Ascension Island Chart No. 1691 dated April 1985). Depths at anchorage from 11 to 31 fathoms. Abandoned cables are in the area and if picked up should be released without cutting, if possible. Regular mailship always takes precedence for anchorage and cargo facilities.

HEALTH: Pratique should be requested when giving ETA.

RADIO: VHF Channel 6 or 16 "Wideawake" or Ascension Radio 2182 kHz. Shipping Agents Ascension Island Services Telex 219. Harbour Authority, the Administrator Telex 214.

RADAR: None.

TUGS: No tugs available.

BERTHING: No alongside berthing. "See Anchorages."

Cargo Facilities: Cargo has to be discharged by ships' cranes onto lighters. Lighters pull alongside Pierhead where cargo is off loaded. Pierhead cranes can handle weights up to 20 tons.

MEDICAL: Facilities available. 48 hours notice required if possible. Georgetown has a 12 bed hospital. Dental facilities usually available. Vaccination and inoculation certificates not normally required.

TANKERS: Anchorages available. Tankers for English Bay should anchor off Clarence Bay until boarded, it is not normally possible to put tankers into English Bay after 0900 hrs.

FRESH WATER: Not normally available.

FUEL: Not normally available.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: Preferable that this done by crew to avoid delays in starting discharge.

CONSULS: No Consulates. British Administrator attends to all requirements.

REPAIRS: Only minor repairs can be effected.

REPATRIATION: No facilities for crew changes. Repatriation can usually be arranged but only in the case where a person has been hospitalised or in extreme compassionate cases. No civil airlines call at Ascension but RAF (to UK) or USAF (to Antigua twice weekly and to Johannesburg bi-monthly) can usually assist. Master of vessel required to give guarantee in writing that all hospital fees and air fares will be honoured by his shipping line Agent.

TIME: Always GMT.

HOLIDAYS: Cargo vessels can be discharged during public holidays – no night work.

SERVICES: *Offshore Services:* Ascension Island Services. Contact Dr. Ray Harrison, Senior Manager.

GENERAL: There are no facilities for visitors on the island. With certain exceptions no-one is allowed to land at Ascension without an entry permit.

SHORE LEAVE: Limited facilities ashore make shore leave impracticable for most crews but Immigration Officer ready to consider special limited arrangements at the request of the Master. Yachts are normally granted 48 hour stay with daytime shore leave to revictual.

AUTHORITY: Office of the Administrator, Ascension Island, South Atlantic. *Tel:* Georgetown 6311/6327. *Telex:* 214 Govt. Av. *Contact:* The Administrator.

Australia

GENERAL

AUSREP:

The Australian Ship Reporting System (AUSREP) – General Instructions

INTRODUCTION: Legislation has been passed by the Australian Parliament which makes participation in the Australian Ship Reporting System compulsory, this is now included in the Australian Navigation Act as Division 14, Part IV. AUSREP is a ship reporting system established in accordance with the International Convention for Safety of Life at Sea. Its objectives are:

- i) To limit the time between the loss of a vessel and the initiation of search and rescue action, in cases where no distress signal is sent out.
- ii) To limit the search area for a rescue action.
- iii) To provide up-to-date information on shipping resources available in the area in the event of a search and rescue incident.

The coverage of AUSREP and the Australian Search and Rescue (AUSSAR) area, as advised to the International Maritime Organisation (IMO) is identical to the International Civil Aviation Organisation Search and Rescue regions around Australia.

APPLICABILITY: Division 14, Part IV of the Act and the Regulations apply to:

- (a) All Australian-registered ships engaged in trade or commerce interstate or overseas while in the AUSREP area.
- (b) Ships not registered in Australia but engaged in the coasting trade or in trade between Australia and an external Territory or between external Territories while in the AUSREP area.
- (c) Ships not registered in Australia but demised under charter parties to charterers whose residences or principal places of business are in Australia while in the AUSREP area.
- (d) Foreign ships, other than the above-mentioned vessels, from their arrival at their first Australian port until their departure from their final Australian port; they are encouraged, however, to participate from their entry into the AUSREP area until their final departure from it.
- (e) Australian fishing vessels proceeding on overseas voyages while in the AUSREP area, but *not* including those vessels operating from Queensland ports, which may call at ports in Papua New Guinea as an incidental part of their fishing operations; a definition of "overseas voyage" is given in Section 6(1) of the Navigation Act, 1912.

OPERATING AUTHORITY: Department of Transport through the Federal Sea Safety and Surveillance Centre (FSS&SC), Canberra. Signal address: Sea Safety Canberra. Tel: Canberra (062) 68 7920. Telex: 62349. Cables: Sea Safety Canberra.

MAIN FEATURES OF AUSREP: On departure from an Australian port or on entering the AUSREP area, a Sailing Plan (SP) is sent to FSS&SC where a computerised plot is maintained of vessel's position. Position Reports (PR) are sent to FSS&SC each day at the time that has been nominated by the Master so that a report is received at least every 24 hours. Should a vessel at any time, be in a position more than 2 hours steaming from the position that would have been predicted from the last SP or PR, then a Deviation Report (DR) must be sent. On arrival at his destination or on final departure from AUSREP area the Master sends Final Report (FR). AUSREP is a positive reporting system in that, should an expected report become overdue, actions which may include the launching of search aircraft are initiated and will be continued until the vessel's safety is confirmed.

Dates and times contained in AUSREP reports are to be in Universal Co-ordinated Time (UCT) which is indicated by the suffix 'Z'.

Basic AUSREP Format Components: The following list shows all the AUSREP format components. The full list of components do not have to be included when sending AUSREP reports. Masters should include those components shown in the examples given for each report, others may be included at the Master's discretion or when relevant to the type of report being sent.

A. Vessel name and call sign.
B. Date/time of event (UTC).
C. Position (Lat. and Long.).
D. Geographical position (not to be used for AUSREP messages).
E. Course.
F. Speed.
G. Name of last port of call (when entering AUSREP area only).
H. Date/time and point of entry into AUSREP system.
I. Destination and ETA.
J. Whether Pilot is carried on vessel (not required).
K. Date/time and point of exit from AUSREP system.
L. Route (vessels intended track).
M. Coast radio stations monitored.
N. Nominated Daily Reporting Time (as nominated by the Master).
O. Draft (optional on SP only).
P. Cargo (optional on SP only).
Q. Defects or other limitations.
R. Pollution (reports or any pollution seen).
S. Weather conditions (optional).
T. Ship's Agents (optional on SP only).
U. Ship type and size (optional on SP only).
V. Medical personnel carried (SP only).
W. Number of persons onboard (optional on SP only).
X. Remarks.

Format based on IMO Resolution A.531(13) of 17th November, 1983.

SAILING PLAN REPORT (SP): Either up to 24 hours before, or up to 2 hours after departure from a port within the AUSREP area, or when a vessel is entering the area, an SP report is sent to the FSS&SC. The SP contains information necessary to initiate a plot and give an outline of the intended passage. The SP states daily report time, when the Master will send a daily position report to the FSS&SC. Should a vessel not sail within 2 hours of the time stated in the SP the plan is cancelled and a new SP sent.

In the case of a foreign vessel whose next port of call is outside Australia, if the Master does not intend to send position reports, this fact is indicated in the SP by the inclusion of the group NOREP in place of the nominated daily reporting time.

A SP submitted before a vessel enters the AUSREP area will be acknowledged by FSS&SC who will advise "SAR watch will commence on receipt of a Position Report confirming vessel has entered the AUSREP area".

Note: This is the only message that FSS&SC will confirm after receipt.

The Format for SPs is:

AUSREP SP
A. Vessel name and call sign.
F. Speed.
G. Name of last port of call (when entering AUSREP area only).
H. Date/time and point of entry into AUSREP system.
I. Destination and ETA.
K. Date/time and point of exit from AUSREP system (when leaving AUSREP area).
L. Route.
M. Coast radio stations monitored.
N. Nominated Daily Reporting Time (UTC) (as nominated by the Master).
V. Medical personnel.
X. Remarks (if any).

Note: Other sections of the basic format may be included at the Master's discretion.

POSITION REPORT (PR): Each day at the nominated daily reporting time given in the SP, a PR is sent to the FSS&SC. The first PR is required within 24 hours of departure and subsequently daily thereafter, reporting at the nominated daily reporting time, until and including the day of arrival. The information contained in the PR will be used by the FSS&SC to update the plot. If it is found necessary to alter the nominated daily reporting time, this alteration is shown in the PR sent before the change.

The ETA at port of destination or AUSREP area boundary is always confirmed in the last PR of a passage. It may also be amended in any PR whenever the Master is aware of a revised ETA.

The Format for PRs is as Follows:

AUSREP PR
A. Vessel name and call sign.
B. Date/time of position given.
C. Position (Lat./Long.).
E. Course.
F. Speed.
M. Coastal radio stations monitored.
X. Remarks (if any).

DEVIATION REPORT (DR): Should a vessel, at any time, be in a position more than 2 hours steaming from the position that would be predicted from the last SP or PR, then a Deviation Report must be sent.

The Format for DR's is as Follows:

AUSREP DR
A. Name and call sign of vessel.
B. Date and time (Z).
C. Position (Lat./Long.).

Then include whichever format components are affected by the deviation.

X. Remarks (may include reason for deviation. e.g. reduction in speed due weather, change of port of destination, etc.).

FINAL REPORT (FR): When the vessel approaches the port of destination and arrives at a position where VHF contact is made with the local Harbour Authority or pilot station, which, under normal conditions, is within 2 hours steaming of the pilotage grounds, a FR is sent to the FSS&SC. Under no circumstances should a FR be sent more than 2 hours before arrival. Alternatively if the arrival is outside radio watchkeeping hours, the FR should be sent ideally, immediately after berthing, but no later than 2 hours after arrival. If it is known that the vessel is to anchor or berth where telephone facilities are not available, then the FR is sent through the appropriate coastal radio station before anchoring or berthing.

For a vessel departing from the AUSREP Area the FR is to be sent after crossing the area boundary and not later than the next nominated daily reporting time.

The Format for FRs is as Follows:

AUSREP FR
A. Vessel name and call sign.
K. Date/time and point of exit from AUSREP system.
X. Remarks (must include the words Final Report).

METHOD OF PASSING REPORTS: When in an Australian Port: A reverse charge telephone call, a collect charge *urgent* telegram or telex may be used when making an AUSREP or SAR message.

It is advisable to communicate all reports direct from the ship to the FSS&SC to avoid delays associated with intermediate agencies. Tel: Canberra (062) 68 7920. Telex: 62349. Cables: Sea Safety Canberra.

When at Sea: All reports are addressed Sea Safety Canberra, and may be sent free of charge through any Australian Coast Radio Station controlled by the Overseas Telecommunication Commission (OTC). Schedules and frequencies are given in Admiralty List of Radio Signals, Vol. 1, and in the Marine Information Manual – Australia.

NOMINATED DAILY REPORTING TIMES: When nominating their Daily Reporting Time, Masters of single radio operator ships will appreciate that reports nominted during the last single operator period of the day, if not received, cannot be followed up until the next radio watch period, causing a considerable delay in activating any SAR action that may be required. It is, therefore, desirable that times of reporting be restricted to within the period 2200 to 0900 (Z).

ACTION TAKEN WHEN A REPORT BECOMES OVERDUE: It is a requirement, if any report is not received at the Federal Sea Safety and Surveillance Centre within 2 hours of the nominated reporting time, that necessary steps are taken to ascertain the safety of the vessel. The following is an outline of the action that will be taken should a report become overdue. Circumstances may indicate more rapid action.

1. During the first 2 hours: Internal checks will be carried out.
2. Vessel will be listed on traffic lists requesting Master to furnish overdue report and a CQ enquiry may be initiated.
3. At 6 hours overdue: Broadcast of ships call sign with JJJ/Report Immediate Indicator will be inserted in the traffic lists indicating concern due to non-receipt of PR/FR.
4. Extensive communication checks with Australian and overseas CRS, Owners, Agents and other vessels are carried out to trace the last sighting or a contract with the vessel with the aim of confirming her safety.
5. At 21 hours overdue: The JJJ/Report Immediate broadcast will be upgraded to the urgency signal XXX/Pan indicator. Search planning will be in progress.
6. By the time the report is 24 hours overdue, search action will have been initiated. This action can include the launching of search aircraft.

IT IS MOST IMPORTANT that ships report at their nominated reporting time each day and send their FINAL REPORT when leaving the area, thus avoiding unnecessary search action. If a ship is unable to pass a position report due to unserviceable radio equipment or illness of the Radio Officer all attempts must be made to pass a signal to this effect through another vessel, harbour or other shore authority either by VHF, signalling lamp or use of lifeboat transmitter.

When ships are out of MF range of an Australian coast radio station, they should listen to Sydney (VIS) long range NAVAREA X broadcasts, also Sydney (VIS) and Perth (VIP) HF traffic lists, for signals concerning vessels whose reports are overdue. This applies particularly to ships near the boundary of the AUSREP area.

Should radio conditions prevent direct contact with any Australian coast radio station, every effort should be made to pass Position Reports/Final Reports through any other ship or any other coast radio station.

REPORTS TO AMVER: Whilst participating in AUSREP, Masters may also wish their reports to be forwarded to New York for inclusion on the AMVER plot. This should be indicated in report remarks, and will particularly relate when sending the Final Report when vessel leaves the AUSREP area.

OFFENCES: The Navigation Act provides penalties involving fines of up to $10,000 for infringements of reporting provisions.

AUSREP PROCEDURE PAPER: This brochure has been designed so that the general information section may be read and the procedure section (see "AUSREP Procedure") permanently displayed for ready reference.

For further information or advice on AUSREP procedures can be obtained from: Controller, Federal Sea Safety and Surveillance Centre, Department of Transport, Australia, P.O.Box 594, Canbarra ACT 2601.

AUSREP Procedure

AUSREP SP – SUBMITTED ON ENTERING AUSREP AREA:

Format	*Example*
AUSREP SP	AUSREP SP
A. Vessel name and call sign	A. Lollipop/V2LZ
F. Speed	F. 12 knots
G. Port of departure (name of last port of call)	G. Port Said
H. Date/time and point of entry into AUSREP system	H. 020400Z 0448S 07555E
I. Destination and ETA	I. Adelaide 180600Z
L. Route	L. 129 to Leeuwin then various
M. Coast radio station monitored	M. GKA, 9VG, VIP, VIS
N. Nominated Daily Reporting Time	N. 0600Z
V. Medical personnel	V. No medic
X. Remarks	X. Pass to AMVER

Message transmitted: AUSREP SP. A Lollipop/V2LZ, F. 12Kts, G Pt Said, H 020400Z 0448S 07555E, I Adelaide 180600Z, L 129 to Leeuwin then various, M GKA VIP VIS, N 0600Z, V No medic, X pass to AMVER.

AUSREP SP – SUBMITTED ON DEPARTURE FROM A PORT WITHIN AUSREP AREA TO A PORT OUTSIDE AUSREP AREA: (May be submitted up to 24 hours prior to sailing and up to 2 hours after departure).

Format	*Example*
AUSREP SP	AUSREP SP
A. Vessel name and call sign	A. Lollipop/V2LZ
F. Speed	F. 12 knots
H. Date/time and point of exit from AUSREP system	H. 020500 Fremantle
I. Destination and ETA	I. Djakarta 090600Z
K. Date/time and point of exit from AUSREP system	K. 080600Z 1200S 10700E
L. Route	L. 327 to 2900S 11327E then 340 to 1200S 10700E
M. Coast radio stations monitored	M. GKA, VIP, VIO, PRI, 9VG
N. Nominated Daily Reporting Time	N. 0400Z
V. Medical personnel	V. No medic
X. Remarks	X. Report to AMVER

Message transmitted: AUSREP SP, A Lollipop/V2LZ, F 12 kts., H 020500Z Fremantle, I 090600Z Djakarta, K 080600Z 1200S 10700E, L 327 to 2900S 11327E 340 to 1200S 10700E, M GKA VIP VIO PRI 9VG, N 0400Z, V No medic, X Report to AMVER.

Note: In the case of a foreign vessel whose next port of call is outside Australia, if the Master does not intend to send Position Reports, this should be indicated in the AUSREP SP by the inclusion of the group NOREP in paragraph N.

AUSREP SP – SUBMITTED ON DEPARTURE FROM AND TO A PORT BOTH WITHIN THE AUSREP AREA: (May be submitted up to 24 hours prior to sailing and up to 2 hours after departure).

Format	*Example*
AUSREP SP	AUSREP SP
A. Vessel name and call sign	A. Lollipop/V2LZ
F. Speed	F. 12 knots

Message transmitted: AUSREP SP, A Lollipop/V2LZ, F 12 kts., H 212200Z Adelaide, I Melbourne 231400Z, L Coastal Var, M VIA, VIM, N 0100Z, V No medic.

POSITION REPORT (AUSREP PR): AUSREP PR – Submitted at the nominated Daily Reporting Time given in SP or previous day's PR. The first PR is required within 24 hours of entry to AUSREP area or departure from a port within AUSREP area.

If it is found necessary to alter the nominated daily reporting time then this alteration is shown in the PR sent before the change.

ETA at port of destination or AUSREP area boundary is always confirmed in the last PR of a passage. It may also be amended in any PR whenever the Master is aware of a revised ETA.

Format	*Example*
AUSREP PR	AUSREP PR
A. Vessel name and call sign	A. Lollipop/V2LZ
B. Date/time of position	B. 030400Z
C. Position	C. 0748S 07940E
E. Course	E. 129
F. Speed	F. 8.5 knots
X. Remarks (e.g. change of reporting time or revised ETA)	X. ETA now 060200Z

Message transmitted: AUSREP PR, A Lollipop/V2LZ, B 030400Z, C 0748S 07940E, E 129, F 8.5 knots, X ETA now 060200Z.

DEVIATION REPORT (AUSREP DR): Should a vessel, at any time, be in a position more than 2 hours steaming from the position that would be predicted from the last PR or SP, then a Deviation Report must be sent.

Format	*Example*
AUSREP DR	AUSREP DR
A. Vessel name and call sign	A. Lollipop/V2LZ
B. Date/time	B. 050200Z
C. Position	C. 3900S 14500E
Then include whichever format components are affected by the deviation	F. 9 knots I. Adelaide 080200Z
X. Remarks (include reason for deviation e.g. reduction in speed due weather, change of route or port of destination etc.).	X. Reduced speed due to main engine problems

Message transmitted: AUSREP DR, A Lollipop/V2LZ, B 050200Z, C 3900S 14500E, F 9 knots, I Adelaide 080200Z, X Reduced speed due to main engine problems.

FINAL REPORT (AUSREP FR) – SUBMITTED ON ARRIVAL AT A PORT WITHIN AUSREP AREA: When the vessel approaches the port of destination and arrives at a position where VHF contact is made with the local Harbour Authority or pilot station, which under normal conditions, is within 2 hours steaming of the pilotage grounds, a FR is sent to FSS&SC. Under no circumstances should a FR be sent more than 2 hours before arrival. Alternatively if the arrival is outside radio watch keeping hours, the FR should be sent, ideally, immediately after berthing, but not later than 2 hours after arrival. If it is known that the vessel is to anchor or berth where telephone facilities are not available, then the FR is sent through the appropriate coast radio station before anchoring or berthing.

Format	*Example*
AUSREP FR	AUSREP FR

X. Remarks (must include the words Final Report.).	X. Final Report.

Message transmitted: AUSREP FR, A Lollipop/V2LZ, K 080200Z Adelaide, X Final Report.

AUSREP FR – VESSEL DEPARTING AUSREP AREA: The Final Report is to be sent after crossing the AUSREP area boundary, and never later than the next nominated daily reporting time given in previous SP/PR.

Format	*Example*
AUSREP FR	AUSREP FR
A. Vessel name and call sign	A. Lollipop/V2LZ
K. Date/time and point of exit from AUSREP system	K. 070030Z 1100S 10631E
X. Remarks (must include the words Final Report).	X. Final Report, now bound Semarang

Message transmitted: AUSREP FR, A Lollipop/V2LZ, K 070030Z 1100S 10631E, X Final Report now bound Semarang.

NOTES ON PROCEDURES:

(1) *Date-Time Group:*
Dates and times contained in AUSREP reports are to be in Universal Co-ordinated Time (UTC) which is indicated by the suffix "Z".
Example: 5 November 1982, 0600LMT (UTC+9hrs.). Transmitted as 042100Z.

(2) *Latitude:*
Four figure group indicated by suffix "S" (South) or "N" (North).
Example: Latitude 06° 15′ 46″ South. Transmitted as 0616S.

(3) *Longitude:*
Five figure group indicated by suffix "E" (East).
Example: Longitude 82° 06′ 24″ East. Transmitted as 08206E.

(4) *Intended Route:*
Indicate Great Circle (GC) or Rhumb Line (RL) with way points being followed, expressed in Latitude and Longitude or geographical place-names.

(5) *Speed:*
Anticipated average speed vessel will make till next reporting time.

(6) *Course:*
True course anticipated till next reporting time. When more than one course will be sailed enter "various". If course shown as "various" FSS&SC will interpret this as being the normal courses a vessel will follow on that particular passage. However, if the above assumption does not apply, clarification should be made.

(7) *Radio Stations Monitored:*
List stations which the vessel normally works to contact Managers, Owners, Charterers and Agents, etc., in addition to Australian Coast Radio Stations monitored.

(8) *Nominated Daily Reporting Times:*
When nominating their Daily Reporting Time, Masters of single radio operator ships will appreciate that reports, nominated during the last single operator period of the day, if not received, cannot be followed up until the next radio watch period, causing a considerable delay in activating any SAR action, that may be required. It is therefore, desirable that reports are transmitted during the first single operator period of the day.

(9) *2 Hour Rule:*
Should a vessel, at any time, be in a position more than 2 hours steaming from the position that would be predicted from the last PR or SP, then a Deviation Report (DR) is sent.

(10) *JJJ Procedure:*
When an AUSREP report is 6 hours overdue, Coast Radio Stations (CRS) will, on request from FSS&SC broadcast a Priority Signal with the traffic lists. This signal consists of the vessel's call sign followed by JJJ (RTG) or REPORT IMMEDIATE (RTF). Any sighting of/or communication with this vessel by any other vessel should be reported immediately to the CRS stating time of contact, position and estimated course and speed of the vessel overdue for report.

(11) *Severe Weather:*
Vessels which anticipate passing through areas of severe weather conditions, or are experiencing severe weather, are urged to report their position at more frequent intervals to the FSS&SC. The time of their next anticipated position report should be included under "REMARKS".

(12) *Method of Passing Reports:*
When in an AUSTRALIAN port–
A reverse charge telephone call, a collect charge URGENT telegram or telex may be used when making an AUSREP or SAR message:
It is advisable to communicate all reports direct from the ship to the FSS&SC to avoid delays associated with intermediate agencies.
Telephone: Canberra (062) 68 7920
Telex: 62349
Telegram: Sea Safety Canberra
When at sea–
All reports are addressed to SEA SAFETY CANBERRA, and may be sent free of charge through any Australian Coast Radio Station controlled by the OVERSEAS TELECOMMUNICATIONS COMMISSION (OTC). Schedules and frequencies are given in Admiralty List of Radio Signals, Vol. 1, and in the Marine Information Manual – Australia.

(13) *Co-ordinates of Australian SAR and AUSREP area* (also see "Plan")
A. The coast of the Antarctic Continent in Longitude 75° E.

B.	6° 00′ S.	75° 00′ E.
C.	2° 00′ S.	78° 00′ E.
D.	2° 00′ S.	92° 00′ E.
E.	12° 00′ S.	107° 00′ E.
F.	12° 00′ S.	123° 20′ E.
G.	9° 20′ S.	126° 50′ E.
H.	7° 00′ S.	135° 00′ E.
I.	9° 50′ S.	139° 40′ E.
J.	9° 50′ S.	141° 00′ E.
K.	9° 37′ S.	141° 02′ E.

then following the territorial boundary (see "Note") to:

L.	12° 00′ S.	144° 00′ E.
M.	12° 00′ S.	155° 00′ E.
N.	14° 00′ S.	155° 00′ E.
O.	14° 00′ S.	161° 00′ E.
P.	17° 40′ S.	163° 00′ E.

Q. The coast of the Antarctic Continent in Long. 163° 00′ E.

Note: As the territorial boundary in this area cannot be readily defined by co-ordinates, the following may be used for AUSREP purposes only.

(see next column)

K.	(1)	9° 37′ S.	141° 02′ E.
	(2)	9° 08′ S.	143° 53′ E.
	(3)	9° 24′ S.	144° 13′ E.
L.		12° 00′ S.	144° 00′ E.

(14) *Monitoring Australian Coast Radio Stations (CRS):*
When ships are out of MF range of an Australian Coast Radio Station, they should listen to Sydney (VIS) Long Range NAVAREA X broadcasts, also Sydney (VIS) and Perth (VIP') HF Traffic Lists, for signals concerning vessels whose reports are overdue. This applies particularly to ships near the boundary of the AUSREP area.
Should radio conditions prevent direct contact with an Australian Coast Radio Station, every effort should be made to pass Position Reports/Final Reports through any other ship or any other Coast Radio Station.

(15) *Communications:*
IT IS MOST IMPORTANT that ships report at their nominated reporting time each day and send their FINAL REPORT when leaving the area, thus avoiding unnecessary search action. If a ship is unable to pass a position report due to unserviceable radio equipment or illness of the Radio Officer all attempts must be made to pass a signal to this effect through another vessel, harbour or other shore authority.

(16) *Reports to AMVER:*
Whilst participating in AUSREP, Masters may also wish their reports to be forwarded to New York for inclusion on the AMVER Plot. This should be indicated in report remarks, and will particularly relate when sending the FINAL REPORT when the vessel leaves the AUSREP area.

AUSTRALIAN SHIP REPORTING SYSTEM (AUSREP)

Ship's particulars:

Information contained in this form will only be used for the purpose of safety of life at sea.

If details of the vessel change in the future, please forward the spare form containing only *changed* particulars to:

FEDERAL SEA SAFETY AND SURVEILLANCE CENTRE:
Information Notice

The International Convention for the Safety of Life at Sea, requires governments "to ensure that any necessary arrangements are made for the rescue of persons in distress at sea, around its coasts". The Australian Government being a signatory to the International Convention for the Safety of Life at Sea, established the Marine Operations Centre in April 1972 to comply more fully with the Convention's requirements.

The Centre was subsequently renamed as the Australian Coastal Surveillance Centre (ACSC) in 1978 with the introduction of an enhanced coastal surveillance function and renamed again in 1984, as the Federal Sea Safety and Surveillance Centre (FSS&SC). This recent change reflects the Centre's primary role of Search and Rescue, as the coastal surveillance function has been largely transferred to the Coastal Protection Unit of the Australian Federal Police, which is co-located within the Centre.

The Federal Sea Safety and Surveillance Centre is a part of the Department of Transport's Maritime Safety Division, situated in Canberra in the Australian Capital Territory. The FSS&SC is in fact Australia's Maritime Rescue Co-ordination Centre.

The principal function of the FSS&SC is therefore the co-ordination of marine search and rescue activity, (other than incidents involving the defence forces), within the area of Australian responsibility, which is shown in the general instructions of the Australian Ship Reporting System.

The FSS&SC works in close liaison with the State Authorities who are responsible for SAR activity within port limits, and where their facilities permit, for small craft such as pleasure boats and fishing vessels in near coastal waters. The State police are the local SAR Authority around the Australian coastline, and are often assisted by the various volunteer coastal associations.

For incidents which occur further out to sea and those beyond the resources of the State Authorities, Defence Forces and Civil marine/aviation facilities are used to perform the air or sea search and the resulting rescue.

The facilities of the FSS&SC are available to all seafarers whether they are private boating enthusiasts, commercial fishermen or professional seamen of the merchant fleets of the world. When a vessel is in distress and lives are at stake, no effort is spared to search for and rescue survivors.

The FSS&SC is manned continuously 24 hours a day by co-ordinators with considerable marine and in some cases aviation qualifications and experience. These men have specialised knowledge in search and rescue procedures to analyse the various situations that may arise and devise methods to resolve them.

Communications are the very heart of all search and rescue co-ordination and the FSS&SC is well equipped with a network of telephone and telex systems giving a complete coverage throughout Australia, and overseas to other international marine authorities, such as the U.S. Coast Guard at Honolulu, San Francisco, and New York, Lloyd's Intelligence, London and the Japanese Maritime Safety Agency in Tokyo, to name only a few.

Apart from telephone and telex links, radio communications play a major role when co-ordinating a SAR incident. The Overseas Telecommunications Commission (OTC) maintains the coast radio stations (CRS) around the Australian coastline, and it is these radio stations which provide the vital link between the ship and shore. The CRS also have direct telex lines to the FSS&SC.

When advice is received at the FSS&SC of a distress, or any information likely to be related to distress, the duty co-ordinator will initiate whatever action he considers necessary depending on the type of incident reported, whether it be a single flare sighting, a report of a vessel or yacht overdue, a vessel grounding, or a radio received distress message.

Also operated at the Federal Sea Safety and Surveillance Centre as a functional part of the SAR framework is the Australian Ship Reporting System (AUSREP), the area of operations being the same as for the Australian SAR Organisations. AUSREP was introduced in December 1973 on a voluntary basis to enable mariners to familiarise themselves with the reporting system. Since then legislation has been passed which makes AUSREP compulsory for all Australian flag vessels and foreign vessels under certain circumstances which are explained in the AUSREP Instructions and the relevant Marine Notice. However, all ships are encouraged to participate whenever they are in the AUSREP area.

In addition to the Centre's functions in the SAR role, the FSS&SC is also the section of the Department of Transport responsible for:

i) Co-ordination and promulgation of Navigational Warnings (NAVAREA X), Australian Coastal Navigation Warnings (AUSCOAST) and weapons practice warnings.
ii) Operation of the Licensed Foreign Fishing Vessel Reporting System in the 200 nautical miles Australian Fishing Zone.

In all aspects of the Federal Sea Safety and Surveillance Centre's activities, over 2,000 incidents a year are handled, ranging from co-ordination of full scale search and rescue operations, planning evacuation of medical cases at sea, plotting the movements of oil slicks and spillage to receiving reports of illegal fishing by foreign fishing vessels and various flare sightings, around Australia's 12,000 mile coastline.

PILOT LADDERS: The Merchant Services Guild of Australia has advised that as from 1st December, 1975, Pilots will not board any ships on which the height from sea level to point of access exceeds 9 m., unless prior written assurance is given by the owner or Agent that arrangements have been, or will be, made to satisfactorily alter the ship's construction or equipment at the earliest opportunity. The only acceptable means for boarding ships with freeboard in excess of 9 m. is by a pilot ladder secured at an opening in the ship's side, or by an approved combined system of pilot ladder and accommodation ladder. The notice has been issued by the M.S.G.A. as, although the "9 m. rule" has been part of Australian and SOLAS regulations for some years, their members have found that a high number of vessels are not fully complying.

HOLD LADDER POLICY: For easy reference, summarised below is the Waterside Workers Federation official policy for hold ladders in Australia. Details of acceptable designs for special type vessels, i.e. car carriers, shallow 'tween deck refrigerated ships, etc. are available from Agent's Office upon request.

1. General Cargo Vessels – The standard acceptable ladder construction would be an upper vertical section limited to 3 m. (subject to this being technically possible) with the balance of the access hold ladders being of stairway design angled to the tank top.

2. Bulk Cargo Vessels – The standard acceptable ladder construction would be an upper vertical section limited to 3 m. (subject to this being technically possible) with a bottom vertical section limited to 6 m., (in order to reduce damage by grabs, bulldozers, etc.) and with the balance of the access ladders between the upper vertical section and lower vertical section being angled and of stairway design with the angle being not greater than 65° in both the above classes of vessels.

HEALTH: The Procedure for Clearance of ships at *ALL* ports in Australia is as follows:

An overseas vessel approaching a port should by radio supply the Agent not more than 24 hours and not less than 12 hours prior to arrival, answers to the following questions:

A. Name, type and nationality of vessel.
B. Itinerary for last 21 days. If over 21 days from the last port, name of port and date of departure.
C. Name of first Australian port and ETA.
D. Number of crew.
E. Number of passengers.
F. Have you had any deaths on the voyage? If so please give details.
G. Have you had any cases of illness during the last 21 days with a fever of 38°C or above, and
    a) accompanied by rash, jaundice or glandular swelling or;
    b) accompanied by diarrhoea lasting longer than 24 hours.
H. Have you had persons suffering from venereal disease during the voyage?
I. What live fish, birds, reptiles or other animals are you carrying? Ships' pets should be mentioned.
J. Have you carried livestock on previous voyages in the last 6 months? If yes, please advise type of livestock, date of voyage and ports entered. Have all stock carrying compartments been thoroughly cleaned and disinfected?
K. Do you request Radio Pratique or radio approval to both?

3. Radio Pratique may be given to all vessels except stock vessels, provided satisfactory answers are given to the quarantine questionnaire. Stock vessels will require a satisfactory report from Agricultural Quarantine. Vessels which do not send answers to the questionnaire must be prepared to stop at the Quarantine Line.

4. When Radio Pratique has been issued a Quarantine Officer will board to deliver the Certificate of Pratique.

5. Vessels must fly the "Q" flag until after Pratique has been granted by radio or otherwise. The Agent must deliver the answers to the questionnaire to Quarantine as directed by the Regional Director of the Commonwealth Department of Health.

Authority: Department of Health, P.O.Box 100, Woden, A.C.T. 2606. Tel: (062) 891555. Telex: AA 62149. Cables: Health, Canberra.

Medical:

(a) There are now no requirements for Vaccination/Fever Certificates in Australia, except for a Yellow Fever Certificate if a person has visited an infected area in the last 6 days.
(b) Inoculations and vaccinations can be carried out at most ports in Australia by arrangement with a general practitioner through Shipping Agents. Yellow Fever can only be done at Commonwealth Medical Offices.

Services:

(a) Most ports in Australia can provide renewal or extension of the International Derat Certificate.
(b) Refuse disposal services are available at all Declared Ports in Australia (see "Notice to Masters" below). The charges for these services are under Quarantine Regulation 33(c) (see "Appendix" below).

Notice to Masters of Vessels: Quarantine Regulation 33(c) – Refuse Disposal Charges.

A vessel shall, while the vessel remains in or near a declared port make available for collection by an authorised collector, all animal waste, organic refuse, galley scraps or quarantineable waste from the vessel.

1. A fee in respect of each day or part of a day during which the vessel remains in or near the declared port and a service is provided: $30.00.

2. A fee in respect of each person on board the vessel on each day or part of a day: $2.00.

3. Where the fees referred to exceed $1,000 a fee in respect of that day: $1,000.00.

4. A fee in respect of each half-hour or part of a half hour required for carrying out or providing the service (excess waiting time): $8.00.

Appendix: Ports declared under Quarantine Regulation 33(c):

Victoria	Geelong Melbourne Portland Westernport
South Australia	Adelaide Port Pirie Wallaroo Thevenard Port Lincoln Whyalla
Western Australia	Fremantle Bunbury Albany Esperance
Northern Territory	Darwin
Queensland	Brisbane Maryborough Bundaberg Gladstone Port Alma Mackay Bowen Townsville Lucinda Mourilyan Cairns Thursday Island Weipa
Tasmania	Burnie Devonport Hobart Launceston Stanley

LOAD LINE ZONE: *Extended Tropical Load Line Zone:* At the request of the Australian Government, IMO has issued to Member Governments, a circular advising that commencing 1st May, 1986, Australia intends to permit Australian flag vessels and, where approved by other Governments, vessels flying their flag, to load to Tropical Load Line marks at the ports of Dampier, Port Headland and Port Walcott between 1st May and 30th November each year.

In effect, a ship loading at any of these ports and bound for a port in the Summer Zone, e.g. Japan or North Europe, will be permitted to submerge its Summer Load Line by an amount commensurate with the fuel etc., that will be consumed during passage through the Seasonal Tropical Area and the Tropical Zone to the North of these ports.

SHIP SUPPLY SERVICE: The National Safety Council of Australia has some capability in this regard as follows:

NORTH QUEENSLAND COAST: Approximate area from Cape York (Lat. 10° 42′ S., Long. 142° 35′ E.) to abeam Rockhampton (Lat. 23° 25′ S., Long. 150° 50′ E.), up to 100 nautical miles offshore. Helicopter is based at Townsville (Lat. 19° 15′ S., Long. 146° 46′ E.) and approximate transit time can be calculated by 100 knot cruise speed.

Contact: National Safety Council of Australia, Queensland Division, Townsville S.A.R., 16 Belinda Street, Aitkenvale, Queensland, 4814. Tel: (077) 79 6511, (077) 75 3647. Facsimile: (077) 79 6356.

VICTORIA COAST: Approximate area from Merimbula in New South Wales (Lat. 36° 54′ S., Long. 149° 54′ E.) round S.E. point of Australia and along Southern coast of Victoria to Portland (Lat. 38° 19′ S., Long. 141° 28′ E.). Helicopter cruise speed 100 knots, aircraft based at Morwell in Victoria (Lat. 38° 13′ S., Long. 146° 28′ E.), operating up to 100 nautical miles offshore.

Contact: National Safety Council of Australia (Head Office), P.O. Box 700, Traralgon, Victoria 3844. Facsimile: (03) 267 7770. Telex: 35369.

The helicopter types would be Bell 212 twin turbine medium lift machines which are equipped for Search & Rescue & Emergency work, including winch, infra-red scanner, VLF/OMEGA navigation system, Radar, ADF 320 for location of marine beacons, medical equipment, oxygen, etc. They carry crewmen with a ship to aircraft winch capability including stretcher recoveries.

The NSCA operates an Emergency service only (i.e. not commercial work) and is available 24 hours a day throughout the year. Request for this service should be passed directly to the Australian Coastal Surveillance Centre. Aircraft carry Marine VHF and will normally make initial contact on Channel 16 using ships name as call sign.

There is some possibility that the area covered by the NSCA will be increased later in 1984.

GRAIN SURVEYS: *Survey Requirements for Vessels Loading Grain Cargoes:* Vessel's cargo compartments must be thoroughly swept clean, particularly of old grain, even if same is of Australian origin. All traces of grain must be carefully swept from floors of lower holds, tween decks, spar ceilings, bulkheads, box coamings, mast housings, base of electric crane housings and also from all beams, frames and gussets and stiffeners in all compartments. Vessels, upon arrival, often find when opening hatches that some old grain has fallen onto the ceilings originating from hatch beams,etc., which are not sufficiently swept. Such grain falls onto the ceilings due to the movements of the vessel at sea and should be removed prior to inspection.

SHIPMASTER'S REPORT: July 1983.

Radio/Health: I sent a request for Free Pratique to the Commonwealth Director of Health, Sydney, that being my first port, but the radio operator instructed our Radio Officer to address the message to Quarantine Sydney.

There was no advice as to the vessel having been granted Free Pratique when the Port Health Authorities boarded the vessel in Sydney. I was told that the Radio Pratique must be requested 18 – 24 hours prior to arrival from the Agents (see "Health" above).

The questionnaire to be answered was Form 106 No. 3.13.

ABBOT POINT, Queensland: 19.52 S. 148.05 E.

(See Plan)

PORT LIMITS: Southwards of Lat. 19° 48′ S., between Long. 147° 59′ E. and Long. 148° 08′ E. East to coast.

DOCUMENTS: See "Townsville".

PILOTAGE: Compulsory. Prior notice confirming ETA 24 hours before arrival to be given through local Agent. Boarding ground is Lat. 19° 48.5′ S. Long. 148° 05′ E. or as directed by Pilot vessel.

Maintain listening watch on VHF Channel 16/67. Standard IMO pilot ladder rigged as per IMO recommendations. Usually starboard side 1 m. above water.

ANCHORAGE: Lat. 19° 49′ S., Long. 148° 06.5′ E. in 25 m.

RESTRICTIONS: Ballast condition, propellor fully immersed with forward draft not less than 2% of LOA.

No restrictions on time, however berthing at discretion of Harbour Master with regards to weather conditions.

Engines must not be immobilised whilst alongside without prior permission of Harbour Master.

Unberthing in accordance with state of tide and draft. Under keel clearance required is 10% of deepest draft plus 0.61 m.

MAX. SIZE: Optimum max. size vessel is 297 m. LOA and 47.5 m. beam, however, consideration given to larger vessels provided that mooring arrangements on board vessel are satisfactory.

HEALTH: Standard Australian Regulations and procedures apply, radio pratique is available.

VHF: Abbot Point Security maintains listening watch on VHF Channel 16. Pilot vessel and tugs, call on VHF Channel 16 and work on VHF Channel 6.

TUGS: 2 twin screw Zed-Pellor tugs of 56 tonnes bollard pull are available. Two line launches are also available for berthing. Tugs' lines always used.

BERTHING: One berth only which is a bulk coal loading facility, serviced by conveyor and shiploader. Length of berth fendering 268 m. Plus 4 mooring dolphins. Depth of water in approaches is 17.0 m. below datum. Depth of water at berth is 19.3 m. below datum.

Shiploader has a rated capacity of 4,600 tonnes/p.h.

DENSITY: 1026.5.

FRESH WATER: Not available.

FUEL: Not available.

GANGWAY/DECK WATCHMEN: Ship's crew as watchman, ship's gangway used.

AIRPORT: Townsville Airport, 210 km. by road.

TIME: Local time is GMT plus 10 hours.

EMERGENCY CO-ORDINATION: Through Abbot Point Security using VHF Channel 16, internal telephone 212 or external (077 862244).

TELEPHONE: Provided on berthing.

GENERAL: Provisions available on request.

Nearest town is Bowen, 32 km. by road, Bowen has full facilities.

SHIPMASTER'S REPORT: March 1986.

Port Limits: The area comprised within a line commencing at the intersection of the HW mark and the meridian of Long. 147° 59′ E. and bearing 000° (T) along that meridian to its intersection with parallel of Lat. 19° 48′ S.; thence bearing 090° (T) along that parallel to its intersection with meridian of Long. 148° 08′ E.; thence by that meridian bearing 180° (T) to the intersection of that meridian and the High Water mark, thence by that High Water mark generally in a Northwesterly direction to the point of commencement and including all navigable rivers communicating with that area and the banks and shores and foreshores thereof.

Abbot Point is within a Permanent Tropical Zone, within the Great Barrier Reef.

Tropical Zone: 1st April/30th November.

Summer Zone: 1st December/31st March.

Anchoring Position: Indicated on Chart AUS. No. 255 – Abbot Point and Approaches. In position: Lat. 19° 49′ S., Long. 148° 06.5′ E.

Pilot Boarding Position: Indicated on Chart AUS No. 255 – Abbot Point and Approaches. Lat. 19° 48.5′ S., Long. 148° 05′ E.

Pilot boards by pilot boat, tugs and Pilot stationed at Bowen. This chart is well recommended.

Abbot Point: Australia's most Northerly deep-water coal shipping port, situated about 20 km. North of Bowen. The port is established under the auspices of the Harbours Corporation of Queensland. Developed by the MIM Holdings Ltd. and operated by the Abbot Point Bulkcoal Pty. Ltd. Development began in 1981, and operations commenced in 1984. Coking coal from Collinsville and steaming coal from Newlands are the only two MIM products handled.

Heavy duty railway, using modern rolling stock, and multiple diesel electric locomotives convey the coal from the fields to the 450 hectare site.

Loading Procedure: Coal travels on conveyors via a 1,350 tonne surge bin. There are 2 weightometers and an automatic continuous sampling plant. The conveyor system extends along a 100 m. rock causeway and a 2.8 km. approach trestle, which also supports a roadway to the deep-water wharf and shiploader.

Size of Vessels: From 15,000 d.w.t. to 165,000 d.w.t.

Depths: Approach depth, (stated) 17.2 m. Alongside berth (stated) 19.3 m.

Tugs: 2×50 tonne bollard pull. Tugs' lines used.

Line Boats: Two for vessel berthing.

Berthing: In normal circumstances vessels may berth port side to on flood tides and starboard side to on ebb tide. However, be prepared to berth either side to in accordance with the Harbour Master's requirements.

In normal conditions draft is to be adjusted so that the propellor is fully immersed and vessel trimmed approximately 1.8 m. by the stern. The arrival draft must be cabled to the Harbour Master and Agent who will advise any adjustment required.

To ensure maximum safety all vessels using heavy mooring wire ropes are requested to have the ends terminating in a 9 m. *rope spring finished with a standard eye for placing over the bollards and hooks.* All mooring ropes and wires should have a 6 m. tail of light rope spliced into the eye.

Hooks on mooring bollards are electrically operated and self release.

Pilot Ladder: Constructed and rigged in accordance with SOLAS requirements.

Berth: Length of trestle from shore to berth – 2.75 km.

Length of Berth: (Extent of fender system 264 m. approximately).

Length between extreme mooring dolphins – 466 m.

Length of Berthing Basin: 512 m.

Width of Berthing Basin: 70 m.

Depth at Berthing Basin: 19.3 m.

There are 7 breasting dolphins, equipped with Bridgestone energy absorbing cell-type rubber fenders.

Height of top of fenders above datum 7.5 m. approximately.

Height of underside of fenders above datum 0.9 m. approximately.

Ship Loader: Type: Travelling gantry with luffing boom.

Design rate maximum capacity: 4,600 tonnes/p.h.

Length of travel: 212 m.

Boom operating range: +12° to – 10°.

Maximum outreach from fender line: 34 m.

Height above datum (plus 12°): 27.5 m.

Height below datum (minus 10°): 19.5 m.

Travel speed variable from 3 m./min. to 30 m./min.

Stowage Factor: *Steaming coal: approx. 1.11 cu.m./tonne. Angle of repose from 35° – 50°.

Coking coal: approx. 1.05 cu.m/tonne. Angle of repose 33°.

*Vessel achieved a better stowage factor loading steaming coal.

Final Quantity: It has to be remembered when requesting to stop loading that there is about 3,000 tonne on the belt, which must be run off.

Loaded Tonnage: Calculated on draft survey. (Vessel experienced S.W'ly winds Force 4 and swell of about 1 m.). Intermediate draft surveys are conducted if loading by grades, hatches, or more than one port discharge.

Cargo Completion: Vessels must vacate berth without delay, subject to tidal conditions.

Arrival Notice: At least 7 days prior to arrival cable to "Abbotcoal Bowen" Telex: AA47689 (MIMABB).

(a) Name of vessel.
(b) Type of vessel. (If O.B.O. confirm that vessel is "Gas Free").
(c) ETA.
(d) Total cargo quantity required. (Subject to C/P requirements and allowances).
(e) Hatch loading sequence, Pour by Pour.

Reference to (b) above – Master to advise Agent and Harbour Master.

1. Date vessel discharged last oil cargo.
2. Time and place of last Gas Free Certificate.
3. Location and amount of slops on board (and assurance that slop tanks inerted or pressed-up).

48 hours prior to arrival – advise ETA.

24 hours prior to arrival – confirm ETA and Hatch Number ("1st Pour"). Also advise Harbour Master of ETA/Berthing Draft/and ballast water is not contaminated.

6 hours prior to arrival call Abbot Point on VHF Channel 16 and confirm ETA. Radio Pratique granted and Hatch Number 1st Pour.

Note: To avoid delays to berthing and to avoid tug cancellations it is important that all adjustments to ETA's are advised to all parties.

All hatches to be clean/dry and opened before berthing.

Hatch lids are to be clearly numbered, for easy identification, no responsibility attached to shore loading personnel if any infringement to this requirement.

All loading is expressed in metric tonnes of 1,000 kg.

Pratique: Radio Pratique is available. Send message to the "Quarantine Officer" through the ship's Agent, not more than 24 hours prior to arrival. (This stipulation is not enforced). The Agent will keep vessel advised. Text of the message is in accordance with the advised procedure in the Sailing Directions for Entry to First Australian Port.

If Radio Pratique has not been granted prior to berthing ensure that there is no contact with the wharf or employees by crew until Pratique is granted.

Shore Leave: Crew are permitted to go ashore after Immigration and Customs Clearance. The Agent can arrange a minibus service to Bowen and return. Cost about Australian $85.00 for the round trip. The trip to Bowen is 30 minutes.

Telephone: A telephone is placed onboard. No STD calls, only overseas operator service on a reverse charge basis.

Restrictions: Access to wharf and loading plant is restricted.

Persons requiring access (crew members/visitors) must wear safety helmets, safety shoes and adequate eye protection, and comply with all safety regulations.

Abbotcoal are not responsible for accidents incurred by personnel who use their wharf gangway.

Pedestrian access along the wharf approach is not permitted.

Special authorisation is required for private vehicles and visitors, within the port area and wharf access.

Access to the remainder of the port site is strictly forbidden.

Derat Examination Certificate: Quarantine doctor will arrange for renewal. Cost Australian $45.00.

Consuls: None available.

Repatriation: Can be arranged. Coach leaves Bowen for Townsville, with direct flights to New Zealand and Brisbane for other international connections.

Fresh Water/Fuel/Diesel: Not available from wharf, there are no facilities.

Ship Chandler: Will attend vessel if necesary. Bonded stores are also available. Prices may be high due to transportation costs.

AUTHORITY: Department of Harbours and Marine, P.O.Box 889, Bowen, Queensland 4805. *Tel:* (077) 861268, 861933. *Telex:* 47435. *Contact:* Captain P. J. Zealley, Harbour Master Bowen/Abbot Point, Tel: (077) 861775.

AGENT: Sub-Agent of Patrick Agencies, Brisbane.

ADELAIDE, S.A.: 34.51 S. 138.30 E. (See Plan)

PORT LIMITS: Northern Limit: a line drawn due East from Lat. 34° 40.42′ S., Long. 138° 22.55′ E. to shore.

Southern Limit: a line drawn due East from Lat. 34° 51.30′ S., 138° 24.80′ E. to shore.

Western Limit: a line drawn between Lat. 34° 40.42′ S., Long. 138° 22.55′ E. to Lat. 34° 51.30′ S., Long. 138° 24.80′ E.

DOCUMENTS: See "Melbourne".

If first port of call, Customs and Quarantine Officers board at pilot station. If intermediate port and vessel has pratique, boarding is done at the wharf. The loadline and freeboard of all tankers arriving with full cargo are inspected by the Department of Navigation.

PILOTAGE: Advance notice 24 hours, telegraphic requests through ship's Agent. VHF Channel 16. Call sign "Adel. OH" Pilot launch orange hull, yellow deck house, "Pilot" on each side in black letters. Give pilot launch good lee and safe pilot ladder. Pilot boards 1.5 miles seaward of Entrance Beacon.
ANCHORAGE: 0.5 mile West of Entrance Beacon.
RESTRICTIONS: Controlling depth in channel to container berth 39 ft. 4 in. (12.0 m.) and to Inner Harbour 30 ft. (9.1 m.) ISLW. All vessels to maintain 1 ft. (0.3 m.) keel clearance in berth at all times.

Night berthing/unberthing subject to Harbour Master's approval.

Keel Clearance: Draft of less than 8.2 m. – 0.9 m. under keel
Draft from 8.2 m. to 9.1 m. – 1.1 m. under keel
Draft in excess of 9.1 m. – 1.3 m. under keel.

MAX. SIZE: Inner Harbour – length 200 m. OA; draft 31 ft. (9.4 m.) Neaps, subject to tide; 34 ft. 06 in. (10.5 m.) Springs. Outer Harbour (Container Berth) – length 945 ft. (288 m.) OA; draft 37 ft. (11.3 m.) Neaps, subject to tide; 39 ft. (11.9 m.) Springs.
HEALTH: Including Document A in short form. Also see "Melbourne".
RADIO: Adelaide Radio VIA.
RADAR: Decca Type RR 1219 installed in signal tower.
TUGS: 4 tugs available.
BERTHING: Tug power as required by Pilot. Depth at berths: Inner Harbour: 27 ft. (8.2 m.) – 36 ft. (11 m.). Outer Harbour: 36 ft. (11.0 m.) – 40 ft. (12 m.).

Berth	*Length (m)*	*Depth at L.W. (m)*	*Type*	*Cargo*	*Cranes*
9	133	8.2	Ro/Ro ship ramp	Containers

29	245	9.8		Lay-up and Repair	—
H	304	11.0	Bulk loading	Cement clinker	Loader
Osborne					
1	208	9.8	Bulk	Sugar, dry & liquid bulk	6/9t travelling cranes
2	159	9.4			
O.H. 2	183	11.0	Passenger terminal	Passengers	—
O.H. 4	214	11.0	Ro/Ro quarter ramp	Containers	—
O.H. 6	298	12.0	Container berth	Containers	45t container crane 60t on hook An additional 36 ton container handling gantry crane will be available early 1987.
O.H. 1	185	11.0	General	Sheep	

STEVEDORES: No advance ETA required.
MEDICAL: Contact Quarantine Department in ample time.
TANKERS: Vessel carrying inflammable cargoes or not gas-free restricted navigation during darkness. "Leak free" advice to Harbour Master to be given through Agent. 500 tons slop discharge facilities. 6 Berths. Unauthorised persons not allowed on board.
Berths:

"J"	Shell Co.	Depth alongside 8.2 m.
"L"	Mobil Oil Co.	Depth alongside 8.5 m.
"M"	B.P. Ltd.	Depth alongside 8.5 m.
"N"	Caltex Co.	Depth alongside 8.5 m.
O.H.4	B.P. Ltd.	Depth alongside 11.0 m.
OSB. 1	Terminal Properties.	Depth alongside 9.8 m.

DENSITY: Slightly denser than sea water; not affected by tide.
FRESH WATER: Inner Harbour: Through Hydrants at 12–15 t.p.h. Outer Harbour: 120 t.p.h.
FUEL: Fuel oil, thin fuel oil, diesel, gas oil. 48 hours notice required. A bunkering barge capable of transporting 1,000 metric tons of bunkering oils operates in the port. The use of this bunkering barge will enable vessels to bunker without leaving their loading berths or using road tankers.
GANGWAY/DECK WATCHMEN: Optional except for white spirit tankers. Cost varies according to time of shift.
OPENING/CLOSING HATCHES: Carried out by crew.
CERTIFICATES:

Last Port Customs clearance.
Ship's Register.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment.
Light Dues Receipt.
Ship's Articles (British Vessel).

CUSTOMS ALLOWANCES: Each Crew member 200 cigarettes or 40 cigars or 8 oz. tobacco. Limited amounts of spirits per man.
CARGO GEAR: Accordance Australian Regulations. See "Melbourne".
IDENTIFICATION CARDS: See "Melbourne".
CONSULS: The following countries are represented:

Austria
Belgium
Denmark
Finland
France
Germany F.R.
Greece
Guatemala
Italy
Japan
Lebanon
Liberia
Netherlands
Norway
Peru
Philippines
Portugal
Sweden
USA

REPAIRS: All repairs possible.
DRY DOCKS: None.
REPATRIATION: Available.
AIRPORT: Adelaide Airport 8 miles, regular airlines.
TIME: GMT plus 9 hours 30 minutes. Daylight Saving Time from last Sunday in October to first Sunday in March – GMT plus 10 hrs. 30 mins.

HOLIDAYS: Xmas Day, Waterside Workers' Picnic Day (late January), Good Friday, Anzac Day (25th April), Adelaide Cup Day (3rd Monday in May), Eight Hours Day (2nd Mon. October). Restricted holidays, Boxing Day, New Year's Day.
TELEPHONES: Port Adelaide Police 49-6111, Ambulance (Wharf) 461616, Fire Brigade 471515.

Note: $30 connection fee plus cost of calls.

SERVICES: Garbage disposal, cleaning out and fitting out and compass adjusting.
DEVELOPMENTS: 2nd Portainer Crane (36 tonne capacity) to be sited at Outer Harbour Berth No. 6 and to be operational early 1987.
AUTHORITY: Dept. of Marine and Harbors, P.O. Box 19, 293 St. Vincent Street, Port Adelaide, S.A. 5015, Australia. *Tel:* (08) 470611. *Telex:* AA 82525. *FAX:* 470605. *Cables:* Depmah. *Contact:* Captain J. R. Page, Senior Maritime Officer – Marine Safety.
AGENT: Patrick Agencies, POB 107, 3 Todd Street, Port Adelaide, S.A. 5015. Tel: 47-4655. Telex: AA 82624. FAX: (08) 47-6139. Cables: "Rikpat Adelaide".

ALBANY, W.A.: 35.02 S. 117.53 E. **(See Plan)**

PORT LIMITS: All the waters of King George Sound and Princess Royal Harbour Westward of a line drawn from Herald Point to Bald Head.
DOCUMENTS: See "Melbourne".
PILOTAGE: Compulsory service provided by State Marine and Harbours Department. Pilot boards vessel with King Light – bearing 292°, distance 3 miles.
ANCHORAGE: King Point Light, bearing 292°, distance 3 miles, or as directed by Agent's radio message. There is a Prohibited Anchorage of 0.5 miles radius from a position on the line of main leads midway between Buoy Nos. 1 and 2.
RESTRICTIONS: The Entrance Channel from King George Sound to Princess Royal Harbour has a width of 550 m. land to land. The Navigation Channel therein being 145 m. wide, with a depth of 12.8 m. – 12.2 m. LWOST. Depth of Swinging Basin in the harbour is 12.20 m. and vessels with a draft of 11.20 m. can work No. 3 Berth and 9.6 m. No's. 1 and 2 Berths. Although some margin is allowed at the Harbour Master's discretion, dependent upon weather and tidal conditions, (HHW 0.9 m.). Vessels can be berthed day or night.
MAX. SIZE: LOA 200 m., beam 29 m., draft 11.5 m. at Berth No. 3 and 9.8 m. at Berth Nos. 1 and 2, deadweight 38,000 tonnes.
HEALTH: Master should supply answers to a prescribed questionnaire 24 hours before arrival. Details of the questionnaire can be obtained from vessel's Agent and answers should be radioed to Agent, who will arrange pratique.
RADIO: Perth or Esperance Radio.
VHF: Call sign is "Albany Port" and is normally open 0830 – 1630 hrs. Monday to Friday except holidays. Otherwise by special arrangement Channels 6, 12 and 16.
TUGS: Motor tug available, bollard pull 27.4 tons. Normally ships lines are used.
BERTHING:
King George Sound: Safe anchorages are available.
Princess Royal Harbour: The following berths are available:

Land Backed Wharf: A continuous wharf face of 608 m. allocated into 3 berths. Berth No. 1: 209 m., depth 10.4 m. Berth No. 2: 172 m., depth 10.4 m. Berth No. 3: 227 m., depth 12.2 m. There is no swell at any of these berths.

Max. permissible ship draft at LW is 11.5 m. at Berth No. 3 and 9.8 m. at Berth Nos. 1 and 2.

Load/discharge is by ship's gear other than loading of grain on Berth No. 3 which is by shore equipment.

The wharf berths are served by road and rail transport. The rail transport is connected with the West Australian Government Railways State system.

Berth Uses: No. 1 Wharf has a transit shed with a floor space of 4,300 sq.m. and is used mainly for general cargoes. Whilst the berth has not been constructed to receive ro/ro vessels, it has been possible to work them at this berth.

No. 2 Wharf is used for loading of livestock and the discharge of rock phosphate, sulphur and for general cargoes. This wharf has also been designed as a secure wharf for petroleum products discharge.

No. 3 Wharf is a general purpose berth and has been designed for receiving ro/ro vessels and container traffic, although it is used mainly for the loading of bulk grain.

CRANES: No cranes are available and ships use their own gear.
BULK CARGO FACILITIES: All berths are capable of receiving bulk cargo via ships gear and grabs into hoppers and road trucks.

No. 3 Wharf has a grain loading facility consisting of conveyors, 3 loading booms and spouts of which any 2 can operate together. The design loading rate (wheat) is 1,600 t.p.h. The facility is also designed to load 50,000 d.w.t vessels.

STEVEDORES: No ETA required. Private companies. ETA by 1330 hrs. in order to commence on any shift of the following day. (Labour can be confirmed the next day).
Normal Working Day: Day Shift (Ordinary Time) 0730 to 1430 hrs. Evening Shift (Time and a Half) 1430 to 2130 hrs. Night Shift (Double Time) 2300 to 0600 hrs. Saturday (Double Time) 0730 to 1430 hrs., Sunday (Double Time and a Half) 0730 to 1430 hrs. and 1430 to 2130 hrs.
MEDICAL: No advance notice except in case of serious illness to be included in arrival cable, ample hospital facilities available.
TANKERS: Discharging facilities are provided only at No. 2 Wharf where the hose is 200 mm., connecting to a 300 mm. main. Loading facilities are provided on all 3 berths from 100 mm. hoses.

Max. drafts at these berths are Berth Nos. 1 and 2, 9.6 m. and Berth No. 3, 12.2 m.

DENSITY: Average salinity of water in the port is 1026 – 1027.
FRESH WATER: Available at all berths at a rate of approximately 60 – 80 t.p.h. Unlimited quantities available. Supply by 62 mm. hoses metered individually or if more hose required from 200 mm. main meter.
FUEL: Light marine diesel oil is available at all berths from pipe-line or road tanker. Pipe-line approximately 100 t.p.h.
FIRE PRECAUTIONS: During receival of fuel Berth No. 2 is isolated and all Australian Association of Port and Marine Authorities' guidelines complied with.
CONSULS: Norway – Vice-Consul – Tel: 41 1755.
REPAIRS: A slipway of 340 tonne capacity is available. Small repairs only are dealt with by Board of Trade Engineers. Shore based facilities for minor engine repairs. Local shipwrights are available.
SURVEYORS: Cargo Inspectors: S.G.S., C.A.S.C.O. and Associated Marine Surveyors, W.A., Lloyd's Register, American Bureau, Bureau Veritas available at 4 hours notice.
GANGWAY/DECK WATCHMEN: Gangway watchmen required on all Australian crewed vessels and foreign fuel tankers.
HATCHES: Normally carried out by ships crew.
CUSTOMS ALLOWANCES: Each crew member 200 cigarettes or 40 cigars or 250 gm. tobacco; spirits 1 litre per person.
REPATRIATION: Crew changes and repatriation can be carried out with little difficulty.
AIRPORT: Airport located 11 km. from port with domestic flights to Perth.
TIME: GMT plus 8 hours.
HOLIDAYS: As for Fremantle except W.W.F. Picnic Day being late January.
POLICE/AMBULANCE/FIRE: Police Tel: 41 1411; Ambulance Tel: 41 1666; Fire Tel: 41 2122.
EMERGENCY CO-ORDINATION CENTRE: State Emergency Service contacted through Police Tel: 41 1411.
TELEPHONES: Telephones are available at all berths. Arrangements made through Agents.
SERVICES: Some radio and radar repair facilities available. Minor electrical and mechanical repairs.
BANKS: Commonwealth Trading, 261 York Street. Tel: 41 2022.
Australia & New Zealand, 23 Albany Highway. Tel: 41 1300.
National Commercial, 250 York Street. Tel: 41 2655.
Rural & Industries, 232 York Street. Tel: 41 1288.
Westpac Banking Corp., 281 York Street. Tel: 41 1722.
STORING: Vessels can be stored by launch in King George Sound or alongside the berth by road. Stores can be loaded during cargo operations. Forklifts can use all wharves. For stores Customs Form 43 to be submitted giving details of stores. For any storing in excess of 3 hours W.W.F. labour must be engaged.
SHORE LEAVE: No restriction.
IDENTIFICATION CARDS: Not required.
DELAYS: Not normally experienced unless waiting for another vessel on grain loading or deep draft Berth No. 3.
SHIP SUPPLY SERVICES: Fremantle Tug Operators, c/o Hall's Shipping & General Agencies, Port Road, Albany, W.A. 6330.
Austin Launch Service, 13 Alicia Street, Albany, W.A. 6330.

Servicing of ships in this area is done by launch, as helicopters are not readily available to take off sick personnel. Austin's Launch Service operate launches and a 50 ft. tug which are used for servicing ships in the area.

The transfer of personnel, sick seamen and transport of stores is carried out by launch or tug. Communication is done by VHF.
AUTHORITY: Albany Port Authority, 85 Brunswick Road, Albany, W.A. Postal Address: P.O.Box 175, Albany, W.A. 6330. *Tel:* (Office) (098) 41 2844, (Transit Shed) 41 2759. *FAX:* (098) 41-7566. *Contact:* B. J. E. Hudson, Managing Secretary.
AGENT: Patrick Agencies, P.O.Box 525, Port Road, Albany, W.A. 6330. Cables: "Rikpat". Tel: 41 3538. Telex: via Fremantle 92434 Rikpat. FAX: (09) 3358672.

ARDROSSAN, S.A.: 34.26 S. 137.55 E. (See Plan)

DOCUMENTS: See "Melbourne".
PILOTAGE: Compulsory (except for B.H.P. vessels). 24 hours notice required. Pilot boards one mile East of berth.
APPROACHES: *Navigation Beacon:* The light beacon, flashing white every second, marks the Northern side of the seaward limit of the dredged exit channel.
Lead Lights: Lead light towers line up on a grid bearing 249°. Towers are located approximately 10 m. from the clifftop edge and approximately 610 m. from clifftop edge.
MAX. SIZE: Max. size 46,000 d.w.t. for berthing and loading.
HEALTH: Officials board at berth. 24 hours notice required.
VHF: Manned weekdays 0730 hrs. – 1200 hrs. and 1245 hrs. – 1615 hrs.
TUGS: Available from Port Adelaide.
BERTHING:
B.H.P. Jetty:

Length 931 m. "T" head – 6 Dolphins and 2 mooring platforms. Total berth length 409 m. Continuous fendering is installed from Dolphin No. 2 to Dolphin No. 5 for 160 m. length. Depth of water – 9.2 m. MLWS.

Loading is via a belt conveyor system. Two fixed loading booms are available for use. One boom is set higher with a longer reach. Only 1 boom may be used at a time. The fixed boom necessitates vessel warping along "T" head during loading.

Loading rates: Dolomite 2,400 t.p.h.
Wheat 400 t.p.h.
Barley 400 t.p.h.

Northern Boom:
Height of chute above MLWS – 12.38 m. Loading chute extends across vessel from wharf face – 12.3 m.
Southern Boom:
Height of chute above MLWS – 16.18 m. Loading chute extends across vessel from wharf face – 16.1 m.
TIDE: Average rise and fall 1.8 – 2.4 m. max. 3.1 m. at Spring tides.
FRESH WATER: Small quantities can be made available by special arrangement. (Flow rate is approximately 3 tonnes/hour).
FUEL: Not available.
STEVEDORING: Arranged with private companies.
Operations: Working hours are flexible to suit vessel's requirements.

Working Hours – Night Shift	0001 – 0800 hrs.
Day Shift	0800 – 1600 hrs.
Afternoon Shift	1600 – 2359 hrs.

AUTHORITY: BHP Steel International, Long Products Division, P.O.Box 21, Whyalla, South Australia 5600. *Tel:* (088) 373106. *Telex:* AA 89520. *Cables:* Hematite Ardrossan. *Contact:* R. Bennett.
AGENT: Sub-agent of Patrick Agencies, Adelaide.

BALLAST HEAD, Kangaroo Is.: 35.45 S. 137.48 E. (See Plan)

In Eastern Cove, Kangaroo Island. Private bulk loading installation from which charter vessels load gypsum for shipment to factories in Eastern Australian states. No facilities for discharging cargo and no Customs, health or other government departments' facilities available.
DOCUMENTS: For vessels chartered to carry gypsum to Eastern Australian ports, Bills of Lading prepared on completion of loading.
PILOTAGE: No Pilots resident at Ballast Head but pilotage can be arranged through Harbour Master, Port Adelaide if required.
ANCHORAGE: Sea approach is unobstructed, with deep water anchorage and turning basin of Eastern Cove, 4.5 km. wide and extending 0.8 km. South of berth. Minimum depth about 10.5 m. Sand bars exist immediately South of berth but well inside line of dolphins.
RESTRICTIONS: Vessels may proceed to anchorage at any time, but can berth only during daylight hours. Loaded vessels can leave berth or anchorage at any time without concern for tide conditions.

Port can experience dodge tides. Port classified as unsafe by Department of Marine and Harbours. Vessel must be ready to depart berth at any time.
MAX. SIZE: Vessels of 27,000 d.w.t. are regularly loaded. However, before confirmation of vessels suitability can be given, dimensions of vessel must be advised to ensure conformance with berth and loading requirements. Ships must exercise extreme care in berthing to avoid damage to dolphins or head frame. Max. approach velocity 0.15 m./sec.
HEALTH: Pratique must be obtained at Port Adelaide.
RADIO: Ship-shore VHF radio. Call sign "Ballast Harbour". Frequencies, 150.80 MHz for distress and calling; 156.60 MHz for working.
Arrival Advice: At least 8 hours notice of ETA is required to S.A. Gypsum Adelaide Office, Tel: (08) 2687855 or after hours, Adelaide (08) 390 1357 or Kingscote (0848) 22457.
TUGS: No tugs are available, but can be arranged from Port Adelaide, if required. However, a launch is available for running ships' lines, and must be used.
BERTH: The berth consist of a line of 10 dolphins running North/South, 293 m. overall length forming a T-head jetty with loading conveyor gantry. Depth of water alongside 26 ft. (7.9 m.) LWOST. Berthing signals by radio instruction or mast head.
Loading Facility: Loading equipment consists of conveyor system to fixed loading gantry supporting luffing boom conveyor. Discharge from boom conveyor feeds into an adjustable Banana Spout that can be rotated through 360°. Boom conveyor operates only in horizontal position and loading chute does not telescope. Fixed loading gantry situated at centre of line of berthing dolphins. Distance from face of fenders to centre line of loading spout is 12.0 m. Distance from low water level to outlet end of loading chute in loading position – 8.2 m. Maximum handling rate of rock gypsum on conveyor system, 850 t.p.h.
MEDICAL: Doctor available at Kingscote, 40 km. distant. Hospital also at Kingscote.
FRESH WATER: Not available.
FUEL: No facilities available.
GANGWAY/DECK WATCHMEN: None required.
OPENING/CLOSING HATCHES: Carried out by crew.
CONSULS/REPAIRS/DRYDOCKS/REPATRIATION: No facilities available.
AIRPORT: Kingscote Airport approximately 30 km. distant. Regular air service to Adelaide – at least one flight daily.
TIME: 9 hours 30 minutes in advance of GMT from March to October inclusive. 1 hour Summer saving time operates from November to February inclusive.
HOLIDAYS: Loading carried out on any day except Christmas Day, at least 24 hours Notice of ETA required for loading on public holidays.
POLICE/AMBULANCE/FIRE: Police station, Kingscote 2.2018 Ambulance, Kingscote 2.2037 or 2.2028; Fire, Kingscote 2.2200.
TELEPHONES: No arrangements exist for placing telephones on board.
SERVICES: None available.
DELAYS: Berth accommodates only one vessel at a time, but once berthed the loading continues without break until completion except for the time taken to shift ship from hatch to hatch and to check draft.
AUTHORITY: Department of Marine and Harbours, P.O.Box 19 G.P.O., Port Adelaide, South Australia. *Tel:* (08) 470648. *Telex:* 82525

Gypsum Products Group, CSR Building Materials, P.O.Box 58 Rosewater East, South Australia 5013, Australia. *Tel:* (08) 268 7855 *Telex:* AA 82112.
Contact: State Manager, Gypsum Products Group. *Tel:* (08) 268 7855 Mine Manager, New Lake Gypsum Quarry, Kangaroo Island. *Tel:* (0848 33-077.

BARROW ISLAND, W.A.: 20.49 S. 115.33 E.

(See Plan)

LOCATION: The Barrow Island Tanker Terminal, owned and operated by West Australian Petroleum Pty. Limited, is a crude oil loading installation located on the East side of Barrow Island, Western Australia. The tanker moorings are located approximately 32,400 ft. (9,875 m.) offshore at Lat. 20° 48′ 52″ S., Long. 115° 33′ 04″ E. Refer to current hydrographic chart AUS-742 for further information.

DOCUMENTS: Refer to "Melbourne" – Also see "Health".

MINIMUM REQUIREMENTS:

Minimum Requirements for Tankers Loading:

1. A Mooring Master is assigned to tankers calling at Barrow Island Tanker Terminal to assist in mooring and unmooring, in connecting and disconnecting the submarine loading hose (cargo hose), and to advise on matters concerning the safety of the tanker and terminal facilities.
2. West Australian Petroleum Pty. Limited (WAPET) may, at its discretion without prior written approval, refuse to moor or load any tanker that does not conform to the minimum requirements listed below. WAPET also reserves the right to reject any tanker, that in the judgement of the Mooring Master, is deficient in any manner whatsoever. The onus is exclusively on the Master, Owner and Charterer of each Tanker entering the port to ensure that the vessel is seaworthy and that all equipment is and remains in good working order. Failure by WAPET to reject any vessel not meeting these requirements will not relieve the vessel's Owner or Charterer of liability.
   Vessels which could possibly contravene pollution regulations (both Commonwealth and State) will not be accepted.
3. Tankers exceeding the following dimensions or other combination of dimensions within the maximum tolerance as may be determined by WAPET cannot be accommodated at the sea berth:
   a. *Deadweight tonnage (loaded) – 71,000 tonnes.
   b. Overall length – 820 ft. (250 m.).
   c. Moulded depth – 58 ft. (17.67 m.)
   d. An under-keel clearance of not less than 5 ft. (1.56 m.) must be maintained.
   *May be increased to 81,600 tonnes maximum in the latter part of 1986.
4. Tankers must have the following:
   a. At least one tension winch on the port side and one tension winch on the starboard side at the after end of the maindeck and a minimum of four tension winches on the poop deck;
   b. At least one set of mooring bitts on the port and starboard sides at the after end of the main deck;
   c. A minimum of four sets of mooring bitts on the poop deck to which preventer wires can be hove tight and made fast; and
   d. A set of bitts at the after end of the fo'c'sle head on the port and starboard sides to which the swamp moorings can be made fast.
5. Both bow anchors are required to have a minimum of 10 shackles of chain. All anchors and chains are to comply with the requirements of a Classification Society recognised by the Australian Department of Transport.
6. Tankers should have sufficient mooring ropes and/or wires so that single or doubled up they have a total breaking strain of 80 tonnes to each of the 6 mooring buoys. 6 such lines or combinations not less than 120 fathoms each in length are required.
7. The tanker's derrick or crane must be capable of lifting the 5 tonne cargo hose on the starboard side.
8. Tankers shall have an access platform to facilitate safe connection of the cargo hose of configuration and dimensions to meet the requirements of Australian Standard No. 1657.
9. Tankers are required to furnish the necessary personnel to perform all work involved in the connecting and disconnecting of the cargo hose.
10. Tankers manifolds must be capable of being bolted to the 12 in. U.S.A.S. flanges used by the cargo hose.
11. Under fine weather conditions, tankers are required to arrive ballasted to at least one quarter of their summer deadweight tonnage with propeller submerged. During adverse weather conditions tankers shall, if so notified by the Mooring Master, take on additional ballast prior to berthing.
12. Tankers are required to victual and provide sleeping accommodation for the Mooring Master and 2 Operators and to victual only the 3 man launch crew.
13. At all times the tanker shall be in a state of readiness to leave the moorings.
14. The dumping of rubbish overboard at the Port is prohibited.

READINESS: Notice of Readiness is accepted:

(a) *When the berth is available:*
When the vessel is all fast in the berth, i.e. all lines secured to the buoys and preventers made fast.

(b) *Where the berth is not available:*
6 hours after the vessel drops anchor at a nearby anchorage. Laytime ceases for the period of time taken for the vessel to move from the anchorage and is resumed when the vessel is all fast at the berth.

(c) *Where a vessel with inadequate lights arrives at night:*
6 hours after daybreak following arrival or when the vessel is all fast at the berth – whichever occurs first.

PILOTAGE: A Mooring Master will meet and board tankers bound for the port in an approximate position with terminal tanks (conspicuous) bearing 300° and 2 nautical miles off the moorings. Tankers waiting to berth etc. are requested to anchor in this position.

The pilot ladder shall be kept at the proper height for safe use for boarding and disembarking.

ANCHORAGE: See "Pilotage".

RESTRICTIONS: Vessels equipped with adequate searchlights may be berthed during the hours of darkness. 2×12 in. (30 cm.) reflector diameter searchlights, one fitted to each port and starboard wing of the bridge in such a manner as to provide a wide scanning range, are considered adequate. Tankers not fitted with searchlights may berth in daylight hours only.

MAX. SIZE: The minimum depth of water in the vicinity of the berth is 43.3 ft. (13.2 m.) and an under keel clearance of 5 ft. (1.56 m.) is required at all times. Also see "Minimum Requirements – No. 3".

HEALTH: Tankers arriving from foreign ports must make prior arrangements for quarantine and customs clearance through their agents. Port Walcott, Western Australia, is the nearest port where customs and quarantine clearances can be obtained.

RADIO: All tankers proceeding to the Port of Barrow Island shall notify WAPET at Barrow Island, Telex: 99125 or WAPET Perth Office, Tel: 325 0181 (contact available 24 hours/day) or cable address WAPET, Perth, during normal business hours, their estimated time of arrival, not less than 96 hours before arrival, amending or confirming this ETA at intervals of 48 and 24 hours prior to arrival. A final ETA is to be confirmed 12 hours before arrival at the Port. Failure to comply with the above procedure may result in a Mooring Master not being available on the tanker's arrival. Quantity and condition of ballast on board should be advised in original ETA message.

During normal daylight working hours, the Company's Mooring Master, Barrow Island, can be contacted by means of the International Maritime VHF. Frequencies in use are:

Channel 16 156.8 MHz – safety and calling
Channel 14 156.6 MHz – terminal operations,
ship/shore
Call sign 'Barrow Island'
Channels 8 & 12 are also fitted

At times other than normal working hours, contact may be made by pre-arranged scheduling. In all events tankers are required to tune their VHF sets to Channel 16 when within 100 nautical miles of Barrow Island.

TIDES: Slack water at the terminal moorings occurs approximately 1 hour after HW and LW. The direction of the flow is approximately 245° flood tide and 065° ebb tide, and attains a rate of approximately 1 knot at springs.

Times and heights of high and low waters occurring at the Terminal Moorings are to be published in the Australian National Tide Tables effective 1978 (supplement). The above tidal information can only be taken as a guide as times, direction, rate and heights cannot be implicitly relied upon.

BERTHING: West Australian Petroleum will furnish a suitable launch and crew to secure and cast off the tanker's lines to the mooring buoys.

Tankers must have at least 2 sets of mooring bitts on the port and starboard sides at the after end of the main deck or, alternatively a mooring winch and 1 set of bitts, and on the poop deck, in addition to mooring winches, 4 sets of mooring bitts to which mooring lines and/or wires can be hove tight and made fast.

To facilitate berthing, 2 mooring lines on the after end of the main deck, and 2 mooring lines on the poop deck should be securely joined together giving an effective length of approximately 240 fathoms (440 m.).

Each self-tensioning winch should have approximately 70 fathoms (128 m.) of wire or rope flaked out on the deck ready for running by the mooring launch to the mooring buoys. After mooring, tension winches will not be left in tension, but with the brake securely screwed up.

Permanent 5 in. circumference wires are fitted to all mooring buoys. These wires are provided to supplement the tanker's own lines relative to the prevailing weather conditions at the time. These wires are fitted with 160 ft. (48.7 m.) of 3.75 in. (9.6 cm.) wire and 4 in.×100 ft. (110 cm.×30 m.) terylene messengers. A good ship's rope messenger is required to bring the messenger to the tanker's winch drum.

The propeller shall not be turned over while the cargo hose is connected except by using the turning engine. After the cargo hose has been disconnected, the propeller shall not be turned over by the main engine without first notifying the Mooring Master.

West Australian Petroleum reserves the right to refuse to load any tanker that is deficient in any manner whatsoever or presents a pollution hazard.

LOADING: The tanker should, if possible, arrive with the derrick or crane rigged on the starboard side and in all respects ready to lift the deck hose, hanging off chain, etc., from the mooring launch.

The onshore Terminal facilities consist of five 200,000 bbl. capacity floating roof storage tanks, two gas engine drive centrifugal loading pumps with necessary auxiliary equipment. The loading pumps are rated to deliver a maximum of 15,400 bbls. (2,000 tonnes) per hour of crude oil to tankers with a nominal pressure of 10 – 25 p.s.i.g. at the ship's rail.

Barrow Island crude oil has an approximate API gravity range of 35.5 to 37.1 and an approximate temperature range of 74°F to 98°F (23°C – 37°C).

The sea line delivering the oil is 20 in. O.D. × 0.375 in. (51 cm. × 9 mm.) steel pipe with a 2 in. (5 cm.) thick concrete external coating. The line is terminated with 200 ft. (61 m.) of flexible submarine loading hose consisting of 150 ft. (45 m.) of 16 in. (40 cm.) and 50 ft. (15 m.) of 12 in. (20 cm.) hose. The seaward end of the pipeline is marked with a white spar buoy, and the pick-up end of the flexible hose is marked with a white cone buoy.

The submarine pipe-line is left full of crude oil between tanker arrivals. (After picking up and connecting the cargo hose, the system will be pressurised to about 25 p.s.i.). After the hose has been hoisted and secured at the ship's rail, the blank flange on the end of the hose assembly is removed and the cargo hose connected to the tanker's manifold by the deck hose and the adaptor spool assembly previously delivered to the tanker by the mooring launch.

During loading operations, a responsible deck officer must be present to approve the hose connections and supervise the tanker's crew members in this work.

One deck hose, 19 ft.×12 in. (5.18 m.×30 cm.) and reducers of 14 in. to 12 in. and 12 in. to 10 in. are available (36 cm. to 30 cm. and 30 cm. to 25 cm.). All flanges are U.S.A. Standard, formerly known as American Standards Association. An adaptor from 10 in. diameter U.S.A.S. (flange pitch circle diameter 14.25 in.) to 10 in. diameter British Standard (flange pitch circle diameter 15 in.) is available.

The tank tops should be kept closed at all times. Ullage plugs should be closed but not pinned at all times except when sampling, gauging, thieving or inspecting for which they may be opened for the necessary time but should be immediately closed again.

Steam to deck machinery is not to be turned off without first notifying the Mooring Master.

The Mooring Master is to be advised when 200 tonnes is required to complete loading so that the pump motors can be eased down slowly, and again at 50 tonnes when the pumps will be stopped and loading completed by gravity. On completion of loading, the manifold valve is to be closed slowly to minimise the surge of oil in the pipe-line and the consequent quick build up of back pressure.

Portable U.H.F. radios are supplied for communication between tankers and the Terminal. To minimise the possibility of a dangerous situation arising due to an undetected radio failure, tankers are required to keep an hourly test call schedule with the Terminal at which time they should advise the Terminal of the back pressure at the ship's rail.

CAUTION – When all hose connections have been made the Cameron valve and the ship's manifold are opened and gravity loading takes place until such time as the ship's checks are completed and clearance is given to start the shore loading pumps. Whilst loading, the flow of oil from the terminal via the submarine pipe-line is not to be shut off by closing ship's valves or the pipe-line valve without prior approval of the Mooring Master. At least one tank is to be fully open to the inflow of oil from the submarine pipe-line at all times, and in order to reduce back pressure as many tanks as possible should be open during loading. In all events the back pressure at the ship's rail is not to exceed 100 p.s.i.

DEBALLASTING: There are limited facilities for receiving ballast from vessels loading at Barrow Island.

Owing to the time factor involved in pumping dirty ballast ashore, it is recommended that tankers arrive with clean segregated ballast and preferably deballast concurrently with loading.

However, if required, dirty ballast on arriving tankers may be pumped to shore using ship's pumps through the submarine line then through a deballasting line to the ballast receiving pond.

The following deballasting procedure is used at the Terminal:

No ballast may be discharged at the port without first notifying the Mooring Master.

After the hose has been connected, at least one-third of the summer deadweight tonnage must be loaded before deballasting in order to keep the ship in as heavy a condition as possible and thereby minimise the effects of sudden changes in sea and weather conditions. Part of this oil is to be used to displace ballast from the submarine line. The line displacement of the submarine loading line is approximately 12,250 barrels (1,680 tonnes).

When the preceding operation is complete, deballasting operations start. When the oil-water interface is detected onshore, the stream is diverted from the crude oil storage tanks to the ballast receiving pond. Pumping of the ballast continues until all ballast is discharged from the ship. Pressure at the ship's rail during deballasting should not exceed 100 p.s.i. At this pressure the discharge rate is approximately 1,120 tonnes/p.h. (8,000 bbls.)

When all ballast is discharged Barrow Island crude oil previously loaded is pumped into the line in order to displace all ballast from the submarine pipe-line. When approximately 11,000 bbls. (1,500 tonnes) of crude has been pumped the Mooring Master and the shore pumping station are to be advised.

When the water-oil interface is detected ashore, the stream is then diverted to the shore tanks and the ship's pumps are requested to be stopped. During the displacement operations, pumping rates should be kept as high as possible to keep line contents in a turbulent condition in order to sweep the lines as clean of water as possible.

GENERAL: Ships must load promptly and leave the port moorings promptly or risk demurrage charges which may accrue to other vessels waiting and ready to load.

Medical facilities, telephone, Consuls or Foreign Government Representatives, bunker oil, fresh water, cargo or tank inspection services, and facilities for ship's laundry, stores or repairs are not available at Barrow Island Tanker Terminal.

Ship's crews cannot be accommodated ashore on the Island.

The dumping of any rubbish overboard is prohibited.

AGENCY: No ship's Agent's services are furnished by West Australian Petroleum.

AUTHORITY: West Australian Petroleum Pty. Limited, 233 Adelaide Terrace, Perth. Postal Address: Box C 1580 P.O., Perth, W.A. 6001. *Tel:* (09) 325 0181. *Telex:* Wapet AA 92008. *Cables:* Wapet.

BOTANY BAY, N.S.W.: 34.00 S. 151.14 E. (See Plan)

DOCUMENTS:

2 Crew Lists (Form M. & S. II).
Stores List (Form 42 A).
Personal Effects List (Form 5).
2 copies Health Report (Form A Q360).
3 copies Ports of Call List (Form C & E 886).

PILOTAGE: Compulsory. Ordered by Agent basis Master's ETA. Pilot boards outside Botany Bay Heads in position Lat. 34° 01.1′ S., Long. 151° 17.5′ E. Vessels waiting for Pilot not to proceed West of Long. 151° 15′ E. Pilot vessels fitted with VHF for communication with other ships. Watch maintained on Channel 13 while at sea and messages conducted on Channel 6.

RESTRICTIONS: Tankers not berthed after sunset. Mooring normally effected 2 hours before HW at Kurnell No. 3.

MAX. SIZE:

Kurnell	No. 1	Length	183 m.	Draft	10.02 m.
„	2	„	198.2 m.	„	11.1 m.
„	3	„	228.5 m.	„	11.5 m.
Bulk Liquids Berth		„	185 m.	„	14.0 m.

RADIO: Sydney Radio. VHF to Harbour Control, Sydney. Also see "Sydney – VHF".

TUGS: Two tugs permanently stationed at Botany Bay. Extra tugs sent from Sydney on request.

BERTHING:

Kurnell Nos. 1 & 2: Operators: Australian Oil Refining Pty. Ltd. Finger pier with 2 berths; No. 1 – Eastside. No. 2 – Westside. Crude 1×26 in. 1×18 in. lines – 8 in. hoses. Fuel 1×24 in. 1×12 in. lines – 8 in. hoses. White 6 in. – 16 in. Bunkers and FW ex-wharf. Slop facilities up to 8,200 tons.

Kurnell No. 3 Berth: Operators: Australian Oil Refining Pty. Ltd. Vessel moors using both anchors forward and ropes to 5 buoys and 2 swamp moorings, semi-circle (astern). Hoses connected midships – 2×12 in. to submarine line (crude). Bunkers, fuel and diesel. Fresh water 70 t.p.h. ex-pipe-line.

Bulk Liquids Berth: Bulk liquid chemical and petrochemical cargoes piped to adjacent tank farms. Max. length of vessel – 185 m. Depth alongside 19 m. Max. draft 14 m.

Brotherson Dock: Six berth container terminal dredged to 15.3 m., swinging basin at entrance dredged to 13.1 m. Northern terminal leased to the Australian National Line – 42 hectares, wharfage 1,000 m. comprising 3 berths each with ro/ro ramp and 35 tonne gantry cranes. Southern terminal leased by Container Terminals Australia Limited – 38 hectares, wharfage 936 m., comprising 3 berths.

TANKERS: See "Berthing" and "Developments".

Kurnell Nos. 1 and 2: Berthing and unberthing at all tides, berthing during daylight hours only, can unberth after dark.

All vessels turn prior to berthing and are always heading out. At Berth No. 1 port side alongside, Berth No. 2 starboard side alongside.

Kurnell No. 3: After embarking the Pilot, vessel proceeds on the main entrance leads, (312°), until abeam of Bumbora, or entering the arc of visibility of Bare Island Light, then turn to port on the leading beacons line 271° 22′. In the meanwhile, the Maritime Services Board Area Superintendent has joined the vessel and taken up station on the forecastle. The vessel continues on the leading beacons line until the drop marks ashore are in line and then drops starboard anchor and turns to starboard to drop port anchor. After dropping the second anchor, the vessel goes astern (with the aid of tugs) until the hose pick-up buoys are abeam of the vessel's starboard manifold. When finishing up 8 shackles of chain will be in the water, so the vessel has to be equipped with minimum 11 shackles of chain on both anchors. The anchoring procedures vary with the individual Pilot. Some Pilots (now that a larger area has been dredged) prefer to drop first the port anchor and then starboard, depending on wind speed and direction.

Ships initially connect their own ropes to the mooring buoys and later pick up the preventer wires. Weather conditions may warrant the connection of a second ship's rope to the buoys.

Vessels moor with their anchors at 45° angle.

Usually 2 tugs are being used for vessels up to 700 ft. in length and 3 tugs for longer vessels. Ship's ropes are being used for towing ropes.

An accommodation ladder should be rigged on the port side and pilot ladders on both sides.

The sequence of letting go the mooring ropes and heaving up the anchors depends on the wind direction.

Bulk Liquids Berth: Berthing and unberthing at all stages of the tide during daylight hours. During the hours of darkness subject to Harbour Master's approval.

Vessels usually turn prior to berthing and go port side alongside heading out.

BALLAST: *Tank Cleaning and Dirty Ballast Facilities:* A.O.R. Berth Nos. 1 and 2: Maximum quantity acceptable 8,255 tons. Rate 1,000 t.p.h.

Only clean, oil free ballast water may be discharged overboard, after written permission received from Port Authority which is difficult to obtain.

Severe penalties will be imposed by the Authorities for any infringement of Harbour Regulations, and when doubt exists with regard to whether the ballast is clean and oil free, then the shore reception facilities may be used.

DENSITY: 1025.

FRESH WATER: Available at all berths.

FUEL: Marine fuel and diesel oil available at Kurnell Berth Nos. 1, 2 and 3.

FIRE PRECAUTIONS: Normal restrictions.

GANGWAY/DECK WATCHMEN: None available.

IDENTIFICATION CARDS: See "Melbourne".

REPAIRS: Most repairs. Ships not allowed to be immobilised.

DRY DOCKS: Nil.

AIRPORT: 6 km. – regular airlines.

TIME: GMT plus 10 hours. (Plus 1 hour for daylight saving when applicable).

HOLIDAYS: Cargo worked all days.
POLICE/AMBULANCE/FIRE: Tel: 000.
TELEPHONES: At Wharf and Kurnell Berth No. 3. AOR Ltd.
SERVICES: Compass adjusting only.
DELAYS: Normal only.
DEVELOPMENTS: Major port development for container and bulk trades, with channels of up to 19.2 m. in depth and entrance of Bay 2 km. wide completed on the Northern foreshore.

A wharf for bulk liquid chemicals and petrochemicals has been commissioned, and extensive storage facilities have been constructed on port land adjacent to the wharf.

Two container terminals of 42 (Northern) and 38 (Southern) hectares have been developed along the sides of the Brotherson Dock. These two new terminals more than double the container handling capacity of Sydney Ports (Port Jackson and Botany Bay).

Each of the terminals has 3 berths involving almost 2 km. of wharfage. The water depth at these berths is 15.2 m.

A crude oil berth is planned to the South of the existing Bulk Liquids Berth. Work on construction is scheduled to commence in the latter half of 1986 and completion is expected 18 months later. The berth will accommodate vessels up to 120,000 tonnes deadweight and appropriate dredging in the Entrance Channel and the Swinging Area will be carried out.

AUTHORITY: Maritime Services Board of New South Wales, G.P.O. Box 32, Sydney, NSW 2001, Australia. *Tel:* (02) 240 2111. *Telex:* MSB SY AA 24944. *Cables:* "Marboard".

BOWEN, Queensland: 20.01 S. 148.15 E. (See Plan)

The channels have not been sounded since 1980, the wharves are in a state of disrepair and the coal loading facility on No. 3 Jetty is about to be dismantled

AUTHORITY: Bowen Harbour Board, 6 Herbert Street, P.O.Box 78, Bowen, Queensland 4805, Australia. *Tel:* (077) 861966. *Contact:* Miss J. Buckingham, Office Supervisor.

Department of Harbours and Marine, P.O.Box 889, Bowen, Queensland 4805. *Contact:* Captain P. J. Zealley, Harbour Master.

BRISBANE, Queensland (including Fisherman Islands, Hamilton, Pinkenba): 27.27 S. 153.04 E. (See Plan)

PORT LIMITS: A vessel is considered an "arrived vessel" when it is at the Pilot boarding grounds off Caloundra.
DOCUMENTS: See "Melbourne".
PILOTAGE: Notify Agent approximately 1 week in advance. Confirm ETA to Duty Harbour Master 24 hours before arrival at pilotage ground, plus max. draft. Master of vessel to radio ETA Pilot boarding ground 8 hours before arrival. Messages should be addressed: Shipserv Caloundra Signal Station.

Contact Caloundra Signal Station by VHF Channel 16 when within range. Pilot boards S.E. of Cartwright Point in position, Lat. 26° 43′ S., Long. 153° 10.6′ E. Pilot vessel white hull with words "Pilots" in black letters. Orange superstructure. Place ladder about 6 ft. from water.

Pilot ground is 44 miles from entrance to river. River then navigable to ocean going vessels for 14 miles from the mouth.

Same Pilot remains to berth vessel. Pilotage time about 5 hours.

APPROACHES: Good navigation conditions in Moreton Bay except in exceptionally heavy weather in N.W. channel. Minimum depth in N.W. channel 13 m., and N.E. channel 7.5 m., in Bar Cutting 11.6 m., in Swinging Basin at Luggage Point 11.7 m., to Hamilton 9.1 m., and to Bulimba Point 8.8 m. (all LWOST). Dredged channels in Moreton Bay minimum 300 m. width. River Cuttings 120 m. width, Bar Cutting 180 m. width.

In Moreton Bay and Brisbane River the mean spring rise is 2.13 m. above LWST and mean neap rise is 1.74 m. above LWST. The lowest neap tide 1.22 m. above LWST and maximum spring tide 2.7 m. above LWST. The visibility generally good except in cyclonic weather when heavy rain.

RESTRICTIONS: Berthing times dependent on vessel's draft in relation to state of tide.

MAX. SIZE: Waterline length in river 250 m. at 9.7 m. draft (special provision made for larger vessels, especially when light draft condition preparing entering Graving Dock). Draft at HWOST for tankers 12.2 m.; for cargo vessels 9.7 m.

HEALTH: See "Melbourne". Doctor boards at river entrance or at berth. Available 24 hours per day.

RADIO: Most traffic channelled through VIB, coastal radio station Brisbane. VHF Channel 16, 156.6 MHz and 156.8 MHz.

RADAR: Continual watch kept at Caloundra Head, and Lytton Hill Signal Station.

TUGS: Six tugs available, 3×33 tonnes and 3×42 tonnes bollard pull. Tugs are privately owned. Tugs join vessel approaching the berth, or as may be required elsewhere in the river. Line boats available.

BERTHING:

BULK LOADING FACILITIES: *Hamilton Wharf Berth No. 4:* Gross handling rate for loader is 700 t.p.h. Movable conveyor system services 110 m. of wharf. Rutile Sand – Daily Rate 7,000/8,000 tonnes.
Pinkenba No. 1: 2 belt conveyors serving 7 loading spouts of which 4 can be used simultaneously. Nominal handling rate is 1,600 t.p.h.
Pinkenba No. 2: Single shiploader. Loading rate for grain 1,000 t.p.h.
Coal Wharf: Single shiploader, loading rate for coal 1,000 t.p.h. Also discharge bulk cement to silos at 800 t.p.h.
Grain Wharf: Single shiploader, loading rate 2,200 t.p.h.

TANKERS: Port and Harbour Regulations stipulate that tankers use large coir/nylon springs for attaching vessel's fore and aft springs to the mooring bollards on the wharves except where tension winches are fitted. The springs are supplied by wharf owners.

Moorings should consist of at least 4 parts out each end in addition to 2 back springs both fore and aft. If these lines are not tended and taut at all times the vessel cannot be considered to be securely moored. In addition to the above 2 lines have to be made fast: 1 fore-line from the main deck and 1 aft-line from the main deck.

A rat guard is to be properly fixed to each mooring line and where it is not possible to place a guard on the forward or after spring lines, a piece of tarred rag or hessian should be attached.

A Radar Station at Lytton at the mouth of the Brisbane River conducts a 24 hours, all weather watching brief over all ships entering or leaving the port of Brisbane.

The load-line and freeboard of tankers arriving with full cargo may be inspected by the Department of Navigation.

All official or crew wishing to go or leave the Ampol Terminal at Fisherman Island or B.P. Terminal at Luggage Point must do so by launch. Masters should contact the local Agents to arrange.

Ampol Refinery, Fisherman Island: Dolphin berth. Berth length 330 m., depth 12.8 m. Grades handled:

Crude Oil discharge, 4×8 in., 3,353 m., 150 p.s.i./3,500 cu.m.p.h. max.

Fuel Oil, Diesel Oil, Gas Oil, loading 4×8 in., 3,353 m., 290 cu.m.p.h. max.

No dirty ballast facility.

Port side alongside.

B.P. Refinery, Luggage Point: Dolphin berth. Berth length 280 m., depth 12.8 m. LWOST. Grades handled:

Crude Oil discharge 2×12 in., 1,402 m., 150 p.s.i./3,500 cu.m.p.h. max.

Fuel Oil, Diesel Oil, loading 2×12 in., 1,402 m., 300 cu.m.p.h. max.

No dirty ballast facility.

Port side alongside.

Ampol Products Wharf, Lytton: T-head and Dolphins. Berth length 280 m., depth 9.8 m. LWOST. Grades loaded:

Fuel Oil, 1×8 in., 1,676 m., 200 cu.m.p.h. max.
Gas Oil, 3×8 in., 762 m., 1,500 cu.m.p.h. max.
Ballast, 2×8 in., 1,676 m., 1,000 cu.m.p.h. max.
Kerosene, 2×8 in., 1,676 m., 1,000 cu.m.p.h. max.
Diesel Oil, 1×8 in., 1,676 m., 350 cu.m.p.h. max.
Dirty Ballast: 2×8 in., 762 m., max. 6,000 tons, max. rate 1,000 cu.m.p.h.
Starboard side alongside.

B.P. Products Bulwer Island: T-head and Dolphins. Berth length 240 m., depth 9.8 m. LWOST. Grades loaded:

All products: Loading 1×8 in., 2,764 m., 550 cu.m.p.h. max. Discharge 1×8 in., 183 m., 150 p.s.i., 1,000 cu.m.p.h. max.

LPG: Loading 1×6 in., 671 m., 45 cu.m.p.h. max.

Dirty Ballast: 1×8 in., 90 m., max. 4,460 tons, max. rate 1,000 cu.m.p.h. max. No ballast with chemicals acceptable.

Either side alongside.

Shell Pinkenba: T-head and Dolphins. Berth length 220 m., depth 11.0 m. LWOST. Grades discharged:

Fuel Oil, Diesel Oil, Bitumen, 1×8 in., 427 m., 150 p.s.i., 1,000 cu.m.p.h. max.

Gas Oil, Ballast, Kerosene, Chemicals, 1×8 in., 427 m., 150 p.s.i., 850 cu.m.p.h. max.

Lub Oils, 1×8 in., 732 m., 150 p.s.i., 320 cu.m.p.h. max.
No dirty ballast facilities.
Starboard side alongside.

Mobil Colmslie: T-head and Dolphins. Berth length 190 m., depth 6.5 m. LWOST. Grades discharged:

Ballast, Kerosene, Gas Oil, Chemicals, 1×8 in., 577 m., 150 p.s.i., 750 cu.m.p.h. max.

Fuel Oil, Diesel Oil, 1×8 in., 577 m., 150 p.s.i., 800 cu.m.p.h. max.
Lub Oils, 1×8 in., 577 m., 150 p.s.i., 300 cu.m.p.h. max.
LPG, 1×2 in., 91 m., 15 cu.m.p.h. max.
No dirty ballast.
Either side alongside.

Maritime Wharves Pty. Ltd., Hamilton: T-head and Dolphins. Grades discharged:

Ballast, Kerosene, Gas Oil, Fuel Oil, Diesel Oil, 1×8 in., 1,676 m., 150 p.s.i., 750 cu.m.p.h. max.
No dirty ballast facilities.
Starboard side alongside.

All berth depths must be confirmed prior to arrival.

Gas freeing facilities not available, but chemist available to issue Gas-free Certificate. There are slop discharge facilities at both refineries.

BRIDGES: Gateway Bridge in Quarries Reach. Clearance 57.4 m. at highest tide. Vessels with structures exceeding 45 m. above waterline must obtain approval of Harbour Master to pass under bridge.

STEVEDORES: Ample labour available for all cargo working except rush periods.

Normal capacity per gang per shift: 60 tons break bulk; 75 tons palletised cargo.

CRANES:

Location	*No.*	*Capacity* (Tonnes)
ANL Wharf	2	25

BROOME, W.A.: 17.59 S. 122.14 E. (See Plan)

PORT LIMITS: East limit: From Fall Point (17° 59.1′ S., 122° 20.3′ E. approx.) in a direction 180° – 4.5 miles to position 18° 03.6′ S., 122° 20.3′ E., thence.

South limit: In a direction 270° – 10.5 miles to position 18° 03.60′ S., 122° 09.35′ E., thence.

West limit: In a direction 000° – 8.25 miles to position 17° 55.40′ S., 122° 09.35′ E., thence.

North limit: In a direction 090° about 3.1 miles to the shore (17° 55.40′ S., 122° 12.60′ E. approx.)

CERTIFICATES/DOCUMENTS/HEALTH: See "Melbourne".
PILOTAGE: No resident Pilot. Inform Marine and Harbour Department, Fremantle ETA 2 weeks in advance. Pilot boards approximately 292° (T) distant 4.5 miles from Gantheaume Point.
RESTRICTIONS: Channel between Channel Rock and Middle Bank dredged to 17 ft. LWOST. Vessels of more than 15 ft. draft restricted to height of tide for arrival/departure. HWOST 27.5 ft. HWONT 17.2 ft.
MAX. SIZE: Draft 30 ft.
VHF: Channels 6, 12 and 16.
TUGS: None.
BERTHING: 2 berths. Outer berth max. length 612 ft., 32 ft. LWOST. Inner berth length 479 ft., depth 28 ft. LWOST.
STEVEDORES: 2 gangs working 0800 hrs. – 2000 hrs. and 0000 hrs. – 0700 hrs.
CARGO GEAR: See "Melbourne".
FRESH WATER: Up to 100 tons available. Rate up to 20 t.p.h. at 85 cents per 1,000 litres.
FUEL: Diesel oil available, provided prior notice given to BP Agents.
REPAIRS: Minor repairs possible through Port Engineering Services.
TIME: GMT plus 8 hours.
GENERAL: Tides: Both ebb and flood in direction of line of jetty. Tide has apparent ebb period of 8 hours, flood 4 hours. Slack water 2.5 hours prior HW and LW. Information given by radio.
DEVELOPMENTS: The Government of Western Australia has approved in principal a plan to provide grain handling and storage equipment at the port of Broome. An A$18.4 million project has been put forward to ship sorghum from the port and the Western Australia Harbour and Light Department has designed the equipment necessary for storage and ship loading. Tenders call for the construction of a 20,000 tonne mechanised storage shed and 2 shiploaders. (Storage shed completed but currently not in use due to Sorgham project being abandoned).

Marine and Harbours Department, P.O.Box 46, Broome, Western Australia 6725. *Tel:* (091) 921304. *Telex:* AA99450. *Cables:* Harbour Master Broome. *Contact:* M. Gower, Port Manager.

AGENT: Sub-agent of Patrick Agencies, Fremantle.

BUNBURY, W.A.: 33.19 S. 115.38 E. (See Plan)

DOCUMENTS:
Number of Crew Lists, 2 official (Forms M & S 11 and 2 flimsy copies).
Passenger Lists, 5.
Customs Documents:
- Last Port Clearance.
- Form 42A Ship's Stores consumed in Australia.
- Form 5 Manifest of Crew's Possessions.
- Loading Ports List.
- Ship's Master's Bond.
- Approved Identification Documents of all crew.
- Commonwealth Light Dues Receipt.
- State Tonnage Dues Receipt.

Health Documents, Certificates and other forms handed to Master by Quarantine Doctor.
Manifests, 3.
Bills of Lading, 2.

PILOTAGE: Compulsory with exception of British ships whose Master holds an exemption certificate for the port. Radio Harbour Master, Bunbury 24 hours and 4 hours notice. VHF Channel 16 – pilot boat and tug. Base set not manned continuously but pilot boat may be contacted 1 hour before arrival. Pilot boat painted white with black rubbing strip, black gunwhale, centre house with orange top. Word "Pilot" painted on sides. Pilot boards 1.5 – 2 miles from breakwater. Boarding area is with North Shore leads in line bearing 157° – 337° and 1 mile from Breakwater Light seawards – no alternative area. Anchorage – main lighthouse bearing 195° distance 1.5 – 2 miles.
ANCHORAGE: Depth 7 to 9 fathoms. Anchoring not advised in stormy weather; safer to steam offshore.
RESTRICTIONS: 24 hour port but entry not generally carried out at night.
MAX. SIZE: *Outer Harbour:* Max. length 585 ft. Deepest permissible loaded draft 9.0 m. at No. 1 berth and 8.7 m. at No. 2 berth.
Inner Harbour: Max. draft 11.6 m.
HEALTH: Quarantine inspection required if Bunbury is first Australian port. Quarantine inspection for Health Clearance – hours of inspection 0600 – 2200. Also see "Melbourne".
RADIO: Perth Radio.
VHF: Watch maintained on Channel 16 prior to arrival of vessels.
TUGS: 2 tugs available. "Capel" (42 tonne bollard pull) and "Geographe" (22 tonne bollard pull). Join vessel off berth. Ship's lines used if necessary. The tugs are normally manned from 0700 to 1600 hrs. weekdays. At other times overtime is charged.
BERTHING: Heavy shore mooring springs used.
BULK CARGO FACILITIES: *Outer Harbour:* One ore-loading berth 184 m. in length. Conveyor system loading at 900 t.p.h.

General purpose berth 184 m. in length. Equipped with grain handling facilities (rated at 250 tonnes per hour).

Weighbridge: 50 tonne capacity, 15 m. × 3 m. platform.

New Inner Harbour: No. 1 Woodchip berth consists of 6 breasting dolphins fitted with flexible fender units, 2 mooring dolphins, 35 ton bollards and a central shiploader platform and access jetty. The dolphins and platform are connected by steel walkways. Length of berth 381 m. Depth 12.2 m. Wood Chip bulk loader rated at 1,000 t.p.h. The facilities can accommodate vessels up to 11.6 m. draft. During loading the vessel is warped back and forth alongside the shiploader. Berth also used for tanker discharge.

No. 2 General purpose berth, length 240 m.

Alcoa's Alumina Berth. Bulk loader rated at 2,000 t.p.h.

The approach channel depth to both berths is 12.20 m.

Weighbridge: 60 tonne capacity, 18 m. × 3 m. platform.

STEVEDORES: Weekdays – ETA to be advised by 0600 hrs. for labour requirements on that day. Week-ends – ETA required by 0600 hrs. Friday.
MEDICAL: Medical attention available. Hospital facilities available. Vaccinations and valid certificates required.
TANKERS: One tanker discharge berth – (See "Bulk handling facilities" – Woodchip berth).
DENSITY: 1023 to 1027 – no relation to tide.
FRESH WATER: Readily available – 60 cents per kilolitre.
FUEL: Furnace oil by road ex-Fremantle. Marine and light diesel by road.
GANGWAY/DECK WATCHMEN: Not required.
OPENING/CLOSING HATCHES: Preferably by crew.
CUSTOMS ALLOWANCES: Each crew member 200 cigarettes initially and thereafter as required in reasonable quantities. Wine and/or Spirits, open bottles of spirit on arrival not to exceed 1 quart and thereafter as required in reasonable quantities.
CARGO GEAR: Must comply with Australian Loading and Unloading Safety Regulations. See "Melbourne".
IDENTIFICATION CARDS: See "Melbourne".
CONSULS: Vice-Consul for Norway.
REPAIRS: Facilities available.
DRY DOCKS: Nil.
REPATRIATION: Facilities available.
AIRPORT: Light aircraft landing strip only.
TIME: GMT plus 8 hours.
HOLIDAYS: Days on which work cannot be performed: Good Friday, Christmas Day, Labour Day, Waterside Workers' Picnic Day, Anzac Day.
POLICE/AMBULANCE/FIRE: Emergency Number Bunbury 000.
TELEPHONES: Available on application.
DELAYS: Generally no delays.
SHIP SUPPLY SERVICE: *Contact:* Wills Shipping, P.O. Box 52, Bunbury W.A. 6230. Tel: (097) 214866 Telex: AA93045.
AUTHORITY: Bunbury Port Authority, P.O.Box 4, Bunbury 6230, Western Australia. *Tel:* (097) 21-2800. *Telex:* 92211. *Contact:* Mr. B. P. Cunningham, Managing Secretary.

AGENT: Patrick Agencies, 33 Victoria Street, Bunbury, W.A. 6230. Tel: 219922. Telex: 94934 A/B Rikpat. Cables: Rikpat.

BUNDABERG, Queensland: 24.45 S. 152.24 E.

(See Plan)

PORT LIMITS: Along the major arc of a circle radius 4 miles, centred on South Head light (24° 45.6′ S., 152° 24.7′ E. approx.), commencing at a point (24° 44.3′ S., 152° 20.6′ E. approx.), extending in a Northerly, Easterly and Southerly direction to a point near Bargara (24° 48.6′ S., 152° 27.6′ E. approx.).
CERTIFICATES/DOCUMENTS/HEALTH: See "Melbourne".
PILOTAGE: Compulsory. Radio not less than 24 hours ETA; VHF Channel 16.

Pilot boards 2.5 miles East of South Head Lighthouse.

DEPTHS: (Datum) Channel 7.6 m.; Swinging Basin 7.6 m., Sugar Berth 10.0 m.; Oil Berth 8.0 m. Keel clearance normally 0.9 m.
RESTRICTIONS: Length 182.87 m. maximum. Vessels not to pass out through sea reach on ebb. Channel width 76 m. Also see "Delays".
RADAR/VHF: No radar service. Bundaberg Harbour Board office, craft, tug and pilot launch can be contacted on VHF Channel 16 during office hours.
TUGS: One tug, 22 tonnes bollard pull, owned by Howard Smith Industries, and one work boat of 4 tons bollard pull, owned by the Harbour Board, which is also used for pushing, are available, both fitted with VHF. Ship's lines or tug's lines are used, and no charge for tug's lines.
BERTHING: No. 1 Bulk Sugar Berth 190 m. long. No. 2 Oil, Molasses, Aqua Ammonia, 80 m. long.
SPECIALISED CARGO HANDLING FACILITIES: *Bulk Sugar Berth:* Loading by movable gantry at 1,400 t.p.h.
Bulk Molasses: Loading rate 240 t.p.h. No facilities for containers or roll-on/roll-off traffic.
Oil Berth: Facilities for discharge all petroleum products and aqua ammonia and loading molasses.
MEDICAL: Hospital facilities available.
TANKERS: 10 in. lines. No slop discharge facilities. Oil tankers, discharge only. Molasses tankers, load only. Depth alongside tanker berth 8.0 m. Datum.
DENSITY: Average density about 1025.
FRESH WATER: Available, delivered by hose, variable loading rate and quality (bore water) 12 t.p.h. Cost 50 cents per 1,000 gallons.
FUEL: All grades available, 24 hours notice required.
GANGWAY/DECK WATCHMEN: Not necessary, but available.
OPENING/CLOSING HATCHES: By crew.
CARGO GEAR: No additional local regulations. See "Melbourne".
IDENTIFICATION CARDS: See "Melbourne".
CONSULS: None.
REPAIRS: Almost all types of deck and engine repairs possible.
DRYDOCKS: No drydock. Slipway for small vessels only. Mobile and floating cranes may be hired.
SURVEYORS:

(1) Cargo surveyors available (Lloyd's Agent).
(2) Classification surveyors available from Brisbane.

REPATRIATION: Facilities exist.
AIRPORT: Airport 2 miles from city serviced by regular internal airlines.
TIME: GMT plus 10 hours.
HOLIDAYS: Normal Queensland holidays observed but cargo worked regardless of holidays.
POLICE/AMBULANCE/FIRE: Dial 000 from the port.
EMERGENCY CO-ORDINATION CENTRE: Bundaberg Harbour Master (Captain G. Price). Tel: (Office) 724633. Telex: 49751.
TELEPHONES: Telephone connection placed at tanker berth and sugar berths.
BANKS: Major Australian Banks have branches in Bundaberg.
STORING: See "Prelims".

(1) Yes.
(2) Yes at sugar berth. No at oil berth.
(3) Yes.
(4) Yes.
(5) Same as other Australian ports.
(6) No. None available.

DELAYS: Vessels can berth at any state of the tide provided there is 0.9 m. under keel clearance. Vessels sail on flood tide only.
AUTHORITY: Bundaberg Harbour Board, P.O.Box 75, Bundaberg, Queensland 4670. *Tel:* (071) 712247, 712248. Port Office *Tel:* 794233. *Cables:* Bundaberg Harbourboard. *Contact:* Mr. D. Antrobus, Harbour Board Secretary. Captain G. Price, Harbour Master.

AGENT: Sub-agent of Patrick Agencies, Brisbane.

BURNIE, Tasmania: 41.03 S. 145.55 E.

(See Plan)

PORT LIMITS: Within all waters that are bounded by an imaginary circle having a radius of 5 nautical miles and centred at the Eastern end of the Island Breakwater situated in Emu Bay.
APPROACHES: Port situated on Western shore of Emu Bay and easy of access. Bay is 2 miles wide and 1 mile deep facing in a Northerly direction. The bottom is sand and clay interspersed with patches of reef and rock, particularly in the South Eastern sector of Bay. Vessels may anchor on main leads in vicinity of Pilot Boarding Ground, but it is not advisable remain at anchor during strong on-shore winds. Port protected by 2 breakwaters: the inner, founded at inner end of Blackmans Reef, lies in a 110° direction and is 380 m. long. The other, an island structure 488 m. long and protecting the port from Easterly weather, lies in a 130°/310° direction, with its N.W. end bearing 045°, 213 m. from the S.E. end of the Inner Breakwater.

DOCUMENTS: Also see "Melbourne". (Marine Board only): Inward Manifests to be lodged on arrival. Agents supply Manifests and non-negotiable copy Bills of Lading to Customs for checking prior to vessels arrival.

PILOTAGE: Prior advice through local Agents, ETA by radio telegraphy through Melbourne Radio (VIM) or Hobart Radio (VIH) to Burnie Port Authority. Immediate advice VHF Channels 16 and 12.

Pilot launch – 14 m. white launch with buff cabin, name "Miowera". International Signals apply. Boarding area on main harbour leads 210° (T) with Round Hill Point Lighthouse bearing 155° (T). Ladder 1.5 m. from water, manropes, no boat rope.

ANCHORAGES: See "Approaches".

RESTRICTIONS: Maximum length 250 m. 24 hour service.

MAX. SIZE: (See "Restrictions"). Tankers at Island Breakwater to 10.9 m. draft at all states of tide.

HEALTH: Pratique automatic when from other Australian ports. When from overseas Radio Pratique should be applied for 12-24 hours before arrival to "Quarantine Hobart".

RADIO: Melbourne Radio (VIM).

RADAR/VHF: No radar service. Port equipped with VHF, R/T operating International Maritime Bands. Pilot vessel, tug, and other floating plant similarly equipped. "Burnie Harbour" on VHF Channels 16, 12 and 67 continuously. Pilot vessels and tugs on Channels 16, 12, 6 and 67.

TUGS: Tug(s) join East of Island Breakwater. Usually lashed alongside with tug's lines (no extra charge). When on towing duty, usually ship's line. 1×40 tonne bollard pull tug stationed in the port. Additional tugs available from nearby ports.

BERTHING: *Ocean Wharf:* Lies on the South side of the inner breakwater. With 270 m. of effective berthage it is 28 m. wide with an apron width of 8.5 m. The berth is dredged to 10 m. at the outer end to 8.0 m. at the inner end. There are 3 transit sheds on this wharf with a total area of 3,809 sq. m. Axle loading is 6 tonnes.

McGaw Pier: This pier is 44 m. wide with berths on both sides. On the North side there is 213 m. of effective berthing with dredged depths ranging from 9.1 m. at the outer end to 6.5 m. at the inner end. Apron width is 7.6 m. A stern loading ramp is situated at the inshore end suitable for vessels with their own ramp. Axle loading on this berth is 10 tonnes.

On the South side there is 183 m. of effective berthage with a dredged depth of 9.4 m. This berth has one crane of 28 tonne capacity with an outreach of 27 m. The axle loading on this berth is unlimited. There are two transit sheds serving both berths with an area of 3,000 sq. m. and an axle load of 10 tonnes.

Bulk Berth: This modern pre-stressed concrete berth is 213 m. in length with a large mooring dolpin off the seaward end. Vessels of 250 m. in length are accommodated. The width of the apron is 13.4 m. and axle loading is 50 tonnes. The berth incorporates a bulk loader with a capacity in excess of 1,000 tonnes per hour. The berth is also suitable for general cargo and container operations. The dredged depth at the berth proper is 10.5 m. At the inner end provision is made for the quarter ramps of the largest Ro/Ro vessels. There is a bulk tallow loading point at this berth.

Jones Pier: A modern pre-stressed concrete berth 198 m. length dredged to 9.8 m. Axle loading is 50 tonnes.

A twin lift 65 tonne portainer is available at this berth which can accommodate vessels (including Ro/Ro quarter ramp) of 250 m. in length. The berth is dredged to 10.0 m.

There is one large storage shed of 2,973 sq. m. plus a cold room of 1,058 cu.m. and a cool room of 1,490 cu.m. There is also another storage shed of 1,500 sq. m. A bulk tallow loading point is on this berth.

A.N.L. Terminal: This berth is 83 m. long and 35 m. in width and has 3 large mooring dolphins on the seaward end which enables vessels of 200 m. in length to berth. The berth is dredged to 9.4 m.

A modern slewing container handling crane of 50 tonnes capacity is on this berth. This crane may be hired when not required for terminal operations. Stern loading facilities are provided by 8.5 m. wide ramp. Axle load is 50 tonnes.

Mobile cranes available if required.

BULK CARGO FACILITIES:

Conveyor Loader: At bulk berth for export of zinc, lead and copper concentrates to 1,270 t.p.h.

Inward Bulk: Berth and crane at South McGaw Pier.

Sulphuric Acid: Loading and discharging facility at Island Tanker Berth and bulk berth, with rate of 1,000 t.p.h.

STEVEDORES: Labour to be ordered (1) by 1500 hrs. for following day (weekdays), (2) by 1300 hrs. Friday for Saturday and Sunday, (3) by 1900 hrs. Sunday for Monday.

MEDICAL: Notify Agent prior arrival of extra requirements other than pratique. General Hospital 1 km. from port. Cholera revaccinations arranged by prior notice.

TANKERS: Tanker Berth is 85 m. long and 30 m. wide, sited on South side of Island Breakwater. 11.3 m. of water in this berth, which will accommodate vessels of up to 200 m. in length. Diameter of lines are 250 mm. No residue discharge facilities. 1 berth, maximum draft 10.9 m.

DENSITY: 1025 to 1028.

FRESH WATER: All wharves – hose from wharf hydrants. Rate adequate.

FUEL: Diesel and heavy fuel available from road tankers.

FIRE PRECAUTIONS: Normal. 24 hour ferry service to be maintained to tanker berth.

GANGWAY/DECK WATCHMEN: Watchmen commonly used. Penalty rates apply on weekends and holidays.

OPENING/CLOSING HATCHES: Stevedores will close hatches.

SHIP CERTIFICATES:

Safety Construction.
Safety Equipment.
Safety Radio Telegraphy.
Load Line.

CUSTOMS ALLOWANCES: 200 cigs. or 500 grams tobacco. Beer is carried outside the bond. One bottle spirits per man every 10 days.

CARGO GEAR: Australian Navigation (Loading & Unloading) Regulations apply.

CONSULS: None.

REPAIRS: Limited repairs carried out. Founderies and machine shops nearby.

REPATRIATION: On crew member signing off Agent requires passport or identification card. Agent handles repatriation details and notifies Immigration Department, Hobart, re movements of crew member.

AIRPORT: Daily services: 17 km. distant.

TIME: Local time is Australian Eastern Standard time, i.e. GMT plus 10 hours. Tasmanian Summer Time applies. Dates of operation published in Australian Notices to Mariners.

HOLIDAYS: Cargo work performed on all holidays except Christmas Day, Good Friday, WWF Picnic, Anzac Day, Labour Day.

POLICE/AMBULANCE/FIRE: Police Tel: 30-1201; Ambulance Tel: 31-2111; Fire Tel: 31-1155.

TELEPHONES: Telephones are available at all wharves, through Port Authority.

AUTHORITY: Burnie Port Authority, P.O.Box 216, Burnie, Tasmania 7320, Australia. *Tel:* 004-313444. *Telex:* AA59003. *Cables:* Burmar. *Contact:* Captain M. C. Strachan, Harbour Master.

AGENT: Sub-agent of Patrick Agencies, Melbourne.

BUSSELTON, W.A.: 33.38 S. 115.20 E.
(PORT CLOSED)

This port is closed to commercial shipping and it is unlikely that the jetty will be re-opened.

Jetty partly demolished by cyclone in 1978.

AUTHORITY: Busselton Shire Council, P.O.Box 84, Southern Drive, Busselton, Western Australia 6280. *Tel:* Busselton 521011. *Contact:* The Shire Clerk.

CAIRNS, Queensland: 16.56 S. 145.47 E. (See Plan

CERTIFICATES/DOCUMENTS/CARGO GEAR: See "Melbourne".

PORT LIMITS: Commencing at the HW mark on the Northernmost tip o Taylor Point and bounded thence by a line bearing approximatel 83° 52′ T. (83° 30′ A.M.G.) for a distance of about 15.66 nautical mile (29,000 m.) to a point on the LW mark on the Northernmost tip of th coral reef surrounding Green Island, thence by that aforesaid LW mar generally in an Easterly and South-Easterly clockwise direction aroun the aforesaid coral reef to its Easternmost tip, thence by a line bearin 180° T. (179° 38′ A.M.G.) for a distance of about 9.34 nautical mile (17,300 m.) to a point on the HW mark on the Northern shore of Fitzro Island, thence by that HW mark generally in a South-Westerly, South Easterly and North-Easterly direction anti-clockwise around th aforesaid Fitzroy Island to a point on the Southern shore of that Islan where the HW mark intersects with the Southerly projection of th aforesaid line from the Easternmost tip of the coral reef surroundin Green Island to the Northern shore of Fitzroy Island, thence by a lin bearing 180° T. (179° 38′ A.M.G.) for a distance of about 4.10 nautica miles (7,600 m.) where it intersects with a line bearing 90° T. (89° 38 A.M.G.) and distant about 5.78 nautical miles (10,700 m.) from a poir on the HW mark on the Northern bank of Bubbabadoo Creek at it confluence with the Pacific Ocean, thence by the aforesaid line bearin 270° T. (269° 38′ A.M.G.) for about 5.78 nautical miles (10,700 m.) to th aforesaid point on the HW mark on the Northern bank of Bubbabado Creek at its confluence with the Pacific Ocean, thence by that HW mar generally Northerly and Westerly back to the point of commencemer including all navigable rivers, creeks and waters communicating with th area described above.

PILOTAGE: Arrangements are made by ship's Agent with the Harbou Master. Location of boarding is outside the Fairway Beacon, 10 km. fror port.

APPROACHES: Through Grafton Passage, which is 34 km. long an 8 km. wide, and free of any encumbrances, and is lighted by a grou flashing light on Fitzroy Island which is visible in clear weather for range of 47 km.

Channel: 10 km. long, 76.2 m. wide, 8.2 m. LWOST – defined beacons 183 m. apart spaced at intervals of approximately 915 m. an 1220 m.

After passing through the channel, the inlet widens to 458 m. opposi the main wharves. The inlet runs for 8 km. with various depths.

MAX. SIZE: *Largest Vessel:* "Royal Viking Star" – gross tonnage 28,22 and overall length 206 m.

Largest Cargoes: Raw Sugar: "Eiru Maru" 30,961.5 tonne 9.3 m. draft.

Bulk Molasses: "Team Augini" 18,793.5 tonnes, 7.925 m. draft.

Petroleum Products: "W. M. Leonard" 25,533 tonnes, 8.687 m. draf

PRATIQUE: Available 24 hours per day, 7 days a week. Also se "Melbourne".

VHF: VHF radio-telephone service is situated at the Piermaster's Offic No. 2 Wharf, and operates a service from 0800 hrs. to 1700 hrs. wi "out of hours" transmission being every hour, on the hour.

The Launch "Floreat" has HF and VHF.

TUGS: 2 tugs are based in the port and are operated by North Queensland Towage Service Pty. Ltd. The tug "Babinda" has a bollard pull of 14 tons. Other tugs are available from Mourilyan Harbour on request.

Launches for running lines etc. are also available, together with punts and catamarans. The launch "Floreat" is used for channel soundings and is also available for other purposes.

BERTHING:

	Depth alongside:
Nos. 1 to 5	8.6 m. LWOST – 3.048 m. from wharf face
No. 6	8.8 m. LWOST – 3.048 m. from wharf face
No. 8	9.1 m. LWOST – 3.048 m. from wharf face
No. 10	9.5 m. LWOST – 3.048 m. from wharf face
No. 12	10.7 m. LWOST – 3.048 m. from wharf face

BULK HANDLING FACILITIES:

Bulk Sugar Terminal Loading: No. 12 Wharf.

(a) 1 travelling gantry loader, consisting of a luffing boom supported from a shore based structure (mobile).

(b) Maximum distance from wharf edge to loading unit 14.2 m.

(c) Maximum length of traverse of loading unit 143.2 m.

(d) Maximum length permissible for ship using bulk berth – wharf length 183 m. plus dolphin in line with wharf and 39.6 m. distant each end. No limit anticipated.

(e) Maximum beam permissible for ship using bulk berth 24.4 m.

(f) Maximum clearance of loading unit at highest high water (for non retracting loader), not applicable, boom of loader at horizontal working position 13.5 m. above high water level but boom is capable of being lifted to a vertical position.

(g) Gross handling rate for loader – 864 t.p.h.

Bulk Molasses Terminal:

Total capacity of 19,000 tons with pipe-line connection to wharf. Loading rate 305 t.p.h.

Bulk Tallow Tanks:

Rear of No. 6 Wharf. 2 tanks; one with a capacity of 304.8 tons and one with a capacity of 813 tons. Loading rate of 56 t.p.h. to 61 t.p.h.

Container Handling Facilities – Ro/Ro:

There are facilities at No. 6 Wharf for handling containerised and unitised cargoes, including a 25 ton stiff-legged derrick crane and a Roll-on/Roll-off stern ramp. There is adequate assembly area adjacent to the wharf.

STEVEDORES: Port quota 28 men. Portsmith Stevedoring Pty. Ltd.

TANKERS: Tankers berth at Berth No. 10. Max. LOA 183 m. Berth is served by various oil pipe-lines and L.P. gas pipe-lines to company depots.

FRESH WATER: Fresh water is available on all wharves. Rate of supply is 70 t.p.h.

FUEL: Oil bunkering facilities are available at Berth No. 10 which is connected by pipe-line to adjacent oil tank farm installations.

DRY DOCK: A dry dock, 61 m. long and 12.2 m. wide accommodates vessels up to 58 m. in length. De-watering rate is 303–379 litres per minute. Draft of vessels which can be accommodated is equivalent to the height of tide at the particular time.

Slipways: Tropical Reef Enterprises has slipway facilities at Senrab Point to handle vessels up to 3,000 tons. North Queensland Engineers and Agents Pty. Ltd. slipway in Smith Creek is able to handle vessels to 61 m. in length. Travel lift up to 100 tons available.

AIRPORT: International Airport.

TELEPHONES: There are plug-in points available to shipping from Nos. 1 to 6 Wharves, and No. 8 Wharf.

DEVELOPMENTS: Planning is currently underway for construction of a cruise liner terminal facility.

AUTHORITY: Cairns Port Authority, P.O.Box 594, Cairns, Queensland 4870. *Tel:* (070) 51-3555. *Telex:* 48256. *Contact:* Mr. R. C. Manning, Secretary.

AGENT: Patrick Agencies, 112 Abbott Street, P.O.Box 621, Cairns, North Queensland 4870. Tel: 51-5211/5445. Telex: 48412. Cables: "Rikpat".

CARNARVON (Including Useless Loop & Cape Culvier) W.A.: **(See Plan)**

(A) CARNARVON: 24.53 S. 113.40 E.

BERTHING: Jetty closed.

SHIP SUPPLY SERVICE: Carnarvon-Sharks Bay Shipping Services, P.O.Box 571, Carnarvon, W.A. 6701. Tel: (099) 41 1178. After hours: (099) 41 1898.

One launch readily available at this port which is capable of performing emergency or general duties to vessels at sea if required. Details of the launch "King Bay" are as follows:

L.O.A.	13.70 m.
Beam	3.65 m.
Draft	1.22 m.
Twin screw speed	13.50 knots
Capacity	2,200 Lt. Distillate
2 – 3 Bunks	
Cooking/Refrigeration facilities.	

The vessel has an adequate open/working deck area aft of the wheelhouse to carry light provisions/stores – approximate area 15.2 sq.m.

The cabin with access via the wheelhouse provides adequate shelter, resting and cooking facilities for 3 – 4 persons.

Being an ex-Pilot launch she is particularly stable and seaworthy.

The service is readily available 24 hours a day and in particular is very useful for vessels using the Northern approaches to or from Useless Loop at Sharks Bay which is some 90 mile distant and at which there are no faciltities for storing. Contact is as above per O.T.C. Radio Station Carnarvon or alternatively to Perth, details of which are as follows:

Office hours	09 322 6543
After hours	09 364 5738

In addition to the above Carnarvon-Sharks Bay Shipping Services also have operating at Carnavon 2 small tugs which are available 24 hours a day for servicing vessels at Useless Loop, Shark Bay or for any other emergency services which they may be required.

(B) CAPE CUVIER: 24.13 S. 113.23 E. **(See Plan)**

LOCATION: Cape Cuvier is situated on the N.W. coast of Australia approximately 75 km. N.N.W. of Carnarvon.

PORT LIMITS: This port is now incorporated in the Port of Carnarvon the limits of which have been extended as follows:—

"A line due West for 4 nautical miles from a point on the mainland in Lat. 24° 10′ S. and Long. 113° 26′ 4.5″ E., and thence in a S.S.W. direction to Cape Ronsard at the North End of Bernier Island" and then as for Carnarvon to the starting point.

DOCUMENTS: The following documents are currently required and must be completed prior to arrival and sailing.

Form 42A:	Ship's Stores Consumed in Australia.
Form M&S–11 (2 copies):	Crew List.
Form W080:	Boarding Report.
Form W283:	Loading Ports List.
Form 5:	List of all Articles Owned or in Possession of Master, officers and crew.
Form QA4:	Quarantine Notice.
Form QA5 (if required):	Ship Master's Bond.
Form F Q360:	Primary Health Report.
Ship's Stationery:	Crew List.

APPROACHES: Red Bluff about 12 miles North of Cape Cuvier can be picked up by radar at a distance of about 20 miles. Cape Cuvier is easily identified by large white salt hill.

The berth is floodlit at night when a vessel is being loaded.

PILOTAGE: Facilities provided by vessels for Pilot boarding at Cape Cuvier must comply strictly with Solas regulations in all aspects.

Pilot, supplied by Department of Marine and Harbours, will board approximately 1 mile North of jetty-head.

Any delays to vessels berthing due to non-compliance with Solas regulations (IMO current resolutions) will be for owners account.

Guidelines for all ships calling at Cape Cuvier: From past experience we have found it necessary to insist that all vessels intending calling at Cape Cuvier must supply plans showing winch layouts and deck machinery. In the case of older type vessels it is in the owners interest that a Department Pilot checks the vessel before arrival. The best way to organise this is to send the vessel to Dampier on the first voyage of the charter or fly the Pilot to wherever the vessel is.

The winches are the controlling factor and must be in first class working condition. There must be no rust on the brake drums and all brake linings must be renewed. If the vessel is old it may be necessary to machine the brake liner so that the brakes will grip. The worm drive brake lever must be free and greased and be able to apply considerable pressure on the brake linings without running out of thread.

The winch reels must be capable of taking 250 m.×80 mm. rope on vessels over 35,000 d.w.t. and 250 m.×70 mm. for vessels under 35,000 d.w.t. A minimum of 4 winches each end and we would prefer 6 winches if possible as it makes the operation safer and easier with big savings on renewing ropes. The winch drums must be at least 800 mm. wide by 600 mm. in depth or similar total volume.

The winches must be capable of supplying full power for long periods so steam or hydraulic lines and associated machinery must be in first class working order.

The leads must be good with all rollers working. The 2 centre winches are used for 310 m.×36 mm. wires so they must have provision for securing the wire to the side of the drum. Roller leads (aft only) must have a 75 mm. top bar to prevent the wires from jumping off the rollers when the vessel is trimmed by the stern.

The Pilot will remain on board for the entire loading and will be responsible for moving the vessel in the berth. Good accommodation with toilet and shower facilities and meals must be provided.

Finally, vessels with cranes and/or timber posts must pay extra special attention to the winches, because a brake failure could result in serious damage to the ship loading boom and the ship.

Remember – the condition of the winches control the safety of the vessel while in the berth.

Failure to adhere to the above even if a roller is not working could result in long and costly delays to the ship.

ANCHORAGE: Recommended anchorage is in position with the jetty bearing approximately 200° (T) at a distance of 1.5 miles. Depth at anchorage is about 15 fathoms. 3 cables off the shore, the depth is about 9 fathoms. Holding ground is good.

RESTRICTIONS: No berthing at night. Also see "Pilotage".

MAX. SIZE: Vessels of 65,000 d.w.t. call on a regular basis. Depth alongside is 52 ft. (15.85 m.).

RADIO: Carnarvon Radio.

Weather Broadcasts: Vessels are advised to listen to daily weather broadcasts by:

1. Perth Radio (VIP) at 0100 hrs. GMT and 1200 hrs. GMT, on 484 kHz, 8597 kHz, 12294 kHz or at 0200 GMT and 1000 GMT on 16947 kHz or 22315 kHz.

2. Broome Radio (VIO) at 0118 and 1230 hrs. GMT on 440, 4323.6 and 6407.5 kHz (local forecast).

3. Carnarvon Radio (VIC) at 0148 and 1130 hrs. GMT on 476, 4323 and 6407.5 kHz (local forecast).

Vessels Arrival Requirements: Cape Cuvier is a first port of entry and all vessels bound for the berth are required to radio to Dampier Salt (Operations) Pty. Limited, Telex No. 99283, through the normal recognised coastal radio stations, i.e. Broome Radio VIO, Carnarvon Radio VIC or Perth Radio VIP the following information additional to Port Health messages (see "Health"):

1. 10 days before intended arrival at the port, the estimated time of arrival and whether or not the port is the first port of call in Australia.
2. 7 days before intended arrival at the port, confirmation or any variation of the advice previously given.
3. 4 days before intended arrival at the port, confirmation or any variation of the advice previously given.
4. 48 hours before intended arrival at the port – estimate time of arrival at the Pilot boarding ground and also advise the vessel's estimated draft fore and aft.
5. 24 hours before intended arrival confirmation or any variation of the advice previously given.
6. 12 hours before intended arrival, final confirmation of time of arrival.

In addition to the requirements above, all vessels are required to radio the Superintendent of Pilotage, Department of Marine and Harbours, Fremantle, Telex No. 94784 the messages referred to in 1, 2 and 3 so that arrangements can be made to fly a Pilot to Carnarvon. 48 hours and 24 hours ETA's to be sent direct to Harbour Master, Department of Marine and Harbours, Carnarvon.

Note: Because of the isolated location of Cape Cuvier and the need to organise transport for the various berth services it is imperative that ample notice is given on arrival times. This is particularly so for weekend arrivals. Failure to adhere to these requirements may jeopardise vessels berthing to the detriment of owner's account, and could result in substantial costs and delays.

VHF: Call sign: Cape Cuvier. Available frequencies: Channels 6, 8, 12, 16, 67. Loading Operation Frequency: 155.97 MHz. Emergency Working Frequency: Channel 67.

A continuous watch must be maintained by the vessel on VHF Channel 16. All vessels approaching the Port or at anchor must maintain a continuous watch on this frequency. *Disregard of this requirement is a contravention of Berth By-Laws and may adversely affect expeditious berthing.*

HEALTH: In the case of each vessel arriving from overseas the following information must be sent to the Port Health Authorities between 12 and 24 hours before arrival, addressing the message to Quarantine Carnarvon prefixing the message SHIPSERVE (a copy of which message is required to be sent also to Dampier Salt (Operations) Pty. Limited (Telex No. 99283)):

1. The expected hour and date of arrival of the vessel.
2. Confirmation that the Master has individually inspected all persons on board within 24 hours before arrival.
3. Particulars of any cases of serious illness on board.
4. Confirmation that all persons on board are satisfactorily vaccinated against cholera and in possession of valid Vaccination Certificate.
5. Request for permission to enter Port.

On receipt of quarantine message, Dampier Salt (Operations) Pty., Limited, will advise anchorage position if vessel is not berthing on arrival.

Vessels must also ensure International Quarantine signals are displayed at all times until cleared by the Quarantine Officer.

Quarantine inspections are normally carried out at the berth where the Quarantine Doctor/Officer may grant Free Pratique.

Rat guards are to be maintained on all mooring lines while vessels are berthed at Cape Cuvier.

Whilst berthed at Cape Cuvier all food and organic waste must be kept in efficiently sealed containers and frequently doused with a soluble disinfectant. No garbage may be thrown overboard.

TUGS: A contractor operates the tugs and line launches which are available at all hours.

The following craft are available to assist in berthing and unberthing.

"Cooralya" – Line launch. Length 9.6 m., breadth 3.8 m., draft 1.2 m. Engine Cat. 3208T. 260 h.p. at 2,800 r.p.m. Single screw.

"Quobba" – Tug. Length 19.5 m., breadth 6.1 m., draft 3.3 m. Main engines 2×V12 Detroit Diesel V71. Series 1,800 r.p.m. 470 b.h.p. each. Bollard pull 11.4 tonnes. Twin screw kort nozzles.

"Boolathana" – Tug. Bollard pull 25.0 tonnes. Length 24 m., breadth 8 m., draft 3.4 m. Main engines 2×V12 Caterpillar 398 1,400 r.p.m. 850 b.h.p. each. Twin screw kort nozzles.

BERTHING:

Salt Loading Berth: Situated at Lat. 24° 13′ S., Long. 113° 24′ E. The berth is used only for salt loading.

A central timber decked wharfhead carrying a fixed position, stiff arm, slewing and luffing conveyor boom shiploader with deflector.

Six mooring buoys anchored to the seabed.

Vessels moor to buoys and warp themselves into position for loading each hold. The shiploader generally has the capacity to load 2 adjacent holds for each warped position of the vessel.

The principal berth dimensions are as follows:

Natural seabed level: R.L. – 17.8 m.

Minimum distance between vessel and jettyhead structure: 14.5 m.

Berth length 670 m. between fore and aft mooring buoys Nos. 2 and 5.

Berth width 180 m., between breasting mooring buoys Nos. 3 and 4, and minimum vessel stand-off from jettyhead (14.5 m.).

R.L 0.0 m. is Indian Spring Low Water at Cape Cuvier. The maximum tidal range at Cape Cuvier is 1.7 m.

The principal shiploader dimensions are as follows:

Jettyhead area:	18 m.×18 m.
Jettyhead deck level:	R.L. 13.2 m.
Shiploader boom underside:	R.L. 16.2 m.
Shiploader boom outreach:	Approx. 30 m.
Shiploader boom luff:	incline 45° decline 15°
Shiploader boom loading arc:	incline 18° decline 15°
Shiploader boom slew:	± 90°
Shiploader boom conveyor width:	1,600 mm.
Shiploader boom conveyor speed:	3.1 m./sec.
Shiploader boom conveyor capacity:	3,500 t.p.h.

Also see "Loading".

MOORING:

Ships Mooring Lines:

1. Vessels shall provide the following lines:

6×250 m.×80 mm. diameter polylines on forecastle deck.

6×250 m.×80 mm. diameter polylines on afterdeck.

All lines to have a reinforced soft eye, 1 m. long in the outer end.

2. All vessels shall provide satisfactory ships lines on both fore and after decks such to pick up the 36 mm. diameter steel wires, 2 from each mooring buoys Nos. 2 and 5.

3. All working and spare lines supplied by the vessel are to be in first class working condition.

Mooring Equipment – Supplied by Dampier Salt:

1. Dampier Salt shall supply 2×310 m.×36 mm. diameter steel wires from each of mooring buoys Nos. 2 and 5. These lines are to be run back to the vessel and secured on drum winches to act as the fore and aft longitudinal mooring lines.

2. Dampier Salt (Operations) Pty. Limited shall supply all ropes necessary for stopping off polylines.

Berth Operating Conditions: Unless the Pilot otherwise directs, berthing operations will generally be restricted to the following conditions:

Winds: Zero winds from Northern quadrants and below 25 knots within the Southern sector between East and West.

Swells: Up to a mean amplitude of 2 m. as recorded on the berth wave rider.

Ballast: The vessel to maintain ballasted state with the propellor 75% immersed and a stern trim.

Berth Occupancy: Unless the Pilot otherwise directs, berth occupancy will generally be restricted to the following conditions:

Winds: Below 35 knots from the Southern quadrants. Below 10 knots from the Northern quadrants.

Swell: Up to a mean amplitude of 2.5 m. as recorded on the berth wave rider.

Mooring Procedure:

1. Preparation before Berthing – Two central drums, both fore and aft, are to be left bare ready to receive the 36 mm. diameter wires when these wires are landed on board from mooring buoys Nos. 2 and 5.

Suitable polylines are to be readied to be run out from the vessel to pick up the steel wires. The length of these polylines is to be a minimum 250 m. All other drum winches fore and aft are to be equipped with polylines 250 m. long and 80 mm. diameter. A minimum of 4 working polylines 250 m.×80 mm. must be available on each of the fore deck and after deck. If insufficient winch drums are available for these lines then they are to be coiled down on the deck. Two spare 250 m.×80 mm. polylines must be held coiled in readiness on each fore deck and after deck.

2. On berthing – Immediately prior to berthing, a number of shore based personnel will board the vessel to assist in handling lines during berthing. As instructed by the Pilot, polylines will be run out as both breasting lines and to pick up the steel wires from the fore and af mooring buoys. Polylines unable to be held on drum winches will be taken up on warping winches, stoppered off and placed on bitts.

The Pilot will give instructions as to how much tension is to be applie to each line.

3. On Warping – During the shiploading operation, it will be necessar to shift the vessel such that the shiploader can load the vessel i accordance with the loading schedule. Normally, the shiploader will loa only two hatches from the one positioning of the vessel.

The shore-based personnel will board the vessel to assist in line handling for the warping operation The tugs will also assist as required.

Under the direction of the Pilot, lines shall be played out or taken i such to warp the vessel to the next loading position.

4. On Unberthing – All lines shall be dropped or taken in as instructe by the Pilot. The shore personnel will assist in line handling.

LOADING:

Condition to Load Salt:

1. Ensure that vessel's holds are thoroughly washed and all traces o the previous cargo are removed.

2. Ensure that vessel's holds are thoroughly lime washed with slake lime (calcium hydroxide – $Ca(OH)_2$) and that no other substances ar mixed with it.

Note: Limewashing is a pre-requisite of vessel's loading. If vessel' holds are not considered by an independent Marine Surveyor to be in condition of cleanliness normally acceptable to Dampier Sa (Operations) Pty. Limited the vessel may not be loaded until such tim as the Surveyor is satisfied that the holds meet the standards set b Dampier Salt (Operations) Pty. Limited.

In the event that holds are not acceptable, the Master may be require to sign a "Letter of Indemnity" accepting the cargo on behalf of th Operating Line, acknowledging that holds are in the condition describe in the report by the independent Marine Surveyor.

Provided the vessel's holds are acceptable to the Surveyor as bein "clean" the Surveyor will issue a Hold "Cleanliness Certificate".

The above stipulations are necessary to avoid any contamination (other effects on the quality of the product loaded and are required b both Shippers and Receivers. Limewashing also assists in protectin the vessel's holds against adverse action caused by the salt.

3. Ensure that mooring lines are laid out in readiness for berthing i accordance with "Mooring Procedure".

Loading Procedure: The vessel is to ensure that the first 2 holds to be loaded have the hatch covers removed on berthing. On berthing the vessel will be positioned by the Pilot such that the loading can commence immediately upon acceptance of the notice of readiness and verification that vessel's holds are clean to standards set by Dampier Salt (Operations) Pty. Limited.

An independent Marine Surveyor appointed by Dampier Salt will agree all draft readings and ballast soundings with the Chief Officer prior to commencement of loading.

The Marine Superintendent from Dampier Salt (Operations) Pty. Limited will board the vessel immediately following mooring to check that the vessel is ready to load, and then commence the loading operation. This Officer will agree with the Chief Officer a loading sequence, loading schedule, warping procedures, draft problems (if any) and any other matters relating to the loading of the vessel. Warping procedures shall be confirmed with the Pilot.

The Marine Superintendent will draw up a loading schedule, after consultation with the Master, nominating the approximate hold loading duration, times of warping and the estimated time of completion of loading, and sailing time.

An Operations Foreman will normally remain on board the vessel for the duration of loading in order to liaise with the Chief Officer on matters concerning the loading procedures.

A belt weightometer is used by Dampier Salt (Operations) Pty. Limited to indicate loading rates and tonnages loaded in each hold. This instrument has an accuracy of ± 1.5%. It is the practice of Dampier Salt (Operations) Pty. Limited for the Surveyor and Chief Officer to agree a preliminary draft survey when the second last hold is approximately 80% loaded. This survey then allows the correct loading of the remainder of the cargo so as to ensure correct trim and prevent inadvertent overloading. The final loaded cargo tonnage is determined by draft survey, calculated by and agreed between the Surveyor and Chief Officer.

No labour is available at Cape Cuvier to board the vessel for any shipboard duties other than handling of mooring lines. Trimming is by conveyor discharge at the end of the loading spout only.

Salt – General Specifications: Stowage factor of Salt. Normal stowage density 32 cu.ft. per long ton or 0.89 cu.m. per metric tonne. Angle of repose 33°.

STEVEDORES: Dampier Salt Pty. Ltd.

MEDICAL: Master to advise by telex via coastal radio if any crew members require medical or dental services. Prior advice will generally ensure adequate arrangements can be made to accommodate such requests. Insufficient notice, or advice only on berthing may jeopardise the chances of obtaining normal medical/dental treatment. Emergency medical treatment is normally available through Carnarvon Regional Hospital.

DENSITY: 1025.

FRESH WATER: Not available. Due to possible loading delays caused by adverse weather it is recommended that vessels arrive with all fresh-water tanks full.

FUEL: Not available.

WATCHMEN: No shore watchmen available.

HATCHES: To be opened/closed by ship's crew.

CUSTOMS ALLOWANCES: 200 cigarettes in opened carton, or 0.25 lb. cigars, or 0.5 lb. tobacco, and one opened bottle spirits per crew member.

An Australian Customs Boarding Officer is resident in Carnarvon. Regulations of Australian Department of Customs and Excise apply to the Port.

CARGO GEAR: Not required. Salt loading is by conveyor belt.

REPAIRS: There are no ship repair facilities. However, vessels may carry out repairs of a limited nature but only with the prior approval of Dampier Salt (Operations) Pty. Limited and the Harbour Master.

DRY DOCK: None.

REPATRIATION: Road connection to Carnarvon, which is 65 miles distance from Cape Cuvier, thence air connection with Perth where international flights available.

AIRPORT: Private airfield only, about 10 miles from port of Cape Cuvier. Carnarvon has a daily air service to Perth. Connecting flights for other Australian cities and also for overseas destinations are available from Perth.

TIME: GMT plus 8 hours.

GENERAL: Port is gazetted under Western Australian legislation and controlled under Ports and Harbours Regulations.

Charts and Publications:

Australian Pilot Volume V
Australian Chart AUS 329 (N.W. Cape to Pt. Cloates)
Australian Chart AUS 330 (Pt. Cloates to Quobba Pt.)
Australian Chart AUS 331 (Quobba Pt. to Geraldton)
British Chart BA 1055 (Bedout Island to Cape Cuvier)

Winds: The local wind pattern usually shows a marked diurnal variation in both wind speed and direction, typical of the local sea breeze cycle. Wind intensity under the diurnal system regularly attains an intensity of more than 20 knots and blows from the Southern quadrants of the compass.

The mooring area is protected to some extent from Southerly winds by the cliffs at the Cape which are approximately 120 m. high.

Swell: A predominant high energy, long period swell system emanates from the deep sea to the S.W. This system is both diffracted and refracted locally by the topography of Cape Cuvier Point and travels eastward across the bay. Analysis shows that open sea swell patterns of amplitude of 3.5 m. are generally dispersed by diffraction and refraction at the Cape to an amplitude in the berth of generally less than 2 m. The period of these waves is generally in excess of 8 seconds and can be up to 30 seconds. Wave lengths are in the order of 250 m.

Superimposed on the long period swell system are the effects of the diurnal wind system which generate local wind waves of a shorter period of about 5 seconds. In this instance wave lengths are in the order of 30 m. Depending on wind direction, this short period swell is also diffracted and refracted by the Cape.

When local or storm winds blow consistently from the Northern quadrants for a duration of the order of 12 hours, the inshore berth location is subjected to the same type of wind wave climate as the offshore open sea location.

Current: The mean velocity profile in the berth of currents is some 5.3 cm. per second (0.1 knots) setting exclusively to the N.W. The maximum current speed recorded is 31 cm. per second (0.6 knots), this being a storm generated current.

Tides: For operational purposes, the tidal predictions for Carnarvon are usually considered accurate for Cape Cuvier.

A maximum tidal range of 1.7 m. can be expected at Cape Cuvier.

Cyclones: The local cyclone season extends from mid November to end of April with an average of one cyclone per year which will influence the area near Cape Cuvier. Cyclones in the area generally travel in a Southerly direction parallel to the coast prior to crossing the coast and moving inland. Whilst offshore the cyclone can generate dangerously high waves in the port which is unprotected from the North. Wave heights resultant from cyclonic conditions may reach 10.5 m. in the berth area. Wind velocities in excess of 60 m./sec. (120 knots) may also be experienced.

Weather Effects on Berth Occupancy: Berthing may be delayed due to strong winds or heavy swell and vessels may on occasion be required to return to anchor before completion of loading if the berth is affected by inclement weather conditions.

In these cases, the decision to vacate the berth will be made by the Pilot or the Harbour Master.

Ordering Stores: Telex advice of any and all stores and provisions requirements should be given to Agent at least 4 days prior to arrival. Stores orders received later than this may not be able to be filled.

Access to Vessel:

At Anchorage: Whilst at anchorage, access will be by authorised personnel only from the line launch or one of the tugs.

In Berth: Whilst in berth, access will normally be from a rope ladder and catwalk on the shiploader boom. On these occasions the shiploader supervisor will direct the timing and positioning of the shiploader boom such to minimise inconvenience to the shiploader operation.

Vessels Engines: Vessel's engines are not to be demobilised whilst the vessel is in berth. Adverse weather conditions affecting the area may require the vessel to be moved. Vessels in the berth will be on notice to shift at all times.

OPERATOR: Dampier Salt (Operations) Pty. Ltd., Lake Macleod Division, P.O.Box 501, Carnarvon, W.A. 6701. *Tel:* (099) 41 1200. *Telex:* AA 99283.

AUTHORITY: Department of Marine & Harbours, 1 Cliff Street, Fremantle, Western Australia 6160. *Tel:* 335-0888. *FAX:* (9) 335-0850. *Contact:* J. M. Jenkins, General Manager.

AGENT: See "Fremantle".

(C) USELESS LOOP (Shark Bay): 26.05 S. 113.24 E.

DOCUMENTS: See "Melbourne".

PILOTAGE: Compulsory. Notice for Pilots is by 'Shipserv' message to Superintendent of Pilotage, Department of Marine and Harbours, Fremantle, 7 days, 48 hours and 24 hours prior to arrival.

APPROACHES: Vessels from the North proceed direct to Denham Channel, vessels from the South can navigate through Naturaliste Channel with caution using Chart AUS 331. All vessels must anchor at pilot boarding ground situated 1 mile North of Denham Channel Lat. 25° 52′ S., Long. 113° 15′ E. and wait for further instructions on VHF Channel 16. Vessels must provide a good lee for pilot boat with ladder always on starboard side unless otherwise ordered. It is important that final ETA is correct and must be amended if necessary to Harbour Master via Carnarvon or Perth Radio. It is important that vessels arrive in full or good ballast condition otherwise they may be unable to berth.

Pilots remain on board during transit to Useless Loop, when berthed alongside jetty and until disembarkation in above position.

RESTRICTIONS: Continuous strong "Southerlies" may result in abnormal tides which could result in large vessels having to leave berth prior to completion of loading on rare occasions.

TUGS: None.

BERTHING: One berth. Owned and operated by Shark Bay Salt Pty Ltd. Conveyor belt system from Salt Stock Pile to ship gross rate 800 t.p.h. for salt, 600 t.p.h. for gypsum. Dolphin type jetty length 620 ft. runs approximately North and South directions and 2.1.cables from Topper Island. Min. depth at berth 33 ft. LWOST. Rise of tide approximately 3 ft. Winds predominantly S.E./S.W.

FUEL: Not available.

FRESH WATER: None available.

REPAIRS: Not available.

AUTHORITY: Department of Marine & Harbours, 1 Cliff Street, Fremantle, Western Australia 6160. *Tel:* 335-0888. *FAX:* (9) 335-0850. *Contact:* J. M. Jenkins, General Manager.

AGENT: See "Fremantle".

COFFS HARBOUR, N.S.W.: 30.18 S. 153.09 E.

PILOTAGE: Compulsory. Pilots boards in position Lat. 30° 18′ 36″ S. Long. 153° 09′ 42″ E.

APPROACHES: Depth at entrance 9.4 m. No bar.

ANCHORAGE: Vessels awaiting berth may anchor, in reasonable weather, on the line of the leads with the outer end of the jetty bearing approximately N.N.W.

HEALTH: Coffs Harbour is a first port of entry for quarantine purposes for the coast of New South Wales. Vessels requiring Pratique should not enter the boat harbour area inside the inner breakwaters. A quarantine mooring ground has been established between the boat harbour area and a line 3 miles off the Northern face of the main jetty.

VHF: Pilot and Port Authority on VHF.

BERTHING: Southern berth 189 m. long. Depth of 7 m. at outer end shoaling to 5.3 m. at inner end. Suitable for ships 91 m. to 121 m. long, any breadth, and 6 m. mean loaded draft.

Northern berth 168 m. long (approx.) depth 5.8 m. – 6.4 m. Occasional heavy swell in harbour and vessels use anchors at berth. Unmarked anchorage off the jetty has a sand bottom. Boat harbour on Northern side and launching ramp on Southern side. Berths connected to the N.S.W. railway system.

CRANES: Two diesel electric travelling cranes, capacity 5 tonnes.

STEVEDORES: *Working Hours:* 0800 to 1900 hrs.; weekdays, except Thursday, 0800 to 1700 hrs. Saturdays, 0800 to 1700 hrs. Sunday by arrangement.

FRESH WATER: Available at berths, 13.6 cu.m.p.h.

FUEL: Oil available in drums, or 45.5 cu.m. rail tankers available at berth if ordered 24 to 48 hours in advance.

REPAIRS: Light repairs effected.

AIRPORT: Nearest at Newcastle.

HOLIDAYS: See "Sydney".

AUTHORITY: Maritime Services Board of N.S.W., P.O.Box 23, Coffs Harbour N.S.W. Tel: (066) 523311.

Captain R. Pook, The Pilot Station, Gregory Street, South West Rocks, N.S.W. 2431. *Tel:* (065) 66-6140.

AGENT: See "Sydney".

DAMPIER: W.A.: 20.38 S. 116.45 E. (See Plan)

LOCATION: Port Dampier is located on the N.W. coast of Australia in the Dampier Archipelago. Legendre Island in position Lat. 20° 21′ S., Long. 116° 51′ E. forms the N.E. extremity of the Archipelago and Rosemary Island in position Lat. 20° 28′ S., Long. 116° 37′ E. forms the N.W. extremity of the Archipelago.

The port facilities are constructed: adjacent to Parker Point in Lat. 20° 39′ S., Long. 116° 43′ E.

East Intercourse Island in Lat. 20° 39.03′ S., Long. 116° 40.4′ E.
Mistaken Island in Lat. 20° 39.2′ S., Long. 116° 39.6′ E.

PORT LIMITS: A vessel is considered to be an arrived vessel from the time of crossing the quarantine line, which runs due East from Courtenay Head Lighthouse.

APPROACHES: From the 100 fathom line in Lat. 19° 20′ S., Long. 116° 20′ E., a channel 15 miles wide, leading 157° was surveyed by the Royal Australian Navy in 1963 and found to be clear of dangers. This approach is recommended for ships arriving from the North and N.E. Ships arriving from the West pass North of Tyrell Rocks situated to the N.W. of the Monte Bello Islands and then should pass not less than 5 miles to the North of Rosemary Island on the Latitude of Legendre Island Light.

Marine Notice: No. 1/84. Dated 1st June, 1984.

Mariners and small boat owners are advised that the following navigation buoys have been deployed to delineate the Woodside Channel in Mermaid Sound.

Spar Buoy No. 8W in position Lat. 20° 32′ 50″ S., Long. 116° 43′ 21″ E. This buoy is painted red and has a red (5 secs.) occulting light. The buoy has the characters '8W' painted on the spar and is fitted with a radar reflector and day mark.

Spar Buoy No. 4W in position Lat. 20° 28′ 40″ S., Long. 116° 43′ 53″ E. This buoy is painted red and has a red (5 secs.) occulting light. The buoy has the characters '4W' painted on the spar and is fitted with a radar reflector and day mark.

Woodside Channel Buoy in position Lat. 20° 26′ 12″ S., Long. 116° 43′ 42″ E. This buoy is painted red and has a red group flash 3 every 5 secs. light. The buoy has the word 'Woodside' painted on the spar and is fitted with a radar reflector and daymark.

Further construction work will continue in the area adjacent to the Spar Buoy 8W and all persons are cautioned to keep well clear of construction equipment in this area until further notice.

ARRIVAL ADVICE: Dampier is a first port of entry and all ships bound for this port are to radio through the normal recognised coast stations, addressing their messages "Pilharb Perth" and prefixing the message "Shipserv".

(a) In the case of vessels arriving from overseas.
  (i) 10 days before intended arrival at the port ETA and whether the port is the first port of call in Australia.
  (ii) 7 days before intended arrival at the Port, confirmation of any variation of the advice given pursuant to paragraph (i) above including in the message the forward and after arrival draft.
(b) In the case of all vessels, cable "Shipserv Pilharb Perth".
  (i) 72 hours before intended arrival at the Port advising ETA at the Pilot boarding ground East of Malus Island, including in the message if not previously given the forward and after arrival draft and deepest departure draft.
  (ii) 48 hours before intended arrival, confirmation or any variation of ETA.
  (iii) 24 hours before intended arrival, confirmation or any variation of ETA.
(c) In addition to this information, Masters of OBO vessels are to furnish the information required under "General" – "Gas-freeing".

Arrival Information: Every vessel intending to *load* a cargo of iron ore at Dampier shall on departure from the last port of call cable the following information, addressing the message SHIPSERV HAMIRON DAMPIER.

(a) ETA, quantity of cargo required, deepest departure draft, and distance between keel and hatch coaming.
  Example: Name of Ship, ETA PM20/4, 108000 k/t, 16.46 m., 24.15 m.
(b) 7 days before intended arrival at the Port confirmation or any variation to the above and indicate loading order by hatches of the products to be lifted.
  Example: Name of Ship, ETA 1000/4, 108000 k/t, 16.46 m., 24.15 m., 1/10000 Fines, 7/10000 Fines, 9/10000 Fines, 2/10000 Lump, 4/10000 Lump, 6/10000 Lump, 3/8000 Fines, 5/10000 Fines, 2/8000 Lump, 6/6000 Lump, 7/5000 Fines, 3/8000 Fines, Trim 3000 Fines. Total 108000 k/t.

Arrival Advices: Every vessel intending to *discharge cargo* at Dampier shall on departure from the loading Port or 7 days before arrival, whichever occurs first, cable the following information addressing the message SHIPSERV HAMIRON DAMPIER: ETA, quantity and nature of cargo to be discharged, stowage and the deepest arrival draft.

Example: Name of Ship, ETA AM/4, 4700LT. General 1/1200, 2/200, 3/1500.

Note: Berthing and sailing times must be fixed with Pilbara Harbour Services prior to 1500 hrs. each weekday and 0700 hrs. on Saturday for service between the hours of 2359 Saturday to 0830 Monday. It is therefore imperative that ample notice is given on arrival times particularly for weekend arrivals.

HEALTH: Radio Pratique is now in force for the Port of Dampier. Please send Radio Pratique message to Agency Telex Number not more than 24 hours before arrival or less than 12 hours before arrival. See "General – Health" before first port.

On receipt of quarantine messages Harbour Master will advise anchorage position if vessel not berthing on arrival.

Inspections may be carried out at the jetty or at anchorage at the discretion of the Quarantine Officer.

Rat guards are to be maintained on all mooring lines while vessels are berthed in Dampier Harbour.

PILOTAGE: Pilotage is compulsory for all vessels entering, leaving and manoeuvring within the Port except those of a tonnage of 150 tons or less and those whose Masters hold a valid pilotage exemption. Pilotage services operate from the pilot cutter "Pilbara Mercury" and Bell 206B Jetranger helicopter.

Pilot boarding and disembarking arrangements must comply with the SOLAS regulations and be properly rigged and attended.

Pilot Boarding Ground: The area bounded by lines of Lat. 20° 24′ 00″ S. and 20° 24′ 30″ S. and meridians of Long. 116° 44′ 30″ E. and 116° 43′ 00″ E.

Helicopter – Landing Requirements: Pilots will board suitable vessels by means of a helicopter which will land on a hatch cover. Normally this applies to bulk carriers and not general cargo vessels. The helicopter will not be used for oil tankers, which will, with other vessels unsuitable for helicopter operations, be boarded by launch. The helicopter used is a float equipped Bell 206B Jetranger weighing 769 kilos and is fitted with VHF Channels 16 and 11.

Where a vessel is to be boarded by helicopter, the vessel must meet the following criteria:

1. Mark on the hatch top, a termination are consisting of a square having sides of 11.7 m. in length. For day and night operations this mark must be in WHITE paint – all markings to be at least 13 cm. in width.
2. Surrounding the termination area there shall be an area not less than 10.67 m. in width in which there shall be no obstructions likely to hazard the rotor systems.
3. The combined termination area and obstruction free area shal constitute the helipad areas.
4. Within the termination area there shall be no obstructions likely to hazard the flotation systems.
5. The touchdown area shall be so situated within the termination area that when the floats are positioned within the touchdown area, the main rotor shall be contained within the termination area.
6. Paint the letter "H" in WHITE paint in the centre of the square having sides of 2.0 m. and 13 cm. wide.
7. Paint ALL handrails, lugs, ventilators and other obstructions on the hatch top in WHITE.
8. Ensure that ALL derricks, cranes, aerials, etc., are clear of the approach paths to the termination area.
9. The helipad shall be illuminated with floodlights positioned at both wings of the ship's bridge with the beams crossing over the helipad.
10. A flag or pennant must be illuminated so the helicopter pilot can assess the wind direction and strength.
11. Ships departing the port must wash down the helipad before the helicopter lands (day and night).
12. All loose objects must be removed from the helipad area.
13. All crew members should be kept clear of the landing area, an hats worn by crew approaching the helicopter must be secured b a chin strap, crew must not attempt to approach the helicopte unless requested to do so by the helicopter pilot. When the ship' Pilot has disembarked, an officer should be available to guide hin to the bridge.
14. Before making the initial landing the helicopter pilot will visit you ship and,
    i) Decide whether your vessel is suitable for helicopte operations.
    ii) Discuss with you any alterations which may be necessary t make landings possible.

The following is the radio procedure to be complied with: Before landin the helicopter Pilot must receive clearance from the Master by VH Channel 11.

i) Call sign of the helicopter will be "Dampier Pilot Helicopter".
ii) Phrases to use for landing.

Helicopter;

(Name of Ship) this is Dampier Pilot Helicopter, I request clearance t land.

Ship;
Dampier Pilot Helicopter this is (Name of Ship). You are cleared to land.

Example:
Helicopter;
"Senwa Maru" this is "Dampier Pilot Helicopter", I request clearance to land.
Ship;
"Dampier Pilot Helicopter" this is "Senwa Maru" you are cleared to land.

RADIO: Perth Radio – VIP. Broome Radio – VIO. Also see "Arrival Advice" and "Tankers".

VHF:

Call Sign	Dampier Port Control
Frequency	Channels 16, 67, 11, 12, 13, 14, 72, 74 and 68.
Channels	11, 13 and 68 are port working frequencies.
Channel 72	Can be used vessel to vessel.
Channel 67	Emergency working frequency.

A continuous watch is maintained on VHF Channel 16. All vessels approaching the Port or at anchor must maintain a continuous watch on this frequency.

Continuous watch is also maintained on VHF Channel 11, the working channel for general port traffic information.

TUGS: Pilbara Harbour Services Pty. Limited own and operate the tugs, workboats and lines launches which are available to shipping on a 24 hour service.

The following craft are available to assist in berthing and unberthing and for hire:

"Pilbara Star"	4,800 h.p.	Bollard Pull	55 tons
"Pilbara Saturn"	4,800 h.p.	Bollard Pull	55 tons
"Pilbara Neptune"	1,900 h.p.	Bollard Pull	28 tons
*"Pilbara Jupiter"	2,600 h.p.	Bollard Pull	47 tons

Three (3) Lines Launches
One (1) Workboat – 400 h.p.

MOORING: Mooring lines are taken ashore by lineboat. Vessels using heavy wire ropes are required to have the ends terminated with a 9 m. rope spring finished with a standard eye for placing over the bollards and slip hooks.

All mooring ropes and wires to have a 6 m. tail of light rope spliced into the eye to facilitate the transfer from the boat to the dolphin.

Vessels shall be ready in all respects to commence loading on completion of mooring, hatches cleaned and opened.

LOADING IRON ORE: Vessels loading iron ore are recommended to exhibit either on top of the hatch lids or on the deck or coaming adjacent to the hatch, numerals identifying the hatch. These are to be of such a colour and size as to be clearly visible to the shiploader operator stationed at the end of the shiploader boom.

Reference to loading is to be made by hatch, not hold and all weights are to be expressed in metric tonnes.

Confirmation in writing of the cargo booking is delivered on board prior to berthing by the Pilot.

This document contains four copies of the loading sequence. The first copy is retained on board, the remainder completed and passed to the shiploader operator immediately on berthing. Attention is drawn to the run off quantity required to be loaded to clear the conveyors at the completion of loading.

Red, green and white list lights, clearly visible to the shiploader operator are recommended fittings on all vessels loading iron ore. A fixed white light shall indicate the vessel is upright.

Masters are cautioned the loading of iron ore is carried out by draft. Frequent "on the run" draft checks between hatch changes should be carried out. Whilst shiploading sequences are equipped with weight scales, these figures are to be used only as a guide and reference to them will not relieve the Master of the responsibility of adequately maintaining draft checks and supervising the loading accordingly.

Final confirmation of tonnages on board will be the result of a draft survey carried out by the Master and the Company's surveyor.

Ballast shall be adjusted to ensure at high water a minimum clearance of 1.0 m. is maintained between the vessel's structures and the shiploader. Ballast to be discharged at a rate which prevents disruption to loading, final trimming and completion.

Subject to tide, ships shall be ready to vacate the iron ore berths on completion of loading and have all gear tested and available for use on departure.

Ships departing during the hours of darkness will require to have fitted on the fore mast a small steering light visible from the bridge.

STOWAGE FACTORS: The following stowage factors are provided for guidance:

Lump Ore	2.50 tonnes/cu.m.	Fine Ore	2.55 tonnes/cu.m.
Pellets	2.90 tonnes/cu.m.		

PARKER POINT ORE JETTY: The ore jetty consists of a tubular steel pile structure carrying a deck and rail traverse of a slewing boom shiploader.

8 multi-spring pile dolphins fitted with Yokohama air block fenders are situated clear of the ore jetty structure and vessels berth port side alongside and moor to these dolphins. See "Plan" for standard mooring pattern.

Iron ore is the only product handled and following are principal dimensions:

Length of jetty:	268.9 m.
Depth of water alongside:	17.20 m. (LAT)
Travel of shiploader:	180 m.
Radius of ore delivery from fender facing:	23.8 m.
Ht. under side boom at LAT:	22.14 m.
Total length of fendering, No. 1 to No. 8 dolphins:	354.8 m.
Rated capacity of shiploader:	6,000 long t.p.h.

The ore jetty is connected to the East Intercourse Island departure channel by a 170 m. wide departure channel dredged to 15.35 m. (LAT) in 1982.

Parker Point ore loading facility accommodates vessels up to 140,000 d.w.t.

The maximum departure draft from this berth is dependent upon tidal conditions and adequate under keel clearance.

EAST INTERCOURSE ISLAND ORE JETTY: The ore jetty consists of a tubular steel pile structure carrying a deck and rail traverse of a slewing boom shiploader.

Nine multi-spring dolphins fitted with Yokohama air block fenders are situated clear of the ore jetty structure and vessels berth starboard side alongside, mooring to these dolphins. See "Plan" for standard mooring pattern.

Iron ore is the only product handled over this facility and the following are principal dimensions:

Length of jetty:	341.4 m.
Depth of water alongside:	21.50 m. (LAT)
Travel of shiploader:	237.8 m.
Radius of ore delivery from fender facing:	25 m.
Ht. under side boom at LAT:	24.05 m.
Total length of fendering, No. 1 to No. 9 dolphins:	429.8 m.
Rated capacity of shiploader:	7,500 long t.p.h.

The ore jetty is connected to the open sea by a 167.7 m. wide departure channel dredged to 15.35 m. (LAT).

East Intercourse Island ore loading facility accommodates vessels up to 230,000 d.w.t. The maximum departure draft from this berth is dependent upon tidal conditions and adequate under keel clearance.

SERVICE WHARF: All general cargo is received over this facility and vessels are acceptable up to a max. draft of 7.19 m. (LAT).

The wharf consists of steel sheet pile cells constructed in water of surrounding depths of 6.51 m. (LAT).

A berthing basin 243.8 m. long and 38.10 m. wide has been dredged to a depth of 7.73 m. (LAT) on the Western side.

The wharf is 69.5 m. in length and faced with piles on which are secured rubber fenders. Mooring buoys are positioned off the N.E. and S.W. extremity of the wharf and head and stern lines are secured to these buoys.

Generally ships berth port side to this facility and normal discharge is carried out by 3 gangs using ship's own gear.

Vessels are required to berth ready in all respects to work cargo with hatches open and cargo gear rigged.

On completion, vessels may be required to vacate the berth and cover hatches, stow gear, etc., at anchor.

Tankers delivering oil products are accommodated at this wharf.

See "Plan" for standard mooring pattern.

MISTAKEN ISLAND SALT BERTH: The salt berth owned and operated by Dampier Salt Limited consists of a tubular steel pile approach structure carrying conveyor belt to a fixed position, cantilever shiploader.

7 multi-spring pile mooring dolphins are situated clear of the shiploader platform, ships generally berth starboard side alongside.

Due to the fixed nature of the loader, ships have to be warped along the line of dolphins, to bring each hatch in sequence under the loading boom.

This wharf was built by Dampier Salt Limited, for the handling of salt from their salt pans, situated 6.4 km. from the wharf. The following are the principal dimensions:

Total length of fendering No. 1 to No. 7 dolphins:	358.2 m.
Depth of water alongside:	12.00 m. (LAT)
Outreach of loader boom from line of fendering:	18.29 m.
Ht. under side boom at LAT:	20.01 m.
Rated capacity of shiploader:	2,800 long tons per hour.

See "Plan" for standard mooring pattern.

Underkeel Clearance: Underkeel clearance of 1.0 m. required whilst alongside. On departure vessels up to 35,000 d.w.t. to maintain 1.0 m. keel clearance and vessels over 35,000 d.w.t. to maintain 1.5 m. keel clearance.

Condition to Load Salt:

1. Ensure that vessel's holds are thoroughly washed – to remove all traces of the previous cargo.
2. Ensure that vessel's holds are thoroughly lime washed with slaked lime (Calcium Hydroxide – $Ca(OH)_2$) and that no other substances are mixed with it.
3. Vessels should ensure that mooring lines are laid out in readiness for berthing. See "Plan".

Note: Limewashing: This requirement is a pre-requisite of vessels loading. If vessel's holds are not deemed, by an independent Marine Surveyor, to be in a condition of cleanliness normally acceptable to Dampier Salt (Operations) Pty. Limited, the vessel may not be loaded until such time as the Surveyor is satisfied that the holds meet the standards set by Dampier Salt (Operations) Pty. Limited. This may mean that unacceptable vessels will be laid at anchor until the holds are deemed to be acceptable for loading salt. The Master may be required to sign a "Letter of Indemnity" accepting the cargo on behalf of the Operating Line – with holds in a condition described in a report by the independent Surveyor, if the holds are not acceptable. In these cases, no cleanliness certificate will be issued by the Surveyor.

Provided the vessel's holds are acceptable to the Surveyor as being "clean" the Surveyor will issue a Hold "Cleanliness Certificate".

The above stipulation is for the contamination effects on quality control and is a requirement of both Shippers and Receivers of the Salt. Limewashing also protects the vessel against adverse action on the vessel's holds caused by the salt.

Loading Procedure: The vessel is to ensure that the first two holds to be loaded have the hatch covers removed on berthing. On berthing the vessel will be positioned by the Pilot such that the loading can commence immediately upon acceptance of the Notice of Readiness and verification that vessel's holds are sufficiently clean to standards determined by Dampier Salt (Operations) Pty. Limited as acceptable to load.

An independent Ships' Surveyor, retained by Dampier Salt (Operations) Pty. Limited will take all draft readings during the berthing operation in order that the commencement of loading will not be delayed. Ship's arrival condition and ballast readings prior to commencement of loading will be agreed between the Chief Officer and Surveyor.

An Operations Supervisor from Dampier Salt (Operations) Pty. Limited will board the vessel immediately following mooring to check that the vessel is in readiness to load, and then commence the loading operation. This Officer will then agree with the Chief Officer loading sequence, loading schedule, warping procedures, draft problems (if any) and any other matters pertaining to the loading of the vessel.

He will draw up a loading schedule confirming with the Chief Officer the approximate hold loading duration, times of warping and the estimated time of completion of loading, and sailing time.

An Operations Foreman will remain on board the vessel for the duration of loading in order to liaise with the Chief Officer concerning the procedures and times to move the vessel so as to load each hold in warp sequence and maintain critical draft, where applicable.

A belt weightometer is used by Dampier Salt (Operations) Pty. Limited, to indicate loading rates and tonnages loaded in each hold. This instrument has a proven accuracy of ±1.5%. It is the practise of Dampier Salt (Operations) Pty. Limited, for the surveyor and Chief Officer to agree a preliminary draft survey when the second last hold is approximately 80% loaded. This survey then allows the correct loading of the remainder of the cargo so as to ensure correct trim and prevent inadvertent overloading. The final loaded cargo tonnage is determined by draft survey, calculated by and agreed between the Surveyor and Chief Officer.

No labour is available at Dampier to board the vessel for any shipboard duties. Trimming is by conveyor discharge at the end of the loading spout only. Any subsequent trimming required must be undertaken by the ship's crew.

Stowage Factor: Stowage density 32 cu.ft. per long ton or 0.89 cu.m. per metric tonne. Angle of repose 33°. It has been found that the cargo does not shift during the vessel's voyage to discharge port.

Typical Specification – Australian Salt NaCl (Sodium Chloride):

Appearance: Generally clear, white and free from organic matter.

Additives: Nil additives in final washed product.

Component:

(percentage by weight)	*Average*
Moisture content:	2.25
Calcium content:	0.03
Magnesium content:	0.02
Potassium content:	0.01
Sulphate content:	0.11
Chloride content:	58.97
Water insolubles content:	0.02
Heavy metals:	less than 15 ppm.
NaCl content:	97.50

Chemical analysis expressed in combined form:

NaCl	97.50%
$CaSO_4$	0.12%
$MgSO_4$	0.05%
$MgCl_2$	0.04%
KCl	0.02%
Moisture	2.25%
Insolubles	0.02%

Location of Berth in Relation to Dampier Township:

The berth although geographically in close proximity to the township of Dampier is in fact a journey of some 40 km. by road. The only land access to the berth being through Company property. During shiploading and/or replenishing of the salt stockpile on Mistaken Island, there is a continuous 24 hour per day movement of large heavy haulage trucks along a narrow causeway which makes the movement of private vehicles, taxis or individuals extremely hazardous. Therefore access to the township through Dampier Salt property is strictly controlled and limited.

Vessel Arrival Requirements:

Dampier Salt (Operations) Pty. Ltd. operates its own shipping agency department. All vessels calling at the salt berth are attended by a nominated Dampier Salt (Operations) Pty. Ltd. Shipping Officer who acts in the capacity of both owners and charterers agents.

Services Required:

1. Master to advise by telex via coastal radio if any crew members are required to attend doctors or dentists. Prior advice will generally ensure adequate arrangements can be made to accommodate the requests. Insufficient notice, or advice on berthing may jeopardise the chances of obtaining normal medical/dental treatment. Emergency medical treatment is available at all times.
2. Telex advice of any and all stores requirements should be given to Dampier Salt (Operations) Pty. Ltd., at least 4 days prior to arrival. Stores orders received later than this may not be able to be filled, although the majority of items normally requested are carried locally by the ships' providores.

   Prior telex advice will ensure the maximum supplied – whilst advice to the Agent on arrival may not be sufficient time to fulfil the full requirements of the vessel.

CARGO GEAR: See "Melbourne".

FUEL/WATER/REPAIRS: Fuel for ships' bunkers is not available.

A limited supply of fresh water is available in an emergency.

Stores and provisions can be arranged. For large orders Masters are recommended to cable their Agent giving 7 days notice of their requirements.

Minor ship repair work can be arranged through ship's Agents. However, Masters requiring major work are recommended to cable their Agents advising their requirements in advance. (Note: Port of Dampier By-Law No. 23).

MEDICAL: Doctors are permanently resident at Dampier and Karratha and a modern General Hospital is situated in Karratha.

TANKERS: Woodside Offshore Petroleum – Withnell Bay Berth: *Telegrams Required from Vessels Intending to Load Woodside Condensate:*

1. On departure from last port of call:

   A. To: (Agent's telegraphic address) Dampier Tlx. No. . . . advise:
   - (a) ETA and Arrival Draft Dampier.
   - (b) Type and complement of moorings available.
   - (c) Quantity and condition of ballast (segregated, dedicated clean ballast, dirty ballast) and rate – no tank washing slops, ballast containing lead, heavy metals, chemicals accepted ashore.
   - (d) Acceptable loading rate and if concurrent, ballast discharge.
   - (e) Confirmation readiness to load nominated cargo . . . tonnes NWS Condensate approx. density 15°C . . . Temp . . . °C.
   - (f) Prepare port side manifold with derrick/crane min. SWL 5 tons.
   - (g) Confirm accept quick connection/disconnection couplings to following requirements.
     - (i) Distance centre of flange to drip tray top more than 685 mm.
     - (ii) Distance between adjacent flanges centre to centre more than 1200 mm.
     - (iii) Clear distance behind flange face 230 mm.
     - (iv) Vessel flange thickness – 8 in. ANS1 150 28.4 mm. – 31.6 mm.; 10 in. ANS1 150 30.2 mm. – 33.4 mm.; 12 in. ANS1 150 31.8 mm. – 35.0 mm.
     - (v) Vessel flange diameter – 8 in. ANS1 150 341.3 mm. – 344.5 mm.; 10 in. ANS1 150 404.8 mm. – 407.0 mm.; 12 in. ANS1 150 481.0 mm. – 484.4 mm.
   - (h)
     - (i) All navigation, equipment/engines operational.
     - (ii) No tank leakage.
     - (iii) Inert gas system (if fitted) Operational.
     - (iv) All cargo systems/transfer equipment inspected, tested, leak free and operating correctly.
     - (v) Stress calculations for cargo transfers, ballasting and bunkering made and within recommended safety limits.

   B. To: "Shipserv Pilharb Perth" (Telex: 99610 Phspl) – Harbour Master advise ETA and whether first Australian port.
2. 7 days prior to arrival: Advise ETA and arrival drafts.
3. 3 days prior to arrival: Advise ETA.
4. 2 days prior to arrival: Advise ETA.
5. 24 hours prior to arrival: To "Shipserv (Agent's telegraphic address) Dampier Telex: (Agent's Telex No.).

   Advise ETA and confirmation answers question (h).

   Answer to Radio Pratique Questionnaire.
6. Coastal Vessels: Should advise the above requests as soon as possible.

Note: All requests for tugs, etc, must be made during office hours. Therefore it is essential that vessels advise Agents an accurate ETA prior to 1200 hrs. on Friday when the vessel expects to arrive between 1600 hrs. Friday and 0900 hrs. Monday.

Also see "Service Wharf".

STEVEDORES: Subject to application. Apply: Hammersley Iron Pty. Ltd.

GANGWAY/DECK WATCHMEN: Crew.

OPENING/CLOSING HATCHES: By crew.

SHIP CERTIFICATES: See "Melbourne".

REPATRIATION: Limited facilities available.

AIRPORT: Daily service to Perth. Karratha Airport is 15 km. from the port.

TIME: GMT plus 8 hours.

TELEPHONES: Ship-to-shore telephones are available at all berths for ship-to-shore communications. Ships and jetty telephones are barred access to STD and trunk line facilities.

WEATHER: The Archipelago is situated in the cyclone belt with an incidence of about three cyclones per year in an area extending from Port Hedland to North West Cape.

The cyclone season lasts from December to April.

Prevailing winds are Easterly in Winter and Westerly in Summer but surrounding hills give considerable protection. Forces in excess of 20 knots are seldom experienced.

The port facilities are situated in sheltered waters and experience only slight seas and occasional low Northerly swell in the Summer months.

TIDES: Tidal streams are weak within the Archipelago, the flood flowing to the South with a maximum strength of less than one (1) knot at Spring tides in the berthing area.

Spring tidal range is 5.3 m.
Neap tidal range is 3.2 m.
Mean sea level is 2.7 m.
(Lowest Astronomical Tide).

Dampier is a standard port in the Australian National Tide Tables, published by the Hydrographer Royal Australian Navy.

SERVICES: A Walport film exchange is available – contact ship's Agent.

A sealed road connects Dampier with Perth extending North to Port Hedland. This highway provides all weather access from the State capital.

A bus service operates between Dampier and Perth and Dampier and Port Hedland.

Postal and telegraphic facilities are available at Dampier Post Office. Business Hours: 0900–1230 hrs., 1330–1700 hrs. weekdays.

Customs: A sub-collector of Customs and staff are resident in Dampier and regulations of the Department of Business and Consumer Affairs–Bureau of Customs will apply.

Police: A police sergeant and police officers are stationed at Dampier.

Township: Dampier is a modern township built overlooking Hampton Harbour at the S.W. extremity of the Archipelago. It has a population of approximately 3,000 and an enclosed air-conditioned shopping centre and hotel-motel cater for everyday requirements.

SEAFARERS' CENTRE: A seafarers' centre operated by the Mission to Seamen Flying Angel Club is located on the Esplanade, Dampier, overlooking the Hampton Harbour. The centre is equipped with a shop, recreational facilities, bar, and serves meals. Telephone: 83 1424 (area code 091).

GENERAL: *Gas-freeing of Vessels:* The port requirements regarding gas-freeing of OBO or other vessels presenting at the port are as follows:

The Master of an OBO vessel shall cable the Harbour Master Port of Dampier addressing its message "Shipserv Pilharb Perth" 72 hours before intended arrival at the port, advising:

(a) Nature of the preceding three cargoes the vessel has carried.
(b) Date and place last oil cargo was discharged.
(c) Statement on the condition of the slop tanks and whether these are pressed up or fully inerted and sealed.
(d) The date and place of issue of the Gas-Free Certificate carried on board.

1. Where vessels have been issued with a Gas-Free Certificate prior to their call at Dampier, such vessels can berth on arrival or whenever the berth is free.
2. Where vessels arrive at the Port of Dampier without a Gas-Free Certificate on board, such vessels must be issued with a Gas-Free Certificate before berthing.
3. No Gas-Free Certificates signed by the Ships' Masters will be accepted.
4. Gas-Free Certificates will be acceptable only from an industrial chemist or any other competent person approved by the Port Authority, Pilbara Harbour Services Pty. Limited.

Charts and Publications:

1. Australian Pilot Volume V
2. Australian Chart No. 741 Decca
3. Australian Chart No. 58 Decca

Hamersley Iron Pty. Limited: The jetties, wharves and facilities over which iron ore, general cargo and oil products are handled are owned and operated by:

Hamersley Iron Pty. Limited, Tel: 83 1000 (Area Code 091). Telex: AA99151. Cables: "Hamiron Dampier".

Vessels Arriving to Discharge General Cargo:

(a) Owners are required prior to accepting cargo for Dampier, to submit a copy of the vessel's General Arrangement Plan for the purpose of ascertaining the vessel's acceptability in sufficient time to permit recommendations to be made on the positioning and stowage of the cargo.
(b) Prior to departure from the loading port, Masters shall forward by first class air mail a copy of the vessel's cargo plan showing the nature, description and weight of the cargo to be discharged at Dampier.

The documents referred to in (a) and (b) above shall be forwarded to Hamersley Iron Pty. Limited, P.O.Box 21, Dampier, marked *Urgent Ship's Papers.*

Also see "Arrival Advices".

REGULATIONS: Following are some of the important regulations in respect of handling of dangerous goods (effective 1st November, 1984).

46. (1) The Master of a vessel having on board flammable liquid or onto which flammable liquid is being loaded shall ensure that, in handling the flammable liquid, the requirements of the International Safety Guide for Oil Tankers and Terminal (1984 Edition) published by the International Chamber of Shipping are complied with in addition to the other requirements of these regulations.

(2) The Master of a vessel having on board liquefied flammable gas or onto which liquefied flammable gas is being loaded shall ensure that, in handling the liquefied flammable gas, the requirements of the International Chamber of Shipping Tanker Safety Guide (Liquefied Gas) (1979 Edition) published by the International Chamber of Shipping are complied with in addition to the other requirements of these regulations.

47. (1) In this regulation the Rules for the Safe Transport, Handling and Storage of Dangerous Substances and Oils in Port Areas (1984 Edition) made by the Association of Australian Port and Marine Authorities are referred to as the rules.

(3) The Harbour Master may exempt the Master of a vessel from the requirements of sub-regulation (2) if he is satisfied that:

(a) flammable liquid has not been carried in the tanks or spaces into which the ore is to be loaded during the last 3 voyages on which cargo has been carried in those tanks or spaces; and
(b) since flammable liquid was last carried in the tanks or spaces they have been properly cleaned and ventilated and a certificate as described and to the effect described in sub-regulation (2) (a) has been obtained from an approved person, and any such exemption may be given subject to the taking of such other precautions as are specified by the Harbour Master.

(4) An exemption under sub-regulation (3) shall have effect according to its tenor.

(5) Application to the Harbour Master for an exemption under sub-regulation (3) may be made in writing setting out a description of the cargo carried on each of the last 3 voyages and the dates on which they were loaded and the application shall be accompanied by a copy of the certificate referred to in sub-regulation (3) (b) that the Harbour Master is satisfied is authentic.

64. The Master of a dangerous goods vessel berthed at a wharf shall ensure that the outboard side accommodation ladder or lifeboat is turned out as an alternative means of escape.

67. (b) at all times while the vessel is berthed at a wharf, in addition to the requirements of paragraph (a):

(i) the vessel's International Ship-Shore Fire Connection is connected to the fire hydrant of the vessel that is nearest to a gangway; and
(ii) a hose is connected between the vessel's International Ship-Shore Fire Connection and a shore hydrant.

78. (4) Where a vessel is to be loaded with, or unloaded of, flammable liquid, the Master of the vessel shall ensure that, before loading or unloading is commenced, a box or satchel on which the words "Emergency Documents", in black letters, are clearly displayed, is placed on the wharf in a prominent and readily accessible position at least 30 m. from the vessel and that the box or satchel contains:

(a) details of the plan referred to in sub-regulation (1) (a), including particulars of relevant times, sequences, and rates;
(b) a list of the characteristics of:
  (i) the cargo, if any, on board the vessel; and
  (ii) the flammable liquid to be handled;
  and details of the position where it is or, as the case may be, is to be stowed;
(c) a Crew List, including reference to persons joining or leaving the vessel while it is in the port; and
(d) a plan of the general arrangement of the vessel.

82. (1) The Master of a vessel engaged in cargo operations involving dangerous goods shall ensure that:

(a) 2 suitable independent telephone or VHF systems for communicating between the vessel and the shore are available; and
(b) throughout the cargo operations, all reasonable endeavours are used to maintain communication between the vessel and a responsible person on the shore by means of each of the 2 systems referred to in paragraph (a).

(2) For the purposes of sub-regulation (1) (a), a VHF system is not suitable unless each unit is portable and is carried by a person nominated for the purpose of maintaining communication in accordance with sub-regulation (1) (b).

83. The Master of a vessel shall ensure that:

(a) if any leakage or spillage occurs during the loading onto, or unloading from, the vessel of flammable liquid, the loading or unloading shall be forthwith stopped, all valves shall be closed, and the Harbour Master shall be forthwith notified; and
(b) if any leakage or spillage of oil or oily ballast water onto the deck occurs, scupper plugs are not removed and steps are taken forthwith to prevent oil or oily ballast water from going overboard.

AUTHORITY: Pilbara Harbour Services Pty. Ltd., East Intercourse Island, P.O.Box 178, Dampier, Western Australia, 6713.

Tel: (091) 83 1306. *Telex:* AA99610. *Cables:* Pilharb Perth. *Contact:* Captain G. F. Hammonds, Harbour Master. T. E. Dyer, Superintendent – Port Operations.

AGENT: Pilbara Harbour Services Pty. Ltd.

DARWIN, N.T.: 12.28 S. 130.50 E. (See Plan)

PORT LIMITS: A line between Charles Point and Lee Point defines the seaward limits of the port.

DOCUMENTS: Vessels arriving at Darwin as their first Australian port will require the following documentation:

2 Crew Lists, Form M & S 11.
2 Passenger Lists, Forms M308, 309, 310.
2 Port of Call Lists.
1 Crew Personal Effects List, Form 5.
2 Barber's and Ship's Stock, Form 5AA.
1 Stores List, Form 42A.
1 Animal Pets Aboard, Form QA4.
Ship's Log.
Last Port Clearance.
Safety Certificates: Construction
Equipment
Loadline
Radio
International Oil Pollution Prevention Equipment (Tankers Only).

Where possible, cargo manifests and stowage plans should be forwarded by airmail, ahead of the vessel to the local Agents.

Enquiries regarding Customs Allowances should be directed to either the vessel's agent or to the Customs Officer at time of boarding.

PILOTAGE: Darwin buoyage is IALA "System A". Pilotage is compulsory for all craft exceeding 25 m. LOA unless a current Pilotage Exemption is held by the Master.

Pilot Boats: Pilot boats are dark blue with the word "Pilot" in white on either side. Decks and upperworks are yellow and white with red visibility patches. Both boats are fully seagoing and equipped with radio, radar, fire and salvage pumps, as well as equipment for treating oil pollution.

Boarding: The usual pilot boarding point is 1 nautical mile N.W. of Channel Rock Buoy (No. 6). Pilot boarding arrangements must be according to the International Maritime Organisation Regulations.

Vessels awaiting pilotage may anchor between 1 and 2 nautical miles N.W. of Channel Rock Buoy, in 25 m. of water, sand bottom and good holding ground.

Special arrangements can be made for deep draft vessels, whereby the Pilot will board to seaward of Charles Point Patches Buoy (No. 5) situated at Lat. 12° 20.4′ S., Long. 130° 40.5′ E. Vessels awaiting pilotage from Charles Point Patches Buoy may anchor 2 nautical miles North of the buoy, where there is not less than 20 m. of water and good holding ground.

In the case of bad weather, the pilot boat will lead ahead to sheltered waters, using VHF-FM radio for communication.

Also see "Radio".

ANCHORAGE: Masters familiar with the Port may be invited to proceed to the Quarantine Anchorage area, 0.3 to 0.5 of a nautical mile West of Quarantine Buoy (No. 10), situated at Lat. 12° 28.6′ S., Long. 130° 49.9′ E. The Quarantine Anchorage area offers good sand holding ground in not less than 15 m. of water.

Also see "Health".

MAX. SIZE: Ships up to 246 m. LOA and 12.83 m. draft have been accepted at No. 1 berth by special arrangement, depending on tide conditions.

HEALTH: *Quarantine Reporting:* A vessel approaching the Port and requiring pratique, should send a message to the Quarantine Office not more than 24 hours and not less than 12 hours before arrival, containing the following information: name of vessel, ETA, number of passengers, number of crew, number of passengers disembarking, and last port of departure and date. The message should also state whether or not there is any disease on board, whether or not livestock have been carried within the last 6 months, and whether or not there are any animals or birds on board at present.

On arrival the health report should be given to the Quarantine Officer, 2 copies being furnished on the prescribed form (Q360 Form A), one of which will be signed by the Quarantine Officer and returned to the Master. A passenger list and crew list together with a list of passengers disembarking including their permanent address within the country is also required. (Commonwealth Health Department – Quarantine Regulations – Part III: 18, 19, 20 and 21.)

The telegraphic address of the Quarantine Department is "Quarantine Darwin Telex AA85658".

Health Clearance: The Commonwealth Department of Health Quarantine Officer will clear vessels at all times, subject to the provision of suitable lighting during the hours of darkness. A gangway should be made available for the use of the Quarantine Officer. The appropriate day or night signal should be displayed until clearance is obtained. (By night – red over white lights.) Subject to receipt of a satisfactory message, wharfside clearance or radio pratique may be available on request.

Quarantine Anchorage: The Quarantine anchorage is 0.3 to 0.5 of a nautical mile West of Quarantine Buoy (No. 10). Vessels requiring to use the anchorage may be subject to pilotage.

RADIO: Ships at sea should work Perth (VIP) or Sydney (VIS), these being the major West and East area stations. Darwin Radio (VID) should be worked as early as possible and full use made of Satcom and Telex.

ETA: Notice of ETA and request for a Pilot must be made to the Harbour Master not less than 24 hours before anticipated arrival at Channel Rock Buoy (No. 6), situated at Lat. 12° 25.1′ S., Long. 130° 46.9′ E.

Communications: Telex messages should be addressed to Telex AA85605, answer-back code "Harbour". Telegraphic address is "Shipserv Norport".

Confirmation of ETA is required at least 2 hours before arrival at Channel Rock Buoy. Such confirmation, or any amendment to ETA, should be made on VHF-FM Channel 16 (156.8 MHz) or the Port Working Frequency of VHF-FM Channel 10 (156.5 MHz). Both Channels are continuously monitored.

VHF-FM Channel 16 is for calling and distress only; Channel 10 should be used for routine working.

The standard Colregs signals may be used by vessels requiring a Pilot.

VHF: Communication within the port is by VHF-FM radio using the following frequencies:

Channel 16 – 156.800 MHz	Distress and calling
67 – 156.375 MHz	Distress
10 – 156.500 MHz	General Port working and routine business
12 – 156.600 MHz	Tug working
6 – 156.300 MHz	Intership

Call sign is "Darwin Harbour" H24.

Ships arriving off the port should make contact on Channel 16 and shift to Channel 10 for routine working. This can be done as part of "Notice of Arrival" which is required 2 hours before ETA Channel Rock Buoy.

RADAR: A low power radar installation covers the commercial port area but is not part of the traffic management system. Both the pilot boats are radar equipped.

TUGS: Coastal Tug and Barge Pty. Ltd. operate the tug "Goyder" of 700 kw and 10 tonne bollard pull. This vessel has limited seagoing capability.

Line Boats: Frances Bay Marine offer 2 small metal work boats for line handling and limited picket boat service.

Launches: Launches up to 50 passenger capacity are available for services to vessels at anchor.

Those and other vessels, including landing barges up to 20 tonne d.w.t., can be contacted through the Port Office.

BERTHING: See Table below.

No. 1 Berth (Iron Ore Wharf): No. 1 Berth is a dolphin type berth with a face length of 142 m. Two mooring dolphins are positioned 69 m. East and West of the berth, which can routinely accommodate vessels up to 240 m. LOA and 12 m. draft.

The berth is used mainly for the import of bulk petroleum products and acids, as well as the export of livestock, bulk ores and ore concentrates. In addition, No. 1 Berth can be utilised as a ro-ro berth for vessels with large starboard quarter ramps, such as first and second generation PAD and SCAN carriers. Bunker fuel up to 120 cSt is available by 15 cm. pipe-line.

The wharf is equipped with a travelling belt loader, designed for ores and similar dry bulk cargoes. The loader has a transit distance of 140 m. along the wharf and an outreach of 14 m. beyond the fenders. The high water air-draft of the loading boom is 11 m. The loader is connected by travelling belt to the shore stockpile area, a distance of approximately 450 m. Bulk cargoes can be loaded at a maximum gross rate of 1,000 tonnes/p.h.

A variety of product lines are installed to handle petroleum and acid cargoes:

Black oil	30 cm.
White Oils	25 cm.
Distillates	20 cm.
Marine Diesel	15 cm.
LPG	10 cm.
Sulphuric Acid	10 cm.

Discharge rates up to 300 tonnes/p.h. (1,000 kPa) can be accepted on each of the main pipe-lines.

No. 1 Berth is also equipped with a cattle race, 200 m. in length, for the live export of cattle and buffalo. The ship loading ramp is workable at any stage of the tide. Livestock are delivered into the cattle race directly from road trains.

No. 2 Berth West (New Fort Hill Wharf): No. 2 Berth West, 150 m. in length, was opened in 1981 to form the first stage of the Port of Darwin's present development programme.

Maximum deck loading is 2.5 tonnes/sq.m. and height of deck is 9.5 m. above datum. Minimum depth alongside is 11.8 m. Bunker fuel up to 40 cSt is available by 20 cm. pipe-lines. The berth is fitted with pipe-lines for the discharge of bulk cement.

Ro/Ro Facility: In 1982 the "Linkspan" ro/ro facility was installed at the Western end of No. 2 Berth, establishing the berth as the centre for ro/ro operations.

The ro/ro facility consists of an extendable version of the "Linkspan" ship-to-shore semi-buoyant bridge 77 m. in length, connecting with a 35 m.×42 m. pontoon and is workable at all tidal levels.

The pontoon can be extended, retracted and ballasted, thus enabling ro-ro vessels of any size or type – side-loading, end-loading, quarter-loading (port or starboard) – to use the Port of Darwin.

For example, when extended:

The pontoon forms a corner berth for use by ships with their own ramps. Non-ramp ships can be loaded or discharged over extendable finger flaps.

Ships with port or starboard quarter ramps or stern ramps, lying port side to the wharf, can be handled with equal ease. Vehicles discharged over a starboard quarter ramp make a 125° turn on the pontoon to reach the end of the "Linkspan",

Large international ro-ro vessels, such as first and second generation PAD and SCAN carriers, can lie at the No. 1 Berth, working cargo over their starboard quarter ramps.

When the pontoon is retracted, its outer end forms an extension of No. 2 Berth West. The facility can then be used for vessels like car carriers, with side doors or starboard shoulder ramps.

No. 2 Berth East: No. 2 Berth East is a 150 m. extension to No. 2 Berth, giving a total wharf length of 300 m.

Maximum deck loading is 5 tonnes/sq.m., enabling containers to be stacked 4 high and catering for forklift axle loads of 80 tonnes. Deck height above datum is 9.5 m., with minimum depth alongside 12.5 m.

Both No. 2 Berths, West and East, are served by an I.H.I./Sumitomo rail-mounted, single lift gantry container crane. The crane has a container handling capacity of 30 TEU per hour and a heavy lift capacity of 70 tonnes. A 10 cu.m. grab is available for the handling of bulk cargoes.

Berths	*Main Cargoes*	*Depth Alongside (m.)*	*Length (m.)*	*Height above datum (m.)*	*Max. Deck Loading (Tonnes/sq.m.)*	*Width of Apron (m.)*	*Special Facilities*
No. 1	Petroleum Livestock Mineral Ores	12.0 – 12.6	142	10.4	3.0	12.0	Travelling Belt Unloader, Ro-Ro
No. 2 West	Containers Dry Bulk Piped Cement	11.8	150	9.5	2.5	35.0	Container Crane, Ro-Ro Container Crane
No. 2 East	Containers Dry Bulk	12.5	150	9.5	5.0	35.0	—
No. 3 West	General	9.0 – 10.0	146	10.6	1.8	12.2	—
No. 3 East	Dry Bulk General	9.0 – 12.6	146	10.6	2.2	34.0	—
No. 4 West	Fishing	4.5 – 7.0	70	9.5	1.8	11.9	—
No. 4 East	Fishing	4.5 – 6.0	70	9.5	1.8	9.0	—
Frances Bay	Fishing	4.0	200	8.5	1.0	21.0	—

No. 3 Berths, West and East (Outer Stokes Hill Wharf): No. 3 Berths, West and East, comprise the outer side of a concrete decked, steel piled wharf with a 300 m. trestle approach. Total length of the two berths is 292 m., with a least depth of 9 m. Height above datum is 10.6 m. Permissible wheel loading for standard type vehicles is 6 tonnes, while maximum deck loadings are 1.8 tonnes/sq.m. with some local restrictions.

Both berths are used mainly for general break bulk cargo, as well as by rig tenders, timber carriers, passenger ships, survey vessels and visiting naval craft. Number 3 Berth East, is also used for dry bulk imports, such as sulphur and clinker, which are landed by ship's grab. Bunker fuel up to 40 cSt is available by 12 cm. pipe-lines.

No. 4 Berths, West and East (Inner Stokes Hill Wharf): These berths, on the inner side of Stokes Hill Wharf, are reserved for smaller vessels such as prawn trawlers, tugs and the like. Maximum length of vessel is restricted to 40 m.

Total length of the berths is 140 m., with a least depth alongside of 4.5 m. Height above datum is 9.5 m., with maximum deck loading of 1.8 tonnes/sq.m. Bunker fuel up to 40 cSt is available by 12 cm. pipelines.

Frances Bay Small Ships Facility: The facility has a concrete deck on steel piles with an overall length of 200 m. The least depth is 4 m., deck height is 9.5 m. above datum and deck loading is 1.0 ton/sq.m.

Facilities include shore power at 415V., 3 phase, 100A per point, bunkers to 10 cSt and fresh water. The wharf is designed as an assistance to the fishing industry and is situated adjacent to Darwin Ship Maintenance Services repair works, with its 400 ton synchrolift dock. Full cold and dry storage facilities are under construction.

Storage Facilities: One cargo shed suitable for the under-cover and secure storage of break bulk cargoes is located at No. 3 Berth West (Stokes Hill Wharf). Total floor area is approximately 1,600 sq.m.

The port's two main cargo sheds are situated in the Container Depot, adjacent to Kitchener Drive. The sheds have a total floor space of approximately 7,000 sq.m. Used predominantly for container storage, the sheds are equipped with 60 power points for refrigerated containers.

The Container Depot has an additional 18,000 sq.m. of open storage space, able to accommodate 600 TEU when double stacked.

The first stage of the Darwin Container Terminal, immediately adjacent to No. 2 Berth West, was completed in May, 1983. Fitted with 64 power points for refrigerated containers, the Terminal is currently able to accommodate approximately 624 TEU when double stacked.

The Terminal's capacity is being gradually increased as land-backing of No. 2 Berth West progresses. With the completion of the berth's land-backing, expected in 1988, the Terminal will be capable of accommodating 1,000 TEU when double stacked.

CARGO HANDLING EQUIPMENT: An extensive range of cargo handling equipment is maintained by the Port Authority and the Stevedores.

Fork lifts vary in lifting capacity from 2.5 tonnes to 27 tonnes.

Mobile cranes of up to 16 tonnes lifting capacity are owned by the Port Authority. Larger mobile cranes – up to 300 tonnes – can be hired locally.

A variety of tractors and trailers (6.1 m. and 12.2 m.) are available as internal transfer vehicles and for ro/ro container operations.

BRIDGES: There are no bridges or other restrictions to prevent access to the Port by vessels of not more than 12 m. draft. Ships of greater draft may need await tide at Charles Point Patches.

STEVEDORES: Working hours from 0800 – 2200 hrs. (2 shifts) Sundays to Fridays, extension to 2400 hrs. if vessel sails. Saturdays to 1200 hrs. with extension to 1500 hrs. if vessel is sailing. Night shifts by arrangement. Weekend and Monday labour (including mooring gangs) must be ordered by 1300 hrs. Friday. Average rate on breakbulk general is 9 tonnes/p.h per gang.

OPENING/CLOSING HATCHES: Ship's hatches are usually handled by W.W.F. labour while the vessel is alongside.

GANGWAY/DECK WATCHMEN: Gangway Watchmen are compulsory for all foreign going vessels over 3,000 g.r.t., can be supplied by the Stevedores at union award rates. Hold Watchmen are not necessary. Shed or Gate Watchmen may be required during the handling of hazardous cargoes.

Gangways: Various shore gangways are available for hire from the Stevedores.

MEDICAL: Full hospital facilities available without prior notice.

FRESH WATER: Good quality potable water is available in unlimited quantities at all berths. Delivery rate is approximately 30 tonnes/p.h. per connection.

FUEL: All grades of fuel up to 40 cST and lubricants are available.

TANKERS: See "Berthing".

Precautions: Governed by Australian Ports Association standards. Copies of Port tanker rules are supplied on arrival and will be amplified by Pilots if necessary.

CONSULS: The following Consuls are located in Darwin:

Honorary Consul for Finland
Mr. J. C. Hickman, G.P.O.Box 540, Darwin.
Honorary Consul for Germany (F.R.)
Mr R. W. Barth, G.P.O.Box 3329, Darwin
Honorary Consul for Greece
Mr. P. H. Paroulakis, G.P.O.Box 3070, Darwin.
Consulate of Indonesia
Mr. Soedhoro, G.P.O.Box 1953, Darwin.
Honorary Consul for Italy
Mrs. Anna Sacilotto, G.P.O.Box 2364, Darwin.
Honorary Consul-General for Japan
Mr. R. Morris, G.P.O.Box 1616, Darwin.
Honorary Consul for Philippines
Temporarily unfilled.
Honorary Consul for Portugal
Mr. J. L. da Costa Alves, G.P.O.Box 455, Darwin.
Honorary Consul for Switzerland
Mr. P. H. Fuchs, 46 Wells Street, Darwin.

DENSITY: The usual water density of 1,025 kg./cu.m. may reduce to 1,022 kg./cu.m. during the wet season owing to river run-off.

REPAIRS: Routine maintenance and boilermaking assistance to light engineering standards. There is no foundry in the Port.

DRY DOCKS: A "Syncrolift" facility with S.W.L. 400 tons operates at Frances Bay (length 40 m., breadth 9 m., depth 4.0 m.).

SURVEYORS: Representatives of most Cargo Surveyors and Classification Societies can be brought from interstate or overseas at short notice. Lloyd's Agent at the port represents most of the Classification Societies and both Commonwealth and N.T. Surveyors are appointed at the Port.

CUSTOMS ALLOWANCES: Australian Commonwealth Regulations apply.

Customs Officers board all vessels upon arrival, with the exception of Intermediate Port vessels. For such vessels, Officers board Mondays to Fridays between 0800 hrs. and 1600 hrs.

Prior notice of arrival is required, including details of passengers and crew leaving the vessel at Darwin.

Requests for the services of Customs Officers should be made through the vessel's Agents.

REPATRIATION: Scheduled aircraft connect with all Australian states several times daily. Direct overseas connections include New Zealand, Singapore, Bali and Brunei. All facilities exist for changes of crew and repatriation of seamen. Full hospital facilities are available without prior notice.

AIRPORT: International connections possible.

TIME: Local time is UT minus 9 hours 30 minutes without variation. Summer time is not used. ETA and similar information should preferably be in local time: if GMT/UT is used, it should be clearly stated.

HOLIDAYS: Cargo is not worked on Christmas Day, Good Friday, Anzac Day or Picnic Day (first Monday in August).

Gangs for mooring and unmooring vessels can be made available at all times.

POLICE/AMBULANCE/FIRE: All emergency services are available through the Harbour Office. Automatic fire alarms are installed throughout the Port and alarms can be raised or emergencies reported on Channel 16 at any time.

Police	27.8888
Fire	22.3344
Ambulance	27.9000

EMERGENCY CO-ORDINATION CENTRE: Any maritime emergency will initially be handled through the Harbour Office. The responsibility may eventually be transferred to another authority depending on the magnitude or complexity of the emergency.

TELEPHONES: This service is available aboard ships at all berths by prior arrangement through the Agents. Standard rates apply.

SHORE LEAVE: When Immigration and Customs requirements have been satisfied, there are no restrictions on crew members' shore leave. Identity cards or shore passes are not necessary.

A Telephone Interpreter service is available by telephoning 81 4411 at any time. Most major European and Asian languages are included.

DELAYS: Berthing delays are very infrequent. Occasional labour shortages develop when several general cargo vessels are working.

SERVICES: A Compass Adjuster resides at the Port.

BANKS: No foreign bank branches exist in the Northern Territory but local banks represent most overseas finance houses.

STORING: Vessels can be stored by truck or by launch if at anchor. Vehicles and boats may not approach tankers while working cargo. Forklifts and shore cranes can be used to assist stores loading. Local labour is available to assist storing. The usual Customs Regulations apply regarding drawback of duty or tax.

GENERAL:

Charts and Documents: Refer to:

AUS 27, 28, 309
Admiralty Pilot Vol V
Admiralty List of Lights (Vol K)
Admiralty Tide Tables (Pacific)
Admiralty National Tide Tables (AHP11)
Marine Information Manual Australia

A copy of the Port Handbook and (in season) the Port Cyclone Procedures will be issued to Masters of arriving vessels.

Restrictions and Regulations: Vessels must not immobilise main engines without permission from the Harbour Master.

Tankers: Tankers will not be allowed to immobilise at any time of year while working cargo. Petroleum tankers and other carriers of hazardous liquid bulk cargoes will be issued on arrival with a copy of port "Procedures for Tankers", which sets out in full the procedures to be carried out in case of fire, oil spill or other accident. Tankers are not berthed before sunrise or after sunset but can depart any time.

Anchorage: Anchorage is prohibited in area between Emery Point, Mandorah and Bullocky Point, where high voltage power lines cross the harbour bottom. Anchorage is not advised in the foul area South of Channel Rock Buoy, which is obstructed with wartime wreckage.

Cyclone Procedures: Darwin is within the Southern Zone of tropical revolving storms. The season extends from November to April and the Port and environs may be more or less affected at any time during that period. All vessels entering the port during the "Cyclone Season" are supplied with copies of the Port procedures which set out in detail the various stages of alert and warning, together with actions to be taken in the case of an approaching cyclone. Ships may be placed on short notice for sea and required to maintain themselves in seagoing condition at all times.

Allocation of Berths: The allocation of berths is determined by the Harbour Master.

Signals: The Port of Darwin adheres to the International Code of Signals and the International Rules for Prevention of Collision.

Two special emergency sound signals are used in the Port. In the case of fire, the morse letter F (· · – ·) should be continuously sounded on the ship's whistle or siren. In the case of oil spill or other pollution of the harbour waters, the morse letter P (· – – ·) should be continuously sounded.

Tides: Darwin is a standard port (No. 6323) and full predictions are given in the Australian National and Admiralty Tide Tables. Maximum range is 7.92 m., with a mean range of 3.72 m. Tidal streams at Springs may exceed 3 knots in channels and reach 3 knots at berths.

Visibility: Visibility in the district is usually good but may be affected by dust during the "Dry Season" and humidity during the "Wet Season". Fog is virtually unknown. During the "Wet Season" severe thundersqualls with heavy rain frequently occur. These are usually brief but gusts may reach 60 knots and the wind generally shifts through 360°. Vessels at anchor should veer a good scope of cable and have a second anchor ready for immediate use.

Electricity: Shore power connections are installed at all berths 415 va, 3 phase 60 or 100A.

Garbage Disposal: The dumping of garbage into port waters is strictly prohibited.

The Port Authority provides a free garbage collection and disposal service, for which purpose a modern oil-fired incinerator is operated in the Port Area.

Delivery and collection of bins can be arranged by contacting the Wharf Office on Number 2 Berth (Tel: 81 6701) or through the Shipping Agent.

Port Security: The Port Authority operates its own security service, staffed by Port Authority personnel. Patrols throughout the Port area take place around-the-clock.

The Container Depot (adjacent to Kitchener Drive) and the Container Terminal (adjacent to No. 2 Berth, West) are enclosed by high security fences which are locked when the areas are not being worked.

The storage sheds in the Container Depot are kept locked when not being worked as are the Transit sheds on Berth Nos. 3 and 4, when being used to store cargo.

Requests for additional security for special cargoes should initially be addressed to the Port Authority.

DEVELOPMENTS: *Container Crane:* No. 2 Berths, West and East (New Fort Hill Wharf) are equipped with an I.H.I./Sumitomo rail-mounted, single lift gantry container crane.

The crane has a handling capacity of thirty 6.1 m. (or fifteen 12.2 m.) containers per hour and a heavy lift capacity of 70 tonnes at 50% outreach. It is equipped with a 10 cu.m. grab for bulk cargoes.

Selected Data – Container Crane:

Containers per hour	30 TEU
Bulk capacity	10 cu.m. grab
Capacity at 100% outreach	35 tonnes
Capacity at 50% outreach	70 tonnes
Outreach from fenders	32 m.
Total outreach	35 m.
Height to bottom of boom	30 m.
Total height	50 m.
Total height (boom raised)	70 m.
Total weight	850 tonnes
Speed of travel on rails	27 m./min.

Construction of a 100 berth fishing haven with lock access has begun in Frances Bay, adjacent to existing fishery facilities. These berths are scheduled for completion in 1986.

Land backing of the first section of new Fort Hill Wharf is proceeding on a gradual basis. It is expected that the wharf will be fully land-backed in 1988.

SHIPMASTER'S REPORT: July 1986 – (See "Plan").

The vessel berthed port side to at No. 1 Berth (the Iron Ore Wharf).

The starboard anchor was let go (used when unmooring during a S.E. wind).

The starboard anchor came up foul hawse due to picking up the Ro-Ro pontoon mooring chain. Apparently this is a "typhoon" mooring.

AUTHORITY: Darwin Port Authority, P.O.Box 390, Darwin N.T. 5794. *Tel:* (089) 81 6701 (all hours). *Telex:* AA85605 Harbor. *Contacts:* Mr. M. N. Bartlett, Director Marine and Port. Capt. J. A. Mayor, Manager Operations. Mr. B. K. Newell, Manager Administration. Mrs. F. Chan, Manager Marketing. Capt. R. J. Wilson, Harbour Master. Mr. B. E. McFadyen, Operations Engineer. Capt. M. S. Fleming, Assistant Harbour Master.

AGENT: Sub-agent of Patrick Agencies, Sydney, NSW.

DERBY: W.A.: 17.17 S. 123.35 E. **(See Plan)**

Port not operational. Berth on care and maintenance only.

No labour available.

All shipments via Broome.

AUTHORITY: Department of Marine and Harbours, 1 Cliff Street, P.O.Box 402, Fremantle, W.A. 6160. *Tel:* (09) 3350888. *Telex:* Omhfre AA 94784. *FAX:* (9) 335-0850. *Contact:* R. H. Hudson, Superintendent, Navigation & Pilotage.

DEVONPORT, Tasmania: 41.11 S. 146.22 E. **(See Plan)**

PORT LIMITS: Within all waters that extend 3 miles seawards bounded on the Eastward by an imaginary line drawn 000° – 3 miles from the coastline and intersecting the most Easterly point of Wright Island and to the Westward by an imaginary line drawn 000° – 3 miles from the Western side of the entrance to the River Don.

DOCUMENTS: See "Melbourne".

APPROACHES: Port situated 1 mile inside Mersey River, the entrance to which is sheltered by the Mersey Bluff on the West and by a breakwater on the East bank. There is good anchorage in vicinity of boarding ground, but it is inadvisable to remain at anchor during periods of strong on-shore winds. The Inner Harbour provides good all-weather shelter. There is a swinging basin which can accommodate vessels of length 200 m. or more, especially where tugs are used.

PILOTAGE: Compulsory. 24 hour service for all vessels where Masters are not in possession of a valid Exemption Certificate. Pilots will board when required at a position within 400 m. of a point Mersey Bluff Lighthouse bearing 242° by 1.93 km.

Masters of vessels requiring the services of a Pilot are advised to radio the Harbour Master, Devonport, their ETA and vessel's arrival draft 12 hours prior to arrival.

ANCHORAGE: The quarantine anchorage is defined as to the North of a line running East and West through the Mersey Bluff Lighthouse. Vessels must lie clear of the fairway into the River.

RESTRICTIONS: Approach channel 26 ft. (7.9 m.) LWOST. Tidal range is 2.44 m. average, 2.56 m. Spring. Enquiries should be made for vessels exceeding 30 ft. (9.6 m.) draft and 600 ft. (180 m.) length.

MAX. SIZE: LOA 200 m., max. draft 9.6 m. Also see "Restrictions".

TIDES:	
Lowest Recorded Tide	Minus (−)0.48 m.
Mean High Water Spring Tides	2.89 m.
Mean High Water Neap Tides	2.62 m.
Mean Low Water Neap Tides	0.59 m.
Mean Low Water Spring Tides	0.33 m.

HEALTH: Pratique is mandatory for all vessels arriving from overseas ports. Agents normally make necessary arrangements.

VHF: 24 hour listening watch – Channel 16, switching to Channels 12 and 67 as required. Call sign is "Devonport Harbour Control".

TUGS: Conventional 1,130 b.h.p. (bollard pull 23 tonnes) plus smaller tug 250 b.h.p. immediately available. Additional tugs, as required, available at reasonable notice.

BERTHING:

Berths on West Side:

No. 1 Berth: Length 167 m., depth alongside 8.5 m.

No. 2 Berth: Length 189 m., depth alongside 8.5 m.

No. 3 Berth: Length 168 m., depth alongside 7.9 m.

Cargo Shed: On wharf 2,676 sq.m.

No. 4 Berth: Length 198 m., depth alongside 10.5 m.

Cold Store: For meat, vegetables and dairy produce 7,200 cu.m. Additional cold storage facilities of 38,000 cu.m., capacity available within 3 km. of the port.

LPG/Stock Berth: Max. length vessel 90 m., max. draft 6.3 m., depth alongside 6.4 m.

Berths on East Side:

No. 1 Berth: Length 115 m., depth alongside 7.2 m.

Ferry Berth: Passenger Terminal. Roll-on/Roll-off. 9.14 m. wide stern loading ramp. Wharf decking 4.57 m. above LWOST. Travelling gantry crane – 32 tonne capacity. Assembly area of 2.1 hectares of heavy duty open space. Cargo shed – 855 sq.m.

No. 2 Berth: Length 182 m., depth alongside 9.5 m. Roll-on/Roll-off facility. Travelling slewing crane of 25 tonnes capacity. 3.2 hectares of heavy duty open space and 60 power points for refrigerated units.

All wharves are floodlit for night work and are under T.V. surveillance. Ample fresh water at a rate of 32 – 40 tonnes per hour available at a nominal charge. Three phase power, telephones and victualling available to all berths. Bunkering by road tankers only. Garbage disposal by arrangement. Other cranage available – floating crane 35 tonne capacity, 2 mobile cranes of 6.5 tonne and 4 tonne capacity, 2 large forklifts – capacities 20,321 kilos and 23,133 kilos and numerous small forklifts.

TANKERS: 1 berth with 250 mm. discharge lines for black and white products.

BULK HANDLING FACILITIES:

Wheat: One berth with discharge connections to 12,000 tonne silo.

Tallow: One berth with loading connections to 1,500 tonne silo.

Ores: One berth with facilities for loading and discharging using crane, hoppers and conveyors.

Livestock: One berth suitable for ships up to 90 m. in length with adjacent holding facilities.

STEVEDORES: Agents for ships arrange stevedores.

MEDICAL: An out-patients department of the local general hospital is available 2 km. from the port. Lie-in facilities are available at the hospital proper 8 km. from port.

REPAIRS: The Port Authority can carry out limited repairs. Fuller repairs can easily be arranged to be carried out by the numerous engineering firms in the vicinity of the port. Underwater diving service is available with facilities for photography, welding, survey and repairs.

SURVEYORS: *Cargo Inspectors:* For Devonport, the appropriate Cargo Inspector would be R. M. Davies and Associates, Wynyard. Tel: (004) 42 2435.

Surveyors: There are no surveyors in the Devonport area but, Lloyd's Agents are readily available in Launceston, just over 1 hours' drive way.

GANGWAY/DECK WATCHMEN: Arranged by Agent.

CARGO GEAR: Australian Navigation (Loading and Unloading) regulations apply.

FRESH WATER: Available all wharves. 40 t.p.h.

FUEL: Road tanker delivery only.

TELEPHONES: Available each berth.

HOLIDAYS: Work all days except Christmas Day, Good Friday, Anzac Day, Labour Day, Picnic Day W.W.F.
POLICE/AMBULANCE/FIRE: Fire 24-1886 (Other than alarm, 24-1887); Police 24-5499; Ambulance 24-5077.
EMERGENCY CO-ORDINATION CENTRE(S):

1. *At Sea in Australian Waters:* Under the AUSREP system which became effective from 1st April, 1982, all Australian and foreign vessels from arrival at first port until departure from the last port, must report at least once every 24 hours, a position report and destination, to the Australian Coastal Surveillance Centre, Canberra (A.C.S.C.), who are responsible for the Australian SAR area, the largest in the world covering one nineth of the earth's surface. In the event of a report not being made, SAR operations will begin within 24 hours of a missed report. Although not mandatory until first port of arrival, foreign vessels would find it in their best interests to inform Canberra of their arrival in Australian waters and their departures therefrom.
2. *Alongside:* In addition to the emergency numbers listed (Police/Ambulance/Fire), there is a State Emergency Service responsible for major emergencies. In Devonport the Harbour Master is the local co-ordinator, but the service can be contacted direct on Burnie 31-3160 or 31-4144. The service is manned 24 hours a day.

TIME: GMT plus 10 hours. Summer time is effective from the first weekend in October until the last weekend in March. Reporting of ETA's should be made in Eastern Standard Time or as appropriate, which should be made clear in the message.
AIRPORT: Devonport (Pardoe) Airport is situated approximately 8 km. from the port with approximately 6 flights per day each way to/from Melbourne (the services are reduced on Sundays). There are also intra-island services. Facilities at the airport are being increased and an increase in the intake of flights should follow.
SERVICES: Shipwrights and carpenters available at 24 hours notice. Underwater diving services available.
SHORE LEAVE: Once Customs and Immigration requirements have been met, there are no restrictions upon crews except those imposed by the Master and that they must have rejoined their ship by sailing time. For non-English speaking crews, there is a telephone interpreter service in the following languages: Chinese, Greek, Croatian, Serbian, Italian, Spanish, Polish and Vietnamese.
STORING: Vessels are normally stored by truck and not barge. On all berths, except No. 2 West, trucks are able to proceed alongside a vessel. At No. 2 West trucks can approach within about 30 metres. The same applies to fork lift trucks. The ship's Agents are normally responsible for arranging labour for storing.
BANKS: There are no American or European banks in the area, although all the Australian banks are usually affiliated to one or other of the major banking houses. There has been a Commission Report (the Campbell Report), submitted to Federal Parliament recommending that foreign banks be allowed to trade in Australia, but as yet, the report has not been acted upon.

The normal method of credit card usage is by Bankcard, issued by the Australian banks. These can be obtained outside Australia through the overseas branches of Australian banks, particularly those situated in London. Visa, American Express and Diners Club cards are also accepted by certain banks and establishments. Access usage is no longer permitted.
DEVELOPMENTS: Channel widening and deepening continue.
AUTHORITY: Port of Devonport Authority, 50 Formby Road, Devonport, 7310 Tasmania. Postal Address: P.O.Box 478, Devonport, 7310 Tasmania. *Tel:* (004) 24-0911. *Telex:* Pordev AA59222. *FAX:* (004) 246418. *Contact:* Mr. D. J. Cowan, General Manager. Captain W. J. Stuart, Harbour Master.

AGENT: Sub-agent of Patrick Agencies, Melbourne.

EDEN (Twofold Bay), N.S.W.: 37.04 S. 149.55 E.

DOCUMENTS: See "Sydney".
PILOTAGE: Compulsory, boarding ground is close off the entrance to the Bay (position Lat. 37° 04.5′ S., Long. 149° 56.5′ E.).
APPROACHES: Entrance depth into Twofold Bay is 36 m. at LWOST. Bottom sand. Tidal data: Higher HW 1.3 m., Lower HW 1.1 m.
MAX. SIZE: Woodchip berth can accommodate vessels up to 50,000 g.r.t. Also see "Tankers".
VHF: Channels 16, 12 and 6 available.
TUGS: 1 tug of approximately 1,000 h.p. 3×12 m. work boats.
BERTHING: Also see "Tankers".
Private Jetty (Eden Canning Co.): This jetty is situated at Cattle Bay. Length 145 m., depth at outer end 6.0 m.
Eden Jetty: This jetty is situated on middle of Snug Cove. Length 205 m., The South-Eastern part of this jetty has a depth of water of 7.3 m. at the outer end, which extends for 110 m. inshore jetty fendered.

The North-Western berth has a minimum depth of 4.9 m.
Eden Breakwater Jetty: Situated on Eastern side of Snug Cove, 1 berth. Length 104 m. Depths: Inner End 2 m.; Midpoint 5 m.; Seaward end 7.5 m. Breakwater wall extension under construction.
Mooring Jetty: Fishing vessel use only. Situated West side of Snug Cove.
Woodchip Loading Berth: "T" Head jetty with centre loading point located at Mungaroo Point. Berth consists of a pier, extending from the shore with a 6 buoy mooring system off the end of the pier. Berth can accommodate vessels up to 50,000 g.r.t. Loading rate approximately 750 tonnes/p.h., 2 fixed loading arms. Length of jetty 275 m., depth alongside 12.5 m.
STEVEDORES: Same working hours as Sydney.
TANKERS: There are a group of mooring buoys East of breakwater. Tankers discharge by a submarine oil pipe-line extending to shore. Max. length of vessel 183 m., max. draft 9.75 m.
FRESH WATER: Available at Eden Jetty.
FUEL: Limited supplies of distillate, and diesel fuel.
REPAIRS: Slipways, and repair facilities for fishing craft only available. Minor repairs can be effected.
DRYDOCKS: None.
AIRPORT: Merimbula, 17.7 km., with service to Sydney.
HOLIDAYS: See "Sydney".
GENERAL: *Access:* By road only to berths.
Navigation Information: Australian Pilot Vol. II, Sailing Directions N.S.W. Coast (10th Edition). Charts: AUS 806, AUS 101.
AUTHORITY: Maritime Services Board of N.S.W., P.O.Box 32, Sydney, N.S.W., 2001. *Tel:* 240 2111. *Telex:* Msb Syaa 24944. *Cables:* Marboard.
Local Official: The Pilot, Pilot Station, Eden. Tel: (0649) 61719.

AGENT: See "Sydney".

ESPERANCE, W.A.: 33.52 S. 121.53 E. (See Plan)

DOCUMENTS: The following documents should be available for inspection:

Ship's Papers, including the following certificates:
(a) Register.
(b) Load Line.
(c) Safety Equipment.
(d) Safety Radio.
(e) Safety Construction.
(f) Australian Light Dues Receipt.
(g) Articles of Agreement and Account of the Crew (or equivalent).
(h) Western Australian "Port Bill" – Tonnage Dues Receipt.
Valid Derat or Exemption Certificate.
Crew's Identity Documents.
International Vaccination Certificates of all persons aboard.

PILOTAGE: Pilotage is compulsory except where Exemption Certificates are held. Radio "Harbour Master – Esperance" 48 and 24 hours before arrival. VHF Channel 16 – pilot boat and base set. Base set not manned continuously but pilot boat may be contacted 1 hour before arrival. Pilot boat painted white with black rubbing band and white centre house. Word "Pilot" painted on both sides of house. Pilot boards 1.5 miles N.E. of Gull Island. Pilot ladder and ancillary equipment must comply with international regulations. Lee to be provided against swell.

It is more usual for vessels to approach from the Westward. In this case use may be made of either West or Causeway Channels. Approaching from the Eastward is not recommended during the hours of darkness or in weather which is in any way restricting visibility.
ANCHORAGE: Vessels proceeding to anchorage should anchor in an E.N.E. direction from the Eastern extreme of the breakwater. Good holding is found in depths ranging from 14.5 m. – 27.5 m. However, plenty of cable should be veered and at least 6 shackles is recommended. In the most boisterous conditions vessels have held well with from 6 to 8 shackles out. However, the vessel should always be watched. A pilot ladder and not accommodation ladder is recommended for vessels at anchor due to the swell conditions which normally prevail at the anchorage.
MAX. SIZE: Max. departure displacement 35,000 tons.
PRATIQUE: Vessels requiring "Free Pratique" are cleared between 0600 and 2000 hrs. daily.

Vessels may be cleared outside these hours upon request and at the discretion of the local Medical Officer.

Vessels are cleared alongside and rarely at anchor.

Please also note that a Health Message is required at the first port of entry from overseas. This is to be despatched within the period 12 and 24 hours prior arrival at the first port of entry, and to advise the following information:

Name of vessel, and ETA.
Last port of call.
Date of departure.
Number of crew on board.
Number of passengers on board (if any).
Confirmation that all on board have valid vaccinations and details of any sickness.

RADIO: Esperance Radio, call sign VIE (operative from 0700 to 2000 hrs.). Perth Radio, call sign VIP (continuous).

Port VHF limited to Channels 6 and 16. Call sign "Esperance Harbour", range 70 miles.
TUGS: One tug with 30 tonne bollard pull will be used.
BERTHING: The Inner Harbour consists of one land-backed berth of 244 m. (No. 1). A second berth of 213 m. in length adjoining the first is to the S.E. (No. 2). The depth in the approach Channel, manoeuvring area and alongside is 11 m. Maximum draft permitted is 10.0 m., pending maintenance dredging. On occasions it may be possible to exceed this draft but reference must be made to the Harbour Master before so doing, who may at his discretion permit an increase dependent on tide and prevailing weather conditions.

At all berths shore coir and/or nylon springs may be used to supplement ships moorings.

24 hour port but entry not generally carried out at night.
TANKERS: Tankers berth at No. 2 Berth, Inner Harbour. Tankers berth during daylight hours only but may be permitted to sail at night at the discretion of the Harbour Master.

Tanker discharge line 14 in. reduced to 8 in. at discharge manifold. Average discharge rate 465 tonnes per hour.

STEVEDORES: 19 men. Working hours: 0800 – 1700 hrs., 1800 – 2400 hrs., 0000 – 0700 hrs. No work from 1700 hrs. Saturday to 0800 hrs. Sunday. ETA to Agent by 1600 hrs. previous day for labour requirements Tuesday to Friday. For weekend requirements ETA to Agent by 1600 hrs. on Thursday. For Monday labour ETA to Agent by 1600 hrs. Friday. Notice for labour pick-up has to be posted by 1700 hrs.

OPENING/CLOSING HATCHES: Preferably handled by crew or as per charter party.

MEDICAL: Advance notice not required. Normal facilities and hospitalisation available.

DENSITY: 1026-1028.

FRESH WATER: Available at all berths; one hose 40 t.p.h., two hoses 70 t.p.h. charge, 90 cents per kilolitre.

FUEL: Available by road tanker only. Advise Agent of grade and quantity at least one week before arrival.

GANGWAY/DECK WATCHMEN: Shore watchman is supplied at entrance to Tanker Berth in the case of tankers only. Shore watchmen are available if requested by vessel. It is more normal for ship to provide gangway watchmen from crew. Irrespective a gangway watchman must be on duty at all times at any berth.

CARGO GEAR: Inner Harbour berths, two link belt bulk loaders used. One loader for grain and gypsum at No. 1 berth. One loader for zinc/copper concentrates at No. 1 and No. 2. Rates achieved on various commodities – gypsum 850 t.p.h., grain 500 t.p.h., zinc concentrates, copper concentrates 200 t.p.h., phosphate and sulphur 100 t.p.h. per ship's grab.

Mobile Cranes: P. & H. Omega 20, 18 tonnes capacity and Cranvel 8 tonnes capacity.

Permanent sheep yards are erected at No. 1 berth with holding capacity of 11,500 head. Races and loading ramps available for both sheep and cattle.

IDENTIFICATION CARDS: See "Melbourne".

CONSULS: Nearest at Fremantle.

REPAIRS: Welding, rewinds, under-water inspections. Large structural repairs not possible.

DRY DOCKS: None.

BANKS: Commonwealth Banking Corporation transacts business with all American and European banks. Postal address – P.O.Box 486, Esperance, 6450.

EMERGENCY CO-ORDINATION CENTRE: Contact Port Authority.

STORING: See "Prelims".
(1) By truck.
(2) Storing can be completed during loading or discharging.
(3) Trucks can unload at ship's side.
(4) Fork lifts can be operated.
(5) Normal Customs procedures apply.
(6) Storing usually completed by ship's crew although other labour may be used.

SURVEYORS:
(1) Harbour Master acts as Cargo Inspector.
(2) Harbour Master represents Lloyd's Register on request.

REPATRIATION: Facilities exist for repatriation of crews.

AIRPORT: Feeder airline services connect with Perth and international flights. 13 flights per week in either direction. Airport is 25 km. from harbour area.

TIME: GMT plus 8 hrs.

POLICE/AMBULANCE/FIRE: Police 711900; Ambulance 711711; Fire 712328.

TELEPHONES: Available all berths.

SHORE LEAVE: Crew allowed ashore provided Immigration Act complied with in relation to Identification Cards.

DELAYS: Not normally encountered.

SHIP SUPPLY SERVICE: There are no ship supply services operational in the Esperance area.

In the case of emergencies arrangements have been made to fly in a helicopter on charter or on less urgent cases make use of the locally based tug.

AUTHORITY: Esperance Port Authority, P.O.Box 35, Esperance, W.A. 6450. *Tel:* (090) 71 2111. *Telex:* Esport AA91057. *Contact:* C. A. Stewart, Managing Secretary. After hours (090) 711884. Captain N. S. W. Dyson, Harbour Master. *Tel :* (090) 711463. After hours 711563.

AGENT: Sub-agent of Patrick Agencies, Fremantle.

EXMOUTH, W.A.: 22.20 S. 114.10 E. (See Plan)

SHIPMASTER'S REPORT: October 1984.

DOCUMENTS:
5 copies Crew List, 2 on Form M.S. 11.
2 copies Form 42A, Stores List (Ship's Bond).
1 copy Form 5. Personal Effects Declaration.
3 copies Form C & E 886. Dates and time of Departure from Overseas Ports of Loading.
*2 copies Form 0360. Health Report. 1 retained by Master.
Form 40. Application for Clearance.
Form QA3. Quarantine Notice and Declaration. If animals on board as cargo.
Form QA4. Quarantine Notice.
Form QA5. Shipmaster's Bond (Pink, Yellow). If ship's pets on board.
Forms in respect of Colonial Light Dues (if applicable).
*Forms obtained from Customs Boarding Officer on arrival.
Customs Officials, etc. board at berth.

PILOTAGE: Pilotage compulsory. Pilot boards 1 mile N.E. of jetty, from the line launch.

ANCHORAGES: 1.5 miles N.E. of jetty.

RESTRICTIONS: Berthing/sailing during daylight only. Berthing carried out at slack water.

HEALTH: See "General" before first port.

VHF: Port VHF system as such is non existent – consists of handheld portable set of very limited range, and generally during office hours only.

TUGS: None.

BERTHING: Straightforward approach from sea on recommended track to Learmouth. Reasonably deep water and no navigational hazards in vicinity of track.

Berth is a 'T' head jetty with a face 48.75 m. in length with mooring and breasting dolphins. Distance between outer dolphins is 320 m. Wharf decking is 6.1 m. above datum with depth alongside 12.0 m.

Berthing Operations: Berthing is usually starboard side to. Jetty is approached with bow slightly canted into berth and when approx. 100 m. off jetty, port anchor is let go to 1 shackle on deck and anchor dredged into berth. Forward slipline is sent away as soon as possible by mooring boat and when close enough, other lines sent by heaving line. It is essential to get either breastlines or springs ashore as soon as possible in order to hold vessel in position.

It may be necessary, once vessel is held alongside berth to change some of the moorings, as it was on this occasion. Final moorings as follows:

Forward:
1 Slipline (effectively 2 headlines).
1 Headline.
2 Breastlines (from starboard shoulder to bollard on inshore side of jetty).
2 Springs.
In addition port anchor on bottom, 1 shackle on deck.

Aft:
1 Sternline-slipline (effectively 2 stern lines).
1 Sternline.
2 Springs (from poop to North end of dolphin).
2 Breastlines (from aft maindeck to bollard on inshore side of dolphin).

A number of points arose from the mooring/unmooring operations:

Firstly, I am of the opinion that the anchor should be dropped further from the jetty, in order to assist the unmooring due to absence of tugs. This would be no problem if an offshore wind could be guaranteed, but the wind is invariably onshore. Secondly, mooring gangs are slow in getting ropes to their destination which proved to be the biggest hazard.

Care *must* be taken when mooring to ensure that the final ropes aft (in this case the springs) are on separate winches in order to clear the propeller as soon as possible – any delay when unmooring on an ebb tide could result in vessel drifting onto the aft isolated dolphin. The ideal time to unmoor would be on a flood tide and using the anchor to warp clear of the jetty. Unfortunately, things at sea are rarely done under ideal conditions, hence my comment regarding letting go the anchor sooner.

The mooring points on the jetty are themselves far from ideal considering the strength of the ebb stream which can be compounded by a strong offshore breeze. Breast lines end up as very short, almost vertical leads, especially when light. In this case the vessel was partially ballasted prior to arrival, which somewhat alleviated this problem.

However, having made all the bad points about the berth, I must add that the shore staff were very co-operative and a fast discharge is normal.

Also see "Restrictions" and "Plan".

DISCHARGING: 1 line only. Permanent line on jetty connected to ship's manifold amidships with hoses. Shore line 300 mm.×1 km. Max. back pressure 150 p.s.i. High rate of discharge (up to 1,200 cu.m./hr. due empty shore tanks).

No water clearance required after discharge as line rests in Gas Oil.

Grades: As far as can be ascertained only Gas Oil delivered to Exmouth.

BALLAST: No tank cleaning or dirty ballast facilities.

DENSITY: 1025.

FRESH WATER: Very limited quantities available. Not available in dry season.

FUEL: Very limited quantities of Gas Oil.

REPAIRS: No facilities.

GENERAL: No contact with receivers (U.S. Navy). Liaison is with a Royal Australian Navy Officer on secondment to U.S. Navy.

Immobilisation of Engines: Not recommended due to strength of current and poor mooring facilities.

Stores, etc.: No laundry facilities. Very limited quantities of bread, milk, etc., available from local shops. Any large amounts of stores require to be ordered approx. 3 weeks in advance.

AGENT: Sub-Agent of Patrick Agencies, Fremantle.

FREMANTLE, W.A.: 32.03 S. 115.44 E. (See Plan)

(A) FREMANTLE
(B) KWINANA

(A) FREMANTLE

DOCUMENTS: See "Melbourne". Also Inward and Outward Manifests accordance Regulation Nos. 142 and 143 and schedule. These documents supplied by ship's Agents.

APPROACHES: Channel leading from Gage Roads into Cockburn Sound presently 45 ft. (13.7 m.) deep, planned to be deepened to 55 ft. (17 m.) to take ships of 120,000 tonnes.

PILOTAGE: Pilotage is compulsory in the Port of Fremantle except for ships not exceeding 150 g.r.t., and for coastal and inter-state ships, the Masters of which hold operative Pilot Exemption Certificates. There are 2 pilot boarding grounds: the outer boarding ground which is situated 3.5 nautical miles N.E. of Bathurst Point, Rottnest Is., and the compulsory pilot boarding ground in Gage Roads to the Westward of Hall Bank Buoy, which is approximately 2 miles from the entrance to the Inner Harbour.

Note: Pilotage is compulsory from the Outer Boarding Ground for ships drawing 11.6 m. or more.

It is necessary for all vessels to give 24 hours notice by radio telegraphy of the expected time of arrival at Fairway Buoy, followed by a second notice, confirming or amending the previous notice, 2 hours ahead of the expected arrival time in that locality.

Ships requiring a Pilot at the non-compulsory ground must include this requirement in their 24 hours notice of arrival.

Two pilot vessels available, one has royal blue hull, white superstructure and the other, a fast pilot launch, is painted international orange. Pilots may be contacted by VHF Channel 12.

Usually pilot ladder is required on the port side for vessels inward and starboard side for vessels outward, even when the wind is in the East, unless Easterly wind is very strong as there is nearly always a West to N.W. swell. If in doubt call Port Signal Station on VHF Channel 12.

Pilot does not board vessel at anchor.

Pilot ladder to be 4 ft. – 5 ft. above sea level with manropes slightly shorter. Boat-rope not required. The ladder should be clean and conform with Regulation 17 of SOLAS. The vessel should be making 3 – 4 knots.

SOLAS Regulations are strictly adhered to i.e. Single length of ladder, non-slip surface (Aluminium Not acceptable), 12 in. spacing between steps, no more than 2 replacement steps, all ropes on ladder and manropes to be manila and not covered (nylon and polypropelene not acceptable), Regulation 17(a) part (VII) and (VIII) very important, a responsible officer to standby and not a sailor.

Check with Signal Station and find out if Pilots preference is ladder or mechanical hoist (if available).

ANCHORAGES: Gage Roads 44 ft. (13.4 m.) Owen Anchorage 42 ft. (12.8 m.) Cockburn Sound 50 ft. (15 m.).

RESTRICTIONS: *Inner Harbour:* Basin and entrance channel dredged to minimum of 36 ft. (11 m.) below datum.

Outer Harbour: Main approach channels dredged to minimum of 45 ft. (13.7 m.) below datum – secondary channels leading to alumina refinery jetty and steelworks jetties dredged to minimum of 38 ft. (11.6 m.) below datum.

MAX. SIZE: Limited by draft. Minimum under-keel clearance of 0.9 m. required.

Outer Harbour, up to 41 ft. 6 in. (12.6 m.) draft.

Inner Harbour, up to 34 ft. 6 in. (10.5 m.) draft but with suitable tide and by special permission of Harbour Master up to 35 ft. (10.6 m.) draft.

Tankers: The maximum ship draft acceptable at the Oil Refinery Jetty at Kwinana is 41 ft. 6 in., this being the maximum draft permitted in the approach channels.

HEALTH: No restrictions except quarantine. Doctor not normally available between 2200 and 0600 hrs. See "Melbourne".

Port Quarantine Regulations:

(a) The accommodation, galley and other areas must be free from cockroaches and rodents.

(b) Garbage cans, either belonging to the ship or to Fremantle Port Authority, when used must be at all times covered with satisfactory tops.

(c) Rat guards must be fitted to all lines and regularly checked including weekends where the Department of Health have increased their inspections.

It is also to be noted that regardless of the existence of current Derat or Derat Exemption Certificates, all vessels are inspected for rodents.

RADIO: VIP Perth.

TUGS: *Inner Harbour:* 4 available up to 2,600 h.p. (1,940 kW), join vessel in Gage Roads – extra charge if tug's line is used.

Outer Harbour: 3 tugs, including 2 special tugs equipped as fire tenders are also stationed. Tugs join ships approx. 2.5 miles from berths – extra charge if tug's line is used.

VHF: Port Authority signal station manned 24 hours. Keeps watch principally on Channel 16, 14, 12, 8 and 6. Channels 14 and 6 are exclusively assigned to tug use. Channel 12 for ship/shore contact.

BERTHING: *Inner Harbour:* Victoria Quay – continuous quayage 5,359 ft. (1,633.3 m.); 8 berths.

North Quay – continuous quayage 5,877 ft.; 10 berths. Container berth (No. 11 & 12) 1,427 ft. (429 m.); 2 berths.

All berths in the Inner Harbour, including Victoria Quay, North Quay and the container berth are dredged to a minimum of 36 ft. (11 m.) below datum.

Outer Harbour: Alumina Refinery Jetty, length of berth 800 ft. (244 m.), depth 38 ft. (11.6 m.). Steelworks Jetty No. 1, length of berth 183 m., depth 36 ft. (11.0 m.). Steelworks Jetty No. 2, length of berth 259 m., depth 40 ft. (12.2 m.). Oil Refinery Jetty, see "Tankers" below. Bulk Cargo Jetty, length of berth 1,603 ft. (489 m.), depth 44 ft. (13.4 m.).

A bulk grain jetty of 955 ft. (291 m.) depth 55 ft. (16.8 m.) has been constructed at Kwinana to serve Co-operative Bulk Handling Ltd's grain terminal.

The jetty is equipped with conveyors and ship loaders capable of handling bulk grain at the rate of 5,000 t.p.h. It will eventually be able to handle vessels up to 100,000 d.w.t. Max. sailing draft 41ft. 06 in.

CRANES: 2 'twin lift' portainer cranes, 2 single lift container cranes, 35 tonne capacity luffing crane, quay cranes of 20 tonne, 7.5 tonne and 3 tonne capacity, mobile cranes of up to 6 tonnes capacity, also 80 tonne floating crane is available.

STEVEDORES: Shipboard stevedoring by private contractor, shore side by FPA and others – usually arranged by ship's Agent. ETA should include particulars of cargo, showing heavy lifts, dangerous or hazardous cargoes, hatch stowage, gangs required, etc.

MEDICAL: Notice not necessary but advisable if treatment required. Full hospital facilities available. Cholera vaccinations essential if ship comes from affected areas. International certificates must be current.

TANKERS: *Kwinana Oil Refinery Jetty:* 2 berths for tankers up to 752 ft. (229 m.) – depths 12.8 m. and 13.4 m. 1 berth for tankers up to 860 ft. (262 m.) – depth 13.6 m. Oil separation tanks ashore serve each berth.

DENSITY: Salt 1025, generally at all tides.

FRESH WATER: Available 24 hours a day, delivered by up to 8 hoses each of 50 tonnes/p.h. $1.50 per kilolitre.

Note: Seasonally a water shortage in the Fremantle area may limit the amount of water which can be supplied to ships.

FUEL: Marine fuel (2 grades); Marine diesel. Notice 14 days then 48 hrs.

FIRE PRECAUTIONS: Watchman to be on duty. Ship heading out. Fenced off on land. Buoys 50 ft. (15 m.) out from ship marking prohibited area.

GANGWAY/DECK WATCHMAN: Watchman required – member of crew, or shore-based watchman available.

OPENING/CLOSING HATCHES: By arrangement between ship's Agent and Stevedore.

CERTIFICATES: Health; Derat; Load Line; Ship's Register; Articles. Also see "Melbourne".

CUSTOMS ALLOWANCES: According to local Customs Dept.

CARGO GEAR: Strict surveillance of cargo handling gear by Commonwealth Government Dept. of Transport Australia. Also see "Melbourne".

IDENTIFICATION CARDS: See "Melbourne".

CONSULS:

Austria
Belgium
Denmark
Finland
France
Germany F.R.
Guatemala
Italy
Japan
Netherlands
Norway
Philippines
Portugal
Sweden
U.S.A.

REPAIRS: All types of deck and engine repairs possible.

DRY DOCKS: No dry docks – slipway up to 3,000 tons.

REPATRIATION: Facilities exist for repatriation of crews.

AIRPORT: 17 miles (23 km.) to Perth International Airport.

TIME: GMT plus 8 hours.

HOLIDAYS: *Extraordinary Holidays – Port Closed:* Labour Day (1st Monday in March); Good Friday; Anzac Day (25th April); Union Picnic Day (celebrated on the first Tuesday in November); Christmas Day (25th December).

Ordinary Holidays: New Year's Day (1st January); Australia Day (celebrated on a Monday late in January); Easter Monday; State Foundation Day (1st Monday in June); Boxing Day (26th December).

On ordinary holidays waterside labour available to work ships in following categories:

(a) Scheduled passenger ships.
(b) Marine casualties.
(c) Ships that can complete cargo handling operations prior to the next engagement of labour.

POLICE/AMBULANCE/FIRE: Victoria Quay Police Station Tel: 335.2783 or 335.5016; Ambulance 335.1601; Fire Brigade 335.6262.

TELEPHONES: Telephones can be supplied to any vessel – installation time plus proportion of annual rental plus cost of calls.

SERVICES: All special services available.

REGULATIONS: Normal port regulations. Special Regulations for Tankers berthing at Oil Refinery Jetties.

SHIP SUPPLY SERVICES: Elder Prince Marine Services Pty. Ltd., P.O.Box 892, Fremantle, W.A. 6160. Tel: (09) 3358444. Telex: AA92821 Towboat.

Services: Passenger launches for crew ferries, agents, providores to vessels at anchor in Gage Roads and Cockburn Sound. Stores lighters and fresh water up to 150 tonnes per trip. Draft survey, paint punts, lines running.

Other Operators – Seaborne:

Australian Offshore Services, 111 St. George's Terrace, Perth, W.A. 6000.

Brambles Manford, 191 St. George's Terrace, Perth, W.A.

Lombardo Marine Group Pty. Ltd., Offshore Division, 106 Marine Terrace, Fremantle, W.A. 6160.

Tidewater Port Jackson Marine Pty. Ltd., 94a Murray Road, Bicton, W.A. 6157.

Atlas Offshore, c/o TNT Australia Resource Development or Union-Bulkships Pty. Ltd., 17 Henry Street, Fremantle, W.A. 6160.

Western Marine Service Co., 17 Mews Road, Fremantle, W.A. 6160.

Other Operators – Airborne:

Merifield Helicopters Pty. Ltd., 28 Broadway, Nedlands, W.A. 6009.

Mayne Bristow Helicopters Pty. Ltd., Jandakot Airport, Jandakot.

Jayrow Helicopters W.A. Pty. Ltd, 320 Great Eastern Highway, Redcliffe, W.A. 6104.

Vowell Air Services (Helicopters) Pty. Ltd., Hope Road, Jandakot Airport, 6164.

Lloyd Helicopters Pty. Ltd., 64 Canning Highway, Victoria Park, W.A. 6100.

Westcoast Helicopters Pty. Ltd, P.O.Box 108, Belmont, W.A. 6104.

DEVELOPMENTS: No. 12 Berth, North Quay is fitted with a ro/ro ramp and 2 Portainer cranes. 2 other container cranes are provided at North Quay.

AUTHORITY: Fremantle Port Authority, 1 Cliff Street, Fremantle, Western Australia 6160, P.O.Box 95, Fremantle, 6160. *Tel:* (09) 335 3981, 335 3801. *Telex:* AA 92951 "Frepa" and AA 95919 Frehm (shipping advices only). *Cables:* "Fremport", Fremantle, W.A. *Contact:* Captain J. R. Barron Harbour Master. Mr. A. T. Poustie, General Manager.

AGENT: Patrick Agencies, P.O.Box 656, 10, Phillimore Street, Fremantle, W. Australia 6160. Tel. 335–6311. Telex: AA 92434. Cables: "Rikpat Perth WA". Fax: (09) 335-8672.

(B) KWINANA

The following information was produced by Alcoa of Australia Ltd. Also see Section (A).

LOADING: Alumina Loading Procedure – Kwinana

The following information is for your guidance and should assist in achieving a successful loading with minimum delay. We would appreciate your assistance and thank you in anticipation of your cooperation.

Berthing: Berthing and loading will be facilitated if the vessel arrives with sufficient ballast for navigation requirements and retains as much ballast as possible for as long as possible without delaying the loading.

Mooring Arrangements and Shifting Ship:

1. It is the vessel's responsibility to provide adequate mooring lines and to tend them properly whilst at the berth. A vessel with under strength or insufficient moorings will be considered unseaworthy. The quality of equipment and supervision shall be such that the ship is able to remain in the berth, in all normal weather conditions, without undue surging backwards and forwards or drifting off the wharf face.
   If, due to drift, it becomes apparent that the loading chute is endangered, loading will cease immediately. Time lost in such an event could be treated as a vessel delay.
2. Normal moorings at Kwinana, would consist of three headlines, three stern lines, a breastline at each end, a forward and an after spring. The breastlines are preferably doubled up by placing a bight directly over a shore bollard.
3. As the shiploader is of the fixed type, vessels are loaded by warping them backwards and forwards along the jetty so as to position the various hatches underneath the loading chute. If the ship is to be moved ahead, normally the sternlines and forward spring are slackened, whilst heaving on the headlines and the after spring. To move astern, the process is reversed.
4. To minimise the possibility of springs fouling the underside of the dock fenders it is strongly recommended that:
   - A messenger line attached to a 'D' shackle is used on the slackening spring to keep the spring alongside the ship and above the fender line.
   - The spring should not be slackened excessively.
5. You will be advised 30 minutes before completion of each hold and we request your co-operation in providing your crew for vessel movements as promptly as possible.
6. The arrangement of mooring cells and bollards is such that even when shifting between adjacent hatches the breastlines typically change their angle by up to 60° relative to the fore and aft line of the ship, thus losing most of their effectiveness. It is usually necessary therefore to relocate the breastlines at each shift by carrying the ends along the wharf from cell to cell. In the case of long shift ship (e.g. from No. 2 to No. 7 hatch) it may also be necessary to move head or sternlines and springs, since they may become unsafe or ineffective through being too short or too long.

Line Priorities: Most ships are not fitted with sufficient self-tensioning or self-stowing mooring winches to be able to work all mooring ropes direct from the winch drums. Where only 2 or 3 such winches are fitted, it is important that they be used to the best advantage. We recommend that the following priorities be observed:

1. Forward
   (a) Two headlines, for warping ship ahead. (May be turned up on windlass warping drums).
   (b) For'd spring – for warping astern.
   (c) Breastline – for holding alongside.
   (d) Third headline, extra breastlines etc.
2. Aft
   (a) Two sternlines, for warping astern.
   (b) After spring – for warping ahead.
   (c) After breastline – for holding alongside.
   (d) Third sternline, extra breastline etc.
3. Where a breastline cannot be secured directly to a winch or warping drum, a second breastline should be provided.

Cleanliness/Draft Survey: Prior to loading, the vessel's holds and hatch covers will be inspected by an Independent Surveyor engaged by Alcoa or the Consignor.

This Surveyor will also conduct a Draft Survey in conjunction with the Chief Officer.

Shipping Foreman: Alcoa's Shipping Foreman supervises the loading of the vessel and will liaise with the Chief Officer. Hatch stowages and order of loading should be advised to the Foreman prior to commencement of loading.

Weighing: All cargo is weighed continuously by a weightometer which permits a record of hatch tonnages. However the weightometer is a guide only and must not be relied upon as cargo is determined by draft survey.

Documentation: Upon completion of loading an Alcoa Transportation Officer will attend on board to complete all documentation.

Pollution: We are obliged by Fremantle Port Authority regulations to report any pollution caused by vessels at our berth.

G. G. Trimble
Transportation Department, Booragoon

MASTER

____
DATE

ALCOA BERTH – GENERAL:

Jetty Approach: The Company's jetty is located on the East side of Cockburn Sound, approached in daylight hours by the Northern Channels and loading vessels berth on the North side of the jetty, facing due West. At night, the approach is from Cockburn Sound and the Southern Channels. Departure fully loaded is by the Southern Channels to Cockburn Sound, thence Parmelia and Success Channels and Gage Roads to sea.

Fully loaded vessels for discharge at our dock approach through the Parmelia and Success Channels into Cockburn Sound thence by Southern Channels to berth on the South side of the jetty, facing due West. Departure in ballasted condition is by Northern Channels to sea during daylight hours and Southern Channels at night.

Woodman, Jervoise and Medina Channels are unlit and are used for daylight navigation only.

	Max. Draft
Fremantle Approach – Gage Roads	13.10 m.
Cockburn Approach – Parmelia and Success Channels	12.65 m.
Alcoa Kwinana – Jetty Approach	
Northern – Woodman, Jervoise and Medina Channels	8.53 m.
*Southern – Sterling & Calista Channels	10.98 m.
Anchorage – Gage Roads on sand	
Cockburn Sound on clay	16.45 m.

*Overall length limit of 228.6 m.

Refer Chart AUS.117 for detail.

Facilities, Supervision and Manning: The berth consists of 8 cells, each 18.9 m. in diameter spanning 335.3 m. No. 1 Cell is 152.4 m. from the shore. No. 8 Cell is 487.7 m. from shore.

There is a maximum of 12.2 m. depth of water alongside the jetty and vessels are restricted to a maximum of 10.98 m.

The jetty runs due West from the Plant site. Loading vessels will berth port side to heading West and discharging vessels berth starboard side to.

The loading berth is fitted with line haul capstans, guides, bollards and cleats to assist in line-handling operations. There is also a heavy line astern to the beach, to which the ship's line can be attached to assist between hold moves. This heavy line should be let go upon completion of loading to enable Alcoa staff to recover it before Pilot arrives.

All line handling on the jetty is carried out by Alcoa staff and ship's crew are prohibited from handling lines on the jetty.

A hydraulic gangway is provided on the Eastern side of the Alumina loader on Cell No. 4, for loading vessel access and this is operated by Alcoa staff during loading operations. However, discharging vessels on the South side must provide own access. A safety net is required under the gangway which must be provided and fitted by the vessel. (Refer Navigation 'Miscellaneous Equipment' Regulations).

Dock Access Restrictions: The overall control of movements on Company docks are strictly under the direction and control of the Alcoa Foreman who liaises with Security Staff on personnel and vehicle access.

Directions given by Alcoa dock and security staff *must* be complied with immediately.

Access to the docks by personnel and vehicles will be restricted where the access of emergency vehicles or safety is jeopardised.

Access to the dock will be allowed at the discretion of Alcoa supervisory staff whose decision is final.

(a) When the safety of personnel and vehicles is not endangered.
(b) A vehicle is on lawful business providing services to Alcoa or to the vessel, i.e. provisions, laundry, oils, servicemen and emergency services, etc.
(c) Company vehicles servicing equipment or transferring personnel.
(d) Vehicles delivering baggage, large parcels, carrying persons requiring medical attention or Pilots and Masters to and from the vessel.
(e) No hindrance to emergency vehicles will occur.
(f) When a vehicle does not exceed 15 tonnes all up weight.
(g) At the Master's request.

Vehicles are not to remain on the dock unattended for any reason, and must complete their business and be removed from the dock promptly. Alcoa reserves the right to remove vehicles from the dock without consulting the owner or driver, should the need arise and will accept no responsibility for accidental damage to the vehicle should this occur. Persons proceeding in an unsafe manner on the dock will be fully responsible for any claims made due to their actions.

No bunkering facilities are available on the jetty, however a barge from Fremantle is available for the transfer of fuel oils subject to weather conditions.

Water is normally available at 50 tonnes per hour from connections on the dock.

Provisions, laundry and engineering services have access to the vessel from the dock.

The movement of flammable material over Alcoa property is strictly controlled and permission must be sought from the Transportation Officer before any transfer to or from vessels at the berth.

Holds must not be cleaned whilst vessels are secured to Alcoa berths. Vessels whose holds have not been passed as suitable for loading alumina, must make arrangements to have these holds brought up to the required standard. As cleaning cannot take place to Alcoa berths, then the vessel must move to a suitable berth within the port, for this purpose.

General Information: The jetty is 17 km. from Fremantle by road with no public transport services readily available.

Alcoa Security Personnel will provide first aid for minor injuries and an ambulance is available at the plant for urgent transferring of patients to hospital, however, normal medical needs will be arranged by the Agent.

Local telephone calls are provided free and there is a "collect call" telephone in the jetty office for interstate and overseas calls.

Access to and from the jetty will be usually under the control of a Security Guard. However, remote control operation of the gates will be used at times and it will be necessary to follow the instructions on the notice boards at the gates to gain entry or exit. Besides voice communications with the main Security Office there is remote control television surveillance of the whole dock area.

ALCOA BERTH – LOADING:

Description of Product: A fine white powder Al_2O_3 density 0.99 cu.m. (35 cu.ft.) per tonne.

Stowage factor: 1.02 cu.m. (36 cu.ft.) per tonne in a bulk carrier; 1.133 cu.m. (40 cu.ft.) per tonne in a general cargo vessel.

Angle of repose 32° – 36°, no shifting boards required.

Absorbs moisture, not to be loaded in heavy rain. Is chemically inert and will not contaminate or damage other cargo except through dust effect alone. No inherent vice.

Ship Loader – Dimensions, Loading Rate and Limitations: The non-traversable, lifting and slewing loader is located on the fourth cell (318.2 m.) from the shore.

The loader is an open spout feed type with a dust control box fitted on the chute and is fed by conveyor systems from storage bins ashore.

Note: Vessel is required to move under its own power, to enable loader spout positioning over hold. Fullest co-operation of vessel's crew and officers is required to minimise non-loading time.

The loader is capable of a maximum of 1,100 t.p.h. whilst loading and allowing for vessel movements, achieves an average overall loading rate of 750 t.p.h. from start to finish of loading, depending on vessel's configuration and hold capacities.

All cargo is weighed continuously by a Weightometer, accurate to within 0.5% and situated at the foot of the jetty.

Individual hold tonnages are calculated from the Weightometer readings.

The draft tonnage is used for all documentation.

The loader spout is capable of being raised and lowered and the supporting boom swings horizontally through approximately 20° West to 15° East of North at maximum extension of boom.

HW to underside of loader boom in operating position is 17 m.

Fender face to vertical centre line of spout extended is 17.45 m.

Fender face to vertical centre line of spout retracted is 7.85 m.

Loader chute fully lowered is 7.32 m. below HW mark.

Loader chute fully raised is 8.61 m. above HW mark.

HW is 3.66 m. below top of cell.

Variation between HW and LW rarely exceeds 1.22 m.

Loader boom must be fully retracted to raise and lower for vessel berthing and departure.

Alumina Vessel Limitations:

Length Overall	200.00 m.
Breadth	29.87 m.
Draft	10.98 m.

Height of hatch coaming (or any equipment in way of loader access) not to exceed 15.85 m. above waterline.

Ship's beam, the distance from shell to inside of fore and aft coaming at centre hatches, not to exceed 7.92 m.

Vessels with division in holds or centre line bulkheads unacceptable for loading at this facility.

Projections outside main hull line must not exceed 0.5 m.

All drains, hatch wells, bridges, etc., to be dry and sealed, vents to be closed before loading.

Cargo to be protected against sweat, however not necessary to cover steel bulkheads.

Recommended that winches and engine room skylights be covered to avoid dust nuisance.

Vessels not fitted with easily closed hatch covers, should have hatch tents or tarpaulins prepared to quickly cover open holds during adverse weather.

Working Times: 7 days per week, 24 hours per day, however, we request that berthing and sailing movements avoid shift change times of 0630 – 0730 hrs., 1430 – 1530 hrs. and 2230 – 2330 hrs. daily.

Berthing and Sailing: Any time, subject to weather, quarantine, Pilot and tug availability. 2 tugs usually used for berthing and 1 only for departure if draft exceeds 10.21 m. or LOA exceeds 183 m.

Vessels requested to maintain sufficient ballast for navigation requirements without affecting or delaying the loading programme.

Proposed stowage plan required by Alcoa, prior to berthing if possible or immediately vessel is secure to our dock. Advice of distance from centre of first loading hold to front of bridge is required prior to berthing, to enable pilot marker to be placed on dock to assist positioning of vessel.

Survey: Holds will be inspected for cleanliness by a qualified surveyor appointed by Alcoa or the Consignee prior to loading commencing. Holds must be free of all rust scale, residues of previous cargo, dry and swept as required for wheat cargo. Alcoa has no responsibility for vessel cleanliness.

A qualified surveyor will also carry out a full draft survey in conjunction with the Chief Officer.

Documentation: On completion of loading, the Company's Transportation Officer will attend on board to complete all documentation.

The vessel's Agent compiles the Notice of Readiness, Time Sheet/Statement of Fact, Manifest and any supplementary documents required by Charterers and Owners.

The Company's Transportation Officer compiles the Bills of Lading, Weight Certificates and provides details of times, hold quantities etc., for completion of required documents.

OPERATOR: Alcoa of Australia Limited, P.O.Box 252, Applecross, W.A. 6153. *Tel:* (09) 3640111. *Telex:* AA 93910. *FAX:* (09) 364 8920. *Cables:* Kwinalumin – Perth. *Contact:* G. G. Trimble, Transportation Officer – Marine

GEELONG, Victoria: 38.09 S. 144.22 E. (See Plan)

PORT LIMITS: A line in a 150.5° direction from a beacon 1.5 chains West of the Little River entrance intersecting with a line in a 009° direction from the N.W. extremity of Sproat St., Portarlington. N.B. – This seaward limit passes 2 cables Eastward of No. 1 beacon Pt. Richards channel.

DOCUMENTS:

3 Crew Lists Form M & S 11.
Store List Form 42A.
1 Articles owned or in possession of Master, officers or crew, Form 5.
3 ports of call Form C & E 886.
1 Form QA 3 ship's cargo.
1 Form QA 4 ship's pets.
2 Form QA 5 Shipmaster's bond.
2 Form AQ 360 Health reports.

PILOTAGE: See "Melbourne". Radio ETA to "Seapilots Melbourne" 24 hours prior arrival advising deepest draft. Pilot station equipped with radio-telephone continuous watch on 2182 kHz., and VHF Channel 16. Pilots carry portable sets.

ANCHORAGES:

1. Quarantine. As directed.
2. Explosives.
   (a) *Outer:* 088° from Pt. Wilson Beacon 3.52 miles. Circle 0.25 miles (463 m.) radius. Depth 32 ft. (9.7m.).
   (b) *Inner:* 077° from Pt. Wilson Beacon 1.77 miles. Circle 0.15 miles (278 m.) radius. Depth 21 ft. (6.4 m.).
3. Vessels over 30 ft. (9.1 m.) draft: outside No. 2 Beacon Pt. Richards and South of the line of prolongation of the Pt. Richards Channel. Least depth 12.5 m.
4. Vessels over 27 ft. 6 in. (8.4 m.) draft: East of and within 1 mile of No. 17 Beacon Pt. Richards Channel. Least depth 9.1 m.
5. Inner Harbour: As directed:
   Note: Vessels desiring launch communication with the shore will normally anchor South of the Hopetoun Channel.

Masters of vessels are cautioned *(a)* that the bottom of the Inner Harbour is soft mud and is not good holding ground and *(b)* that vessels should not be immobilised unless with the express permission of the Harbour Master. Vessels at anchor should retain the maximum quantity of ballast on board.

RESTRICTIONS: Vessel must have at least 2 ft. (0.6 m.) of water under the keel with a maximum of 6 in. (0.15 m.) for tide.

Night navigation is permissible for vessels with draft up to 10.5 m. and LOA 200 m.

MAX. SIZE: Tankers: 853 ft. (260 m.) length with 34 ft. 6 in. (10.5 m.) draft. Other vessels: Enquiries should be made with regard to vessels over 658 ft. (200 m.) length. Max. beam 45m.

TUGS: Vessels normally towed from Hopetoun Channel to berth, extended towage if required. 3 large tugs available. Use of tug's line optional. Tugs equipped with VHF Channels 6, 8, 12 and 16.

BERTHING:

	No.	*Length (m.)*	*Depth (m.)*	*Use and facilities*
Cunningham Pier	4	328	9.7	Gen. cargo – cargo shed 137m. × 15 m. Rail access.
Bulk Grain Pier	2	201	11.0	Bulk grain export. Gantry extends 154 m. of berth.
Corio Quay South 1	1	183	9.7	Stern loading ramp for roll-on/roll-off. Rail access.
Corio Quay North 1	1	183	9.7	Dry bulk load/discharge. Rate of loader 600 t.p.h.
2	1	183	9.7	Rail access Four 6 t. Portal cranes. Gen. cargo shed 91 m. × 30.5 m.
Corio Quay North 3	1	161	9.7	Gen. cargo shed 97.5 m. × 27 m.
Lascelles Wharf 1	1	173	11.0	Dry bulk cargo.
2	1	173	11.0	Siwertell bulk unloader. Rate 600 t.p.h. Cargo shed 30 m. × 27 m.
3	1	275	11.0	Single lift Portainer crane – Container Berth.
Refinery Pier 1 & 2	2	213	11.0	Petroleum products.
3 & 4	2	275	11.0	Crude oil, chemicals and LPG export.
Pt. Wilson Explosives Pier	2	168	9.1	Dangerous cargo. Commonwealth Government controlled.
Pt. Henry	1	152	11.0	Bulk alumina and allied products. Unloading gantry.

STEVEDORES: Labour ordering: Day labour must be ordered by 1400 hrs. the preceding day. Twilight shift labour by 1400 hrs. preceding day, and midnight shift. Saturday labour must be ordered by 0900 hrs. Friday, Sunday labour by 1100 hrs. Friday (day and twilight shift), Sunday midnight before 0900 hrs., Friday. Monday labour is ordered at 1600 hrs. Sunday. Special requirements exist for labour requirements on public holidays.

TANKERS: Refinery Pier. 4 berths, depth alongside 36 ft. (11 m.) Pumping platform 16 ft. (4.9 m.) above low water, wharf 12 ft. (3.7 m.) above low water. One-ton crane at each berth and accommodation ladder.

No. 1 and 2 Berths: Pier 2,909 ft (887 m.) long, direction 315° berth 700 ft. (213 m.) approx., suitable for ships up to 180 m. LOA. Ships moor to 2 spring dolphins 61 m. apart; pumping platform set back 1.7 m. from line of these dolphins.

No. 3 and 4 Berths: a branch from the main pier, direction 330°, berth 275 m. approx., suitable for ships up to 260 m. LOA. Ships lie alongside a concrete sprung berthing beam 73 m. in length. No. 4 Berth equipped with capstans and 90 tonnes S.W.L. mooring hooks for berthing large vessels. Distance between backspring bollards 35 m. Hoses 8 in. – reduction from 10 in. available.

Ballast: Tank Cleaning and Dirty Ballast Facilities: Line 12 in. Maximum quantity restricted by ullage in shore tank. Rate 900 t.p.h. Berths 1, 2, 3 and 4. All ballast must be discharged via the shore reception facilities even though oil free. Severe penalties will be imposed by the Authorities for any infringement of harbour regulations.

Geelong Port Authorities take a serious view of any form of oil pollution within the harbour, and Courts impose heavy penalties on offenders. Essential Master advises ship personnel before berthing of necessity for extreme care to ensure no oil spillage occurs.

Port Authority Circular: Mooring Ropes: In the light of new Tanker Terminal Safety requirements based on recent I.M.O. recommendations, some modification of the former stipulation regarding wire rope moorings may now be considered. Where backsprings are crossed on Refinery Berths 1 and 2, rope remains the preferred mooring. Otherwise where sliphooks are provided, wire moorings will be accepted, whereas they are not acceptable on bollards.

Please ensure that tank vessels entering the port have either rope moorings, wires with rope tails, or that vessels with wire moorings are berthed in locations where the wire eyes are placed on sliphooks.

HEALTH: An overseas vessel approaching the port requiring Pratique shall send a message to the Quarantine Officer not more than 24 hours and not less than 12 hours before arrival containing the following information: name of vessel, ETA, number of passengers, number of crew, number of passengers disembarking, port of departure and date, disease on board.

By supplying by radio to Agent the answers to 12 questions on the form Q.2 (see "General – Health" before first port), the vessel may be permitted to berth prior to the granting of Pratique.

On arrival the health report shall be given to the Quarantine Officer, 2 copies being furnished on the prescribed form, 1 of which will be signed by the Quarantine Officer and returned to the Master.

RADIO: Coastal radio station for local messages "Radio Melbourne" VIM. The Port of Geelong Authority maintains a Signal Station at Point Henry at which a 24-hour watch is kept. (Lat. 38° 7′ 51″ S., Long. 144° 25′ 28″ E.). The building is a cream brick tower 11.3 m. in height to the roof, situated at the Northern end of the high land of Point Henry, and is surmounted by a white signal mast. Movement of traffic within the port is controlled through the Signal Station. Communication is affected as follows:

1. Telephone. Geelong 48 – 2700.
2. Radio Telephone VHF F/M (International Channel).
   (i) Channel 16. 156.8 MHz. Calling (continuous watch).
   (ii) Channel 12. 156.6 MHz. Working.
   (iii) Channel 8. 156.4 MHz. Pilots and Tugs (continuous watch).
   (iv) Channel 6. 156.3 MHz. Tugs.
   (v) Channel 67. 156.375 MHz. Safety.

These frequencies are the same as those operated by the pilot launches, Point Lonsdale Signal Station, Melbourne Harbour Control and all Port Phillip tugboats on commercial towage.

MEDICAL: Comprehensive medical facilities available, including 459-bed Geelong Hospital. If vessel to be in port less than 24 hours it is advisable to radio Agent informing him of medical requirements prior to vessel's arrival.

DENSITY: Normally 1025, may decrease to 1023 after much rain, or increase to 1027 in Summer after prolonged dry spell.

FRESH WATER: Available at all berths from shore hose at 40–50 t.p.h. Charge 56c per kilolitre plus service charge.

FUEL: Marine fuel to 650 sec. and diesel fuel available Corio Quay North and Lascelles Wharf; all grades to 3,500 sec. available at Refinery Pier berth.

FIRE PRECAUTIONS: Stringent restrictions against burning or welding on vessels carrying dangerous cargoes. Standard fire precautions.

GANGWAY/WATCHMEN: Shore gangway man compulsory. Penalty rates after hours.

OPENING/CLOSING HATCHES: Crew or stevedores, to Master's requirements. It is normal to request bulk carriers to arrive at berth with all hatches open.

CERTIFICATES:

Derat Certificate (Health Requirement).
Ship's Articles (British) (Customs requirement).
Ship's Register (Customs requirement).
Load Line Certificate (Customs requirement).
Safety Equipment Certificate (Customs requirement).
Safety Radio Certificate (Customs requirement).
Last Port Clearance (Customs requirement).

CUSTOMS ALLOWANCES: 200 cigarettes or 250 gm. tobacco or 40 cigars. Spirits: Any bottle opened not to exceed 1 litre.

CARGO GEAR: Australian Navigation Act requirements. See "Melbourne".

IDENTIFICATION CARDS: See "Melbourne".

CONSULS: See "Melbourne".

REPAIRS: All services available. Most Melbourne repair and service firms will also undertake work in Geelong.

DRY DOCKS: *Rippleside Slipway:* 1,000 tons on 47.85 m. B.P. and repair workshop.

REPATRIATION: Possible without difficulty.

AIRPORT: Nearest major commercial airport is Tullamarine, 50 miles distant, from which there are frequent interstate and international flights. Airport accessible by road in about 1 hour 15 minutes (direct bus).

TIME: GMT plus 10 hours. Summertime, GMT plus 11 hours.

HOLIDAYS: Closed holidays: Christmas Day; Waterside Workers' Picnic Day; Labour Day; Good Friday; Anzac Day (Tanker operations excepted). Other holidays: Australia Day; Easter Monday; Queen's Birthday; Geelong Cup Day.

TELEPHONE: Placed aboard on arrival; ship charged for calls and service.

SERVICES: Cleaning, painting, fitting out, etc., fumigation. Good fresh stores available.

POLICE/AMBULANCE/FIRE: Police 26 2800; Ambulance 22 2555; Fire 21 2755.

SHORE LEAVE: No restrictions. Seamen aboard vessels berthed at Refinery Pier sign book on leaving pier and again on re-entering; this is in lieu of any form of dock pass.

AUTHORITY: Port of Geelong Authority, 65 Brougham Street, (P.O.Box 344), Geelong, Victoria 3220. *Tel:* (052) 22 1644. *Telex:* AA38648. *Contact:* N. Samuels, Chairman.

AGENT: Patrick Agencies, 2 Moorabool Street, P.O.Box 37, Geelong, Victoria 3220. Tel: 22 1155. Telex: AA 32658. Cables: "Rikpat".

GERALDTON, W.A.: 28.46 S. 114.36 E. (See Plan)

PORT LIMITS: Inner Harbour includes all that area of water in Champion Bay bounded by a line drawn from Gregory Street, Geraldton, along the foreshore to a point due South of the Western extremity of the breakwater; thence along the breakwater to the Western extremity of the Eastern breakwater; thence S.E. to the foot of the said Gregory Street, and also including the Entrance Channel thereto.

Outer Harbour includes all that area of water in Champion Bay and Geelvink Channel bounded by an imaginary line drawn from Point Moore lighthouse true West as far as Longitude 114° 30′ E. thence true North to the shore of the mainland about 2.75 nautical miles (North and West from Woolawar Gully), but excluding the waters of Geraldton Inner Harbour and the Entrance Channel thereto.

ETA: "Shipserve Harbour Master Geraldton" requires 48 and 24 hours notice prior arrival. The 24 hours message should be timed to be delivered before 1630 hrs. local time on the day before arrival so that arrangements can be finalised, when possible, in working hours. Please also indicate fore and aft draft in the 48 hours notice.

Masters are advised for medical and or other emergencies; the Harbour Master should be contacted through Principal or Local Agents.

Vessels arriving in ballast are requested to retain all clean ballast until after berthing. Discharging ballast before arriving may preclude berthing if strong wind conditions prevail.

DOCUMENTS: Quarantine Notice and Declaration QA3 Form A, Quarantine Notice QA 4 Form E2, Shipmaster's Bond QA 5, Departure Notice, 2 Crew Lists. Also see "Melbourne".

PILOTAGE: Compulsory. Pilot boards in position Point Moore Lighthouse 2.2 miles, bearing 135°. If conditions abnormal pilot launch may not be able to reach this position then Port Control will advise boarding point. Usually off No. 1 and No. 2 beacons.

Pilot ladder and accessories, including access to vessel, must comply in all respects with current IMO/SOLAS requirements. Failure to comply *will* incur delays.

At NO time will mechanical pilot hoists be utilised due to swell conditions.

ANCHORAGE: Vessels of up to 150 m., Moore Pt. Lt. Ho. 195° distance 2.2 miles in 11 m. Vessels in excess of 150 m. are advised to anchor close to and to seaward of Pilot Boarding Ground, unless weather conditions are excellent. The former position is referred to as the "Inner Anchorage" and the latter, the "Outer Anchorage".

MAX. SIZE: Length 213 m.; Beam 30.4 m. Permissible drafts: 8.7 m. at LW – 9.1 m. at 0.8 m. of tide, 9.3 m. at 1.1 m. tide provided swell at Waverider Buoy does not exceed 3 m. Vessels wishing to load to maximums dependent on tide prevailing should contact Harbour Master before so doing.

RESTRICTIONS: Swells up to 5.0 m. in outer approaches. Loaded ships advised not to enter when swell excessive.

Bluff Point Leads or Outer Channel: Depth of water 10 m., minimum LWIS width of channel 180 m.

Curved Section of Channel: Depth of water 9.7 m. to 9.4 m. LWIS.

Inner Harbour Channel and Manoeuvring Area: 9.1 m. LWIS. Depth alongside berths: No. 2-5 9.4 m. LWIS.

HEALTH: First port of entry, radio Port Authority not less than 12 hours prior to arrival advising state of health. Also see "Melbourne".

TUGS: One 16.5 tonne bollard pull and one 6 tonne bollard pull. Compulsory.

RADIO: VHF available for communications with Pilot. Channels 6, 9, 12 and 16. Continuous watch not maintained.

BERTHING: The wharf is divided into 4 berths numbered 1, 2, 3 and 4 from East end, 3, 167 m. in length and the fourth 181 m.

No. 1. Berth has a transit shed with a 1,000 ton capacity, and an old shed which has been used for bulk storage of wheat and salt. The berth is used as a general purpose berth.

No. 2. Used as the tanker berth, and also for the discharge of bulk phosphate, sulphur and allied cargoes. Also for loading bulk cargo other than wheat. General cargo can also be handled and facilities are available for the holding and loading of sheep. Has an unobstructed apron of 27.5 m. for almost the full length of berth.

No. 3. Berth mainly for loading of bulk grain. There are 2 loading gantries on the wharf each capable of loading wheat at the rate of 400 t.p.h.

No. 4. It is possible to use No. 4 for general purposes, but a loading gantry and conveyor system at the berth is used for loading mineral sands. Max. rate 1,000 t.p.h. Air draft for loader not to exceed 11 m.

No. 5 berth is situated to the West of the main wharf and runs in a N.N.E. direction. The berth is 213 m. in length with mooring dolphins either end. Currently the berth is used for general purposes.

CARGO GEAR: See "Melbourne".

STEVEDORES: 35 men. Working hours 0800 – 1700, Monday – Friday. Extended shifts Monday – Thursday. Evening shifts all days except Saturday.

CRANES: Gottwald 260-69 container crane will be available December 1986.

FRESH WATER: At each berth 25 t.p.h.

FUEL: Light diesel oil 80 t.p.h.
FIRE PRECAUTIONS: Fire fighting unit available.
REPAIRS: Engine and engineering repairs can be carried out. Arrange through Agents.
GANGWAY/DECK WATCHMEN: Normally done by ships' crew.
OPENING/CLOSING HATCHES: Done by ships' crew.
CUSTOMS ALLOWANCES: Each crew member 200 cigarettes or 40 cigars or 8 oz. tobacco and limited amounts spirits per man.
REPATRIATION: Crew changes can be carried out with little difficulty.
AIRPORT: Local airport 11 km. East of town. International – Perth, 430 km. South.
HOLIDAYS: Christmas Day, Boxing Day, Easter, Labour Day, Anzac Day, Queen's Birthday, Foundation Day.
POLICE/AMBULANCE/FIRE: Police 21 1144; Ambulance 21 3255; Fire 21 2222.
TIME: GMT plus 8 hours.
TELEPHONES: Available at each berth (ordered through Agent).
SERVICES: Compass adjustment, radio and radar repairs available. Contact Agents.
BANKS: Commonwealth, Westpac, Rural & Industries, A.N.Z. Banking Group, National Australia Bank.
STORING: See "Prelims".

1. Stored by truck.
2. Not applicable.
3. Trucks allowed alongside.
4. Fork lifts allowed.
5. Storing of ships must abide by Customs Regulations.
6. Waterside workers would be employed to assist with storing if required.

SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Not required.
DELAYS: All subject to weather conditions.
GENERAL: *Mineral Sands Loading:* We would like to remind Owners of the very stringent hold cleanliness requirements for vesels loading mineral sands, particularly rutile and zircon.

Owners will be aware that these sands are refined very high quality products and Surveyors require vessels to be completely free of all chemical residues, especially loose rust scale, before presenting for loading. Any work required must be done by shore labour, which is costly and time consuming.

DEVELOPMENTS: The Inner Harbour may be dredged to 13.2 m.
AUTHORITY: Geraldton Port Authority, P.O.Box 1064, Geraldton, Western Australia 6530. *Tel:* (099) 212699. *FAX:* 21-7886. *Contact:* Harbour Master, Department of Marine & Harbours, P.O.Box 296, Geraldton, Western Australia 6530. *Tel:* 213340 or 215255. *Telex:* 91285.

AGENT: Patrick Agencies, 10 Francis Street, P.O.Box 67, Geraldton, W.A. 6530. Tel: 21-6744, 21-6976. Telex: 91696 A/B Rikpat. Cables: Rikpat.

GLADSTONE, Queensland: 23.51 S. 151.15 E.

(See Plan)

PORT LIMITS: Inside a line commencing at a point 1.5 miles North of East Point, Facing Island; thence to the outer extremity of Jenny Lind Bank, and thence by a line to Tiber Point.
DOCUMENTS: See "Melbourne".
PILOTAGE: ETA's may be sent through Brisbane or Rockhampton Radio Stations, not less than 24 hours before arrival, followed by amended advices where necessary as takes pilot launch 2 hours to reach Pilot Boarding Ground from town. Pilotage compulsory all merchant ships. Pilot boards at the Fairway Buoy which is approx. 28 km. West of Bustard Head. VHF Channel 16 may be used to contact pilot station, call sign "Gladstone Harbour Control"; 24 hour watch maintained. Pilot boat also has VHF. Pilot boat orange launch and displays usual signals.

Boarding of Pilots may be possible by helicopter if vessel meets certain requirements. The decision will be made after radio communication with the vessel.

ANCHORAGE: Good anchorage inside Gatcombe Head about 7 cables South of Bushy Islet in 8 to 10 fathoms, sand and mud, North of Facing Island Leads.
RESTRICTIONS: The port is served by an entrance channel, some 10 km. long, with a bottom width of 183 m., dredged to 15.3 m. at LWOST.

The max. allowable draft of a vessel passing through the channel is determined by the following formula:

Allowable draft in metres = 15.3 m. + tide height $\dot{-}$1.5 m./2.0 m.*

*−1.5 m. (for vessels less than 85,000 d.w.t.) and −2.0 m. (for vessels of 85,000 d.w.t. or greater).

The max. daily tide height is 4.9 m.

The min. daily tide height is 2.7 m.

Tankers carrying petroleum products may enter during hours of darkness only at Harbour Master's discretion.

MAX. SIZE: The Port can accommodate vessels of up to 16 m. draft on any day of the year. The maximum draft for entrance channels is dependent on tidal conditions. Length and breadth dependent upon wharf to which vessel is to proceed. Principal wharves are:

Auckland Wharf	No. 1	Depth	11.30 m.	at LW
„ „	No. 2	„	11.30 m.	„
„ „	No. 3	„	11.30 m.	„
Barney Point		„	15.00 m.	„
South Trees	East	„	13.72 m.	„
„	West	„	12.80 m.	„
Clinton Coal Facility		„	17.20 m.	„
Smelter Wharf		„	15.00 m.	„
Clinker Wharf		„	10.40 m.	„

HEALTH: A system of Radio Pratique has been adopted for vessels calling at Gladstone as first port Australia provided they are regular callers from disease free areas.

All vessels requiring Pratique must radio answers to a series of questions regarding crew health etc. to ship's Agents 24 hours prior to arrival.

See "General-Health" before first port.

RADIO: Radio messages passed to Agents via any coastal radio station. All shipping cables to Agents, etc., should be prefixed "Shipserv" to enable delivery destination outside ordinary postal hours if necessary.
VHF: Shipping movements are controlled by VHF Radio, the base station being operated by the Harbour Master and his Staff.
TUGS: 4 tugs in service with bollard pulls of 46, 42, 42 and 34 tonnes. Tugs normally join vessel in vicinity of South Trees Point. Tug's lines always used when vessels are piloted. There is no extra charge for use of tug's lines.
BERTHING: Large vessels requiring load coal either Auckland Point Wharf or Barney Point Wharf normally swing and berth starboard side to, head to sea, on flood tide. Smaller vessels using these berths either port or starboard side to, depending upon tide. Vessels requiring discharge bauxite South Trees Island Wharf berth at periods of slack water (high or low) only. Vessels loading alumina this wharf berth either on flood tide or slack water – *never* on ebb tide.

Auckland Point Wharves: With total length of 578 m., there are 3 berths at Auckland Point, owned and operated by the Gladstone Harbour Board.

No. 1 Berth: Coal is exported through this berth over 2 bulk shiploaders each with a capacity of 800 tonnes/p.h. These loaders travel a distance of 142 m. along the wharf and are joined by 2 conveyors to the coal stockpile area. Capacity of the stockpile is 300,000 tonnes. Depth of berth is 11.3 m. LWOST

No. 2 Berth: This berth handles the export of grain (wheat, grain sorghum, oil seeds) from the rich grain growing areas of the Dawson/Callide Valleys and the Central Highlands. Grain is stored in the adjoining complex of silos and storage sheds.

Total Port capacity for storage of grain is over 82,000 tonnes. Taken from the storage areas by conveyors, the grain is loaded onboard vessels by 2 mobile gantry shiploaders at a combined rate of 1,600 tonnes/p.h. The berth depth is 11.3 m. LWOST.

No. 3 Berth: Petroleum products imported through this berth are stored in the tank farms constructed by the major oil companies on reclaimed land adjacent to the berth. This vital fuel is then distributed throughout Central Queensland. General cargo and special heavy lift vessels also use this berth. The berth depth is 11.3 m. LWOST.

Barney Point Wharf: This wharf with a total length of 205 m. is owned and operated by Thiess Dampier Mitsui Coal Pty. Ltd. Coal from the T.D.M. Mine at Moura and Thiess Brothers Mine at Blackwater is exported through this facility. Coal from the Moura Mine is carried 180 km. to the port over the direct Gladstone to Moura railway line. The stockpile area has a capacity of 400,000 tonnes. Shiploading is done by a single 2,000 tonnes/p.h. mobile shiploader. The berth depth is 15.0 m. LWOST.

South Trees Wharf: Owned and operated by Queensland Alumina Limited, this facility handles all cargoes for the giant alumina refinery. Bauxite is imported from Weipa (in North Queensland) and alumina is exported to all parts of the world. The other components necessary for the alumina process – caustic soda and fuel oil are also imported over the wharf.

Depth at the berth is 12.8 m. LWOST.

Boyne Wharf: Constructed to serve the needs of the Gladstone aluminium smelter, the wharf is 250 m. long and will cater for vessels up to 60,000 tonne capacity.

A causeway 710 m. long provides access to the wharf and to a sealed area (400 m. × 50 m.) for storage of aluminium billets. On the wharf is a 400 tonnes/p.h. mobile unloader to handle petroleum coke used in the smelting process.

Depth at the berth is 15.0 m. LWOST.

Fisherman's Landing Wharf: Most Northerly of the wharf centres, the wharf at Fisherman's Landing will export clinker from the Queensland Cement & Lime Clinker Plant. The limestone is mined in the Mount Larcom area, crushed and pumped down to the plant in slurry form. After processing, the clinker is exported to Brisbane to be used in the manufacture of cement.

The clinker will be loaded by a 2,000 tonnes/p.h. pivoting bulk shiploader. The shiploader will load vessels of 25,000 tonne capacity.

Depth at the berth is 10.4 m. LWOST.

Clinton Coal Facility: One berth owned and operated by Gladstone Harbour Board. Shiploader and unloading operations at rate of 4,000 tonnes/p.h. Berth presently caters for vessels from 25,000 d.w.t. to 140,000 d.w.t. and of 16 m. draft. The berth has recently been extended by 50 m. to 340 m. together with modifications to the shiploader chute. This will allow loading of vessels of 55 m. beam.

BULK HANDLING FACILITIES: *See Table overleaf.*

STEVEDORES: Special ETA advice necessary if week-end labour required and must be ordered by 1400 hrs. on previous Friday. Monday labour for vessels arriving after Friday must be ordered by 1500 hrs. on Friday. The only commodities requiring shore labour are bulk grain and general cargo.
MEDICAL: Dependent duration stay in port, prior notice for medical attention not required (other than notice of infectious diseases). Hospital facilities available. Current vaccination certificate for each member of crew required.
TANKERS: Diameters of discharge lines 12 in., (0.305 m.) and 8 in. (0.203 m.) for white oils and 6 in. (0.152 m.) black oils, no slop discharge facilities. Main tanker berth at Auckland Point Wharf (Berth No. 3) min. depth alongside 11.30 m. LWOST. Black oil also discharged South Trees Island Wharf for use in alumina plant only.
DENSITY: Average density 1024–1028.

FRESH WATER: Available all wharves. Fresh water hydrants placed at intervals along wharves.

FUEL: Fuel oil is available by bunker lines at Auckland Point No. 1 and No. 3 Berths and South Trees Island Berths. (Fuel oil at South Trees Island is available to Queensland Alumina's vessels only). Lubricating oils and diesel are available by road tanker. Coal (high carbon content) also available.

FIRE PRECAUTIONS: Where petroleum and goods of dangerous inflammable character are being unloaded, watchman shall be employed to collect matches from all persons in vicinity and to patrol wharf within the limits in which petroleum cargo is being handled. Every vessel carrying inflammable liquids when in any Queensland port shall display red flag, not less than 1 m. (3 ft.) square with white circular centre 15 cms. (6 in.) in diameter.

OPENING/CLOSING HATCHES: Either by ship's crew or shore labour.

GANGWAY/DECK WATCHMEN: Services of watchmen is not recommended except in the case of petroleum tankers previously mentioned.

SHIP CERTIFICATES: List of certificates usual for Australian ports. See "Melbourne".

CARGO GEAR: To be in accordance with Commonwealth Navigation (Loading and Unloading Safety Measures) Regulations. See "Melbourne".

CUSTOMS ALLOWANCES: 0.5 lb. of tobacco or 200 cigarettes, to be opened. 1 only 26 ounce bottle, to be opened.

IDENTIFICATION CARDS: See "Melbourne".

CONSULS: None.

REPAIRS: Minor engine and deck repairs are undertaken.

DRY DOCKS: None available. Slipway capable of lifting vessels up to 125 tons displacement with max. beam 23 m. and max. draft forward of 6 ft.

REPATRIATION: Facilities for effecting crew changes and necessary repatriations can be arranged. Prior notice required.

AIRPORT: Airport approximately 3 km. from port and is regularly served by 2 internal airlines. Daily flights to Brisbane with connections with overseas airlines.

TIME: GMT plus 10 hours.

HOLIDAYS: Only 5 official holidays in year when it is *not* possible to arrange cargo work: Christmas Day; Anzac Day (25th April); Labour Day (1st Monday in May); Good Friday.

POLICE/AMBULANCE/FIRE: Telephone number of these services in cases of emergency only is "000" and ask to be connected to the required service. Emergency call to Hospital is 72.1033.

TELEPHONES: Public phones available on wharf.

SERVICES: No tank cleaning facilities. No slop facilities.

SHORE LEAVE: Crew members allowed ashore provided vaccination certificates in order.

DELAYS: No unusual delays other than berth availability or unusual tidal conditions.

GENERAL: No cranes on wharves. Mobile cranes available for hire. No lighterage facilities. Electricity available to ships. Passengers not normally embarked or disembarked this port, as no facilities for them.

DEVELOPMENTS: Investigations into the deepening of harbour channels are being carried out to enable vessels of 200,000 d.w.t., to be fully loaded.

Tide/Draft Table: The Harbour Master at Gladstone has issued a tide/draft table following the completion of the dredging programme. A copy of the full table is available from Agent's office, but we quote below examples of drafts extracted from the full table:

Tabulated tide height (m.)	*Vessels up to 85,000 d.w.t.* (m.)	*Vessels over 85,000 d.w.t.* (m.)
2.2	15.6	15.1
2.5	15.9	15.4
2.8	16.2	15.7
3.1	16.5	16.0
3.4	16.8	16.3
3.7	17.1	16.6
4.0	17.2	16.7
4.3	17.3	16.8
4.6	17.4	16.9
4.9	17.6	17.1

The restriction at Clinton Wharf of vessels maximum 140,000 d.w.t. is also lifted and in future the vessel size at this berth will be limited by such parameters as beam 55 m. and loader travel – distance between forward hatch and aft hatch 230 m. – vessels which exceed these limitations will be considered on an individual basis.

AUTHORITY: Gladstone Harbour Board, P.O.Box 259, Yarroon Street, Gladstone, Queensland 4680. *Tel:* (079) 76 1333. *Telex:* Gl Port AA 49480. *Contact:* Mr. B. J. Jordan, Secretary.

AGENT: Patrick Agencies, P.O.Box 296, 136 Gondoon Street, Gladstone, Queensland 4680. Tel. 72 2088. Cables: "Rikpat" Gladstone. Telex: AA 49431.

GOVE, N.T.: 12.12 S. 136.40 E. **(See Plan)**

DOCUMENTS:

2 Crew Lists Form M. & S. 11 (3 at outports).
5 Passenger Lists, Forms M. 308 and 309.
1 Loading Ports List, Form B921.
3 Barber's stocks and stock in ship's shops and canteens, (Form 5) continuation of the back, Form 5 AA.
1 List of Customable Articles, Form 5 (crew).
3 Return of Goods of Barber's stock, etc., Form 5 AA.
1 Stores List, Form 42 A.
1 Annual Declaration, Form QA76.
2 Primary Health Report, Form Q360.
1 Clearance from Last Port.
Ship's Log.
1 Derat Certificate.
1 Light Dues if paid previously.

PILOTAGE: Compulsory for vessels proceeding to Nabalco facilities. The Pilot will board at the anchorage position.

ANCHORAGE: Melville Bay affords good holding ground, the bottom being either sand or mud and the depths ranging up to 48 ft. (14.64 m.) West of Dundas Point. Vessels awaiting a berth should anchor approximately 1.5 miles (2.41 km.) Westward of West Woody Island close by the Fairway Buoy. The Quarantine Officer and Customs Officer normally clear vessels alongside the berth, but may on occasions board at the anchorage.

A vessel is considered to be an "arrived ship" for purposes of laytime when she enters the Quarantine Anchorage.

We quote below Australian Notice to Mariners No. 510/1978.
Gove Harbour – Quarantine Anchorage Altered:

(a) A pecked line is to be inserted joining the following positions:
From Lat. 12° 11.12′ S., Long. 136° 37.5′ E. on the Harbour Limit to
Lat. 12° 09.58′ S., Long. 136° 37.5′ E. thence to
Lat. 12° 09.58′ S., Long. 136° 39.6′ E. and thence to
Lat. 12° 11.12′ S., Long. 136° 39.6′ E. on the Harbour Limit
On Plan, from Long. 136° 39.6′ E. in the N. border to
Lat. 12° 11.12′ S., Long. 136° 39.6′ E. on the Harbour Limit.

(b) The Legend *Quarantine Anchorage* is to be inserted within the area of 1(a).

RESTRICTIONS: Approach Channel to bulk cargo and tanker jetties has minimum depth 13.8 m.

Approach Channel to general cargo jetty has minimum depth 11.59 m.

PRATIQUE: The port of Gove has been declared a port of first entry for health clearance of vessels arriving from overseas.

Vessels will usually be cleared alongside the berth.

If Pratique is required, vessel must provide a Primary Health Report.

Radio Pratique may be granted if answers to the "Australian Quarantine Questionnaire" are received 12-24 hours prior to vessel's arrival. See "General – Health" before first port.

TUGS: There are 3 work boats available for hire in the port, max. h.p. 2000. Tug's lines are used in most instances, but no extra charge is made.

BERTHING: *Bulk Cargo Wharf:* The bulk cargo wharf runs in a N.W./S.E. direction and bears 189° true 2,440 m. (8,000 ft.) from West Woody Island triangulation point. The wharf has a 'T' head which is connected to the shore by an access bridge 946 m. (3,120 ft.) long and 3.05 m. (10 ft.) wide.

The Northern branch of the wharf head constitutes the bauxite/alumina berth and the Southern branch the bulk liquids berth.

The bauxite/alumina berth is mounted with a travelling, luffing shiploader with telescopic trimming spout having an outreach of 31 m. (101 ft. 6 in.) from the fender line. The distance of travel along the berth is 164.2 m. (540 ft.). The clearance beneath the spout at maximum elevation for loading is 16.7 m. (55 ft.) above chart datum (LWOST) at berth side.

The shiploader has a designed capacity of 2,000 tonnes/p.h. for bauxite and for alumina.

The shiploader is connected by a belt conveyor system to the bauxite stockpiles and to the alumina silos, 3,202 m. (10,500 ft.) and 2,592 m. (8,500 ft.) distant respectively from the wharf head.

The bulk liquids berth consists basically of mooring dolphins and fenders associated with a pipe bridge support. Three pipe-lines are provided namely:

(1) 46 cm. (18 in.) diameter for bunker fuel oil.
(2) 30 cm. (12 in.) diameter for caustic soda.
(3) 25.4 cm. (10 in.) diameter for diesoleum, petroleum and aviation kerosene.

During the tanker discharging operations, connection between ship and shore is provided by 20.3 cm. (8 in.) diameter flexible hoses with BS Table "F" 8-hole fittings at each end.

If other types of fittings are required to effect discharge, arrangements should be made by the tanker vessel to provide such items.

The length of each pipe-line is approximately 1,982 m. (6,500 ft.) covering the distance from bulk liquids berth to shore tank farm.

A depth of water of 13.9 m. (45 ft. 08 in.) below chart datum (at low water ordinary Spring tide) is available at both the alumina/bauxite and bulk liquid berths.

This will allow simultaneous occupancy by a tanker and bulk carrier, each of up to approximately 60,000 d.w.t., under ordinary conditions. A minimum clearance under the keel of 10% of the draft is required for berthing and unberthing.

General Cargo Wharf: This wharf extends in a S.E. direction from the Eastern side of the land strip leading to Dundas Point. The wharf bears 315° (T) × 1,342 m. (4,400 ft.) from Half Tide Rock and is a substantial structure 94 m. (310 ft.) long by 27.89 m. (91 ft. 6 in.) wide connected to the shore by an access jetty 287.2 m. (950 ft.) long and 5.49 m. (18 ft.) wide.

The wharf has been designed for vessels of max. length of 182.8 m. (600 ft.) and of up to 20,000 d.w.t. to berth at each side under normal conditions. Vessels of up to 30,000 tons can be accommodated under suitable tidal conditions.

The depth of water alongside is 11.59 m. (38 ft.) below chart datum (LWOST) on both sides of the wharf head.

Fisherman's and Light Cargo Wharf: This wharf is located near Harbour Island in Melville Bay. It is administered by V. B. Perkins Pty. Ltd. Total wharf length is 48.0 m. and width 18 m. Max. wharf loading by vehicles 4.5 tonnes/sq.m. The min. available depth alongside is 5.0 m.

Ramps: 2 Landing barge ramps accommodating landing barges up to 1,500 g.r.t. A 28 tonne SWL fork lift is available for cargo operations.

RADIO: *Notice of Arrival:* Prior to arrival, vessels are requested to radio the following information:

(i) For all vessels:
  (a) ETA Gove – 72 hours out
  – 48 hours out
  – 24 hours out
  (b) Anticipated draft forward and aft.
(ii) For bulk carriers, anticipated hatch loading plan, loading sequence and quantity required in each pour.
  (c) For petroleum tankers, approximate quantities to be discharged and grade of product desired for first discharge, and order of unloading various grades if more than one grade is carried.

Radio messages should be addressed to "Gobaux", Darwin. The call sign of the radio station at Darwin is VID. Radio messages will be passed by teleprinter to Gove.

Cable messages for Nabalco should be addressed to "Shipserv", Gove.

VHF: The Nabalco Harbour Master's Office maintains a listening watch on Channel 16 during office hours. VHF frequencies used are 16, 12 and 6. Call sign "Gove Harbour".

CRANES: 8 mobile cranes, capacities between 5 tonnes and 90 tonnes.

STEVEDORES: No local stevedoring companies.

TANKERS: See "Berthing".

FRESH WATER: Available at all berths.

FUEL: Available at Fisherman's and Light Cargo Wharf only.

MEDICAL: Medical services and a large modern hospital with comprehensive theatre, medical and surgical facilities, at Nhulunbuy, 9 miles from the port.

AIRPORT: Gove is served by commercial flights to and from Darwin on 5 days a week and by commercial flights several times a week from Brisbane and Sydney via Cairns. Services to other parts of Australia and the rest of the world are frequent from Darwin.

TIME: The time used is GMT plus 9.5 hours, and all reference to time should be given in Local Time.

REPAIRS: Limited facilities, minor repairs only.

DENSITY: 1025.

SURVEYORS: Local Pilots conduct draft, on-hire and bunker surveys, however, Lloyd's Surveyor available from Darwin or Cairns.

HATCHES: Opening and closing carried out by ship's crew.

REPATRIATION: Facilities exist for effecting crew changes and repatriation.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 litre of spirits per crew member.

IDENTIFICATION CARDS: May be required.

SHORE LEAVE: After clearing inwards crew members may proceed ashore without special permission.

REGULATIONS: It is forbidden to take firearms, alcoholic beverages and foodstuffs ashore.

AUTHORITY: Nabalco Pty. Limited, P.O.Box 21, Nhulunbuy, N.T.5797. *Tel:* (089) 87 5211. *Telex:* 85045 (Port Telex). *FAX:* (089) 872-596. *Cables:* Gobaux. *Contact:* Captain W. J. Gibson, Port Superintendent or Captain G. K. Bridges, Assistant Port Superintendent.

Gove Port Office *Tel:* (089) 875347.

AGENT: Agency undertaken by Nabalco Pty Limited.

GROOTE EYLANDT (Milner Bay), N.T.: 13.52 S. 136.25 E. **(See Plan)**

LOCATION: Milner Bay is situated on the Northwestern corner of Groote Eylandt which is itself situated in the Southwestern area of the Gulf of Carpentaria.

It is a "Port of First Entry" to Australia. Customs, Quarantine Doctor, Police, are in residence on the Eylandt.

PORT LIMITS: The waters in Milner Bay bounded by a line commencing at the HW mark on the N.W. coast of Groote Eylandt in position Lat. 13° 50′ 05″ S., Long. 136° 24′ 29″ E. and proceeding in a 260° 44′ 10″ direction to a point in Lat. 13° 50′ 28″ S., Long. 136° 22′ 03″ E. at the high-water mark on the East coast of Connexion Islet; thence by a line following the contour of the coast of Connexion Islet at the HW mark to "Boulder" in position Lat. 13° 50′ 46″ S., Long. 136° 20′ 14″ E.; thence by a line bearing 151° 30′ to a position Lat. 13° 53′ 34″ S., Long. 136° 21′ 47″ E.; thence by a line bearing 80° 44′ 10″ to a point being Lat. 13° 52′ 54″ S., Long. 136° 25′ 58″ E. thence by a line following the contour of the coast at high-water mark to the point of commencement.

DOCUMENTS:

3 Crew Lists.
5 Passenger Lists.
1 Port of Call List.
3 Stores Lists.
1 Crew's Personal Effects List.
Derat. Certificate.
Clearance from Last Port.

PILOTAGE: Compulsory to Ore Jetty

There is a Port Superintendent and a Port Officer at Milner Bay who will assist Masters in berthing and departing from the jetty. Approaching Groote Eylandt from the Northwards, vessels should steer to a position 10 miles North of the Northeast Islet, which is rocky on the Northern coast and rises to grassy hills. From the above position, steer to pass about 3 miles North of Chasm Islet until the recommended track on chart AUS. 14 is reached. This track 221° passes about 1 mile East of Brady Rock (light Gp. Fl. (3) ev. 12 secs.) and continues on this course until Bickerton Island Light (Fl. 5 secs.) bears 250° when the course should be altered to steer for Hand Islet on the recommended track (250°) until reaching the position to alter course to 195° to pass down the middle of Warwick Channel. It is recommended to remain on this course until reaching the patch South of Connexion Island.

If vessels enter via the Connexion Passage, care must be taken to avoid the 5.4 m. fathom patch off N.W. Bluff and keep clear of the 8.2 m. patch about 3.5 miles N.E. of Connexion Islet.

ANCHORAGES: Good holding ground is found 1 mile West of the jetty where there is a good sand bottom free of obstructions with about 12.0 m. of water. Due to currents up to 3 knots in the area, it is advisable to use at least 6 shackles. Quarantine is granted at this anchorage.

MAX. SIZE: The max. LOA is 223 m. and max. breadth 30 m. The max. draft is 11.5 m.

PRATIQUE: Vessels are granted Pratique at the Anchorage 1 mile West of the wharf or at the Jetty.

RADIO: The Port is able to communicate with vessels which are fitted with VHF radio through normal international Maritime Channels and the call sign is "Milner Bay". However, the shore station is only open during office hours unless prior telegraphic arrangement is made. Office hours are 0800 to 1645 hrs. Monday to Friday.

It is requested that vessels arriving at any hour of the day should monitor VHF Channel 16 as sometimes attempts are made to contact vessels outside of office hours. Channels available are 16, 67 and 06 (private).

ETA's are requested at least 72, 48 and 24 hours prior to arrival. Telegraphic address is: Hematite, Alyangula, Telex AA85886 (Answerback 'Milbay'). Telephone No. (089) 876011.

VHF: Port – Channels 16, 06 and 67.
Tugs – Channels 16, 12, 06 and 67.

TUGS: 2 tugs available. 1×16 tonne bollard pull and 1×6 tonne bollard pull.

Normally join the vessel 0.75 miles from berth.
Ship's lines taken for berthing.

BERTHING: The ore-loading jetty is situated in approximately Lat. 13° 51.5′ S., Long. 136° 25′ E., with a depth of water alongside of 11.5 m. MLWOST with a tide range of 1.8 m. Two small tugs are available to assist in berthing vessels. The jetty consists of a central landing 98.75 m. long and 10.97 m. wide, with two breasting dolphins on the North and South ends of the central landing. A roadway extends from the shore to the central landing, virtually parallel to and on the North side of the loading conveyor belt. Local Tidal Information may be obtained from the Port Superintendent on arrival.

The line of dolphins is offset 8° from the jetty stem which runs out 411.5 m. from the shore in a 249° 45′ direction so that care must be exercised in placing the vessel for loading. All breasting dolphins are fendered with vertical timbering. When berthing, vessels should keep well clear of the loading head in the centre of the jetty, as it is possible that a vessel on a too fine approach could cause damage to the loading boom with the flare of the bow.

Vessel must have rat guards in position at all times (except while shifting ship), otherwise they will be liable to a fine. As Groote Eylandt is a reserve this requirement is rigidly enforced.

Loading rate is 900 – 1,100 t.p.h. and the vessel is required to shift ship to load each hatch as the loading boom is fixed. Shore labour is available to shift lines, etc., as required. Shore labour will not trim manganese ore, which is dump loaded from the conveyor.

This is a seasonal tropical loading zone from 1st April to 30th November.

FRESH WATER: Available. Rate 9 tonnes/hour.

STORES: Not available.

FUEL: Not available.

CUSTOMS ALLOWANCES: 200 cigarettes, 1 bottle spirits, 3 bottles of beer per man.

MEDICAL: There is a Medical Centre and medical staff available if necessary. Valid vaccination certificates are required, covering the requirements of the Australian Government Department of Health.

FIRE PRECAUTIONS: A permanent fire-fighting facility is installed on the ore-loading jetty. It is an automatic system which starts as soon as a fire hydrant is turned on, and delivers a 140 p.s.i. through a 2.5 in. hydrant with a 5 TPI V thread connection.

All shore hoses are 2.5 in. and are equipped with fog nozzles. Foam equipment is also available on the jetty with an output of approximately 1,000 gallons per minute. Fire-fighting lines on the jetty deliver salt water only. International shore connection available.

TIME: Time kept is Northern Territory "Standard Time", GMT plus 9.5 hours.

WEATHER/WIND/TIDE: Tides cause some eddying in both the Connexion and Warwick Channels, but these cause no concern provided normal care is exercised.

Prevailing winds from May to October are S.E. and blow strongly at times during the day but ease off considerably after sunset.

There are occasional heavy fogs in the area in June and July in the early morning and these sometimes persist until 1000 or 1100 hrs.

From November to May the wet season prevails with winds blowing mainly from the N.W. with heavy rains and occasionally, more than moderate seas.

IDENTIFICATION CARDS: Seamen calling at this port have to be in possession of Seamen's Identification cards, Form M315, issued by the Commonwealth of Australia, however, certain nationalities are exempt.

Facilities at Groote Eylandt are severely restricted and the Port Authorities recommend seamen should be provided with the required card before arriving at Groote Eylandt. For information, we would advise that Greek nationals are not exempt from this requirement, but nationals of Great Britain, Norway, Japan, Hong Kong, India and the People's Republic of China are.

REPATRIATION: Can be effected to most countries from Groote Eylandt via Darwin which is serviced by Qantas and British Airways. Due to the remoteness of Groote Eylandt, repatriation of crew members should only be considered in a 'Force Majeure' circumstance. All necessary bookings and reservations are made through the local airline office and Seamens' Discount Fares, where applicable, are utilised.

AIRPORT: Ansett N.T. operate a 3 times a week jet service to and from Darwin. Air Queensland operate a twice weekly service to and from Cairns.

ACCOMMODATION: Visitors accommodation in the GEMCO township of Alyangula, is severely limited and shipowners who are arranging for a change of personnel at Groote Eylandt are requested to ensure that the arrival of crew members at Groote coincides as closely as possible with the arrival of the vessel.

NOTARY PUBLIC: A Notary Public is not available.

HOLIDAYS: Cargo worked on most holidays by arrangement.

SHORE LEAVE: The area is an Aboriginal reserve and *shore leave is allowed in the town area only* provided the vessel has a permit which is supplied by the Agent on berthing.

AUTHORITY/AGENT: The Groote Eylandt Mining Company Pty. Ltd. act as ships' Agents in all cases.

Groote Eylandt Mining Company Pty. Ltd., Post Office, Alyangula, N.T. 5798. *Tel:* Alyangula (089) 87 6011. *Telex:* AA 85886. *Cables:* Hematite Alyangula. *Contact:* J. Campbell, Port Superintendent.

Mail for vessels to be addressed to: "Vessel's Name", Groote Eylandt Mining Co. Pty. Ltd., Groote Eylandt, N.T. 5798.

HAY POINT (including Dalrymple Bay), Queensland: 21.16 S. 149.18 E. (See Plan)

PORT LIMITS: The seaward Port Limits extend from the North shoreline at the entrance to Bakers Creek by a line in an East North Easterly direction to Lat. 21° 10′ S., Long. 149° 20′ E. thence East to Lat. 21° 10′ S., Long. 149° 30′ E., thence South to Lat. 21° 18′ S., Long. 149° 30′ E. thence West to the shore South of Hay Point.

A vessel is considered to have arrived when it anchors within Port Limits or if proceeding directly alongside at the time when the Pilot boards.

DOCUMENTS: The documents required by the Customs Department are:

2 Crew Lists.
1 Declaration of Dutiable Goods (Australian Customs Form 5)
1 Ports of Call List showing previous 6 ports
1 List of Dutiable Stores and Drugs held on board (Australian Customs Form 42A)
Last Port Clearance.

The Customs Officer will also wish to sight the following documents:

Ship's Register
Safety Radio Certificate
Safety Construction Certificate
Safety Equipment Certificate
Loadline Certificate.

The documents required by the Department of Health are:

2 Declarations of Health (Australian Government Department of Health Form Q.360)
1 Crew List
1 Vaccination List
1 Ports of Call List.

The Quarantine Officer will also wish to sight a current Derat Exemption Certificate.

PILOTAGE: Pilotage, which is compulsory is provided by the Queensland Department of Harbours and Marine, whose Pilots are stationed at the port. Vessels should notify the Harbour Master, through their Agents of their ETA 24 hours before arrival and they will be advised of the Pilot boarding area. The boarding areas are generally 2.3 miles S.E. or N.E. of Hay Point Wharf, depending on whether the vessel is berthing port side or starboard side alongside.

Vessels must make a good lee for the pilot boat and have a pilot ladder rigged in accordance with the provisions of the Navigation (S.O.L.A.S.) Regulations.

Boarding of Pilots may be possible by helicopter if vessel meets certain requirements. The decision will be made after radio communication with the vessel.

Coastal Pilotage Services: Pilots of the Queensland Coast & Torres Strait Pilot Service are available on request for the full length of the Great Barrier Reef Inner Route including Hydrographer's Passage adjacent to the Port of Hay Point and other navigable reef entrances.

Ship's Masters, Owners or Agents wishing to obtain further information on coastal pilotage services should contact: The Queensland Coast & Torres Strait Pilot Service. Postal Address: Box 1573 GPO, Sydney, NSW 2001. *Tel:* (02) 292 125. *Telex:* AA20269. *Cables:* Shipserv Torres Sydney.

ANCHORAGE: No. 1 Anchorage generally used by vessels which will be berthing port side to, is situated 2.3 miles S.E. of Hay Point Wharf. No. 2 Anchorage for vessels berthing starboard side to, is situated 2.3 miles N.E. of Hay Point Wharf. Ships will be advised of their anchorage position before arrival but the attention of Masters is drawn to the restricted area between Nos. 1 and 2 Anchorages where anchoring is prohibited. Also see "Plan".

RESTRICTIONS: A vessel arriving at the port must have its propeller totally immersed and be trimmed not more than 2.5 m. by the stern.

Maximum departure draft is dictated by the height of tide and is calculated on the basis of maintaining an underkeel clearance in the departure channel equal to 10% of draft + 0.6 m. Channel depth is 13.4 m. and vessels on maximum draft will sail 1 hour before HW.

While alongside vessels must maintain a minimum underkeel clearance of 1.5 m.

MAX. SIZE: The designed maximum size vessel for the berths is 200,000 d.w.t.

HEALTH: Radio Pratique may be requested through a vessels' Agents, between 12 and 24 hours prior to arrival. This is generally granted if there are no unusual circumstances. See "General" before first port.

On receipt of quarantine message the Agent will obtain from the Harbour Master an anchorage position and advise vessel not berthing on arrival.

Inspections may be carried out at the jetty or at anchorage at the discretion of the Quarantine Office.

Pratique is available in the berth on a 24 hour basis, 7 days per week.

Rat guards are to be maintained on all mooring lines whilst the vessel is alongside.

Whilst in the vicinity of the port, vessels are required to store garbage aboard in containers approved by the Quarantine Inspector.

RADIO: Radio messages can be sent through Sydney Radio (VIS) but within 24 hours of arrival Townsville Radio (VIT) provides a faster service.

Advice of Arrival: Dalrymple Bay: The port of Hay Point is a first port of entry and all vessels bound for this port to load at the Dalrymple Bay Coal Terminal facilities are to radio through the normal recognised coastal radio stations or by telex the following arrival notifications, addressing their messages to:

Cables: Shipserv Dalbay Mackay.
Telex: AA 46374.

The following ETA notices are required:

(i) 7 days before the intended arrival at the port, or on departure from the last discharge or loading port, whichever is the sooner, advising:
ETA at the port.
Whether the port is the first port of call in Australia.
Arrival condition (ballast or part loaded).
Cargo requirement.
Full or part cargo.

(ii) (a) 48 hours before intended arrival at the port advising:
ETA at the Anchorage Area/Pilot Boarding Ground within port limits.
Confirmation of tonnage intended to load.
Forward and after arrival draft.
Planned forward and after sailing draft.
Stowage plan.
Hatch loading sequence plan.
Distance between keel and hatch coaming.
(b) Masters of vessels calling to load part cargo only shall advise the following additional information:
If arriving part loaded:
  Berthing displacement.
  Previous loading port.
  Stowage of loaded cargo.
If completing loading at subsequent port(s):
  Next loading port.

(c) Masters of O.B.O. vessels are to furnish the following additional information:
Nature of the preceeding 3 cargoes the vessel has carried.
Date and place last petroleum product was discharged.
Statement on the condition of the slop tanks and whether these are pressed up or fully inerted and sealed.
The date and place of issue of the Gas Free Certificate carried on board.
Confirmation or variation of previously advised ETA at the port.

(iii) 24 hours before intended arrival at the port advising:
Confirmation or variation of previously advised ETA at the Anchorage/Pilot Boarding Ground.

(iv) Immediately upon arrival at the Anchorage/Pilot Boarding Ground, as designated, within port limits, advising:
Arrival/anchorage time.
Chart position.
Declaration that vessel is in all respects ready to load, with clean hatches, and hatch covers opened on berthing.
First pour.
Actual arrival draft forward and aft.

VHF: Call sign "Hay Point Harbour". A continuous watch is maintained on Channel 16. Working Channels are 14 and 12. Vessels arriving at the anchorage should confirm ETA 2 hours before arrival and then notify anchoring time. A continuous watch should be maintained on Channel 16 while at anchor.

TUGS: 2 tugs each of 75 tonnes bollard pull are available to service vessels using the Central Queensland Coal Associates wharves and 2 Z-peller tugs each of 55 tonnes bollard pull are available for the Dalrymple Bay Terminal. Tugs normally join vessel at pilot boarding area. Tugs lines are used.

BERTHS: The Port of Hay Point currently consists of 3 coal loading berths as follows:

Central Queensland Coal Associated Berth No. 1:

Berth Alignment	350° True
Dredged Depth	16.76 m. Below Datum
Dredged Width	60.96 m.
Dredged Length	342.90 m.
Nominal Loading Rate	4,000 t.p.h.
Shiploader Travel Distance	188.98 m.
Air Draft (From Chart Datum)	24.0 m.
Max. Height of Fenders Above Chart Datum	9.2 m.

Central Queensland Coal Associates Berth No. 2:

Berth Alignment	330° True
Dredged Depth	17.07 m. Below Datum
Dredged Width	60.96 m.
Dredged Length	365.76 m.
Nominal Loading Rate	6,000 t.p.h.
Max. Shiploader Travel Distance	191.41 m.
Normal Shiploader Travel Distance (Between Limit Switches)	181.36 m.
Air Draft (From Chart Datum)	24.0 m.
Max. Height of Fenders Above Chart Datum	10.0 m.

Dalrymple Bay Coal Terminal Berth No. 1:

Approach Trestle:	
Approach Trestle Length	3,850 m.
Trestle Conveyor Capacity	6,600 t.p.h.
Wharf:	
Design Vessel – Maximum	200,000 d.w.t.
Design Vessel – Minimum	20,000 d.w.t.
RL Top of Front (seaward) Rail	+17.6 l.w.d.
Number of Berthing Dolphins	7
Number of Mooring Dolphins	4
Distance between extreme Berthing Dolphins	254 m.
Distance between extreme Mooring Dolphins	490 m.
Berthing Dolphin Fender Type	Bridgestone – C2250H –R1 Cell Type
Berth Depth	−20.0 m. l.w.d.
Channel Depth	−13.4 m. l.w.d.
Maximum Predicted Spring Tide	6.7 m.
MHWS	5.49 m.
MHWN	4.23 m.
Available Draft in Channel at MHWS with Underkeel Clearance* of 2.27 m.	16.6 m.
Available Draft in Channel at MHWN with Underkeel Clearance* of 2.15 m.	15.5 m.
Wharf Conveyor Belt Width	2,000 mm.
Wharf Conveyor Belt Speed	4.94 m./sec.

*Underkeel Clearance = 10% of draft +0.61 m.

Moorings: Due to the open sea nature of the berths vessels with wire rope moorings should have a synthetic tail at least 10 m. long fitted to assist in mooring and to reduce breakages.

LOADING: Dalrymple Bay: Vessels shall be ready in all respects to commence loading on completion of mooring with holds clean and hatches open and present detailed loading plan, agreed to by the Terminal, which clearly shows hatch quantities with loading sequence and quantity of coal to be reserved for trimming, by hatches, including anticipated sailing draft.

Ballast shall be adjusted to ensure at HW a minimum clearance of 1 m. is maintained between the vessel's structure and the shiploader. Ballast to be discharged at a rate which prevents disruption to loading, final trimming and completion.

Loading Procedures: A portable radio and telephone will be placed on board for communications during shiploading operations.

The loader operator is in direct radio and telephone contact with the Control Room and the Production Foreman at all times.

The responsible ship's officer may direct the shiploader operator at any time.

The manner in which the coal is stowed is the sole responsibility of the Master or his nominee and his instructions and directions will be complied with within the limits of the Terminal facilities. Any changes in loading sequences must be immediately relayed to the Production Foreman.

The coal is reclaimed from the Terminal stockpiles by bucketwheel reclaimer or received direct from the rail receival pit and, after passing through a 1,000 tonne capacity surge bin and the automatic sampling station, is conveyed at a nominal rate of 6,600 t.p.h. to the shiploader, a distance of 3,880 m.

In the case of problems during loading, the Production Foreman may be contacted via the shiploader operator or the Control Room, the telephone numbers of which are listed on the Terminal Loading Plan, a copy of which is retained by the Master.

On directing the shiploader operator to stop loading during normal operations, there will be between 150 to 200 tonnes still to be received, being coal that has to be cleared from the wharf belt to permit the loader to move from South to North.

At the completion of loading the operation is first stopped at the reclaimers and the whole system emptied of coal. The surge bin and all reclaim, jetty, wharf and shiploader belts have at the moment of stopping a variable amount of coal, depending on the position of the reclaimers, shiploader and the feed rate in use. The amount of coal may be up to 3,355 tonnes.

All coal contained on the outloading conveying system must be run off into the vessel on completion of loading. The Production Foreman will be able to give an estimate of the quantity to be expected. An allowance for these tonnages must be made during the final stages of loading.

It is essential for the efficient operation of the loading system that a minimum quantity of 250 tonnes be requested for the final pour. Smaller quantities cannot be handled effectively.

Red, green and white list lights, clearly visible to the shiploader operator, are recommended fittings on all vessels loading coal. A fixed white light shall indicate the vessel is upright.

The Shiploader Operator has been instructed to observe the trim lights and to keep the vessel upright during loading and to stop loading in the event of a hatch becoming too full.

The sole responsibility for the correct and safe loading of the vessel, as is customary, rests with the Master and it is stongly recommended that a responsible officer is on deck at all times directing and supervising the loading by mechanical shiploader to a spout trimmed condition. No mechanical or manual trimming will be undertaken by the Terminal Company. The vessel is to provide sufficient lights on board for night loading and shall open and close hatch covers.

Vessels nominated to load consignments for more than one parcel shall complete each parcel before starting the next.

Masters are cautioned that loading of coal is carried out by draft. Frequent "on the run" draft checks between hatch changes should be carried out. Whilst shiploading sequences are equipped with weight scales, these figures are to be used only as a guide. Reference to these will not relieve the Master of the responsibility of adequately maintaining draft checks and supervising the loading accordingly. No guarantee of accuracy can be given of these belt weight scales.

On directing the Shiploader Operator to stop loading in an emergency there will be about 150 tonnes to receive as the belts do not stop instantaneously. The loader may then be moved from North to South only, or loading resumed in the same hatch.

Subject to tide, ships shall be ready to vacate the loading berth on completion of loading and have all gear tested and available for use on departure.

Draft Survey: Weight determination of coal loaded onto vessels is carried out by Draft Survey, utilising the ship's scales to the nearest tonne, conducted by a Surveyor acceptable to the Terminal Company.

Immediately the vessel is berthed, the Surveyor will carry out an initial Draft Survey to determine all weights on board. The Surveyor will review the proposed loading plan and be available to advise the Master on the loading sequence and quantities most appropriate to the Terminal facilities and equipment and early despatch of the vessel.

During the final stages of loading, the Surveyor will attend the vessel and be available to advise the Master as required on the final trimming and cargo distribution.

Immediately on completion of loading the Surveyor will carry out the final survey and issue a Certificate of Weight in respect of the entire cargo loaded.

The Master or his nominee is required to assist the Surveyor in determining the quantity loaded and its hatchwise stowage.

Properly certified accurate and legible ships scales shall be made available to the Surveyor.

Gas-Freeing of Vessels: The Master of every O.B.O. vessel shall include the following information with the 48 hour arrival notice (ETA), addressed to:

By Radio: "Shipserv Dalbay Mackay".
By Telex: AA 46374.

(a) Nature of preceding 3 cargoes the vessel has carried.
(b) Date and place last petroleum product was discharged.
(c) Statement on the condition of the slop tanks.
(d) Date and place of issue of the Gas-Free Certificate carried on board.

See "Radio – Advice of Arrival".

No Gas-Free Certificate signed by the Ship's Master will be accepted.

The Master of an O.B.O. vessel shall not allow his ship to berth at the Terminal facilities unless the vessel is certified to be gas-free and a Certificate of Test has been issued by an authority acceptable to Dalrymple Bay Coal Terminal Pty. Ltd., certifying that the tanks, holds and/or spaces are free from explosive, flammable and injurious gases, fumes and vapours and slop tanks are pressed up or fully inerted and sealed, and such certificate is still valid.

Slop tanks pressed up or fully inerted and sealed shall not be opened whilst the vessel is alongside the berth.

All costs in connection with the inspection, testing and issue of a Certificate of Test in relation to a tank or hold or space for the purposes of these requirements shall be borne by the Owner of the ship.

A Notice of Readiness will not be accepted from an O.B.O. vessel unless it is certified gas-free in accordance with the above requirements.

Shiploader:

Maximum Loading Rate	6,600 t.p.h.
Average Loading Rate	6,000 t.p.h.
Shiploader Conveyor Belt Width	2,500 mm.
Shiploader Conveyor Belt Speed	3.2 m./sec.
Maximum Operating Wind Speed	72 k.p.h.
Maximum Reach of Chute from Front Rail	41.5 m.
Fender Face from Front Rail	7.5 m.
Maximum Reach of Chute from Fender Face	33.0 m.
Shuttle Travel	21.7 m.
Shiploader Longitudinal Travel	214 m.
Highest Boom Working Position	+12°
Lowest Boom Working Position	−10°
Distance from 0.0 l.w.d. to Underside of Boom in +12° Position at Fender Face (Air Draft)**	30.3 m.
Cyclone Security	Tie down to strongpoint

**Dimension shown provides for a clearance of 0.6 m. but location of Control Cabin and hatch covers should be checked for each berthing.

MEDICAL: Hospital and dental facilities available in Mackay 37 km. by road. Agent should if possible be notified at least 24 hours before arrival of medical attention required, or on Friday if arriving over weekend.

FRESH WATER: Not available.

FUEL: Not available.

DENSITY: Average 1024.

CONSULS: See "Brisbane".

REPAIRS: Minor repairs only. Vessels not permitted to immobilise at berths.

DRY DOCKS: See "Brisbane".

SURVEYORS: Cargo and draft surveyors in attendance at berths. On hire and gas-free surveys can be carried out. Arrange through Agents. Department of Transport Surveyor – see "Gladstone".

GANGWAY/DECK WATCHMEN: None available.

OPENING/CLOSING HATCHES: To be opened and closed by ships crew.

CUSTOMS ALLOWANCES: 200 cigarettes, 26 oz. bottle spirits every 10 days.

REPATRIATION: Readily available through Mackay Airport which has daily connections to Brisbane and worldwide.

AIRPORT: At Mackay 37 km. by road. Serviced by T.A.A. and Ansett. Regular daily flights to Brisbane and Sydney.

TIME: GMT plus 10 hours. No Summertime applicable. (1984).

HOLIDAYS: Public holidays as for Brisbane. Loading operations are unaffected except for Christmas Day.

POLICE/FIRE/AMBULANCE: Police Tel: 561 333. Ambulance Tel: 561 222. Fire – contact relevant terminal operating company.

EMERGENCY CO-ORDINATION CENTRE: Australian Coastal Surveillance Centre, Canberra. Search and Rescue Tel: (062) 475 244.

TELEPHONES: Available on each berth.

SERVICES: Compass adjusting and radio, radar or gyro repairs can be arranged if prior notice is given.

BANKS: Major Australian banks are represented in Mackay. Contact through ships' Agent.

SHORE LEAVE: Permitted. Nearest city Mackay 37 km. away.

IDENTIFICATION CARDS: Citizens of certain non-Commonwealth countries require identification cards.

GENERAL: *Charts and Publications:* Australian Pilot Volume III. Australian Chart No. Aust. 249. Sailing directions and other information for the Ports and Harbours of Queensland. Ports of Queensland and their services.

Weather Conditions: The Port of Hay Point is situated in the cyclone belt. An incidence of about 2 cyclones per year can be expected on the Queensland coast, usually during the cyclone season between November and April.

Prevailing winds are South-Easterly and velocities in excess of 25 knots are infrequent.

The port facilities are sheltered from major swell by the Great Barrier Reef. However, prolonged South-Easterly winds of more than 20 knots can occasionally make conditions unsafe alongside and Masters are advised to order Pilot and tugs in sufficient time should these conditions occur.

Tides: Tidal streams are generally weak, reaching a maximum strength of 2 knots at Spring tides. The flood tide sets 150° and the ebb sets 330° parallel to the berth with the direction of the stream changing about 1.5 hours before the predicted tide times.

Maximum Predicted Spring Tide	6.70 m.
Minimum Predicted Spring Tide	−0.10 m.
Mean Spring Tidal Range	4.75 m.
Mean Neap Tidal Range	2.24 m.
Mean Sea Level above Chart Datum	3.11 m.

The Port of Hay Point is a standard port in the Australian National Tide Tables published by the Hydrographer, Royal Australian Navy and in the Official Tide Tables for Queensland published by the Department of Harbours & Marine.

The minimum underkeel clearance of 10% of the vessel's loaded draft plus 0.61 m. allows a maximum drafted vessel to sail 1 hour before HW. The least depth in the channel is −13.41 m. l.w.d.

The Harbour Master has advised maximum permissible drafts relative to predicted height of tides, for general guidance, which may be amended from time to time at the Harbour Master's discretion to suit prevailing conditions.

AUTHORITY: Harbours Corporation of Queensland, P.O.Box 2195, Brisbane. *Contact:* Assistant Director, Harbours Management. *Tel:* (07) 227 8823. *Telex:* Harbrs AA 40760.

Harbour Master, Hay Point – Captain A. J. F. Diack. *Tel:* (079) 563 109. *Telex:* Haypt AA 46483.

AGENT: Sub-Agent of Patrick Agencies, Brisbane.

HOBART (including Risdon), Tasmania: 42.53 S. 147.20 E. (See Plan)

PORT LIMITS: 'Harbour' means so much of the waters of the River Derwent and its Estuary as lie to the Northward of a line drawn from the Derwent Light (on the Iron Pot Islet) to Kelly Point, on North Bruny; together with so much of the D'Entrecasteaux Channel as lies to the Northward of a line drawn from the Southern end of Partridge Island to Southport Island; and together with all bays and estuaries opening either into the said River Derwent or the said D'Entrecasteaux Channel.

DOCUMENTS: As for all Australian Ports.

PILOTAGE: Pilotage is compulsory for all vessels exceeding 35 m. in length. For vessels bound for Hobart (including Risdon) the pilot boarding ground is on a line drawn from White Rock Lighthouse (Chart AUS 171 – Lat. 42° 58.7′ S., Long. 147° 23.9′ E., Fl. W. 3 secs., 13 m., 8 nautical miles); to Crayfish Point on the Western bank of the River Derwent. Notice of ETA and request for a Pilot must be advised at least 24 hours in advance and confirmation or amendment of this ETA must be made not less than 2 hours prior to the vessel's arrival at the pilot station. Channel 16 VHF is continuously monitored and ETA may be confirmed or adjusted on this frequency using the call sign "Hobart Harbour". Vessels can generally establish contact on Channel 16 at ranges in excess of 50 nautical miles from Hobart and are requested to do so. Telex facilities are available using HARHOB AA58319.

The pilot boat is 13.1 m. LOA, white upper works, blue hull with the word 'Pilots' on each side.

ANCHORAGE: Vessels awaiting Pilot may anchor 1 mile S.E. of Crayfish Point or 1 mile S.W. of White Rock Light, depending on weather conditions. Depth of water is 20 m. with good holding ground. Vessels wishing to proceed to the Quarantine Anchorage will require a Pilot.

RESTRICTIONS: Navigation within the Port of Hobart is on a 24 hour basis with the following exceptions:

(i) Vessels of 25 m. or more in length will not be permitted to pass under the Tasman Bridge from Monday to Friday inclusive between the hours of 0700 to 0915 and 1600 to 1830.

(ii) At Risdon vessels exceeding 175 m. in length and of a draft more than 10 m. may be restricted from departing berth during the hours of darkness if such vessel has to swing to proceed to sea.

The following overhead clearance restrictions exist within the Port of Hobart:

(i) The centre line of the Main Navigation Span of the Tasman Bridge is 45 m. above MHWS.

(ii) The overhead clearance of the power cable just South of the Electrolytic Zinc Company Wharf at Risdon is 45.7 m. above MHWS.

MAX. SIZE: The maximum depth of water at the entrance to the River Derwent is 15.2 m. Ships of up to 12.6 m. draft can be accommodated at Macquarie No. 4 Berth. There is no restriction as to length and beam. Max. draft available at Risdon is 10.7 m.

HEALTH: Australian Commonwealth Rules apply. The Commonwealth Department of Health Quarantine Doctor/Officer will clear first entry vessels at all times, boarding at Quarantine Anchorage or by arrangement.

RADIO: Hobart Radio – call sign VIH. Hours of duty EST (add 1 hour for Summer Time) Monday to Saturday inclusive 0730 – 1730 hrs., Sunday 0800 – 1600 hrs.

RADAR: There is no Port Control Radar but the pilot boats are radar equipped. Minimal fog may occur during April to July but shipping is seldom delayed because of it.

VHF: The Marine Board of Hobart maintain a listening watch on Channel 16 and Channel 67 on a 24 hour basis from the Port Control Building Hobart. When contact has been established all traffic must be passed through Channel 12. Tugs are worked on Channels 6 or 8. Vessels can usually establish contact on Channel 16 at ranges in excess of 50 nautical miles and are requested to do so. (See also "Pilotage").

TUGS: Five tugs as available for assisting vessels. Their bollard pulls vary from 10 to 25 tonnes. Vessels bound for Risdon will pick the tug up just North of the Tasman Bridge. A nominal additional charge is made for the use of tugs' lines.

BERTHING:

Hobart:

Macquarie No.4: Common user container/general cargo berth. Quay length 244 m., water depth 12.6 m. 3 ha. of sealed cargo area, adequate reefer holding points, rail siding connecting into main rail system, wharf apron, axle loading 70 tonnes.

Macquarie No. 2/3: Common user deep sea berth suitable for quarter ramp vessels. Quay length 328.3 m., depth 10 m. to 14.6 m.

Macquarie No. 1: General cargo berth, quay length 168.9 m., water depth 6.2 m. to 9.8 m.

Elizabeth St. Pier: Suitable for specialised car carriers with stern quarter ramps. Used for discharge and storage of vehicles. Quay length 153 m., water depth 7 m. to 11.3 m.

Princes No. 1: Common user Ro-Ro berth for vessels equipped with their own ramps. Quay length 138 m., water depth 7.2 m. Used by William Holyman & Sons, ramp is fixed with an axle load SWL of 40 tonnes.

Princes No. 2: General cargo and bulk wheat discharge berth. Quay length 167.7 m., water depth 8.0 m.

Macquarie No. 5/6: Terminal leased to Union Steamship Co., comprises 2 Ro/Ro berths with adjustable ramps each having an axle loading SWL of 59 tonnes. Quay lengths 135 m. and 189 m., water depth 10.1 m. to 13.6 m. A marshalling area provides 4.4 ha. of fenced hardstanding.

Selfs Point Oil Wharf: Dolphin type berth with a wharf face length of 95 m., length over dolphins of 252 m., and a water depth of 11.0 m. Facilities are available for discharge of all black and white products including LPG. In addition vessels may obtain supplies of marine fuel oil and marine diesel oil for bunkers. Also see "Developments".

Risdon:

Owned by the Electrolytic Zinc Company of Australasia, situated 2 miles above the Tasman Bridge on the Western side of the river. Quay length 400 m., water depth 10.4 m. to 10.7 m. Imports of raw and semi-processed materials such as zinc concentrates, phosphate rock, muriate of potash etc., are discharged by a conveyor system. Exports of manufactured zinc, cadmium, sulphate of ammonia are loaded via 2 modern gantry type cranes of 25 tonnes SWL, operating from mid-1984.

Facilities are available for sulphuric acid to be loaded into tankers at a 151 m. acid wharf with a minimum depth of 7.9 m.

CRANES: One Coles "Colossus" 254 tonne fully mobile crane – capacity to handle 30 tonnes at 33 m. outreach and 170 tonnes at 9.1 m. outreach through 360° of slew and a working rate of 15 to 20 lifts per hour. 2×31 tonne cranes; 2×15 tonne cranes; forklifts ranging from 170 kg. to 23,000 kg., 6 tow-motors; and 1×12 m. tri-axle trailer container handling crane. Also see "Developments".

BRIDGES: See "Restrictions".

STEVEDORES: Sundays to Fridays: Working hours in 3 shifts: 0800 – 1500 hrs., 1500 – 2200 hrs., 0001 – 0700 hrs. Saturdays: to 1200 hrs. with extension to 1500 hrs. if vessel is sailing. Weekend and Monday labour must be ordered by 1300 hrs. Friday.

MEDICAL: Full hospital facilities available without prior notice.

DENSITY: Varies from 1016 at Risdon to 1025 at Hobart.

FRESH WATER: Fresh water is available at all wharves. Delivery is effected via hydrants at convenient points along the wharves. Hose connections are 64 mm. diameter standard thread and delivery rates from 40 tonnes to 60 tonnes per hour per connection.

FUEL: All grades of fuels and lubricants available. Vessels may be supplied at Selfs Pt. Wharf (see "Berthing") or by road tankers.

TANKERS: See "Berthing" and "Developments".

CONSULS: Consulates exist for the following countries:

Denmark
Finland
France
Germany (Fed. Republic)
Greece
Italy
Japan
Netherlands
Norway
Sweden
Switzerland
United Kingdom

REPAIRS: Facilities available for minor engine and hull repairs. Several repair firms are situated in Hobart.

DRY DOCKS: No dry docks, however a modern slipway owned and operated by the Marine Board is available for vessels up to 1,200 tonnes displacement.

SURVEYORS: A Commonwealth Surveyor is available and Lloyd's Agents also represent other Classification Societies.

GANGWAY/DECK WATCHMEN: Can be supplied at Union award rates. Watchmen will be required during discharge/loading of dangerous cargoes.

OPENING/CLOSING HATCHES: Normally handled by stevedores while alongside or by ship's crew before arrival.

CUSTOMS ALLOWANCES: Australian Commonwealth Regulations apply.

CARGO GEAR: Discharge/loading is usually by ship's gear except at Risdon. However a number of cranes are available for hire from the Marine Board (see "Berthing" and "Cranes").

REPATRIATION: All facilities exist for crew changes and repatriation of seaman. Scheduled aircraft connect with all states several times daily where services operate world-wide and there is also one overseas flight per week via New Zealand.

TIME: Local Time (Eastern Standard Time) 10 hours ahead of GMT. Summer Time is in force from October to March when clocks are advanced to GMT plus 11 hours.

HOLIDAYS: No work will be performed on Waterside Workers' Picnic Day (January); Labour Day (March); Good Friday; Anzac Day (25th April); and Christmas Day (25th December). Work is restricted to certain types of vessels and conditions on New Year's Day (1st January); and Boxing Day (26th December).

POLICE/AMBULANCE/FIRE: Automatic fire alarms are installed throughout the port and emergencies can be reported to Port Control on Channel 16, 24 hours a day. Otherwise fire, police and ambulance calls may be reported by dialling 000.

TELEPHONES: Available at all wharves and may be placed on board vessels. Standard rates apply and coin operated telephones are available for use by ship's crews.

SHORE LEAVE: No restriction on crew shore leave or need for shore passes as long as Immigration and Customs requirements have been satisfied.

SERVICES: A number of Compass Adjusters are available.

DEVELOPMENTS: A new oil wharf is being constructed at Self's Point and should be completed August 1987.

A 35 tonne gantry container handling crane will be installed on Macquarie No. 4 Wharf and be operational by January 1987.

AUTHORITY: Marine Board of Hobart, P.O.Box 202 B, 1 Franklin Wharf, Hobart, Tasmania, 7001. *Tel:* (02) 346722. *Telex:* Marhob AA 58319. *FAX:* (002) 310693. *Contact:* Captain J. M. E. Lucas, Harbour Master.

AGENT: Sub-agent of Patrick Agencies, Melbourne.

JABIRU: 11.55 S. 125.00 E. (See Plan)

LOCATION: The Jabiru Oilfield is in the Timor Sea, about 680 km. West of Darwin and some 300 km. off the Kimberley coast of North Western Australia.

DOCUMENTS: Masters should endeavour to complete the following forms ready for collection on arrival by Customs Officers if Jabiru is their vessel's first Australian destination.

Form M&S 11 and attachment
3 copies Crew List.
Form 42A
1 copy Ship's Stores Consumed.
Form 5
1 copy List of Crew's Possessions.
Form B.921 (Formerly Form C&E 886)
3 copies Ship's Log – Ports of Call.
Form Q360
2 copies Health Report of all Persons Aboard.
Form QA3
1 copy Animal Cargo.
Form QA4
1 copy Ship's Pets.
Form QA5
1 copy Ship Master's Bond regarding Animals Carried (only if pets on board).

The Customs Officer in attendance will advise any other documentary requirements, and provide forms if necessary.

Because the "Jabiru Venture" is not a designated port, offtaking vessels should have their Agents apply for certificates of permission for entry to Australia at other than a designated port as required under Section 58 of the Customs Act.

Customs Authorities have advised that permission will generally be granted. However, Customs Officials retain the right to board offtake vessels for inspection at their discretion and Masters of offtake tankers are required to provide accommodation and mess facilities for visiting Customs Officers.

PILOTAGE: Pilotage is compulsory. The "Jabiru Venture's" Master will transfer to the offtaking vessel when it reaches a distance of 3 nautical miles from Jabiru and will act as Pilot for approach and mooring. 1 or 2 officers from the "Jabiru Venture" may remain on board the offtaking vessel for the time the vessel is moored, at the discretion of the Master of the "Jabiru Venture". Suitable accommodation is to be provided for these personnel.

APPROACHES: The "Jabiru Venture" is equipped with a radio direction finding (RDF) beacon with a frequency of 436 kHz. Call sign is 'JVX' and range is 100 nautical miles. The beacon will be switched on 24 hours before ETA of the offtake tanker.

The "Jabiru Venture's" Master will advise by radio the bearing on which offtaking vessels should approach.

ANCHORAGE/RESTRICTIONS: There are no depth restrictions, prohibition zones or other traffic rules in the vicinity of the "Jabiru Venture". However, if the vessel cannot moor on arrival and wishes to anchor it should do so well beyond a 3 nautical mile radius of the "Jabiru Venture" to avoid damage to subsea oil production facilities.

Vessels should arrive with propeller and rudder fully submerged and trim should not exceed 10% of the after draft.

READINESS: *Notice of Readiness:* Arriving vessels should tender Notice of Readiness when 3 nautical miles from the "Jabiru Venture". Notice of Readiness will only be accepted between the hours of 0700 to 1500 because of the difficulty of berthing in darkness.

MAX. SIZE: 150,000 d.w.t.

HEALTH: *Australian Government Requirements:* A Radio Pratique message should reach the vessel's Agent no more than 24 hours, and no less then 12 hours before arrival, as per the following instructions.

Please answer the following questions, indicating NIL where necessary, and answer them in order. If answers are not correct, or not in the correct order, it could cause unnecessary delay to vessel berthing.

A. Name, type and nationality of vessel.
B. Itinerary for last 21 days. If over 21 days give name of port and date of departure.
C. Name of first Australian port and ETA.
D. Number of crew.
E. Number of passengers.
F. Have you had any deaths on the voyage? If so please give details.
G. Have you had any cases of illness during the last 21 days with a fever of 38° Celsius or above, and
   (a) Accompanied by rash, jaundice or glandular swelling;
   or
   (b) Accompanied by diarrhoea lasting longer than 24 hours.
H. Have you had persons suffering from venereal disease during the voyage?
I. What live fish, birds, reptiles or other animals are you carrying (ship's pets should be mentioned)?
J. Have you carried livestock on previous voyages in the last 6 months? If 'Yes' please advise type of livestock, date of voyage and ports visited. Have all stock carrying compartments been thoroughly cleaned and disinfected?
K. Request Radio Pratique.

RADIO:

Prior to Arrival: Type and number of shipping documents required, and vessel details – name, d.w.t., length, beam, propulsion gear, details of forward mooring gear, and if possible, arrival draft and trim – should be advised to:

Operations Manager, BHP Petroleum Ltd., Lot 1876, Pruen Road, Berrimah, Northern Territory, 5788, Australia. Tel: (089) 844-188. FAX: (089) 844-139. Telex: AA85146, Cable: Hempet Darwin, at least 5 days before the estimated arrival date of the vessel but not later than 2 days before the laycan begins.

Advice of Arrival: Incoming vessels should advise Operations Manager, BHP Petroleum (preferably by Telex: 85146) of ETA 72 hours before intended arrival, and give the following information:

(a) Name of vessel and radio call sign.
(b) Radio telex identification number and frequencies licensed for use with radio telex.
(c) INMARSAT identification number and which satellite in use.
(d) HF radio telephone frequencies, if so equipped.
(e) Morse code HF working frequencies.

ETA should be confirmed or varied, as appropriate, 48, 24 and 12 hours before intended arrival.

Communications with the "Jabiru Venture":
The "Jabiru Venture's" radio communication hours are 0600 – 1800 local time (2030 – 0830 GMT).

"Jabiru Venture" call sign - VJJJ.
"Jabiru Venture" radiotelex identification - 01141 Jabv X.
"Jabiru Venture" INMARSAT number for telex - 583-1543604 Jabv X.
"Jabiru Venture" INMARSAT number for telephone - 873 1543604.

The "Jabiru Venture" is on the Indian Ocean INMARSAT.

Incoming vessels may use the following frequencies for radiotelephone communications with the "Jabiru Venture":

4125.0 kHz	4143.6 kHz	
6218.8 kHz	6221.6 kHz	
8291.1 kHz	8294.2 kHz	
12429.2 kHz	12432.3 kHz	12435.4 kHz
16587.1 kHz	16590.2 kHz	16593.3 kHz

If vessel does not have these frequencies, it should use the HF radio telephone frequencies advised in its ETA message and the "Jabiru Venture" will use those listed above. Alternatively, the "Jabiru Venture" will meet the incoming vessel on radiotelex frequencies nominated in its ETA message.

If morse code communications are required, the "Jabiru Venture" will use the following frequencies: 4203.0 kHz, 6304.5 kHz, 8406.5 kHz, 12609.5 kHz, 16813.5 kHz.

The "Jabiru Venture" maintains listening watch on: 500 kHz RS, 4125 kHz RS, Channel 16 VHF, Channel 6 VHF.

The "Jabiru Venture" will listen for incoming vessels at: 2300 hrs., 0100 hrs., 0300 hrs., 0500 hrs., 0700 hrs., 0800 hrs.

TUGS: Workboats available to assist with mooring.

BERTHING: A floating production system – the converted 140,000 d.w.t. tanker "Jabiru Venture" is fitted with process facilities and a metering system to enable stabilisation of crude oil, and offtake to visiting tankers.

Offtaking tankers are moored in tandem with the "Jabiru Venture" by a 60 m. long hawser. Crude oil is delivered through 1×16 in. floating hose system.

With around 155,000 kl. total crude oil storage capacity, the "Jabiru Venture" is able to deliver parcel sizes up to 130,000 kl. at a rate of approximately 3,000 kl./hr.

Standard of Offtaking Vessels: Generally, vessels between 25,000 d.w.t. and 150,000 d.w.t. can be accommodated. Larger vessels may be accepted at Operator's discretion. Offtaking vessels require a derrick rated to 10 tonnes SWL and should be fitted with bow chain stoppers, and bow fairleads of the panama type capable of handling 78 mm. chafing chains. One drum is to be empty and available on the forward windlass/winch to take the 72 cm. diameter×150 m. messenger line which is used to pull up the chafing chain and hawser. The winch is required to lift 15 tonnes. Should the vessel not be fitted with suitable bow chain stoppers, the mooring hawser will be secured using a 26 m.×115 mm. diameter snotter rope supplied by the "Jabiru Venture".

Offtaking vessels must be able to accept at least 40 cu.m. of sea water from the floating hose as slops.

Offtaking vessels should have manifolds and associated equipment conforming to Oil Companies' International Marine Forum (OCIMF) standards.

On arrival, both the "Jabiru Venture" and the offtaking tanker will be subject to a safety check to ensure that safety standards are met before delivery of crude oil begins. This safety check will be carried out with the aid of the checklist which covers communication, watch requirements, fire prevention, ventilation, pollution control, and emergency procedures.

Given the particular requirements of the "Jabiru" floating production and storage system, Operator may require that offtake vessels be checked for safety and suitability before finalisation of charter.

Offtake vessels may also be required to provide accommodation for any of the following people for the duration of offtake:

2 Deck Officers from the "Jabiru Venture".
Independent Surveyor.
Customs Officers.
Shipping Agent.
Quarantine Officer.

Mooring: Neither tug nor supply boat services are required. The Pilot, the 26 m. snotter rope and hose coupling tools will be transferred to the offtaking vessel by the "Jabiru" workboat. When the offtake vessel is "onsite" the 60 m. hawser will be made fast to the bow of the offtake vessel.

In case emergency disconnection is required the offtake vessel should provide a long handled axe on the forecastle.

Requirements for Vessels on Station: Offtake vessels are required to keep their engines on continual 'stand-by' and be ready to respond to requests for engine movement immediately. Vessels may be required to move astern to prevent creeping up or jack-knifing.

The hawser system has a working load of 200 tonnes and so offtake vessels may use considerable astern power to keep station. All engine movements should be made with due care, however. A log of engine movements is to be kept and a copy given to the "Jabiru Venture's" Master on departure.

Watches: A qualified officer with authority to manoeuvre is to keep a bridge watch whilst the offtake vessel is on station. A qualified seaman is to keep a mooring watch at the bow at all times. Reliable communications are to be established between the bow and the bridge.

Connection of Hose: After the mooring hawser has been made fast, the workboat will pull the floating hose to the starboard side of the offtaking vessel. The hose-end must then be lifted on board using the offtaking tanker's derrick.

The connection of the hose is the responsibility of the offtake vessel's crew, who should endeavour to complete this task as quickly as possible.

The hose-end connection is a 16 in. 'Camlock' quick release coupling and will fit standard 16 in. ANSI 150 lb. flanges.

Manifold adaptors/extenders to suit the above should be supplied by the offtaking vessel.

Crude oil will be delivered at a rate of around 3,000 kl./hr. (approximately 18,900 bbls.p.h.).

Delivery will be suspended for safety reasons during visits by helicopters to the "Jabiru Venture", (for approximately 2 hours), and/or if weather conditions exceed safety limits.

The floating hose is fitted with a self-sealing breakaway coupling for emergency disconnection.

Typical Cargo Properties:

Density	@ 15°C	0.8139
Viscosity	@ 20°C	3.45 cst
	@ 40°C	2.41 cst
Pour Point		15°C – 18°C
Reid Vapour Pressure		31.0 kPa (4.5 p.s.i.)

Tankers going into cold seas require heating coils.

MEDICAL: Medical and dental services are not available at Jabiru. In emergencies, medical evacuation to Darwin (3.5 hours flying time by helicopter and plane) can be arranged.

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: Repairs are not permitted whilst moored to the "Jabiru Venture".

TIME: GMT plus 9.5 hours.

During the Southern hemisphere Summer (last Sunday in October to first Sunday in March but sometimes subject to adjustment) GMT plus 10.5 hours.

SHORE LEAVE: Not possible.

GENERAL:

Services: The remote, deep-sea location of Jabiru severely limits the provision of services. Offtaking tankers should ensure that they carry supplies adequate for a return journey.

Visitors: Access to the "Jabiru Venture" is by a 2 hour light aircraft flight from Darwin to Troughton Island, and then a 1 hour helicopter flight to the "Jabiru Venture".

Because of the limited capacity of the 4 scheduled flights each week, the difficulties in arranging extra flights and the severe accommodation constraints on board the "Jabiru Venture", Operator requests the co-operation of all parties in ensuring that the number of visitors is kept to a minimum.

It should be noted that the Operator intends to make no flights to or from the "Jabiru Venture" whilst offtake is underway so any visitors should travel the day before offtake begins.

Customs and Department of Transport Officers, independent surveyors, ship's Agents, buyers representatives and any others intending to visit should seek the permission of: Operations Manager, BHP Petroleum, Darwin. Tel: (089) 844-188. Fax: (089) 844-139. Telex: 85146. Cables: Hempet, Darwin, at least 2 days before scheduled offtake. (Earlier advice would be appreciated).

Laytime: At a delivery rate of 3,000 kl./hr. and allowing for start-up and slow-down periods, a 110,000 kl. cargo will require up to 40 hours pumping time.

Early Departure: By arrangement, offtaking vessels may depart before *nett* quantities have been determined. Documents will then be finalised using telex communications.

Fire Fighting: The "Jabiru Venture" has only the fire fighting equipment required for a vessel of its type. It can give no aid to offtake vessels in case of fire and, in the event of an emergency on board an offtake vessel or the "Jabiru Venture", the offtake vessel will be released.

Pollution Control: For control of small oil spills, the "Jabiru Venture" holds dispersant which can be dispensed from the "Jabiru Venture's" workboat, or from a helicopter should this be considered necessary.

The costs of countering any pollution caused by oil which has passed the last flange of the delivery hose will be recovered from the offtake vessel.

No refuse is to be dumped overboard. The IMO convention on the dumping of waste at sea applies.

Any waste water discharged should have an oil content of no more than 15 p.p.m.

Stores: Not available.

Dirty Ballast: Dirty ballast, slops or refuse cannot be accepted by the "Jabiru Venture".

Weather: Prevailing winds are Southerly from May to October.

The wet season is during the Summer months – November to April – and at that time prevailing winds are Northwesterly.

During the Summer months, the Timor Sea is subject to occasional cyclones. In January and February, in particular, weather and sea states may prevent mooring and/or loading for periods of a few days.

The limiting significant wave height for mooring is 2.2 m. On this basis mooring will be feasible 85% of the time. For tankers already moored, the design limits for the hawser will be approached when significant wave height reaches 2.8 m. and winds reach 36 knots. On this basis, loading will be feasible 93% of the time. Should safety limits be exceeded during loading, the "Jabiru Venture's" Master will require the offtake tanker to uncouple.

Charts:
Australian: AUS. 314.
British: B.A. 1047, B.A. 942A.

The charts listed above cover the general area and the Jabiru site.

OPERATOR: BHP Petroleum Ltd., Lot 1876, Pruen Road, Berrimah, Northern Territory 5788, Australia. *Tel:* (089) 844-188. *Telex:* AA 85146. *FAX:* (089) 844-139. *Cables:* Hempet, Darwin. *Contact:* Operations Manager.

LAUNCESTON, Tasmania (including Inspection Head, Beauty Point, Bell Bay): 41.27 S. 147.07 E. (See Plan)

PORT LIMITS: A line drawn from Low Head to Hebe Reef thence to West Head defines the seaward limit of the Port of Launceston (including Port Dalrymple which comprises Bell Bay, Beauty Point Harbour and Long Reach).

Seaward Position of Port: Lat. 41° 03′ S., Long. 146° 45′ E.

A vessel is considered to have arrived when at the Pilot Boarding Ground.

DOCUMENTS: Agents prepare Bills of Lading and Shipping Documents. Only documents required Crew List and Passenger List. Light Dues receipt is necessary if payment is made before arrival.

PILOTAGE: The Pilot service is provided by the Port Authority and is compulsory for all vessels over 50 g.r.t. unless a valid Pilot Exemption Certificate is held for the Port of Launceston.

Contact Harbour Master by radio giving ETA 24 hours before arrival, and give updated ETA to "Bell Bay Control" on VHF radio 3 hours before arrival. "G" flag to be flown on daylight arrival.

Pilot boards from launch (fitted with VHF Channels 12, 16, call sign "Tamar Pilot"), 1.4 nautical miles N.W. of Low Head Lighthouse.

MAX. SIZE: Max. permissible draft 9.0 m. at zero water. 11.10 m. at HW. Length restricted to approx. 250 m., and beam 45 m. Vessels over 168 m. length cannot work Channel during ebb tide. Under keel clearance to be 1.4 m.

ANCHORAGE:
Position *(a)* Low Head Lat. 41° 03′ 32″ S., Long. 146° 47′ 18″ E.
(b) 1.15 miles 280° from *(a)*
(c) 0.90 miles 308° from *(b)*
(d) 0.85 miles 038° from *(c)*
(e) 0.90 miles 128° from *(d)*
thence 0.85 miles 218° to *(b)*

HEALTH: Organised by ship's Agent. Notify Agent prior to arrival. Pratique automatic if vessel visits other ports in Australia prior calling Launceston, otherwise contact: Health Department, Commonwealth Dept. of Health, Quarantine Dept., Ship Inspection Service, ANL Terminal, Bell Bay, Tas. 7252. (P.O.Box 132, George Town, Tas. 7253). Tel: (003) 82 2224.

Radio Pratique: The Master of any vessel arriving from overseas should, not more than 24 hours and not less than 12 hours before arrival, transmit to the Quarantine Officer, if necessary through the Agent, a statement giving the following details:

A. Name, type and nationality of vessel.
B. Itinerary for last 21 days. If over 21 days from last port, name of port and date of departure.
C. Name of first Australian port and ETA.
D. Number of crew.
E. Number of passengers.
F. Any deaths on board during the voyage? Give details.
G. Any cases of illness during the last 21 days with a fever of 38°C or above, and:
  (a) accompanied by rash, jaundice or glandular swelling, or
  (b) accompanied by diarrhoea lasting longer than 24 hours.
H. Persons suffering from venereal disease during the voyage?
I. Live fish, birds, reptiles or other animals being carried (including ship's pets).
J. Livestock carried on previous voyages in the last six months? Please advise type of livestock, date of voyage and ports visited. Have all stock-carrying compartments been thoroughly cleaned and disinfected?
K. Do you request Radio Pratique?

RADIO: Melbourne VIM or Hobart VIH.

VHF: *Port Control:* (manned 24 hours). Tel: Launceston (003) 32 9711, A/H 32 9711. Bell Bay (003) 82 1222, A/H 82 1222. Telex: Bell Bay AA58640 PBBAY. Telefax: Bell Bay (003) 82 1222, (0830 to 1700 hrs.) Telegraphic Address: Harbmaster Launceston. Radio Call Sign: "Bell Bay Control". Pilot Call Sign: "Tamar Pilot".

Radio Service: The P.L.A. Port Control Room at Bell Bay is manned 24 hours and operates a radio service on the following frequencies.

VHF Channel 16 (156.8 MHz) International distress and calling.
VHF Channel 12 (156.6 MHz) Working frequency.
VHF Channel 67 (156.375 MHz) Alternate calling and distress.
HF 2182 kHz International distress and calling (for emergency use only).
Call Sign: "Bell Bay Control".

Assistance Afloat: Contact Port Control. Assistance Ashore: Contact Port Control. Emergency Assistance: Contact Port Control.

Port Office: The "Port Office" at Bell Bay includes the Harbour Master's Office and the "Port Control" room. The Harbour Master, with the Deputy Harbour Master and Assistant Harbour Master/Pilots control shipping movements, berth and shed allocations, cargo storage areas and equipment requirements.

Tugs, linesboats and linesmen are ordered by the "Port Office" staff on behalf of vessels' Agents.

It is therefore essential that any change in a vessel's ETA or ETD be communicated to the "Port Office" as soon as possible.

RESTRICTIONS: *Navigation of Lower Reaches:*

(a) Draft Limitations: Determined by a 1.4 m. clearance under the keel giving maximum permissible draft at LW 9.0 m. (at zero tide), and maximum permissible draft at HW 11.1 m.

(b) Size Limitations: Vessels over 168 m. LOA enter and depart according to the time limitations below. For vessels exceeding 250 m. LOA and/or 45 m. beam contact Harbour Master.

(c) Time Limitations:

Entry: Vessels over 168 m. LOA enter on flood tide only. Earliest entry is 30 minutes after LW at George Town. Vessels then enter according to draft through to HW at George Town. Pilots board approximately 15 minutes before these times.

Departure: Vessels over 168 m. LOA single up for departure within the following limits: Vessels berthed at Woodchip Berths – from 1 hour before, up to HW or LW depending on draft of vessel. Vessels berthed at all other down river berths – from 1 hour before to 1 hour after HW or LW depending on draft of vessel.

Shifting of Vessels: The shifting of vessels of any size from berth to berth within the Port will be undertaken 24 hours a day, subject to any special requirements at the berth.

(d) Night Navigation: Unrestricted for vessels under 180 m. LOA. Over 180 m. LOA at Pilot's discretion.

Navigation of Upper Reaches: The Upper Reaches are navigable to the City of Launceston.

Limitations: Length 100 m., draft 5.4 m.

Special Navigation Conditions: Contact Harbour Master for vessel and conditions outside these limits.

Datum: Lower Reaches: LAT (Lowest Astronomical Tide)=AHD* minus 1.977 m. Upper Reaches: LWOST (Low Water Ordinary Spring Tide)=AHD minus 2.260 m.

*AHD: Australian Height Datum.

Tidal Range: George Town – average 3.2 m. Launceston – average 3.8 m.

Depths Alongside:

Eastern	
(At Lowest Astronomical Tide)	
No. 1 Bell Bay, Comalco (Private)	10.8 m.
No. 2, Bell Bay, (A.N.L. Ro/Ro and Container)	8.4 m.
No. 3, Bell Bay, (Temco, Bulk and General)	11.2 m.
No. 4, Bell Bay, (Tankers)	11.2 m.
No. 5, Bell Bay, Common User (Ro/Ro and Container) (see "Plan")	9.0 m. to 12.4 m.
Long Reach, Thermal Power Station	12.3 m.
Long Reach, No. 1, Woodchip N. (Forest Resources)	11.5 m.
Long Reach, No. 2, Woodchip S. (A.P.P.M.)	11.2 m.
Western	
(At Lowest Astronomical tide)	
Inspection Head (Bulk Wheat and Tallow)	9.9 m.
A.M.C. Jetty, Beauty Point (Private)	9.7 m.
Launceston	
(At Low Water Ordinary Spring Tide)	
Kings Wharf	4.5 m. to 5.6 m.*
R.A. Ferrall Shiplift – Kings Wharf	5.6 m.*
Cattle Jetty	3.0 m.*
Wheat Berth	3.0 m. to 4.0 m.*
Ship Repair Facilities: Launceston	
Fitting Out Berth: Town Pier	3.0 m. to 4.0 m.*
Wm. Hart Graving Dock: Dock Ramp	3.0 m. to 4.0 m.*

*Subject to siltation, depths maintained by dredging.

TUGS: Towage services are operated by North Western Shipping and Towage Co. Pty. Ltd. with 2 ship handling tugs based at Inspection Head Wharf. Both are fitted with radar; both have fire monitors, and one has foam.

"Yorktown" built 1972, 249 g.r.t. LOA 29.49 m. Speed 10.5 knots with bollard pull of 33 tons, type 1.4mW, twin screw.

"Wybia" built 1967, 217 g.r.t. LOA 30.10 m. Speed 10.5 knots with bollard pull of 21 tons, type 0.9mW, single screw.

Other tugs are available at several hours notice from other ports. Launches are available for small ship and barge handling.

All tugs are equipped with VHF radio with Channels 6, 8, 12, 16 and 67

BERTHING:

Bell Bay: On the Eastern shore within 8 nautical miles of the entrance.

No. 1, Comalco Berth (Private):

A concrete decked and piled wharf, providing facilities for handling of aluminium and bulk cargoes. Length of wharf: 152.4 m.; width 18.95 m. Width of apron: 9.1 m. Mooring dolphins: 5 with outermost 2 at 330.4 m. apart. Width of approaches: 6.1 m. Depth alongside: 10.8 m. at LAT. Height of deck above datum: 5.40 m.

Cranes: 2×12.5 ton portal, electric, luffing, slewing, grabbing, travelling cranes. (Manufacturer: Stothert & Pitt).

Lifting capacity/speed: 12.5 ton grab full; 6.25 ton (cargo) at 91.44 m./min. Max. radius: 20.57 m. Min. radius: 7.01 m. Tail radius: 5.33 m. Max. outreach from wharf fenders: 13.96 m. Max. backreach from wharf fenders: 27.19 m. Centre of crane to outer edge of wharf fenders: 6.61 m. Max. height of hook above wharf deck/max. radius: 19.81 m. Max. height of bottom of grab above wharf deck/max. radius: 8.23 m. Max. depth of bottom of grab below wharf deck/max. radius: 15.24 m. Length of travel: Full length of wharf. Rated capacity: 300 tonnes/p.h. each. Average "alumina" complete discharge: 225 tonnes/p.h. each. Average "pitch" complete discharge: 300 tonnes/p.h. each.

Wharf deck loading: 2.7 tonnes/sq.m. (5 cwt/sq.ft.).

Axle loading: 20 tonnes.

Cargo bin: Uncovered concrete cargo bin 133.27 m. long × 8.53 m. wide × 3.66 m. deep runs along back of wharf. Alumina is now being discharged by self-unloading vessels to hoppers then by conveyor to the smelter.

Other bulk cargoes: Discharged to hoppers then road-hauled to the works.

Oil fuel: Via 200 mm. pipe; base of tanks is 30.48 m. above wharf level. Manifold is in centre of wharf.

Wharf power: Nil.

Telephone: Ship Tel: (003) 82 1482, when connected. Agents Tel: (003) 82 1471. Comalco switchboard (003) 82 5111.

Fresh Water: Available at maximum rate of 50 tonnes/p.h. per connection.

Bunkering: Road tanker.

No. 2, A.N.L., Ro/Ro, and Container Berth: A specially designed terminal for the Bass Strait and Sydney vehicular deck ships equipped with stern loading facilities capable of carrying wheeled and mobile cargo to maximum of 120 tonnes gross weight.

Length of wharf: 86.6 m.; width 38 m. Mooring dolphin: 227.9 m. East of ramp end. Fender dolphin: 116 m. East of ramp end. Depth alongside: 8.4 m. at LAT. Height of deck above datum: 5.03 m.

Cranes: (a) 25 ton portal, electric, horizontal luffing, slewing, travelling wharf crane for handling containers and unit loads. (Manufacturer: Stothert & Pitt).

Max. radius: 32 m. Min. radius: 10.67 m. Tail radius: 5.79 m. Max. outreach from wharf fenders: 24.39 m. Max. backreach from wharf fenders: 39.62 m. Centre of crane to outer edge of wharf fenders: 7.62 m. Max. height of hook above wharf deck/max. radius: 18.29 m. Max. depth of hook below wharf deck/max. radius 12.19 m. Length of travel: 28 m. Max. hoisting speed: 24.38 m. per min. (25 ton). 48.77 m. per min. (no load). Max. lowering speed: 36.58 m. per min. (25 ton).

(b) 40 tonne mobile harbour crane will be available for use at this berth in case of breakdown of crane (a) by late 1986. For details refer "Cranes" section.

Ro/Ro ramp: 8.23 m. wide with max. vehicle width of 8.14 m. and capacity in excess of 120 tonnes. Axle loading on ramp: 63 tonnes (forklift). Gross loads in excess of 120 tonnes can be accommodated with reference to Chief Engineer.

Wharf deck loading: 2.7 tonnes/sq.m. (5 cwt./sq.ft.). Wharf axle loading: 14.5 tonnes; forklift – 43.6 tonnes.

Marshalling area: 4.72 ha.

Rail: Shipside. Rail loop services marshalling area.

Reefer outlets: 102 for 120 refrigerated containers, each 415v, 30 amp. Wharf power: 1×240v, 10 amp.

Telephones: Ship (Master) Tel: ((003) 82 1366. Ship (Crew) Tel: (003) 82 1593. Agents Tel: (003) 82 1084.

Fresh Water: Available at maximum rate of 50 tonnes/p.h. per connection.

Bunkering: Road tanker.

No. 3, Bell Bay Wharf (Temco, Bulk and General): A concrete decked, steel piled wharf providing for handling of general and bulk cargoes.

Length of wharf: 152.5 m.; width 20.4 m. Mooring dolphins: 236.9 m. apart. Depth alongside: 11.2 m. at LAT. Height of deck above datum: 5.18 m.

Cranes: (a) 12.5 ton kangaroo pouch type, grabbing, travelling crane. (Manufacturer: Stothert & Pitt). This crane will be withdrawn from service and replaced by crane (b) early 1987.

Lifting capacity/radius: 12.5 tons at 26.89 m. max. radius. Max. radius: 26.89 m. Min radius: 5.79 m. Tail radius: 8.08 m. Max. outreach from wharf fenders: 16.76 m. Max. backreach from wharf fenders: 37.03 m. Centre of crane to outer edge of wharf fenders: 10.13 m. Max. height of hook above wharf deck/max. radius: 21.34 m. Max. depth of hook below wharf deck/max. radius: 13.72 m. Length of travel: Full length of wharf. Average grabbing rate: 225 tonnes/p.h.

(b) 19 tonne slewing, luffing, grabbing, travelling crane with trailing hatch hopper on rails. (Manufacturer: Caillard Levage). This crane will be fully operational by early 1987.

Lifting capacity: 19 tonne with grab; 25 tonne with hook. Lifting capacity/radius: 19 tonne at 30 m. max. radius; 25 tonne at 24 m. max. radius. Max. radius 30 m. Min. radius: 10 m. Tail radius: 6 m. Max. outreach from wharf fenders: 22.49 m. Max. backreach from wharf fenders: 37.51 m. Centre of crane to outer edge of wharf fenders: 7.51 m. Max. height of bottom of grab above wharf deck/max. radius: 18 m. Max. height of hook above wharf deck/max. radius 22 m. Max. depth of bottom of grab below wharf deck/max. radius: 14 m. Length of travel: Length of wharf for 108 m. Associated equipment: Trailing hatch hopper with operator's cabin. Estimated unloading rate (grab): 500 tonnes/p.h. Average loading rate (grab): 660 tonnes/p.h.

Wharf deck loading: Deck and approaches: 4.3 tonnes/sq.m. (8 cwt./sq.ft.) except. Deck between crane rails: 2.7 tonnes/sq.m. (5 cwt./sq.ft.). Up to 140 tonne loads on suitable transporters can be accommodated with reference to Chief Engineer. Axle loading on deck/pavement: 20 tonnes; 17.8 tonnes (forklift).

Transit shed space: 744 sq.m.

Wharf power: 2×415v, 30 amp.; 2×240v, 10 amp.

Telephones: Ship Tel: (003) 82 1768. Agents – Stevedores Tel: (003) 82 1437. Temco – Wharf Office Tel: (003) 82 1411. Customs Tel: (003) 82 1526.

Fresh Water: Available at maximum rate of 50 tonnes/p.h. per connection. Bunkering: Road tanker.

No. 4, Tanker Berth: A "T" head concrete decked, timber berth. Max. permissible length of vessel 189 m. Length of wharf: 25.5 m.; width 12 m. Mooring dolphins: 262 m. apart. Fender dolphins: 61 m. apart. Depth alongside: 11.2 m. at LAT. Height of deck above datum: 5.33 m. Axle loading: No vehicles allowed on deck without reference to Chief Engineer.

Pipe-lines: (a) 2×250 mm.; one for black and one for clean oil.

(b) 1×100 mm.; for discharge of LP Gas, 440 kPa (64 lb/sq.in.).

(c) 1×75 mm. vapour return line.

Manifold is 19 m. from downstream fender.

Tanks: Bottom of tanks in tank farms 33 m. above manifolds on wharf.

Wharf power: Nil.

Telephones: Ship: (flame proof connection) Tel: (003) 82 1755. Watchman Tel: (003) 82 1179.

Fresh Water: Available at max. rate of 50 tonnes/p.h. per connection.

Bunkering: Fuel oil 100 mm. and 150 mm. connections, rate of 50/60 tonnes/p.h. Diesel oil by road tanker, 75 mm. connection at 18 tonnes per 1 hour 15 minutes.

No. 5, Common User Berth (General, Container and Ro/Ro): A concrete decked, steel piled, heavy duty berth designed for Ro/Ro, container, conventional and bulk cargoes.

A steel decked bridge 24.4 m. long×7.2 m. wide connects West marshalling area to the wharf. Length of wharf: 313.6 m. Mooring dolphin: Behind wharf 37.3 m. East of wharf end. Depth alongside: 9.0 m. to 12.4 m. at LAT (see "Plan"). Height of deck above datum: 5.05 m.

Cranes: (a) 50 ton portal, electric, horizontal luffing, slewing, travelling wharf crane equipped with spreaders and other equipment for the handling of 6.1 m. and 12.2 m. ISO containers and grabbing by special arrangement. (Manufacturer: Deer Park Engineering). Lifting capacity/radius: 40 ton at 32 m.; 50 ton at 22.86 m. Max. outreach from wharf fenders: 23.67 m. (40 ton); 14.53 m. (50 ton). Max. backreach from wharf fenders: 40.33 m. (40 ton); 31.19 m. (50 ton). Centre of crane to outer edge of wharf fenders: 8.33 m. Max. height of hook above wharf deck/max. radius: 24.38 m. Max. depth of hook below wharf deck/max. radius: 9.14 m. Length of travel: Length of wharf.

(b) 40 tonne mobile harbour crane, with standard capacity of 40 tonnes (under hook) and heavy lift capacity of 100 tonnes (under hook). (Manufacturer: Favco-Gottwald).

This crane will be in operation by late 1986.

Standard load/radius limits: 40 tonnes at 11 m. to 31 m., then reducing to 26.0 tonnes at 42 m. Heavy lift/load radius limits: 100 tonnes at 11 m. to 17 m. then reducing to 26.0 tonnes at 42 m.

Max. radius: 42 m. Min. radius: 11 m. Max. outreach from wharf fenders: 33.67 m. Max. backreach from wharf fenders: 50.33 m. Centre of crane to outer edge of wharf fenders: 8.33 m. Max. height of hook above wharf deck/max. radius: 32 m. Max. depth of hook below wharf deck/max. radius: 15 m. Associated equipment/spreaders, etc.: Equipped with remote controlled swivel gear, load leveller and fully automatic spreader for handling containers, general cargo and bulk materials.

For further details see "Cranes".

Ro/Ro Ramp: 8.23 m. wide stern loading ramp with max. vehicle width of 8.14 m. and capacity in excess of 100 tonnes.

Axle loading on ramp: 52.4 tonnes (forklift). Gross loads in excess of 100 tonnes can be accommodated with reference to the Chief Engineer.

Wharf Deck Loading: 3.23 tonnes/sq.m. (672 lb./sq.ft.); 1985 extensions: 5 tonnes/sq.m. (9.3 cwt./sq.ft.).

Wharf Axle Loading:

(a) Deck and pavement: 50 tonnes.

(b) 1985 deck extension: 80 tonnes.

Marshalling Area: East: 1.8 ha.; West: 1.5 ha.

Total of 3.3 ha. or 3.8 ha. including wharf decks.

Transit Shed Space: 2,675 sq.m. Sheds are fitted with exhaust fans for pre-shipment storage of primary produce.

Rail: At ship side, full length of berth.

Reefer Outlets: 72 for 144 refrigerated containers.

Wharf Power: 5×415v., 30 amp.; 6×240v, 10 amp.; 1×415v., 60 amp.

Telephones: Ship Tel: (003) 82 1840. Agents: Tel: (003) 82 1880. Stevedores: Tel: (003) 82 1860. Customs: Tel: (003) 82 1890.

Fresh Water: Available at max. rate of 50 tonnes/p.h. per connection.

Bunkering: Road tanker.

Bell Bay Industrial Area:

(a) P.L.A. Cold Stores: Cold storage capacity of 22,864 cu.m., consisting of 6 chambers each with temperature of −23°C., plus self-levelling ramp and forklift service garage.

(b) Stockyards: Area 590 sq.m.

(c) Incinerator: Quarantineable waste disposal, with average destruction rate of 325 kg.hr. over a 6 hour period, equipped with hydraulically operated loader and ram.

(d) Weighbridge: 16 m. long, weighing up to 50 tonnes.

(e) Butane Gas Storage Sphere: (Gas Corporation of Tasmania) – capacity of 600 tonnes.

Long Reach: On the Eastern shore within 12 nautical miles of the entrance.

Thermal Power Station Berth (H.E.C.):

A "T" head concrete decked, steel piled wharf, 26.2 m.×13.4 m. with a concrete approach from land 3.66 m. wide.

Mooring Dolphins: 2 at 262 m. apart.

Fender Dolphins: 2 at 61 m. apart.

Depth Alongside: 12.3 m. at LAT.

Height Above Datum: 5.66 m.

Wharf Deck Loading: 488 kg./sq.m. (100 lb./sq.ft.).

Axle Loading: 14.3 tonnes.

Pipes for Discharge: 3×250 mm. lines, feeding into 2×300 mm. lines to 3×15,000 tonne tanks: head 0.00 m. when tank is empty to 18.29 m. when tank is full. Pipe connections are "Chicksan" booms.

Wharf Power: Nil.

Telephone: Ship Tel: (003) 82 1377.

Fresh Water: Available at max. rate of 30 tonnes/hr. per connection.

Bunkering: Road tanker to 20 tonne all-up weight.

No. 1 Woodchip Berth – Northern (Forest Resources):

A berthing face 217 m. long. Approach from land is a bridge 78.7 m. long×3.81 m. wide.

Fender Dolphins: 5.

Mooring Dolphins: 2 at 482 m. apart.

Shore Trip-Hooks: 2 at 213.4 m. apart. Steel walkway between dolphins is 1.22 m. wide.

Depth Alongside: 11.5 m. at LAT.

Height of Deck above Datum: 5.64 m.

Woodchip Loader (fixed): Situated on central dolphin with loading rate of 700 tonnes/p.h.

Wharf Power: Nil.

Telephones: Ship Tel: (003) 94 7193. Agents Tel: (003) 94 7303. Customs Tel: (003) 94 7116. Forest Resources Switchboard Tel: (003) 94 7303.

Fresh Water: Available at max. rate of 30 tonnes/p.h. per connection.

Bunkering: Not available.

No. 2 Woodchip Berth – Southern (Associated Pulp and Paper Mills Ltd.):

A berthing face 229 m. long. Approach from land is by a causeway and a bridge 18.7 m. long×4.7 m. wide.

Fender Dolphins: 5.

Mooring Dolphins: 2 at 482 m. apart.

Shore Trip-Hooks: 2 at 210.3 m. apart. Steel walkway between dolphins is 1.07 m. wide.

Depth Alongside: 11.2 m. at LAT.

Height of Deck (Loading Dolphin) above Datum: 6.86 m.

Woodchip Loader (Fixed): Situated on central fender dolphin with loading rate of 700 tonnes/p.h.

Axle Loading on Deck and Approach: 14.3 tonnes; 50 tonnes (forklift).

Wharf Power: Nil.

Telephones: Ship Tel: (003) 94 7377. Customs Tel: (003) 94 7133. A.P.P.M. Switchboard: Tel: (003) 94 7201.

Fresh Water: Available at max. rate of 30 tonnes/hr. per connection.

Bunkering: Not available.

Beauty Point Harbour: On the Western shore within 6.5 nautical miles of the entrance.

Australian Maritime College Jetty (Private):

A "T" head concrete jetty, constructed for A.M.C. Seamanship Centre training vessels. A side pontoon plus lifeboat deck exist on Northern side of jetty approach.

Length: 60 m., width 9 m.

Mooring Dolphins: 2 at 115 m. apart.

Depth Alongside: 9.7 m. at LAT.

Height of Deck above Datum: 4.5 m.

Wharf Deck Loading: 1.5 tonnes/sq.m. (2.8 cwt./sq.ft.).

Axle Loading: 14.3 tonnes.

Telephones: A.M.C. Seamanship Centre Tel: (003) 83 4455.

P.L.A. Small Boats Marina:

Suitable for ocean-going craft. Constructed as a pontoon and catwalk type with amenities block, car park and picnic area adjacent.

Total Berths: 52.

Fresh Water: Available.

Telephone: Caretaker Tel: (003) 83 4377

All enquiries should be directed to: The Secretary, Port of Launceston Authority, P.O.Box 257C, Launceston, Tasmania 7250, Australia. Tel: (003) 32 9711. Telex: AA58730, AA58640. Telefax: (003) 32 9726, 82 1222.

Inspection Head Wharf (Bulk Wheat, Tallow and General; Fish Processing):

No. 1, Northern end: 180.6 m. long, width 28.1 m., concrete decked and steel piled.

No. 2, Southern end: 153.6 m. long, width 34.3 m., concrete decked and piled.

Total Length: 334.3 m., providing 2 overseas berths.

Mooring Dolphins: 2 at 452.2 m. apart: Northern dolphin: 45.5 m. from end of wharf. Southern dolphin: 72.4 m. from end of wharf. Depth Alongside: 9.9 m. LAT. Height of Deck above Datum: 5.33 m. Swinging Room: 270 m. off North end of wharf. 210 m. off No. 2 berth.

Cranes: 5 ton stiff leg derrick crane on S.W. corner of No. 2 wharf. Max. radius: 13.72 m. Min. radius: 4.57 m. Max. outreach from wharf fenders: 8.06 m. (West); 11.66 m. (South). Max. backreach from wharf fenders: 19.38 m. (East); 15.78 m. (North). Centre of crane to outer edge of wharf fenders: 5.66 m. (West); 2.06 m. (South). Wharf Deck Loading: 2.7 tonnes/sq.m. (5 cwt./sq.ft.). Axle Loading: 12.1 tonnes. Heavy lifts can be accommodated on Southern approach with reference to Chief Engineer.

Transit Shed Space: Shed No. 1A: 972 sq.m. (Bulk wheat capacity: 2,463 cu.m.). Shed No. 1B: 976 sq.m. (Bulk wheat capacity: 1,841 cu.m.).

Cold Storage: Cold Store No. 5: 629 cu.m. Cold Store No. 6: 102 cu.m. Fish Processing: Shed No. 2A: Export. Shed No. 2B: Local.

Wheat Loaders: 2 "Neuro" unloaders (Tasmanian Grain Elevators Board) rated at 250 tonnes/p.h.

Tallow Storage:

Tanks	1×600 tonnes; 6×100 tonnes; 1×50 tonnes (settling);
Storage Barge	1×200 tonnes.
Total Capacity	1,450 tonnes
Loading Capacity	200 tonnes/p.h.
Pipe-lines	1×100 mm., 1×152 mm.

Wharf Power: 8×240v, 10 amp.; 8×415v, 30 amp.

Telephones: No. 1 Wharf: Ship Tel: (003) 82 1665. Agents Tel: (003) 82 1647, 83 4111. Stevedores Tel: (003) 83 4141. Customs Tel: (003) 83 4131. Bulk Tallow Plant Tel: (003) 83 4455.

No. 2 Wharf: Ship Tel: (003) 82 1664. Asst. Harbour Master Tel: (003) 83 4266. Wharf Office Tel: (003) 83 4211.

Fresh Water: Available at max. rate of 30 tonnes/p.h. per connection.

Bunkering: Road tanker.

Launceston: On Eastern shore 35.4 nautical miles from the entrance.

King's Wharf: (P.L.A. Plant Berth and Flinders Island Services):

A concrete decked and piled wharf providing a total berthing length of 295.4 m. Equipped with 50 ton bollards every 18.3 m.

Depth Alongside: 4.5 m. to 5.6 m. at LWOST, subject to siltation. Depth maintained by dredging.

Height of Deck above Datum: 5.64 m.

Wharf Deck Loading: 1.3 tonnes/sq.m. (2.5 cwt./sq.ft.); ship building area; 2.7 tonnes/sq.m. (5 cwt./sq.ft.) main deck. Axle Loading: 12.7 tonnes. Transit Shed Space: 2,463 sq.m. Rail: Siding services the adjacent P.L.A. Pileyard).

Wharf Power: 5×415v., 30 amp.

Telephone: Connection by Telecom.

Fresh Water: Available at max. rate of 30 tonnes/p.h. per connection.

Bunkering: Road tanker.

Next section of wharf has been demolished and replaced with a timber piled and decked walkway 277.3 m. long used as P.L.A. Plant Berth.

Castle Jetty:

A "T" shaped timber deck 27.3 m. long connected to holding and receiving yards by an adjustable gangway near the centre of a berth 57.5 m. long.

Depth Alongside: 3.0 m. at LWOST, subject to siltation. Depth maintained by dredging. Height of Deck above Datum: 5.64 m. Rail: Siding adjacent.

Fresh Water: Available.

Wheat Berth:

A concrete decked and timber piled wharf with facilities for bulk unloading; used as lay-up and P.L.A. Plant Berth, but no longer used for bulk wheat discharge. Wharf Length: 13.81 m. Depth Alongside: 4.0 m. at LWOST, subject to siltation. Depth maintained by dredging. Height of Deck above Datum: 5.61 m. Wharf Deck Loading: 2.7 tonnes/sq.m. (5 cwt./sq.ft.). Axle Loading: 13 tonnes. Rail: Siding adjacent.

Wharf Power: Nil.

Telephones: Connection by Telecom.

Fresh Water: Available at max. rate of 30 tonnes/p.h. per connection.

North of this is a walkway 34 m. long with mooring hooks. 21 m. South is a catwalk connected to a walkway 33 m. long ending in a mooring dolphin, giving a total berthing face of 101.5 m.

CRANES: The Port Authority operates a range of mobile cargo handling and wharf equipment and floating plant which is available for hire.

Mobile Cargo Handling and Wharf Equipment:

Mobile Harbour Crane: Favco-Gottwald (HMK 280-89) mobile harbour crane, with standard capacity of 40 tonnes (under hook) and heavy lift capacity of 100 tonnes (under hook).

This crane will be in operation by late 1986.

Standard Load/Radius Limits:

40 tonnes at 11 m. to 31 m., then reducing to 39.3 tonnes at 32 m., 28.2 tonnes at 40 m., 26.0 tonnes at 42 m.

Heavy Lift Load/Radius Limits:

100 tonnes at 11 m. to 17 m., then reducing to 92 tonnes at 18 m., 85 tonnes at 19 m., 78 tonnes at 20 m., 59.7 tonnes at 24 m., 43.2 tonnes at 30 m., 28.2 tonnes at 40 m., 26.0 tonnes at 42 m.

These limits may vary depending on berth and crane position. Any further details are available on enquiry from the Chief Engineer.

Max. radius: 42 m. Min. radius: 11 m. Max. height of hook above wharf deck/max. radius: 32 m. Max. depth of hook below wharf deck/max. radius: 15 m. Hook speed: With no load: 84 m./min.; with 27 tonnes: 63 m./min.; with 40 tonnes: 44 m./min.

Set up time on this crane is fast with outrigger pads positioned by the operator. Change of position can be effected by the operator from the cabin.

The cabin adjusts in height from the standard 17 m. up to 24 m. above wharf deck at the operator control.

Closed circuit TV installation permits the operator a clear view of the hook activities.

The mobile crane can handle bulk commodities by motorised grab if required.

Operations by the crane can be carried out throughout the port area and consideration will be given to use within the industrial area.

The crane usually travels in an upright position but can be lowered automatically to a height of 6 m.

Associated equipment/spreaders, etc: Equipped with remote controlled swivel gear, load leveller and fully automatic spreader for handling containers, general cargo and bulk material.

Also see "Berthing".

BULK CARGO FACILITIES: See "Berthing".

SPECIALISED CARGO-HANDLING FACILITIES: See "Berthing".

BRIDGES: No bridges for large overseas shipping. Some inter-state vessels proceeding to Launceston will pass under Batman Bridge – 27 m. mast height allows 0.9 m. clearance at HW.

STEVEDORES: Agent for ship arranges stevedores.

MEDICAL: Agents should be notified to prepare for medical attention or hospitalisation. Hospitals at Launceston, Beaconsfield and George Town.

TANKERS: See "Berthing". No. 4 Bell Bay Tanker Berth, Long Reach Thermal Station Berth and No. 1 Bell Bay Comalco Berth.

DENSITY: 1012 to 1028, depending on rainfall.

FRESH WATER: Fresh water available at all berths. Delivery 30 t.p.h. by hose.

FUEL: See "Berthing".

FIRE PRECAUTIONS: Tankers governed by the Association of Australian Port and Marine Authorities "Rules for the Handling of Dangerous Goods and Oils in Ports".

CONSULS: None.

REPAIRS/DRY DOCK: William Hart Graving Dock: Situated on South bank of North Esk River adjacent to Charles Street Bridge. A steel and concrete graving dock with a clear width at the entrance of 12.8 m., capable of accommodating vessels up to 62.5 m. in length.

Maximum permitted draft: 3.66 m.

Depth Alongside Dock Ramp: 3.0 m. to 4.0 m. at LWOST, subject to siltation. Depth maintained by dredging. Design keel loading: 33.9 tonnes/m.

Telephones: Dockmaster (P.L.A. switchboard) Tel: (003) 32 9711 (all hours). Shipowners Tel: (003) 31 2035

Fitting Out Berth: Town Pier: (Forms part of William Hart Dockyard).

A concrete decked berth. Length: 135.8 m. Depth Alongside: 3.0 to 4.0 m. at LWOST, subject to siltation. Depth maintained by dredging. Height of Deck above Datum: 4.98 m. Deck Loading: 2.7 tonnes/sq.m. (5 cwt./sq.ft.). Axle Loading: 14.3 tonnes.

Wharf Power: 1×240v, 10 amp.

Fresh Water: Available to max. rate of 30 tonnes/p.h. per connection.

Shore reception facilities are available for dirty bilge and fuel:

1×54,552 litres (12,000 gal.).
1×22,730 litres (5,000 gal.).
1×16,800 litres (3,698 gal.).

R.A. Ferrall Shiplift: Adjacent to Northern end of King's Wharf. A shiplift docking complex 105.3 m.×26 m. with a lifting platform 60 m.×18 m. operated by 16 synchronised lifting winches.

A transfer system is provided for up to 3×700 tonne displacement vessels leaving the platform free for larger vessels.

Maximum Vessel Size: Length 65 m., beam 18 m., draft 5.5 m. (over 4 m. subject to tide and blocking, etc.). Displacement 2,160 tonnes (ship); 3,120 tonnes (barge).

Depth Alongside: 4.5 m. to 5.6 m. at LWOST, subject to siltation. Depth maintained by dredging. Design Keel Loading: 55 tonnes/m. Height of Deck above Datum: 5.64 m. Crane: 17.5 ton stiff leg derrick crane covers Northern section of docking platform.

Lifting capacity/max. radius: 15 ton at 25.87 m.; 17.5 ton at 19.81 m. Min. radius: 6.40 m. Max. height of hook above deck/max. radius: 9.75 m. Max. depth of hook below deck/max. radius: 9.14 m.

Deck Loading: Rear wharf: 4.2 tonnes/sq.m. (7.87 cwt./sq.ft.); Inner/outer decks: 5.3 tonnes/sq.m. (9.69 cwt./sq.ft.). Axle Loading: Platform: 4.8 tonnes (forklift). Rear wharf: 58.8 tonnes. Inner/outer decks: 26.7 tonnes (with max. weight vessel); 45 tonnes (if less than 1,500 tonne weight vessel). Transfer System Capacity: 704 tonnes.

Telephones: Ship Tel: (003) 34 0022. Dockmaster (P.L.A. switchboard) Tel: (003) 32 9711 (all hours). Shipowner Tel: (003) 31 7471.

SURVEYORS: Lloyd's, AB and N.V. are represented. Contact: John Waugh, Mechanical Engineer Port of Launceston Authority, Tel: (003) 32 9711. Telex: AA58730. FAX: (003) 32 9726.

GANGWAY/DECK WATCHMEN: Most vessels supply their own. May be supplied if required. Tidal port makes this requirement necessary.

HATCHES: Opening/Closing usually by stevedores.

CUSTOMS ALLOWANCES: 200 cigarettes or 250 grams of tobacco per man; 1 opened litre spirits per man; stores sealed on arrival.

CARGO GEAR: See "Berthing". Certificates of loading gear and derrick tests to be produced. Also see "Melbourne".

REPATRIATION: Arranged through ship's Agents.

AIRPORT: Approx. 64 km. from Bell Bay and 15 km. from Launceston. Served by Ansett and Australian Airlines.

TIME: EST – GMT plus 10 hours. Clocks advanced by 1 hour October-March.

HOLIDAYS: Good Friday, Anzac Day, Christmas Day and New Year's Day close holidays, work on other holidays may be arranged through Agents.

POLICE/AMBULANCE/FIRE: Port Radio Control must be advised in the event of fire. Inspection Head 831141; 831204; 831109 (fire calls only), Bell Bay 821566; 821680; 821717 (fire calls only).

TELEPHONES: Ship-to-shore phones available.

EMERGENCY CO-ORDINATION CENTRE: The Port of Launceston Authority is a founder and active member of the Bell Bay Industrial Mutual Aid Group.

Trained assistance in emergency operations is rapidly available from the adjacent industrial complexes to offset the delay in obtaining full Emergency Services from Launceston.

Port Control is equipped with a direct line to the State Emergency Service offices in Launceston and Hobart, and can be quickly converted into an Emergency Operation Centre.

All Emergencies: Contact: Port Control. Radio: Channel 16. Tel: (003) 82 1222.

STORING: Vessels stored by truck; Customs require stores be "entered for export".

SHORE LEAVE: When Immigration and Customs requirements have been satisfied there is no restriction on crew shore leave so long as they rejoin the vessel on departure. There is no need for identity cards or shore passes except in so far that non-English speaking persons may wish to identify themselves.

SHIP SUPPLY SERVICES: No service available.

In cases of emergency upon request, the pilot boat has been used for removing sick crew members, taking small quantities of stores and repair people to vessels outside the port. Water has been supplied in small quantities from the tugs to vessels anchored off the port.

There is no all weather anchorage outside the port and in many instances it would be more appropriate to bring a vessel to anchor within the port at Bell Bay for any required services.

In the case of serious emergency and a vessel was unable to enter the port, depending upon circumstances, Coastal Surveillance, Canberra would if needs be, organise a helicopter to be sent from Melbourne.

GENERAL: *Surveys:* Surveys, including Damage, Draft, On and Off Hire, Protest, Classification Society, Commonwealth D.O.T. and Gas Free Certification can be arranged through Harbour Master's office or ship's Agent.

Services: Ship Chandlers, P&I Club, radio repairs and divers.

Floating Plant: Launches: Two 10 m., fibreglass, twin-hulled, diesel powered, high speed launches: "McClarron" and "Dalrymple". "McClarron" is fitted with SSB HF, VHF and 27 MHz radio; "Dalrymple" is fitted with VHF and 27 MHz radio. Both launches are used for workboat/rescue/patrol/VIP and river sounding.

Launch "Captain Gibson": a 16.2 m. steel launch equipped with radar, VHF radio and used as a pilot launch.

Launch "Wm. Robinson": a 11.1 m. steel launch equipped with VHF radio and used as a relief pilot launch and a harbour workboat.

Launch: "Carrington": a 15.3 m. steel launch equipped with VHF and 27 MHz radio. Vessel has a bollard pull of 6 tonnes and is used as a harbour workboat.

Other Floating Plant: Two flat top barges 24 m.×7.77 m. One flat top barge 34 m.×7.31 m. Four hopper barges 47 m.×8 m. (one in use as a tallow storage barge). One pile driving frame on a barge 24 m.×7.77 m. One suction-cutter dredge "Currong". One grab dredge "Priestman".

Other Plant: A variety of construction and maintenance plant such as pumps, welders and sand-blasting equipment, etc., may be made available for special requirements. Details will be supplied upon application. A variety of other and specialised units are also available at 24 hours' notice from contract hirers to the Authority.

AUTHORITY: Port of Launceston Authority, P.O.Box 257C, Launceston, 7250. *Tel:* (003) 329711. *Telex:* Plaun AA 58730. *FAX:* (003) 329726, 821222. *Cables:* Portlaun. *Contact:* The Secretary.

Harbour Master: Captain R. E. N. Barber (Bell Bay). *Tel:* George Town (003) 821222. *Telex:* Pbbay AA58640.

AGENT: Sub-Agent of Patrick Agencies, Melbourne.

LUCINDA, Queensland: 18.32 S. 146.20 E. (See Plan)

LOCATION: Lucinda is a first port of call and is situated in position Lat. 18° 32′ S., Long. 146° 20′ E. This port is approximately 680 miles North of Brisbane.

PORT LIMITS: See "Plan".

PILOTAGE: Location of pilotage boarding ground for the bulk sugar loading berth is Lat. 18° 30′ S., Long. 146° 24′ E.

The pilot vessel is equipped with VHF Channels 16, 12 and 6. No regular watch is kept.

For the inshore berth the pilot boarding ground is in position Lat. 18° 15′ S., Long. 146° 03.5′ E.

HEALTH: Pratique available 24 hours a day, 7 days a week. This is carried out alongside.

TUGS: Required for all movements.

BERTHING: *Sugar Wharf:* The sugar wharf has an approach jetty from the shore 5.76 km. in length. The berth is 224 m. long.

The wharf is used for the export of bulk sugar which is loaded via a travelling gantry.

The depth of water at LWOST is 13.6 m.

The mean Spring rise is from 0.5 m. to 2.9 m. whilst the mean water neap rise is from 1.2 m. to 2.1 m.

The sugar berth was constructed to accommodate vessels of 40/45,000 d.w.t. with loading rate of up to 1,420 tonnes/p.h. at the offshore deepwater wharf. Tugs are required for all movements. Berth starboard side to. The maximum all up weight of vehicles allowed on wharf is 5 tonnes gross. There is a height clearance of 2.1 m. on apron.

There are 3 sheds and are confined to bulk sugar storage only. Total capacity 231,000 tonnes. (400,000 tonnes shipped out in 1980).

Inshore Berth: Length 133.35 m. Depth 9.0 m. Imports bulk aqua-ammonia and exports bulk molasses.

FRESH WATER: Not available.
FUEL: Not available.
GENERAL: *Stores:* Available from Townsville but should be ordered prior to arrival.
AUTHORITY: Department of Harbours and Marine, P.O.Box 1921, Townsville, Queensland 4810. *Tel:* 71-5135. *Telex:* 47124. *Cables:* Harbour Master - Townsville. *Contact:* Captain M. Lutze, Harbour Master, Townsville.
AGENT: See "Townsville".

MACKAY, Queensland: 21.06 S. 149.14 E. (See Plan)

PORT LIMITS: Along Lat. 21° 03.9′ S. from Long. 149° 13.5′ E. to Long. 149° 22.08′ E. thence 180°(T) to Lat. 21° 10.0′ S. in Long. 149° 22.08′ E. thence 270°(T) to Long. 149° 20.1′ E. thence 250°(T) to Lat. 21° 12.96′ S. Long. 149° 11.5′ E.
CERTIFICATES/DOCUMENTS/CUSTOMS ALLOWANCES: See "Melbourne".
PORT LIMITS: As for anchorage.
PILOTAGE: Compulsory, service obtained by radio to Agents at least 24 hours before ETA. Pilots will board in position Lat. 21° 06.94′ S., Long. 149° 15.22′ E. To allow time for manoeuvring, vessels should be under weigh at the Pilot boarding time. Masters are advised not to manoeuvre West of a line between Slade Island and Flat Top Island.
ANCHORAGES: *Prohibited Anchorages:*
(*a*) Lat. 21° 07.63′ S., Long. 149° 13.20′ E.
(*b*) Lat. 21° 07.63′ S., Long. 149° 15.70′ E.
(*c*) Lat. 21° 06.78′ S., Long. 149° 16.55′ E.
(*d*) Lat. 21° 05.82′ S., Long. 149° 13.45′ E.
RESTRICTIONS: None. Day or night access.
MAX. SIZE: Up to 620 ft. (189 m.). Largest vessels load at No. 1 berth, max. length governed by length of traverse of loading appliance winch 445 ft. 8 in. (136 m.) between hatches.

Vessels up to 650 ft. berthed at Breast Wharf subject to Harbour Master's approval, state and height of tide, daylight, and draft, etc.
HEALTH: See "Melbourne". Inspection at anchorage or at berth.
RADIO: See "Brisbane". A VHF Port Radio Station has been established at Mackay Harbour. Frequency: Channels 67, 16, 13, 11 and 6, call sign "Mackay Harbour". Hours: Continuous.
TUGS: Two tugs available, 1 × 12 tons bollard pull and 1 × 26 ton bollard pull.
BERTHING:

Berth No.	*Length* (m.)	*Depth* (m.)
1.	123.00	10.6
2.	198.12	10.3
3.	198.12	10.6
4.	182.88	10.4

Slack water entry. Swinging basin 28 ft. (8.3 m.) LWOST. Mean high neap tide rise 13 ft. 4 in. (4.1 m.). Mean high spring tide rise 18 ft. 1 in. (5.5 m.). Depth at berths 33 ft. – 35 ft. (10.1 m. – 10.4 m.).
SPECIALISED CARGO HANDLING FACILITIES:
Sugar Loading Gantry
(*a*) Loader Height: Clear height of loader in horizontal position from top of the pier, 26 ft. (7.9 m.). Height of pier above LW, 34 ft. (10.4 m.). Can be used in lifting slope "V" position up to 14° above horizontal. Max. vessel's hatch height above sea surface with which vessel may start loading even at HW, 35 ft. (10.7 m.).
(*b*) Outreach: Max. outreach of loader from side of pier, 40 ft. (12.2 m.). Breadth of permanent fender from side of pier, 2 ft. 6 in. (0.8 m.). The chute can be traversed along the boom for a max. distance of 20 ft. (6.1 m.).
(*c*) Movable Range. Length of movable range along pier, 445 ft. 8 in. (135.8 m.).
(*d*) Capacity: Average loading rate 1,400 tonnes/p.h.
(*e*) Total storage capacity 727,000 tonnes.
Container/Unit Load Facilities

Berth: length 600 ft. (183 m.); depth 34 ft. (10.4 m.); width 100 ft. (30.5 m.). Wharf deck: 126 ft.×60 ft. plus 2 ft. 6 in. breadth of permanent fender (38 m.×18 m. plus 0.8 m.); height above low water 28 ft. (8.5 m.) Crane: 25 tons (25.4 tonnes) capacity at 110 ft. (33.5 m.) radius.
Grain: 4 grain silos, capacity 10,800 tons. Rate 3,000 tonnes per day.
STEVEDORES: As much notice as possible.
TANKERS: Berth at Breast Wharf. Load rate for bulk molasses 300 t.p.h. through 18 in. (46 cm.) dockline. 8 in. (20.3 cm.) (Caltex) dockline for white petroleum. 10 in. (25.4 cm) dockline (Mobil) for black petroleum products. 8 in. (20.3 cm.) dockline (CSR) for export of industrial alcohol. 4 in. (10.2 cm.) dockline (gas supply) for import LPG. 6 in. (15 cm.) dockline for export of tallow.
DENSITY: Sea water.
FRESH WATER: Available all berths, rate of load 45 tons (45.7 tonnes) per hour.
FUEL: Available at Breast Wharf and North Pier Berth.
FIRE PRECAUTIONS: Normal requirements.
WATCHMEN: Not obligatory.
OPENING/CLOSING HATCHES: Normally by crew, but can be done by stevedores if required.
CARGO GEAR: See "Melbourne".
IDENTIFICATION CARDS: See "Melbourne".
REPAIRS: Small repairs can be carried out. Oxy-welding and electric welding plants, compressors and air tools available. Salvage divers available.
REPATRIATION: Facilities available.
AIRPORT: Daily service to Brisbane and thence to world-wide destinations.
TIME: GMT plus 10 hours.
HOLIDAYS: Bank holidays as for Brisbane, plus Waterside Workers' Picnic Day.
POLICE/AMBULANCE/FIRE: Police Tel: 51-2000, Fire Tel: 572244, Ambulance Tel: 572222.
TELEPHONES: Ships' extension telephones may be connected at all berths.
SHIP SUPPLY SERVICES: Broken Bay Light Salvage and Diving Services, P.O.Box 233, Mackay, 4740. 39 Main Street, Dundula, Q. 4740. Tel: (079) 521592.
Services: Underwater video inspections and recording of ships hulls, propellers, rudders, state of marine fouling and zinc blocks including damage inspection and report.

Transport of lubricating oils and essential items.

Transport of personnel.
Rendezvous Points: Offshore Mackay and Hay Point. (Other rendezvous points can be arranged through ships Agents.)
Communications: Vessel carries both SSB and VHF.

Initial contact possibly through Mackay Harbour Board.
Vessel: 12 m. steel salvage and general purpose vessel.

Roylen Cruises Pty. Ltd., Tel: (079) 57 2595; 57 2596. Telex: 48515. P.O.Box 169 Mackay, River St., Mackay, North Queensland 4740.

The barge "Tambai II" is available for charter, for the transportation of stores, oil, bulk distilate and water.
DEVELOPMENTS: Construction of a Northern Wharf commenced in 1984. Length 150 m. and width 20 m. The Berth will be dredged and the swinging basin extended. Completion expected 1986. Expected max. draft 12.5 m.

Berth will be used for export of grain and import of fertiliser and iron ore.
AUTHORITY: Mackay Harbour Board, P.O.Box 96, Mackay, Queensland 4740, Australia. *Tel:* 551155. *Telex:* Mkport 46373. *Contact:* E. N. Lever, Secretary.
AGENT: Sub-agent of Patrick Agencies, Brisbane.

MARYBOROUGH (Urangan), Queensland: 25.18 S. 152.54 E. (See Plan)

PORT LIMITS: The area between the mainland and Great Sandy Island from a line joining Hook Point and the Eastern extremity of Inskip Point to the parallel of 25° 7′ S. latitude, including all rivers, creeks and navigable waters in the above named area.
APPROACHES: Via Hervey Bay and the Pearl Channel.

The width of the channel to Urangan is 500 ft. (152.4 m.).

The depths of water at LWOST in this port and approaches are:

	Metres
Urangan Channel	5.10
Mary River	0.90
Sandy Straits	1.20

The swinging basin at Urangan has a width of 1,800 ft. (548.64 m.) and a depth of 27 ft. (8.23 m.).
DOCUMENTS: See "Melbourne".
PILOTAGE: Vessels requiring the services of a Pilot should advise the Harbour Master, Bundaberg at least 24 hours before their expected time of arrival at the Fairway Buoy and also advise vessels draft.

Pilot Boarding Ground is located off the Fairway Buoy, Hervey Bay and the distance therefrom to Urangan Jetty is 13 miles.
RESTRICTIONS: Large vessels may only enter and leave during daylight hours.
MAX. SIZE: Max. draft of vessels that may enter the port are:
Urangan: HWOST 24 ft. (7.3 m.) and at LWOST 14 ft. (4.27 m.) allowing 3 ft. (1 m.) under keel.
HEALTH: Pratique not available.
TIDES: The mean Spring rise is 10 ft. (3.048 m.), while the mean Neap rise is 8 ft. (2.438 m.) at Urangan.
TUGS: Not available.
BERTHING: Berth demolished April 1986. Port not presently used for commercial shipping.
REPAIRS: Limited small repairs can be carried out.
FRESH WATER: Not available.
CONSULS: None.
MEDICAL: The Hospital, situated at 185 Walker Street, Maryborough may be contacted on telephone number 212222.
POLICE/AMBULANCE/FIRE:
Fire Services: For emergency calls, dial "000" and ask the operator for the Fire Brigade. General enquiries should be directed to telephone number 212535. The Brigade Station is situated at 98 Lennox Street, Maryborough.
Police Services: For emergency calls, dial "000" and ask the operator for the Police. General enquiries should be directed to telephone number 212211. The Police Station is situated in Lennox Street, Maryborough.

Vessels at Urangan should ring Hervey Bay Police on 281122.
Ambulance Services: For emergency services, dial "000" and ask the operator for the Ambulance. General enquiries should be directed to telephone number 212244. The Brigade is situated at 155 Neptune Street, Maryborough and at 118 Torquay Road, Hervey Bay (Tel: 281211).
AUTHORITY: Harbours Corporation of Queensland, Box 2195 GPO, Brisbane 4001. *Tel:* 2277111. *Telex:* Harbrs 40760. *Cables:* Harbours.
Local Authority: Captain K. Hawkins, Harbour Master, P.O.Box 476, Bundaberg, Queensland 4670 or P.O.Box 155, Maryborough, Queensland 4650. *Tel:* (071) 738208. *Telex:* 49751. *Cables:* Harbours.
AGENT: See "Brisbane".

MELBOURNE, Victoria (including Maribyrnong River, Holden Oil Dock, Port Melbourne, Williamstown and Yarraville): 37.50 S. 144.58 E. **(See Plan)**

PORT LIMITS: Vessels at anchor off Gellibrand Light are considered "arrived" for the purposes of priority of berthing.

Form QA3 (Declaration of animals carried as cargo), only if on board	1
Form QA4 (Declaration of ship's pets)	1
Form QA5 (Shipmaster's Bond to cover ship's pets)	1
Form A Q360 (Health Report)	2

Of the above, Forms 42A and 5 need only be compiled at first port of call in Australia. Passenger — individual Passenger Cards are utilised therefore no list of passengers required. Agents require 7 copies of Manifest of cargo on board and at least 1 set copies Bills of Lading. These normally received by airfreight or airmail direct from Agents at loading port outside Australia therefore not necessary for Masters to be in possession of either Manifest of cargo on board or appropriate copies of Bills of Lading.

PILOTAGE: The Pilot Boarding Ground for Port Phillip lies 3 miles to 5 miles S.W. from the Point Lonsdale Lighthouse. The preferred boarding position, because of the dangerous tidal conditions at Port Phillip Heads, is with the Point Lonsdale Lighthouse bearing 043° at a distance of not less than 3 miles off.

At Western Port the preferred boarding ground is 3 miles due South of West Head.

Both pilot stations are manned by a Pilot in Charge at all times. A continuous watch is kept on VHF Channels 16, 13 and 12 at Queenscliff. A listening watch, for emergencies only, is also maintained on 2182 kHz radio telephone at Queenscliff. At Western Port, the pilot station can be contacted by calling on VHF Channels 16 and 14.

VHF Procedure:

Two hours prior to arrival at the boarding ground, VHF contact should be made on Channel 16 by calling "Port Phillip Sea Pilots". Please give position, course and speed; and ETA at Pilot Boarding Ground.

Following the initial contact a listening watch should then be kept on VHF Channel 12 for vessels bound for Port Phillip or Channel 14 for vessels bound for Westernport.

The pilot launch will make contact when abeam of Point Lonsdale or West Head outward bound to give final boarding directions.

Tides at Port Phillip Heads: (See cautionary notice on Charts AUS. 143 & 158.)

In the entrance the tidal stream runs at its strongest at times of High and Low Water, and the ebb stream may at times exceed 9 knots. You will be required to be in a position WESTWARD of the tidal stream in the fairway when embarking a Pilot.

Low powered vessels and vessels of over 10.5 m. draft should indicate such condition in their first telegram/telex, as the time of their passage through the Port Phillip entrance may be governed by the tidal stream.

Requirements for Embarkation of Pilots:

1. Make a *good lee* for the pilot launch with the wind and sea well abaft the beam on the weather side, and a speed of about 7 knots.
2. The pilot ladder constructed and rigged in accordance with I.M.O. requirements (see Chapter V of SOLAS 1960 for pilot ladders, and Aust. D.O.T. Notice No. 12/1976), also Commonwealth of Australia Navigation (Orders) No.15 of 1983. The ladder should be clean, properly fitted with spreaders, well clear of all discharges and outlets, and all outboard fittings which might foul the pilot launch. The bottom of the ladder should be 1.5 m. or 5 ft. above the water. The distance from the waterline to the point of access must not exceed 9 m.
3. Two clean *manila* manropes of not less than 24 mm. dia. and not more than 32 mm. dia. are to be securely made fast to the ship, and *must not* be made fast to the ladder at any point. The manropes must not be longer than the ladder.
4. Where the ladder is rigged over a bulwark, *two* stanchions are to be securely fitted in the top of the bulwark, one on each side of the ladder, and steps are to be provided from the top of the ladder to the deck.
5. A heaving line is to be provided for mail and the Pilot's bag.
6. By night a bright light is to be provided, shaded to show *downwards and forward* to clearly illuminate the ladder and the ship's side.
7. Tripping lines and boat ropes are *not* to be used.
8. An officer should be in attendance at the ladder, with life-saving appliances ready for immediate use.

Masters are urged to have all gear kept in first class condition, to have it inspected regularly, and to ensure always that the ladder and manropes are securely made fast. Serious accidents have occurred through inattention to these matters.

Should the gear and the manner in which it is rigged not be satisfactory, pilotage services may be withheld.

Vessels ETA: MOST IMPORTANT – For effective use of Pilots, it is essential that the Master of a vessel requiring a Pilot for either Port Phillip or Western Port, advises the Pilot Office on Telex: AA36920 Pilots, not less than 24 hours before arrival, his ETA and deepest draft. Changes in the ETA of more than 1 hour should be amended immediately, and the final ETA confirmed 4 hours before arrival.

ANCHORAGE: *Quarantine Anchorage:* If, from Quarantine Regulations, Southerly gales, or other causes, it is necessary to anchor off the old Quarantine Station, a vessel drawing more than 6 m. should anchor to the Northward of the light, Fl. WG. 3 secs. adjacent to the red brick chimney 24 m. high, with the light bearing 195°; 3 to 6 cables offshore, in depths of from 11 m. to 15 m. and at night in the white sector of the light visible from 126° through South to 199°, preferably with the light bearing 195° and Port Lonsdale Light bearing 280°.

Queenscliff Anchorage: In anchoring off Queenscliff, care should be taken to keep clear of West Channel Fairway by bringing up as near as possible to N.W. side of channel. A good berth in a depth of 12 m. and in red sector of low light, may be obtained with High Lighthouse bearing 284° distant 0.5 miles, and fixed green light at Queenscliff Pier Head bearing 326°.

Vessels awaiting berths in the Port of Melbourne are normally directed to anchor at Pilot's discretion South of Gellibrand Buoy and clear of the Melbourne Ship Channel.

Tank Cleaning: The Port Officer for Port Phillip, the responsible authority for the waters of Port Phillip Bay, has issued a circular which requires all Masters to notify the Harbour Master if they intend to anchor in the waters of Port Phillip for the purpose of cleaning tanks, gas freeing, cooling down or repairs.

For purposes indicated notify Port Officer, Ports and Harbours Division, 168 Exhibition Street, Melbourne, 3000, Victoria, Australia. Tel: 669-8666. Telex: AA37056.

RESTRICTIONS: Mean Tidal Range is 0.50 m. and mean of all High Waters for 1984 was 0.82 m. Tide is used for the navigation of vessels having drafts in excess of those given in Column 5 of "Max. Size". For the navigation of channels, a minimum under keel clearance of 0.6 m. is required for vessels drawing up to and including 10.9 m. and a clearance of 0.9 m. for vessels having a draft between 10.9 m. and 12.2 m. Vessels over 183 m. in length require 10% of maximum draft under keel clearance to navigate river and Webb Dock at all times, subject to draft restriction in Column 5 of "Max. Size".

Tankers which are not gas-free or with cargoes which have a flashpoint of less than 150°F will not be navigated to or from river berths at night.

MAX. SIZE: In the Port of Melbourne, draft and length limitations for navigation of vessels are determined by the Port Phillip Sea Pilots, and these divisions are outside the jurisdiction of the Port Authority, the Port of Melbourne Authority.

Maximum lengths and drafts of vessels navigating by day and night to and from berths in the port.

168 m. =	550 ft.	9.8 m. =	32 ft. 2 in.
165 m. =	541 ft.	9.7 m. =	31 ft. 10 in.
152 m. =	500 ft.	9.4 m. =	30 ft. 10 in.
150 m. =	492 ft.	9.3 m. =	30 ft. 6 in.
144 m. =	472 ft.	9.2 m. =	30 ft. 2 in.
140 m. =	460 ft.	9.1 m. =	29 ft. 10 in.
137 m. =	450 ft.	8.9 m. =	29 ft. 2 in.
136 m. =	446 ft.	8.8 m. =	28 ft. 10 in.
120 m. =	394 ft.	8.7 m. =	28 ft. 6 in.
91 m. =	298 ft.	8.5 m. =	27 ft. 11 in.
51.6 m. =	169 ft.	7.9 m. =	25 ft. 11 in.
26.5 m. =	87 ft.	7.7 m. =	25 ft. 3 in.
25 m. =	82 ft.	7.6 m. =	24 ft. 11 in.
		7.1 m. =	23 ft. 4 in.
		7.0 m. =	23 ft. 0 in.
		6.5 m. =	21 ft. 4 in.
		6.4 m. =	21 ft. 0 in.
		0.6 m. =	2 ft. 0 in.

An under keel clearance of 0.6 m. is required when navigating in the Port, but vessels over 183 m. require 10% of draft when navigating the River or Webb Dock.
The clearance under Westgate Bridge is 51.6 m. (clearance under painting gantry 49.7 m.) from Australian Chart Datum (zero on tide gauge).
Max. draft LW refers to Australian Chart Datum. All movements are subject to weather conditions.
*This depth extends out from the berth for 9 m. then increases to channel depth.
†Tankers with a flash point below 61°C will not be navigated to or from River Berths by night.

BRIDGE: Clearance under Westgate Bridge is 51.5 m. at LW. (See "Restrictions").

PRATIQUE: All overseas vessels at first port of entry to Australia or at any subsequent ports, subject to quarantine until pratique granted or until vessel released from quarantine. If examinations and inspections satisfactory vessel granted pratique for all Australian ports. A list of names and addresses of passengers also required at first port of entry. 24 hours quarantine clearance of overseas vessels available. Treatment of Crew members for illnesses other than quarantineable diseases arranged by private practitioners through ship's Agent.

Radio Pratique: Concession of Radio Pratique is available to all vessels except those which carry stock animals. Following requirements to be met in the case of a vessel requiring Radio Pratique or permission to berth.

(a) (1) The Master of the vessel or his Agent must make a request (using Form Q2) to the Department of Health within the period of 24 hours prior to the arrival of vessel giving answers to all questions on the form.

(2) If the answers given are satisfactory Radio Pratique will be given for Melbourne from a specified time and date enabling the vessel to proceed to the berth without displaying the quarantine signal.

(3) A Quarantine Officer will board the vessel at the berth, if the answers given on the Declaration of the Health (Q360) are found to be satisfactory pratique may then be granted for all Australian ports.

(b) Notwithstanding that pratique for all ports may have been granted, Master will still be responsible for reporting any case of infectious disease which may subsequently occur whilst vessel is in Australian waters.

Should a case of infectious disease (not being a quarantineable disease) occur on board whilst vessel is at sea in Australian waters, Master will be required to advise by radio Commonwealth Regional Director of Health for State in which next port situated, who will arrange for a Quarantine Officer to see case on arrival, Master will not be required to fill in a Supplementary Health Form and vessel will be permitted to proceed direct to berth without flying "Q" flag.

Should a case of suspected quarantineable disease occur on board whilst at sea in Australian waters, Master is required to radio details to the Commonwealth Regional Director of Health for State in which next port situated and await instructions. Commonwealth Regional Director of Health will decide according to circumstances whether to inspect vessels outside Quarantine Line or permit it to proceed to berth and will advise Master.

(c) Should it come to notice in any particular case that Radio Pratique has been granted as a result of a wireless message sent in accordance with sub-paragraph (a) whereas in fact wireless message contains false information, matter will be investigated thoroughly and reported to the Director-General of Health who will decide whether radio pratique will be denied in future to vessel on which Master and the ship's surgeon hold responsibility.

Also see "Shipmaster's Report".

RADIO: Melbourne Radio VIM.

A Shipping Control Centre referred to as "Harbour Control" is established on the southern side of Victoria Dock entrance. It is a two storied structure supported on a rectangular tower with an overall height of 39.6 m.

Movement of traffic within the Port of Melbourne is controlled by the Harbour Master through Control Officers operating from this Centre who direct all shipping movements in and out of the port, and co-ordinate all ancillary services connected with shipping movements on a 24 hour basis.

The radio call sign is "Harbour Control", and the following frequencies and Channels are available.

Continuous watch kept on:

156.3 MHz	Channel 6	Intership operations.
156.4 MHz	Channel 8	Intership operations.
156.6 MHz	Channel 12	Port operations.
156.650 MHz	Channel 13	Port operations.
156.8 MHz	Channel 16	Calling and safety.
156.375 MHz	Channel 67	Safety of persons and vessels.

All vessels fitted with VHF radio shall, when navigating or at anchor within the Port of Melbourne, keep a continuous listening watch on Channel 12.

When approaching the Port of Melbourne radio communication is made with Harbour Control initially on Channel 12 and then on a Channel as directed for berthing instructions and information regarding the movement of other vessels. Vessels entering the port shall not pass Fawkner Beacon, Charles Grimes Bridge or Shepherd Bridge without permission from Harbour Control. This shall not apply to vessels less than 20 m. in length except when such vessel is towing or licensed to carry passengers.

A vessel anchored or berthed in the Port shall not leave its anchorage or berth without permission from Harbour Control and acts during the currency of the permission which shall be 15 minutes. This shall not apply to vessels less than 20 m. in length except when such vessel is towing or licensed to carry passengers.

Vessels proceeding inwards are to report their positions to Harbour Control where applicable when passing Fawkner Beacon, Breakwater Pier and Westgate Bridge.

Vessels proceeding outwards are to report their positions to Harbour Control where applicable when passing Westgate Bridge, Breakwater Pier and Fawkner Beacon. If vessels are departing from Webb Dock or Port Melbourne they are also to report when leaving berth.

The following procedure is followed in respect to the navigation of vessels in the vicinity of Webb Dock and is given for guidance.

1. If inward-bound river traffic has not reached No. 12 Beacon by the time a vessel is ready to depart from Webb Dock, the inward-bound vessel will generally be directed to wait until the departing vessel has cleared Webb Dock and is able to cross to the correct side of the channel. (In practice this takes about 5 minutes).
2. It is incumbent on a vessel not to depart from Webb Dock unless there is sufficient time for the vessel to cross to the correct side of the Channel without hindering any vessel which may be navigating between the Williamstown Breakwater and the River Entrance.
3. Permission to depart from Webb Dock will usually be given if:
   (a) Inward bound traffic has not passed No. 12 Beacon.
   (b) Outward bound river traffic has not passed Westgate Bridge.

Permission to depart does not relieve the vessel departing from Webb Dock of its responsibility under paragraph 2.

A Precautionary Area off Point Gellibrand, comprises an area within defined limits where ships must navigate with particular caution and within which the direction of traffic flow is recommended as follows:

Caution:

(a) When entering, transiting and leaving the Precautionary Area, vessels at all times should keep to Eastward when inward bound and to Westward when outward bound.

(b) Any inward bound vessel shall not hinder:

(i) Any vessel using the Port Melbourne or Williamstown Channels.

(ii) Any vessel which is outward bound which is within or which is about to enter the Precautionary Area.

(c) It is essential for vessel navigating within the Port to maintain radio contact with Harbour Control and directly with one another.

Vessels when inward bound may use the area to the East of the Port Melbourne Channel. Yachts and other pleasure craft should keep to the East of the Port Melbourne Channel as far as possible and avoid at all times hindering the movement of larger vessels, particularly those constrained by size and draft to the shipping channels.

TUGS: Tugs attend for inward-bound vessels at or in vicinity of Gellibrand Light for vessels proceeding either up river or to Port Melbourne berths. On departure and should vessels require attendance down river, service terminated in vicinity of river entrance. Tugs present for service at any point required by Owner or Agent. Ships lines, or tug lines at a charge. Crews of tugs will not accept wire tow line. Wire tow line with rope end of 5 or 6 fathoms acceptable, rope section being available for tugs towing hook.

West Side Breakwater Pier		11.2	213	L.P. Gas.
East Side Gellibrand Pier		11.2	289	Bulk Crude Oil

See also "Tankers".

CRANES: Self-propelled floating crane with 250 tonne capacity available.

STEVEDORES: ETA Advices: Firm ETA, if possible, before noon on previous day to arrival. If not possible no later than 1500 hrs. on day previous to arrival.

MEDICAL: No advance notice necessary for medical attention required on vessel's arrival. All hospital facilities available. No inoculations required for vessels coming to Australia but Master should possess International Health Cards for each member of crew.

TANKERS: (Also see "Anchorage"). Holden Oil Dock at Yarraville suitable for tankers up to 183 m. length. Depth alongside 10.0 m. Max. beam 25.83 m.

Williamstown: Gellibrand Pier, depth alongside 11.2 m. can accommodate tankers up to 290 m. length. Discharge via Chiksan arms.

Breakwater Pier, depth alongside 11.2 m. accepting tankers up to 225 m. length.

Maribyrnong: No. 1 Berth, depth 9.8 m. can accommodate tankers up to 178 m. length. Petrochemical and molasses berth, depth alongside 9.8 m.

Ballast: Slop facilities only at Holden Oil Dock.

Safety Requirements: The Port of Melbourne Authority is introducing the following safety requirements for all tankers berthing at Melbourne and Masters of such vessels likely to call at Melbourne should be notified accordingly.

(a) A declaration required from the Tanker Master prior to arrival at Melbourne listing the following information which must be in the hands of the PMA at least 24 hours prior to the tanker's arrival:
  (i) Is the hull leak free?
  (ii) Is inert gas system fitted and fully operational?
  (iii) Is crude oil washing system fitted and fully operational?
  (iv) Are there any defects to the tanker, machinery or equipment which would affect safe pilotage, berthing, cargo or ballast operations?
  (v) Have stress calculations for the envisaged programme of cargo transfer, ballasting and bunkering been made?
  (vi) Is the hull stress calculated within recommended safety limits?

The following special information is required for liquefied gas tankers:
  (vii) Are all cargo tanks and lines oxygen free?
  (viii) Is reliquefication or boil-off control equipment in good working order?

(b) The following items will be required from the tanker Master immediately upon berthing for stowage in the 'Emergency Document' box:
  (i) A list of the characteristics of the cargo on board and to be handled, and position of stowage.
  (ii) Cargo Transfer Plan, schematic type, 2 copies required. Plan to include times, sequence and rate.
  (iii) Crew List.
  (iv) Tanker's general arrangement plan.

It is recommended that the declaration required from the Tanker Master regarding Section (a), Questions 1-8, be despatched by telex in an abbreviated form to Melbourne Harbour Control, Telex: HBRCON 33437, prior to the vessel berthing in Melbourne. Below is set out a sample telex message:

HBRCON 33437

ATTENTION – PORT EMERGENCY SERVICE

QUESTIONS I, III, V, VI	Yes
QUESTIONS II, IV	No
QUESTIONS VII, VIII	Not applicable

F BLOGGS
MASTER, M.V. "SEASPRAY"

New Safety Requirements at Tanker Berths: Dated 31st January, 1984.

3.2.3.3. *Emergency Towing Wires:* The Master of a ship having on board dangerous substances shall ensure that immediately after the ship has berthed, wire hawsers of adequate strength to allow the ship to be towed from the Berth are placed over the outboard side at the fore and aft ends of the ship:

1. such wires shall have an eye in the outboard end and be made securely fast to the ship at the inboard end, and shall be tended and adjusted to remain within 1 m., of the water level to meet changes in the draft of the ship;
2. in order that sufficient wire can pay out to enable the tugs to tow effectively, 55 m. of slack wire or such other lengths as required by the Port of Melbourne Authority shall be retained between bollard and fairlead; and
3. to prevent the slack wire from running out, it shall be stopped by rope yarn or other easily broken means.

Access Between Tanker Terminal and Ship:

The Master shall provide safe access to the ship by means of a properly rigged Gangway. Where practicable the gangway shall:

1. be adjacent to the ship's accommodation; and
2. be clear of cargo hoses and the ship and shore cargo manifolds.

Where a fire or explosion in the shore cargo manifold area could block the escape route of persons from the ship, the Master shall ensure that:

1. the outboard accommodation ladder is turned out and rigged ready for immediate lowering; and
2. the outboard lifeboat is lowered to the embarkation deck and kept ready for immediate launching.

Moorings:

The Master shall ensure that any mooring wire used to secure the ship is fitted with a rope pennant unless:

1. the mooring wire is secured on the Berth with a quick release device, or
2. permission to use mooring wires without pennants has been given by the PMA.

Anchors Ready for Letting Go:

The Master shall ensure that immediately after the ship is secured at the berth an anchor is walked back clear of the hawse and is kept ready for letting go.

Operation of Sea and Overboard Discharge Valves:

Except where the PMA otherwise permits, the Master of ship handling liquid bulk dangerous substances or oils shall ensure that all sea and overboard discharge valves connected to cargo or ballast pumps are kept closed.

Any valve required to be closed by the above shall be secured by lashing or, in the case of remotely operated valve, by a suitable means or marking to prevent the accidental operation of the valve.

Radio Procedures:

The Master of a ship having on board liquid flammable bulk dangerous substances shall ensure that, whilst the ship is at a berth, the main radio transmitting aerials are earthed.

The Master of ship having on board liquid flammable bulk dangerous substances shall ensure that, prior to the ship's radar or radio equipment being serviced:

1. permission is obtained from the PMA, and
2. any conditions imposed by the PMA are observed.

DENSITY: 1000 – 1019.

FRESH WATER: Water available at wharf face at 30 m. intervals. Rate 50–100 t.p.h.

FUEL: 24 hours notice required. All grades 1–1500 secs. Rl. Marine Diesel. Light Marine Diesel. Gas Oil 34 sec. Red No. 100F. Bunker Fuel 600 sec. Red No. 100F. Light Diesel 37 sec. Red No. 100F.

At Gellibrand and Breakwater Piers. Minimum notice 48 hours; prefer notice 4 to 5 days.

Tanker fuel oil 450 SSF at 122° F. Volume – unlimited if 4 to 5 days' notice given.

FIRE PRECAUTIONS: Copy of "Anti-Pollution Notice" is handed to Master of tankers together with booklet "Advice to Masters" printed in eleven languages.

Anti-Pollution Notice: Your attention is drawn to the comprehensive legislation in force to prevent pollution of any sort in the Port of Melbourne. Visual checks are made on all ships and on an offence being detected immediate prosecution may follow.

You are warned that the polluting by oil is an indictable offence entailing a fine of up to $50,000 *plus* costs of cleaning and damage to the environment.

Due to the poor natural flushing of Port Philip and Hobson's Bays any pollutants discharged into these Bays tend to have a long lasting effect and can cause serious environmental damage.

All Scuppers and overside deck openings shall be securely plugged or blocked during the handling of any dangerous goods or oil or ballast water.

Discharge of oily ballast water or bilges is not permitted within the Port of Melbourne. Permission of the Harbour Master must be obtained prior to taking in or discharging any ballast including water ballast.

Tank washings must not be discharged overside in the Port of Melbourne.

Sewage holding tanks must not be pumped out in the Port of Melbourne. While a vessel is lying alongside any wharf, all discharge outlets shall be properly screened or protected to ensure that discharges shall not fall upon the wharf.

Garbage and refuse must not be dumped overside but must be kept for disposal ashore as directed by the Port Authority or kept on board.

Immediate notification shall be given to Harbour Control in the event of any spillage of oil into Port waters.

GANGWAY WATCHMEN: Shore/Gangway Watchman compulsory.

OPENING/CLOSING HATCHES: Normally carried out by Stevedores. Ship's crew may if required by vessel to do so. Crew may close hatches prior to sailing; but if Stevedores instructed to do so, they then claim right to finish, unless ship sails before completion of work.

SHIP CERTIFICATES: Register – showing vessel's name, port of registry, gross and nett tonnages and Owner. Loadline Certificate which must be current. Safety Radio Certificate. Safety Equipment Certificate. Light dues receipt, ship's Articles (British), Clearance from previous port.

CUSTOMS ALLOWANCES: 200 cigarettes in an opened carton *or* 0.5 lb. cigars *or* 0.5 lb. tobacco. 1 bottle spirits (opened).

CARGO GEAR: This must comply with Australian Regulations, as issued by the Ministry of Shipping and Transport.

When working cargo with ship's gear, certificates should be available to attest to identification and good condition of all such gear. If vessel on first visit to Australia and certificates not available, a declaration by Master will be accepted provided gear in order. On subsequent visits certificates and identification of each item of gear must be readily produced.

IDENTITY CARDS: Not required to be carried by crew going ashore in Australia. However, Section 23 of the Migration Act 1958/1964 provides that Masters of vessels entering Australia from overseas shall have in their possession an identity card in an approved form for each member of crew. These provisions included in the Act to ensure positive identification available to departmental officers should any Seaman, not being an Australian citizen, desert vessel. Should vessel arrive in Australia without required Seamen's identification cards, seamen are unable to go ashore until photographer called to vessel in order to photograph each crew member, and identification cards completed.

Following nationalities need not complete identification card required under Migration Act provided Crew members in possession of relevant Seamen's Identity certificates/discharge book; Canada, Denmark, Fiji, Ghana, Hong Kong, India, Israel, Italy, Japan, Malaysia, Norway, South Africa, South Korea, Pakistan, United Kingdom.

Masters of vessels, Australians and New Zealanders are not required to have such an Identification Card.

Masters are reminded that Crew members' travel documents and Commonwealth of Australian Forms M.315, where applicable, are to be retained in the custody of the Master at all times, and are to be produced to Customs Boarding Officers upon demand.

CONSULS: The following countries are represented by consuls in Melbourne:

Austria
Barbados
Belgium
Brazil
Canada
Chile
China
Denmark
Dominican Rep.
Ecuador
Finland
France
Germany F.R.
Greece
Honduras

Iceland
Indonesia
Italy
Japan
Malaysia
Mauritius
Mexico
Monaco
Nauru
Netherlands
New Zealand
Nicaragua
Norway
Panama

Peru
Philippines
Portugal
Senegal
Seychelles
Spain
Sweden
Switzerland
Thailand
Turkey
United Kingdom
U.S.A.
Venezuela
Yugoslavia

REPAIRS: All major repairs possible.

DRYDOCKS: Floating dock 156 m. × 24 m., lifting capacity 8,000 tonnes. 2×5 tonne cranes.

REPATRIATION: All facilities available for effecting crew changes and repatriation – namely sea, air and rail.

HOLIDAYS: Sunday, Christmas Day, Good Friday, Labour Day, Picnic Day, Anzac Day: with exception of Sunday are regarded as "close holidays" and waterside workers cannot be required to work on these days. Only work of special nature performed on these days by agreement.

Following ordinary holidays observed: Boxing Day, New Year's Day, Australia Day, Easter Monday, Queen's Birthday, Melbourne Cup Day.

On Boxing Day and New Year's Day, waterside workers will work on following classes of vessels only, namely:

(a) Passenger ships to sail on schedule.
(b) Ships to finish and sail before next pick-up of labour.
(c) Ships which in opinion of local Board of Reference, should be declared "Urgent Vessels".
(d) Marine casualties.

On remaining ordinary holidays work performed if required by an employer. Work performed on holidays subject premium rates of pay.

POLICE/AMBULANCE/FIRE: Fire, Ambulance, Security – Port Emergency Service. Tel. 611-1603 or, by VHF Radio Channel 16 "Melbourne Port Emergency".

TELEPHONES: Telephone can be placed aboard at all berths. Trunk calls cannot be made from shipboard phones.

SERVICES: Tank cleaning. Compass adjusters available.

SHORE LEAVE: Crew allowed ashore. Visitors to ship after dark require permit issued by Master. No passport required while ashore.

AUTHORITY: Port of Melbourne Authority, Building A, World Trade Centre, Melbourne. Postal Address: P.O.Box 4721, Melbourne, 3001, Victoria. *Tel:* (03) 611-1777. *Telex:* 34211. *Cables:* "Harbor, Melbourne". *Contact:* A. S. Bolles, Assistant General Manager – Operations.

AGENT: Patrick Agencies, Box 4329 GPO, 3rd Floor, 45 William Street, Melbourne, Victoria, 3001. FAX: (03) 614-6890. Cables: "Rikpat". Tel: 614-6333. Telex: AA. 30456.

MOURILYAN, Queensland: 17.36 S. 146.08 E.

(See Plan)

PORT LIMITS: Mourilyan Harbour, the area to the West of a line joining Hall Point and the outer extremity of the North Head.

ARRIVAL: Requirement for vessels in ballast; minimum forward draft to be 2% of overall length, minimum after draft – propeller immersed. Draft to be notified to Agent in arrival telegram.

CERTIFICATES/DOCUMENTS/CUSTOMS ALLOWANCES: See "Melbourne".

PILOTAGE: Order Pilot through Agent, as early as possible. Confirm through Agent or direct to Harbour Master, Innisfail. Pilot vessel, located in Mourilyan Harbour, watches on VHF 16 when vessel expected to berth (Channels 12, 8, 14 and 6 available). Pilot vessel white with orange cabin and blue trim. Pilot boards 2 miles East of harbour entrance. Approved pilot ladder and good lee required, *not* accommodation ladder. Vessels awaiting Pilot anchor in boarding position above, good holding. Leading beacons – in line 270° T, showing fixed red neon. Entrance beacons flashing – red port, green starboard.

RESTRICTIONS: No night-time arrival pilotage. On Spring tides, entry restricted to at or near slack water. No turbine-powered vessels accepted. Berthing daylight only. Night-time sailings permitted. Vessels entering or leaving – Forward draft not to be less than 2% of overall length and propeller to be immersed.

MAX. SIZE: Length 183 m. Beam 28.0 m.

Draft Arrival: Limited by swing basin, maximum depth 7.1 m. less 0.6 m. keel clearance, all vessels swing and berth port side to main wharf.

Draft Departure: Limited by entrance depth of 8.53 m. less 0.91 m. keel clearance.

HEALTH: See "Pilotage". Also see "Melbourne".

RADIO: VIT Townsville (MF). VIK Cairns has been discontinued.

TUGS: 2 tugs stationed at Mourilyan. Tug usually required for unberthing. Tug normally pushing or using tug's lines, no extra charge.

BERTHING: Ships always berth port side to at Mourilyan. One sugar and molasses berth, length 193 m. depth 10.0 m. LWOST.

BULK HANDLING FACILITIES: Mobile bulk sugar loading gantry, rate 1,400 t.p.h. Bulk molasses loading rate 300 t.p.h.

STEVEDORES: No waterside workers employed. Normal ETA advices to Agents for arrangement of bulk-loading staff.

MEDICAL: Hospital facilities available, Port Health Doctor also general practitioner.

DENSITY: Usually 1024 – 1027 irrespective of tide. After heavy rains, particularly January-April, considerable freshening occurs to 1008.

FRESH WATER: Good water readily available, shore hoses from wharf face. Approx. 25 t.p.h. capacity. 25c. per 1,000 litres.

FUEL: Limited quantities of fuel oil and diesel oil available by road-tanker.

GANGWAY WATCHMEN: Not normally required.

HATCHES: Worked by crew.

CARGO GEAR: See "Melbourne".

CREW I.D. CARDS: See "Melbourne".

CONSULS: None.

REPAIRS: No major facilities available. Most types of welding, light machinery, and pipe-fitting can be arranged. Technicians can usually be obtained for radar, etc., with advance notice by radio to Agents.

REPATRIATION: Possible.

AIRPORT: Nearest airport at Cairns, 110 km. Regular flights available.

TIME: GMT plus 10 hours.

HOLIDAYS: Various national, state and local holidays. Cargo usually worked on all holidays except Christmas Day.

POLICE/FIRE/AMBULANCE: Ring 000 on shore public telephone or ship's telephone if fitted.

TELEPHONE: No telephone aboard.

SHORE LEAVE: Not normally restricted. Distance to nearest township (Mourilyan) 10 km., to Innisfail 17 km. No public transport services from harbour.

DELAYS: Awaiting daylight or tide or, exceptionally, awaiting vacancy of berth or moderation of weather. No delays usually in loading.

GENERAL: Port normally used only for export of sugar and molasses. Deadweight (cargo on board on arrival) restrictions may apply to certain classes of vessel. Agents will advise details if applicable.

AUTHORITY: Department of Harbours and Marine, P.O.Box 34, Innisfail, Queensland 4860. *Tel:* 070-611599. *Telex:* Via Cairns AA 48069. *Cables:* Harbour Master Innisfail. *Contact:* Captain D. J. Plume, Harbour Master.

AGENT: Sub-agent of Patrick Agencies, Cairns.

NEWCASTLE, N.S.W.: 32.55 S. 151.48 E.

(See Plan)

PORT LIMITS: To seaward, all waters enclosed by a radius of 3 miles from Nobbys Lighthouse. Vessels are prohibited from anchoring in the following area:

Within the area enclosed by an imaginary line 057° from the green light on the outer extremity of the Northern Breakwater and a line 127° from the red light on the Southern Breakwater to the positions where both these imaginary lines meet the arc of a circle of 3 nautical miles distant with the navigation light of Nobbys Head as its centre.

DOCUMENTS: See "Melbourne".

PILOTAGE: Compulsory. As much notice as possible through Maritime Radio, Sydney (VIS), amending 2 hours prior arrival. Amendment through Channel 16 VHF, to Harbour Control. Telegraphic address "Marboard". Pilot vessel painted high-visibility orange, "Pilots" on deck-house in black paint.

Pilot Boarding Ground: Vessels will be advised on VHF Channel 13 by the signal station. A good lee, speed 3 – 5 knots, no boatrope, ladder to be approximately 3.0 m. above water with manropes.

ANCHORAGE: *Anchorages in the Approaches:* While no anchorages are recommended off the Port for all weathers, good anchorage can be found in Stockton Bight from 1 to 2 miles North of the end of the Northern Breakwater or 2 to 3 miles East of the end of the Southern Breakwater, in fair weather. Due to the heavy confused sea in South to S.E. weather, vessels anchored should weigh and proceed out to sea till the weather moderates.

RESTRICTIONS: Entrance Channel dredged to 15.2 m. ISLW – A minimum keel clearance of 10% draft required. Certain berths within port may only be worked during slack water or early ebb tide. Vessels over 700 ft. navigate in daylight only (inward).

MAX. SIZE: Max. d.w.t. for bulk cargo vessels dependent on 10% under keel clearance on entry or departure.

Steelworks Channel Facility: Max. length of 290 m., max. beam 43 m., max. draft 15.2 m. plus tide less 1/11th to provide 10% under keel clearance. Depth in loading basin 16.5 m.

E.g. With a tide of 1.2 m. max. draft is 14.92 m. (tidal range this port 0 m. – 2.1 m.).

New K.C.L. Loader – Kooragang Island: LOA 290 m., max. beam 47 m. Depth in loading basin 16.5 m.

HEALTH: Refer to "Melbourne".

Newcastle is a first port of entry for quarantine purposes for the coast of New South Wales (see page 266 of Sailing Directions). There are no quarantine anchorages in the Port and vessels proceed directly alongside a berth for quarantine examination. Masters of vessels are to ensure that no persons board or land from their vessel until Free Pratique is granted.

RADIO: All radio messages through Sydney (VIS).

RADAR/VHF: Nobbys Head Signal Station equipped with radar. Max. range 64.0 miles. Contact signal station on VHF. Normal VHF watch held on Channel 13. Also see "Sydney-VHF".

TUGS: Tugs usually come alongside shortly after entering breakwater. Tug's lines available for use.

BERTHING: See "Restrictions".

Berth	*Length* (m.)	*Depth at I.S.L.W.* (m.)	*Remarks*
Merewether Street Wharf	200	6.9	General Cargo.
Lee Wharf No. 1, 2 and 3	519	9.1	General Cargo
Lee Wharf No. 4	140	9.1	Bulk cargoes, lead, zinc, general.
Lee Wharf No. 5	171	9.7	
No. 1 Thorsby	183	11.0	Containers, 1×26 ton luffing crane.
No. 2 Thorsby	201	10.0	Bulk motor spirit, bunkering.
Western Basin No. 1	155	9.1	General cargo.
No. 2	—	—	No longer in use.
No. 3	244	11.6	Grain, 4×1,000 t.p.h. Movable loading heads. Silo 6,000,000 bushels.
No. 4	293	11.6	Continuation of No. 3. 2×15 ton electric cranes. General cargo. 30 ton portainer crane also available. Stern ramp at Northern end of berth.
Eastern Basin No. 1–2 Basin Loaders	367 (wharf)	11.6*	Coal – Berth length with dolphins 500 m. 2 loading heads × 1,000 t.p.h. each. Travel 345 m. *Depth 11.6 m. for 46 m. width. Depth in approaches 13.1 m. Clearance from bottom of chute to I.S.L.W. is 15.2 m.
State Dockyard			
No. 3 Berth	213	8.2	Waiting berth – repairs.
No. 4 Berth	117	8.5	Waiting berth – water, light and power available at both berths.
Dyke Berths			
No. 1 & 2	533	11.0	Bulk zinc and lead concentrate at No. 2. Loading head – 1,500 tonnes per hour.
No. 3	183	7.0	Lay-up berth.
No. 4 & 5	565	16.5	Coal loading berths in Steelworks Channel. 3 loading heads, loading rate 2,500 tonnes per hour each.
Kooragang Island			
No. 2	183	11.6	Cement, clinker, phosphate, sulphur. Located 2 miles up river – part of "Kooragang Reclamation Scheme". Bulk discharge and loading. 2 ship "loaders/unloaders", rate 650 t.p.h. each.
No. 3	190	11.6	2×500 t.p.h. vacuum unloaders for alumina and petroleum coke. Dolphins North and South giving total distance of 316 m. 1×10,500 t.p.h. coal loader (8,000 t.p.h. into vessels 180,000 d.w.t.). (Stage I of III).
No. 4	290	16.5	Coal loading head. Rate 8,000 t.p.h.

Steelworks Wharves: These wharves consist of a long shore berth situated at the Broken Hill Pty. Co. Ltd., Iron and Steelworks on West side of North harbour Port Waratah and is owned by the Company. Length of wharf is 810 m. Diameter of Swinging Basin is 580 m. with a depth of 12.8 m. at I.S.L.W.

Depths of Water at Berths at I.S.L.W.:

No. 1 Berth	7.3 m.
No. 2 Berth	9.6 m.
No. 3 Berth	9.6 m.
No. 4 Berth	7.9 m.
No. 5 Berth	12.2 m.
No. 6 Berth	7.9 m.

At Nos. 2 and 3 Berths there are 6×10 ton luffing cranes. Height of decking of wharf I.S.L.W. is 4.5 m.

At the Northern or top end of the wharf, No. 5 Berth, the Company discharges their ironstone and limestone direct from ships by means of three powerful travelling grabs. The length of wharf allocated for this discharge of ore is approximately 275 m.

The Company's private railway lines, which are connected with the Government Railways, run direct to the wharf and their steel products are loaded direct from truck, to ship's hold.

Beyond the wharfage accommodation before mentioned, there is a coke berth, No. 6 Berth, comprised of dolphins. This berth is 162 m. long × 7.0 m. wide, including the dolphins on which is erected a mechanical coke loading plant for loading direct into vessels' holds. Depth of water available at this berth I.S.L.W. is 7.9 m.

The channel leading to the Steelworks Wharves is 12.8 m. I.S.L.W.

Facilities at Wharves: Water, telephones and shore power are available at most wharves in the Port. A Maritime Services Board Patrol Officer meets all vessels berthing at all except the Steelworks Wharves to arrange supply of services required.

BULK HANDLING FACILITIES: See "Berthing".

Notice: Issued by Maritime Services Board of N.S.W.

Air Draft at Nos. 4 and 5 Dyke Berths: The max. permissible air draft of vessels loading at Nos. 4 and 5 Dyke Wharves is 20 m. This is the distance of the hatch covers above chart datum, and not the distance between the hatch covers and the water level. This fact should be brought to the Master's attention.

To assist the Master or Cargo Officer, a mark has been placed on the shiploaders indicating when the limit is being approached so that action can be taken by the ship to ensure that the limit is not passed.

Trimming Procedures: As laid down in "Coal Vessels – Working Code – N.S.W. Ports", a copy of which is in the hands of all Agents and Shippers, attention is drawn to Clause 4:

"On arrival at the loading berth, the vessel's Master or Cargo Officer shall nominate the hatches required for trimming purposes to attain the vessel's final draft and no more than 2 hatches shall be designated for this purpose. No more than 5% of the vessel's total required tonnage may be reserved for trimming purposes, and trimming will not be permitted in discreet quantities of less than 0.5% of the vessel's total required tonnage".

In the past this Clause has been ignored but it will be policed more stringently in the future.

Coal Loading: We draw the attention of both Owners and Masters to the Port Manager's advices which are reported below:

1. Subsequent to the harbour deepening and completion of development projects on Kooragang Island, the larger vessels have caused the surge problems to manifest again. The surge problems are considered serious and are caused by hydraulic interaction of passing vessels.
2. Therefore, for reasons of safety to vessels and personnel employed on ship loading, geared vessels will not be stemmed at the Steelworks Channel Loader. Geared vessels of a size suitable for loading at the Carrington Basin Loader will in future be stemmed at that facility which is reverting to past practice.

The M.S.B. requests that, as detailed in the coal operation guidelines, all vessels due to load coal supply a hatch tonnage list together with a proposed loading sequence to the Senior Supervisor 7 days prior to arrival.

Coal shippers have been requested to ensure that Masters are advised in good time of the stowage factors of the coal to be loaded, to allow accurate calculation of hatch tonnages.

This reminder has been brought about by the introduction of the Kooragang Coal Loader which, by nature of its construction and operation, is not as flexible as the Dyke or Basin Coal Loaders.

The Maritime Services Board of N.S.W. have issued a notice regarding the practice of trimming vessels by the head and their handling characteristics.

The notice states that a marginally greater forward draft than aft has little effect on a vessel's manoeuvrability and handling and is acceptable. It has been noted, however, that vessels have been prepared for sailing with the head down by anything up to 0.75 m. which can make steering control and handling extremely difficult.

In the light of this problem the M.S.B. has announced that where vessels are found to be excessively trimmed by the head the services of an additional tug may be required during manoeuvring.

Apart from the extra costs involved in hiring another tug it may be that, if the vessel's condition is not noticed until sailing time, a delay may occur whilst another tug is made available. Stand-by charges will also be incurred whilst awaiting the extra tug.

MEDICAL: All hospital facilities available.

TANKERS: No. 2 Throsby Wharf. Berth length 201 m., depth alongside 10.0 m. Largest vessel 200 m. length.

Bulk Berth Kooragang. Berth length 183.0 m., depth alongside 11.6 m.

Both Berths – flexible discharge hoses. 200 mm. dia. 8 hole ASA flanges.

DENSITY: Density varies considerably throughout port, with particular reference to upstream rains.

FRESH WATER: Available all berths, 4 – 15 t.p.h. delivery, dependent on other demands.

FUEL: Normal bunkering available by either road or barge, or pipe-line at Inflammable Liquids Wharf.

FIRE PRECAUTIONS: Written notice to Fire Brigade for tankers.

GANGWAY/DECK WATCHMEN: Services of watchmen are compulsory, approximate hourly rate $A21.00. Safe and efficient gangway to be provided at all times.

OPENING/CLOSING HATCHES: Dependent on type of cargo and hatch (coal, wheat, ship's crews closing hatches).

CERTIFICATES AND CUSTOMS ALLOWANCES: See "Melbourne".

CARGO GEAR: No additional other than wire preventers to derrick heads if rope guys used. Also see "Melbourne".

CREW I.D. CARDS: See "Melbourne".

CONSULS: The following countries are represented at Newcastle: Belgium, France, Netherlands, Norway and Sweden.

REPAIRS: *Floating Crane:* A floating crane, of 80 ton lifting capacity, is available, operated by the State Dockyard.

State Dockyard: The main State Dockyard is situated at the Southern end of the Dyke with shipbuilding and repair facilities. There are 3 shipbuilding berths that launch into the Basin on a bearing of 253°, and 3 fitting out or repair berths.

Dockyard No. 3 Berth: On the Eastern side is 238 m. long with a depth of 7.0 m. at the Northern end and 5.0 m. at the Southern end; 2×6 ton cranes are fitted on this wharf and 3×40 ton cranes also serve this berth as required, travelling across from the building berths.

Dockyard No. 2 Berth: 143 m. long is on the Northern side of the Basin Cut with depth of 5.5 m. alongside.

Dockyard No. 1 Berth: Faces the Basin and is 103 m. long with a dolphin a further 46 m. from the end. 3×6 ton cranes serve both these berths.

Other small yards in the port provide slipways and building and repair facilities for small vessels.

DRY DOCK: *Floating Dock:* A floating dock, operated by the State Dockyard is moored in Throsby Basin, opposite the Inflammable Liquids Berth. This dock has a lifting capacity of 15,000 tonnes; length overall 195 m.; clear width of entrance 33.5 m.; maximum draft of vessels is 8.5 m. Adjacent to the floating dock are repair workshops and two patent slipways, one of 1,250 tons capacity and one of 300 ton capacity.

SURVEYORS: (1) Cargo Superintendents Co. (A'Asia) Pty. Ltd., A. Fowler and Associates, Griffith Australia Services Pty. Ltd, S.G.S. Australia Pty. Ltd., S.G. Webb & Co. Ltd.

(2) American Bureau of Shipping, Bureau Veritas, Lloyd's Register, Norske Veritas.

REPATRIATION: Normal facilities available.

AIRPORTS: Two, approximately 7 miles from city. Several flights daily to Sydney.

TIME: GMT plus 10 hours. Clocks advanced 1 hour between October and March.

HOLIDAYS: Christmas Day; Good Friday; Labour Day; Picnic Day; Anzac Day are regarded as close holidays and waterside workers cannot be required to be worked on these days. On Boxing Day, New Year's Day, waterside workers will work on following classes of vessel only:

(a) Passenger ships to sail on schedule; *(b)* ships to finish and sail before next pick-up of labour; *(c)* marine casualties; *(d)* other vessels which are agreed between employer and WWF branch officials in the port concerned; if there is no agreement on a port basis, agreement as to any such ships, to be reached at Federal level.

On remaining ordinary holidays, work performed as required by an employer. Work performed on holidays subject to premium rates of pay. No Saturday afternoon work unless vessel is proceeding to sea.

POLICE/AMBULANCE/FIRE: Dial "000" for Emergency.

TELEPHONES: Cost 50¢ per day + cost of calls + 60¢ booking fee.

SERVICES: Compass adjusters available.

DELAYS: Some delays waiting for coal berths.

EMERGENCY CO-ORDINATION CENTRE: All emergency situations – refer to Australian Coastal Surveillance Centre. (Free call S.T.D. or reverse charge). Canberra (062) 476666.

STORING: See "Prelims".

(1) Yes.

(2) No restriction, except on tankships, where stores are generally hand-trucked to vessel. Dispensation may be given to use vehicle or barge under certain circumstances.

(3) Yes. Exception is No. 2 Throsby which is a dolphin berth.

(5) Normal to Australian ports.

(6) Yes. Most unusual practice, extremely costly.

DEVELOPMENTS: Berth improvements to take place at the Inflammable Liquids Berth, Kooragang No. 3 Berth, the Tug Berth and the Basin Coal Loader.

SHIPMASTER'S REPORT: 1978.

New Coal Berth No. 5.

Air draft 61 ft., entering with slack water – by day only. Sailing with the tide – night and day.

Harbour control: VHF Channel 13.

Anchorage: liable to the weather – attention to be paid to the Easterly, South Easterly and Southerly winds which can suddenly blow strongly within 1 hour's time. Best anchorage: 108°, two miles from South Breakwater. Not recommended to anchor North of Latitude 32° 55′ S.

AUTHORITY: Maritime Services Board of New South Wales, Newcomen Street, Newcastle N.S.W. 2300, Australia. *Tel:* (049) 25904. *Telex:* MSBNEW AA28761. *FAX:* 264596. *Cables:* Marboard. *Contact:* Captain B. Ramadge, Port Manager. Captain N. Morrison, Harbour Master.

AGENT: Patrick Agencies, 78 Hannell Street, (P.O.Box 63), Wickham, Newcastle, N.S.W. 2293. Telephone: 69.2955. Telex: 28192. FAX: (049) 69-5014. Cables: "Rikpat Newcastle NSW".

PORT AUGUSTA, S.A.: 32.29 S. 137.46 E.

CERTIFICATES/DOCUMENTS/HEALTH: See "Melbourne".
PILOTAGE: One mile N.W. of Eastern Shoal North Beacon. The regulation pilot ladder secured four steps up from water and manropes are required. Boat ropes not required.
RESTRICTIONS: 16 ft. low water. Minimum 2 ft. under keel. No navigation at night. Max. length 450 ft. overall. Tug required for vessels 410 ft. and over.
TUGS: From Port Pirie or Whyalla.
BERTHING:

No. 1	South	370 ft.	Depth	20 ft.
No. 2	Centre	400 ft.	„	20 ft.
No. 3	North	420 ft.	„	18 ft.

Total length of wharf 1,190 ft.

FRESH WATER: 10 t.p.h.
REPAIRS: Minor repairs only.
TIME: GMT plus 9.5 hours.
TELEPHONE: Police 42-3000; Fire Brigade 42-2000; Hospital 42-2011.
AUTHORITY: Department of Marine and Harbours, Ellen Street, Port Pirie, South Australia 5540. *Tel:* (086) 321455. *Contact:* Harbour Master.
AGENT: See "Adelaide".

PORT BONYTHON, S.A.: 33.01 S. 137.46 E. (See Plan)

OPERATOR: Santos Ltd., South Australia.
PORT LIMITS: A straight line drawn between Lowly Point and Ward Spit Beacon joining the Port Pirie port limits. A straight line drawn between Eastern Shoal North Beacon in a direction 277° to the Eastern extremity of Whyalla port limits.
DOCUMENTS:

3 Crew Lists. Form M&S 11 Parts 1 and S.
1 Crew Personal Effects. Form 5.
1 Stores List. Form 42a.
3 Loading Port List (and Ports of Call).
1 Animal and Pets aboard. Form QA4.

To be sighted:

Official Log Book.
Last Port Clearance.
Seamen's Identification Card or Passport.
Safety Certificates:– Construction, Equipment, Safety Equipment, Loadline, Radio, International Oil Pollution Prevention, Light Dues.

PILOTAGE: *Pilot Boarding Ground:* Lat. 33° 07′ S., Long. 137° 39′ E. which is 165° 5 miles from Port Whyalla Entrance Beacon (F.Fl. 4 s.). Pilot disembarks in position 165° 6.75 miles from Port Whyalla Entrance Beacon.

Pilot is compulsory for all vessels exceeding 200 tons gross. There will be no pilotage exemptions.

APPROACHES: Refer Chart AUS 136. Australian Pilot Vol. 1. Admiralty List of Lights Vol. "K". S.A. Tide Tables. Marine Information Manual Port Bonython. System of Buoys marking channel is IALA System.
ANCHORAGE: In a safe position to the Southward of the Pilot Boarding Ground.
RESTRICTIONS: Tankers will not be berthed during the hours of darkness, without the prior approval of the Harbour Master.
MAX. SIZE: 110,000 deadweight tonnes.
HEALTH: Australian Commonwealth Rules apply.
RADIO: Adelaide Radio should be worked.

Not less than 24 hours prior to the arrival of the vessel at the port, the Master or Agent of the vessel shall convey details to the Harbour Master, of the vessel's expected time of arrival at the port, draft fore and aft, the vessel's last port of call and whether the water-ballast is clean.

Not more than 24 hours prior to the arrival of the vessel at the port the Master shall advise the Harbour Master whether the vessel's hull is, to the best of his knowledge, in sound condition and free of leaks.

If the vessel is scheduled to proceed direct to the berth on arrival the Master shall confirm to the Harbour Master the ETA at least 4 hours prior to arrival.

VHF: Contact should be made with Whyalla Port Control which has Channels 6, 8, 12, 16 and 67. Santos have listening watch VHF base station with Channels 9, 12, 13, 14, 16, 67 and 72.

When a vessel is within a distance of 20 miles from the pilot boarding position, the Master of the vessel shall ensure that an efficient VHF radio-telephone listening watch is maintained on Channel 16.

The Master of a vessel arriving at the port shall establish contact with the port control station by means of VHF radio-telephone when not less than 15 miles from the Pilot boarding position.

BHP Co. Ltd. will relay messages to the Harbour Master after hours. Call "Whyalla Harbour Control" on VHF Channel 16.

RADAR: The pilot vessel is equipped with radar. There is a jetty head approach speed radar.
TUGS: There are 2 large and 2 small tugs based at Whyalla. Additionally there is a large tug based at Port Pirie.
BERTHING: The Port Bonython jetty is 2.4 km. in length and has a jetty head at right angles to the jetty. The jetty head is 140 m. in length and has 4 mooring dolphins, the depth alongside is 20 m. The berth length is 340 m. Height of deck of jetty head is 13.24 above MLWS.
Keel Clearance: For berth and channel is 20% of vessel's maximum draft.
LOADING: The first vessel achieved a loading rate of 5,000 tonnes/p.h.
BALLAST: There are facilities to accept ballast water pumped ashore via the ballast water pipe-line.
MEDICAL: There is a fully equipped base hospital at Whyalla.
DENSITY: Usually 1030.
FRESH WATER: Proposed fresh water supply rate of 25 t.p.h. Fresh water is of poor quality and it is not recommended for loading.
FUEL: Not available.
FIRE PRECAUTIONS: There are 7 fire monitors at the jetty head.

1 each side of loading (manifold) platform, 50 m. apart and 12 m. above platform.

1 each end on jetty head in line with outer breasting dolphins 45 m. East and West of loading platform and 12 m. above.

2 at inboard end of loading platform and 2.5 m. above platform for fighting platform fires.

1 adjacent to Administrative Block 100 m. inboard of loading platform.

REPAIRS: Some routine maintenance is available at Whyalla.
SURVEYORS: A Lloyds' surveyor is available in Adelaide. There is an ABS Agent in Whyalla.
GANGWAY/DECK WATCHMEN: No gangway watchmen are employed. There are Security personnel employed by Santos within the complex and at the entrance gates.
AIRPORT: There is a regular air service from Whyalla to Adelaide.
TIME: Local time GMT plus 9 hours 30 minutes. Summer time is 1 hour added to S.A. Standard Time. Date of application of Summer time varies each year.
POLICE/AMBULANCE/FIRE: All emergency facilities are available. There is an ambulance and fire truck within the Santos complex. Police are available from Whyalla. Tel: 45 7088.
TELEPHONES: There is a telephone in the Administration block on the main jetty adjacent to the head of the jetty. A telephone is placed onboard for the vessel's stay at the berth.
REGULATIONS: Port Bonython port rules apply.

SHIPMASTER'S REPORT: November 1984. (Updated 1986).
Approaches: Recommended charts: BA 2389, 407; Aus. 136, 778, 777, 776. Passage up the Gulf is straightforward with fairly good radar echoes returned from the rather low lying coast. The lights of Whyalla and the flare at Bonython serve as useful guides.

The area is intensely fished and considerable interference may arise from concentrations of fishing vessels from Port Lincoln and Whyalla. All fishing vessels have been cautioned to keep clear of the Bonython Departure Channel but this instruction is largely ignored.

Documents: Normal port entry procedure and papers.
Pilotage: The Pilot boards from a yellow hulled launch in a position 165°, distance 5 miles from Whyalla Entrance Beacon and the usual strict observance of IMO/SOLAS pilot ladder regulations is required. Ladder about 1.5 m. from water.

Pilots work Channels 16, 12 and 6 on VHF and the launch will approach from Whyalla itself. Once the Pilot is boarded, the vessel proceeds to the berth up the Western Channel or Eastern Channel, depending on tidal flow, while loaded vessels depart from the newly marked departure channel with the Pilot disembarking at the Entrance Buoy.

Length of pilotage to first line ashore, about 1.5 hours.

Max. Size: See "Berthing".
VHF: See "Pilotage".

The name rhymes with "python" and the correct pronunciation will avoid embarrassment over the VHF.

Tugs: Two tugs are available (from Whyalla): "Taminga" 3,600 h.p. and "Turmoil" of 2,250 h.p. Despite my reservations, the Pilot assured me that they are perfectly adequate for pulling loaded vessels off the berth against the fresh onshore winds that predominate. Mooring boats are available for running lines to the dolphins.
Berthing: Consists of a new liquids handling terminal situated at the Northern end of the Spencer Gulf, about 9 miles from the port of Whyalla, in position Lat. 33° 01′ S., Long. 137° 47′ E., by the promontory noted on the charts as Stony Point.

The berth is designed to handle crude carriers up to 110,000 tonnes and LPG vessels up to 75,000 cu.m.

The oil handling facility has been in use for 2 years while the LPG facility has only come into operation within the last few months, this vessel being the second LPG ship to load there.

The berth consists of a "T" head jetty at the end of a 2.5 km. trestle.

Mooring arrangements are good and the berth is well fendered.

Within the next few months a 24 hour berthing operation will be put into effect although it is as well to obtain prior advice from the Agent since it occasionally suits their operation to berth vessels during daylight.

The Japanese company Idemitsu apparently invested a huge proportion of the cost of the project and it was at their insistence that the cargo lines are dedicated to their own product and with no cross-connection available.

Loading: Notice of Readiness is tendered and accepted at time of vessel being secured.

The maximum outreach of the loading arms is no more than 4.0 m. beyond the ship's side which necessitates the use of low extensions to the manifold. The arms also require a minimum distance of 2.0 m. between them and this precludes the simultaneous loading of 2 grades since they require a VRL to maintain an overpressure in their shore tanks.

At the moment LPG production is about 1,000 tonnes per day and they only envisage shipments every 6 weeks or so.

Quoted rates for the 2 products at the moment are 2,400 cu.m./hr. Our overall average was 890 tonnes/p.h. on each grade with occasional hourly rates up to 1,000 t.p.h.

It will be necessary to shift ship on changing grades to line up the chicksans/manifolds for the second grade.

Despite the length of pipe-line both products were cold. Butane at minus 4°C and Propane at minus 42°C.

Surveys are carried out on board but the final B/L figures are based on measurement of the shore tanks; on this occasion both sets of figures compared quite well.

Port Regulations do not allow the venting of tank vapours to atmosphere and in the event of a vessel arriving under inerts excess pressure will be vented to the shore flare. A charge for loss of product being made accordingly. Similarly, if they have doubts about contamination (ammonia) in the ship's tanks, this would also be led to the flare. Continuous sampling is done ashore.

It was not made clear whether a vessel would be asked to leave the berth to 'cool down' (Harbour Master's comment: March 1986 – two chill downs have been conducted alongside the jetty to date) and it is thought that this would be a matter for discussion/decision on an individual basis. Tug hire, at 40,000 Aus. dollars per berthing operation is expensive.

The ship will be subjected to the normal D.O.T. inspection during her visit. They will not necessarily be carried out prior to loading. Very thorough, especially on safety gear, lifting gear and documentation.

We received excellent co-operation throughout at all levels and stages of the operation. Since this was only their second cargo they were, perhaps, taking particular care, but there is no reason to expect this co-operation to deteriorate in the future.

Also see "Fire Precautions".

Fresh Water: Available from the jetty; the local personnel do not advise taking any since it is most unpleasant (reportedly) to drink.

Fuel: Not available.

Fire Precautions: The terminal's safety regulations require the vessel to prepare a comprehensive loading plan which must include hull stresses for each stage of the operation.

Repairs: With the Whyalla Shipyard closed, these may be difficult to arrange.

Surveyors: Nearest Lloyd's Surveyor resides at Adelaide.

Gangway/Deck Watchmen: A substantial shore gangway is provided.

Strict security control is exercised throughout the complex and authorisation for visitors must be obtained. They are especially wary about intoxicated personnel boarding or leaving the vessel and may ask for a ship's Officer as escort.

Airport: There is a local airport which facilitates the delivery of spare gear, etc.

Storing: The local chandlers have a very good working relationship with the terminal personnel and there is little problem in loading foodstuffs and small stores/spares. The usual restrictions apply to the movement of metal objects.

There is a 1 tonne crane on the jetty (Eastern end) which may be used for storing.

Meat and fish prices are very good, together with most local produce. Beers other than the local South Australian brands may be difficult to obtain (coming from Adelaide) and are more expensive.

Shore Leave: Security will arrange for transport to and from the ship to the gate.

It is some 20 km. into town and the cost (one way) of a taxi is 30 Australian dollars. The Agent will be able to arrange a mini-bus service.

AUTHORITY: Department of Marine and Harbors of South Australia, P.O.Box 102, Whyalla, South Australia 5600. *Tel:* 086-455666. *Contact:* Captain J. S. Ellyett, Harbour Master.

AGENT: Sub-Agent of Patrick Agencies, Adelaide.

PORT GILES, S.A.: 35.02 S. 137.46 E.

PORT LIMITS: As marked on Chart AUS. 125 (plans in the Gulf of St. Vincent). From a position the HW line in Lat. 35° 00.5′ S. in a direction 090°×7 miles, thence 180°×1.75 miles, thence 270°×6.7 miles (approx.) to the shore.

DOCUMENTS: All documents necessary for first entry vessels are as for other Australian ports (i.e. Customs, Health, etc.)

PILOTAGE: Compulsory. Pilot boarding ground is 2.5 miles East of the seaward end of the Port Giles Jetty. Pilot vessel "R.S. Baker", approx. 9 m. LOA, orange hull, yellow superstructure, "Pilot" in black on topside. Vessels proceeding to Port Giles, 24 hours' notice required to Department of Marine and Harbors, Port Adelaide.

ANCHORAGE: MacDonnel Sound, 7 miles from berth.

RESTRICTIONS: Daylight berthing only. Sailing at any time.

MAX. SIZE: Vessels to 40,000 d.w.tonnes able to load fully and depart at lowest tide. Normal limit 206 m. LOA and 40 m. beam.

HEALTH: Radio Pratique available within 24 hours of arrival provided sufficient information supplied. Quarantine/Health Officer will still board vessel in order to grant formal Pratique. Vessels arriving from other Australian ports have automatic Pratique, but Health Officer may still attend the vessel on arrival.

RADIO: ETA messages for Agent, Harbour Master, etc., may be routed through any Australian coastal station, the closest being Adelaide Radio (VIA) not less than 24 hours prior to arrival.

VHF: Channels available at Port Giles 16, 12, 6. Channel 16 used for general calls to Port Adelaide Outer Harbour, Signal Station. Call sign: Port Adelaide Outer Harbour. Messages on Channel 12. Hours of operation: 24 hours per day. Messages will be relayed to Port Giles.

RADAR: No radar service.

TUGS: By arrangement from Port Adelaide.

BERTHING: Berth dimensions: Length 256 m. (840 ft.), width 39.6 m. (130 ft.), depth 11.6 m. (38 ft.), draft subject to keel clearance 0.6 m. (2 ft.). Vessels berth on North side of jetty, either head in or head out depending upon weather conditions.

CRANES: None.

BULK LOADING FACILITY: 5 booms with luffing and swinging ability. Loading rate; 2 or more booms 800 tonnes per hour, 1 boom 400 t.p.h. Chute clearance low water: 15.54 m. Cargo handled: barley, wheat, peas.

SPECIALISED CARGO HANDLING FACILITIES: None available.

BRIDGES: None.

STEVEDORES: Ordering of labour organised through Agent and Grain Handling Authority.

MEDICAL: Ambulance – Yorketown (088) 521200. Doctor available in Yorketown.

TANKERS: No facilities available.

DENSITY: 1027.

FRESH WATER: Available at 15 tonnes per hour ship/shore hose.

FUEL: By road tanker, by arrangement.

CONSULS: None at Port Giles. Services available from Adelaide.

REPAIRS: None available at Port Giles. Available from Adelaide.

DRY DOCKS: None.

SURVEYORS: (1) Cargo Surveyors available through Agents, from Port Adelaide.

(2) Lloyd's Surveyor should be organised through principal Agents. Lloyd's Agents is at Port Adelaide.

Other Classification Society Surveyors also available in Australia with sufficient notice to Agents. None are resident in Port Giles.

GANGWAY/DECK WATCHMEN: Gangway watchmen not available.

HATCHES: Ship's crew.

CUSTOMS ALLOWANCES: Normal Australian allowances.

CARGO GEAR: Bulk grain loading only.

REPATRIATION: Crew changes and repatriation possible.

AIRPORT: Nearest regular airport, Adelaide.

TIME: GMT plus 9.5 hours Summertime (GMT plus 10.5 hours late October to early March).

HOLIDAYS: New Year's Day; Australia Day (January); Good Friday; Easter Monday; Anzac Day (April); Adelaide Cup Day (May); Queen's Birthday (June); Labour Day (October); Christmas Day and Proclamation Day (December 26th).

The bulk loading plant operates on all public holidays except Good Friday and Christmas Day.

POLICE/AMBULANCE/FIRE: Police Tel: 52 1100 (Stansbury Tel: 52 4205, Edithburgh Tel: 52 6024).

Ambulance Tel: 52 1200 (Edithburgh Tel: 52 6000, Stansbury Tel: 52 4100).

Fire Tel: 52 1000.

EMERGENCY CO-ORDINATION CENTRE: Tel: (062) 475 244.

TELEPHONES: Ordinary hours 0830 to 1630 to connect $60.00 and disconnect $60.00. Overtime hours to connect $84.00 and to disconnect $84.00. Rental $1.14 per day.

SERVICES: Tank and hold cleaning services available with prior arrangement.

BANKS: Not available at Port Giles. Nearest banks at Yorketown.

State Bank of South Australia, 25 Warooka Road, Yorketown. Tel: 52 1570, Telex: 82082.

A.N.Z. Banking Group Ltd., 40 Warooka Road, Tel: 52 1211.

STORING: See "Prelims".

1. Truck.
2. –
3. Normal road access.
4. Forklift trucks can use jetty.
5. Normal Customs bond regulations apply.
6. Ship's crew.

SHIP SUPPLY SERVICE: Not available.

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: Normal Australian I.D. cards necessary, but not required to be carried ashore.

REGULATIONS: No unusual regulations.

DELAYS: Not normal only if another vessel is at berth loading.

DEVELOPMENTS: None in foreseeable future.

AUTHORITY: Harbour Master, Department of Marine and Harbors, Box 125, Yorketown 5576. *Tel:* (088) 526 130.

Head Office: Department of Marine and Harbors, P.O.Box 19, Port Adelaide, South Australia 5015. *Telex:* AA 82525.

AGENT: Sub-agent of Patrick Agencies, Adelaide.

PORT HEDLAND, W.A.: 20.18 S. 118.35 E. (See Plan)

PORT LIMITS: An arc of a circle of 10 miles radius with centre at Hunt Point Beacon.

APPROACHES: Port Hedland, entered between Airey Point (Lat. 20° 18′ S. Long. 118° 35′ E.) and Hunt Point, about 3.25 cables N.N.W., is a secure harbour with dredged Channel giving a depth of 11.8 m. below datum, a turning basin with a depth of 8.2 m. below datum. The Channel extends some 7.75 miles seaward from the turning basin and is defined by beacons, buoys and leading marks.

The most conspicuous object in daylight is the Crushing Plant owned by the Mt. Newman Mining Company. This plant is 47.24 m. above sea level, and is of oblong shape, situated 095° (T) by 1,383.74 m. from the Shipping Control Tower at Lat. 20° 19′ S. Long. 118° 34′ 50″ E. Cooke Point, which terminates in black, steep-faced rock, is sharply defined. Finucane Island water tank, 5 cables W.N.W. of Hunt Point, is also conspicuous.

Note: March 1986.

Dredging in progress. New Beacons in place to Port Limits. The channel now extends some 10.5 nautical miles to seaward from the turning basin.

When clearance surveys accepted nominal depth in dredged channel should be 14.3 m. and depth in turning basin 9.2 m.

New Beacons for channel within 10 nautical miles of Port Limits in place with 2 exceptions No. 34 and No. 50 (to be in place late 1986) and 2 extra New beacons to mark channel (No. 15 to 50).

Also see "Developments".

DOCUMENTS:

2 Copies Health Report Q360 for Quarantine Office to be accompanied by Crew List showing Vaccination dates.
1 Copy Store List Form 42A. All narcotics and restricted drugs to be identified by type, size and quantity. Report is to include lifeboat kits.
1 List Crew Possessions. Form 5 including Declaration Sheet. In declaring goods, quantity, description and value to be stated. In the case of all watches, radios, cameras, binoculars and the like, maker's name or brand and serial numbers must be shown.
1 Crew List. Form M & S 11. Comprised White Cover Sheet, 2 copies plus Green Listing Sheet, 2 copies.
1 List Ship's Pets. QA4. If any pets, including any animal, bird or fish on board to be accompanied by 1 pink QA5.
5 Copies Crew List. Company type. (Customs 3, G.M.L. 1 and Agent 1).
Identification Card. Form M315. One per crew member, except as detailed below.

With reference to Seamen's Identification Cards, a Passport size photograph of the seamen is sufficient. A side-face photograph is not required. Seamen in possession of the following National travel documents are no longer required to have an Identification Card in Commonwealth of Australia Form M315.

Canada	Passport or Seaman's Identity Certificate
Chile	Passport or Seaman's Book
Denmark	Seaman's Book
Egypt, Arab Rep. of	Passport or Seaman's Book
Fiji	Passport or Seaman's Certificate of Nationality and Identity
Ghana	Passport or Seaman's Certificate of Nationality and Identity
Hong Kong	Seaman's Identity Book
India	Seaman's Identity Book
Iran	Passport or Seaman's Identity Card.
Israel	Seaman's Book
Italy	Libretto de Navigaziona
Japan	Mariners Pocket Ledger
Kenya	Passport or Seaman's Identification Certificate
Lebanon	Passport or Seaman's Identification Certificate
Malaysia	Passport or Seaman's Identity Card
Malta	Discharge Book
Nauru	Seaman's Document of Identity
New Zealand	Identity Book
Norway	Seaman's Document of Identity
Pakistan	Seaman's Identity Card or Continuous Discharge Certificate
South Africa	Seaman's Record Book and Certificate of Discharge or Seaman's Identity Certificate or Certificate of Naturalization or Identity
South Korea	Seaman's Certificate Book
Taiwan	Passport or Seaman's Book
Tanzania	Passport or Seaman's Book
United Kingdom*	Passport or Seaman's Record Book and Certificate of Discharge

*United Kingdom Passports may be held for surrender only if grantee is agreeable, otherwise an Australian Identification Card must be available.

Masters are reminded that crew members' travel documents and Commonwealth of Australia Forms M315, where applicable, are to be retained in the custody of the Master at all times and are to be produced to Customs Boarding Officers upon demand.

PILOTAGE: Pilotage is under the control of the Harbour Master and is compulsory for all vessels except the following which shall be exempt:

(a) all vessels which do not exceed 35 m. in length overall;

(b) all coasting and interstate vessels exceeding 35 m. but not exceeding 65 m. in length overall, the Masters of which hold a current Pilotage Exemption Certificate valid with respect to the Port;

(c) all vessels owned and operated by the Western Australian Coastal Shipping Commission exceeding 65 m. but not exceeding 135 m. in length overall, the Masters of which hold a current Pilotage Exemption Certificate valid with respect to the Port;

(d) subject to the consent in writing of the Harbour Master first being obtained, vessels which are not registered in the Commonwealth of Australia exceeding 35 m. but not exceeding 65 m. in length overall, the Masters of which hold a current Pilotage Exemption Certificate valid with respect to the Port; and

(e) Vessels of war.

Note: The future pilotage area will extend to some 21 nautical miles from Hunt Point for designated vessels. An arrival route for ballasted vessels is under consideration to the Eastward of the present recommended track. This is not an extension of the Port Limits, only of pilotage rights.

Pilot boarding by helicopter:

Pilots will board suitable vessels by means of a helicopter which will land on a hatch cover. Normally this applies to bulk carriers and not general cargo vessels. The helicopter will not be used for oil tankers, which will, with other vessels unsuitable for helicopter operations, be boarded by launch. The helicopter used is a float equipped Bell 206B Jetranger weighing 769 kilos and is fitted with VHF.

Where a vessel is to be boarded by helicopter, the vessel must meet the following criteria:

(a) Mark on the hatch top, a termination area consisting of a square having sides of 11.7 m. in length. For day and night operations this mark must be in WHITE paint – all markings to be at least 13 cm. in width

(b) Surrounding the termination area there shall be an area not less than 10.67 m. in width in which there shall be no obstructions likely to hazard the rotor systems.

(c) The combined termination area and obstruction free area shall constitute the helipad area.

(d) Within the termination area there shall be no obstructions likely to hazard the floatation systems.

(e) The touchdown area shall be so situated within the termination area that when the floats are positioned within the touchdown area, the main rotor shall be contained within the termination area.

(f) Paint the letter "H" in WHITE paint in the centre of the square, having sides of 2.0 m. and 13 cm. wide.

(g) Paint ALL handrails, lugs, ventilators and other obstructions on the hatch top in WHITE.

(h) Ensure that ALL derricks, cranes, aerials, etc., are clear of the approach paths to the termination area.

(i) The helipad shall be illuminated at night with flood lights positioned at both wings of the ship's bridge with the beams crossing over the helipad.

(j) A flag or pennant must be illuminated so the helicopter pilot can assess the wind direction and strength.

(k) Ships departing the Port must wash down the helipad before the helicopter lands (day and night).

All crew members should be kept clear of the landing area and should not attempt to approach the helicopter unless requested to do so. When the Pilot has disembarked an officer should be available to guide the Pilot to the bridge.

Vessels which are selected for night operations will be visited by the helicopter pilot who will indicate the precise markings required and will advise Masters with regard to any questions that they might have.

Boarding by pilot vessel:

When boarding by pilot vessel it is most important that a lee be given to allow the Pilot to board, whether the vessel be under way or at anchor. In the latter case with the anchor still down, a steady ahead movement on the engines with the helm hard over usually affords the necessary lee. Failure by the Master to afford a lee may result in the Pilot being unable to board, with consequent delay.

Vessels will be advised of Pilot boarding times and in the interest of expediency, whenever required, vessels should be under way before the Pilot boards. The Pilot ladder should be clean and properly constructed, fitted with spreaders to prevent turning and spacing pieces to maintain treads in a horizontal position. Manropes of 76 mm. Manila should be rigged on each side of the ladder for its full length.

Where pilot ladders are led over bulwarks, suitable stanchions should be rigged and steps provided inboard. In addition to cleanliness of the pilot ladder on arrival, the gangway or accommodation ladder must be washed down after completion of loading, before the Pilot boards for departure.

Unless the ladder is satisfactorily washed down and free of ore dust, the Pilot may refuse to board with resultant loss of time and expense until the ladder is cleaned to the Pilot's satisfaction. Failure by Masters to comply with these requirements in the past in Australian ports has resulted in delays and off-hire situations in the case of time chartered vessels, heavy fines for the Master plus court costs and substantial compensation for the injured against the Owner.

ANCHORAGE: Vessels should anchor North of a line between Spoil Ground Buoy and No. C 6. The bottom is sandy but the holding ground reported to be good.

A prohibited anchorage exists.

RESTRICTIONS: All Channels from seaward as far as the Swinging Basin are dredged to 11.8 m. below datum, and 183 m. wide in the straight sections, widening to 244 m. on curves. The N.W. section of Swinging Basin is dredged to 8.1 m. below datum. Total width of Basin is 600 m. Also see "Approaches", "Berthing" and "Developments".

MAX. SIZE: Max. size vessels entered: Length 315 m., 225,162 d.w.t. Vessels up to 305 m. may be handled at night.

Note: Acceptable length of vessels may increase with limit for night movements to 315 m. LOA. Present restrictions in place until further notice.

Keel Clearance: The official scale of keel clearance required for Port Hedland is as follows:

Vessels draft (m.)	*Inner Harbour*	*Outer Harbour*
10.8 m. to 12.3 m.	1.0 m.	1.2 m.
12.4 to 13.0 m.	1.2 m.	1.5 m.
13.1 to 14.0 m.	1.2 m.	1.7 m.
14.1 to 15.0 m.	1.2 m.	1.8 m.
15.1 to 16.0 m.	1.2 m.	1.9 m.
16.1 to 17.0 m.	1.2 m.	2.0 m.
17.1 to 18.0 m.	1.3 m.	2.1 m.

Arrival drafts:

The port experiences strong winds on occasions and in order to ensure a safe transit of the channel and berthing, vessels should be ballasted to the following minimum arrival drafts:

D.w.t.	*Forward Draft*	*Aft Draft*
Up to 10,000	2.0	No more than 0.6 m. of the propellor to be exposed
10,000 to 20,000	2.0 to 2.5	
20,000 to 30,000	2.5 to 3.0	
30,000 to 50,000	3.0 to 5.0	6.5
50,000 to 100,000	5.0 to 7.0	6.5 to 7.5
Over 100,000	7.0 to 8.0	7.5 to 8.5

All vessels should advise their intended arrival draft to the Harbour Master 24 hours prior to their arrival. Vessels which do not meet these minimum requirements may be subject to delay until ballasting gives the stated drafts. Vessels which may have difficulty in meeting these drafts should notify the Harbour Master in their 24 hour notice.

Vessels over 100,000 d.w.t. may be required to vary their drafts prior to berthing, having regard to prevailing tidal conditions affecting depths in swinging basin and under the ship loader.

PRATIQUE: *Vessels Requesting Radio Approval to Berth/Radio Pratique:*

The Quarantine Act provides for the granting of pratique to vessels, at or about to arrive at, a port (Q. Act S33).

Vessels whether carrying a surgeon or not may request approval to berth/radio pratique through their Agents between 12 and 24 hours before arrival, or with shorter notice at the discretion of the Director.

The Agents should supply written and signed answers to a questionaire received from the Master of the vessel by radio. Where personal delivery of the answers is difficult or impracticable, such as at night time or at weekends, the answers and approval to berth may be given by telephone on the strict understanding that the Agent will deliver the signed document as soon as possible on the next working day.

See "General – Health" before first port.

Note I: Masters or Medical Officers who wilfully make a false statement in answer to any question render themselves liable to a fine not exceeding $5,000 or imprisonment for a period not exceeding 2 years.

Note II: The granting of pratique to a vessel does not release from being subject to quarantine any goods on board the vessel. Goods including passengers' and crews' baggage, ship's stores and cargo require separate quarantine clearance.

Agents who fail in their obligations should be warned that the vessels they represent may be denied subsequent approvals for this reason. If the answers are acceptable to a Quarantine Officer, approval to berth should be given in writing.

If only Radio Approval to berth is given the ship may go straight to its berth on arrival, still flying the quarantine signal. Unauthorised persons will not be allowed to board or approach the vessel, and nobody will be allowed to leave the vessel until pratique has been granted, unless prior permission of a Quarantine Officer has been obtained.

If the answers to questions 6, 7, 9 and 10 are in the negative, see "General – Health" before first port, and the Quarantine Officer is satisfied that as a result of inspecting the vessel on previous voyages, she is likely to be free from infection, he will grant pratique by radio.

Radio Pratique if granted will be limited to the vessel's declared first port of entry.

After a vessel which has received approval to berth (or Radio Pratique), has berthed, a Quarantine Officer will go on board and, subject to receipt of satisfactory advice from the Master as to the health conditions on the ship during the period which has elapsed since the questionaire was answered, will issue a Certificate of Pratique.

If suspected infectious illness occurs subsequent to the granting of approval to berth or Radio Pratique, the Master will be required to notify Quarantine immediately through his Agent.

RADIO/VHF: Vessels trading Japan to Port Hedland use Sydney, Darwin and Broome Radio Stations. There is no Radio Station in Port Hedland. Broome Radio transmits navigation warnings including alterations to buoy positions in the approach to Port Hedland.

Vessels bound for Port Hedland should advise the Harbour Master 48 hours and 24 hours before their arrival, indicating their draft, fore and aft, and last port (Address: Harbour Master, Telex No. AA 99213, Port Hedland. If telex number not included messages may be delayed). A continuous watch is kept in the Port Shipping Control Tower, which is fitted with VHF, and vessels should call "Port Hedland Harbour" on Channel 16, 4 hours before arrival at anchorage to confirm their ETA and in order that they may be kept acquainted with berthing instructions and the movement of other vessels. The Tower will also assist ships by giving them their bearing and distance by radar from the Tower. No ship may enter the dredged channel or depart from any berth without permission from Port Control. The height of tide is available and will be transmitted to vessels by VHF or Aldis upon request.

Vessels equipped with VHF should guard Channel 16 (156.8 MHz) when in range of Port Hedland, and also whilst at anchor. This channel is in direct communication 24 hours a day with Port Control (call sign "Port Hedland Harbour") and will avoid superfluous launch trips to advise Masters of changing conditions. Visual signals may be used in addition to a constant VHF watch. Should the Master of a vessel at anchor wish to communicate by VHF with another vessel, then he must first advise "Port Hedland Harbour" who will allot him a working channel.

TUGS/LAUNCHES: Six tugs, operated and managed by Adelaide Steamship Industries, are stationed in Port Hedland. The fleet consists of:

	Gross Tonnes	*Brake (h.p.)*	*Bollard Pull (tonnes)*
M.V. Tabba Tabba	347	2,400	32
M.V. Strelley	347	2,400	32
M.V. Turner	311	2,400	36
M.V. Talga	309	2,640	35
M.V. Degrey	312	3,156	52
M.V. Yule	311	2,400	37

In addition to normal harbour operations the tugs "Tabba Tabba" and "Strelley" are equipped with deep sea towing gear and fire fighting monitors.

Tugs can also be utilised for the shipment of fresh water to vessels at the outer anchorage at the rate of approx. 100 tonnes per tug.

A buoy maintenance barge fitted with lifting and recovery gear to 25 tonnes S.W.L., is also maintained by the tug operators.

Elder Prince Marine Services Pty., Ltd., also operate launches and workboats, ranging from 10 m. to 13 m., which are available for use as ferries, line boats, etc.

BERTHING: (Due to the tidal range and strength of current, ships over 20,000 d.w.t. do not sail on the ebb tide).

Note: As a general rule –

(a) Vessels of less than 20,000 tonnes d.w.t. may sail on an ebb tide with range of less than 4.9 m.

(b) Vessels of less than 10,000 tonnes d.w.t. may sail on an ebb tide with range of less than 5.8 m.

(c) Vessels of less than 5,000 tonnes d.w.t. may sail at any time.

Goldsworthy Pier: This is situated on the Western side of the Harbour on Finucane Island, and lies S.W. of Hunt Point Beacon (No. 29). The face of the jetty extends over a distance of 177 m. and lies in the line 017°–197° (T) and consists of six breasting dolphins, each of which has a floating fender unit. There are two dolphins ahead and astern of the jetty to facilitate the mooring of vessels. These dolphins are set back from the line of the berth face and have no fenders.

The distance from the No. 1 or North Dolphin to the No. 10 or South Dolphin is a total of 378 m. and the dredged mooring basin 366 m. long, 61 m. wide, has a depth of 15.85 m. below datum. The shiploader has an overall length of travel of 180 m. and a max. capacity of 4,500 t.p.h.

Fresh water and fuel are not available at this berth.

Vessels will normally berth port side to, heading out to sea. Ship's gangways should be rigged prior to berthing on the off-side as gangways are not acceptable on the jetty. A launch service is available to ferry personnel to the town. Ship's personnel are not allowed on the loading facility. Provision for a future second loading berth ahead of the existing jetty has been made.

The height of the shiploader underside in the raised portion above chart datum is 24.1 m. The loader is not completely retractable behind the berth face but retracts to a position 0.84 m. behind the fender line.

No. 1 Berth: This landbacked berth lies in a 350° – 170° direction and has a length of 213 m., with a mooring dolphin 58 m. from the Northern end. Depth alongside is 11.2 m. A dry cargo storage shed adjacent to the berth has a floor area of 5,300 sq. ft. and general cargo will be handled by fork lift vehicles to and from the vessel. Provision for tanker berthing. Provision for heavy lift crane/and/or bulk handling installation in the future.

Stack load on berth 3,418 kg./sq.m. Fork lift capacity 27.2 m/t. Max. axle loading 8 tonnes on dual axle. Raykin fender system.

Oil fuel, fresh water and telephone are available at the berth.

Cargo is handled by fork lifts and/or road trucks to a cargo receival shed a short distance away. The berth is equipped to receive bulk fuel. Limited grades of bunkers and fresh water are available. Fresh water can be supplied at the rate of 35 t.p.h., and bunkers at 80 t.p.h. Amounts of 200 tons of water are always available, and vessels requiring more than this are requested to give at least 48 hours prior notice, through their Agents.

No. 2 Berth has been demolished. There are plans for replacing it at a future date.

A pipe-line for loading bulk drilled mud is fitted and is operated by a private company. This is located at the South end of No. 1 Berth.

No. 3 Berth: No. 3 Berth is situated to the South of Mangrove Point and runs in a 117° – 297° (T) direction for a distance of 183 m., with dolphins 46 m. ahead and astern to facilitate the mooring of vessels. There is a mooring basin 274 m. in length dredged to 11.20 m. below datum alongside the berth and dolphins (depth alongside to be increased during present dredging, possibly by 2 m.).

Cargo is handled by form truck into the sheds or storage area at the rear of the shed, or loading direct into road truck. The full length of the wharf is protected by a fender system.

A mechanical bulk-loading facility is operated by the Leslie Salt Company on this wharf. The loader has a capacity of 1,500 t.p.h.

Fresh water is available at normal rates of 35 t.p.h. Bunkers can be obtained at rate of 100 t.p.h. Provisions for tanker berth.

Mount Newman Piers A and B: These two berths form a continuous line running in a 117° – 297° (T) direction from a position immediately South of No. 3 Berth towards Nelson Point. Pier A is the Northward berth and extends for a distance of 305 m., the depth alongside being 17.29 m. Pier B, the Southward berth, has a length of 353 m. and is dredged to a depth of 16.07 m. below datum.

The two shiploaders are fully retractable and have an average capacity of 6,000 t.p.h. each. No. 1 loader, at "B" Berth, has a boom reach of 28 m. from the wharf face, and the height of the underside of the loader is 24.5 m. above datum. Loader No. 2, "A" Berth, has a boom reach of 29.6 m. and a height above datum of 27.5 m. Vessels will normally swing on entry and berth starboard side to on these berths. Starboard gangways should be rigged prior to arrival so that no delay is incurred in the boarding of Quarantine and Customs Officials on berthing.

Bunkers are not available on these berths.

Note: Because of the tidal range and the movement of large ships within the harbour it is essential that all vessels tend their mooring lines at all times when alongside any berth in Port Hedland.

DEVELOPMENTS: The channel is being deepened by 2 m.

Notice: Dated 19th February, 1986.
To: Shipmasters
From: Port Hedland Pilots

During the next 6 months, the 4 buoys marking the approach channel to Port Hedland (outside Port Limits) will be replaced by 13 beacons. Whilst this note in no way replaces formal Navigation Warnings and Notices to Mariners on the subject, it is provided to give advanced warning of future changes. It is recommended that all incoming ships contact "Port Hedland Harbour Control" well before arrival at 'C.I.' to obtain the latest information regarding the new beacons.

Number	*Latitude*	*Longitude*
C1	19° 59.58′ S.	118° 26.09′ E.
C2	19° 59.69′ S.	118° 26.36′ E.
C3	20° 02.34′ S.	118° 24.82′ E.
C4	20° 02.37′ S.	118° 25.08′ E.
C6	20° 03.90′ S.	118° 25.13′ E.
C7	20° 04.46′ S.	118° 24.95′ E.
C8	20° 04.62′ S.	118° 25.54′ E.
C9	20° 06.58′ S.	118° 28.04′ E.
C10	20° 06.44′ S.	118° 28.20′ E.
C11	20° 08.14′ S.	118° 29.01′ E.
C12	20° 08.06′ S.	118° 29.16′ E.
C13	20° 08.97′ S.	118° 29.50′ E.
C14	20° 08.89′ S.	118° 29.65′ E.

MEDICAL: Medical attention may be arranged through the Agent. No person will be attended unless he is provided with a letter from the Master authorising such treatment. All charges incurred will be charged to the vessel.

TANKERS: *Connections:* 10 in. lines with 8 in. flexible hoses. Discharge rates depend on grade and consignee.
Local Installations: Mobil, Shell, B.P., Caltex and Ampol.

DENSITY: Average 1026.

REPAIRS: Minor repairs only can be effected. Radio and radar technicians, electricians, plumbers, welders and divers are available. There are a number of machine shops and a foundry is being constructed. Sand-blasting equipment and fumigation facilities are available.

AIRPORT: Daily jet flights to Perth and regular services to Darwin are available. In addition, there are several small charter planes available. Airport 12 km. from port.

CONSULS: At present, there is no Consular representation at Port Hedland.

TIME: GMT plus 8 hours.

SURVEYORS: Marine Surveyors of the Department of Transport and Construction are based in Wilson Street, Port Hedland. Tel: 73 2598 and 73 1173.

POLICE/AMBULANCE/FIRE: Police 731444; Ambulance 731800; Fire 732555; Hospital 732144.

CARGO GEAR: Ship's gear used. Mobile cranes up to 31 tons capacity may be hired. Crane of 120 tons capacity owned by Mount Newman Co. Fork lifts of 4,000 lb., 8,000 lb. and 10,000 lb. available.

CERTIFICATES: The following documents should be available for inspection:

Ship's papers, including the following certificates:
- *(a)* Register.
- *(b)* Load Line.
- *(c)* Safety Equipment.
- *(d)* Safety Radio.
- *(e)* Safety Construction.
- *(f)* Australian Light Dues Receipt.
- *(g)* Articles of Agreement and Account of the Crew (or equivalent).
- *(h)* Oil Record Book.
- *(i)* Register of Cargo Gear.
- *(j)* Gas Free Certificates for Obo's.
- *(k)* Western Australian Conservancy Dues Receipt (Port Bill).

Valid Derat or Exemption Certificate.
Crew's Identity Documents.
International Vaccination Certificates of all persons aboard as well as Crew List giving vaccination dates.

STOWAGE FACTORS: Basis of most recent stowage factors of iron ore cargoes loaded at Port Hedland have been approximately as follows:

Fine Ore	2,723 kg. per cu.m., or 0.3672 cu.m. per tonne.
Lumpy Ore	2,355 kg. per cu.m., or 0.4247 cu.m. per tonne.
Run of Mine Ore	2,643 kg. per cu.m., or 0.3784 cu.m. per tonne.

However, as these factors sometimes vary from cargo to cargo, it is recommended that Masters check with loading Agents for each shipment before finalising stowage plans.

GENERAL: If the Master wishes to anchor outside prior to proceeding to sea, he must advise the Pilot when leaving the berth, and the Pilot will advise suitable anchorage. The Master will advise the Pilot of estimated time of departure in order that this may be reported to the Port Control.

DELAYS: Delays of port operations, including delays of other vessels waiting for berth, caused by a vessel which for any reason is not prepared and able to move from the berth when so ordered, are chargeable to the vessel which causes such delays.

PROVISIONS: Supplies of food, liquor, cigarettes, etc., are readily available in Port Hedland.

Providores will generally meet vessels on arrival but early advise to the ship's Agent of a vessel's requirements is desirable.

SHIP SUPPLY SERVICE: Elder Prince Marine Services Pty. Ltd., P.O.Box 81, Port Hedland, W.A. Tel: (091) 731651. Telex: AA 99286.
Services: Pilot boat services to vessels that cannot be serviced by helicopter. Passenger launches for Agents, crew ferries, providores to vessels at anchor in Outer Anchorage or berth at Goldsworthy Berth. Stores run, garbage collection and line running.

AUTHORITY: Port Hedland Port Authority, P.O.Box 2, Port Hedland, Western Australia 6721. *Tel:* 73 1400 (office hours: 0800 – 1200 hrs., 1300 – 1630 hrs.). *Telex:* 99213. *Contact:* Captain R. P. Gardner, Deputy Harbour Master.

AGENT: Sub-agents of Patrick Agencies, Fremantle.

PORT HUON, Tasmania: 43.10 S. 146.59 E. (See Plan)

For Additional Information see "Hobart".

PORT LIMITS: 'Harbour' means so much of the waters of the River Derwent and its estuary as lie to the Northward of a line drawn from the Derwent Light (on the Iron Pot Islet) to Kelly Point, on North Bruny; together with so much of the D'Entrecasteaux Channel as lies to the Northward of a line drawn from the Southern end of Partridge Island to Southport Island; and together with all bays and estuaries opening either into the said River Derwent or the said D'Entrecasteaux Channel.

DOCUMENTS: As for all Australian Ports.

PILOTAGE: Pilotage is compulsory for all vessels exceeding 35 m. in length. For vessels bound to Port Huon from the North, via the D'Entrecasteaux Channel, the Pilot boarding ground is on a line drawn from the Iron Pot Lighthouse (Chart AUS. 171 – Lat. 43° 03.7′ S., Long. 147° 25.5′ E. Gp.Fl. (3) W 9 secs. 20 m. 11 nautical miles); to Kelly's Point on the Northern tip of Bruny Island. For vessels bound to Port Huon from the South, the Pilot boarding ground is on a line drawn from the Southern end of Partridge Island (Chart AUS. 173 – Lat. 43° 24.6′ S., Long. 147° 06.0′ E.) to Southport Island. Notice of ETA and request for a Pilot must be advised at least 24 hours in advance. Confirmation or amendment of this ETA must be made not less than 6 hours prior to the vessel's arrival at the pilot station. For additional information on this section see "Hobart".

ANCHORAGE: There are no safe anchorage positions South of the pilot line. However, vessels wishing to anchor may be guided by the Pilot on VHF to positions in the D'Entrecasteaux Channel where there is good holding ground.

RESTRICTIONS: Navigation is on a 24 hour basis, however the draft of vessels navigating within Hospital Bay, Port Huon, is restricted to 9.0 m.

MAX. SIZE: Vessels of up to 190 m. long and 9.0 m. draft can be accepted at Port Huon Wharf, while vessels of up to 160 m. in length and 8.0 m. draft are about the maximum for the Australian Paper Manufacturers' Wharf.

HEALTH: The local medical practitioner boards vessels after berthing and acts for the Commonwealth Dept. of Health. Immigration/Customs Officers travel by road from Hobart and board after Pratique has been granted. Quarantine Authorities must be informed of suspected disease or fever at least 18 hours before arrival.

RADIO/VHF: See "Hobart".

TUGS: Tugs from Hobart are available for assisting vessels. However, because of the distance involved additional notice is required, and tug charges are at higher rates.

BERTHING:
Port Huon Pier: The East side has a quay length of 172.6 m., with a water depth of 7.6 m. and the West side a quay length of 203.4 m., with a water depth of 9.8 m. This wharf is primarily used for the export of fruit (apples and pears) and it has a cool store capacity of 4,700 cu.m.
Australian Paper Manufacturers Wharf: The berthing head has a length of 82 m., with mooring buoys ahead and astern of the vessel and a water depth of 8.2 m. This wharf is used exclusively for the loading of wood pulp.

MEDICAL: A local doctor is available and a hospital is situated at Franklin (4 miles).

STEVEDORES: Labour allocated and supplied from Hobart.

FRESH WATER: Available only at Port Huon Pier.

FUEL: Limited supplies provided by road tanker from Hobart (40 miles). Fruit ships usually call at Hobart for bunkers.

GANGWAY/DECK WATCHMEN: See "Hobart".

OPENING/CLOSING HATCHES: See "Hobart".

CARGO GEAR: At Port Huon Pier, discharge/loading is by ship's gear and at A.P.M. Wharf a fixed conveyor belt system from the shore is used.

TELEPHONES: A telephone is connected to all vessels on arrival.

AUTHORITY: Marine Board of Hobart, 1 Franklin Wharf, G.P.O.Box 202 B, Hobart, Tasmania 7001. *Tel:* 34 6722. *Telex:* Marhob AA 58319. *FAX:* (002) 343169. *Contact:* Captain J. M. E. Lucas, Harbour Master.

AGENT: See "Hobart".

PORT KEMBLA, N.S.W.: 34.28 S. 150.54 E. (See Plan)

PORT LIMITS: In the absence of any specific clause in the Charter Party, the local custom is that a vessel, having obtained Pratique, is considered to be an "arrived ship" when it is anchored off the port and reported as such to "Port Kembla Harbour".

CERTIFICATES/DOCUMENTS/HEALTH/CUSTOMS ALLOWANCES/CARGO GEAR: See "Melbourne".

PILOTAGE: Pilotage is compulsory for all foreign vessels and Australian Masters without an exemption; this service operates 24 hours per day. When entering or leaving the Inner Harbour, the Pilot requires 10% of draft clearance under the keel. Pilots equipped with VHF.

The pilot boarding station is in position 1.6 miles north of entrance buoy.

RESTRICTIONS: An artificial harbour, formed by two breakwaters with an entrance of 305 m. and a depth of 16.75 m. ISLW at the entrance. Leading from the Outer Harbour there is an Inner Harbour Basin, which is entered through a 165 m. wide channel, having a depth of 15.25 m. ISLW. The port consists of the Outer Harbour and the Inner Harbour. In the Outer Harbour the swinging basin is approximately 457.2 m. with a minimum depth of 10.70 m., and in the Inner Harbour the swinging basin is approximately 365 m. with a depth of 15.25 m.

MAX. SIZE: The deepening project at Port Kembla has been completed and the port can now handle vessels in the 150,000 d.w.t. range for ore discharge and coal loading. Vessels arriving part loaded or in ballast are required to be as near as practicable to an even keel and at no less than half loaded draft to facilitate ship handling in the strong winds common to this port.The depths are now as follows:

Entrance Channel 15.25 m. ISLW.

Iron Ore Discharge Berths:

No. 1 Depth alongside 13 m. ISLW.

No. 2 Depth alongside 15.75 m. ISLW.

New Coal Berth: Max. LOA 290 m. Max. beam 45 m. Max. airdraft 23 m. Max. draft 15.25 m. + tide – 10%.

Arrival Draft: The Maritime Services Board of New South Wales has issued a notice regarding the arrival condition of vessels at Port Kembla. This notice covers ballasting and trim on arrival. According to the Board, some vessels have arrived trimmed too deeply by the stern, which makes it unsafe to enter port.

Agents and Masters are advised that to ensure a safe entry at all times, the arrival draft should never be less than 2% of the vessel's LOA at the head and 3% of LOA at the stern. Failure to ensure that these conditions are met may result in delays to entry.

PRATIQUE: Quarantine service is available 24 hours a day with Radio Pratique available.

RADIO: A continuously manned signal station (Port Kembla Harbour) maintains constant contact with the Pilot, pilot tender, tugs and launches. In addition, a VHF radio-telephone system (Sydney Radio on Channel 16) provides communication for vessels at sea or at anchor.

Whilst anchored off the port of Port Kembla, it is necessary to maintain radio watches, as officially a vessel is at sea until entering the breakwaters into the port.

BERTHING: Outer Harbour:

No. 3 Jetty: Length 289.6 m. Width 20.7 m. Depth 11.8 m. to 4 m. 2×20.3 ton and 2×7.1 ton cranes for general cargo by both rail and road.

No. 4 Jetty: Length 228.6 m. Width 15.5 m. Depth 10.8 m. to 4.6 m. Facilities for discharging sulphuric acid and anhydrous ammonia.

Inflammable Liquids Berth: T-head with 2 EMCO loading/discharging heads and dolphins, can accommodate vessels up to 182.9 m. long. Depth 10.7 m. This berth is also used for bunkering, however, no priority is given for bunkering ships over tankers.

No. 6 Jetty: Length 298.7 m. Width 30.5 m. Depth 9.8 m. to 7.3 m. 4×7.1 ton and 2×17 ton cranes for general cargo by both rail and road. Bunker facilities available.

Inner Harbour:

Broken Hill Pty. No. 1 Products Berth (private): Length 192 m., depth 11 m. 4×10.2 ton cranes. Bunker facilities available.

Broken Hill Pty. No. 1 Bulk Berth (private): Length 278 m., depth 13 m. Discharging by 2×17 ton grab unloaders, each nominally 600 t.p.h. Outreach 32 m. Loading by conveyor-fed loading head – coke 700 t.p.h. and coal 1,000 t.p.h. Bunker facilities available.

Broken Hill Pty. No. 2 Bulk Berth (private): Length 310 m., depth 15.75 m. Discharging by 1×35 ton grab unloader, nominally 2,000 t.p.h. Outreach 32 m. Bunker facilities available.

Broken Hill Pty. Ro-Ro Terminal (private): Depth 11 m. Accommodates starboard quarter ramp vessels up to 180 m.

Broken Hill Pty. No. 2 Products Berth (private): Length 221 m., depth 12.2 m. 2×30.5 ton cranes.

Australian National Line Ro-Ro Terminal (private): Depth 9.2 m. Accommodates stern ramp vessels up to 170 m. in length.

New Coal Berth: Shiploading: The berth is dredged to 16.25 m. below LW and the access channel to 15.25 m. to permit 110,000 tonne cargoes to be loaded in Stage I. The geometry of the berth and shiploaders will permit the loading of 10,000 d.w.t. to 150,000 d.w.t. vessels.

The berth is equipped with 2 shiploaders with a peak capacity of approximately 2,500 tons. The loaders function in the same manner as the reclaimers with one machine loading coal at full capacity whilst the other positions itself at the next hatch.

In Stage I the new berth will handle all of the coal. Simultaneous loading from two berths will become necessary in Stage II when the most appropriate second berth arrangement would be developed.

Old Coal Berth: Length 214.9 m. Depth 13.0 m. 2 shiploaders load 300 tonnes/hr. Direct loading through either the rail tippler or road hopper to 1 loading head. Also see "Shipmaster's Report".

Multi-Purpose Berth: Maximum length 290 m. Depth alongside 16.25 m. This berth handles vessels of similar size to the new coal berth.

TUGS: At the present time four tugs are available, 24 hours per day, provided previous notification is given.

The tugs have bollard pulls ranging from 40 tonnes to 45 tonnes.

Vessels over 224 m. LOA proceeding to the new coal berth require 4 tugs and vessels 183 m. – 244 m. require 3 tugs.

TANKERS: Max. length of vessel 183 m., depth alongside 10.67 m.

DENSITY: Average 1025.

STEVEDORES: The Association of Employers of Waterside Labour (AEWL). controls labour in the port, the present total strength being 230 men (not including B.H.P., ANL and coal loader labour).

Working times:

1st shift:	0730 to 1430 hrs. – Monday to Friday, Sunday
2nd shift:	1500 to 2200 hrs. – Monday to Friday, Sunday
3rd shift:	2300 to 0600 hrs. – Monday to Friday, Sunday
1st shift:	0730 to 1130 hrs. – Saturday only or: 0730 to 1430 hrs. – Saturday only.

There are sufficient forklifts, tractors, bulldozers, etc., available to handle all general and bulk cargoes as necessary.

FRESH WATER: Fresh water is available at all berths.

FUEL: Furnace and diesel oil is obtainable by pipe-line at the inflammable liquid berth and No. 6 Jetty and also at the B.H.P. discharge berth and B.H.P. No. 1 loading berth. Limited quantities are available by road tanker at No. 3 Jetty, the coal loading berth and the multi purpose berth. No bunkering barges are available.

Delivery capacity by pipe-line is approx. 120 t.p.h. Delivery capacity by road tanker is approximately 20 t.p.h.

MEDICAL: There are sufficient doctors, dentists, etc., to handle all eventualities; also two well equipped modern hospitals.

REPAIRS: There are no drydocking facilities, but several marine engineering companies operate here, who can handle most types of repairs.

HOLIDAYS: See "Sydney".

GANGWAY/DECK WATCHMEN: Carried out by Shore Watchmen.

OPENING/CLOSING HATCHES: Crew or stevedores.

CREW IDENTIFICATION: See "Melbourne".

TIME: GMT plus 10 hours. GMT plus 11 hours (November to February).

AIRPORT: Kingsford Smith International Airport, Sydney.

TELEPHONES: Pilot station 740761; Signal station 744571. Telephones available.

SHIP SUPPLY SERVICE: Off-shore service may by provided by:

Stannard Bros. Launch Services Pty. Ltd., No. 4 Jetty, Port Kembla, N.S.W. 2505.

C.B. Air, Albion Park Aerodrome, Albion Park Rail, N.S.W. 2527.

T.N.T. Air Charter, 2 Hayes Road, Rosebery, N.S.W. 2018.

DEVELOPMENTS: A third export grain terminal for vessels of 120,000 d.w.t. under construction. Completion 1989.

SHIPMASTER'S REPORT: December 1982.

Inner Harbour Coal Berth

Restrictions: The following information is required prior to arrival berthing:

1. Stem of each type of coal.
2. Stowage, tonnage and type of coal each hold.
3. Commencing holds – basis two loading heads.
4. Trimming holds.
5. Expected departure draft.
6. LOA, gross and nett tonnages.

The vessel must conform with the following criteria:

Vessels must not present for loading with hatch coaming more than 17.4 m. above ISLW.

Minimum size of hatch openings (without prior arrangement with harbour authority) when using trimming head 4.9 m. × 4.9 m.

Whilst under keel clearance during loading operations is usually left to the discretion of individual Masters, the Harbour Master recommends 0.3 m.

Vessels of 243.84 m. and over are required to berth and sail in daylight hours only.

Due to the short travel range of the loading gantries it is recommended that with the larger size vessels, i.e. LOA 228.6 m. and upwards, to avoid moving along the berth during the final phases of loading that loading be programmed to complete in the centre hatches.

Max. Size: Max. LOA 267 m., max. beam 40 m. Max. loaded craft 11.40 m. plus available high tide less 0.3 m. under keel clearance on sailing (i.e. 11.10 m. plus tide).

Berthing: The berth is constructed with a concrete decking on steel piles and has a length of 215 m. Bollards are placed at 18.29 m. intervals with provision for mooring lines beyond the actual berth. Maximum pull load of each bollard is 85.63 k/t. Depth of water at the berth is 11.40 m. ISLW with a bottom of natural sand and clay. This depth extends for a distance outward from berth of 12.19 m. and for a distance alongside of 267 m.

Depth after 12.19 m. distance outward from berth is 13 m. ISLW increasing to 15.25 m. ISLW in the main channel.

Vessels usually berth port side alongside.

Bulk Cargo Facilities: There are two loading gantries at ship's side which have a travelling range along the berth of 150 m.

Each fitted with a telescopic loading chute with a trimming head attached which has the effect of throwing the coal in any given direction.

Each boom has an outreach from the wharf fender of 19.8 m. Maximum angle of raise is 80°, working range of boom is horizontal to 11° below the horizontal.

For the purpose of estimating expected loading time it is recommended that with both loading heads in use a figure of 1,400 t.p.h. be used.

SHIPMASTER'S REPORT: January 1983:

Documents: The following forms, are to be completed and presented to the Customs Boarding Officer upon your arrival at the first Australian port.

Form	*No. of Copies Required*	*Note*
Form M&S 11 (Crew List)	2	—
Ship's Crew List	3	—
Form 5 (Crew's Possessions)	1	Refer Form G29 (Instructions to Master)
Form C & E886 (Ports of Call)	3	Show all ports from first overseas loading port.
Form QA3 (Animal Cargo)	1	Refers to cargo only. One for each relevant port. Nil return not required.
Form QA4 (Ship's Pets)	1	Nil return required.
Form QA5 (Shipmaster's Bond)	1 (in duplicate)	Required only if ship has pets
Form 42A	1	Part 1 only
Forms Required if Passengers On Board		
Form M308 (List of Passengers Disembarking in Australia)	5	To be divided into ports of disembarkation
Form M309 (List of Passengers not Disembarking in Australia)	5	

Pilotage: Embarkation of Pilots: Masters of vessels are requested to carry out the following procedure when embarking a Pilot:

1.1 Make a good lee for the pilot launch and proceed at a speed of about five knots.

1.2 The pilot ladder, clean and fitted with spreaders at intervals, is to be rigged well clear of all discharges and outlets, and of all outboard fittings which might foul the pilot launch. The bottom of the ladder is to be maintained at a position approximately 1.5 m. above the water. The distance from waterline to point of access must not exceed 9 m.

1.3 Two clean 24 mm. in diameter manilla manropes are to be rigged with knots in the end only. The manropes are to be securely made fast to the ship. On no account must they be made fast to the ladder at any point.

1.4 Where the ladder is rigged over a bulwark, *two* stanchions not less than one metre in length are to be securely fitted in the top of the bulwark, one on each side of the ladder. Steps are to be provided from the top of the bulwark to the deck.

1.5 A heaving line is to be provided for mail and the Pilot's bag.

1.6 By night a bright light shaded to show downwards and clearly illuminate the ladder and ship's side is to be in position before the pilot launch approaches.

1.7 Tripping lines and boatropes are not to be used.

Note: Masters are urged to have all the abovementioned gear kept in first class condition and to have it inspected frequently and to ensure always that the ladder and manropes are securely made fast.

Serious accidents have occurred through inattention to these matters. Should the abovementioned gear and the manner in which it is rigged be not satisfactory, pilotage services may be withheld.

VHF: It is necessary to maintain a VHF watch on Channel 13, whilst anchored off the port.

Berthing: Outer Harbour:

The under mentioned rules are provided for the guidance of Masters of vessels berthed in the Outer Harbour, Port Kembla.

(a) Main engines should not be taken adrift or major repairs commenced unless arranged by prior consultation with the Harbour Master.

(b) Power for main engines should be available at *four hours' notice* during normal weather conditions.

(c) Upon the International Code Signal XT being hoisted at the Signal Station, or by night the exhibition of two all round red lights therefrom, power for main engines should be available at *one hour's notice.*

(d) Sufficient crew should be maintained on board to enable removal of vessels from jetties to be effected if such removal is considered necessary for the safety of the vessel and/or other vessels.

Inner Harbour: New coal berth is located between Berth 12 and Berth 14. See "Plans".

Port Kembla Coal Loader – Stage 1

1 – Navigation restrictions

Vessels – LOA	290 m.
– Beam	45 m.
Approach channel depth	15.25 m. below ISLW
Berthing basin depth (sand bottom)	16.25 m. below ISLW
Underkeel clearance while moving	9% draft
Tide variation – mean high of high tides	1.4 m.

Sailing restrictions:

Weather conditions – Pilot's discretion

Inward movements – No restrictions

Outward movements – Up to 12.8 m. draft – No restrictions

– Above 12.8 m. draft – Daylight only

(New navigational aids are being installed and tested. If these are satisfactory the daylight restriction will be lifted)

Vessels normally berth port side to berth.

Tug requirements:	over 244 m.	– 4 tugs
	183 m. – 244 m.	– 3 tugs
	under 183 m.	– 2 tugs

2 – Berth

Length of berth face	287.12 m.
Length between extreme mooring bollards	400 m.
Length between centres of end fenders	250 m.

Fendering – 8 Seibu Type W 2000H×1500L buffer fenders at 35.64 m. centres.

Bollards – 10×100 tonne quick release hooks

– 6×120 tonne quick release hooks

– 2×100 tonne storm bollards

3 – Shiploaders – 2 travelling shuttling bridge type (only one in operation at a time).

Nominal loading rate	5,000 t.p.h.
Outreach (+ reach of chute when tilted)	32 m. (+8 m.)
Throw – pivoting spoon type	5 m. maximum
(dependent on flow characteristics and moisture content)	
Air Draft	22.40 m. above ISLW
Shiploader travel: park to park	235 m.
common range	185 m.

4 – Operating Authority

Maritime Services Board of N.S.W.

Box 32 G.P.O.	Circular Quay West
Sydney 2001	Sydney 2000
Telex: Sydney Head Office	Msbsy AA24944
Pt. Kembla Cl. Ldr.	Msbptk AA29270

Repairs: There is an efficient diving service – Commercial Diving Service Pty. Ltd., (Shipping repair and maintenance division underwater), 3 South Avondale Road, Dapto P.O.Box 126, Dapto 2530, N.S.W., Australia. Neil Johnson Tel: (042) 61 4179. Keith Johnson Tel: (042) 61 4980.

Telephones: Placed on board on arrival at New Coal Berth.

Telephone Numbers:

The Maritime Services Board of N.S.W.

Office	74.0203/74.0204
Pilot Station	74.0761
Signal Station	74.4571
Stannard Bros. (for moorings)	74.1045

General:

Pollution: The Board views very seriously any kind of pollution. The regulations provide for heavy penalties on conviction. Attention is invited to the following:

1. *Oil of any description* – Discharge or escape from a ship – *Penalty up to $50,000.*
   Failure to inform of discharge or escape: *Penalty up to $10,000*
   Cost of dispersing or dealing with oil: *May be recovered from Master or Owner.*
2. *Other Pollutants* – (Including dangerous goods)
   Discharge or escape into port : *Penalty up to $400.*
3. *Dangerous Goods*
   Failure to keep pipe-line or hose gastight and free from leakage: *Penalty up to $200.*
   Failure to keep dangerous goods which have escaped in as small an area as possible: *Penalty up to $200.*
   Failure to report escape of dangerous goods from a pipe-line or hose within 24 hours: *Penalty up to $200.*

AUTHORITY: Maritime Services Board of N.S.W., Cnr. Military and Darcy Roads, Port Kembla. *Postal Address:* P.O.Box 89., Port Kembla, N.S.W. 2505. *Tel:* 74 0201. *Contact:* H. Lewis, Port Manager.

AGENT: Patrick Agencies, National Bank Building 1st Floor, 147 Crown Street, Wollongong, NSW 2500. Postal address: P.O.Box 465, Wollongong East. Tel: (042) 285666. Telex: AA 29025. FAX: (042) 28 3852. Cables: "RIKPAT".

PORTLAND, Victoria: 38.20 S. 141.36 E. (See Plan)

PORT LIMITS: As much of the waters of Portland Bay as lie Westward of a line bearing due North from Point Danger to the opposite shore of Portland Bay.

DOCUMENTS: Refer to "Melbourne".

PILOTAGE: Compulsory except for exempt Masters. Pilot boards about 0.75 mile N.E. of main breakwater. Pilot is available 24 hours. 24 hours notice required.

Approach from the West: A safe course into Portland Bay can be maintained by rounding Lawrence Rocks at a distance of 1.5 miles and altering until a course of 330° can be steered, which will clear the Southern side of the Bay between Point Danger and Portland by 1.5 miles. Steer this course until Whaler Point Lighthouse bears 270° about 2.5 miles distant where course can be altered for the harbour entrance.

Approach from the East: Is a straight course after rounding Lady Julia Percy Island, 18 miles from the breakwater.

ANCHORAGE: Portland Bay is clear of all hazards and safe anchorage may be found 0.25 to 0.5 miles North and N.E. of the Main Breakwater and for smaller vessels between the Lee Breakwater and Whaler Reef. Holding ground is good, and excellent shelter is obtained from Westerly weather. Anchoring is not recommended in strong Easterly or South-easterly weather, as there may be a confused sea and swell.

RESTRICTIONS: The Harbour is bounded by 2 breakwaters, enclosing 101 hectares. The entrance is 244 m. wide.

Swinging Basin: Between the two breakwaters, bounded by No. 6 Berth and the Lee Breakwater.

Depth of water in the harbour is based on a datum of 0.082 m. above LWOST, which ensures a depth of not less than 11 m. under all tidal conditions. Mean rise and fall is approximately 0.75 m. but the prevailing wind has a certain influence on the tide.

MAX. SIZE: The largest vessel to use the port to date was with a departure draft of 11.89 m.

Also see "Tankers".

HEALTH: Portland is a first port of entry. When requiring Pratique, inform the Port Health Officer of the ETA, number of crew and passengers and the state of health of the complement. Use the prefix "Shipserv" for all cabled messages. All requirements as for Melbourne.

RADIO: Maritime VHF operating on Channels 12 and 16 is installed in the Harbour Master's Office and on the tugs.

Listening on Channel 16 between 0800 and 1700 hrs. and when shipping is expected.

Radio Advice of Arrival: Address ETA telegrams to the Harbour Master, using the prefix "Shipserv".

TUGS: 1×1,600 h.p. and 1×1,700 h.p. available.

BERTHING: The Main Breakwater extends 1,280 m. in a North-South direction from Battery Point with its Northern extremity in 14 m. of water. There are 2 berths at the inshore end known as No. 1 and No. 2, K. S. Anderson Wharf.

Depth alongside No. 2 Berth, is 11 m. SW, whilst the Max. draft is 10.5 m. (this draft may be increased if written application made to Harbour Master).

No. 1 K.S. Anderson Berth: Dredged to 12.2 m. for a length of 212 m., with a max. draft of 11.6 m. with similar variance conditions as apply to No. 2 Berth. K.S. Anderson Wharf is 396 m. in length and is primarily utilized as a bulk grain loading wharf. Two mobile shiploaders operate over the length of the wharf. Shiploaders are 27 m. high and are capable of delivering 1,000 t.p.h. of grain.

In addition to bulk grain, K.S. Anderson Wharf is suitable for use as a point for bunkering as well as loading and discharging general and ro/ro cargo.

No. 5 Berth: A multi-purpose, heavy duty wharf is located on the East side of No. 2 Quay. No. 5 Berth has an alongside depth of 11 m., and is 122 m. in length. Facilities adjacent to No. 5 Berth include a bulk tallow installation, a 7,230 cu.m. capacity cool/cold store and a 2.6 hectare container park.

No. 6 Berth: At right angles to K.S. Anderson Wharf, length 228.6 m., depth 11.0 m. It is designed and built for handling bulk cargoes, but is also utilised for loading livestock, woodchips and general cargo. As the case with No. 5 Berth., a tallow line runs to No. 6 Berth.

Special Purpose Bulk Berth: Constructed to service the shipping requirements of an aluminium smelter which is under construction at South Portland. Berth is located on the Main Breakwater 198 m. North of K.S. Anderson Wharf. Depth alongside – 12.2 m. Max. draft 11.7 m.

Cold Stores: 7,230 cu.m. capacity situated on No. 2 Quay.

Container Storage Park: A container park of 2.6 hectares is situated on No. 2 Quay. Capacity is 80 refrigerated and 500 conventional containers.

TANKERS: S.L. Patterson Berth and Lee Breakwater protrudes in an Easterly direction from point 3.7 cables South of Whaler Point Lighthouse for a distance of 1,180 m., with its extremity in 12.2 m. of water.

The S. L. Patterson Berth is situated on this breakwater about 457 m. from the seaward end.

The wharf is 76 m. in length and designed for vessels up to 38,000 d.w.t. Depth alongside is 10.4 m. LW. Maximum draft permitted is 9.9 m.

Berthing and unberthing of tankers is on a 24 hour basis, at the discretion of the Harbour Master. During darkness, a Pilot is compulsory.

The Shell Company of Australia Limited, and Ampol Petroleum (Victoria) Pty. Limited have pipe-lines to the berth. Average discharge rate is approximately 300 t.p.h. This wharf can also be utilised as a loading berth ex-road transport and as a fitting out repair berth

STEVEDORES: There are 68 registered members and in excess of 100 casual waterside workers available.

Hours of work are from 0800 – 1700 hrs., from 1700 – 2300 hrs. and midnight – 0700 hrs.

Extended shifts are allowed to be worked to 1900 hrs. each day (except Thursday and Sunday) when no twilight labour is available.

Pallets can be manufactured locally by prior arrangement.

Vessels can be serviced expeditiously under skilled supervision including fitting out for grain, battening out for freezer or general cargo and securing cargoes to departmental requirements. Ample supplies of dunnage are available.

MEDICAL: Medical, dental and optical services are available.

FRESH WATER: Obtainable in unlimited quantity at all berths at a loading rate of up to 100 t.p.h.

FUEL: Available ex-road tanker.

REPAIRS: There are a number of repair and light engineering firms capable of repairs to shipping.

GANGWAY/DECK WATCHMEN: Shore gangway watchman are compulsory.

AIRPORT: An air service is maintained between Portland and Melbourne. 3 flights daily connecting with all interstate and international services.

TELEPHONES: At all berths. Tanker Berth No. (055) 231852. K.S.A. No. 1 – (055) 231122, K.S.A. No. 2 – (055) 231633, No. 6 Berth – (055) 231286, No. 5 Berth – (055) 231111, S.P.Berth – (055) 234804.

POLICE/AMBULANCE/FIRE: Fire Brigade 232998; Police 231999; Ambulance 231666; Hospital 231033, after hours, general patients 231400.

GENERAL: *Provisions:* Plentiful and available at short notice. Bonded stores are at present only available from Melbourne at approximately 24 hours notice.

DEVELOPMENTS:

1. New berth extending to No. 5 will be completed February 1987. Berth designed to take ingot trade from new smelter nearing first stage completion 1986.
2. New special purpose bulk berth, constructed for sole use of Alcoa smelter works for offloading alumina is completed and in operation.
3. Plans to increase present depth of 12.2 m. to 13.7 m. in 1987/88 in areas of grain wharves.

SHIPMASTER'S REPORT: November 1984.

Bulk Loading Facilities: Bulk grain at No. 1 and No. 2 Berths K.S. Anderson Wharf. As the shiploaders are fed by 1 conveyor belt, only 1 ship can be loaded at a time.

AUTHORITY: Port of Portland Authority. P.O.Box 292, Portland, Victoria 3305, Australia. *Tel:* (055) 231922. *Telex:* AA 55853. *Cables:* Shipserv. *Contact:* Captain D. O'Donnell, Operations Manager/Harbour Master.

AGENT: Patrick Agencies, 77 Bentinck Street, P.O.Box 133, Portland, Victoria 33005. Tel: (055) 23-4011 (office), (055) 23-4422 (after hours). Telex: Rikpat AA 55865. FAX: 23-5174. Cables: Rikpat.

PORT LATTA, Tasmania: 40.51 S. 145.23 E.

(See Plan)

DOCUMENTS:

Cargo Plan.
4 Crew Lists, Commonwealth No. MS11.
1 Customs Store List, Commonwealth No. 42A.
1 Personnel Effects, Commonwealth No. 5.
1 Quarantine/Animals, Commonwealth No. QA4 and QA5.
Last port clearance.
3 Lists of ports of call.
Also see "Certificates".

PILOTAGE: Compulsory pilotage from anchorage to berth. Pilot remains on board throughout loading. Pilot station equipped VHF radio Channels 16, 12 and 6. Pilots and line boats stationed at small boat harbour, Port Latta. Pilot boards at anchorage (2 miles N.E. of seaward end of jetty). Vessels communicate with Port Latta Marine Department on normal ship-shore frequencies, through Australian coastal stations, addressing message to "Pickands Wynward" prefixed "Shipserv". ETA required 10 days, 2 days, 1 day prior. Accommodation ladder to be rigged and ready on port side.

ANCHORAGE: 1 mile radius from point with Rocky Cape Light. Bearing 130° (T) × 5 miles (16 fathoms).

RESTRICTIONS: Vessels berth on arrival day or night, weather permitting. Minimum depth of water in berth and approaches 15.25 m. (50 ft.) at I.S.L.W. A static 1.5 m. (5 ft.) under keel clearance required at all times, or 10% of draft whichever is the greater.

MAX. SIZE: LOA 245 m. (804 ft.), beam 38.5 m. (126 ft.), draft 16.0 m. (52.5 ft.). Vessels in excess by prior consultation.

HEALTH: Commonwealth appointed Quarantine Officers will board vessel at anchorage or berth when Port Latta is first port of call. Minimum 24 hours advance notice of pratique to "Quarantine (Hobart)" and Agent. Quarantine Officer requires 1 copy Crew List.

RADIO: Radio messages addressed to "Shipserv. Pickands, Wynward" and Agent.

TUGS: One tug is available "Spring Cove", 1,825 h.p. 27 tons bollard pull. Tug is on thirty (30) minutes standby notice when in berth.

Two (2) line boats are available. On call 24 hours when a vessel is in berth. Licensed to carry five (5) passengers. Used to transport all persons and goods ship to shore.

Tug will join vessel at anchorage. Tug stationed at Port of Stanley and will stay with vessel throughout loading. The use of tug or ship line is at discretion of Pilot. No extra charge made for use of tug lines.

BERTHING: Propeller submerged with vessel at or near even keel. Vessels usually berth port side alongside using starboard anchor. Accommodation ladder to be rigged and ready on port side.

Mooring lines required.

(a) *Under 100,000 tonnes deadweight.* Seven (7) 220 m. (722 ft.) lines forward includes backspring. Similar aft.

(b) *100,000 tonnes deadweight plus.* As for (a) and in addition one (1) 220 m. wire forward and one (1) 220 m. wire aft. All mooring lines must comply with Classification Society requirements. Ore berth where vessel secures 3.9 m. (12.8 ft.) clear of loading facility to three (3) mooring buoys forward and three (3) aft. Backsprings to protection dolphins. *Polypropylene instead of nylon required.*

Main engines required to be on thirty (30) minutes standby notice.

Mooring winches to be fully operational and maximum power available at all times.

LOADING/DISCHARGING: A 1,830 m. (6,000 ft.) long steel structure from the shore carries the ore conveyor and oil pipe-lines.

Shiploader: Two (2) radial arm type (one loading at any given time).

Rate: 3,000 long tons per hour maximum (2,750 nominal).

Working Hours: 24 hours/day, every day weather permitting.

Outreach: (a) Central: 24.82 m. (81.4 ft.). (b) Max. slew: 17.82 m. (58.5 ft.).

Throw: Max. 3.9 m. (12.7 ft.). Working Trajectory 1.8 m. (5.9 ft.).

Height: (Air Draft) above H.W. 16.46 m. (54 ft.).

Travel: 79.25 m. (260 ft.) for one loader. Total coverage both loaders 164.6 m. (540 ft.) including 6.1 m. (20 ft.) dead area between loaders. Stowage factor iron ore pellets 0.4767 cu.m./tonne. Angle repose 27°.

MEDICAL: Minimum of 24 hours notice required by Agent to arrange doctor. Hospitals situated at Smithton, 19 miles; Wynyard, 25 miles.
TANKERS: Berth on arrival, weather permitting. Hose 10 in. diameter, discharge line only, no facilities for receiving ballast or slops. Maximum permitted draft 45 ft.

Oil/Ore vessels require gas free certificate prior to landing.

A floating pipe-line connecting facility to vessel is handled by line boats.
DENSITY: 1025.
FRESH WATER: Limited quantity from tug – 70 tons.
FUEL: Not available.
FIRE REGULATIONS: Standard Mines Department fire regulations.
OPENING/CLOSING HATCHES: Ship's responsibility.
CERTIFICATES: Required: Derat., Safety Equipment, Load Line, Registered Tonnage, Safety Construction, Safety Radio.
CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes or 8 ozs. tobacco per man. Wine/Spirit, 1 quart per man, bottle/bottles must be unsealed.
CARGO GEAR: None required.
IDENTIFICATION CARDS: See "Melbourne".
CONSULS: No consulates.
REPAIRS: Carried out by local contractors through Agent.
REPATRIATION: Agents can arrange repatriation and crew changes.
AIRPORT: Nearest airport 25 miles at Wynyard with daily domestic flights to mainland for international flight connections.
TIME: Local time is Eastern Australian Standard (EST), GMT plus 10 hours. Tasmanian Summer Time exists between October and March, GMT plus 11 hours.
HOLIDAYS: Cargo loading continuous throughout public holidays.
POLICE/AMBULANCE/FIRE: Police, Stanley 581104; Ambulance, Smithton 521221; Fire, Stanley 581202.
TELEPHONES: Arrange through Pilots.
SHORE LEAVE: Arrange through Pilots. Sufficient crew remain on board to handle vessel for clearing berth – to include ten (10) competent deck crew, five (5) forward and five (5) aft.
GENERAL: *Chart:* Port Dalrymple to Circular Head, AUS 798.
Tide Predictions: See "Port of Stanley" – Australian National Tide Tables. Mean Spring range of tide 2.5 m. (8.42 ft.).
Officials: Marine Supervisor, Quarantine Officer, Customs Clearance Officer and Agent will board on arrival, weather permitting.
AUTHORITY: Savage River Mines, Marine Department – Port Latta, P.O.Box 353, Wynyard, Tasmania 7325., Australia. *Tel:* Wynyard (004) 423451. *Telex:* Pickand AA 59019. *Cables:* Pickand Wynyard. *Contact:* D. C. Schmidt, General Manager.

AGENT: Sub-agent of Patrick Agencies, Melbourne.

PORT LINCOLN, S.A.: 34.42 S. 135.50 E. (See Plan)

PORT LIMITS:
Northern Limit: From Pt. Boston Light in a direction 059°×3 miles.
Southern Limit: From Cape Donington Light in a direction 059°×3 miles.
Eastern Limit: A line joining outermost ends of North and South limits.
DOCUMENTS: See "Melbourne".
PILOTAGE: Compulsory. Pilot boards 1.0 miles S.E. of Boston Point.
APPROACHES: Depth in approach Channel 30 ft. (Proper Bay) – 14.2 m. (Main Pier).
TUGS: 1 tug available.
VHF: Radio telephone in operation. Channels 6, 12, 16 and 67.

Office hours 0845 – 1700.
BERTHING: Kirton Point Jetty oil tanker berth at "T" head, berthing space 900 ft. (275 m.), depth 32 ft. (9.75 m.). Shipping Pier depth 27 ft. (8.2 m.) and 28 ft. (8.5 m.).

Two bulk grain loading berths 350 m. long, depth 14.93 m., with 2 travelling loaders with combined capacity of 4,000 tonnes an hour and an outreach of up to 35.5 m. on each side of jetty. Vessels up to 60,000 d.w.t. can be accommodated.

A berth, 247 m. long, depth 12 m. to accommodate general cargo including bagged grain, phosphate rock and sulphur vessels.

B.H.P. Jetty (Proper Bay) jetty and berth with mooring dolphins. Distance between outer dolphins 882 ft. (270 m.). Depth 34 ft. (10.4 m.) MLWS. Channel depth 9.1 m. Loading rate 1,900/2,000 t.p.h. Max. beam permissible 80 ft. (24 m.).
FUEL: Diesel and limited fuel oil by road tanker only.
FRESH WATER: Available at jetty and shipping pier. Not available at B.H.P. (Proper Bay) Berth,
AIRPORT: There is a scheduled 1 hour air service to Adelaide with up to 6 flights a day.
EMERGENCY CO-ORDINATION CENTRE: Australian Coastal Surveillance Centre-Canberra. Tel: (062) 475344. Telex: AA 62349.
STORING: See "Prelims".
(1) Yes.
(2) Operations at Harbour Master's discretion.
(3) Yes, right alongside.
(4) Yes.
(5) Normal Australian Regulations.
(6) Yes.

AUTHORITY: Department of Marine and Harbours, P.O.Box 354, Port Lincoln, South Australia, 5606. *Tel:* (086) 82 3633, 82 3723. *Telex:* AA 82525. *Contact:* Captain R. J. Cobban, Harbour Master.

For Proper Bay: Broken Hill Proprietary Co. Ltd.
AGENT: Patrick Agencies, 79, Liverpool Street, Harwill Court No. 11, P.O.Box 1592, Port Lincoln, South Australia 5606. Cables: Rikpat. Tel: (086) 82 1011/1167. Telex: AA 80932.

PORT PIRIE, S.A.: 33.10 S. 138.08 E. (See Plan)

CERTIFICATES/DOCUMENTS/HEALTH: See "Melbourne".
PILOTAGE: Compulsory. The Pilot Boarding Station is South-West to West and within 3 miles of Eastern Shoal North Beacon.

The regulation pilot ladder should be secured so that the lowest step is 1.22 m. clear of the water. Manropes must be provided but a boat rope is *not* required.

Pilotage distance is 17 miles and time occupied is approximately 2 hours.
ANCHORAGE: Vessels awaiting a Pilot should anchor near the Pilot Boarding Station which is good holding ground.

Exempt vessels may anchor within Germein Bay. However, anchorage near Cockle Spit is not recommended for vessels of light draft under adverse weather conditions.
RESTRICTIONS/MAX. SIZE:
Daylight: Max. length 183.0 m. OA } i.e. Port Limits
Max. beam 27.5 m. OA }
At Night: Max. length 178.0 m. OA (outward). Max. length 160 m. OA (inward).

Vessels over these lengths and beams at Harbour Master's discretion.

The entrance, river channel and harbour area are dredged to 6.4 m. LWOST. The keel clearance of any vessel proceeding in the harbour or channel should be 0.76 m. and vessels over 22.25 m. the minimum keel clearance should be 0.91 m.

Max. draft at HWOST is 8.1 m., keel clearance of 0.9 m. required.

Vessels have sailed from the port under suitable tidal conditions with drafts in excess of 8.23 m.
Port Pirie Channel Information: The table shows the *maximum* depths to which vessels may load when the sailing or berthing time is 2 hours before HW (i.e. allowing 0.3 m. (1 ft.) rise of tide) and to provide the following keel clearances:
N.B. Berthing time means the Pilot boarding time at Eastern Shoal North.
Note 1: It is recommended that the maximum draft shown on the table should be *decreased* by 0.15 m. (6 in.) when "fixing" vessels in advance, to allow for possibility of the tide being less than that predicted due to weather conditions.
Note 2: The LW heights should be considered when fixing deep vessels to ensure that the vessel always remains afloat in the berth.

Minimum Keel Clearance
Column 1. From 21.33 m. to 22.25 m. (70 ft. to 73 ft.) beam 0.76 m. (2 ft. 6 in.)
2. Over 22.25 m. (73 ft.) beam 0.91 m. (3 ft. 0 in.)

Predicted height of tide	Depth in Channel			1			2		
	m.	ft.	in.	m.	ft.	in.	m.	ft.	in.

RADIO/VHF: Port Pirie is serviced by VHF R/T Channels 16, 12 and 6. "Pirie Harbour" maintains a watch from 0845 hrs. – 2359 hrs. and when a vessel is under pilotage on Channel 67 and Channel 16. Vessels entering the port should advise "Pirie Harbour", as soon as contact can be established, of their ETA and draft, also the position anchored, if applicable. Exempt vessels should advise when ready to depart.

There is no visual signal station.

There is no radio telegraph station at Port Pirie. All such messages are handled through "VIA" Adelaide and are forwarded to or from Port Pirie by land-line.
TUGS: Two tugs, bollard pull 11 tonnes and 22 tonnes.
BERTHING: Vessels are normally berthed in the order of first arrival at the Pilot Boarding Station and are usually swung prior to berthing.

Main engines must not be immobilised and static engine tests must not be made without prior approval of the Harbour Master.

Berths: Vessels berthed at No. 1 should not exceed 152.40 m. (500 ft.) OA length.

At Berth Nos. 2, 3, 5, 6, 7, 8, 9 and 10 the OA length limit of 183.0 m. applies, provided adequate berthing space is available.

			Dredged to:				
Berth	*Depth*		*Width*		*Length*		*Normal usage*
No.	*m.*	*ft.*	*m.*	*ft.*	*m.*	*ft.*	
1	7.32	24	24.38	80	152.40	500	General
2	8.23	27	30.48	100	182.89	600	Silo-Bulk Grain

10	8.23	27	30.48	100	158.51	520	Coke, Coal and Limesand*
11	3.6	12	24.38	80	47.71	150	Acid

*Fuel oil can be discharged at these berths, for B.H.A.S.

CRANES: Eight 7.5 ton electric cranes are available as under:
No. 7 Berth – 2 for concentrate loading (Interstate only).
Nos. 8 and 9 and 10 berths – 6 plus the 2 from No. 7 if not required at that berth.

Two 7.5 ton cranes situated at No. 7 Berth are the property of E.Z. Company and the balance of the 7.5 ton cranes are the property of B.H. Associated Smelters and can only be procured when they are not required by the Company or when it is stipulated in contract, agreement or Charter, that cranes to be supplied.

BULK HANDLING FACILITIES: The boom of the shiploader is 70 ft. (21.3 m.) in length and when lowered to the horizontal position for pouring should plumb the midship line of most ships loading from this machine. The "jet-trimming slinger" at the lower end of the loading chute is capable of throwing a stream of ore some 60 ft. (18.3 m.) through 360° and can be directed to any position within the vessel's hold.

Bulk wheat and barley can be delivered ex-silo on a conveyor belt which is capable of delivery at the rate of 800 t.p.h. Five outlets are available but the maximum is 800 t.p.h.

FRESH WATER: Fresh water available all berths at rate of approx. 15 t.p.h.

FUEL: There are no bunkering facilities at any berth. Limited quantities of diesel oil may be obtained by road tanker.

TIME: Local time is Central Standard Time, GMT plus 9.5 hrs.

TIDES: MHW Springs 2.65 m., Neaps 1.65 m. Generally tidal heights of 2.74 m. or over occur at Springs about 50% of the days of the year. However, tides are affected by weather and may be up to 0.61 m. above or below predictions.

REPAIRS: Subject special arrangements.

TELEPHONES: Police 32 1200; Fire Department 32 3000; Harbour Master 32 1455.

AUTHORITY: Department of Marine and Harbours, Ellen Street, Port Pirie, South Australia. *Tel:* (086) 321455. *Telex:* AA82525. *Contact:* Harbour Master.

AGENT: Patrick Agencies, POB 38, 15 David Street, Port Pirie. S.A. 5540. Tel: 32 3222. Cables: "Rikpat". Telex: AA80721.

PORT STANVAC, S.A.: 35.06 S. 138.28 E. (See Plan)

The Marine Terminal is situated on the Eastern shore of the Gulf of St. Vincent, 18 miles South of Port Adelaide in Lat. 35° 06′ S., Long. 138° 28′ E., bearing 219°, 4.0 miles from Marino Light. Mariners are referred to current hydrographic chart AUS 780.

The Terminal berths are open and unprotected. Consequently at all times a vessel must be in a suitable condition, with sufficient deadweight and personnel on board to vacate the berth immediately on short notice.

The Terminal comprises a buoyed sea-berth served by a 34 in. submarine pipe-line, for the discharge of crude oil tankers of up to 175,000 tonnes displacement and a product berth for vessels up to 32,000 tonnes displacement. The product berth is attached to the seaward end of a pier which extends in a direction of 300°(T) from the shore.

The Terminal operates 24 hours per day, seven days per week. Vessels are berthed in daylight, subject to tides and/or suitable weather conditions and may depart at any time. Cargo handling operations are continuous whilst a vessel is in the berth.

DOCUMENTS: Inward clearance is effected on board the vessel by the Customs Boarding Officer after the vessel has berthed. This official is also the Superintendent of the Mercantile Marine Office.

The following documents are required:

Clearance from last port.
Crew List in duplicate on Form M & S 11, and in addition 3 copies on plain paper.
Store List on Form 42A (1 copy).
Dutiable articles owned by Master and Crew on Form 5 (1 copy).
Form C & E 886, Loading Port List (1 copy for each Australian port of discharge).
Cargo Manifest (B/L).
Livestock Notice (Form QA4) if any livestock on board, plus Shipmaster's Bond (Form QA5) in duplicate.

Necessary forms will be supplied by the ship's Agent on a vessel's first visit to the terminal.

Clearance outward is granted on board before sailing. No documents are required by the Master when clearing outwards – the ship's Agent handles all clearance documents at the Customs House.

PILOTAGE: Prior to berthing at Port Stanvac vessels will be boarded by a Company Mooring Master in the anchorage area. The Mooring Master will advise the Master on the pilotage of the vessel to the berth and in respect of mooring and unmooring of the vessel. At the offshore moorings he will also advise on the hoisting and lowering of the submarine hoses and on loading/unloading. He will remain on board while the vessel is moored at the off-shore berth. The Mooring Master will carry out his duties subject to the authority of the Master of the vessel.

Vessels are requested to have a pilot ladder and manropes, rigged on the leeward side for the safe embarkation and disembarkation of the Mooring Master. At night the ladder area should be efficiently illuminated. Pilot ladder and manropes should remain rigged during vessel's stay in port, whilst in the offshore berth.

If the vessel's freeboard is more than 9 m. then the accommodation ladder should be rigged in conjunction with the pilot ladder.

ANCHORAGE: Vessels awaiting to berth at Port Stanvac are advised to anchor in the following positions unless instructed otherwise:

Crude Oil Vessels: Using starboard anchor, with Marino Rocks Lighthouse bearing 065°(T) distance 3.5 miles in 11 fathoms of water.

Product Vessels: With Marino Rocks Lighthouse bearing 065°(T) distance 3.0 miles in 11 fathoms of water.

Holding ground in these anchorages is good with a hard sand bottom.

RESTRICTIONS: Approaches from the West through Investigator Strait; from the East, through Backstairs Passage.

Minimum depth in channel to jetty berth is 40 ft. (12.2 m.). Minimum depth in channel to Sea Line Berth is 60 ft. (18.3 m.).

Height of tide, 9.0 ft. (2.7 m.) HHW, and 4.6 ft. (1.4 m.) LHW.

MAX. SIZE: *Crude Oil Discharge Berth:* Max. size limitations for vessels using the off-shore berth are:

(a) LOA 300 m.
(b) Beam, no limitation.
(c) Draft 15.55 m.
(d) Displacement 175,000 tonnes.

Note: Vessels LESS THAN 65,000 d.w.tonnes need to be referred to Adelaide Refinery for suitability to berth.

Products Berth: Max. size limitations for vessels using the product berth are:

(a) LOA 183 m.
(b) Beam, no limitation.
(c) Draft 9.75 m.
(d) Displacement 32,000 tonnes.

Note: Ships at the product berth must have a parallel flat side at the lightship waterline of a minimum of 61 m. and maintain a minimum freeboard whilst loading of 1.7 m.

HEALTH: Vessels will be boarded by the Department of Health Officer either at the anchorage or in the berth.

If radio pratique (see "Radio") has not been obtained prior to arrival international quarantine signals must be exhibited until the vessel is cleared by the Department of Health Officer.

RADIO: *Arrival Message:* Masters are requested to radio their Agents 7 days before their estimated arrival at the port, giving the following information:

ETA
Number and nationality of crew aboard.
Crew's state of health.
Advise if the hull is free of leaks.
Whether bunkers are required and, if so, the quantity.
The number of crew members, if any, who require the services of a Doctor or a Dentist.
Advise if inert gas system is in good working order and conforms to SOLAS.
Advise if ship has C.O.W. on board and if crude oil washing is required at Port Stanvac and conforms to SOLAS.

Further ETAs should be sent 72 hours, 48 hours and 24 hours prior to arrival. The 24 hours message must also confirm that the hull is free of leaks. If there is any change to the 24 hours ETA then advice should be promptly transmitted.

VHF: Port Stanvac Refinery is equipped with VHF radio operating on the following frequencies: Channel 16 (156.8 MHz) calling and standby only; Channel 14 (156.7 MHz); Channel 9 (156.45 MHz).

Masters of vessels proceeding to Port Stanvac are required to establish VHF radio contact with Port Stanvac (call sign "Port Stanvac") as soon as possible prior to arrival to confirm the vessel's ETA. Masters will be advised on which Channel they should maintain a listening watch while in the Port Stanvac area and to receive instructions related to berthing, cargo operations and other matters.

TUGS: Depending upon conditions and ship size, 1, 2 or 3 tugs may be used to assist in berthing crude oil vessels. These tugs are stationed at Port Adelaide and take about 3 hours to reach Port Stanvac. The tugs' hawsers are always used for berthing.

Tugs are not normally used for berthing at the Product Berth.

BERTHING: Crude Oil Discharge Berth:

Vessels are moored heading approx. 270° using ship's port and starboard bow anchors and 6 mooring buoys in a crescent around the stern. Three Swamp moorings.

Vessels should be equipped with at least 6 mooring lines of at least 220 m. of good quality, to secure in the berth. If a vessel is only equipped with mooring wires these should be fitted with fibre tails of at least 15 m. in length. The mooring buoys are fitted with 40 mm. diameter preventer wires of sufficient length to reach a vessel moored in the berth. These preventer wires will be taken from the buoys to the ship by launch and must be secured on board under the supervision of the mooring Master's Assistant.

After the vessel is securely moored, the ship's crew under the direction of a officer, and supervised by the Mooring Master, will by means of the ship's derrick or crane lift separately 2×12 in. submarine hoses for direct connection to the ship's manifold. The weight of each 12 in. hose is approximately 4.5 tonnes with the ship in loaded trim and about 5 tonnes when in the light condition.

When bunkers are required the 10 in. submarine hose will be lifted and connected at the same time as the discharge hoses. The weight of this hose is approximately 3.5 tonnes.

Vessels should have in place, on the manifold, reducers or spools to suit 12 in. A.S.A. flanges, and a reducer or spool to suit the 10 in. A.S.A. bunker hose.

Vessel's derrick should be rigged with a SINGLE WIRE RUNNER, with a shackle on its working end. All gear to have a safe working load of 5 tonnes.

Two good messenger ropes of at least 25 mm. diameter and 50 m. in length for heaving-in preventer wires should be available.

It is recommended that the patent "Carpenter's Stopper" provided by shore be used in handling the heavy 40 mm. preventer wires.

Maximum discharge pressure allowed is 1,000 Kpa (150 p.s.i.) at the ship's manifold.

Product Berth: The Product berth has a fixed all round green light mounted on top of the hose boom.

All vessels are berthed port side alongside heading in a direction 240°(T).

Mooring line requirements are that vessels may be required to use 8 mooring lines, in good condition. The headline can be a wire rope but, if so, must have a 15 m. synthetic tail. The stern line must be a floating synthetic line so as not to foul the propeller on berthing.

The bow and stern mooring buoys are each fitted with 1×40 mm. diameter preventer wire. These wires will be taken to the ship by launch and secured on board under the supervision of the Mooring Master.

The berth is equipped with a Woodfield Flow Boom which handles all loading hoses, except the 2 solvent hoses. There are 2×14 in. lines which are for transferring white oils and taking off clean ballast. There are 2 × 16 in. lines for transferring black oils and taking off dirty ballast. Each of these 4 lines uses a 10 in. hose. In addition there are 2×6 in. solvent lines utilising 6 in. hoses and 1×12 in. line using an 8 in. hose for loading lube oils.

Typical loading rates are:

Black oils	1,600 tonnes/p.h. both lines.
White oils	1,400 tonnes/p.h. both lines.
Solvents	100 tonnes/p.h. each line.
Lub oils	500 tonnes/p.h. one line.

Multiple grades can be loaded simultaneously if segregation and safety are assured.

Ballast at 700 tonnes/p.h. is discharged through a 16 in. line to shore tanks with a receiving capacity of some 11,000 cu.m. On completion of deballasting clean salt water is to be discharged for approximately 15 minutes.

Notice of Readiness: Notice of Readiness will be accepted when vessel is securely berthed or, if berth is occupied, from the time the vessel is 'brought up' at anchor off the port in, or adjacent to, the recommended anchorage.

Draining of Hoses: Crude oil discharge hoses are cleared by creating a vacuum on the submarine crude oil line. All product hoses are drained by gravity and ship's personnel are requested to co-operate with the Terminal Operators to ensure complete draining of hoses. Drip trays must be placed in position to catch any oil which may remain in the hoses and oil absorbent material must be in readiness to absorb and clean up any small leaks.

Emergency Signal: Should normal ship to shore communication fail, the emergency signal to stop the flow of oil will be one or more blasts of the ship's whistle each blast of NOT LESS THAN 10 SECONDS DURATION. In the case of a fire this should be supplemented by a continuous sounding of the ship's general alarm system. Steam or air should never be shut off the whistle whilst the ship is in port.

Signals: Vessels discharging or loading shall, by day, display the international code inflammable flag and by night, a red light, where it can be clearly seen and visible all around the horizon.

MEDICAL: Medical and Dental treatment is available if required. The Agent should be informed of the treatment required.

FRESH WATER: Fresh water at approximately 25 cu.m.p.h. is available at the product berth.

There is no fresh water connection at the crude berth. Crude oil vessels requiring water must arrange, via their Agents, for water to be brought by tug from Port Adelaide. Tug hire is expensive and is for the account of the ship. Transfer of water from a tug to a ship must be carried out at the anchorage.

FUEL: Fuel oil is available at the Crude Oil Berth, fuel oil and diesel oil are available at the Product Berth.

CONSULS: Most nations, with the exception of the Arabian countries and the Panama Republic, have Consulates in Adelaide.

REPAIRS: Port Stanvac is an open roadstead and while vessels are moored at either berth, the main engines must be maintained in readiness to enable the vessel to leave the berth under full power at all times. No engine repairs which may interfere with this requirement will be permitted.

No welding, hotwork or scaling is permitted on vessels whilst at either berth. All repairs must be carried out in the anchorage. There are 2 repair firms in Adelaide capable of handling emergency voyage repairs. Details of any emergency repairs should be included in the ETA message.

CUSTOMS ALLOWANCES: All dutiable goods declared on Form 5 (see "Documents"), should be ready for possible collection and sealing by Customs. Non Australian crew members are allowed to retain: 200 cigarettes (opened carton) or 0.5 lb. tobacco or 40 cigars or 300 Biddies and 1 opened bottle (quart) of liquor.

BALLAST: No dirty ballast may be discharged into the sea at Port Stanvac.

Ballast disposal facilities are available at the Product Berth, maximum capacity is 11,000 cu.m.

There are no shore ballast facilities for the off-shore berth.

TIME: South Australian standard time is GMT plus 9.5 hours. South Australian Summer time is GMT plus 10.5 hours and this is observed from November through March.

POLLUTION: Extreme care must be taken to avoid pollution of water by oil. A $50,000 fine, plus the cost of any clean-up can be imposed on, among others, a Master of any vessel which causes pollution of the sea by oil

The contents of engine-room and pumproom bilges must not be discharged into the sea. All pumproom and sea suction and overboard discharge valves must be securely lashed before loading or discharging operations commence.

If vessels need to unlash sea suction valves, the Mooring Master must first be informed. The ship's pumps must be started and a vacuum obtained before opening any sea valve.

The area around the ship's manifold and overside in the vicinity of the submarine hoses, when in the off-shore berth, shall be efficiently illuminated at night during loading and discharge operations.

All deck scuppers must be plugged and sealed before commencement of loading or unloading.

A stand-by warning must be given to the Terminal Operator not less than fifteen (15) minutes before any cargo transfer is completed. When topping off, the loading rate will be reduced by the Terminal Operator as required.

SHORE LEAVE: Port Stanvac is an open, unsheltered roadstead and it is emphasised that vessels must be in readiness to vacate the berth immediately on receiving instruction to so do.

There will be a launch available for transporting crew members ashore for shore leave. The launch is restricted to carry a maximum of 10 persons. The launch will only be available on completion of mooring and hose connecting service and will be limited to a maximum number of trips at set times.

At Anchorage: 0800, 1200, 1800 and 2300 hrs. from Launch Dock.
At Berth: Daytime by arrangement with Mooring Master.
Night – 1800, 1930, 2100, 2230, 2400, 0130, 0300, 0430, 0600 and 0730 hrs. from Launch Dock.

Crew members failing to be present for the last return trip of the launch from shore to ship will be required to make their own arrangements for transport to the ship.

Vessel's crew members and visitors are not allowed to walk through the Refinery. Access from the wharf to the Main Gate, and vice versa, must be by car or taxi only. Taxis may be ordered through the Main Gate personnel. Taxis are free as far as the Main Gate.

GENERAL: *Gangway:* A shore gangway is provided at the Product Berth.

Ship's accommodation ladder should be rigged on the leeward side in the off-shore berth.

Garbage: The dumping of garbage into the sea at Port Stanvac is STRICTLY PROHIBITED by law. PENALTY $2,000 FINE.

Laundry: Laundry facilities are available in Port Adelaide. Master should advise requirements to his Agent prior to arrival.

Stores and Provisions: A limited amount of stores such as bread, milk, fresh vegetables and fruit, not exceeding a gross weight of 5 cwt., will be permitted to be delivered by the company launch. In such instances, it will be the responsibility of the vessel ordering such stores to make available a sufficient number of ship's crew to be taken to the launch harbour by the company launch in order to handle the stores into the launch for eventual transportation to the vessel. On no account is the launch crew to handle ship's stores. Arrangements for the handling of stores should be made through the Mooring Master on board the vessel, or the ship's Agent.

Stores ordered in excess of the above quantities must be arranged via the ship's Agent, and must be transported to the vessel direct from Port Adelaide by barge. The cost of this facility is expensive.

Masters are advised that whenever possible they should arrange to receive stores at other ports where facilities for storing may be more convenient.

The company will not accept responsibility for any stores handled at the Terminal.

Tides, Current and Depths of Water: The predicted tide times at Port Stanvac are approximately 10 minutes earlier than the tidal predictions for Outer Harbour, Port Adelaide. However, the times and heights may be affected quite markedly by the prevailing weather conditions. The tidal current flows in a N.S. direction and on occasions may reach 1 knot.

The lowest recorded depth of water at the Product Berth is 40 ft. MLWS and at the Crude Oil Berth is 61 ft. MLWS.

Weather: From September to May, the prevailing winds are from the South, S.E. to East. During the remainder of the year, winds are generally from North, West to S.W. At times winds may reach gale force.

AUTHORITY: Petroleum Refineries (Australia) Pty. Ltd., Adelaide Refinery, G.P.O.Box 1905, Adelaide, South Australia 5001. *Tel:* 382-1133. *Telex:* AA 82003. *FAX:* (08) 382-0962. *Cables:* Petrefine. *Contact:* R. M. K. Sweeney, Marine Co-ordinator.

AGENT: See "Adelaide".

PORT WALCOTT, W.A.: 20.37 S. 117.11 E. (including Cossack and Point Samson (defunct), Cape Lambert (operational) and Dixon Island (possible future)

(See Plan)

PORT LIMITS: All that portion of water bounded by a line starting from the North end of Dolphin Island running to the North end of Delambre Island then in a 081° direction to a position in Lat. 20° 21.5′ S., Long. 117° 31.5′ E. and then due South to meet the high water mark of the shore line generally in a Westerly and Northerly direction to Sloping Point; thence generally Westerly to the Northernmost Northwestern extremity of Burrup Peninsular; thence Northeasterly crossing the Western entrance of Boat Passage to the high water mark at the Westernmost Southwestern extremity of Dolphin Island and thence generally Easterly and generally Northeasterly along the shore line of that Island to the starting point.

DOCUMENTS: See "Melbourne".

PILOTAGE: Pilots resident at Wickham. 24 hours service. Pilotage is compulsory anywhere in the port, except that, with permission, ships may enter port and proceed via the Eastern route to anchorage. Ships should not enter via Bass Pass except with Pilot.

Pilots will, generally, board and leave ships by means of a small helicopter. Ships which cannot accept a helicopter must advise the Harbour Master at least 48 hours prior to arrival. All crew members should keep well clear of the hatch on which the helicopter will land. Helicopter is fitted with marine VHF radio. Call sign "Port Walcott Pilot Helicopter".

Pilotage will be provided, on request, from No. 1 Buoy. However this will only be just prior to a ship berthing. Ships may anchor, inside port limits, to the East of No.1 Buoy.

Pilot Ladders, Hoists, etc: On arrival, Pilots will accept a pilot hoist, a pilot ladder not exceeding 9 m. in length, an accommodation ladder if the weather is suitable or a combination of pilot ladder and accommodation ladder.

Owing to swell conditions, a clean pilot ladder is required for departure. This should be rigged so that it is 1 m. above sea level and provided with 2 clean manropes.

This ladder is required to comply with Australian Standard Specification No. 1267 of 1975 which is based on the requirements of the SOLAS Convention and the Navigation Act.

A pilot hoist or accommodation ladder is *not* considered suitable for disembarking.

Whilst in the berth, the appropriate accommodation ladder is used for access to the ship.

APPROACHES: Approaches are marked by 5 light buoys. The first is in position Lat. 20° 23.45′ S., Long. 117° 25.34′ E. and is fitted with a 3 cm. Racon – morse code "K". From a position about 1 mile East of this buoy, ships should proceed on a course 183° for 7 miles, then 252° for 10 miles to the anchorage area. Ships should not attempt to enter via Bass Pass.

Exit Channel: Marked by some 28 buoys and beacons. Pilotage is compulsory for all ships in this area.

ANCHORAGE:

Recommended Anchorages:

Bearing of Jarman Island Lighthouse.

No. 1	191°×6 miles	No. 7	208°×8 miles
No. 2	201°×6 „	No. 8	215°×8 „
No. 3	196°×7 „	No. 9	222°×8 „
No. 4	205°×7 „	No. 10	204°×9 „
No. 5	213°×7 „	No. 11	210°×9 „
No. 6	200°×8 „	No. 12	217°×9 „

For smaller ships:

'F' 175°×6.7 miles and 'A1' 184°×5.2 miles.

RESTRICTIONS: *Max. draft for different tidal heights in order to obtain 10% U.K.C.*

Based on the availability of 16.0 m. at low water.

Tide (m.)	*Draft* (m.)	*Tide* (m.)	*Draft* (m.)	*Tide* (m.)	*Draft* (m.)	*Tide* (m.)	*Draft* (m.)
2.9	17.18	3.7	17.90	4.5	18.63	5.3	19.36
3.0	17.27	3.8	18.00	4.6	18.72	5.4	19.45
3.1	17.36	3.9	18.09	4.7	18.81	5.5	19.54

3.3	17.54	4.1	18.27	4.9	19.00	5.7	19.72
3.4	17.63	4.2	18.36	5.0	19.09	5.8	19.81
3.5	17.72	4.3	18.45	5.1	19.18	5.9	19.90
3.6	17.81	4.4	18.54	5.2	19.27	6.0	20.00

Controlling Depths for ships to the Service Jetty is 8.2 m. and Ore Jetty 12 m. For sailing from the Ore Jetty – 16.0 m.

For vessels bound for Lambert Service Jetty – 8.8 m. (29 ft.).

Berthing of ore carriers is usually carried out at about 1 hour – 2 hours before HW.

Part loaded ore ships are restricted to berthing at HW. The turning area has a least depth of 12 m. and a U.K.C. of 1.5 m. is required. Drafts of up to 13 m. may be accommodated, but ships are strongly advised to contact the Harbour Master for advice prior to arrival.

Ships of 190,000 d.w.t. and above to berth in daylight only.

Sailing from the Ore Jetty is at 1 hour before HW. No variation can normally be permitted. The 18 mile exit route is 'graded' from 16 m. to 17.4 m. to accommodate tidal variations.

Drafts for sailing are calculated by adding the height of tide to the controlling depth and then deducting one eleventh of that total to give an U.K.C. of 10% of draft.

Owing to tidal peculiarities, berthing at the Lambert Service Jetty is either at about 2.5 hours before HW or 3.5 hours after HW.

TIDES: Spring range is 5.8 m. (19 ft.).

TUGS: Two tugs, "Roebourne" and "Wickham", are available for use at Cliffs Jetties only. Each is 3,200 h.p. with a bollard pull of 50 tons. They are twin screw with Kort nozzles. One line launch is available. Tugs supply towing equipment.

MAX. SIZE:

	Berth No. 1	*Berth No. 2*
DWT	225,000	290,000
LOA	355 m.	355 m.
Beam	50 m.	55 m.

Largest ship to date (July 1984), the 'Weser Ore' 274,326 d.w.t. LOA 335 m. and beam 52 m.

RADIO: Send ETA advices to "Shipserve-Harbourmaster-Portwalcott" 7 days and 24 hours prior to arrival.

VHF: VHF communications are available on a limited basis – a watch being kept on both Channels 16 and 14. Hours are approx. 0830 – 1200 and 1300 – 1630 Monday to Friday. The station is also manned if it is thought that urgent communication is necessary.

HEALTH: Pratique may be given by radio. Pratique is automatic if having called at another Australian port.

BERTHING:

Cape Lambert Service Jetty is owned by Cliffs Robe River Iron Associates (C.R.R.I.A.). The neck is 1,500 ft. long and the berthing head is 510 ft. long. Off each end of the head is a mooring dolphin some 90 ft. away. This permits a vessel of about 625 ft. long to berth. There is a min. depth of 10 m. at LW. The height of the jetty, above LW, is 35 ft. Cargo is handled by ship's gear. The jetty is designed for road transport only. It was built to normal Australian standards and 110 ton locomotives have been landed. This is not a common-user berth and permission must be obtained from the Port Authority before any cargo, other than C.R.R.I.A. cargo, is handled.

Lambert Ore Jetty is owned and operated by C.R.R.I.A. It extends 8,760 ft. to sea in a 046.75° direction. It is double sided and capable of handling ships up to 290,000 d.w.t. Max. beam at No. 1 is 50 m. and No. 2 is 55 m. The depth of water in No. 1 (South) Berth is 18.5 m. and in No. 2 (North) Berth is 19.5 m. Ships should arrange their trim so that there is always a clearance of 1 m. when in the berth. There is a single shiploader designed to operate at 6,000 t.p.h. Ships berth 'head out' and are secured to dolphins, parallel to the jetty. These dolphins are 25 ft. (7.6 m.) above LW. The height of the jetty is 61 ft. above LW and the boom of the shiploader is about 100 ft. above LW. Max. distance between hatches is: No. 1 Berth, 234 m. and No. 2 Berth, 236 m.

CRANES: 2×5 ton mobile cranes.

STEVEDORES: Labour for stevedoring purposes is controlled by the Association of Employers of Waterside Labour. Requests for labour should be made through an Agent or Stevedore. Hours of work are usually 0800 – 2130 and 2130 – 0630. This labour operates at Lambert Jetty.

TANKERS: Usually berthed 'head-in' at the Lambert Service Jetty as the deeper water (35 ft.) is at the seaward end. Discharge is through an 8 in. pipe-line which is situated about the centre of the berth. Tankers at the Lambert Ore Jetty are moored with 2 anchors and stern moorings to the berth.

A basin has been dredged to accommodate tankers. Discharge is through either a 24 in. or 12 in. pipe-line via a pair of "Wheaton Arms".

CARGO GEAR: See "Melbourne".

FRESH WATER: Fresh water available at both wharves – ships supply own hoses with 2.5 in. quick release fittings.

FUEL: Not available.

TIME: GMT plus 8 hours.

STORES: Dry, chiller, freezer and Bond stores are available. It is suggested that ample notice be given.

AIRPORT: At least 1 jet flight per day to Perth from Karratha, flight time 2 hours.

CERTIFICATES: Ore/Oil carriers require inspection by surveyor if previous cargo oil. Gas-free Certificates over 24 hours old are not accepted.

CHARTS: AUS 55, 740, 741, 326 and 327, plain or Decca are available at Harbour Master's Office, also AUS 56 and Aust. Nat. Tide Table. Notices to Mariners, U.K. & Aust. are available for inspection.

REPATRIATION: Carried out regularly.

TELEPHONES: Not available at the berths.

HOLIDAYS: Iron ore is loaded 24 hours per day, except for one 24 hour period over Christmas (usually 2300/24th to 2300/25th December).

SHORE LEAVE: Crew members are allowed ashore by pre-arranged bus or taxi – nearest town is 10 miles away.

SHIP SUPPLY SERVICE: Port Walcott has limited ship-to-shore transport with the only non-fishing commercial craft being CRRIA owned tugs (2) and workboat. All these craft are available for emergency use.

Charter craft are available from either Lombardo Marine Group at Port Dampier or Elder Prince Marine at Port Hedland or Mitchell Marine Services at Point Samson.

The local ship's Agents are conversant with the availability of charter craft and ship Masters and Owners would be well advised to operate through their Agent.

A helicopter Pilot Service commenced at Port Walcott in July, 1984. This service may be available for emergency use. Contact should be made through the Harbour Master's Office.

Harbour Master Port Walcott, Department of Marine and Harbours, P.O.Box 61, Wickham, W.A. Tel: (091) 871106.

Elder Prince Marine Services Pty. Ltd., Port Hedland. Tel: (091) 731651.

Lombardo Marine Group Pty. Ltd., Karratha. Tel: (091) 853344.

GENERAL: Port Walcott is connected by sealed roads to the towns of Wickham, Roebourne, Karratha, Dampier and Port Hedland, each of which has a hospital and other facilities. The sealed road also extends to Perth, some 1,100 miles away.

Charts: AUS 740, AUS 741, AUS 742, AUS 326, AUS 327, AUS 58, AUS 56 and AUS 55 are stocked, either plain or in Decca (LD8) configuration. These charts are available at the Harbour Master's office. British and Australian Notices to Mariners may be inspected at this office.

Tides: Spring range is 5.70 m. (18 ft. 9 in.).

Stores: Providores operate here. Freezer, chiller, dry and Bond stores are available but advance notice is preferred.

Seamen's Club: A Mission to Seamen is situated in Wickham about 16 km. from ore berths. This club is attached to the Wickham Club Inc. and visiting seafarers are welcome as guests. A small bus (15 seater) will be made available on request. This bus is driven by volunteers and is operated at mutually convenient times.

Access: Access from the ship to the shore is by means of ship's accommodation ladder to a dolphin at the ore jetty and by means of a brow at the Service jetty.

Moorings: 1. Any wire ropes should terminate in a fibre rope tail of at least 20 m. length, including eye.

2. Spring lines should be laid out on deck, prior to coming alongside, for a distance of approx. 80 m. from the ship's lead. In the case of wires, the rope tail would be included in this 80 m. This arrangement should permit easy lowering vertically to the appropriate dolphin.

AUTHORITY: Department of Marine and Harbours, P.O.Box 61, Wickham, W.A. 6720. *Tel:* (091) 871106. *Contact:* Captain H. I. Evans, J.P., Harbour Master. Office located at Point Samson.

AGENT: Sub-agent of Patrick Agencies, Fremantle.

RAPID BAY, S.A.: 35.32 S. 138.12 E.

LOCATION: On Eastern shore of St. Vincent's Gulf about 55 sea miles South of Port Adelaide.

PORT LIMITS: 1 mile radius of jetty head.

DOCUMENTS: As for Port Adelaide if overseas entry.

PILOTAGE: Pilotage not compulsory. Pilot available from Adelaide if required. Call "Rapid Bay" on VHF Channel 16 for clearance to berth. No launch for lines. Ample supply of heaving lines to be available on approaching berth – grappling hooks used from ashore.

ANCHORAGES: In fair weather, anchor 1 mile due North of jetty head.

In bad weather, best to anchor in Nepean Bay (Kangaroo Island).

RESTRICTIONS: Daylight berthing only recommended.

MAX. SIZE: LOA 165 m. Jetty 188 m. long, in 113° – 293° direction.

HEALTH: Customs informed of ETA which is first port of call from overseas or if on overseas documents.

RADIO: ETA cables should be by telegram to "Adelcem Adelaide. S.A." Tel: 08-490400.

VHF: Channel 16 for calling.

Channel 12 for relaying berthing and loading instructions etc.

Station not manned at all times.

RADAR: Not available.

TUGS: None available.

BERTHING: Generally starboard side to as tide nearly always sets S.W.

Prevailing wind S.W. – S.E.

Max. draft 28 ft. MLWS.

Fixed head loading boom.

Vessel warps along wharf.

Loading rate approx. 1,500 t.p.h.

CRANES: None.

BULK CARGO FACILITIES: "T" shaped jetty 1,600 ft. long.

"T" shaped jetty 737 ft. long.

Depth 28 ft. MLWS.

Height of chute above water MLWS 10.2 m.

Fixed chute extends 10.8 m. beyond jetty fender line.

Maximum loading rate 1,500 t.p.h.

Cargo – limestone.

SPECIALISED CARGO HANDLING FACILITIES: None.

STEVEDORES: None available.

MEDICAL: Require notice on arrival or by telegram. No hospital available. Nearest at Victor Harbour. Nearest doctor at Yankalilla (16 miles from Rapid Bay).

TANKERS: No facilities.

DENSITY: 1030.

FRESH WATER: Not available.

FUEL: Not available.

FIRE PRECAUTIONS: Normal precautions.

CONSULS: None.

REPAIRS: No facilities.

DRY DOCKS: None.

SURVEYORS: Lloyd's Surveyors and Agents available from Adelaide.

GANGWAY/DECK WATCHMEN: None available.

HATCHES: Controlled by crew.

CUSTOMS ALLOWANCES: If first port of call, Customs will attend from Adelaide.

CARGO GEAR: Loading by fixed boom on jetty head.

REPATRIATION: No facilities.

AIRPORT: Nearest airport at Adelaide approx. 60 miles from Rapid Bay.

TIME: (G.M.T. plus 9.30 hours) Daylight saving November to March inclusive.

HOLIDAYS: All public holidays, however, loading crew can be arranged.

POLICE/AMBULANCE/FIRE: Police Tel: (085) 58.2014 (Yankalilla). Ambulance Tel: (085) 52.2111 (Yankalilla and Victor Harbour). Adelaide Brighton Cement Ltd. owned ambulance on site. Fire Tel: (085) 58.2000 (Yankalilla).

TELEPHONES: On shore only.

SERVICES: None.

SHORE LEAVE: At Master's discretion.

IDENTIFICATION CARDS: Not required.

REGULATIONS: Normal.

DELAYS: None.

DEVELOPMENTS: None.

AUTHORITY: Department of Marine and Harbours, P.O.Box 19,293 St. Vincent Street, Port Adelaide, South Australia 5015. *Tel:* (08) 470611. *Telex:* AA 82525. *FAX:* 470605. *Contact:* Captain R. D. Pearson, Director – Port and Marine Operations. Captain J. R. Page, Senior Maritime Officer – Marine Safety.

AGENT: Sub-Agent of Patrick Agencies, Adelaide.

ROCKHAMPTON, (Port Alma) Queensland: 23.24 S. 150.33 E. (See Plan)

CERTIFICATES/DOCUMENTS: All documentation carried out by ship's Agents either in Rockhampton or at main Agent's office. Also see "Melbourne".

PILOTAGE: Agent notifies Pilot of ETA, and boarding time then determined by Pilot, taking into consideration circumstances prevailing.

Pilot boards from 50 ft. white launch. Pilots can be contacted by VHF Channels 8, 12 and 16, or radio-telephone 2182 and 2760 kHz.

RESTRICTIONS: Channel depth 24 ft. LWOST. Berth depth 32 ft. LWOST. Keel clearance of 2 ft. required. Max. draft dependent on height of tide.

ANCHORAGES: Anchorage for Port Alma is Timandra Buoy, approximately 13 miles from Port. Vessels *Cleared* to enter may anchor at Sea Hill.

HEALTH: Port Alma is a first port of Entry for overseas vessels and full quarantine and customs facilities are available when required. A doctor is in attendance for Quarantine purposes, and there is a quarantine anchorage at Sea Hill Point on the approach channel.

The Port is also a designated timber port, and facilities are available for the issue of Derat Certificates. Fumigation services for both ships and cargo are provided by private firms based at Rockhampton, and under the control of the Commonwealth Department of Health.

RADIO: VIR Rockhampton.

VHF: Harbour Board call sign: "Port Alma Wharves" Channel 16, 67, 6 and 12. Listening watch on Channel 16 when vessel due at Fairway Buoy.

TUGS: Tug assistance obtainable if required from Port of Gladstone.

BERTHING: Berth at Pilot's discretion after receiving advice from Agent as to ETA. Berths allocated by Port Manager.

Berth No. 1: Berth has a concrete deck 18.5 m. wide and 169 m. long (554 ft.) constructed to take a superimposed weight of 5 cwt. per sq.ft. This berth is suitable for all general cargo, including frozen meats and other meatworks products. There is a mooring dolphin situated 43 m. (140 ft.) North of this berth, which can safely accommodate mooring lines from vessels required to moor over the North end of the berth.

Berth No. 2: Berth has a concrete deck 18.5 m. wide and is 122 m. long (400 ft.), constructed to take a superimposed weight of 7 cwt per sq.ft. This berth is suitable for all types of cargo including containers and is equipped with a fixed leg crane with a S.W.L. of 25 tonnes. The pivot point of the crane is situated 22 m. (72 ft.) from the junction of No. 1 and No. 2 Berths and 7.3 m. (24 ft.) from the outside line of the berth fenders. The S.W.L. of 25 tonne is at radius of 33.5 m. (110 ft.) with the hook 24.3 m. (80 ft.) above the deck. There is a mooring dolphin situated 49 m. (160 ft.) South of this berth, which can safely accommodate mooring lines from vessels required to moor over the South end of the berth.

This berth is in a continuous line with No. 1 Berth, to provide 291 m. (954 ft.) of mooring space plus the above mentioned dolphins at either end.

Berth No. 3: Berth consists of 4 berthing dolphins in line with No. 1 and 2 Berths with mooring dolphins at both ends to give an overall length of 238 m. (780 ft.). It is normal practice to place head lines on South end of No. 2 Berth from larger vessels using the dolphin berth. There is a distance of 49 m. (160 ft.) between the South end of No. 2 Berth and the mooring dolphin. All dolphins are of concrete construction.

This berth is currently used for loading bulk salt and discharge of petroleum products.

Dry Shed Storage: A store shed is provided adjacent to No. 1 Berth and is available to shippers by prior arrangement. It is of steel frame construction with non-flammable metal walls. The western wall has continuous sliding doors and at each end (i.e. North and South) there are double metal roller doors. A sliding metal door is situated at the centre of East wall giving an opening of 6 m. (20 ft.).

Container Terminal: The Board has a container terminal available for use subject to prior arrangements. This terminal is suitable for both dry cargo and refrigerated cargo containers. Concrete pads have been designed to take containers stacked 2 high and electrical hook up points are adjacent to each pad.

The terminal is serviced by road and rail, has full security fencing, flood lights for night operation, with office space and telephone.

Equipment: The Board has available 4 fork-lift trucks of 6,000 pound lift capacity.

BULK HANDLING FACILITIES: The loading section of this facility is situated on Berthing Dolphin No. 2 and is in a fixed position, hence it is necessary to shift ship during loading operations. The unit is designed for a loading rate of 1,000 t.p.h. A weigh hopper is not provided and final tonnage loaded is responsibility of vessel's Loading Officer calculated by draft survey.

A. Height from wharf deck to underside of loading boom in working position is 23 m. (75 ft.).

B. Height from wharf deck to trimmer in retracted position is 16 m. (52 ft.).

C. Maximum extension of telescopic chute and trimmer in working position is 21 m. (68 ft.).

D. Maximum outreach of loading head is 16.5 m. (55 ft.).

E. Trimmer can be rotated and trimmer belt can be raised or lowered at the direction of the Deck Officer in charge of loading.

F. Dolphin berth deck is 6.4 m. (21 ft.) above water line at MLWOST.

CRANES: A 25 ton crane (fixed leg) is available on No. 2 berth to handle containers and other cargo.

STEVEDORES: Agent advises Stevedoring Company of ETA. Requisitions to be lodged for labour before 1300 hrs. on previous day. No requisition can be lodged from 1300 hrs. Friday to 1300 hrs. Monday.

TANKERS: Two petroleum companies have terminals at the Port (ESSO Australia and Ampol Petroleum) and bunkers can be arranged through ship's Agents. Petroleum products are discharged at No. 3 Berth. 10-inch disch. lines. No slop facilities. 1 berth 32 ft. LWOST.

Hazardous Cargo: The Port is authorised to handle exposives and other hazardous cargo. Fire protection service.

MEDICAL: All medical requirements carried out by Agent. Hospital available 40 miles from Port Alma.
FRESH WATER: Fresh water available by road transport only, necessitating road haul of 40 miles, average cost $40.00/1,000 gallons.
FUEL: Fuel oil and other bunkers can be arranged by road tankers from fuel terminals situated in Port Alma. Contact ship's Agent in advance.
FIRE PRECAUTIONS: Rockhampton Harbour Board has trained fire fighters on regular staff. Fire pumps and hoses available.
GANGWAY/DECK WATCHMEN: Crew.
OPENING/CLOSING HATCHES: Crew.
CUSTOMS ALLOWANCES: Under supervision by Custom's Department, 200 cigarettes or 1 lb. of tobacco each 10 days. Wine/Spirits, no definite information available.
CARGO GEAR: As per the Navigation Act. See "Melbourne".
IDENTIFICATION CARDS: See "Melbourne".
CONSULS: See "Brisbane".
REPAIRS: Minor repairs only.
REPATRIATION: Facilities available.
AIRPORT: Regular services 43 miles from Port Area.
TIME: GMT plus 10 hours.
HOLIDAYS: Christmas Day, Good Friday, April 25th and Waterside Workers' Picnic Day.
POLICE/FIRE/AMBULANCE: Tel. No. 000. 40 miles distance.
TELEPHONES: No provisions for placing telephone on board ship. Public telephone on Wharf.
GENERAL: The Port is serviced by both road and rail and land is available if required by Shippers subject to negotiation.

The Board has fire fighting equipment to meet requirements for handling hazardous type cargo and provides Linesmen and Line Launch for mooring of vessels.
AUTHORITY: Rockhampton Harbour Board. P.O.Box 9, Rockhampton, Queensland 4700. *Tel:* (079) 276444, ext. 281. *Contact:* J. P. Stanley, Port Manager. *Tel:* (079) 346931 (Port Office), (079) 331728 (after hours). C. R. Monro, Assistant to Port Manager, (after hours: (079) 346103).
AGENT: Sub-Agents of Patrick Agencies, Gladstone.

SPRING BAY, Tasmania: 42.33 S. 147.56 E. (See Plan)

DOCUMENTS: As for all Australian ports.
PILOTAGE: Compulsory. Pilot boards from a tug (black hull, red funnel with black top), on a line joining Pt. Home Lookout and Stapleton Pt. (see Chart AUS 170). ETA is usually sent to vessel's Agent 72 hours prior to vessel's arrival and confirmed 24 hours and 6 hours before arrival at the Pilot station. ETA should also be sent to Harbour Master, Hobart, VHF Channel 16, call sign "Hobart Harbour". The tug from which the Pilot boards leaves Spring Bay Wharf 30 minutes before a vessel is due at the pilot station, and also keeps a listening watch on VHF Channel 16.
ANCHORAGE: A good anchorage can be found in depths of 22 m. approximately 1.25 miles South of Windlass Bay.
RESTRICTIONS: The wharf is used exclusively by vessels loading wood chips from Tasmanian Pulp and Forest Holdings. The main wharf, on which the wood chip loader is situated, is 243.8 m. long with additional dolphins (3) and a mooring block for head, stern and breast lines. Ships are normally berthed starboard side to. The shiploader is a fixed structure and vessels loading are required to move up and down the wharf using their own lines. At present vessels are only berthed during daylight hours, but may leave during the hours of darkness at the discretion of the Pilot. Should a vessel require to immobilise her engines, application must be made to the Harbour Master; if permission is granted a tug will be required to stand by alongside.
MAX. SIZE: The minimum depth alongside the wharf is 10.7 m. and the mooring dolphins and ship loading facilities were designed to accommodate specialised ships with an overall length of 210 m. No difficulty envisaged in working ships having an overall length up to 243.8 m.
HEALTH: The local medical practitioner boards vessels after berthing and acts for the Commonwealth Department of Health. Immigration/Customs Officers travel by road from Hobart and board after Pratique has been granted. Quarantine Authorities must be informed of suspected disease or fever at least 18 hours before arrival. Also see "Melbourne".
RADIO: Hobart Radio, call sign VIH. Hours of duty EST (add 1 hour for Summer Time). Monday-Saturday inclusive 0730 – 1730 hrs. Sunday, 0800 – 1600 hrs.
TUGS: 1 tug is stationed at Spring Bay. When a ship is due a second tug is despatched from Hobart and remains in the port area throughout the vessel's stay. One of the tugs is used to embark and disembark the Pilot as well as assisting in berthing and unberthing. Should tugs be required to stand-by during loading operations an additional charge will be made in respect of crews' wages etc. It is customary to use the tug's lines, for which an additional charge is made.
MEDICAL: A local doctor is available and well equipped health clinics are situated at Triabunna (3 miles) and Orford (7 miles).
DENSITY: 1025.
FRESH WATER: Limited supplies are available from wood chip factory.
FUEL: None laid on to the wharf. In an emergency limited supplies could be provided by road tankers from Hobart.
FIRE PRECAUTIONS: No special fire precautions other than non-smoking or lighting of fires or use of naked lights.
GANGWAY/DECK WATCHMAN: None available.
OPENING/CLOSING HATCHES: Hatches opened by the ship's crew.
CERTIFICATES: Register, Load Line Certificate, Derat Certificate, Light Dues, Articles of Agreement, Clearance from previous Port.
CUSTOMS ALLOWANCES: See "Melbourne".
IDENTIFICATION CARDS: See "Melbourne".
CONSULS: None, nearest at Hobart.
REPAIRS: No facilities available for major repairs, but the wood chip factory may be able to assist in minor repairs. Local Hobart firms available.
REPATRIATION: Facilities available through Hobart.
AIRPORT: Hobart Airport is situated 49 miles from Spring Bay Wharf. Frequent services operate to the mainland and New Zealand from where services operate world wide.
TIME: Local time (Eastern Standard Time) 10 hours ahead of GMT. Summer Time in force October to March when clocks advanced 1 hour.
HOLIDAYS: See "Hobart". Ships may be loaded on days which are regarded as holidays in Hobart.
POLICE/AMBULANCE/FIRE: Police, 573116; Ambulance, 573129; Fire, 573187.
TELEPHONES: A telephone is connected to all vessels on arrival.
AUTHORITY: Marine Board of Hobart, G.P.O.Box 202B, Hobart 7001. *Tel:* 346722. *Telex:* 58319. *FAX:* (002) 343169. *Contact:* Captain J. M. E. Lucas, Harbour Master.
AGENT: See "Hobart".

STRAHAN, Tasmania: 42.10 S. 145.20 E. (See Plan)

PORT LIMITS: "Port of Strahan" means all waters of Macquarie Harbour and all bays and estuaries opening into that harbour, but not beyond an imaginary line bearing 000° (True) for a distance of 1.20 km. from Watts Hill and thence bearing 090° (True) to the shore line.
DOCUMENTS: As for all Australian Ports.
PILOTAGE: Pilotage is compulsory for all vessels exceeding 35 m. in length. All Pilots are stationed at Hobart and special arrangements must be made in advance if a Pilot is to be provided. Usual minimum notice is 24 hours by contacting Marine Board of Hobart by telephone 002.34 6722 or telex Marhob 58319. The Wharf Officer at Strahan may be contacted on telephone No. 004.71 7291.

The Pilot Boarding Ground is outside the bar (Chart B.A. 3531 – Lat. 42° 12.0′ S., Long. 145° 13.0 E.). The pilot launch is fitted with VHF radio (Channels 16, 12, 8 and 6) and the Pilot will advise the ship by radio of the time he intends to board.
ANCHORAGE: There are no safe anchorage positions outside the Port of Strahan. The fairway is unprotected from the weather and during North-Westerly gales the outside bar breaks heavily making entry impossible.
RESTRICTIONS:

(i) Navigation within the port for vessels requiring a Pilot is only during daylight hours.
(ii) The entrance to Macquarie Harbour is 70 m. wide and very strong tidal streams can be experienced – up to 6 knots.
(iii) The tides are unpredictable. In Westerly gales the flood tide can run for 20 hours and when the wind backs to the South the ebb can run out for 20 hours.
(iv) A bar having a least depth of 5.5 m. exists outside the entrance, however the lead depth in the inner channel is 4.27 m.

MAX. SIZE: Largest vessel recently – "Pacific Bold", LOA 66.45 m., draft 4 m.
HEALTH: Australian Commonwealth Rules apply. The local medical practitioner boards vessels after berthing and acts for the Commonwealth Department of Health.
RADIO: See "Hobart".
TUGS: None available and not required.
BERTHING: Two wharves – depths varying from 3.7 m. to 5.5 m. alongside. The port is now mainly used by fishing vessels.
MEDICAL: The nearest hospital and doctor at Queenstown (30 miles).
FRESH WATER: Limited fresh water available from town water supply.
FUEL: Bunkers may be obtained by road tanker.
GANGWAY/DECK WATCHMEN: None available.
OPENING CLOSING HATCHES: Hatches are opened by ship's crew.
AIRPORT: A small airport is located 3 miles from Strahan.
AUTHORITY: Marine Board of Hobart.
AGENT: See "Hobart".

SYDNEY, N.S.W.: 33.55 S. 151.12 E. (See Plan)

PORT LIMITS: *Seaward Port Limits:* An arc of a circle of 3 nautical miles radius, centred on Hornby Light (which is at Lat. 33° 50.1′ S., Long. 151° 16.8′ E.).
DOCUMENTS: 2 copies Form M&S11 (List of Crew); 1 copy Form 42A (Store list); 1 copy Form 5 (Articles Owned or in Possession of Master, Officers or Crew); 3 copies Form C&E886 (Ports of Call); 1 copy Form QA3 (Declaration of Animals Carried as Cargo); 1 copy Form QA4 (Declaration of Ship's Pets); 1 copy Form QA5 (Shipmaster's Bond to Cover Ship's Pets); 2 copies Form AQ360 (Health Report). Of the above, Form 42A and Form 5 need only be compiled at the first port of call in Australia.

Ship's Agents are required to submit 2 copies of Cargo Manifest, and at least 2 sets of Bills of Lading. These are usually received direct from the loading port, and so need not be on board.

Ships carrying dangerous goods must obtain special approval to enter port (see "Entry and Departure Restrictions").

PILOTAGE: Compulsory for seagoing commercial ships (unless specifically exempted). Preliminary arrangements for a Pilot must be made through a local Agent accredited by the Port Authority.

All seagoing commercial ships (including those exempted from pilotage) are to report to "Sydney Maritime" on VHF Channel 12 when 4 hours, and again when 2 hours, from the port. When 5 miles from the port such ships are to report to "Harbour Control" on VHF Channel 13. Also see "VTS and VHF".

"Harbour Control" will instruct the ship what time to be at the Pilot Boarding Ground or, if no Pilot booking has been received, will advise the ship to contact the Agent. The Pilot Boarding Ground is at Lat. 33° 50.1′ S., Long. 151° 19.8′ E., which is 2.5 miles due East of Hornby Light. Ships are not to proceed Westward of the Pilot Boarding Ground without specific instruction by "Harbour Control" or the pilot vessel.

The pilot vessel is a 15 m., aluminium, semi-planing vessel, with metallic grey hull and yellow-orange topsides; the word "Pilot" is prominently displayed on each side of the deckhouse. The pilot vessel operates from a shore base within the harbour. When proceeding to a ship the pilot vessel will call on VHF Channel 13 and, after changing to a working frequency, will give Pilot boarding instructions.

In general, a ship which is about to take Pilot should steer a course which puts the sea on the quarter opposite to that on which the pilot ladder is rigged. The ship should have about 7 knots headway as the pilot vessel comes alongside.

The bottom of the pilot ladder is to be 2.5 m. to 3 m. above the waterline. The ladder is to be rigged (if possible) through an opening in the bulwarks or guard rails (or through a door in the ship's side). If there is no available opening in the bulwarks or guard rails, steps (with handrails) shall be securely fastened inside the bulwarks or guard rails, leading from the top of the bulwarks or guard rails to the ship's deck.

On each side of the ladder there is to be a clean handrope of 32 mm. (diameter) manila rope. The handropes are to be led through stanchions, one metre high, fixed to the ship's bulwarks or guard rails. There are to be no knots in the handropes. A tripping line may be used, but is to be attached not lower than the bottom spreader (which is to be the fifth step from the bottom).

If the highest point of a pilot ladder would be more than 9 m. above the waterline the pilot ladder is to be rigged in combination with an accommodation ladder. The accommodation ladder is to be secured so as to prevent it swinging away from the ship's side. The pilot ladder, and the handropes, are to be secured to the ship's side above the lower platform of the accommodation ladder. The Pilot must be able to transfer safely and easily from the pilot ladder to the accommodation ladder. The accommodation ladder is to be rigged so that a person ascending the ladder is moving towards the ship's bow. The lower platform of the accommodation ladder is to be horizontal. The lowest point of the accommodation ladder is to be 6 m. to 7 m. above the waterline.

Pilot hoists are not favoured. If a hoist is used in a ship with freeboard not exceeding 9 m., a conventional ladder (with handropes) must be rigged immediately alongside the hoist, so that the Pilot can transfer safely and quickly to the ladder if the hoist fails. If a hoist is used in a ship with freeboard exceeding 9 m., a combination ladder must be rigged immediately alongside the hoist. *Note particularly* that a Pilot hoist is *not* accepted as an alternative to a combination ladder.

Master's should note that the Port Authority places great emphasis on the safety of it's pilots. Delays may occur if boarding arrangements are found to be substandard.

ANCHORAGES: There is no recommended anchorage off the port, but ships frequently anchor close Northward, off the suburb of Manly (see chart Aus. 200). The Port Authority cautions any ship anchoring off the port to keep a close anchor watch, because the area is susceptible to sudden, unpredicted changes of weather. Within the port there are several short-term anchorages (see "Berthing"). Mooring buoys are available for ships awaiting orders (see under "Berthing").

Restricted Area: There is a Restricted Area off the port bounded by a line drawn from North Head in a direction 090° (T) and a line drawn from Hornby Light in a direction 130° (T) and the arc of a circle of 3 nautical miles radius centred on Hornby Light. The mid-entrance markers, in line 294° (T), divide the Restricted Area into 2 sectors. The Northern sector is "Area A"; only ships which are entering the port may pass through "Area A". The Southern sector is "Area B"; only ships which are leaving the port may pass through "Area B". Anchorage is prohibited within the whole of the Restricted Area. The ship is not to be navigated along the line of the mid-entrance markers.

RESTRICTIONS: *Entry and Departure Restrictions:* Tankers which are not gas-free are not permitted to manoeuvre West of Bradley's Head during the hours of darkness.

Arrival at the following berths is restricted to daylight hours: all tanker berths, Point Piper Anchorage, Rose Bay Buoy, and Snails Bay Dolphins. Departure from the following berths is restricted to daylight hours: all tanker berths, and Nos. 1 & 2 Snails Bay Dolphins.

Arrival at, and departure from, Sydney Cove Passenger Terminal is not permitted during peak operating periods for commuter ferries (0730 – 0930 and 1600 – 1830 Mondays to Saturdays; 1200 – 1300 Sundays).

Except as indicated above, manoeuvring is generally permitted at any time of day. (For *tidal restrictions.* see "Restrictions-Underkeel Clearance" below).

Ships carrying dangerous goods must not enter port unless the ship's Agent has obtained from the Port Authority a certificate of "Approval for Vessel Carrying Dangerous Goods to Enter Port").

Underkeel Clearance, Tidal Restrictions and Minimum Draft: Ships underway outward-bound are to maintain a minimum underkeel clearance equivalent to 10% of ship's draft; for inward-bound ships this requirement is increased by 0.2 m. The controlling depth for calculating underkeel clearance is the berth depth (see "Berthing" or "Tankers") except at No. 1 Gore Bay (controlling depth 13.7 m.) and No. 2 Gore Bay (controlling depth 10.2 m.).

While alongside, ships are to maintain a minimum underkeel clearance of 0.6 m., except at No. 7 Glebe Island and No. 1 Balmain where the required clearance is 0.3 m.

Tankers proceeding to No. 1 Gore Bay with a draft exceeding 10.0 m., or length overall exceeding 250 m., or beam exceeding 36.5 m., or deadweight exceeding 80,000 tonnes, are to take Pilot 1.5 hours before slack water. The absolute maximum permitted draft is 13.7 m., but the actual draft is to be such that, in the approach channel of 13.7 m. depth, the required underkeel clearance is achieved at 1 hour before slack water. Ships using the berth for the first or second time are further restricted by 0.7 m. and 0.4 m., respectively.

At other berths in Gore Bay, and at Snails Bay Dolphin berths, ships with a draft exceeding 10.0 m. are to arrive and depart berth at or near slack water.

At the AGL Wharf, Mortlake, ships are to berth at slack water.

Ships departing Balls Head berths with a draft exceeding 10.0 m. are to depart on the flood tide.

The departure of ships from No. 1 Balmain and No. 7 Glebe Island is timed to give the required underkeel clearance at 1.5 hours after time of departure.

In all other cases berthing and unberthing is at any state of tide, provided the required underkeel clearance is maintained.

The *minimum* permissable draft for a ship manoeuvring within the port is equivalent to the following percentages of the ship's length overall:

Ships not exceeding 100,000 tonnes deadweight: Forward 2%, Aft 3%.

Ships exceeding 100,000 tonnes deadweight: Forward 3%, Aft 4%.

MAX. SIZE: In general, the maximum permitted size of ships is governed directly by berth length and depth (see "Berthing" and "Tankers") and by depth in approaches. Also see "Bulk Loading Facilities" and "Restrictions – Underkeel Clearance".

HEALTH: All overseas ships (at first port of entry into Australia *and* at any subsequent ports in Australia) are subject to quarantine until Pratique is granted, or until the ship is released from quarantine. (Treatment of crew members for illnesses other than quarantineable diseases is carried out by private practitioners arranged through the ship's Agent). Vaccinations are not normally required (see "Medical").

Radio Pratique may be requested by any ship, 12 to 24 hours before arrival in port (or upon shorter notice in exceptional cases). The request is normally made through the ship's Agent, but a ship's Master can send the request direct to the Duty Shipping Quarantine Officer (telex AA25310) via Sydney Radio. The request must include answers to the following questions:

A. Name, type and nationality of ship?

B. Itinerary for last 21 days? (If over 21 days from last port, give name of port and date of departure).

C. Name of first Australian port, and ETA?

D. Number of crew?

E. Number of passengers?

F. Have you had any deaths on the voyage? If so, give details

G. Have you had any cases of illness during the last 21 days with a fever of 38 degrees Celsius or above, and accompanied by: (a) rash, jaundice, or glandular swelling; or (b) diarrhoea lasting longer than 24 hours?

H. Have you had persons suffering from venereal disease during the voyage?

I. What live fish, birds, reptiles or other animals are you carrying? (Ship's pets should be mentioned).

J. Have you carried livestock on previous voyages in the last six months? If so, advise type of livestock, date of voyage, and ports visited. Have all stock-carrying compartments been thoroughly cleaned and disinfected?

K. Do you request Radio Pratique, or radio approval to berth?

Note that if the Radio Pratique request is telexed or telegrammed (whether by Master or Agent) it may be in an abbreviated form, such as:

"A: Southern Express, container ship, Italian. B: London, Lisbon, Cape Town. C: Sydney 151600H. D: 20. E to H: nil. T: one dog. J: nil, K: Radio Pratique."

It is normally the ship's Agent who is informed whether or not Radio Pratique has been granted. This information is only radioed direct to the ship if the Master made application direct. A "Q" flag need not be displayed if Radio Pratique has been granted. Such Radio Pratique is valid only for the ship's first port of entry. (If the ship's berthing is delayed the Radio Pratique will remain valid for the port, provided conditions on the ship do not change). After the ship has berthed, a Quarantine Officer will board to confirm that there has been no change in circumstances since the Radio Pratique message was sent. When satisfied, the Quarantine Officer will issue a Pratique Certificate valid for all Australian ports.

If Radio Pratique is not confirmed (or not requested) the "Q" flag (or quarantine lights at night) must be displayed. The Quarantine Officer (and Customs Officers) will board ship inside Sydney Heads (unless radio permission to berth has been granted). The Quarantine Officer will examine all persons having illness or infectious disease, as notified by the ship's Master. The Quarantine Officer will also receive the "Primary Health Report". When satisfied, the Quarantine Officer will issue a Pratique Certificate for all Australian ports. The "Q" flag may then be lowered, and the ship may proceed to her berth.

Notwithstanding that Pratique for all ports may have been granted, the Master will still be responsible for reporting any cases of infectious diseases which may subsequently occur while the ship is in Australian waters. Such report is to be made by radio if the ship is at sea when the case is discovered.

RADIO: Sydney Radio (call sign "VIS") provides a full range of Radiotelegram (RTG), Radiotelephone (RTF), Very High Frequency (VHF), and Telex Over Radio (TOR) services.

VTS/VHF: There is a "Port Operations Centre", which controls the Vessel Traffic Management System of the port. The Centre operates continuously. It may be contacted by VHF (see below) or by telephone (02) 240 2000, telex AA 27568 MSBOPS, or facsimile (02) 27 7804. The Centre operates the following VHF stations:

Call sign "Sydney Maritime" – calling and working Channel 12. Area of coverage from 50 miles North of Newcastle to 50 miles South of Port Kembla and 50 miles to seaward (through an interconnected system of remote stations). Initial contact with the port should be made through this station (see "Pilotage"). "Sydney Maritime" also receives arrival messages from ships bound for Newcastle, Botany Bay and Port Kembla, and relays these messages to the port concerned.

Call sign "Harbour Control" – calling and working Channel 13. Area of coverage – within 5 miles of the port. This station controls the Vessel Traffic Management System (VTS) for the port; broadcasts navigational, meteorological, and tidal information at 5 minutes past each hour; and allocates channels for ship/tug communication (such channels comprise 6, 8, 77 and 72, in that order of preference).

Ships within 5 miles of the port must maintain continuous listening watch on Channels 16 and 13 (or Channel 16 alone, if a dual watch is not possible). Ships underway within the port *must* maintain continuous listening watch on Channel 13.

When the ship arrives at 5 miles from the port "Harbour Control" is to be notified (see "Pilotage"); and the ship is to obtain permission from "Harbour Control" prior to entering the port. One hour prior to ship's departure "Harbour Control" is to be notified; and the ship is to obtain permission from "Harbour Control" prior to departing the berth.

Both inwards and outwards ships are required to report (to "Harbour Control") passing each of the following locations (if applicable): Sea Buoy, Bradley's Head, Fort Denison, and Longnose Point. During daylight hours the ship is to display a numeral pendant indicating to which area of the port she is bound; this signal is very important, because it gives the ship right-of-way over pleasure vessels).

Safety, urgency and distress calls should be made on VHF Channel 16, which is continuously monitored by both "Sydney Radio VIS" and "Sydney Maritime".

RADAR: There is a limited port radar service covering the approaches to the port and the outer harbour area. Ships seeking radar information should contact "Harbour Control" (see "VTS/VHF").

TUGS: There are 8 modern, twin-screw tugs with bollard pulls of 30 tonnes to 45 tonnes. These tugs are operated by:

J. Fenwick and Co. Pty. Ltd., P.O.Box 82, Balmain, NSW 2041. Tel: (02) 810 0178. Telex: AA25067.

Waratah Towage Pty. Ltd., 37 Pitt St, Sydney, NSW 2000. Tel: (02) 27 7931. Telex: AA25195. FAX: (02) 272 3509.

A fleet of small tugs is operated by:

Stannard Bros. Launch Services Pty. Ltd., P.O. Box 92, Balmain, NSW 2041. Tel: (02) 810 0537. Telex: AA20149. FAX: (02) 810 6114. This company also provides the port's linespersons.

Orders for tugs for Saturday and Sunday should be placed by 1530 hrs. on Friday. Orders for tugs for weekdays should be placed by 1530 hrs. the previous day. Orders must be placed by the ship's local Agent.

Tugs normally join a ship in the vicinity of Fort Denison. Tugs always take a ship's line when they are to tow from their hook, but may use their own line when making fast alongside. There is no extra charge for using tugs' lines.

The general requirement for tugs is:

LOA under 45 m.	None
LOA 45 m. to under 75 m.	1 small tug
LOA 75 m. to under 100 m.	2 small tugs or 1 large tug
LOA 100 m. to under 125 m.	1 large tug and 1 small tug
LOA 125 m. to under 185 m.	2 large tugs
LOA 185 m. to under 250 m.	3 large tugs
LOA 250 m. and over (by consultation with Harbour Master)	

For tankers and bulk carriers exceeding 125 m. LOA the general requirement is varied as follows:

carrying less than 25,000 tonnes cargo	2 large tugs
carrying 25,000 to under 45,000 tonnes cargo	3 large tugs
carrying 45,000 to under 80,000 tonnes cargo	4 large tugs
carrying 80,000 tonnes cargo, and over	5 large tugs

The general requirement is reduced in the following circumstances:

One less tug (inwards and outwards) if ship has a bow thruster which:
(a) was found to be effective when the ship previously called; and
(b) is currently operational.

One less tug (outwards) if:
(a) the ship is berthed "head out"; and
(b) any berth ahead of the ship is clear; and
(c) weather is fine.

If both of the above circumstances apply, the total reduction is one only.

The general requirement is increased in the following circumstances:

One extra tug if the ship is a car-carrier exceeding 20,000 gross (as calculated by the Port Authority).

For a ship without main propulsion:
one extra tug if ship does not exceed 20,000 gross;
two extra tugs if ship does exceed 20,000 gross.

The requirement at mooring buoys is:

	Inwards	*Outwards*
LOA under 75 m.	None	None
LOA 75 m. to under 185 m.	1 large tug	1 large tug
LOA 185 m. to under 230 m.	2 large tugs	1 large tug
LOA 230 m. and over	2 large tugs	2 large tugs

Tug assistance is not required at anchorages unless the ship exceeds 215 m., in which case 2 tugs are required for a deep-draft ship, and one for a partly-laden ship. Such tugs stand-by the ship throughout the period of anchorage.

Except at No. 7 Glebe Island, no tugs are necessary for a shift-ship not exceeding 30 m. along the berth. One tug is required for a shift ship of more than 30 m. along the berth. A harbour removal to another berth necessitates the full number of tugs as determined by the preceeding paragraphs.

Special variations are made to the above requirements for ships which have especially good, or poor, handling characteristics, and for large ships which are frequent users of the port. All of the above requirements may by increased in the event of adverse weather.

BERTHING: Except as indicated in "Bulk Cargo Facilities" and "Specialised Cargo-Handling Facilities" loading and discharging is by ship's gear (also see "Cranes"). Except where otherwise indicated the quoted depth is the least depth over the entire berth length; in many cases a greater depth is available if the ship does not require the full berth length.

Berth	*Nominal Length* (m.)	*Depth* (m.)	*Function*
No. 6 Woolloomooloo	142	10.7	Cars
No. 7 Woolloomooloo	217	12.2	Cars/Passengers

No. 2 Point Piper	180 radius	10.0	Lay-up

For tanker berths (see "Tankers"). Road access is available to all fixed berths. Rail access is available to the following berths: No. 1 Balmain; Nos. 3 and 4 White Bay; Nos. 1, 2 and 7 Balmain; Nos. 9, 10, 12, and 13 Pyrmont. The Royal Australian Navy has extensive fixed berthage, buoy berths, and dolphin berths in the port.

CRANES: *No. 11 Woolloomooloo:* 2 portal cranes 26.4 tonnes SWL. (Berth to be decommissioned – see note under "Berthing").
Nos. 9 and 10 Darling Harbour: 1 portal crane 26.4 tonnes SWL.
Nos. 1 and 2 Glebe Island: (comprising "Patrick's Terminal"). 2 single lift portainer cranes 35.5 tonnes SWL under spreader, 62 tonnes under hook. A third portainer crane (single lift, 35.5 tonnes SWL under spreader, 80 tonnes under hook) will be entering service in March 1987.
No. 4 White Bay: One twin lift portainer crane 45.7 tonnes SWL (currently out of commission for refurbishment). (The second portainer at White Bay has been permanently removed).
Nos. 3, 4, 5 Darling Harbour: 3 mobile container-handling cranes ("Coles Colossus"), owned by Patrick's Stevedoring Co. Pty. Ltd. Two of these cranes are "4200 Series" and have a tower height of 18 m.; a jib length of 27 m.; SWL 26 tonnes at 28 m. radius, 34 tonnes at 9 m. radius. The third crane, a "6000 Series" model, has a tower height of 18.7 m.; a jib length of 34.5 m.; SWL 29.5 tonnes at 33 m. radius, 45 tonnes at 12 m. radius.
Navy Dockyard, Garden Island: One fixed crane, SWL 254 tonnes.
Based at Cockatoo Island Dockyard: One floating crane, SWL 152 tonnes.

BULK CARGO FACILITIES: (For berth lengths and depths – see "Berthing"). (Ships may berth without hold ballast, because loading units are fully retractable).
No. 11 Woolloomooloo: Miscellaneous bulk handling berth. The berth has a hydraulic unloader and shore cranes with grabs (also see "Cranes"). (Berth to be decommissioned – see note under "Berthing").
CSR North and South Wharves: Bulk raw sugar unloading facility. The berth has 2 gantry grab cranes.
No. 7 Glebe Island: Wheat loading berth. The berth has a gantry with 4 loading units, which have luffing booms and telescopic spouts. Gross loading rate 1,600 tonnes/hour. Maximum beam 33 m. Maximum LOA: no designated figure, but governed by 183 m. maximum traverse of loader along wharf. Maximum draft: during loading, maximum draft depends on height of low water (minimum underkeel clearance 0.3 m.; berth depth 11.6 m. at datum); topping-off is permitted on last flood tide before sailing; final draft is governed by requirement to maintain 10% underkeel clearance in the approach channel of 12.2 m. depth. (Also see "Restrictions" – "Underkeel Clearance" and "note" at end of this section).
No. 8 Glebe Island: ICI bulk soda ash unloading berth. The berth has a mobile gantry with 2 pneumatic suction nozzles. Handling rate 125 tonnes/p.h. (maximum); 80 tonnes/p.h. (average). Maximum beam 13.7 m. Maximum length overall 100 m. Maximum draft: unrestricted for the size of ship using the berth. (Also see "note" at end of this section).
No. 1 Balmain: MSB coal loading berth. The berth has 2 electric gantries with average total loading rate of 800 tonnes/p.h. (maximum rate 1,250 tonnes/p.h.) Maximum beam 32.3 m. (but larger will be considered). Maximum length overall 245 m. Maximum draft – as for No. 7 Glebe Island. Maximum hatch coaming height 14.9 m. (Also see "note" at end of this section).
Balls Head: C & A coal transhipment terminal. Maximum loading rate 2,000 tonnes/p.h. Maximum beam 33 m. Maximum length overall 190 m. Maximum draft: during loading, the maximum draft depends on height of low water (minimum underkeel clearance 0.6 m.; berth depth 10.7 m. at datum, over outer 130 m. of berth length); topping-off is permitted on the last flood tide before sailing; maximum final draft 12.1 m. (Also see "Restrictions" – "Underkeel Clearance").
Note: Nos. 7 and 8 Glebe Island and No. 1 Balmain are in close proximity. To allow a ship to berth or unberth at No. 1 Balmain it is frequently necessary to shift astern a ship at No. 7 Glebe; in the astern position it is usually only possible to load the ship's forward hatches. A similar shift is sometimes necessary to allow a ship to berth or unberth at No. 8 Glebe Island. A concession in tonnage rates is allowed when a ship at No. 7 Glebe Island is shifted, but full rates are charged for Pilot, tugs and linesmen.

SPECIALISED CARGO HANDLING FACILITIES: *Containers:* Nos. 1 and 2 Glebe Island comprise a container terminal (Patrick's Terminal). Containers are also handled at Nos. 3, 4 and 5 Darling Harbour, using mobile cranes (see "Cranes").
Roll-on/Roll-off: Ships equipped with angled stern ramps are handled at Nos. 3, 4, 5, 8, 9 and 10 Darling Harbour. Nos. 5 and 6 White Bay comprise a Ro-Ro terminal for the trans-Tasman trade (Union Company Terminal); No. 5 berth is equipped with a shore ramp. (The shore ramp at No. 6 Darling Harbour has been decommissioned, and the ramp at No. 7 Darling Harbour has been removed).
Car-carrying: Car-carrying ships with side ramps and/or angled stern ramps are handled at Nos. 6 to 9 Woolloomooloo, No. 23 Pyrmont, and Nos. 3 and 4 White Bay.
Liquid Chemicals: Small quantities of liquid chemicals are handled at the tanker terminals (see "Tankers").
Bulk Oils: Handled at the tanker terminals (see "Tankers"). Vegetable and lube oils are occasionally handled at dry cargo berths.
Liquefied Gas: The ACL Wharf, Mortlake, occasionally handles small LPG carriers (see "Tankers").

Note: The sister port of Botany Bay has a major facility for the handling of liquid chemicals, bulk oils and liquefied gas.

BRIDGES: The majority of the port's berths lie beyond the Sydney Harbour Bridge, which is a single span, steel arch bridge. Maximum headway is 53.6 m. above chart datum at the centre (prominently marked). For 45 m. on either side of the centre there is not less than 53.0 m. headway. For a further 64 m. on either side there is not less than 51.5 m. headway. For a further 73 m. on either side there is not less than 49.9 m. headway. When in use, a painting gantry reduces these headways by 2.8 m.

Blackwattle Bay Cement and Coal Wharves lie beyond Glebe Island Bridge, which has a swing span opening of 18.7 m. width. The AGL Wharf, Mortlake, lies beyond Gladesville Bridge, but its headway is ample for the size of ship able to berth at Mortlake.

STEVEDORES: Patrick's Stevedoring Co. Pty. Ltd., G.P.O.Box 3918, Sydney, NSW 2001. Tel: (02) 660 5855. Telex: AA75754. Fax: (02) 660 2769.

Conaust (NSW) Pty. Ltd., G.P.O.Box 4084, Sydney, NSW 2001. Tel: (02) 290 2500. Telex: AA25564. Fax: (02) 290 1950.

Patricks Stevedoring operates:

Patrick's Terminal – a container terminal at Nos. 1 and 2 Glebe Island. Equipment includes 2 rail mounted transtainers; 6 rubber-tyred transtainers; 2 portainer cranes; and heavy fork-lifts.

The PAD/ScanCarriers Ro-Ro Facility at No. 5 Darling Harbour.

General, Ro-Ro, Lo-Lo, and Bulk stevedoring operations at any common-user berth in the port, using a fleet of 75 fork-lifts; 3 Coles cranes; and ancillary equipment.

Conaust Stevedoring provides General, Ro-Ro, Lo-Lo, and Bulk stevedoring services at any common-user berth in the port, using a fleet of 79 fork-lifts, and ancillary equipment. Conaust has a depot at Rozelle Bay for packing and unpacking containers, and for bonding and storing of containerised cargo and break-bulk cargo.

Normal hours of work at common-user berths are:

Mondays to Fridays: 0730-1430 (day shift) (basic rate); 1500-2200 (twilight shift) (1.5 times basic rate); 2300-0600 (midnight shift) (double rate).

Saturdays: 0730-1130 (double rate), or 0730-1430 (double rate). (Saturday worked only if the ship can complete cargo). (Continuous working of passenger ships and bulk oil ships is possible, by special arrangement).

Sundays: 0730-1430 (day shift) (2.5 times basic rate); 1500-2200 (twilight shift) (2.5 times basic rate); 2300-0600 (midnight shift) (double rate).

Labour for Monday to Friday shifts must be ordered not later than the morning of the day previous to requirement. Labour for Saturday and Sunday shifts must be ordered not later than Friday morning. Firm ETA's are consequently very important; the ship's agent should be advised immediately if the ETA changes, so that labour orders can be amended.

Main commodities handled are:

Imports – containers; motor vehicles; CKD's; lumber; paper products; heavy-lifts; steel; bulk oil and general cargo.

Exports – containers; steel; coal; grain and other bulk cargoes and general cargo.

The private terminals employ their own labour force of stevedores.

MEDICAL: Ship's agents can arrange medical attention without prior notice, but notice should be given if possible. Full hospital, medical, dental and ophthalmic services are available. If the ship has passed through a yellow fever zone crew must be inoculated against yellow fever. Otherwise, no inoculations or vaccinations are necessary, but they can be carried out if required.

TANKERS:

Berth	*Nominal Length* (m.)	*Depth* (m.)	*Company*
No. 1 Gore Bay	265	14.0	Shell Co. of Aust. Ltd.
No. 2 Gore Bay	190	11.1	Shell Co. of Aust. Ltd.
No. 3 Gore Bay	172	9.4	Shell Co. of Aust. Ltd.
No. 1 Berrys Bay	162	8.2	BP Aust. Ltd.
No. 2 Berrys Bay	183	9.5	BP Aust. Ltd.
Ballast Point	172	9.4	Caltex Oil (Aust.) Pty. Ltd.
Pulpit Point	167	7.8	Mobil Oil Aust. Ltd.
Chowder Bay	172	12.0	Royal Australian Navy
AGL Mortlake	100	4.2*	Australian Gas Light Co.

*(The quoted depth is available only over the outer 85 m. of berth length).

All berths are located in sheltered areas and are seldom affected by wind; no special moorings are required. Shore gangways available No. 1 Gore Bay only. Each terminal has first-response equipment for oil spills, and can readily call upon other terminals' equipment. The Port Authority has an oil spill combat team on continuous duty with an extensive range of oil spill combat equipment. Industry and Government have local, regional and national contingency plans for oil spill combat. Ship-to-ship transfers are seldom undertaken at this port, but floating fenders are available.

Cargo handling: No. 1 Gore Bay: line diameters 1×102 mm. and 4×254 mm.; maximum discharging rate 4,000 tonnes/p.h. (with crude oil, using 2 hoses); 350 tonnes dirty slops, 6,000 tonnes dirty ballast (total for terminal); S.G. 0.645 to 0.98; maximum temperature 50° Celsius; shore steam is available.

No. 2 Gore Bay: Line diameters 5×152 mm. and 1×203 mm.; maximum discharging rate 2,000 tonnes/p.h.; S.G. 0.645 to 0.98; maximum temperature 50° Celsius.

No. 3 Gore Bay: Line diameters 2×102 mm. and 10×152 mm.; maximum discharging rate 400 tonnes/p.h.; S.G. 0.845 to 0.98; maximum temperature 50° Celsius.

No. 1 Berrys Bay: Not currently in use.

No. 2 Berrys Bay: Line diameter 203 mm.; maximum discharging back pressure 1,050 kiloPascals; no slop facilities; S.G. 0.98 to 0.99; maximum temperature 45° Celsius; shore steam available only for fuel oil.

Ballast Point: Line diameters 102 mm., 203 mm. and 254 mm.; maximum discharging rate 1,000 tonnes/p.h.; no slop facilities; S.G. 0.84 to 0.95; maximum temperature 60° Celsius; no shore steam available.

Pulpit Point: Line diameters: Refined oil 203 mm., lube oil 102 mm., chemical 102 mm.; maximum discharging rates (at 700 kiloPascals); refined oil 400 tonnes/p.h., lube oil 200 tonnes/p.h., chemical 80 tonnes/p.h.; very limited product slop facility; no water slopping facilities; S.G.: refined oil 0.70 to 0.84, lube oil 0.85 to 0.92, chemical 0.65 to 0.85; minimum temperature 30° Celsius, maximum temperature 60° Celsius; shore steam available only for some speciality products (e.g. wax).

AGL Mortlake: Line diameter 152 mm.; maximum discharging rate 500 tonnes/day; no slop facilities; S.G. 0.855; average temperature 20° Celsius; no shore steam available.

DENSITY: The relative density throughout the port is 1025.

FRESH WATER: Fresh water is readily available at all berths. There is no restriction on quantity. The water is clean and sweet, and contains fluoride.

At fixed berths, delivery is from the town mains. The delivery rate is approximately 30 kilolitres/p.h. The charge at common-user berths was (at April 1986) $Aus 0.8 per kilolitre, plus $Aus 0.05 if the shore hoses were hired. Charges at private berths were generally similar.

At buoy and dolphin berths delivery is by tug. The quantity delivered by each tug varies from 40 to 100 kilolitres. The delivery rate is 35 to 60 kilolitres/p.h. The charge was (at April 1986) $Aus 7.00 per kilolitre.

FUEL: Fuel (and a wide range of lubricants) is available from:

Ampol Ltd, Locked Bag 1, P.O. Box Ermington, NSW 2115. Tel: (02) 858 8011, (02) 858 1088. Tlx: AA121325. Fax: (02) 858 2914. Grades: Marine Bunker Fuel Oil, 10-300 centistokes at 50° C. Light Marine Diesel Oil, 2.1-7.4 centistokes at 40° C. Gas Oil or Distillate, 2-5.8 centistokes at 40° C.

Orders accepted 0700 to 1540 (Mon-Fri). 48 hours' notice.

BP Australia Ltd, P.O.Box 14, Milsons Point, NSW 2061. Tel: (02) 922 9451. Tlx: AA20311. Fax: (02) 959 4291. Grades: Interfuel – viscosity 38.2 centistokes at 40° C. Light Diesel Oil – viscosity 2.721 at 40° C.

Orders accepted 0700 to 1400 (Mon-Fri). One week's notice.

Caltex Oil (Australia) Ltd, P.O.Box 3916, Sydney, NSW 2001. Tel: (02) 250 5000. Tlx: AA120244. Fax: (02) 27 6380. Grades: Marine Fuel Oil, 180 centistokes (max.) at 50° C. Marine Diesel Oil, 3.5 centistokes at 40° C. Distillate, 3 centistokes at 40° C.

Orders accepted 0700 to 1630 (Mon-Fri). 36 hours' notice.

Mobil Oil Australia Ltd., P.O.Box 1592, Sydney, NSW 2001. Tel: (02) 817 0411. Tlx: AA20408. Fax: (02) 816 4563. Grades: Bunker Fuel, 32-130 centistokes at 40° C. Diesel Gas Oil, 3 centistokes.

Orders accepted 0730-1600 (Mon-Fri). 48 hours' notice.

Shell Co. of Australia Ltd., P.O.Box 63, Parramatta, NSW 2150. Tel: (02) 682 8666. Tlx: AA177553. Fax: (02) 682 8667, (02) 78 8667. Grades: Marine Fuel Oil, 100 to 380 centistokes at 50° C. Light Marine Diesel Fuel, 1.8 to 5.8 centistokes at 40° C. Gas Oil (Distillate), 1.8 to 4.8 centistokes at 40° C.

Orders accepted 0800 to 1630 (Mon-Fri). 48 hours' notice.

Delivery by pipeline at tanker berths. Delivery at other berths – heavy fuel by bunker barge only ("Amorena": minimum 150 tonnes, maximum per load 1,100 tonnes; "Esar Sydney": minimum 100 tonnes, maximum per load 1,500 tonnes); light fuel and lubricants (bulk or drummed) by barge or truck.

FIRE PRECAUTIONS: There are no additional requirements beyond those internationally practised.

REPAIRS: Cockatoo Dockyard Pty. Ltd., Cockatoo Island, Sydney 2000. Tel: (02) 818 9201. Tlx: AA21883.

Jubilee Engineering Co. Pty. Ltd., P.O.Box 144, Balmain 2041. Tel: (02) 810 0115. Tlx: AA27418.

Storey and Keers Pty. Ltd., P.O.Box 93, Balmain 2041. Tel: (02) 810 0461. Tlx: AA20149.

Groom Bros. Pty. Ltd., 18 Munro St., North Sydney 2060. Tel: (02) 957 3855.

Cockatoo Dockyard is experienced in all types of repairs of steam, gas turbine and diesel machinery. Cockatoo provides extensive hull repair facilities; a machine shop for light, medium and heavy machinery; a "NATA" – registered metrology section; an electrical and electronic repair division; a hydraulics shop; a clean room (to 5 microns); water/grit blasting of hulls; metal bonding; shafting; general docking repairs and painting; slipping facilities for ships up to 400 tonnes. These services are available continuously.

Jubilee Engineering is experienced in the full range of ship repairs and general machinery requirements. Jubilee is a spare parts and service agent for most makes of engine. Jubilee's speciality is re-conditioning of high cost diesel engine spare parts.

Storey and Keers is experienced in engine, structural and plumbing repairs, pipework, painting and cleaning.

Groom Bros. is experienced in hull and engine repairs, overhauls, pipe renewals and steel febrication.

DRYDOCKS: Sutherland Dock, Cockatoo Island – length 210 m.

Fitzroy Dock, Cockatoo Island – length 145 m.

Captain Cook Dock, Garden Island – length 347 m.

(Captain Cook Dock is a Naval facility, but is available to merchant ships).

SURVEYORS: Private cargo inspectors are available from many companies, including:

Name	*Telephone*	*Address*
Avdall and Bozier	(02) 29 6443	44 Margaret St., Sydney 2000
Capt. Downes and Assoc's	(02) 969 1444	8 Lavoni St., Mosman 2088

Nippon Kaiji Kyokai	(02) 233 7751	AA71391	MLC Centre, Sydney 2000
Det Norske Veritas	(02) 922 1966	AA26447	77 Pacific Hwy., N. Sydney 2060

GANGWAY/DECK WATCHMAN: The owner of a ship secured at a shipping wharf is required to provide one watchman to maintain a continuous watch on the ship and the contained area in which the wharf is situated. The stevedoring companies are able to supply such watchmen. The approximate cost per day for a watchman was (in April 1986); normal days $Aus. 780; Sundays $Aus. 1140; Public holidays $Aus. 1310.

HATCHES: Hatches are normally opened and closed by ships' crew. However, if it is necessary to close hatches during loading in order to load containers on deck, the hatches are usually closed by wharf labour.

CUSTOMS ALLOWANCES: 200 cigarettes (or equivalent in tobacco products), and 1 litre of alcohol (opened) per crew member.

CARGO GEAR: Except as indicated under "Bulk Cargo Facilities" and "Specialised Cargo Handling Facilities" loading and discharging is by ship's gear. (also see "Cranes").

See under "VHF".

Lighters, of 100 to 400 tonnes capacity, are available from:

Harbour Lighterage Pty. Ltd., Oxley St., Glebe, NSW 2037. Tel: (02) 660 1922.

Stannard Bros. Launch Services Pty. Ltd., P.O Box 92, Balmain, NSW 2041. Tel: (02) 810 0537. Telex: AA20149. *Fax:* (02) 810 6114.

REPATRIATION: Full facilities are available for effecting crew changes and arranging any necessary repatriation.

AIRPORT: Sydney (Kingsford-Smith) Airport is 9 km. from the city centre. There are frequent flights to and from many national and international destinations, served by: Air India, Air New Zealand, Air Niugini, Alitalia, Ansett Airlines of Australia, British Airways, Cathay Pacific Airways Ltd., Continental Airlines, Garuda Indonesian Airlines, Japan Air Lines, KLM Royal Dutch Airlines, Lufthansa, Malaysia Airline System (MAS), Philippines Air Lines, Qantas Airways, Singapore Airlines, South African Airways, Trans Australia Airlines (TAA), TWA Trans World Airlines, Thai International, UTA French Airlines and Yugoslav Airlines (JAT).

TIME: During the greater part of the year the time kept (throughout New South Wales) is Australian Eastern Standard Time (AEST) ("Zone – 10", or "Kilo" time), which is 10 hours ahead of Co-ordinated Universal Time (UTC). UTC same as GMT.

From mid-Spring to late Summer (Southern hemisphere seasons) the time kept is New South Wales Summer Time (NSWST) ("Zone – 11", or "Lima" Time), which is 11 hours ahead of Co-ordinated Universal Time (UTC). Clocks are advanced 1 hour at 0200 hrs. (AEST) on the last Sunday in October; and are retarded 1 hour at 0200 hrs. (NSWST) on the first Sunday in March.

Note that the time kept in Victoria (the neighbouring state Southward) is the same as in New South Wales throughout the year. However, Queensland (the Neighbouring state Northward) does *not* advance to Summer Time.

HOLIDAYS: (Throughout New South Wales): January 1st*, (New Year's Day) January 26th*, (Australia Day); Good Friday and Easter Monday**; April 25th* (ANZAC Day); second Monday in June (Queen of Australia's Official Birthday); first Monday in August (Bank Holiday); first Monday in October (Labour Day); 25th December* (Christmas Day); 26th December* (Boxing Day).

*When any of these dates is a Sunday the next day (Monday) is a holiday. When 26th December is on a Monday the next day (Tuesday) is a holiday.

**Easter Day (the Sunday between Good Friday and Easter Monday) is generally the first Sunday after the first full moon after 21st March.

POLICE/AMBULANCE/FIRE: There are numerous stations around and adjacent to the port. The telephone number for all emergency services is 000 (tell the operator which service is required).

Both "Sydney Maritime" and "Harbour Control" (See "VTS/VHF") have direct lines to the emergency services. The Port Authority has an emergency service tug, with fire-fighting capability, on continuous standby. The Water Police service has patrol launches on continuous duty, and can summon helicopter assistance at short notice.

EMERGENCY CO-ORDINATION CENTRE: In the event of an emergency within the port appropriate contingency plans will be implemented by the port's Duty Harbour Master (for Marine emergencies) or the Police (for shore emergencies).

For marine emergencies beyond the port area the central authority (for the whole of Australia) is: Federal Sea Safety and Surveillance Centre, Canberra:

Tel: Reports and Enquiries (062) 47 6666 (toll-free).
"Ausrep" Enquiries (062) 68 7920.
Search and Rescue (062) 47 5244.
Telex: AA62349.
Fax: (062) 57 2036.

TELEPHONES: Telephones can be placed on board (by prior arrangement through ship's Agent) at all fixed berths owned by the Port Authority; at Snails Bay Dolphin Berths; and at most private berths. Telephones are not available at buoy berths, but VHF link calls can be freely made (even at fixed berths) by calling Sydney Radio on Channel 26 or Channel 23 (but check channel free before calling).

SERVICES: Sullage, garbage, and bilge slops disposal services are available. Shore Power (240V/15A/50Hz and 415V/30A/50Hz or 415V/60A/50Hz) is available at many fixed berths. Extension of certificates is possible. Many other services are available, including: compass adjusting; radio and radar repairs; charts and nautical publications; sounding and course recorder paper; Notices to Mariners (Australian, New Zealand, British, USA and Indian); and safety equipment.

BANKS: Almost 100 banks have branches or representative offices in the port, including the following (all addresses suffixed "Sydney NSW 2000")

Australia & New Zealand Banking Group Ltd., 20 Martin Place, Tel: (02) 227 1911. Telex: AA29800.

Australian Bank Ltd., 17 O'Connell St., Tel: (02) 264 8000. Telex: AA72253.

BNP Banking Group (Banque Nationale de Paris), 12 Castlereagh St., Tel: (02) 232 8733. Telex: AA20132.

Bank of America, 167 Macquarie St., Tel: (02) 221 1588. Telex: AA25041.

Bank of New Zealand, 333 George St., Tel: (02) 290 6666. Telex: AA23240.

Barclays International Australia Ltd., 25 Bligh St., Tel: (02) 233 6622. Telex: AA71237.

Commonwealth Bank, Cnr. Pitt St. and Martin Pl., Tel: (02) 238 3155. Telex: AA120345.

First National Bank of Boston, Qantas International Centre. Tel: (02) 241 1466. Telex: AA27087.

First National Bank of Chicago, 50 Bridge St., Tel: (02) 233 2875. Telex: AA23189.

Hong Kong Bank Group, 14 Martin Place, Tel: (02) 225 1888. Telex: AA24856.

Lloyd's Bank International Ltd., 35 Pitt St., Tel: (02) 239 5555. Telex: AA26115.

Midland International (Australia) Ltd., Cnr King and Clarence Streets, Tel: (02) 290 8800. Telex: AA24197.

National Australia Bank Ltd., 313 George St., Tel: (02) 239 0399. Telex: AA20300.

National Westminster Bank Ltd., MLC Centre, Tel: (02) 232 8744. Telex: AA24491.

Nordic Bank plc, AMP Centre, Tel: (02) 232 6866. Telex: AA26425.

Overseas Chinese Banking Corp. Ltd., 17 Bridge St., Tel: (02) 235 2022. Telex: AA74295.

Overseas Union Bank Ltd., 23 Hunter St., Tel: (02) 233 4211. Telex: AA75872

State Bank of New South Wales, 55 Elizabeth St., Tel: (02) 226 8000. Telex: AA74239.

Svenska Handelsbanken, 50 Bridge St., Tel: (02) 223 1866. Telex: AA72841.

Swiss Bank Corp, Australia Sq., Tel: (02) 251 1833. Telex: AA122270.

Westpac Banking Corp., 60 Martin Pl., Tel: (02) 226 3311. Telex: AA22891.

STORING: See "Prelims".

Ships can be stored by truck at all fixed berths, and by barge at all berths.

Dry cargo ships can take stores while the ship is working cargo; trucks and barges are permitted alongside. Tankers can also take stores while the ship is working cargo; barges are permitted alongside, but trucks are stopped at least 30 m. from the ship.

Fork-lift trucks are available only at dry cargo berths. Stores are normally loaded by ship's crew, but shore labour is available if required.

An "Application to Take on Board Ship's Stores" (Form 43) must be lodged with Customs by the ship's Agent. Once approval has been given by Customs, the Agent lodges an "Entry for Exportation of Customable and Excisable Goods" (Form B958) to allow goods to be delivered from bond.

SHIP SUPPLY SERVICE: Supply boats are provided by:

Stannard Bros. Launch Services Pty. Ltd., P.O.Box 92, Balmain, NSW 2041. Tel: (02) 810 0537. Telex: AA20149; Fax: (02) 810 6114.

A rendezvous point is arranged close outside the port entrance.

There is no advertised helicopter supply service available, but there are many helicopter operating companies who could provide such a service if requested. Arrangements can be readily made through "Sydney Radio" or "Sydney Maritime" (See "VTS/VHF") for a helicopter to evacuate sick personnel, or to place a doctor on board.

SHORE LEAVE: There are normally no restrictions on crew members' shore leave. Crew members are not required to carry identification documents while ashore (see "Identification Cards").

IDENTIFICATION CARDS: Under Section 23 of the Migration Act 1958/64, Masters of ships entering Australia from overseas are required to have in their possession an identity card (in an approved form) for each member of the crew (other than for crew members exempted as below). This provision is included in the Act to ensure that positive identification is available to Customs officers if a crew member deserts the ship. Cards can be prepared after arrival of the ship, but shore leave will be delayed until this has been completed (a photograph is required).

The following persons are not required to possess identification cards: citizens of Australia; citizens of New Zealand; Masters of all ships.

Citizens of the following countries need not complete identification cards, provided they possess a relevant Seaman's Identity Book or Discharge Book: Canada, Denmark, Fiji, Ghana, Hong Kong, India Israel, Italy, Japan, Malaysia, Norway, South Africa, South Korea, Pakistan, and United Kingdom.

All of the above documents must remain in the Master's custody at all times, and must be produced upon demand by Customs Officers.

REGULATIONS: There are regulations concerning oil, noise and smoke pollution; carriage and handling of dangerous goods; and safety. In the event of an alleged breach of such regulations the ship's Master may authorise the Agent (if agreeable) to accept any subsequent summons to appear in court on behalf of the Master; this avoids delaying the sailing of the ship.

DEVELOPMENTS: *Woolloomooloo:* All berths are scheduled fo decommissioning in early 1987, and redevelopment as a yacht marina.

Sydney Cove: No. 7 has been demolished.

Walsh Bay: All berths have been permanently decomissioned and are t be redeveloped for non-port purposes.

Darling Harbour: No. 7 Darling Harbour has been decomissioned; No. 8 has been temporarily decomissioned for modernisation; No. 26 has been permanently decommissioned; all berths Southward of No. 26 have been demolished, and the area is being redeveloped for non-por purposes.

Pyrmont: No. 8 has been temporarily decommissioned for refurbishmen of amenities. No. 25 has been permanently decommissioned, and is being redeveloped for non-port purposes.

SHIPMASTER'S REPORT: December 1982.

Bulk Loading Facilities: The coal Berth at Sydney is No. 1 Balmain at the head of White Bay above Sydney Bridge. The berth was upgraded a year ago but is not ideal for Panamax vessels, mainly due to location and draft problems.

The coal comes to the dock by train and is transferred onto the loading belt. There are 2 loading heads and together can load at 20,000 tons a day. Air draft not known but is in excess of 15 m., which allows this vessel to berth with hold ballast out. Vessels berth head in, starboard side to so loaders can reach all hatches.

The amount a vessel can load is governed by the tide. Once a vesse is declared for a tide and loading is resumed she is committed to sail on that tide.

Tugs: 4 tugs required for sailing, these are certainly necessary as vesse has to come stern first down the dock before being able to swing of Peacock Point.

Draft Restrictions: The shallowest channel patch is off Miller's Point approximately 45 minutes after unberthing.

Depth of Water at Load Berth: – 11.6 m.

Vessels must keep 0.3 m. below the keel at all times. This means tha vessels can load at the berth to 11.3 m. plus prevailing low tide.

Depth of water in Channel – 12.2 m.

Vessels must have 10% of draft below the keel on sailing. For vessels loading in excess of 11.3 m. draft the prevailing tide will have to be taken into consideration for both loading at the berth and sailing. Vessels completing on a tide must ensure that once past LW they sail on tha tide.

For *guidance only* I have set out below a list showing berth and channel drafts against the prevailing tide. Please ensure that the Berthing Master gives his approval of the draft prior to vessel advising other Parties.

			Max. Departure Draft	
Tide (m.)	*Max. Berth Draft* (m.)	*Channel Depth* (m.)	*Depart. Draft* (m.)	*10% under Keel* (m.)
1.0	12.3	13.2	12.00	1.20
1.1	12.4	13.3	12.09	1.21
1.2	12.5	13.4	12.18	1.22
1.3	12.6	13.5	12.27	1.23
1.4	12.7	13.6	12.36	1.24
1.5	12.8	13.7	12.45	1.25
1.6	12.9	13.8	12.54	1.26
1.7	13.0	13.9	12.64	1.26
1.8	13.1	14.0	12.73	1.27
1.9	13.2	14.1	12.82	1.28
2.0	13.3	14.2	12.91	1.29

AUTHORITY: The Maritime Services Board of New South Wales, Port of Sydney division. Postal address: P.O.Box 32, Sydney, N.S.W. 2001. Office address: 12th Floor, Gold Fields House, 1 Alfred Street, Sydney. *Tel:* (02) 240 2111. *Telex:* 72046 Msbspt. *FAX:* (02) 27 7892. *Contact* Harbour Master, Port of Sydney. (See also under "VTS/VHF" for details of Port Operations Centre numbers).

AGENT: *Head Office:* Patrick Agencies, P.O.Box 3918, 60 Margaret Street, Sydney, N.S.W. 2000. Tel: 233-6722. Telex: AA. 20618. FAX: (02) 251-1158. Cables: Rikpat.

Ships Agency Branch Office: Patrick Agencies, Sydney Branch, Suite No. 2, 12th Floor, ADC House, 189-193 Kent Street, Sydney, N.S.W. 2000. Tel: 233-6722 (as Head Office). Telex: 74093 A/B Rikpat. Cables: Rikpat, Sydney.

THEVENARD, S.A.: 32.09 S. 133.39 E. (See Plan)

PORT LIMITS: As marked on Chart AUS. 1200 (Approaches to Thevenard).

DOCUMENTS: All documents necessary for first entry vessels are as for other Australian ports (i.e. Customs, Health, etc.).

PILOTAGE: Compulsory. Pilots board approximately 2 miles seaward of Entrance Beacon (3 miles seaward of No. 1 Light Beacon). Pilot vessel "Eyre" 15 m. LOA orange hull and yellow superstructure. "Pilot" in black on superstructure. Vessels awaiting Pilot for extended periods should anchor approx. 235° – 4 miles from Entrance Beacon. Vessels approaching pilot station should take care not to approach the Entrance Beacon before Pilot has boarded owing to restricted sea room.

ANCHORAGES: Outer Anchorage as above. Inner Anchorage for vessels awaiting berth available in Murat Bay. This is a safe anchorage for several vessels at one time, with good holding ground. Pilotage is necessary to Inner Anchorage.

RESTRICTIONS: Daylight berthing only. Sailing at any time. Sailing times depending on tide. Tides may be greatly effected by prevailing weather conditions – adverse weather can cause a large depression below the predicted height. Channel depth 8.2 m. (27 ft.) LW. There is a minimum depth of 5.5 m. (18 ft.) in the swinging area off the berths.

MAX. SIZE: LOA 180 m., beam dependent on LOA as determined by Suez Canal formula.

Arrival drafts: As vessels are permitted to discharge clean ballast whilst alongside drafts should be as follows: Fore: 2 m. (min.). Aft: 6 m. (max.).

HEALTH: Radio Pratique available within 24 hours of arrival providing sufficient information is supplied. Quarantine/Health Officer will still board vessel in order to grant formal Pratique. Vessels arriving direct from other Australian Ports have Automatic Pratique, but Health Officer will still attend the vessel on arrival.

RADIO: ETA messages for Agents, Harbour Master, etc. may be routed through any Australian coastal radio station, the closest being Adelaide Radio (VIA), not less than 24 hours prior to arrival.

VHF: Channels available: 16, 12, 8, 6 and 67.

Channel 16 used for general call up, and Channel 6 usually used for Port operations. Call Sign: Thevenard Port Control. Hours of operation: Monday to Friday 0845 – 1700 hrs. except Public holidays, or by arrangement.

TUGS: One tug of 11.4 tonnes bollard pull (650 h.p.), "Wandana".

BERTHING: Berth dimensions: Length 198 m. (650 ft.). Width 30 m. (100 ft.). Draft subject to keel clearance of 0.76 m. (2 ft. 6 in.) for vessels up to 8.2 m. (27 ft.) draft, and 0.91 m. (3 ft.) for vessels over 8.2 m. (27 ft.) draft. One wharf, 2 berths, depth alongside 9.8 m. (32 ft.). Head in or head out berthing dependent on prevailing weather conditions at time of berthing.

CRANES: Nil.

BULK CARGO FACILITIES: Movable gantry and conveyor bulk loading plant. Single loading spout for each berth, however loading of only one vessel at a time is possible. The plant will be manned on a two shift basis for 24 hours, with overtime as necessary for vessels loading gypsum or salt, and from 0800 hrs. to 2300 hrs. (two shifts) Sunday to Friday if overtime required, and 0800 hrs. to 1200 hrs. Saturday for the loading of grain.

Bulk Handling Plant Rates: Wheat 400/450* tonnes per hour. Oats 200 tonnes per hour. Barley 480 tonnes per hour. Gypsum 900 tones per hour. Salt 800 tonnes per hour.

*Dependent on which silo grain is taken from.

SPECIALISED CARGO HANDLING FACILITIES: None.

BRIDGES: None.

STEVEDORES: Ordering of labour organised through Agents and Grain Handling Authority. Loading rates as above.

MEDICAL: Two private medical practices available (4 Doctors). Also two dental practices. District hospital located at Ceduna (distance 4 km.). Ambulance service also available, with connecting air ambulance service for transport to Adelaide, if necessary. Vaccination certificates as for all Australian ports.

TANKERS: No tanker facilities.

DENSITY: Average density 1027/1028.

FRESH WATER: Available at 20 tonnes per hour.

FUEL: Diesel oil available from permanent bunkering facility. Fuel oil available by road tanker providing sufficient notice is given of requirements (approximately 10 days).

FIRE PRECAUTIONS: Usual precautions necessary, having in mind danger of grain dust. Local Fire Brigade available. International shore connection should be connected.

CONSULS: None.

REPAIRS: Minor repairs possible.

DRYDOCKS: None.

SURVEYORS: (1) Cargo Surveyors available – will be arranged by Agents as required.

(2) Lloyd's Surveyor should be organised through principal Agents. Lloyd's Agent is at Port Adelaide.

Other Classification Society Surveyors also available in Australia with sufficient notice to Agents. None resident at Thevenard.

GANGWAY WATCHMEN: All vessels, regardless of nationality, must employ shore based Watchman, on shift basis, during any periods the vessel is not, or is unlikely to be, loading. Approx. cost $9.75 per hour plus overtime penalties.

HATCHES: Opening and closing by ship's crew.

CUSTOMS ALLOWANCES: Normal Australian allowances.

CARGO GEAR: Bulk loading only.

REPATRIATION: Can be achieved. Arrangements should be made through ship's Agent.

AIRPORT: 7 km. to airport. Kendell Airlines, 5 flights per week. 16 seater aircraft. Charter flights can be arranged.

TIME: Local time GMT plus 9.5 hours. Summer time (GMT plus 10.5 hours) late October to early March.

HOLIDAYS: New Year's Day; Australia Day (January); Good Friday; Easter Monday; Anzac Day (April); Adelaide Cup Day (May); Queen's Birthday (June); Labour Day (October); Christmas Day and Proclamation Day (December 26th)

The bulk loading plant operates on all public holidays except Good Friday and Christmas Day.

POLICE/AMBULANCE/FIRE: Police Tel: 782001. Ambulance Tel: 782404. Fire Tel: 782000.

EMERGENCY CO-ORDINATION CENTRE: "Coastwatch" (Australian Coastal Surveillance Organisation) free telephone call from all Australian ports by STD or reverse charge (062) 475244.

TELEPHONES: Telephones placed aboard ship on arrival. Cost approx. $40.00 plus $1.50 per day rental.

SERVICES: Tank and hold cleaning facilities available.

BANKS:

Australia and New Zealand Banking Group Ltd., Poynton Street, Ceduna, S.A. 5690. Tel: 782202.

State Bank of South Australia, Poynton Street, Ceduna, S.A. 5690. Tel: 782060.

Westpac Banking Group, Ponyton Street, Ceduna, S.A. 5690. Tel: 783000.

STORING: See "Prelims".

1. By truck.
2. —
3. Wharf access available for trucks.
4. Wharf access available for fork lifts.
5. Normal Customs Bond Regulations apply.
6. Labour available for storing.

SHORE LEAVE: No restriction.

IDENTIFICATION CARDS: Normal Australian ID cards necessary, but not required to be carried ashore.

REGULATIONS: No unusual regulations.

DELAYS: May be experienced due to awaiting tide or awaiting loading of other vessels during periods of heavy shipping.

AUTHORITY: Department of Marine & Harbours, Thevenard, S.A. 5690. *Tel:* (086) 782077. *Contact:* Harbour Master.

Department of Marine & Harbours, P.O.Box 19, Port Adelaide, S.A. 5015. *Tel:* 47-0725. *Telex:* 82525. *Cables:* Harbors. *Contact:* Captain D. Malcolm.

AGENT: Sub-Agents of Patrick Agencies, Adelaide.

THURSDAY ISLAND, Queensland: 10.35 S. 142.13 E. (See Plan)

DOCUMENTS/HEALTH: See "Melbourne".

PILOTAGE: Pilotage compulsory. ETA 24 hrs. before arrival stating max. draft and direction from which vessel arriving to: Harbour Master, Thursday Island. Further amended ETA if necessary prior to arrival. Pilot boards 1 mile South of Goods Island or Scott Rock Buoy as required. Harbour Master will advise boarding ground after receipt of max. draft and direction from which vessel arriving. Pilot vessel white hull, orange top, flying pilot flag. Vessel awaiting Pilot to anchor West of Black Rock in Normanby Sound or off Scott Rock.

ANCHORAGE: West of Black Rock in 5.5 fathoms. Nurses' Home over shoulder of Black Rock 098° (T) with two white beacons S.E. side Goods Island in line 005° (T).

RESTRICTIONS: Daylight movements only. Draft restricted to 23 ft. (7.01 m.) LWOST.

RADIO: Thursday Island "VII" via telex to Harbour Master's office, for ETA's etc.

VHF: Call sign "Thursday Island Harbour". Listening watch during working hours. Channels 67, 16, 12 and 6.

Torres Straits Pilots on VHF Channels 16 & 12. Pilot vessel on VHF Channels 16 and 6. Call sign "Reef Pilots". Watch maintained when vessels are expected.

TUGS: No tugs.

BERTHING:

Wharf	*Length (m.)*	*Depth (m.)*
Main	30.0	4.00
Engineers	27.5	4.20
Caltex	22.9	5.00
Horn	12.5	4.00

STEVEDORES: 0800 hrs. pick up for day work. 1000 hrs. notice for night work. 1600 hrs. Friday notice for week-end work. Mainly general cargo handled. Approximately 8 t.p.h.

MEDICAL: Notice of required medical attention with ETA message to Harbour Master. Hospital, four doctors available. Vaccinations etc., as per Commonwealth of Australia requirements.

DENSITY: Salt at all states of tide.

FRESH WATER: Available in limited quantities most of the year.

FUEL: Bulk distillate available at Caltex Jetty, approx. 20 t.p.h.

GANGWAY/DECK WATCHMEN: Crew member on gangway sufficient.

OPENING/CLOSING HATCHES: By Stevedores.

CERTIFICATES: Normal Commonwealth of Australia requirements. See "Melbourne".

CONSULS: Nil.

REPAIRS: Deck and engine repairs, excluding large castings.

REPATRIATION: Available.

AIRPORT: Airport on Horn Island, 2 miles by launch, 4 miles by bus. Seven flights per week. Air Queensland regular airline. Private charter plane available.

TIME: Australian Eastern Standard Time.

HOLIDAYS: Normal Queensland Public Holidays. No cargo can be worked on Christmas Day, Good Friday, Anzac Day.

POLICE/AMBULANCE: Police 69 1520. Ambulance 69 1501.

TELEPHONES: STD facilities available with several public boxes available on the island.

SERVICES: Garbage disposal. Apply to Harbour Master.

DELAYS: As wharf space limited and berthing is on a "first come, first served" basis, delays vary with amount of shipping.

AUTHORITY: Harbours Corporation of Queensland, Department of Harbours and Marine, P.O.Box 109, Thursday Island, Queensland 4875. *Tel:* (070) 691405. *Telex:* Harti 48869. *Cables:* Harbourmaster T.I. *Contact:* Captain M. Bochenski, Harbour Master.

AGENT: Sub-agent of Patrick Agencies, Brisbane.

TORRES STRAIT:

QUEENSLAND COAST AND TORRES STRAIT PILOT SERVICE: All Pilots are appointed by the Marine Board of Queensland. The Board also appoints the Secretaries who operate and control the service.

Licensed Pilotage Services:

1. Between Torres Strait (Booby or Goods Island), and all Queensland Ports, and Fairways, via the Inner Route of the Great Barrier Reef. Vessels bound to or from New South Wales Ports may embark and disembark Pilots at the berth. Vessels bound to or from New Zealand, may embark and disembark Pilots at any of the service's offshore boarding grounds.

2. Between Torres Strait and Basilisk Beacon (off Port Moresby) via the Great North East Channel.

3. Between the Reef Entrances at Hydrographers Passage off Mackay (Lat. 19° 46.7′ S., Long. 150° 24′ E.), Palm Passage off Townsville (Lat. 18° 13′ S., Long. 147° 07′ E.) or Grafton Passage off Cairns (Lat. 16° 39′ S., 146° 14′ E.), and all Queensland Ports (including Cape Flattery).

Supplementary Services:

1. Between Darwin, and Gulf of Carpentaria ports, or Torres Strait, via Clarence and Dundas Straits.

2. Between Torres Strait and Gulf of Carpentaria ports.

3. Between Torres Strait and all Papua New Guinea ports via China Strait. In connection with this service it should be noted that passage by China Strait is limited to a max. draft of 12.2 m. (40 ft.).

4. The service also extends through the Goschen and Ward Hunt Straits.

The Inner Route: The Great Barrier Reef is on the World Heritage List and almost the entire Inner Route is within sections of the Great Barrier Reef Marine Park. The Inner Route ensures sheltered water for over 1,000 miles of its length and lies within the natural breakwater of the Great Barrier Reef. It is the shortest, safest, and most economical route from New Zealand, Australian East Coast and South Pacific Ocean to Indonesia and S.E. Asia. It lies in the permanent Tropical Loading Zone. From 1st April to 30th November vessels proceeding to the Pacific may load to Tropical Marks and proceed via Hydrographers Passage, Palm Passage or Grafton Passage.

Pilot Boarding Grounds and Transfer Method:

Queensland – Coastal:

In any port or at the following off-shore locations:

Point Cartwright	Brisbane Pilot Station – Lat. 26° 43′ S., Long. 153° 11′ E. – launch.
Gladstone	North Point – Lat. 23° 44′ S., Long. 151° 21.5′ E. – launch.
Hydrographers Passage	Blossom Bank – Lat. 19° 47′ S., Long. 150° 24′ E. – helicopter (or launch – if helicopter unsuitable).
Palm Passage	Pith Reef – Lat. 18° 13′ S., Long. 147° 07′ E. – helicopter.
Grafton Passage	Euston Reef – Lat. 16° 39′ S., Long. 146° 14′ E. – launch or helicopter.
Cairns	Cairns Fairway – Lat. 16° 49.8′ S., Long. 145° 50′ E. – launch or helicopter.

Queensland – Torres Strait:

Goods Island	Lat. 10° 34′ S., Long. 142° 06.5′ E. – launch or helicopter.
Booby Island	Lat. 10° 36′ S., Long. 141° 51.0′ E. – launch or helicopter.

Papua New Guinea and Great North East Channel:

Port Moresby	Off Basilisk Light Beacon – launch.

At any main port in Papua New Guinea – launch.

Northern Territory:

Darwin	Launch.

Gulf of Carpentaria:

At the ports of Weipa, Groote Eylandt and Gove – launch.

New South Wales:

In any port or at the following offshore locations – Port Kembla, Botany Bay, Sydney or Newcastle (launch).

Any Other Place:

By arrangement with Torres Sydney.

Pilotage Service Advice:

1. An automatic telemetric tide gauge at Booby Island (Australian Notice to Mariners 138/1970 refers) continuously broadcasts the exact tidal rise at Gannet Passage. Another telemetric tide gauge is installed at Turtle Head in the Prince of Wales Channel, the other controlling area for traversing Torres Strait. Note: "Actual tidal heights are frequently different to predicted heights". Additional tide gauges operating on dedicated VHF frequencies are scheduled for installation in 1985/86.

2. Masters of deep draft vessels are advised that some variation of speed may be necessary, particularly in Gannet Passage and Prince of Wales Channel. They may also be requested to exhibit, in certain areas the signals (by day – a black drum; by night – 3 red lights vertically disposed), in accordance with Col. Reg. Rule 28.

Masters should ensure that pilot ladders, hoists and boarding or disembarking arrangements comply strictly with the current SOLAS Regulations.

Strict compliance with any current Marine Notices issued by the Department of Transport, Australia, or the Department of Harbours and Marine, Queensland, is also necessary regarding Pilot boarding/landing arrangements.

3. Communications: All vessels are requested to keep international radio watch times and a listening watch on the nearest coastal radio station (Thursday Island, Port Moresby, Townsville, Brisbane) when approaching or within the pilotage area. A continuous watch (VHF) on Channel 16 should be maintained within the pilotage area and 40 miles distant on approaches thereto. Pilot station VHF call sign – "Reef Pilots".

Requirements for Embarkation of Pilots:

1. Make a good lee for the pilot launch with the wind and sea well abaft the beam on the weather side, and a speed about 5 knots.

2. The pilot ladder constructed and rigged in accordance with I.M.O. requirements (see Chapter V of Solas 1974 for pilot ladders, and Australian Department of Transport Notice No. 12/1976). The ladder should be clean, properly fitted with spreaders, well clear of all discharges and outlets, and all outboard fittings, which might foul the pilot launch. The bottom of the ladder should be 1.5 m. or 5 ft. above the water. The distance from the waterline to the point of access must not exceed 9 m.

3. Two clean manila manropes of not less than 24 mm. diameter and not more than 32 mm. diameter are to be securely made fast to the ship, and must not be made fast to the ladder at any point. The manropes must not be longer than the ladder.

4. When the ladder is rigged over a bulwark, 2 stanchions are to be securely fitted in the top of the bulwark, 1 on each side of the ladder, and steps securely fastened to the deck are to be provided from the top of the ladder to the deck.

5. A good heaving line is to be provided for mail and the Pilot's bag.

6. By night, a bright light is to be provided, shaded to show downwards and forward, to clearly illuminate the ladder and the ship's side.

7. Tripping lines and boat ropes are not to be used.

8. An officer must be in attendance at the ladder, with life saving appliances ready for immediate use. The officer must also have with him a portable radio set for immediate communication with the bridge.

RADIO: Ordering a Pilot. (Prefix all cable messages with the free service instructions word "Shipserv" for prompt delivery 24 hours a day).

South or Eastbound: Torres Strait – Thursday Island VHF call sign is "Reef Pilots", Channel 16.

5 days prior to arrival – advise "Torres" Sydney ETA boarding ground required (Booby or Goods Island), the ship's max. draft and destination. Local time is GMT plus 10 hours.

24 hours and 6 hours prior to arrival – advise "Torind", Telex: AA48822, Thursday Island confirming ETA. Ships using direct ship-to-shore telex should note the telex machine at the pilot station is only tended in office hours. It is more reliable to radio "Torind", Telex: AA48822 Thursday Island prefixed by "Shipserv". When advising any change in ETA Masters should bear in mind that pilot launches require 2 hours for the trip to Booby Island and 1 hour to Goods Island boarding grounds.

Grafton Passage – VHF call sign "Reef Pilots", Channel 16.

Palm Passage – VHF call sign "Torres Pilots", Channel 16.

5 days prior to arrival – advise "Torres" Sydney of ETA at boarding ground, the ship's max. draft and destination. Local time is GMT plus 10 hours.

24 hours and 6 hours prior to arrival – advise "Torres" Sydney confirming ETA.

Hydrographers Passage – VHF call sign "Torres Pilots", Channel 16 (launches and helicopters).

4 days prior to arrival – advise "Torres" Sydney ETA at Boarding Ground, ship's max. draft and destination, and suitability for a "Land On" helicopter transfer. Local time is GMT plus 10 hours.

24 hours and 6 hours prior to arrival – advise "Torres" Mackay confirming ETA (via Townsville Radio VIT) or Hamres, Telex: 48516, Hamilton Island.

North or Westbound: If in an Australian port, instruct the Agent to arrange a Pilot with "Torres" Sydney, giving as much notice as possible, and advising the departure port, ETD therefrom, the ship's max. draft and destination.

If from an overseas port and requiring a Pilot at any offshore Pilot boarding ground (see "Pilot Boarding Grounds") the following procedure should be followed:

5 days prior to arrival – advise "Torres" Sydney of ETA at boarding ground, max. draft and destination.

24 hours and 6 hours prior to arrival – advise "Torres" Sydney confirming ETA.

All messages are acknowledged by "Torres" Sydney.

VHF: The VHF call sign for the Queensland Coast and Torres Strait Pilot Service launches or helicopters is "Reef Pilots" Channel 16, except at Palm or Hydrographers Passage where it is "Torres Pilots" Channel 16.

Increased use of helicopters may occur in the future at any offshore pilot ground. The International Chamber of Shipping Guidelines for Helicopter Operations should be consulted.

Also see "Radio".

DRAFT RESTRICTIONS: *Torres Strait:* The 2 tidal restricted, and therefore, controlling areas for traversing Torres Strait are Gannet Passage (Booby Island) and the Prince of Wales Channel. The latest surveys show a datum depth of 10.06 m. (33 ft.) in the buoyed channel at Gannet Passage, and this, together with daily tidal rises, enables the service to pilot ships through the area with a maximum static draft not exceeding 12.2 m. (40 ft.). Min. under keel clearances required are as follows:

Draft	*Gannet Passage*	*P.O.W. Channel*
11.89 m. or less	1 m.	1 m.
over 11.89 m.	1 m.	10% of draft

The 12.2 m. draft limitation applies from Booby Island to Cairns on the Inner Route and from Booby Island to Bramble Cay on the Great North East Channel Route.

Hay Point, Dalrymple Bay and Abbot Point: The max. draft between any Central Queensland Port and Hydrographers, Palm or Grafton Passages or Capricorn Channel, is limited, only, by the permissible draft at the loading port.

Hydrographers Passage: Masters of vessels fixed to load at Hay Point, Dalrymple Bay or Abbot Point, for the N.W. Pacific Region or Suez are advised that Hydrographers Passage is now operational. A pilot station has been established in the area and Pilots are available with due notice.

Restrictions: None, other than draft – 25 m.

HYDROGRAPHERS PASSAGE: *Sailing Directions:* Master's attention is drawn to Sailing Directions for Hydrographers Passage compiled by the Australian Department of Transport. Relevant extracts are: "Hydrographers Passage shortens the route between Hay Point and Japan via Rossel Island by approximately 220 miles." "Vessels too deep to pass through Torres Strait in safety and bound for ports in the Singapore to Europe range (via Suez) may find it shorter, and with a greater likelihood of favourable weather and currents, via Hydrographers Passage, East and North of Papua New Guinea, and through Sagewin Strait, than the alternative route via Bass Strait and the Great Australian Bight".

"The routes between Hydrographers Passage and Rossel Island or Jomard Entrance, and passing well clear to the East of Lihou Reef, are currently believed to be the shortest tracks between the Hay Point area and Papua New Guinea. Further, a vessel proceeding via Hydrographers Passage to or from Dalrymple Bay, Hay Point, Mackay or Abbot Point, will spend less time within the Great Barrier Reef than by proceeding via Capricorn Channel or Palm Passage".

"The Commonwealth Department of Transport strongly recommends that all vessels engage the services of a Pilot for transit of Hydrographers Passage". (End of extract).

N.B. The route via Hydrographers Passage and North of P.N.G. to Suez is approximately 100 miles shorter than the Great Australian Bight route in actual distance.

From 1st April to 30th November vessels proceeding to Suez via Hydrographers Passage will be able to load to the Tropical Mark.

For further details consult Australian Notices to Mariners 794/1984, also Department of Transport Sailing Directions available "gratis" through D.O.T. Canberra.

PALM PASSAGE: The Queensland and Torres Strait Pilot Service has started a pilotage service through the Palm Passage in the vicinity of Townsville and Lucinda.

Navigational aids were installed in the area at Pith and Rib Reefs in 1975 laying the foundations for future development. Construction of large berths at Lucinda and Abbot Point and increased traffic through Townsville spurred the Torres Service to examine the possibilities of using Palm Passage. With the successful conclusion of studies, the service can now offer pilotage assistance to vessels transiting the channel.

There are virtually no restrictions on vessels using the new passage. Transit is possible at any time, and sufficient depth of water is available that vessels will only be restricted by the draft available at the load port.

For further details see Australian Notices to Mariners 651/1984.

SERVICES: Torres Industries Pty. Ltd., Thursday Island, Address: P.O.Box 219, Thursday Island 4875. Tel: (070) 69 1570. Telex: AA48822. Cable Address: "Torind" Thursday Island.

The company is Agent for many shipping companies and is able to arrange the following services at short notice:

Services of Customs, Immigration, Police and Pratique.
Transportation of personnel and stores from Horn Island (Airport) and Thursday Island to and from ships in transit through the Torres Strait.
Medical and dental attention.
Hotel accommodation, domestic and overseas air travel.
Boat and air charters for local areas.
Forwarding of mail to and from vessels (P.O.Box 219).
Arrange for light engineering repairs.
Supply of dry stores and sea foods, depending on availability.
General ship's husbandry.
"B" class Chart Agency.
Agents for Walport (U.K.) ships' Films Exchange & Video Exchange Service.

TOWNSVILLE, Queensland: 19.15 S. 146.50 E.

(See Plan)

PORT LIMITS: The Townsville Harbour Board jurisdiction commences at the HW mark on the most Northern extremity of Cape Cleveland, thence by a line to a point Lat. 19° 05′ 30″ S., Long. 146° 52′ E., thence by a line due Westward to 146° 45′ E., thence by a line due South to HW mark at a point on the mainland, thence by HW mark to the point of commencement and including all navigable rivers communicating with that area and the banks and shores and foreshores thereof.

APPROACHES: The approach to Cleveland Bay anchorage from the Southward is clear of dangers, with the exception of Salamander Reef, the Four-foot Rock, and the Twenty-foot Rock, all these lying within a radius of 3 miles of Cape Cleveland Lighthouse.

To clear these dangers, passing North of them bring Mount Marlow in transit with the extremity of Hawkings Point, bearing 265° (258° Mag.) before approaching within 5 miles of Cape Cleveland, which will then bear 252° (245° Mag.); and, if passing between them, the leading lights on Cape Cleveland should be brought in line bearing 291° (284° Mag.) before they are approached within 5 miles. Proceeding into Cleveland Bay a depth of not less than 8.2 m. will be obtained by keeping North of the line Mount Marlow in line with Hawkings Point.

Approaching Cleveland Bay from the Northward, passing East of Magnetic Island a vessel should keep at least half a mile off Magnetic Island shore to obtain not less than 11 m. of water at LWOST. The shore is steep to except for Orchard Rocks off the N.E. extremity of the island.

ENTRANCE CHANNELS: 10 pairs of lighted beacons (numbered East and West from seaward) and the East and West Breakwater Beacons mark the entrance channels into Townsville Harbour. The Fairway Beacons are 210 m. apart transversely. No. 2 and 3 Beacons are 164 m. apart and all other pairs of beacons are 180 m. apart.

Sea Channel: This Channel 1.75 miles in length (for use by vessels with draft exceeding 8 m.) lies between No. 1, 2, 3 and 4 Beacons which are spaced at 1,070 m. intervals. Only No. 1 and 4 Beacons are fitted with day marks.

The centre line of this channel is marked by the V-shaped white Sea Leads in line bearing 201.5° (194.5° Mag.), at night the Front Lead (No. 5 East Beacon) exhibits a white light flashing every second.

The Back Sea Lead, 915 m. from the Front Lead, exhibits a white light flashing every 1.5 seconds.

Platypus Channel: The channels alter in direction at No. 4 Beacons and the centreline of the Platypus Channel proceeds in a 212° (T) direction 3.5 miles to the harbour entrance and is marked by 2 V-shaped Dayglo orange triangular leads with black centre, in line bearing 212° (205° Mag.), at night these leads each exhibit a red neon candle light. No. 5 Beacons are 520 m. from No. 4 Beacons, thence there are 5 pairs of beacons and the East and West Breakwater Beacons at 1,000 m. intervals.

Ross River Channel: This daylight only channel which commences 1 mile 128°(T) from harbour breakwater entrance is 1.35 miles in length, 30 m. wide and carries 2.5 m. L.W.S.

Four beacons carrying red square topmarks numbered 1 to 4 from seaward are situated 15 m. from the Eastern edge of this channel, spaced at 750 m. intervals. The Outer (No. 1) Beacon exhibits a light flashing red every 3 seconds. All beacon topmarks at an elevation of 3.7 m.

The centre line of this channel is marked by 2 V-shaped white leads with black centres 700 m. apart in line bearing 219°(T). The leads are not lit.

Shortly after passing No. 4 Beacon the 60 m. wide swinging basin is entered, on the Western side of which is situated a fishing company wharf. Depth in the swinging basin and alongside wharf is 2.5 m. L.W.S.

South of the swinging basin overhead power lines cross the river, the clearance under which is 13 m.

Presently only shallow draft vessels can proceed up river beyond the swinging basin. Dredging is in progress.

DOCUMENTS: *Customs:*

3 Crew Lists, Form M and S–11.
3 Passenger Lists, if applicable.
3 Lists of Ports of Call.
1 Form 42A Ship's Stores.
1 Form 5 Articles Owned by or in the possession of Master, Officers and Crew.
1 Form QA4 Quarantine Notice.
2 Forms QA5 Quarantine Shipmaster's Bond.
2 Inward Manifests.
1 Bill of Lading.
1 Outward Manifest.
1 Form 40 Application for Clearance and Guarantee to Pay Duty.

Health:

Form Q360 Health Report which is taken aboard by inspecting Officer.

Harbour Authority:

2 copies of Inward and Outward Manifest.

PILOTAGE: The Pilot is ordered through the ship's Agent or direct to Harbour Master at least 24 hours before arrival or last port of departure stating ETA and draft. Telegraphic Address "Harbour Master". VHF Channel 16. Call sign "Townsville Harbour". Pilot launch is 42 ft. wooden launch equipped with VHF Channels 6, 12 and 16. Light or sound signal by vessel requiring Pilot is International Call G. For other than deep draft vessels Pilots board within 1.5 – 2.0 miles East of Hawkins Point. Ladder placed on starboard side. Location of anchorage for vessels awaiting a Pilot is off Magnetic Island between Bremer and Hawkins Point.

ANCHORAGES: Boundaries: Orchard Rocks/Cape Cleveland. Cleveland Bay Depths 8.2 m. to 12.2 m.

RESTRICTIONS: 0.6 m. of water under keel at all times.

Harbour Depths:

Sea Channel and Platypus Channel	10.9 m./10.7 m.
Deep Draft Swing Basin, to Berths 1, 2 and 3	10.4 m.
Swing Basin, to Pier Berths and No. 4	9.5 m.
No. 1 (Tanker) Berth	11.4 m.
No. 2 (General) Berth	10.8 m.
No. 3 (Portainer Crane only) Berth	11.0 m.
No. 3 (including Ro-Ro) Berth	10.7 m.
No. 4 (General Cargo and Ro-Ro) Berth	10.5 m.
No. 6 (East Side, General Cargo) Berth	7.2 m.
No. 7 (West Side, Concentrate Gantry) Berth	10.7 m.
No. 8 (East Side, Freezer Shed) Berth	9.8 m.
No. 9 (West Side, Bulk Sugar Gantry) Shed	10.0 m.
No. 10 (Container/Roll on Berth)	7.2 m.
Between Nos. 4 and 6	5.8 m.
Between Nos. 7 and 8	7.7 m.
Between Nos. 9 and 10	8.0 m.

* Depths at berths are 4.5 m. of fender piles.
* Actual minimum depths of water LWOS.

MAX. SIZE:

Berth No.	Length	Max. Length of Vessel
1	274 m.	238 m.
2	256 m.	238 m.
3	256 m.	238 m.
4	247 m.	238 m.
6	122 m.	160 m.
7	183 m.	195 m.
8	213 m.	220 m.
9	230 m.	228 m.
10	160 m.	152 m.

Generally, the limit in size of vessels entering the harbour will be 238 m. in length and 34 m. beam. Large vessels will only be taken into No. 4 Berth on condition that no vessels are berthed at No. 3 Berth closer inshore than mark No. 18 on arrival and mark No. 16 on departure and that a vessel berthed at No. 6 Berth is shoreward of No. 4 mark on both arrival and departure of a vessel at No. 4 Berth.

When tankers of over 213 m. in length are being berthed at No. 1 Berth, no vessel at No. 2 Berth is to be seaward of mark No. 33.

Decking of all wharves is between 4.81 m. and 5.79 m. above datum.

Largest Single Cargo: Inward 56,506 tonnes of bulk oil. Outward, 43,772 tonnes of raw sugar.

Deepest draft vessel, 12.04 m. Longest vessel, 261.15 m. Largest vessel (Tanker) 85,180 d.w.t.

HEALTH: Townsville is a first port of entry and notification of quarantine inspection requirements should be made not more than 24 hours nor less than 12 hours in advance. Inspections may be carried out at the wharf or at the quarantine anchorage, at the discretion of the Quarantine Officer. Rat guards are to be maintained on all mooring lines while vessels are berthed in the Townsville Harbour.

RADIO: Townsville Radio. The Port Radio Station "Townsville Harbour" keeps continuous watch on VHF Channel 16. Working Channels 6 & 12.

VHF: Continuous watch maintained on Channel 16. Call sign "Townsville Harbour". Channels 6 and 12 also available.

TUGS: Normally join at harbour entrance. Tug lines or (optional) ship's lines. Tugs equipped with VHF radio and operate on Channel 16, the same as Townsville Harbour. Two tugs are available. Bollard pull 26 tons and 30 tons each.

BERTHING:

No. 1 Berth (isolated) is used exclusively by tankers for bulk oil discharge and by all types of vessels for bunkering.

No. 2 Berth (Eastern Breakwater).

No. 3 Berth (Eastern Breakwater) is equipped with a container crane which is leased to Townsville Transport & Services Pty. Ltd. and is operated and controlled by Northern Shipping & Stevedoring Pty. Ltd. Both of these companies are part of the M.I.M. Holdings Group. The crane has lifting capacity of 55 tons and its equipment includes an extendable spreader to suit all sizes of containers, a grab of 7.6 cu.m. capacity and a heavy lift hook. Maximum height of lift above wharf deck is 27 m. whilst the outreach beyond the wharf face is 31.85 m. and outreach over rail and road services is 23.77 m. Distance between bogies is 32.61 m. The crane traverses the full length of berth No. 3.

A recently constructed landing pad at the berth allows simultaneous use of the container crane and stern angle ramp for ro/ro traffic.

No. 4 Berth (Eastern Breakwater) has a landing pad, supported by steel piling, to service stern angle ramp ro/ro vessels in the U.K./Continent trade. This wharf is serviced by a molasses pipe-line capable of loading up to 400 tonnes p.h.

No. 6 Berth (No. 1 Pier E.) is a general purpose berth with oil bunker and bulk molasses loading pipe-line facilities.

No. 7 Berth (No. 1 Pier W.) supports a bulk shiploader through which passes mineral concentrates, phosphate rock and ores up to 102 mm. aggregate at the rate of 1,000 t.p.h. The berth is also equipped with bulk molasses loading pipe-line facilities.

No. 8 Berth (No. 2 Pier W.) services the export frozen beef trade with cargoes drawn from freezer stores erected on the pier. It also serves as a general purpose berth.

No. 9 Berth (No. 2 Pier E.) is the raw sugar loading berth. A bulk shiploader delivers sugar to carriers at the rate of 1,500 t.p.h.

No. 10 Berth (A.N.L. Ro-Ro Berth) is equipped with a stern ramp for ro-ro traffic and 25 tonnes, 32 m. radius, travelling jib crane for container and unit load handling.

Wharf Sheds: No sheds are available for general cargo storage at the harbour. Both free and bonded warehousing is available within 4 km. of the wharves.

Storage Facilities: Oils – All major Oil Companies operate ocean terminals close to the Harbour.

Raw Sugar – 2 storage sheds of 285,000 tonnes total capacity.

Molasses – 3 bulk storage tanks of 35,000 tonnes total capacity.

Concentrates – 115,000 tonnes covered storage area.

Frozen Meat – 2 cold stores on No. 2 Pier, total capacity 2,500 tonnes.

Open space storage for Rock Phosphate, Sulphur, Crude Lead and Refined Copper.

Container Terminals: No. 3 Berth, with an area of 1.2 hectares, has storage accommodation for 184 dry containers.

No. 10 Berth, with an area of 2.6 hectares, can accommodate 400 containers, 18 of which may be connected to refrigeration power outlets.

Northern Shipping and Stevedoring Terminal with an area of 1.6 hectares has a holding capacity of 160 refrigerated containers and 400 dry containers.

STEVEDORES: Times for ordering labour: Normal 1400 hrs. previous working day. Bulk Cargoes 0930 hrs. for night labour. Saturday or holidays 0930 hrs. previous working day. Notice required for difficult or long tows or a cargo requiring particular or special handling.

MEDICAL: Advance notice not particularly required unless urgent assistance required. Hospital facilities available. Health book inspected by boarding doctor.

TANKERS: Diameter of load/discharge lines: white fuel 10 in., black fuel 12 in. No residue discharge facility available. One tanker at berth at any time. Max. permitted draft at berth 31 ft.

DENSITY: Average density 1025 at all times.

FRESH WATER: Fresh water is available at all berths. Hoses have 2.5 in. London V thread fittings.

FUEL: Bunker fuel oil and distillate is available through pipe-lines at Berth Nos. 1, 6 and 7. Road tankers are used to bunker small ships at other berths.

FIRE PRECAUTIONS: Tankers required to have safety fire wires lead off foc'sle head and run as far aft as possible. Vessels at all times capable of manoeuvring with main engines.

GANGWAY/DECK WATCHMEN: Services available at ship's option.

OPENING/CLOSING HATCHES: Optional for either crew or stevedores.

SHIP'S CERTIFICATES:

Passenger Ship Safety.
International Load Line.
Ship Safety Construction.
Ship Safety Equipment.
Ship Safety Radiotelegraphy.

CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes or 250 grams tobacco on arrival and then can be purchased by the packet from bar on board. Wine and/or spirits: 1 opened bottle (26 oz.) spirits or wine on arrival and then spirits by the glass and wine by the bottle, from the bar on board.

CARGO GEAR: Australian Navigation Dept. requirements.

CONSUL: Netherlands representative, Tel. 71.6188.

REPAIRS: All deck and engine repairs can be carried out.

DRY DOCKS: Slipway with a capacity of 1,525 tonnes d.w.t. Slip can accommodate a 67 m. length vessel. Air, power, and water are available at the slip.

REPATRIATION: Full facilities exist for effecting crew changes and arranging repatriation.

AIRPORT: Distance from the International airport is 6.5 km.(4 miles).

TIME: East Australian Standard Time, GMT plus 10 hours.

HOLIDAYS: Cargo can be worked on all holidays except Christmas Day, Good Friday and the Waterside Workers' Picnic Day.

EMERGENCY TELEPHONE NUMBERS: Police, Ambulance or Fire "000", and ask to be connected to service required. Non-emergency numbers. Police 72 3000, Ambulance 79.3722, Fire Station 71.2111, Hospital 81 9211.

TELEPHONE: Ship to shore telephones are available at all berths. Oil tankers berthed in the port are required to have on board a flash proof telephone of a type approved by Telecom Australia.

Ship's telephone lines are barred access to STD and trunk facilities.

SERVICES: Services available for compass adjusting, radio and radar service. A floating boom and an oil skimming device is available to deal with oil spills. Chemical dispersants are used for minor spills.

A garbage collection vehicle will call at each ship which has ordered the service before 0800 hrs. each day or at other times as directed by the Quarantine Officer. All garbage must be kept in drums with tight fitting lids on board the vessel until the arrival of the collection vehicle.

Ship's crew is required to deliver garbage to the collection vehicle.

SHORE LEAVE: Crew members allowed shore leave.

AUTHORITY: Townsville Harbour Board, P.O.B. 1031, Townsville, Queensland, Australia, 4810. *Tel:* (077) 72 1011. *Telex:* Naport AA47334. *Cables:* Nausport. *Contact:* Mr. Ivan Malpas, Chief Executive Officer. Mr. R. E. Kenny, Secretary.

AGENT: Sub-agent of Patrick Agencies, Brisbane.

TRIAL BAY, N.S.W.: 30.51 S. 153.03 E.

LOCATION: Approximately 220 nautical miles North of Sydney and 40 miles South of Coffs Harbour. The area behind the breakwater affords good anchorage and shelter and has a tanker terminal only.

See Chart AUS. 220 (Plan of Trial Bay).

PILOTAGE: Pilotage is compulsory. A Pilot boarding position has been established at Lat. 30° 51′ 42″ S. and Long. 153° 03′ 12″ E.

VHF: A listening watch is maintained at the pilot station, South West Rocks during office hours or when shipping is expected at the port.

TANKERS: A mooring system comprising 5 marker and mooring buoys and accommodating 18,000 tonne tankers, has been established approximately 053° 6.75 cables from Monument Point Light. A submarine pipe-line for discharge of petroleum products extends from the buoys in a 169° direction to the shore terminal.

The tanker terminal receives only refined products.

AUTHORITY: The Pilot, The Pilot Station, Gregory Street, South West Rocks, N.S.W. 2431. *Tel:* (065) 66-6140. *Contact:* Captain R. Pook.

AGENT: Sub-agents of Patrick Agencies, Sydney Branch.

WALLAROO, S.A.: 33.56 S. 137.37 E. (See Plan)

PORT LIMITS: Chart Aus.777. A line following the coast line at the HW mark between Point Riley and Point Hughes; thence a line drawn 270° from Point Hughes for 1.5 miles and thence a line drawn 360° to meet a line 270° from Point Riley for 1.5 miles.

DOCUMENTS: All documents necessary for first entry vessels are as for other Australian ports (i.e. Customs, Health, etc.).

PILOTAGE: Pilots board approximately 1 mile seaward of Entrance Beacon. Pilotage is compulsory. Pilot vessel "Yorke" appox. 15 m. LOA orange hull and yellow superstructure "Pilot" in black on topsides. Vessels awaiting Pilot for extended periods should anchor 1 mile – 2 miles to seaward of Entrance Beacon. Vessels approaching pilot station should take care not to approach the Entrance Beacon before Pilot has boarded due to restricted sea room.

ANCHORAGES: Outer Anchorage as above. Inner Anchorage for vessels awaiting berth available in Wallaroo Bay. This is a safe anchorage with good holding ground. Pilotage is necessary to Inner Anchorage.
RESTRICTIONS: Daylight berthing only. Sailing at any time. Sailing times dependent upon tides. Tides may be greatly effected by prevailing weather conditions. A high pressure system in Bight may cause tides to be depressed below predicted levels and conversely a low pressure system may cause tides to be above predicted heights. Channel depth 8.45 m. (27 ft. 9 in.) LW. There is a minimum depth of 8.40 m. (27 ft. 6 in.) in the swinging basin off the berths.
MAX. SIZE: LOA 190 m., beam 28 m. Consideration may be given to accommodating larger vessels on a restricted draft.
Arrival Drafts: As vessels are permitted to discharge clean ballast whilst alongside, drafts should be as follows: 2 m. minimum forward and 8.5 m. maximum aft.
HEALTH: Radio Pratique available within 24 hours of arrival providing sufficient information is supplied. Quarantine/Health Officer will board vessel after arrival in order to grant formal Pratique. Vessels arriving directly from other Australian ports have automatic Pratique, but Health Officer will attend the vessel on arrival.
RADIO: ETA messages for Agents, Harbour Master, etc. may be routed through any Australian coastal radio station, the nearest being Adelaide Radio (VIA), not less than 24 hours prior to arrival.
VHF: Channels available, 16, 12, 8, 6, 67. Channel 16 used for general call up, and Channel 6 is usually used for port operations. Call sign; Wallaroo Port Control. Hours of operation; Monday to Friday 0845 hrs. to 1700 hrs. except Public Holidays, otherwise by arrangement.
TUGS: One tug "Kalanbi", 11.4 tonnes bollard pull (650 h.p.).

BERTHING: Jetty extends 870 m., W.N.W. from the foreshore abreast the town. There are 3 berths on either side of the jetty, extending over a length of 400 m. from the outer end.

Coir springs are provided at all berths and vessels may lie alongside in all weathers. Vessels may be required to berth either head to sea or head in, dependent upon weather conditions prevailing at the time of berthing.

Underkeel clearance in channel: Draft up to 8.55 m., clearance 0.60 m. Draft over 8.55 m., clearance 0.75 m.

Berths	Length (m.)	Depth (m.)	Width Dredged Area (m.)
No. 1 North	83.5	9.45	24.4
No. 2 North	290.0	9.45	36.4
No. 3 North	68.6	7.32	24.4
No. 1 South	207.7	9.30	24.4
No. 2 South	152.0	8.22	30.0

CRANES: None.
BULK GRAIN FACILITIES: No. 2 North Berth – 5 fixed manoeuvrable spouts. Served by a conveyor bulk loading plant. Rated at 800 t.p.h. Maximum working clearance of spout above LW 17.4 m. Maximum coverage spout tip from W.F.A. 20.12 m. The plant is manned on a 2 shift basis from 0800 hrs. to 2300 hrs. daily, Sunday to Friday and from 0800 hrs. to 1200 hrs. Saturdays.
SPECIALISED CARGO HANDLING FACILITIES: None.
BRIDGES: None.
STEVEDORES: Ordering of labour organised through Agents and Grain Handling Authority.
MEDICAL: 2 private medical practices available also 1 dental surgery located in adjacent town (12 km.). District hospital is located at Wallaroo. Ambulance service also available and may be used to transport seriously injured patients to Adelaide if required. Vaccination certificates as for all Australian ports.
TANKERS: No facilities available.
DENSITY: Average density between 1028/1030.
FRESH WATER: Available at 17 tonnes/p.h. By prior arrangement may be boosted to 60 tonnes/p.h.
FUEL: Available by arrangement in small quantities from Adelaide.
FIRE PRECAUTIONS: Usual precautions necessary, bearing in mind danger of grain dust. Local fire brigade available. International shore connection should be in position.
CONSULS: None.
REPAIRS: Minor repairs available locally, marine engineers available from Adelaide.
DRY DOCKS: None.
SURVEYORS: (1) Cargo Surveyors available – may be arranged by Agents as required.
(2) Lloyd's Surveyor should be obtained through principal Agent. Lloyd's Agent is situated at Port Adelaide.
(3) Other Classification Society Surveyors also available in Australia.
GANGWAY/DECK WATCHMEN: All vessels regardless of nationality must employ a shore based watchman on a shift basis once the vessel is in the loading berth ready to load. Approximate cost $14.25 per hour plus shift penalties.
HATCHES: Opening and closing by ship's crew.
CUSTOMS ALLOWANCES: Normal Australian allowances.
CARGO GEAR: No shore based cargo gear apart from bulk grain plant. Other berths - ship's gear.
REPATRIATION: May be arranged through ship's Agent.
AIRPORT: None. Bus connection twice daily to Adelaide.
TIME: Local time GMT plus 9.5 hours. Summertime from late October to early March, GMT plus 10.5 hours.
HOLIDAYS: New Years Day; Australia Day (January); Good Friday; Easter Monday; Anzac Day (April); Adelaide Cup Day (May); Queen's Birthday (June); Labour Day (October); Christmas Day and Proclamation Day (December 26th). The bulk loading plant operates on most public holidays.
POLICE/AMBULANCE/FIRE: Police: Tel. 211200. Ambulance: Tel. 232069. Fire: Tel. 232000.
EMERGENCY CO-ORDINATION CENTRE: "Coastwatch" (Australian Coastal Surveillance Organisation) free telephone call from all Australian ports by STD or reverse charge 062-476666.
TELEPHONES: Telephones placed aboard on arrival. Cost approx. $60.00 plus $1.08 per day rental plus calls.
SERVICES: Tank and hold cleaning services available.
BANKS: State Bank of South Australia, Owen Terrace, Wallaroo.
STORING: See "Prelims".

1. By truck.
2. –
3. Wharf access available for trucks.
4. Wharf access available for forklifts.
5. Normal Customs Bond Regulations apply.
6. Labour available for storing.

SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Normal Australian ID cards necessary, but not required to be carried ashore.
REGULATIONS: No unusual regulations.
DELAYS: May be experienced due to awaiting tide or awaiting bulk loading berth during grain season.
AUTHORITY: Department of Marine and Harbours, Wallaroo, South Australia 5556. *Tel:* 088-232307. *Contact:* Captain R. A. Keavy, Harbour Master.

Head Office: Department of Marine and Harbours, P.O.Box 19, Port Adelaide, South Australia 5015. *Telex:* AA82525.

AGENT: Patrick Agencies, P.O.Box 111, 2 Owen Terrace, Wallaroo 5556, South Australia. Tel: 23-2412 or 23-2340. Telex: Via Adelaide.

WEIPA, (including Albatross Bay), Queensland: 12.42 S. 141.41 E. **(See Plan)**

PORT LIMITS: Seaward boundary commencing at a point at HW mark on the Western Extremity of Duyfken Point, thence by a line in a 173° (T) direction to the HW mark at Boyd Point.
DOCUMENTS/HEALTH: See "Melbourne".
PILOTAGE: Vessels requiring Pilot may apply to Harbour Master, Weipa 48 hours before arrival, confirming ETA 24 hours before. Vessels to give Harbour Master their draft. Generally speaking minimum berthing draft should be, forward 2% of vessel's length and aft, the propeller completely immersed.

Pilot boat is 15 m. (length), named "Richard Hildebrand" and painted white and orange. It may be contacted on VHF Channel 16. Pilot boards 1 mile S.W. of Fairway Beacon.
ANCHORAGE: Anywhere in Albatross Bay except between 2 lines situated 1 mile North and South respectively of the line of leads and extended to the port limits.
RESTRICTIONS: Weipa Approach Channel is 7.8 miles long with a minimum depth of water 11 m. (36 ft. 1 in.) LWOST. Usually vessels up to 30,000 d.w.t. enter channel at any stage of the tide. Vessels of over 30,000 d.w.t. enter at any stage of the flood up to 2.5 hours before HW.

Usually vessels up to 30,000 d.w.t. can berth at any state of the tide. Vessels of over 30,000 d.w.t. due to their departure draft and existing tug power must berth starboard side alongside and can do so at any stage of the flood tide. Vessels normally depart 1 hour 15 minutes before HW. Some vessels up to 30,000 d.w.t. can depart on LW.
MAX. SIZE: Maximum LOA 254 m. (835 ft.) Beam 35.3 m. (116 ft.) Draft depends on height of tide and 90 cm. (3 ft.) keel clearance is required.
HEALTH: See "Melbourne".
RADIO: Forcomal, Sydney Radio and within 48 hours Thursday Island Radio.
VHF: Call "Weipa Harbour" on Channel 16 on arrival 1 mile S.W. of Fairway Beacon. Tugs operate on Channels 6, 8 and 12. Vessels to advise "Weipa Harbour" passing Fairway Beacon inward and outward and on arrival at and prior to departure from the wharf.
RADAR: No Port Radar.
TUGS: Vessels entering North of Cora Bank, tugs join at No. 25 Beacon. Vessels entering South of Cora Bank, tugs join at No. 19 Beacon. Tugs are usually used in the lashed up position using tug's lines.

3 tugs are available of 23, 24 and 43 Tonnes bollard pull, of which only 2 are in use at any one time.
BERTHING: Loading and discharge at Humbug Point generally by ship's gear but mobile cranes may be hired if required.

Evans Landing Wharf is generally only used for petrol and distillate discharge.
CRANES: 2×70 tonne P.&H. 1×31 tonne P.&H. 1×26 tonne P.&H. 2×12 tonne Austin and Weston. 1×12 tonne B.H.B. 1×8 tonne Cranville.
BULK HANDLING FACILITIES: 2 Bauxite Berths, Lorim Pt. West old berth and Lorim Pt. East which is an extension of the previous old berth. Depth alongside Lorim East 12.5 m. (41 ft.) Lorim West 12.5 m. (41 ft.).

Loading rates are Lorim West 3,500 t.p.h. Lorim East 6,000 t.p.h. If there are vessels at both berths loading simultaneously the rates are West 3,500 t.p.h., East 4,500 t.p.h. However, only one berth at a time is usually loaded.
SPECIALISED CARGO HANDLING FACILITIES: None.
BRIDGES: None.
STEVEDORES: No special advice required. None available for working on ships.
MEDICAL: Inoculations per Australian Regulations. No notice required for medical attention. Urgent cases flown out and treated at Cairns or Thursday Island. Hospital facilities available for minor cases.
TANKERS: 8 in. discharge lines. Tankers berth at Evans Landing and Lorim Point.
DENSITY: Dry Season 1024. Wet Season 1012. These figures can vary considerably.

FRESH WATER: Available at all berths. 5 t.p.h.
FUEL: Not available.
FIRE PRECAUTIONS: No specific precautions.
STORES: Very limited stores are available. In emergency large orders could be supplied only if several days notice given by radio, as they have to be flown from Cairns.
GANGWAY/DECK WATCHMEN: Available.
OPENING/CLOSING HATCHES: Work carried out by crew.
SHIP CERTIFICATES: Ship's Register, Load Line, Safety Radio and Safety Equipment Certificates. See also "Melbourne".
CONSULS: None.
REPAIRS: Not available.
DRY DOCKS: None.
SURVEYORS: Lloyd's Surveyor available at Cairns.
CUSTOMS ALLOWANCES: See "Melbourne".
CARGO GEAR: See "Berthing".
HOLIDAYS: Vessels are loaded and berthed or sailed at any time.
POLICE/AMBULANCE/FIRE: Police 697119, Ambulance 697444, Fire 697444. As no telephone supplied contact "Weipa Harbour" on Channel 16 for these services.
SERVICES: Not available.
SHORE LEAVE: See "Melbourne".
IDENTIFICATION CARDS: See "Melbourne".
REGULATIONS: Vessels may not immobilise without written permission from the Harbour Master.
DELAYS: The only delays to be normally expected are as under restrictions, i.e. awaiting tides.
REPATRIATION: Can be arranged.
AIRPORT: 7 miles from airport. Served by Air Queensland.
TIME: GMT plus 10 hours.
BANKS: Commonwealth Trading Bank, Rocky Point, Weipa, Queensland, 4874. Tel: 733238.
DEVELOPMENTS: The Alumina Plant at Weipa has been deferred indefinitely.
AUTHORITY: Department of Harbours and Marine, P.O.Box 489, Weipa, Queensland 4874. *Tel:* 070-697339. *Telex:* 48871. *Cables:* Harbour Master Weipa. *Contact:* Captain R. C. W. Jenkins, Harbour Master.
AGENT: Sub-agent of Patrick Agencies (through Patrick's Melbourne).

WESTERNPORT, Victoria: 38.21 S. 145.14 E.

(See Plan)

DECLARATION: *Declaration Prior to Arrival:* The Master of a ship which carries liquid bulk dangerous substances or oil in bulk, other than oil fuel used for the propulsion or operation of the ship, shall ensure that the Marine Authority is advised, in writing, with answers to the following questions at least 48 hours prior to arrival in the port:

1. Is the hull leak free?
2. Is an inert gas system fitted?
3. Is the inert gas system, if fitted, fully operational?
4. Is a crude oil washing system fitted?
5. Is the crude oil washing system, if fitted, fully operational?
6. Are there any defects to the ship, machinery and equipment, which may affect safe pilotage, berthing, cargo or ballast operations?
7. Have stress calculations for the envisaged programme of cargo handling, ballasting and bunkering been made?
8. Is the hull stress calculated within recommended safety limits?

Additional information required for liquefied gas carriers:

9. Are all cargo tanks and lines free of air?
10. Is the re-liquefaction or boil-off control equipment in good working order?

PORT LIMITS: The Port Authorities consider a vessel to be arrived when she crosses an imaginary line between West Head and Point Grant.
DOCUMENTS: Application for berth, tugs, mooring launches, telephones, and notification to load or unload, to be delivered by ship's Agent to Harbour Master not less than 24 hours before arrival.

Customs Documents required:

Form M & S 11	Crew List and attachments, 3 copies.
Form M 42 A	Stores List, 1 copy.
Form 5	Articles owned by or in possession of crew, 1 copy.
Form C & E 886	Ports of call since commencement of voyage, 3 copies.
Form QA 3	Quarantine Form. (Animals carried as cargo), 1 copy.
Form QA 4	Quarantine Form. (Animals carried as pets), 1 copy.
Form QA 5	Ship Master's Bond re animals carried, 1 copy.
Form Q 360	Health report of all persons on board, 2 copies.
	Inwards Manifest, 1 copy.
	Outwards Manifest, 1 copy.
Form 40	Application for clearance.

PILOTAGE: Pilotage compulsory for merchant vessels except those specially exempted. Pilots for Westernport are available at any time provided notification of ETA is given 24 hours in advance and confirmed 6 hours prior to arrival. Pilot for Westernport will board from a launch, painted orange and showing the signals and lights prescribed for such vessels, by day approximately 3 miles Southward from West Head. By night in the white sector of McHaffie's Point Light, with Cape Schank Light bearing 295° (White), at the entrance to Westernport. Pilot launch is equipped with VHF Channel 16 (156.8 MHz). A speed of 7 knots must be maintained.

In adverse weather, vessels to 9.0 m. draft may board Pilot adjacent to yellow buoy 2 miles – 084° from Flinders Jetty Light. At night buoy shows Fl. Y. 4 secs.

Harbour Master's Office requires notification of vessels ETA at Fairway Buoy 24 hours prior to arrival. Confirmation of ETA is required 6 hours prior to arrival. To minimise delays in co-ordinating Port services vessels expecting to arrive between the hours 0900 to 1700 hrs. should ensure Harbour Master receives confirmation by 0830 hrs. that morning.

Vessels expecting to arrive between the hours 1700 to 0900 hrs. should confirm ETA by 1530 hrs. that afternoon.

Vessels expecting to arrive during a weekend period should indicate ETA by 1530 hrs. on Friday, then follow above procedure.

Telex Number of this Office is PHWP AA 34051.

ANCHORAGES: Anchorage within port between Southern edge Tortoise Head Bank, and Northern shore of Phillip Island. Anchorage 4 miles in length, East to West, and 1.25 miles wide, depths 16 m. – 27 m. at Western end, decreasing 11 m. – 20 m. at Eastern end.

An anchorage area having a least depth of water of 8.5 m., has been established adjacent to Long Island Jetty.
RESTRICTIONS: No vessel shall enter port with less underkeel clearance than 10% of draft.
MAX. SIZE: Governed by underwater clearance. Vessels drawing up to 14.5 m. may enter depending on state of tide, but underkeel clearance shall not be less than 10% of draft.

Oil jetties can accommodate vessels of up to 100,000 tons, depending upon water available.

See "Tankers".

RADIO: *Advice to Ships Masters on Westernport Harbour Control*
GENERAL INFORMATION

1. *Radio Watch*	A continuous radio watch will be kept by Harbour Control on VHF Channel 16. Main working channel is 14.
2. *Pilot Boarding Ground*	Position 3 mile × 180° from West Head will be identified as position "A".
3. *Fairway Buoy*	Position of Fairway Buoy (ISO. 2 sec.) will be identified as position "B".

INWARD BOUND VESSELS

1. Vessels shall report to Harbour Control at least 1 hour before arrival at position "A" or "B", giving ETA position "A" or "B", deepest draft and information re-hull leaks and health of crew, etc.
2. Vessels must request permission to enter port. It is an expressed condition of entry that any malfunction or impairment of machinery, steering and propeller indicators which could cause restrictions in the manoeuvring ability of the vessel, is reported to Harbour Control and to the Pilot when engaged.
3. Vessels shall advise Harbour Control when passing Fairway Buoy (position "B"). Sea lashings to be removed from anchor cables and anchors made ready for immediate use.
4. Vessels shall advise Harbour Control when rounding Sandy Point and request VHF Channel for berthing operations and tugs.
5. Vessels shall report to Harbour Control (Channel 14) when all fast, finished with engines and tugs dismissed.

OUTWARD BOUND VESSELS

1. Vessels shall contact Harbour Control 1 hour before fixed time of departure advising if they will/will not be ready to sail in 1 hour's time.
2. Vessels will be advised at sailing time by duty Harbour Master re permission to sail, port movements, etc.
3. When vessels clear their berth and tugs dismissed and proceeding they shall report this to Harbour Control (Channel 14).
4. Vessels to advise Harbour Control when (a) Rounding Sandy Point. (b) Clear of Port.

VESSELS PROCEEDING TO ANCHORAGE

1. Vessels inward and outward to an anchorage are to use the same procedure as in above for inward and outward vessels respectively. Vessels will be advised if required to anchor and what anchorage to use. Whilst at anchor vessels shall keep a continuous listening watch on Channel 14.
2. Vessels shall advise Harbour Control when they have anchored and also when vessels are underway again from an anchorage.

ENGINE TRIALS AND LIFEBOAT DRILLS, ETC.

1. Vessels wanting to carry out engine trials shall first obtain permission from the duty Harbour Master.
2. When lifeboat drills are to be held and boats swung out and put into the water the duty Harbour Master shall be given prior notice.
3. All vessels in the port shall notify Harbour Control (Channel 14) of any distress signals sighted or any untoward occurrence.

PRATIQUE: Advise state of crew's health 24 hours prior to arrival. If all healthy, pratique granted subsequent to berthing; if crew's health suspect, doctor boards prior to berthing. Pratique automatic when more than 14 days have elapsed since calling at a foreign port, and the vessel has subsequently been granted pratique first at another port within the Commonwealth of Australia. Pratique may be granted 24 hours a day.
TUGS: Two tugs are available both of 3,800 kW. and 50 tonnes bollard pull. Tugs join vessel at Sandy Point. Ship's lines normally used by tugs. Tugs are fitted with VHF and radar and fire-fighting equipment. Additional tugs available from Melbourne given 24 hours notice.

BERTHING: Berthing subject to Harbour Master's direction. 3 oil berths, 2 steel works berths (one is Ro/Ro) and 2 tug berths are available.
Steel Industry Wharf (2 Berths) (16.5 n.m. from Entrance): Berths are owned and utilised by J. Lysaght (Australia). Approach channel has a depth of 9.1 m. Depth alongside both berths is 12.1 m. Swing basin diameter 457 m. Steel works is 2.5 Km. from berth.
Steel Industry Wharf No. 1: Ro/Ro Berth – Vessels with stern door up to 10,000 tons.

Ramp details: Length 28 m. (curved), width 8.5 m. Ramp made up of 7 sections which are hydraulically operated to allow accommodation of various types of stern loading/discharging vessels.

Ramp section is approximately 3 m. proud of stern berthing fenders.

Steel Industry Wharf No. 2: Conventional General Cargo Wharf. 152 m. long, 24 m. to 15.6 m. wide. Reinforced concrete wharf with wooden fendering. A mooring dolphin is provided 30 m. N.E. No. 2 Berth is adjacent and extends in a N.E. direction from No. 1 Berth.

Max. size of vessel to 200 m. length – 40,000 d.w.t.

Tidal range at berth: Between 2 m. and 3 m.

Nature of Bottom: Mud, clay and some rock.

Vessel can dock/undock at any stage.

Vessel can dock/undock during hours of darkness.

Vessels moor using ship's lines to Harbour Master's requirements.

Pilots used, unless Master holds special exemption. Water available.

Bunkers by Road Tanker only, subject to Harbour Master's approval.

Engines may be immobilised whilst ship is alongside, subject to Harbour Master's approval.

Stores and supplies can be delivered from dock or by launch.

STEVEDORES: Westernport is a class "B" port for stevedoring facilities. Port Waratah stevedores available. Require ETA's of vessels from Agent. Ordering time for labour: Tuesday-Friday, by 1430 hrs. previous day. Saturday-Sunday, by 1430 hrs. previous Friday. Monday, by 1430 hrs. previous Sunday. All close holidays observed.

CARGO GEAR: No shore cranes. All vessels must comply with Commonwealth of Australia Regulations prescribed under the Navigation Act.

MEDICAL: Four qualified medical practitioners available and 20-bed Nursing Hospital. Agent should receive prior notice of particulars of vaccinations required.

TANKERS:

Crib Point Jetty: *(2 Berths, 13 n.m. from Entrance):* Berths are State owned and utilised by B.P. (Australia). The approach channel has 14.3 m. below chart datum, swing basin has a diameter of 610 m., and depth of 14.3 m.

No. 1 Crib Point: Capable of accommodating 100,000 ton tankers with a depth alongside of 15.8 m. Shore gangway used at this berth.

No. 2 Crib Point: Capable of accommodating 40,000 ton tankers with a depth alongside of 12.8 m.

Crib Point Terminal – General:

Grades Handled – Crude, Black Oils.

Tank Height – Crude Tank base 17 m. above sea level.
Full 37 m. above sea level.

Distance of tank farm to Jetty Head – 2 km.

Hose and Pipe-line diameters:

Crude: 4×12 in. diameter hoses. 2×24 in. diameter pipe-lines.

Pumping rate up to 5,000 t.p.h. Max. back pressure 150 p.s.i.

Hoses connected by B.P. Airdraft to manifold 16 m. above MHW.

Ballast capacity 30,000 tons.

Long Island Jetty *(1 Berth 15.5 n.m. from Entrance):* Berth is State owned and utilised by Esso (Australia). The approach channel has a depth of 14.3 m., swing basin has a diameter of 548 m. and a depth of 14.3 m. There is a depth of 15.8 m. alongside the berth. Berth used for export of Gippsland Crude and LPG. Can accommodate vessels up to 100,000 tons. Shore gangway used.

Long Island Terminal – General:

Tank Height above sea level – Crude Base 13.7 m. Tank Full 28 m.
LPG Base 7.6 m. Tank Full 36.6 m.

Distance of tank farm to Jetty – Crude 3 km.
LPG 1 km.

Hose and Pipe-line diameters:

No Hoses. "Chiksan" arms used. Airdraft to manifold 16 m. above MHW.

Crude: 2×16 in. diameter arms. 2×30 in. diameter pipe-lines.

Max. pumping rate 7,250 t.p.h. Max. back pressure 125 p.s.i.

LPG: 1×12 in. diameter liquid arm. 1×12 in. diameter vapour arm. 1×20 in. liquid pipe-line.

Max. pumping rate 1,750 t.p.h. Max. back pressure 85 p.s.i. (Refrigerated).

Following are requirements for LPG carriers loading at Long Island Point Jetty:

1. Vessels to present at loading port with cargo tanks precooled and ready to load fully refrigerated butane and must contain a liquid butane heel.
2. Vapours in the ship's tanks must not contaminate the product in any way that may cause the quality specification to be exceeded in any particular case.
3. Vapours in the ship's tanks should not react with the product in any way to cause a hazard or prevent the vapours from being returned to the shore compressor system.
4. The ship's tanks must be free of sulphur compounds/L.G. odourants.

Manifold connection requirements:

Distance manifold flange to ship's sail	Min. 0.91 m. (3 ft.) Max. 3.66 m. (12 ft.)
Height C/L manifold flange above water level/ vessel Lightest Condition:	17.04 m. (55.9 ft.)
Manifold spacing	Min. 1.83 m. (6 ft.) Max. 3.66 m. (12 ft.)
Height of C/L manifold flange above deck	Min. 7.6 m. (2 ft. 6 in.) Max. 1.60 m. (5 ft. 6 in.)

Flange connection 305 mm. (12 in.) 150 ASA to match Chiksan Arms. Connection to be approximately mid way between stern and stem to enable satisfactory mooring of vessel..

Hoses will not be permitted for the loading of refrigerated LPG. Compliance with standard safety check list is required.

Reducers: Terminal has 8 in., 10 in. and 12 in. ASA Reducers.

Arms connected by Esso.

Ballast, normal capacity 15,000 tons, up to 22,000 tons with 48 hours notice.

Pollution: Cases of discharging dirty ballast or oil spillage will be investigated and vessels are liable to fines and/or detention. Vessels shall not discharge into the waters of the port any part of the contents of their cargo, slop or ballast tanks (this includes clean ballast) or tank washings or bilges which are liable to pollute these waters. Masters shall ensure that pipe-lines and equipment are clean before using them for discharging anything into the waters of the port. Scuppers shall be plugged effectively and no leakage or spillage from any vessel shall be allowed to leak or be swept overboard.

Masters of vessels must seek permission from Harbour Master before pumping anything into the waters of the bay.

The State of Victoria has stringent laws in force concerning the pollution of the sea by oil.

Smoke emissions controlled under the Clean Air Act which will operate under the jurisdiction of the Environment Protection Authority.

Ballast (Tankers): All ballast contained in tanks connected in any way to the vessel's cargo carrying system, is to be discharged to shore tankage.

Fire Precautions: Tankers shall not immobilise main engines whilst alongside jetties. Vessels must observe Port Rule 113 (Dangerous Goods and Oil in Ports) 1974. No oil cargo handling or physical preparation for same permitted unless firewatch tug is on duty.

Tank Washing/Gas Freeing: Permitted alongside subject to approval from Harbour Master. All tank washings to be discharged ashore.

Garbage: Garbage and rubbish will be collected daily from vessels within the Port, all collections shall be a charge on the vessel.

Bunkers: Small quantities of marine fuel are available from road tankers.

Fresh Water: Available, approximate rate 100 t.p.h. Approximate price $1.00 per 4.5 cu.m. Delivered from hydrants at Jetty Heads at all Berths.

Density: Average density between 1025 and 1030 oz. per cu.ft.

Mooring: Vessels secure to oil jetties using ship's lines and shore preventer wires, at all times. See "Plan".

GANGWAY/DECK WATCHMAN: A shore watchman may be hired. Cost borne by the vessel.

CERTIFICATES:

Clearance from last port.
Ship's Register.
Articles of Agreement.
Official Log Book.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Derat Certificate.
Light Dues Certificate (receipt).
Pratique Certificate from last port (if to be used in this port).

CUSTOMS ALLOWANCES: *(a)* Tobacco: each crew member permitted either 200 cigarettes or 250 gm. of pipe tobacco, or 250 gm. of Fine Cut Tobacco out of Bond. *(b)* Wine and/or Spirit: each crew member is allowed 1 litre of wines or spirits (opened).

IDENTIFICATION CARDS: Required for all nationalities except the United Kingdom, Canada, South Africa, Japan, Israel, Norway, Denmark, Fiji, Hong Kong, Malaysia, and South Korea. Also see "Melbourne".

CONSULS: None.

REPAIRS: Facilities for medium size deck and engine repairs. All repairs subject to Harbour Master's approval.

SURVEYORS: Cargo Inspectors: Caleb Brett, Cargo Superintendents available from Melbourne. All major classification societies, surveyors and insurers represented as for Melbourne.

REPATRIATION: Facilities available.

AIRPORT: Nearest major commercial airport is Tullamarine, 55 miles distance, from which there are frequent interstate and international flights. Airport accessible by road in about 2 hours by taxi-car.

TIME: Summer, GMT plus 11 hours Winter, March-October GMT plus 10 hours.

HOLIDAYS: Oil terminals work on all holidays. Steel Works observe close holidays.

POLICE/AMBULANCE/FIRE: Police Hastings 790222; Ambulance Frankston 7832222; Fire. Hastings 791345, and Crib Point 839221.

TELEPHONES: Port Authority insists that Public Telephone is placed on board. Cost of this service $100.00, plus cost all trunk calls.

SERVICES: Licensed compass adjuster available. Underwriters' Representatives available. Radio and radar repairs available.

BANKS: American and European bank offices are represented from Melbourne.

EMERGENCY CO-ORDINATION CENTRE: Port Emergency Plan is activated by Duty Harbour Master with Co-ordination Centre initially established in Harbour Master's Office, Stony Point.

STORING: Vessels may be stored by barge or truck. At tanker terminals storing is not allowed during loading or discharging operations. Trucks and forklifts are restricted to a point 60 m. from jetty head. Bonded stores are handled under Customs supervision. Local labour is available to assist with storing.

SHORE LEAVE: Crew members permitted shore leave, and launches can be supplied to vessels at anchor, provided vessels have pratique, and have been cleared by Customs.

DELAYS: No delays anticipated. Port operates 24 hours per day.

AUTHORITY: Ports and Harbours Division, Ministry of Transport, 168 Exhibition Street, Melbourne, 3000. *Tel:* 03-6698666. *Telex:* 34051.

Local Authority: Captain F. Hart, Harbour Master, Harbour Master's Office, Stony Point Road, Crib Point, Victoria 3919. *Tel:* 059-839406. *Telex:* 34051.

AGENT: See "Melbourne".

WHYALLA, S.A.: 33.02 S. 137.36 E. (See Plan)

LOCATION: Situated on Western shore of Spencer Gulf opposite to and 27 miles by sea from Port Pirie. Open to all Southerly winds, which seldom interfere seriously with operations.

BUOYAGE: "IALA" Buoyage system "A" has been adopted.

The system is that the port hand beacons are red in colour, lights red, topmarks can shape and even numbered. The starboard beacons are green in colour and lighting, topmarks cone shape and odd numbers.

FACILITIES: Jetty for iron ore loading, and dredged harbour with one main wharf for steel and general cargo, and for bulk cargoes of coal, coke, limestone, pig iron, salt, etc. Harbour berths are safe berths.

DOCUMENTS: See "Melbourne".

PILOTAGE: Compulsory except for those vessels whose Masters hold Exemption Certificates. Pilots board 0.5 to 1.5 miles East (105°) of Whyalla No. 1 Ore Loading Jetty. Vessels requiring Pilot should request service in sufficient time enable Pilot be ordered before 1600 hrs. Monday to Friday and should show prescribed signal within at least 10 miles of Whyalla. If delayed berthing, Master informed by radio and recommended anchor at Pilot boarding station (see above).

ANCHORAGES: Quarantine line extends in direction 241° from Black Point to Coast Southwestward of port. Quarantine anchorage shown on Australian Chart AUS.135, lies Southeastward of quarantine line and Eastward of jetty. Anchor preferably North of harbour leads. Vessels should not anchor on harbour or jetty leads, but should anchor, draft permitting, approximately 1 mile North of Outer Fairway Beacon. Holding ground good with hard clay and sand bottom.

RESTRICTIONS: Vessels will not be moved within port by Pilot unless at least 10% of max. draft in water beneath keel. Min. clearance 2 ft. Also see "Berthing".

PRATIQUE: Whyalla is a port of first entry. 48 hours' notice of request for Pratique required. Pratique granted at anchorage or in berth. Also see "Melbourne".

Also see "Australia-General" before first port – Answers required to questions in Quarantine form by radio.

RADIO: Cable "Hematite Whyalla" also local Agent *(a)* on departure from previous port advising ETA and total cargo for discharge Whyalla (if any); *(b)* 48 hours prior arrival giving ETA; *(c)* 24 hours prior arrival giving ETA; *(d)* advise any alteration in ETA exceeding 2 hours; *(e)* advise estimated draft on arrival fore and aft. These cables necessary in order ensure loading and labour. Cables to be signed with Master's name. Cables sent outside working hours should be prefixed "Shipserv". In event vessel arriving direct from overseas port requiring Pratique, following additional advice to be cabled: No. of crew, nationality, and whether health vaccination certificates required.

VHF: Port equipped with VHF. Service maintained 24 hours a day. Call sign "Whyalla Harbour".

TUGS: All tugs fitted VHF radio. 4 tugs available between 2.5 and 45 tons bollard pull. Wire towropes not to be used unless risk of damage to tug undertaken by ship. Charge for use of tug's lines. Orders for tugs to be made at least 2 hours before required and not later than 1530 hrs. Monday to Friday. Ferry services undertaken to ships at anchorage outside harbour when requested.

BERTHING: Iron ore loading jetty no longer in service, lies near Eastern side of town is 2,273 ft. long with T head formed by 6 dolphins. At night, the dolphin shows fixed white light,

No. 2 Jetty max. length of vessel 250 m. Depth of water alongside 11.6 m. LW. Approach Channel depth 10.7 m. LWOST. Swinging basin, depth 10.7 m.. LWOST.

Stowage factor iron ore, 13 ft. – 15 ft. per ton. No stevedoring incurred and generally cargo loaded lower holds and no trimming necessary.

Whyalla Harbour: About 1.25 miles to North or Iron Ore Jetty. Entrance Channel 120 m. wide and approx. 3,050 m. length. Water depth in Channel and basin 10.0 m. LWOST. Depth of water at Harbour Wharf 10.7 m. LWOST. 4 berths, full wharf 2,300 ft.

DENSITY: Density of water approximately 1028 to 1035 therefore vessels must load light.

STEVEDORES: Shift work 21 hours per day on continuous 7 day roster. At least 24 hours notice for labour requirements.

MEDICAL: Resident doctors and hospital available.

FRESH WATER: Available at No. 2 Jetty and all wharves.

FUEL: Bunkering not normally undertaken. Fuel oil, coal and diesel oil available at Whyalla Harbour Wharf in emergencies only.

STORES: Marine and bonded stores can be procured by arrangement with Adelaide. 5 days notice required.

Lloyd's agents are Adelaide Steamship Co. Ltd.

STORING: See "Prelims".

Storing at the Blast Furnace Wharf:

1. Vessels can be stored by trucks.
2. Vessels can store during loading or discharging if the vessel can provide cranes and labour for this purpose. Barges not used at this wharf. Storing must not cause any delay to stevedoring operations.

Stevedoring operations cease between the hours of 0700 to 0800; 1500 to 1600; 2300 to 2400.

3. Trucks can proceed alongside at all berths.
4. Forklifts are available for hire and can be used at all berths.
5. Application to load stores should be made to Customs by submitting a requisition showing details of items required, prior to loading.

At least 24 hours notice is required by Customs during business hours, Monday to Friday.

Form 957 (Entry for Exportation) is then completed showing all details and value of the goods, and signed by the Ship Owner or his Agent, and lodged with Customs within 7 days.

6. Shore labour is not available for storing.

Storing at the Ore Loading Jetty:

Modest amounts can be loaded by launch on the port side using ship's cranes. Launch charge $176.00 per hour.

Small orders can be manhandled to ship's starboard side at the jetty. Vessels always berth head out, starboard side to the ore jetty.

REPAIRS: Consult ship's Agents before maintenance or repairs undertaken.

SURVEYORS: The following Surveyors available anytime if advance notice given: (1 hour flight from Adelaide).

Lloyd's Register: 149 Brebner Drive, Westlakes, Adelaide, South Australia 5021. Tel: Adelaide 353 5166. After hours: Adelaide 267 2554 and 294 7478. Telex: 89973 (LRADL).

Bureau Veritas: 20 Divett Street, Port Adelaide, South Australia 5015. Tel: 47 5924. Telex: AA88593.

GANGWAY/DECK WATCHMAN: Available at ship's option.

REPATRIATION: Air, road and rail facilities available.

AMBULANCE: In event of accident contact Agent or BHP 419 or BHP 2205. After hours BHP 699. St. John's Ambulance Services (Tel: 45-7777) available 24 hours daily.

Aerial Ambulance available for transfer of patients to a metropolitan hospital.

BANKS: A.N.Z. Banking Group, Forsyth Street, Whyalla. 5600. Tel: 45 7122

Commonwealth Banking Corporation, Forsyth Street, Whyalla. 5600. Tel: 45 8666.

National Bank of Australia, Forsyth Street, Whyalla. 5600. Tel: 45 8033.

Westpac Banking Corporation, Forsyth Street, Whyalla. 5600 Tel: 457155.

EMERGENCY CO-ORDINATION: Whyalla Police Tel: 45 7088.

State Emergency Service Tel: 45 0272.

Local Emergencies within B.H.P. Area, including Ships Alongside: e.g. Accidents, fire, flooding, deaths, electrical faults causing hazards, oil spills and other pollution.

Dial 'OO' on B.H.P. Interworks black telephones.

SHORE LEAVE: Crew members permitted shore leave, and launches, at ship's option, provide regular schedule to anchorage – weather permitting.

AUTHORITY: *Port Authority:* B.H.P. Steel International, Long Products Division, P.O.Box 21, Whyalla, South Australia 5600 *Tel:* 45 7000 *Telex:* AA 80270 and AA 80259. *Cables:* "Hematite" Whyalla. *Contact:* The General Manager.

Harbour Master: Department of Marine & Harbours, P.O.Box 102, Whyalla, South Australia, 5600 *Tel:* Business: 45 5666. After hours: 45 7682 or 45 3352.

Department of Marine & Harbours available as Cargo Inspectors and Independent Surveyors.

AGENT: Sub-agent of Patrick Agencies, Adelaide.

WYNDHAM, W.A.: 15.27 S. 128.06 E. (See Plan)

PORT LIMITS: All waters in the Cambridge Gulf South of a line extending from Cape Dussejour to the summit of Hill 437 on Lacrosse Island, thence to Cape Donett.

CERTIFICATES/DOCUMENTS/HEALTH: See "Melbourne".

PILOTAGE: Compulsory for all vessels entering the port except those whose Masters have pilotage exemptions. Pilot Boarding Ground, Nicholl's Point bearing 214° distance 5.2 miles (Lat. 14° 58.2′ S., Long. 128° 10.3′ E.). By special arrangement, and if the vessel has no charts and subject to weather, the Pilot will board at the Outer Pilot Boarding Ground, Lacrosse Island Light bearing 351° distance 4.7 miles.

Harbour Master/Pilot is no longer stationed permanently at Wyndham. So early advice (10 days) is essential and should be sent to Supt. Pilotage, Department of Marine and Harbours, Fremantle, Telex: 94784, so that arrangements can be made to fly a Pilot to Wyndham. 48 hours and 24 hours prior to arrival give ETA to Harbour Master, Department of Marine and Harbours, Wyndham.

The approaches Channel has a minimum depth of 6.4 m. LWOST.

ETA: Shipserve "Harbour Master Wyndham" required 48 and 24 hours notice prior arrival. The 24 hours message should be timed to be delivered before 1630 hrs. local time on the day before arrival so that arrangements can be finalised, when possible, in working hours.

Indicate max. draft in the 48 hours notice.

APPROACHES: Generally speaking, it is preferable to arrive at the pilot station at daybreak. Approach Medusa Bank Buoy and pass Westward (buoy bearing 090° distance 1 mile). Steer 180° until Lacrosse Island Lighthouse bears 040°, distance 2 miles. Alter course to 145° to a position with Shakespeare Hill and Cone Hill in transit (086°), Cone Hill distance 4 miles. The course should then be altered to 225°. Course clears Guthrie and East Banks and puts Black Cliff right ahead.

It will be noted that a conspicuous hill (un-named) is sighted immediately behind Black Cliff Point and these together form an excellent lead down this part of the Gulf to a position off Islet Point. From this point onwards pilotage is fairly complicated. There is a submerged wreck off the jetty, which must be considered when berthing and unberthing. Large vessels may only navigate the Hare Channel at half tide or better, as there is a 6.4 m. patch in the fairway.

RESTRICTIONS: The max. length of vessel permitted to navigate the Gulf is 189 m. overall. Longer vessels fitted with bow thrusters have used the port by special permission.

The Gulf is not navigable during hours of darkness at present.

MAX. SIZE: Length 190 m. draft 8.8 m.

HEALTH: Wyndham is a first port of entry. Masters are required to radio Port Health Authority, Wyndham, not less than 12 hours prior to arrival at pilotage station and giving state of health of the vessel. Examination for pratique is usually conducted after arrival alongside and nobody is permitted ashore until doctor's examination is completed.

TUGS: None.

BERTHING: There is a jetty of 283 m. in length. The Southern 210 m. having a least depth of 9.14 m., there is slightly less water at the Northern end.

Ordinary moorings are used. A launch is on station to run lines. There is no tug available.

FRESH WATER: Available at both berths. Supply is 10 t.p.h. approx.

FUEL: Not available.

STEVEDORES: Working hours: 0730 – 1130 hrs., 1230 – 1630 hrs., 1630 – 1830 hrs. When no extension of work, labour finishes at 1630 hrs.

Labour is organised by the A.E.W.L. WWF conditions prevail, 2 gangs are available. Prior advice as to labour requirements, hatches to be worked, etc., is of great assistance to stevedores.

CARGO HANDLING: By ship's gear only direct to motor transport. 1×12 ton Coles slewing crane available, provided sufficient notice is given. Fork-lift trucks and pallets are used for handling general cargo where suitable.

A container park and facilities for handling and storage of reefer and dry containers ashore has been installed.

Bulk Loader on South Berth, grain loading rate 120 t.p.h.

REPAIRS: No facilities.

TIME: GMT plus 8 hours.

AUTHORITY: Marine and Harbours Department, P.O.Box 220, Wyndham, Western Australia 6740. *Tel:* 611006, 611203. *Telex:* 99853. *Contact:* Harbour Master.

AGENT: Sub-agent of Patrick Agencies, Fremantle.

YAMBA, N.S.W.: 29.26 S. 153.21 E.

PORT LIMITS: One nautical mile Eastwards of the ends of the North and South Breakwaters defines the seaward limits of the port.

DOCUMENTS:

2 Crew Lists M&S 11.
2 Port of Call Lists.
2 Passenger Lists Forms M308, 309, 310 (2 each).
1 Crew Personal Effects List Form 5.
1 Store List Form 42A.
1 Animal Pets aboard Form QA4.
Ship's Log.
Last Port Clearance.
Safety Certificates: Construction, Equipment, Safety Equipment, Loadline, Radio.

Where possible, cargo manifests and stowage plans should be forwarded by airmail ahead of the vessel to the local Agent.

PILOTAGE: The Clarence buoyage is IALA "System A". Pilotage is compulsory for all craft exceeding 30.48 m. LOA, unless a current Pilotage Exemption is held by the Master.

Notice of ETA and request for a Pilot must be made to the Harbour Master not less than 24 hours before ETA at breakwater. Cable address is "Pilot Yamba", Telex, receiving only, address is Metyam 66660. Confirmation of ETA is required 2 hours before arrival breakwater. Channel 16 VHF is continuously watched 1 hour before last given ETA and ETA may be confirmed or adjusted on this frequency. Pilot boat is 15 m. LOA and is a black hulled tug with black funnel and white superstructure, called "Francis Freeburn". The usual international signals may be employed by vessels requiring a Pilot. The Pilot boarding point may vary according to weather and sea conditions, if possible it will be 1 nautical mile seaward of the breakwater, otherwise Pilot will either issue instructions or lead vessel into the river and board just inside breakwater entrance. Pilot boarding arrangements must be according to IMO rules. Vessels awaiting Pilot or suitable tide may anchor between 1 and 2 miles East of the breakwater entrance – sand bottom and good holding ground.

ANCHORAGE: Masters familiar with the port and pilotage vessels may proceed to an anchorage downstream of the Harwood Bridge for berthing at Harwood Sugar Mill in 5.0 m. of water or to a position midway between Freeburn Island and Illuka Wall in 6.0 m. of water for vessels berthing at Goodwood Island wharf. Also see "Pilotage".

RESTRICTIONS: Vessels can enter the port day or night. The only restrictions would be on bar conditions and the height of tide in relation to vessel's draft.

MAX. SIZE: Generally,there is no restriction on length, max. beam would be approximately 70 m. to get through a 91 m. passage in a rock reef inside the breakwater entrance. The main restriction is draft of vessel which is 3.7 m. plus height of tide, such tides being almost identical to Sydney in both height and time.

BERTHING: Main general cargo berth is Goodwood Island Wharf. This is a concrete decked, concrete piled wharf with timber and rubber fender piles. Permissible wheel loading 4.2 tonnes, wharf 70 m. deck floor 2,600 kg./sq.m. Vessels of greater than 70 m. length can secure at the berth as bollards are available 24 m. and 30 m. up and downstream respectively from the wharf. The least depth alongside the wharf is 7.0 m. There are no sheds on the wharf, however a large stacking area is available, the wharf being designed mainly for timber export/imports. Ship's cargo gear is usually employed, but mobile cranes up to 50 tonnes are available at reasonable notice for extended hire.

For vessels loading bulk sugar or molasses a "T" jetty is situated at the Harwood Sugar Mill just downstream of the Harwood Bridge, 30 m. long with dolphins for mooring lines about 30 m. up and downstream from the ends of the "T" jetty which has the overhead conveyor belts for loading bulk sugar and molasses. The least depth alongside this berth is 5.0 m. The overhead belt loader is a fixed head and takes 24 hours with shifts in vessel's position to load 2,500 tonnes, bulk molasses is very slow, taking 24 hours to load just over 1,500 tonnes.

There are no roll-on/roll-off traffic berths or berths for handling liquid chemicals or LPG carriers. The berth at Goodwood Island is suitable for loading or discharging explosives.

TUGS: There are no commercial tugs, the pilot vessel may act as a tug if required either by the Master of the vessel or on advice from the Pilot. The "Francis Freeburn" is 460 b.h.p. and five tonnes bollard pull.

HEALTH: Australian Commonwealth Rules apply.

RADIO: Sydney Radio (VIS) or Brisbane Radio (VIB) are the long range area stations.

VHF: The base station with call sign "Yamba Harbour Control" is situated behind the Wooli Head Lighthouse. A continuous watch is not maintained, only on prior notice that a vessel is due. Initial calls are made on Channel 16, another Channel will be used after contact has been made. The pilot vessel, which also acts as tug, if required, has Channels 16, 12, 6, and 8.

RADAR: There is no Port Control Radar.

STEVEDORES: Working hours are from 0800 – 1900 hrs. 5 days per week, weekends by arrangement, also second and third shifts by arrangement.

MEDICAL: Full hospital facilities at Level 2 available without prior notice, Level 3 on transfer to Grafton or Lismore with specialist services.

FRESH WATER: Good quality potable water available in unlimited quantities at 30 tonnes/p.h. per connection, ship's hoses used at the present time.

FUEL: Nearly all grades of fuels and lubricants are available by road transport with arrangements being made through Agent.

CONSULS: Nearest at Sydney or Brisbane.

REPAIRS: Routine maintenance and boilermaking assistance to light engineering standards. The nearest foundry is in Ballina, 1 hour's drive from the port, operated by the same firm that does the maintenance and boilermaking.

DRYDOCK: A slipway of 1,200 tonnes displacement is available.

SURVEYORS: Lloyd's Agents who also represent other Classification Societies and Surveyors can be brought from Sydney or Brisbane at short notice.

GANGWAY/DECK WATCHMEN: Gangway and deck watchmen are not normally used in this port but can be obtained at Union award rates, with prior notice to the Agent.

HATCHES: Opening/closing normally handled by stevedores whilst alongside or by ship's crew before arrival.

CUSTOMS ALLOWANCES: Australian Commonwealth Regulations apply.

CARGO GEAR: Discharge or loading of cargo at Goodwood Island Wharf is by ship's gear, however mobile cranes up to 50 tonnes capacity are available for extended hire at short notice.

REPATRIATION: Scheduled aircraft to Sydney are available twice daily at Grafton Airport, 1 hour's drive away. Rail connections to and from Sydney are also available at Grafton. All facilities exist for changes of crew and repatriation of seamen with prior notice to Australian Customs at Yamba.

AIRPORT: See "Repatriation".

TIME: Local time is GMT plus 10 hours. Summer Time is used from October 24th to March 7th (GMT plus 11 hours)

HOLIDAYS: Christmas Day, New Year's Day and Good Friday.

POLICE/AMBULANCE/FIRE: All emergency services are available through the local wharf office.

Police:	Iluka 46 6019: Maclean 45 2444. If unanswered Tel: 42 0222.
Fire:	Maclean 54 2420
Ambulance:	Maclean 45 2020.

TELEPHONES: This service is available aboard ships at Goodwood Island Wharf by prior arrangement through the Agent, local calls only, account rendered through the Port Authority.

SHORE LEAVE: When Immigration and Customs requirements have been satisfied, there is no restriction on crew shore leave, so long as they rejoin the vessel before departure.

IDENTIFICATION CARDS: There is no need for identity cards or shore passes except in so far as non-English speaking persons may wish to be able to identify themselves.

DELAYS: Berthing delays are very infrequent, only possible delay would be due to adverse bar conditions.

SERVICES: A compass adjuster resides at the port.

EMERGENCY CO-ORDINATION CENTRE: All emergencies are co-ordinated through Canberra.

STORING: Vessels can be stored by trucks, all "under Bond" goods are subject to Australian Bureau of Customs control. Trucks can proceed alongside vessel at berth during storing. Fork lift trucks can be used on wharf to handle stores. Local riggers can be employed to assist storing.

AUTHORITY: Maritime Services Board of New South Wales, G.P.O.Box 32, Sydney, N.S.W., 2001. *Tel:* 240 2111. *Telex:* MSB SYAA 24944. *Cables:* Marboard.

Local Office: Captain G. W. Gray, Pilot Station, Yamba. *Tel:* 462002. *Telex:* 66660 (Metyam Aa) (Receiving only).

AGENT: See "Sydney".

YAMPI SOUND, W.A. (Cockatoo Island and Koolan Island): 16.08 S. 123.38 E.

COCKATOO ISLAND CLOSED MAY 31ST, 1986. WHARF FACILITIES TO REMAIN SERVICEABLE UNTIL CLOSURE OF KOOLAN ISLAND IN 1993.

PORT LIMITS: The port limits, which are not marked on the charts of the area extend from a position in Lat. 16° 13′ 13″ S., Long. 123° 32′ 32″ E. in a Northerly direction for 10 miles to about midway between Bathurst and Irvine Islands, thence Eastward for 15 miles, thence Southwards to the mainland passing nearly 0.75 miles Eastwards of Koolan Island. The Southern limits of the port includes all the intermediate coastline between the Eastern and Western limits as defined above.

DOCUMENTS: The following documents should be prepared prior to arrival if Yampi is the first port of entry to Australia:

Health:
2 copies – Form Q360
Customs:
2 copies – Form M&S 11 (List of Crew)
1 copy – Form 42A (Store List)
1 copy – Form 5 (Articles owned or in possession of Master, Officers or crew)
3 copies – Form C&E (Ports of Call)
1 copy – Form QA4 (Declaration of Ship's Pets)
1 copy – Form QA5 (Shipmaster's Bond) – completed only if pets on board
3 copies – Crew List – unofficial
3 copies – Ship's Bonded Stores – unofficial

The following Certificates are required to be produced if Yampi Sound is the first port of entry to Australia:

Loadline Certificate
Safety Radio Certificate
Safety Equipment Certificate
Safety Construction Certificate
State Conservancy Dues (receipt)
Custom's Clearance from last port

PILOTAGE: Yampi Sound is not a compulsory pilotage area. However, the Company's Port Officer holds a foreign-going Master's Certificate, is well versed in local conditions and will act as Pilot for Masters requiring his service. Koolan Island Pilot Boarding Place 270°×2 miles from Nares Pt. Light. The Port Officer will board at the Quarantine Anchorage.

An approved pilot ladder as per SOLAS Regulations is required.

As a Westerly wind is quite common, Masters are advised that their vessel should be adequately ballasted prior to berthing operations.

ANCHORAGE: Yampi Sound is a well sheltered deep water port with good all weather anchorages.

The Quarantine Anchorage is located on the Eastern side of Yampi Sound, with Nares Point bearing 090° True, distance 2 miles.

MAX. SIZE: *Koolan Island:* LOA, 280 m. Breadth, 43.0 m. Draft (ordinary) 15.54 m. (51 ft.) however loading permitted to deeper drafts on rising tide.

HEALTH: Yampi Sound is a first port of entry to Australia, and valid Vaccination Certificates are required. Radio Pratique is available through Health Department, Port Hedland, Telex No. 99515 Qtne. The doctor is normally available during daylight hours only, excepting emergencies.

Customs normally board upon vessel berthing.

RADIO: The port is able to communicate with vessels which are fitted with VHF radio through the normal international maritime channels. The call sign is "Koolan Island". A continuous listening watch is maintained on Channel 16 when vessels are due.

The telegraphic address for Yampi Sound is "Ironsteel", Derby, W.A., Telex: 99855 Bhmin and Masters of vessels destined for Yampi Sound are required to advise their ETA by radio on departure from the previous port, and at 72 hours, 48 hours, and 24 hours prior to arrival, depending on the vessel's departure from that port.

TUGS: The following vessels are available for shipping movements within Yampi Sound.

**Kalibah* – 850 hp. Tug – 15 tonne bollard pull.
**Farm Cove* – 2,000 hp. Tug – 30 tonne bollard pull.
Wirana – Line launch.

*Tugs will be replaced by 2 tugs of 38 tons bollard pull in August 1986.

Also available for general cargo work is

Wandi II – Landing Barge of 60 tonne capacity.
Dampier Barge – Dumb barge 200 tonne capacity.

TIDES: Tidal streams within Yampi Sound generally set Easterly with the flood, and Westerly with the ebb tide. At Koolan Island Wharf, the tidal stream sets Eastward except for a period from 0.5 hours before to 2.5 hours after HW when the tidal stream sets Westward.

At Spring tides these streams are most pronounced, however may become confused at Neap tides.

Further advice on tides and tidal movement can be obtained from the Company's Port Officer. An automatic tide gauge is in operation – with tide board clearly visible.

LOADING ZONES: A Summer Loading zone exists at Yampi Sound with the exception of a Seasonal Tropical Allowance from 1st May to 30th November.

BERTHING:
Koolan Island: The loading berth at Koolan Island consists of a substantial, well fendered wharf 170.7 m. long with the centre located approximately Lat. 16° 08.3′ S., Long. 123° 44.3′ E. Additional mooring dolphins are located each end of the wharf to accommodate vessels of up to 160,000 d.w.t. with a maximum beam of 44 m.

The depth of water alongside the wharf is 17.0 m. at LWOST with a tidal range of up to 10.67 m.

The shiploader consists of a travelling, retractable, luffing, conveyor boom capable of loading iron ore at a rate of 3,000 t.p.h., and can move a distance of 118.9 m. along the wharf. Larger vessels may be required to shift along the berth to complete loading operations, the vessel's Master being fully responsible for shifting operations at all times.

Loading is normally continuous with the exception of closed holidays such as Christmas Day, Anzac Day, Good Friday, etc.

General cargo handling facilities at this wharf include a 33 tonne travelling and luffing crane on the Eastern end. Shore labour is available only for use as mooring gangs, and loading and handling of cargo on the wharf only. There are no ship foremen.

MEDICAL: There is a resident doctor on Koolan Island and a small medical centre. However, the nearest hospital facilities are at Derby, 140 km. from Yampi Sound, and all patients are transferred by aircraft.

AIRPORT: There is an airstrip located on Koolan Island and flights by the Company's Charter Aircraft connect with the Australian airline system at Derby, 140 km. from Yampi Sound.

SERVICES: Stores, laundry service, fresh water, repair facilities, divers and trading bank facilities are not readily available.

Fresh water can be supplied in an emergency while moderate amounts of stores are obtainable if sufficient notice has been given beforehand. Limited cash can be obtained.

Bunkers are not available, while distillate is available in moderate quantities only after prior arrangement.

The facilities in the townsite of Koolan Island are very limited and include a Post Office, Supermarket, Shop, Savings Bank, A.N.Z. Bank, Open Air Cinema, and a Private Club. There is a swimming pool, tennis courts, squash courts and golf club.

FIRE PRECAUTIONS: There are no fire services available, except the Works Fire Brigade and the safety of the vessel, due to the isolated nature of the berths, remains the responsibility of the Master at all times.

International shore connections are readily accessible at Koolan Island Wharf.

POLICE/AMBULANCE/FIRE: In an emergency the Port Officer should immediately be informed.

Emergency telephone numbers:		*Koolan*
Medical		333
Fire Brigade		222
Port Officer	– Home	387
	Office	202
Agency Officer	– Home	385
	Office	285
Policeman		327

TIME: GMT plus 8 hours.

PORT REGULATIONS: Whilst in the Port of Yampi Sound, Masters are respectfully requested to observe the appropriate Quarantine Regulations, particularly in regard to the following matters:

Garbage, waste oils and tank cleaning compounds should not be discharged into the sea whilst in Yampi Sound.

Rat guards should be used at all times.

SHORE LEAVE: Identity cards are not necessary for shore leave. The townsite on Koolan Island is 10 km. from the wharf. Transport to the townsite is limited, however transport may be arranged through the Agency Officer. Seamen and visitors are not permitted to walk near the quarry areas, and are cautioned to keep clear of all machinery.

Permission must be obtained before seamen and visitors proceed ashore. Blasting in the main pit takes place at irregular intervals, indicated on the board at the end of the wharf.

GENERAL INFORMATION: The sole export from Yampi Sound is iron ore which is quarried on Koolan Island by B.H.P. Minerals Ltd., a subsidiary of the Broken Hill Proprietary Co. Ltd.

The first shipment of iron from Koolan Island was made in 1965.

The largest shipment loaded to date is 140,000 tonnes from Koolan Island by Australian vessel "Iron Spencer".

From November to March Yampi Sound is near the Southern extremities of the N.W. monsoonal influence and cyclones can be expected during this period. The effects of cyclones are more prevalent in this area early in this period, however cyclonic conditions have been experienced at Yampi Sound during November/April.

During the season November to March (known locally as the "Wet"), the prevailing winds are Westerly, strong at times, particularly during the afternoon. Rain and thunder squalls are also frequent during the "wet", and Master's are warned to be watchful for storms, as the accompanying winds can be gale force.

The season April to October (known locally as the "Dry") brings a period of very little rain and frequent periods of strong South-Easterly winds during the mornings, giving way to light Westerly sea breezes in the afternoons. No cyclones are likely during this period.

	Koolan Island
Depth of Water	
Berth	17.00 m. (55.75 ft.)
Turning Basin	20.10 m. (66 ft.)
Channel	20.10 m. (66 ft.)
Tide, Rise and Swell	
Spring Rise	10.70 m. (35 ft.)
Neap Rise	2.10 m. (7 ft.)
Mean Rise	4.63 m. (15 ft.)
Swell	Usually Nil
Keel Clearance	0.91 m. (3 ft.)
Draft of Ballast Condition	6.40 m. (21 ft.)
Loader Facilities	
Outreach	15.85 m. (52 ft.)
Throwing Dist.	4.57 m. (15 ft.)
Clear Height From HWOST	45 ft.
Berthing Side	Normally Starboard side
Stowage factor	13
Angle of Repose	about 25°
Nature of bottom	Mud
Radio Pratique	Available
Time, berthing and unberthing	Usually daylight berthing only. Unberthing upon completion.

AUTHORITY: B.H.P. Minerals Ltd, Koolan Island, W.A. 6733. *Tel:* Derby 911575. *Telex:* 99883. *Cables:* Ironsteel Derby. *Contact:* Port Officer.

AGENT: B.H.P. Minerals Ltd., Koolan Island. Telex: 99855 Bhmin. FAX: 911214.

Ship's mail and any correspondence should be addressed: c/o B.H.P. Minerals Ltd., Koolan Island, Western Australia, 6733

Azores

HORTA, Faial: 38.32 N. 28.38 W. (See Plan)

DOCUMENTS:
3 Crew Lists.
3 Passenger Lists.
For Customs
Arrival Declaration.
Manifest of Cargo for Discharge or in Transit.
Provisions List.
Request to Commence Load/Discharge.
For Port Health
Derat Certificate or exemption.
Health Clearance from Last Port.
For Port Captain
Seaworthiness Certificate.
Certificate of Registry.
Tonnage Certificate.

PILOTAGE: Can be called by 2 long and 1 short blast on the whistle, or by International Code flag "G". Radio contact with pilot station can be made by VHF Channel 16; Tel: 2182; via radio station CUG, or in cases of urgency, through the Horta Naval Radio Station CTH.

Pilot launch painted black with "Pilotos" painted on each bulwark. If requested by Master, Pilot will board at entrance of Faial-Pico Channel or Faial-St. George Channel. Otherwise Pilot will board at port entrance. Vessels waiting for Pilot must remain 1.5 miles from the breakwater with Ponta de Doca Lighthouse in line with Avia Larga Lighthouse on Pico Island.

ANCHORAGE: The best holding ground is with the breakwater light in line with the tower of San Francisco church bearing 272°, and with Ilheu Negro in line with Casa Joao Catita bearing 203°. Another line of good soundings is in the open Channel dos Ingleses.

MAX. SIZE: For berthing, max. draft 22 ft. Depth in the artificial port is 36 ft. at HW. Depth at buoy moorings: 33 ft. Vessels of any draft can anchor outside the port.

HEALTH: If vessel has not touched any contaminated port, Pilot will haul up signal "TO" and Health Inspector will give Free Pratique. Master is obliged to send the Maritime Declaration of Health given by the Pilot to shore within one hour together with a Crew List and Cargo Manifest. If vessel has suspected case of fever on board or is coming from a port in a contaminated zone, Pratique will only be given after Health Inspector has boarded.

RADIO: Commercial station CUG and Naval station CTH.

TUGS: None available.

STEVEDORES: Gangs are provided by local stevedores syndicate when requested by Master or Agent.

MEDICAL: Doctors and hospital facilities always available.

FRESH WATER: Can be provided by one water barge, capacity 57 tons, cost 38.50 Escudos per ton. Also available from 3 hydrants on quay, rate 50 t.p.h.

FUEL: Gas oil and gasoline available by pipe-line on quay.

GANGWAY/DECK WATCHMEN: Police Guard or Coast Guard (Policia Maritima).

OPENING/CLOSING HATCHES: Performed by stevedores.

CUSTOMS ALLOWANCES: Up to 150 grammes tobacco and small allowance wine or spirits for each man.

IDENTIFICATION CARDS: Not required.

CONSULS:
France
Greece
Germany F.R.
Italy
Netherlands
Norway

REPAIRS: Machinery and small electronic repairs can be effected.

REPATRIATION: Can be arranged.

TIME: GMT minus 1 hour all year round.

HOLIDAYS: 1st January; 25th April; 1st May; 10th June; 24th June; 15th August; Corpus Christi; 5th October; 1st November; 8th December; 25th December.

POLICE/AMBULANCE/FIRE: Police 22022; Ambulance 115; Fire 22333 and 115.

TELEPHONES: Can be connected on board vessels berthed alongside.

SHORE LEAVE: Allowed.

AIRPORT: Several flights during the day from Faial Airport, 10 km. from the port, to Lajes airport and International Airport at Santa Maria. There is a daily boat service to Pico and several weekly to other islands.

AUTHORITY: Capitania do Porto da Horta, 9900 Horta, Azores. *Tel:* 22813.

PONTA DELGADA, San Miguel: 37.44 N. 25.40 W. (See Plan)

DOCUMENTS:
1 Store List.
4 Crew Lists.
4 Landing Passenger Lists.
4 In Transit Passenger Lists.
2 Manifests of Cargo Being Landed.
1 In Transit Cargo Manifest.
Ship's Register.
Load-line Certificate.
Safety Equipment Certificates (London Convention).
Derat Certificate.

PILOTAGE: Good deep approach. Harbour Pilot boards 0.5 miles S.E. of breakwater. Radio Harbour Master direct or through Agent ETA 48 hours notice. ETA message to include draft, reason for calling, type of bunker required, fresh water required, oil products needed, nature of repairs and what cargo, if any, aboard.

Pilot station with visual signal tower and radiotelephony, at entrance of port installations. Telephone number 2.35.50. Pilot's motorboat – Pilotos in capital white letters printed both sides hull, as well as flag "P" hoisted during day or 1 red and 1 white light at night.

When necessary, Pilot motorboat will complete identification by flashing word "Pilotos".

Besides usual signals of ICS, Pilots' station, when necessary, will hoist on main signal tower the following:

By Day – Flag "X" of ICS – Wait outside Harbour (for Portuguese or foreign ships regularly visiting Ponta Delgada); Flags "OG" of the ICS – Wait outside Harbour (for all other ships);

By Night – Two green lights (one above the other) – Wait outside the Harbour (for Portuguese and foreign ships).

ANCHORAGE: Outside artificial harbour, in roadstead and off breakwater, anchorage suitable for all ships whose drafts are too deep for admission into artificial port – over 40 ft. depth. Good holding ground.

RESTRICTIONS: Vessel considered adversely trimmed when more than 10 ft. "by the stern" or 2 ft. "by the head".

MAX. SIZE: Up to 38 ft. draft.

HEALTH: The Pilot requests Master to hoist quarantine flag when vessel comes from an infected port, or when sick people carried on board. Port doctor then boards for inspection and nobody allowed to board or leave vessel before completion of inspection.

Animals: Importation and transit of all birds and small animals allowed but valid Health Certificate and valid Rabic Vaccination Certificate required.

RADIO: San Miguel Radio, call sign CUG. Transmitting on 1663.5 kHz. Receiving on 2182 kHz. Radio telephone frequencies 4415.8, 8792.8, and 13175.5 kHz.

RADAR/VHF: Harbour radar covers range of 20 sea miles; controls inside harbour waters. VHF location – main signal tower. Call sign – "Pilotos". Operating 24 hours on Channel 16. Range 20 to 25 miles.

Calls must be made on Channel 16 and then shift to Channels 20 or 22 as indicated by Port Operations Station. Channel 13 used for communications between tug, Pilot station, Pilot aboard, during manoeuvres of mooring and unmooring. It should be understood that the Port Operations Station is not to be used for ship's business with Agents or Shippers of cargo.

TUGS: Two tugs, 1,100 h.p. and 3,400 h.p. operated by Junta Autonoma available for assistance during berthing and unberthing.

BERTHING:
No. 1 – Quay for small craft.
No. 2 – West Quay, 1,069 ft. long, min. depth alongside, LW, 20 ft.
No. 3 – Central Quay, 678 ft. long, min. depth alongside, LW, 27 ft.
No. 4 – East Quay, 2,023 ft. long, min. depth alongside, LW, 40 ft.
Mooring buoys in depths ranging from 20 ft. to 30 ft.

MEDICAL: Large well-equipped hospital. Santa Casa da Misericordia de Ponta Delgada, telephone number 2.23.22 and Clinica de Bom Jesus, telephone number 2.53.52.

TANKERS: Vessels carrying explosives, inflammable liquid or any other dangerous cargoes, before entering port, must hoist International Code Signal "B" at foremast during day and a red light at night. Upon boarding vessel the harbour Pilot enquires from the Master whether there are explosives and any other dangerous cargoes on board. Masters requested to supply accurate information as to quantity and nature in order to enable Port Authorities to select a suitable berth or anchorage for vessel.

Constant Readiness: Vessels carrying dangerous cargoes, while moored, must maintain engines and propulsion machinery in readiness to leave the port under full power, if necessary.

STEVEDORES: Available. Early advice to Agent recommended.

FRESH WATER: Available at all quays ex hydrants.

FUEL: Bunkers are readily available but, for their own convenience Masters should telegraph Agents quantity and type of bunkers required. In order to avoid possible delays to their own and other vessels, Masters are requested to replenish bunkers at the time suggested by their Agents.

GANGWAY/DECK WATCHMEN: Customs Guards are on duty upon the quay and at the entrance of the wharf. Customs guards are also placed on board and those assigned for this duty should be provided with meals (at regular meal times) and sleeping quarters on board.

CUSTOMS ALLOWANCES: Storerooms will be sealed but a reasonable quantity of stores, estimated as indispensable for consumption, may be removed before sealing. This amount should be ready for removal from the storeroom prior to arrival at berth.

CARGO GEAR: Mobile Cranes: 1×12 ton; 2×6 ton; 1×5 ton; 1×3 ton; 1×6 ton (auto-crane); 1×5 ton (Rapier motor crane); as well as 7 lift trucks from 2.5 tons – 4 tons. Tender for passenger vessels.

IDENTIFICATION CARDS: No Crew members allowed ashore without landing cards, which are supplied by Agents.

CONSULS:

Belgium	Tel: 2 20 29	Italy	Tel: 2 42 46
Brazil	Tel: 2 26 38	Mexico	Tel: 2 27 04

Germany F.R.	Tel: 2 39 35	Turkey	Tel: 2 26 67
Greece	Tel: 2 41 29	U.S.A.	Tel: 2 22 16

REPAIRS: Engine or other repairs can be undertaken. Repairs to electric installations, motors and refrigerating systems can also be undertaken as well as repairs to wireless stations (including VHF, radio-telephone equipment, radar, echo-sounders, direction-finders, gyro-compasses, steering-gear, Sal logs and cinema projectors).

Workshops duly equipped to undertake hull and engine repairs. Divers and equipment also available for some underwater work. Small tugs, motor-launches and lighters. Small slipway for vessels up to 200 ft. long. No dry-docking available. A sea-going salvage tug, owned by Junta Autonoma is stationed in the port.

REPATRIATION: Can be arranged.

AIRPORT: 3 km. from Ponta Delgada. Daily flights to Lisbon by TAP-Air Portugal and to Airport of Santa Maria and to Lajes Airfield (Terceira Island) and Faial by Sata Airlines.

Daily connections with flights of TWA and TAP-Air Portugal, to and from Europe and United States or Canada.

TIME: GMT minus 1 hour. No changes.

HOLIDAYS: 1st January – New Year's Day, 25th April (Liberty Day), June 10th (Portugal Day), Corpus Christi, August 15th, October 5th, November 1st, December 1st, Monday before Ascension Day. Government offices close on afternoon of Maundy Thursday and on afternoon of Christmas Eve. Most firms close on Shrove Tuesday and Good Friday.

POLICE/FIRE/AMBULANCE: Police Tel: 22022; Fire Tel: 22333; Ambulance Tel: 22022.

TELEPHONES: Any ship moored alongside can be connected to the city's telephone network, upon request through the ship's Agent.

GENERAL: Visual storm signals are shown on Main Signal Tower.

SERVICES: Fresh and dry provisions available all the year round.

SHORE LEAVE: Allowed.

REGULATIONS: Ballast: Vessels must arrive with sufficient ballast to permit safe handling.

Ratguards: It is advisable to use ratguards while moored alongside. Scupper Covers: Boards or other suitable devices must be used to cover outlets from lavatory discharges, etc., to prevent fouling of pier or craft alongside.

Garbage: It is absolutely forbidden to dispose of cinders, garbage, or any other refuse inside the harbour or within the territorial waters limit. Non-compliance is subject to heavy fines.

AUTHORITY: Junta Autonoma Dos Portos Do Distrito. de Ponta Delgada.

NOTES

Please also advise Shipping Guides Ltd.

Bahamas

FREEPORT: 26.31 N. 78.46 W. (See Plan)

DOCUMENTS:

(a) Inwards:

	Description	*Customs*	*Immigration*	*Agents*	*Total*
1.	Crew Lists	2	1	1	4
2.	In Transit Passenger List	2	2	2	6
3.	Disembarking Passenger List	2	2	2	6
4.	Stores List	2	—	—	2
5.	Gift Shop Inventory	2	—	—	2
6.	Crew's Declaration	2	—	—	2
7.	Ship's Report Inwards (supplied by Agents)	2	1	—	3
8.	Maritime Declaration of Health (supplied by Agents)	1	—	—	1
9.	Cargo Manifest for Freeport	4	—	2	6

10. Landing cards supplied by Agents to be completed by each disembarking passenger.
11. Baggage Declaration forms supplied by Agents to be completed by each disembarking passenger.
12. Clearance from Last Port will be collected by Customs.
13. Derat Certificate should be available for inspection.

If vessel's previous port of call was in Bahamas items (7), (8) and (13) need not be complied with.

When vessel requires Consular Despatch to country such as Venezuela, 2 extra copies items (1), (4) and (6) should be supplied.

(b) Outwards:

	Description	*Customs*	*Immigration*	*Agents*	*Total*
1.	Ship's Report Outwards (supplied by Agents)	2	—	—	2
2.	List of Embarking Passengers (if any)	2	2	2	6
3.	Outward Manifest Freeport Cargo	2	—	2	4

If vessel clearing for another Bahamian port item (1) does not have to be complied with, but copy of next port's manifest required.

PILOTAGE: Compulsory for passenger vessels exceeding 199 gross tons and freighters exceeding 399 gross tons. Pilotage is compulsory for tankers berthing at Borco Dock, but vessels calling for bunkers only may anchor and bunker by barge without using Pilot services. However, pilotage recommended. Pilot station located in position in which Freeport Light bears 050° True, distance 2 miles. Approaching Freeport, particularly from North West, keep at least 3 miles from shore, and, when off port, remain at pilot station until boarded by Pilot. Pilotage area extends from pilot station to offshore refuelling moorings, anchorage to West of harbour entrance and harbour. Pilots available any time of day or night. Harbour signal station maintains a 24 hour watch for visual and radio signals. Borco on VHF Channel 16 only.

Vessels can communicate by RT on 2182 kHz, and once they have established contact will normally be asked to switch to one of the following frequencies: 2638 or 2738 kHz. Vessels can also communicate by VHF Channels 16 and 14. Freeport call sign on all frequencies is ZFP 81 or Freeport Harbour Control. Give ETA 48 hours in advance, with subsequent corrections as necessary.

The Restricted Area has been extended to 1 nautical mile radius from the Eastern end of No. 2 Jetty (Inner Jetty). Vessels are prohibited from anchoring in this area. No other vessels (with the exception of Borco or Harbour Company vessels) should enter the Restricted Area owing to the fire hazard created by the handling of inflammable liquids emitting explosive vapours.

Additionally, a 2 nautical mile area centered on the Eastern end of No. 2 Jetty (Inner Jetty) has been established. Any vessel closing the port from seaward in order to take on stores, land crew members, take on bunkers, fresh water, etc., other than a vessel going alongside the jetties or entering the harbour, should remain outside this 2 mile limit.

Unauthorised entry into these areas does not carry a penalty, however, the prudent mariner is advised that in any investigative proceedings into accidents within these areas, due account will be taken of any failure by a vessel to observe the 2 nautical mile and 1 nautical mile limits as indicated.

ANCHORAGES: There is a good offshore anchorage approximately 2,500 ft. to the N.W. from the entrance channel for a distance of 1.5 miles (submarine cable in existence) which is sheltered from Northerly winds. The bottom of the sea is lime and coral rock covered by sand and loose lime.

Anchorage area is exposed during periods when strong Southerly winds prevail. During these periods, vessels may drag their anchors. Mariners are therefore advised to use anchorage areas with caution.

A vessel can anchor in depths of 14.6 m. to 18.3 m. (48 ft. to 60 ft.) to the West of the harbour entrance with No. 1 Jetty (Outer Jetty) in transit. Anchorage is not recommended for vessels greater than 60,000 d.w.t. and vessel should be prepared to vacate the anchorage at short notice, particularly if the wind sets in from between S.E. and West. Pilotage is not compulsory but recommended and is available upon request.

APPROACHES: The following landmarks are prominent when approaching the port: Borco Refinery 3 chimneys. 369 ft. above MLW. White with red bands showing 3 sets of 4 red lights at night. Visible approx. 20 miles. Flames occasionally visible from Borco stacks. Bahamas Cement Company storage silos just to West of harbour entrance. Visible approx. 15 miles.

Currents in the area are not predictable and are largely wind induced. Harbour is approached through straight channel 1,800 ft. in length, 300 ft. width and with controlling depth of 30 ft. below MLW. Turning basin, 2,000 ft. by 1,800 ft. Vessels may enter and leave harbour on 24 hour basis, weather permitting.

Vessels using Freeport Harbour are adv ion and Masters requested

10	„ „	500,000	92 ft.	91 ft.

*Drafts on Berth Nos. 3, 4, 5, 7, 8 and 9 are limited by depths over submarine pipe-lines in berth approaches.

† 47 ft. if headed S.E.

‡ 46 ft. arriving/47 ft. departing.

HEALTH: Pratique granted by Customs Boarding Officer after Maritime Declaration of Health Form completed by Master and Derat Certificate examined. Important that vessel should not commence refuelling nor work cargo until cleared. A vessel arriving from another Bahamian port, e.g. Nassau, does not require Pratique. If any suspected disease or fever on board, Pratique may be withheld, pending examination by Government Medical Officer.

RADIO: Recommended that radio messages giving ETA, etc., be transmitted via Miami Radio.

Tankers proceeding to Borco Installation should transmit the following information within 6 hours of clearing at last port:

(a) name of tanker;
(b) name of port at which the tanker last called;
(c) date and hour of estimated time of arrival at Freeport.

It is imperative that the Master of each tanker shall establish communications with the refinery at least 72 hours prior to the estimated time of arrival, and that the refinery be notified of any change in ETA. Four hours before arrival at Freeport the Master should establish contact by VHF radio and advise on vessels precise ETA. Any berthing instructions will be passed to the Master at this time.

Radio Telephone: A continuous watch is maintained by the Control Tower of Freeport (Bahamas) Harbour on 2182 kHz and on VHF Channels 16 and 14.

Working frequencies are:

Medium Frequencies:

2638 kHz – Ship-to-Shore
2738 kHz – Ship-to-Shore
2782 kHz – Freeport Harbour (Private frequency).

VHF: Channel 14

In addition, Freeport Harbour can communicate on:

2031.5 kHz – Miami Marine.
2118 kHz – Miami Marine.
2198 kHz – Nassau Marine.
2670 kHz – Coast Guard

As far in advance of the time of arrival as possible, but not less than 1 hour, vessels should establish radio communication with "Freeport Harbour Control" to amend or confirm the ETA.

TUGS: Borco Towing (Bortow) provide 2 tugs for assisting in berthing and unberthing. These are of 4,300 h.p. In addition there are 2 chartered tugs of 4,000 h.p.

BERTHING: 9 wharves, depth alongside up to 30 ft.

STEVEDORES: Freeport Harbour Company, Ltd., are the sole stevedoring company. Some limitation on labour availability and difficult to obtain more than 2 gangs at any one time. Normal discharging rate 10 d.w.t. per hook per hour. Port Authority operate forklift trucks ranging from 2 to 30 tons capacity. First ETA at least 48 hours prior arrival, to ensure labour booked in time.

CRANES: Forklift trucks ranging from 5,000 lbs. to 18,000 lbs. capacity, as well as a mobile crane with a lifting capacity of 12 tons, are owned by Freeport Harbour Company. Mobile cranes up to 35 tons capacity may be hired from local companies.

MEDICAL: No port Medical Officers. Persons requiring attention must proceed approximately 7 miles to Freeport's hospital and dental clinic, or to Antoni Clinic or Lucayan Medical Group Clinic which approximately same distance from port area. Holistic Health World also approximately 7 miles from Freeport Harbour. Advance notice to Agent desirable but not essential.

SPECIALISED CARGO HANDLING FACILITIES: *Cement:* Bahamas Cement Company own and operate the whole of Basin No. 3 (1,365 ft. by 350 ft. by 636 ft. – depth 30 ft. at MLW), with bulk handling facilities.

Roll-on/Roll-off: Basin No. 1: 2 ramps for 2 vessels (passenger/car ferry type) at S.E. end. Depth 28 ft. MLW. Both ramps approx. 4 ft. above MHW.

Basin No. 2: 2 ramps for 5 landing ship type vessels at S.E. end. Depth 15 ft. MLW. 1 ramp 4 ft. above MLW (4 vls.), the other 0 ft. (1 vl.).

LPG: There is a small LPG Berth in Basin No. 2 which accommodates coastal tankers.

TANKER BERTHING FACILITIES: There are 4 off-shore loading platforms (sea islands) situated between 2,500 ft. and 3,600 ft. from the shore line at Pinder's Point. There are 2 berths on each platform making a total of 8 berths which can accommodate tankers ranging in size from 16,000 to 500,000 d.w.t.

Inside the harbour at Dock 1 are facilities for handling smaller vessels, mainly barge loading and import/export of refined products on a small scale. This is the only Mogas import berth for the island.

CONSULS:
Belgium
Brazil
Chile
Denm
D

s the centre of Bortow's aintenance and provision of e off-shore operation. Bortow rsonnel carriers, pilotage service es being used to bunker and water anchorage.

is 600 ft., it will accommodate vessels w.t. with a maximum draft of 27 ft.

g service. This service is given to vessels t, (cruise ships, cargo ships), and to vessels ort solely to purchase, bunker fuel. The barge ccasionally at Borco's marine facilities when it is bunker a vessel by barge. Bunker fuel supplied to t ned vessels ranges from diesel oil to heavy fuel oil, ble ade in between to suit individual customer requirements.

Pro ported or exported via the No. 1 Dock loading facilities are:

Imports:
1. Premium Gasoline.
2. Regular Gasoline.
3. Heavy Fuel Oils for Bunkering.
4. Heavy Fuel Oil, to be supplied as bunker fuel to visiting tankships.

Exports:
1. Diesel oil to small craft for inter-island distribution.
2. All grades of fuel oil into barges or tankships when scheduled for delivery to the Out-Islands or the East Coast of U.S.A.
3. Kerosene.
4. LPG.

Note: Tankships, except for gasoline imports and local sales of kerosene and LPG, normally only use the No. 1 Dock facilities during occasions of extreme bad weather.

Loading Platforms: The 3 loading platforms which accommodate Berths Nos. 3 & 4, 5 & 6, 7 & 8 are of fully enclosed, box like type of construction the interior of which contain equipment for the operation of each respective platform.

The platform serving Berth Nos. 9 & 10 is of a slightly different design in-so-much that it is of an open type construction with no between decks storage space.

All of the platforms are situated in an elevated position approximately 40 ft. above sea-level and are supported by piling structures sunk into the sea-bed.

The platforms serving Berth Nos. 3 & 4, 7 & 8 and 5 & 6, 9 & 10 are interconnected by cat-walks which extend in a N.W./S.E. direction, in line with prevalent weather conditions. The overall lengths of these structures are approximately 2,040 ft. and 3,000 ft. respectively.

Each loading platform is entirely self-sufficient in that they each have their own power supply, fresh water, office and store-rooms, fire fighting and anti-pollution equipment, slop systems, storm water systems and a host of contributory operating equipment. Communication systems amount to P.B.X. Telephones, Magneto Telephones (inter-Jetty communication) and 2 VHF Radio systems.

Two fresh water lines extend from the shore, one to Berth Nos. 9 & 10 and the other to Berth Nos. 3 & 4. Fresh water is then supplied to Berth Nos. 5 & 6 via Berth Nos. 9 & 10, and Berth Nos. 7 & 8 via Berth Nos. 3 & 4. This water supply can also be used to water tankships alongside the platforms.

To enable tankships to be safely secured alongside the loading facilities, each platform and associated cat-walk unit has mooring dolphins with quick-release mooring hooks and integral capstans.

Berth Nos. 3 & 4: Situated approximately 2,500 ft. from the Pinder's Point shore-line with a platform size of 94 ft.×100 ft.× 12 ft. in depth. Submarine sea lines available are:

1×30 in.	Diameter	Crude Oil Line.
2×24 in.	„	Fuel Oil Lines.
1×20 in.	„	Diesel Oil Line.
1×20 in.	„	Kero/Jet Line.
1×20 in.	„	Naphtha Line.
2×20 in.	„	Dirty Ballast Lines.
1×18 in.	„	Bunker Fuel Line.

These pipe-lines terminate at 12 in. Chiksan marine loading arms – counter balanced and hydraulically powered.

Berth Nos. 5 & 6: Situated approximately 3,600 ft. from the Pinder's Point shore-line with a platform size of 100 ft.×144 ft.×12 ft. in depth. Submarine sea lines available are:

Berth No. 5.

2×30 in.	Diameter	Crude Oil Lines.
1×24 in.	„	Fuel Oil Line.
1×20 in.	„	Diesel Oil Line.
1×20 in.	„	Kero/Jet Line.
1×20 in.	„	Dirty Ballast Line.
1×18 in.	„	Bunker Fuel Line.

Berth No. 6.

2×30 in.	„	Crude Oil Lines.
1×24 in.	„	Fuel Oil Line.
1×20 in.	„	Dirty Ballast Line.
1×18 in.	„	Bunker Fuel Line.

These pipe-lines terminate at 16 in. Chiksan marine loading arms of the same design as on Berth Nos. 3 & 4.

Also incorporated on Berth No. 6 is a Berthing Approach System which is used by the Pilots as an aid in safely moving vessels on or off the berth.

Berth Nos. 7 & 8: This platform was completed and handed over in 1973. Situated approximately 2,500 ft. from the Pinder's Point shore-line with a platform size of 110 ft.×90 ft.×12 ft. in depth.

Submarine sea lines available are:

2×24 in.	Diameter	Fuel Oil Lines.
1×20 in.	„	Diesel Oil Line.
1×20 in.	„	Kero/Jet Line.
1×20 in.	„	Naphtha Line.
1×20 in.	„	Dirty Ballast Line.
1×18 in.	„	Bunker Fuel Line.

There is no crude oil facility available at this berth. Crude oils will be handled by Berth Nos. 5, 6, 9 & 10 under normal conditions and by Berth Nos. 3 & 4 if required.

The above listed pipe-lines terminate at 12 in. Chiksan marine loading arms, again similar in construction to the berths mentioned previously. 6 arms service each berth of which 2 are bunker lines and the remaining 4 for product loading.

Berth Nos. 9 & 10: This platform, the most recent addition to the marine loading facilities at Borco was completed and handed over in 1974.

Situated approximately 3,600 ft. from the Pinder's Point shore-line with a platform size of 190 ft.×125 ft. (No below deck space) this facility is of a rather different design to the other loading platforms namely:

The platform is of a completely open design with major operating equipment sited on the top surface. Ancillary equipment such as slop and storm water systems are situated below the platform. Because of its design, equipment is more readily available and build up of hydrocarbon vapours is eliminated.

Other features incorporated within the platform design are:
1. Weather recording station.
2. Meter (bunker) proving systems – electronically controlled.
3. Berthing approach system for Berth No. 10 which is used by the Pilots as an aid in safely moving vessels on or off the berth.

Submarine sea lines available are:

1×20 in.	Diameter	Bunker Fuel Line.
1×24 in.	„	Fuel Oil Line.
1×20 in.	„	Ballast Water Line.
1×42 in.	„	Crude Oil Line.
1×30 in.	„	Crude Oil Line.

As can be readily seen this platform is a crude oil/fuel oil loading/discharging facility only, white oil products are not available. The above stated lines terminate at 10 Chiksan marine loading arms, again similar in construction to those on other platforms. The service per berth as below:

Berth No. 9.	1×12 in.	Diameter	Bunker Fuel.
	1×12 in.	„	Ballast.
	1×12 in.	„	Fuel Oil.
	2×12 in.	„	Crude Oil.
Berth No. 10.	1×16 in.	Diameter	Bunker Fuel.
	1×16 in.	„	Ballast.
	1×16 in.	„	Fuel Oil.
	2×16 in.	„	Crude Oil.

Also see "Shipmaster's Report".

BALLAST: Facilities are provided for discharge of dirty ballast at the tanker jetties. Each jetty is connected by a 20 in. ballast pipe-line. These lines have been tested to 350 lb. pressure and are designed for 150 lb. working pressure.

DENSITY: Salt water. Rise and fall of tide between 3 ft. and 3 ft. 6 in.

FRESH WATER: Fresh water available by pipe-line in the harbour. Average pumping rate 18 t.p.h. per connection with maximum 2 connections in the harbour. Fresh water also supplied by barge to the tanker berths at the rate of about 30 t.p.h. and to vessels at anchorage.

FUEL: All grades available. 24 hours notice desirable. Bunkering facilities are provided at each tanker jetty. 1×16 in. pipe-line provides "C" fuel and intermediate fuel, and 1×16 in. pipe-line provides marine diesel and gas oils. Fuel also available to vessels at anchor by barge.

GANGWAY/DECK WATCHMEN: Not necessary as security guards patrol port area 24 hours a day.

OPENING/CLOSING HATCHES: Normally carried out by stevedores.

SHIP CERTIFICATES: Derat Certificate required.

CUSTOMS ALLOWANCES: 50 cigars or 200 cigarettes or 1 lb. tobacco and 1 quart of spirits per man.

CARGO GEAR: Currently no cranes based permanently in harbour area. However, mobile cranes can usually be made available, although essential shipowners consult Agents before accepting heavy lifts requiring shore facilities for discharge

IDENTIFICATION CARDS: Not required.

CONSULS: No foreign Consuls in Freeport.

REPAIRS: Only minor repairs.

SURVEYORS: 1. Caleb Brett (Bahamas) Ltd., 1st Floor Administration Building, Freeport Harbour, P.O.Box F-2428, Freeport, Bahamas. Tel: (809) 352-7608. Telex: (297) 30029. Cables: Brettcalcabhm.

2. E. W. Saybolt & Co., S.A., 24C Kipling Building, P.O.Box 2049, Freeport, Bahamas. Tel: (809) 352-7616. Telex: (297) 30042. Cables: Saycosa. Additional offices South Riding Point, Grand Bahama, Harbour Area, Freeport.

3. Epic Petroleum Inspection Co. Ltd., P.O.Box F-2525, 25 Churchill Building, Freeport, Bahamas. Tel: (809) 352-2525, 352-4139, 373-4840. Telex: 30051.

REPATRIATION: Facilities for crew changes and repatriation by air.

AIRPORT: Approximately 5.5 miles from harbour, served by following airlines: Air Florida, Eastern Airlines, Air Canada and Pan American Airways.

TIME: GMT minus 5 hours. Summertime, from April to October, GMT minus 4 hours.

HOLIDAYS: No cargo work in the port on following days: New Year's Day; Good Friday; Easter Sunday; Christmas Day; Labour Day (1st Friday in June); Whit Monday; Independence Day (July 10th); Boxing Day (December 26th); Emancipation Day (1st Monday in August); Discovery Day (October 12th). Work ceases 1700 hrs. on day preceding above holidays and commences 0800 hrs. on day after.

POLICE/AMBULANCE/FIRE: Police Tel: 352-8333. Police Station approximately 2 miles from harbour, and operates several radio-controlled vehicles. Ambulance Tel: 352-6735. Ambulance based at Rand Memorial Hospital which approximately 7 miles from harbour. Fire Tel: 352-8888. Fire Station approximately 7 miles from harbour and at present consists of 2 fire-trucks with auxiliary vehicles.

TELEPHONES: Can be placed on board at certain berths. There is a connecting charge.

SHIP SUPPLY SERVICE: Lucaya Shipping and Trading Co. Ltd., P.O.Box F-3240, Freeport, Grand Bahama, Bahamas. Tel: (809) 352-3581. Cables: Caytrade. Telex: 30 711.

Services may be performed by launch or tug boat 2.5 to 3 miles off the port; at a berth in the harbour or at anchorage.

SHIPMASTER'S REPORT: December 1984.

Pilotage: Pilot boards from tug and requires pilot ladder about 10 ft. above water. There are no pilot boats.

Radio: With 5 day message Receivers require the following:

Name of vessel and call sign.
Deepest arrival draft.
Gross bbls. at observed temperature on arrival (estimated).
Average temperature in °F on arrival (estimated).
Expected discharge rate in bbls/hr. assuming unrestricted by shore facilities.
Maximum freeboard 55 ft.
No. and size of cargo manifolds.
No. of hours required to ballast.
Ship's loaded gross bbls. at 60°F less retained slops.
Ship's slop quantity on arrival load port indicating oil and water in bbls.
Indicate if Loading On Top (L.O.T.).
Which slop tank.
Indicate ship experience factor for last 5 cargoes excluding initial voyage after dry dock.
Was Letter of Protest noted, if so give brief details.

VHF: Channel 13 for working Pilots.

Tugs: Usually 2 tugs, 1 of which will put up 2 headlines and 2 quarter lines, the other just 2 headlines. Depends on weather conditions as to which tug is forward and which aft.

AUTHORITY: Freeport Harbour Company, Ltd., P.O.Box F-2465, Freeport, Grand Bahama. *Tel:* (809) 352-9651/4 or (809) 352-9088. *Telex:* (297) 30079. *Cables:* Freharco. *Contact:* Captain John Hinchliffe, Port Director.

NASSAU: 25.05 N. 77.20 W. (See Plan)

DOCUMENTS:

(a) Inwards:

Description	Customs	Immigration	Agents	Total
1. Ship's Report Inwards (supplied by Agents)	2	—	—	2
2. Maritime Declaration of Health (supplied by Agents)	1	—	—	1
3. In transit passenger manifest	2	1	2	5
4. Disembarking passenger manifest	2	1	2	5
5. Crew Lists	2	—	1	3
6. Crew Curio List	1	—	—	1
7. Stores List	2	—	1	3
8. Gift Shop Inventory	1	—	—	1
9. Cargo Manifest	3	—	3	6

10. Derat. Certificate – should be available for inspection.
11. Clearance from last port to be given to Customs.
12. Immigration landing cards must be completed by all passengers. (These are supplied by Agents.)
13. Customs Declaration forms must be completed by all disembarking passengers. (These are supplied by Agents.)
14. Cargo Tally books – two per hatch where Nassau cargo is to be discharged.

If vessel's previous port of call was in Bahamas items 1, 2 and 10 need not be complied with. Item 9 – two cargo manifests supplied to Agents should show freight charges in detail.

Note: All non-Bahamian passengers finally disembarking at Nassau must be in possession of return ticket or have proper Bahamas Immigration Entry Permit.

(b) Outwards:

Description	Customs	Immigration	Agents	Total
1. Ship's Report Outwards (supplied by Agents)	2	—	—	2
2. List of embarking passengers	2	1	2	5
3. Manifest covering cargo loaded	3	—	3	6

Note: If vessel clearing for another Bahamian port, item 1 does not have to be complied with, but copy of next port's manifest required.

PILOTAGE: Presently no signal station and Masters requested telegraph ETA at least 48 hours in advance with subsequent amendments as necessary to Agents, who will inform Pilots. Pilot normally boards in approximate position one mile North of Western end of Hog Island (Paradise Island). When port closed due to bad weather a red flag will be displayed at Western end of Hog Island by day and red light in same location at night. Vessels may anchor in vicinity of pilot station where depth of water allows. There are three Pilots and boats are clearly marked "Pilot" and display international pilotage signals. Pilots are accustomed to boarding by pilot ladder. Pilots on VHF Channels 16 and 14.

ANCHORAGES: Anchorage just off Nassau Harbour extends over area North and East of Western point of Hog Island to approximately half a mile off shore, where it becomes too deep.

RESTRICTIONS: No restrictions apart from adverse weather conditions or excessive draft which may make it advisable to enter on certain state of tide.

MAX. SIZE: No restriction on length or breadth but safe draft is considered 35 ft. Largest vessel to enter harbour to date is QE II. Safe draft cargo pier 25 ft.

HEALTH: Provided vessel healthy Customs grant free pratique on receipt international declaration of health form completed and signed. If any suspected disease or fever on board Master should advise Agent by cable, who will inform appropriate authorities and advise Master clearance procedure. Once vessel obtained free pratique in one Bahamas Port and proceeds another there are no further procedures at next port.

RADIO: Communications can be directed through Nassau Harbour Control, which came into existence in 1974, in an effort to control shipping and movements in and out of the harbour of Nassau.

VHF frequencies used are Channels 6, 9, 14, 16, 12, 68, 73, 74, 79, 20, 65 and 66.

Single Side Band frequencies used are 2082.5 – 2182 kHz. Also transmits 2522 kHz, receive 2126 kHz upper sideband.

AM Radio Ship-to-Shore frequencies are 2182 kHz.

TUGS: Tugs normally join vessel at entrance to turning basin. Usual for vessels to provide tow line.

BERTHING: No specific requirements but due to congestion essential that Agent is kept well informed of ETA.

CRANES: There are 2 lift cranes for Container Handling at the Union and John Alfred Wharves. Both wharves are geared exclusively for container traffic, but a limited amount of break bulk cargo is handled at the Union Wharf.

At the Union Wharf is an "American" Truck Crane of 120 ton capacity geared to handle 20 ft. and 40 ft. containers with a 100 ft. boom used in lo/lo method.

The John Alfred Wharf is served by a Manitowac Track/Crawler crane of 130 ton capacity with a 150 ft. boom. Here 20 ft. and 40 ft. containers are landed by lo/lo method. Also available 135 ton mobile crane.

The Union Wharf encompasses a total berth length of 546 ft., while at the John Alfred Wharf berth length is limited to 500 ft.

BULK CARGO FACILITIES: There are no facilities for this type of cargo.

BRIDGES: No bridges affecting entrance to main berths.

STEVEDORES: Master should include in ETA number gangs required and tons per hatch for discharge, as shipping documents do not always arrive in advance. Discharge rate approximately 10 t.p.h.

MEDICAL: Full medical services available. In serious cases requiring immediate attention Agent should be advised so that doctor may board on arrival.

TANKERS: Limited facilities provided for tankers at Clifton Point on S.W. side of Island. Vessels moor to dolphins offshore and discharge through submarine pipe-line. Vessels proceeding Clifton Point (unless otherwise advised) should pick up Pilot off Nassau and clear Customs. Only oil imports are for domestic purposes and there is no oil refinery. Max. draft Clifton Point 36 ft.

Tugs: One or two tugs of about 1,000 h.p. are used to assist in berthing. Usually 1 tug assists when leaving.

Cautionary Advice: In the past few years several Caribbean berths/fendering systems were damaged during berthing operations, the absence of towing line, between tanker and tug(s) being a contributory cause. It is recommended that the Master discuss berthing practices with the Pilot before the approach and insist that a towing line be passed.

Berthing: The vessel is moored port side to the pier. The starboard anchor is used at times. This procedure is sometimes reversed. Mooring is usually carried out during daylight hours, but vessels unmoor and sail at all hours. A boat takes the headlines to the buoy first, then the forward and aft breastlines, the springlines to the platform last. Six ropes forward, the same number aft. The boat remains in attendance at the pier to transport personnel and crewmen, during the discharge.

Hoses and Boom: One or more 8 in. diameter hoses are used for clean products. Two or more grades can be pumped simultaneously.

The platform is fitted with oil cargo pipe-lines as follows:

1 LPG line, owned by Tropigas/Taylor, 6 in.
1 distilled products line, Texaco, 8 in.
1 diesel oil line, Bahamas Electric Co., 12 in.
1 jet fuel/diesel oil line, Esso, also Shell, 12 in.
1 Avgas/Mogas line, Shell, also Esso, 8 in.
1 fuel oil line, Bahamas Electric Co., 10 in.

Tankers carrying more than one grade to Clifton Point should lay out the cargoes in such a way that two or more grades can be discharged simultaneously.

1×10 in. diameter hose is used for dirty products. Maximum pressure allowed on the hoses is 125 p.s.i.

Vessel's cargo boom is required for lifting cargo hoses.

On completion of discharge, vessel's Butterworth or fire hose is connected to special hydrants on the cargo pipe-lines, to flush back the cargo hoses to the vessel's slop tanks.

DENSITY: 1025.

FRESH WATER: Available Prince George Wharf on old section but not yet provided on new deep water pier. Rate 10 – 15 t.p.h. from hose connections on dock. Public Water Department supplies hose end connections. Price approximately $9.55 per 1,000 gals. depending on amount required. No water barges available.

FUEL: No fuelling facilities available with exception of small quantities diesel which may be delivered by Tanker Truck (4,000 gals.) by prior arrangement.

Small tankers can deliver fuel (80,000 – 100,000 gals.).

FIRE PRECAUTIONS: No special requirements. Vessels carrying explosives should notify Agent in advance so that Authorities may be advised.

GANGWAY/DECK WATCHMEN: Vessel to supply own watchman if required.

OPENING/CLOSING HATCHES: Roller hatches usually opened and closed by vessel's crew but older wooden hatches and tarpaulins handled by stevedores.

SHIP CERTIFICATES: Only certificate normally required for inspection is Derat Certificate.

CUSTOMS ALLOWANCES: Quantity should be reasonably based on individual requirement and length of stay in port. Actual amount is at discretion of Customs Officer clearing vessel.

IDENTIFICATION CARDS: Not required.

CONSULS:

			Telephones

REPAIRS: Only limited repairs and requirements should be passed to Agent in advance of vessels arrival.

REPATRIATION: Crew changes can be arranged but accommodation expensive and not always available at short notice.

AIRPORT: Extremely good air services. At certain periods airlines become fully booked and suggested that reservations be made in advance.

TIME: Local time (Eastern Standard Time) 5 hours behind GMT. Daylight Saving Time 4 hours behind GMT applicable 27th April to 26th October.

HOLIDAYS: New Year's Day (1st January); Good Friday; Easter Monday; Whit Monday; Independence Day; Labour Day; Emancipation Day; Discovery Day (12th October); Christmas Day (25th December); Boxing Day (26th December); Cargo can be worked on all holidays except Labour Day and Christmas Day.

POLICE/AMBULANCE/FIRE: Police 24444; Ambulance 22221; Fire 919.

TELEPHONES: No facilities for placing telephones on board.

GENERAL: *(a)* Bonded Stores only available to passenger vessels regularly calling Nassau. *(b)* Passenger Vessels: Is of assistance to Agent to know how many passengers disembarking and how many in transit.

SERVICES: Most specialised services unavailable, e.g. radar, radio, gyro, tank cleaning, compass adjusting. If Agent given sufficient notice arrangements can be made for technicians to be flown from Miami.

SHORE LEAVE: No limitations.

AUTHORITY: Port Authority of Nassau, P.O.Box N-1417, Nassau, Bahamas. *Tel:* 809-32-22049, 28832 and 67354. *Telex:* 263. *Cables:* Port Department, Nassau, Bahamas. *Contact:* Leon H. Flowers, Port Controller.

SOUTH RIDING POINT: 26.37 N. 78.14 W. (See Plan)

LOCATION: The terminal is situated at South Riding Point on the South coast of Grand Bahama Island, about 35 miles East of Freeport.

At a distance of 4,000 ft. offshore, the Sea Island Mooring Dolphin extremities are positioned thus:

No. 1 Mooring Dolphin: Lat. 26° 36′ 43.7″ N., Long. 78° 13′ 49.5″ W.
No. 6 Mooring Dolphin: Lat. 26° 36′ 46.7″ N., Long. 78° 13′ 33.6″ W.

BAHAMIAN FLAG: Bahamian national flag shall be flown during daylight hours by all vessels within Bahamian territorial waters.

DOCUMENTS: Incoming:

Prepared by Ship:

3 Copies of Declaration Form Y14.
3 Crew Lists.
2 Stores Lists.
2 Crew Declaration forms.
4 Copies of Bills of Lading.

In addition the ship will have to supply a clearance from last port of call, Derat Certificate, vaccination lists and the usual ships papers viz: Register, Safety Construction, Radio, Safety Equipment, Loadline Certificate. Oil Record Book must be up to date and available for inspection.

All vessels must have a valid certificate of insurance or other financial security in respect of civil liability for pollution damage.

Prepared by Agent:

1 Copy of Maritime Declaration of Health.
2 Copies of Inwards Report.

Customs and Immigration: After pratique has been granted, an immigration and customs inspection is carried out. The Master will be required to furnish particulars including:

(a) Name and nationality of vessel.
(b) Last port or ports of call.
(c) Nature of cargo.
(d) Number of crew.
(e) Number of passengers.
(f) Port of destination and name of Agent.
(g) Number of days since departure from last loading/unloading port.

Copies of the crew list and stores remaining on board will be required before clearance is granted.

Masters of vessels must take every precaution to ensure that no drugs, wine or alcoholic liquors are supplied, sold or conveyed to any person at the terminal.

Outgoing:

Prepared by Agent:

4 Copies of Outward Cargo Manifest.
2 Copies of Outwards Report.
Port Clearance Certificate.

In order to comply with Immigration regulations, crews should be checked before sailing and any missing seaman reported to the Agent. In the case of seamen left ashore for any reason, Masters are requested to furnish a letter accepting responsibility for all expenses incurred, advances if any, and instructions for repatriation.

Documentation and Clearance:

Documentation on completion of cargo operations is normally attended to prior to the vessel vacating the berth. In cases where excessive documentation is anticipated a vessel may be asked to leave the berth to complete this standing off. In such cases launches would be made available to transport documents and personnel in order to expedite the vessel's departure.

Early Departure Procedure (EDP) is available on request.

PILOTAGE: Berthing and operational instructions will be given by South Riding Point Control on vessel's arrival at South Riding Point.

A vessel will be deemed to have arrived when in a position, 3 miles South of the sea island and in this position the Berthing Master will board from a tug.

Before a vessel is allowed to proceed the Master will be required to sign the following forms:

(a) Conditions of use of sea berths and inner harbour at South Riding Point (See "Appendix I").
(b) Tug Requisition (See "Appendix II"). The Master will also be provided with copies of the Fire and Safety Regulations (See "Appendix IIIA and IIIB") and a Ship/Shore Safety Check List Form (See "Appendix IVA and IVB").

APPROACHES: Vessels approaching South Riding Point from the Eastern entrance of Northwest Providence Channel are recommended to make departure from Great Stirrup Cay Lighthouse Gp. Fl. (4) 15 sec. 14m. and head directly for South Riding Point Terminal.

Preliminary extensive soundings by U.S. Hydrographic Department indicate no underwater obstructions up to 100 fathom line within Northwest Providence Channel.

Landmarks: Conspicuous towers are sited adjacent to South Riding Point Terminal in the following positions:

1. Position: Lat. 26° 36′ 40″ N., Long. 78° 20′ 51″ W. Steel framework tower painted red and white, 175 ft. above sea level. Light: Air Occ. R. 4 sec. 1 F.W. 2 F.R. vert.
2. Position: Lat. 26° 36′ 51″ N., Long. 78° 19′ 25″ W. Steel framework tower painted red and white, 407 ft. above sea level. Light: Air Qk. Fl. R. 2 F.R. vert.
3. Position: Lat. 26° 37′ 06″ N., Long. 78° 18′ 47″ W. Steel framework tower painted red and white, 211 ft. above sea level. Light: Air Occ. R. 8 sec. 1 F.R. vert.
4. Position: Lat. 26° 37′ 44″ N., Long. 78° 14′ 20″ W. Steel framework tower painted red and white, 241 ft. above sea level. Light: Air 2 F.R. vert.
5. Position: Lat. 26° 42′ 44″ N., Long. 78° 09′ 27″ W. Steel framework tower painted red and white, 270 ft. above sea level. Light: Air Occ. R. 3 sec. 1 F.R. vert.

The F.6M. light exhibited from a white painted wooden mast close East of High Rock Settlement in position: Lat. 26° 37.3′ N., Long. 78° 16.1′ W. is kerosene lit and is therefore unreliable.

A conspicuous parabolic dish antenna is situated in position: Lat. 26° 37′ 30″ N., Long. 78° 17′ 58″ W. The antenna has a face diameter of 85 ft. and maximum height above sea level is 134 ft.

The large buff-painted oil storage tanks are visible behind the sea island. The terminal frontage is backed with pine trees and scrub.

Lights: A light, Fl.R. 3 seconds, is exhibited from a height of 140 ft. above sea level on top of the sea island control building on the central platform, whilst Nos. 1 and 6 mooring dolphins are marked by quick flashing red lights.

Two leading line (range) towers mark the 300 ft. wide approach channel centre line. Lights with clear lenses, each 2.5 seconds flash, 0.5 seconds eclipse, are exhibited from the top of the towers at elevations of 39.4 ft. and 53 ft. The towers are located at Lat. 26° 37′ 21.7″ N., Long. 78° 13′ 10.2″ W., and Lat. 26° 37′ 22.8″ N., Long. 78° 13′ 11.5″ W. respectively. Daymarks are attached as follows:

Leading mark: A 9 ft. triangle at the base of the tower.

Rear mark: A 9 ft. × 6 ft. diamond immediately below the light.

Both marks are painted with 'dayglo' orange.

Two leading line beacons are located, one on each of the two inner harbour breakwaters. These are to guide deep laden vessels into the inshore sea island berth (No.2) when approaching from the west.

Leading mark – a 9 ft. triangle. Rear mark – a 9 ft. × 6 ft. diamond.

Both marks are painted with 'dayglo' orange. Above each mark is situated a white fixed light visibility approximately 4 miles.

Buoys: Red and Black Buoys mark the outer channel entrance to the inner harbour whose light characteristics of red and green respectively are each 2.0 seconds flash, 2.0 seconds eclipse.

Four international orange buoys with quick flashing white lights mark the contour of 50 ft. sea bed between the sea island and the shore.

ANCHORAGES: Three white buoys mark the seaward boundary of a designated anchorage area in the following positions:

West Anchorage Buoy: Quick Flash (Green) Lat. 26° 35′ 51″ N.,
Long. 78° 17′ 27″ W.
Mid Anchorage Buoy: Quick Flash (White) Lat. 26° 35′ 57″ N.,
Long. 78° 16′ 19″ W.
East Anchorage Buoy: Quick Flash (Red) Lat. 26° 36′ 00″ N.,
Long. 78° 15′ 33″ W.

These anchorage buoys are laid in 15 fathoms and vessels wishing to anchor should drop their anchors in the transit line of the buoys which will provide ample swinging room for typical shuttle vessels of up to 100,000 tons d.w.t., in ballast conditions. No attempt should be made to anchor Eastward of the East Anchorage Buoy.

Whilst holding ground is considered good and is of sand, limestone and soft coral, vessels should maintain their engines at short notice readiness, especially during periods of strong onshore winds.

In all cases, vessels wishing to anchor should contact the duty Berthing Master, who will advise on anchorage procedures and whose services are available for pilotage on request and at operational convenience.

Anchorage or the lowering of anchors is prohibited at the sea island berths.

Vessels wishing to stand off until berth readiness are recommended to use Westerly aerial tower (Lat. 26° 36′ 40″ N., Long. 78° 20′ 51″ W.) as Westerly boundary of standing off ground in order to avoid congestion with Freeport traffic.

HEALTH: On completion of mooring, Customs officials acting on behalf of Health and Immigration authorities will board the vessel to grant pratique.

TUGS: 3 × 4,200 h.p. diesel tugs are stationed at the terminal. Each tug has a bollard pull of 50 tons.

All tugs are equipped for fire fighting and can deliver water at the rate of 2,000 gallons per minute through direct or fan spray nozzles. The tugs have foam making and oil dispersant equipment.

The tugs are owned and operated by South Riding Point Holding Ltd. Conditions of hire are given in Appendix II.

Small Craft: The terminal has one diesel engined personnel/general purpose carrier for up to 25 persons and 2 line handling boats. Both of the latter are equipped for anti-pollution duties. Launches are available for hire when operationally convenient.

Small Craft Landing: A landing is situated on the West side of the platform of the oil berths and there are additional landing stages at mooring dolphins Nos. 1 and 6.

BERTHING/UNBERTHING: *Responsibilities:* In all circumstances, the Master of any vessel shall remain solely responsible on behalf of his owners, for the safety and navigation of his vessel.

Tugs: Tank lids and openings should be securely closed before tugs are made fast. Tug utilisation in berthing operations will be as required by the Berthing Master who will meet the vessel in position as directed off the sea island. Masters of calling vessels are reminded of their obligation to comply with statutory pilot ladder rules and associated safe access regulations

Mooring System: The Berthing Master will advise the Ship's Master of minimum mooring requirements. Usual moorings consist of 2 springs, 3 breast and 4 head/stern lines at each end.

The berths have double and triple quick release hooks of 150 and 100 tons capacity. Mooring and berthing dolphins have electrically operated capstans with 2 ton line pull at 100 ft. per minute in association with mooring assemblies.

Ship Connection: The positioning of the vessel's deck manifold in relation to the loading arms on the berth must be carried out to a close tolerance to the requirements of terminal personnel and as directed by the Berthing Master.

Loading arm connection will be made to ship's manifold by the sea island crew.

Independent oil measurement representatives will attend for ullaging and sampling and/or inspection of cargo tanks in vessels discharging or loading.

Unberthing: Tug attendance and numbers will be dependent on weather conditions and on the advice of the Berthing Master.

BERTHING FACILITIES: The sea island has two berths interconnected for tanker to tanker transfer and to the shore tanks and inshore berths by 2×36 in. diameter submarine lines.

The island is 1,470 ft. long with a central platform 48 ft. above datum and 3 mooring dolphins 25 ft. above datum on each side.

The berths are equipped with a Sonar Doppler system for docking assistance with clock meter display indicators and associated lights showing distance off berth and speeds of approach. Current meters are sited on the sea island together with meteorological instruments and public address system.

There are 4 fixed and 4 oscillating foam/oil dispersant monitor units on the platform.

The berths have a sacrificial anode cathodic protection system and ships that have an impressed voltage cathodic protection system should turn it off in the vicinity of the sea island.

Berth No. 1: Tankers of 50,000 to 440,000 d.w.t. can dock at this outer berth which is equipped with a self levelling and articulated gangway and 4×16 in. diameter Chicksan loading arms with quick release couplings in sizes 16 in., 14 in. and 12 in. diameter.

Water depth at the berth is 100 ft.

Berth No. 2: Tankers of 35,000 to 100,000 d.w.t. with a max. LOA of 900 ft. can dock at this inner berth which is equipped with a self levelling and articulated gangway and 4×12 in. diameter loading arms with quick release couplings in sizes 12 in., 10 in. and 8 in. diameter.

Water depth at the berth is 85 ft.

Inshore Berths: Two berths are available within the inner harbour, each of which is equipped with a ship/shore gangway and 4×12 in. loading arms with quick release couplings in sizes 12 in., 10 in. and 8 in. diameter.

Though further development is proposed, use of the inner harbour is currently restricted to vessels not exceeding 675 ft. LOA and 36 ft. loaded draft.

Product Transhipment: May be undertaken with product storage planned for the future.

Small Boat Harbour: This harbour is at the S.W. corner of the inner harbour and has a water depth of 25 ft. The harbour is used by the Company's tugs and small craft.

LOADING/UNLOADING:

Procedure: Once the vessel is secure, the Berthing Master, who also acts as Loading Master, will advise the Master and Chief Officer of their cargo programme and discuss the vessel's ability to comply. Any adjustments will be mutually agreed at this stage and be reflected on the Loading/Discharging instructions which the Master will sign. (See "Appendix VII").

Ballast Water: Ballast water can be received in the terminal oil and water separation tanks through one of the submarine or onshore lines at rates of up to 5,000 t.p.h. On no account may ballast water be otherwise discharged in territorial waters, unless vessel has segregated ballast system.

Dirty ballast and slops from ships' cargo tanks which, on the previous voyage, carried product including fuel oils or any crude requiring heat, cannot be accepted ashore. In such cases, vessels must arrive with clean ballast for shore reception.

During ballast operations at the berths, strict observance of rules and regulations governing the opening of sea valves is necessary and in correct sequence with ballast pump commencement to eliminate the risk of oil spills. Vessels may be required to ballast concurrent with discharge and throughout all cargo operations, maintain draft and trim conditions consistent with prevailing weather conditions, on the advice of Berthing Master.

Control: A responsible Ship's Officer is required to be on duty continuously.

The Terminal Operators in the control buildings offshore and onshore continuously monitor the cargo transfer rates and status of the onshore tanks or shuttle tankers receiving cargoes direct from VLCC's. The Ship's Officer will be advised immediately of changes necessary in the pumping programme.

The Terminal Operator in the offshore control room will activate all cargo movements from the tanker's manifold to or from shore tanks/receiving shuttle tankers.

Mooring Lines: It is the responsibilty of the Ship's Master to ensure that all mooring lines are kept tight. Berthing Master will constantly check a vessel's moorings and may at any time direct lines to be adjusted as circumstances warrant.

Tension Winches: When a vessel is fitted with tension winches, the latter must be set to manual operation and the brakes securely applied.

RADIO: Vessels loading for South Riding Point should communicate ETA date to the terminal immediately after clearing loading port. They should also indicate cargo figures, draft and cargo disposition if multigrade, together with preferred discharge sequence. Intention to crude oil wash should be advised at this stage and supported with details of vessel and crew's experience.

Variations of this original ETA date should be communicated throughout the voyage.

Vessels proceeding to South Riding Point Terminal to load should communicate their ETA immediately upon clearing departure port, indicating draft, condition of ballast, amount of slops, previous cargo and intended lifting.

All vessels should upgrade ETA's 72, 48 & 24 hours prior to arrival.

VHF: Station "South Riding Point Shore Control" located at the terminal is equipped with VHF radio maintaining continuous watch on Channel 16. After making successful contact, vessels will be required to change to a working frequency, where information will be exchanged regarding berthing, manifold connections, quantity of ballast and deballasting time required.

The terminal is also equipped with approved intrinsically safe VHF walkie-talkie radio sets and vessels will have this additional communication with the terminal after boarding by the Berthing Master.

FRESH WATER: Not available.

FUEL: Not available.

MEDICAL: The Rand Memorial Hospital in Freeport is open on a 24-hour emergency service and two medical clinics, Lucayan and Antoni are open during regular office hours.

TIME: Bahamian Standard Time is 5 hours behind GMT. Daylight Saving Time is observed from the end of April through the end of October when clocks are advanced one hour.

SURVEYORS: Saybolt, Caleb Brett, Charles Martin, Redwood and Epic represented on Grand Bahama.

Lloyd's have agency in Freeport. Classification and Salvage Association Surveyors available from Florida.

REPAIRS: Facilities for minor repairs to electrical, radio and mechanical equipment are available in Freeport but should these be required Masters should give as much advance notice by radio as possible.

TELEPHONES: The sea berths have a telephone connection to the shore and to the Freeport exchange. Calls are restricted to emergency use only. All other calls should be made from agency offices ashore.

STORES: Stores are not available at the terminal but may be obtained through the auspices of ships' agencies and chandlers. All deliveries to vessels are restricted to daylight hours and operational convenience. Transportation and handling must be arranged and attended by the vessel's Agent and it is imperative that advance terminal approval is obtained since responsibility cannot be accepted for custody should operational considerations cause delivery delays.

STORING: See "Prelims".

(i) Storing at Terminal discretion. Terminal launches normally employed. Small barges may be used by prior arrangement.

(ii) Storing permitted during cargo transfer using stern lifting devices only.

(iii) At the Inner Harbour berths, trucks would be permitted by way of the stern only.

(v) Usual Customs regulations.

(vi) Labour usually supplied by chandler.

LAUNDRY: Limited services are available in Freeport but in view of the distance from the terminal (35 miles) and the relatively short time at berths, Masters are advised not to depend on such services.

WEATHER: From November to May, average temperatures in the 70's Fahrenheit prevail, with low humidity and little rain. From June to October, average temperatures rise into the 80's with relatively high humidity and rainfall of between 5 in. and 9 in. per month.

SEA CONDITIONS: Prevailing winds are from the S.E. During the Winter season numerous cold fronts transit the area producing a normally predictable wind veer to S.W. then Northerly with the passage of the front. A strong frontal system may cause seas and swell of up to 10 ft. but these quickly subside following frontal passage.

Current in the vicinity of the Sea Island seldom exceeds 1 knot and runs predominantly East and West. Tidal ranges above datum are Low Water 0 – 0.5 m. and High Water 0.8 – 1.5 m.

GENERAL: *Charts:* The best available charts of the area at present are U.S. Defense Mapping Agency Hydrographic Centre N.O. 26326 and British Admiralty No. 390.

Currency: Currency is the Bahamian dollar which is on a par with the U.S. dollar. U.S. dollars are generally acceptable anywhere without changing to local currency.

Garbage: Garbage or refuse disposal overside at berths or in terminal approaches is strictly forbidden.

BANKS: Chase Manhattan, Mall and Pioneer Way, P.O.Box F-2432, Freeport, Grand Bahama.

Citibank N.A., on the Mall, P.O.Box F-2681, Freeport, Grand Bahama.

Barclays International, Mall & Pioneers Way, P.O.Box F-2404, Freeport, Grand Bahama.

Royal Bank of Canada, Bank of Nova Scotia, Canadian Imperial Bank of Commerce, Bank of Montreal.

EMERGENCY CO-ORDINATION CENTRE: Bahamas Air Sea Rescue Association, Freeport. Telephone Nos.: Base Station 809 373-2264, Mobile Radio Telephone 809 352-9889, Daytime 0800 – 1700 hrs. 809 352-8826.

SAFETY: *TERMINAL SAFETY REGULATIONS:* With the object of protecting all concerned against the possibility of fire hazards, oil and smoke pollution, vessels calling at South Riding Point Terminal must comply with the following safety regulations or other regulations which may be issued by the proper authorities from time to time.

Dangerous Area: The whole of the sea island and the onshore terminal are declared Dangerous Areas and the use of naked lights and smoking therein is strictly prohibited except in those places expressly designated by the Master of a vessel and the Terminal Manager.

A copy of the "Fire and Safety Regulations" (See "Appendix IIIA and IIIB") is given to the Master of every vessel by the Berthing Master on boarding and it is the responsibility of the Master to see that these regulations are strictly observed.

Inspection: The Berthing Master will conduct a safety inspection prior to the commencement of loading/unloading and at regular intervals thereafter to ensure that all safety regulations are being enforced.

A comprehensive list of safety requirements are detailed on a Ship/Shore Safety Check List (See "Appendix IVB") and must be signed by the Master of the vessel or his delegate and the Berthing Master.

Galley Fires: Only approved steam or electric galleys in selected locations in the after part of the vessel, as agreed to by the Master and the Berthing Master, are permitted.

Firewires: Firewires of steel must be made fast and hang over the outboard bow and quarter whilst alongside to enable tugs to connect readily in an emergency situation. Firewires must be tended on board throughout cargo operations in order to maintain towing eyes at water level.

Boiler Tubes: Boiler tubes must not be blown whilst vessel is alongside and emitting smoke is strictly prohibited while vessels are in the vicinity of the terminal. Every precaution must be taken to prevent sparks and soot particles escaping from the funnel.

Deck Scuppers: Deck Scuppers must be securely plugged and cemented before loading/discharging operations commence. Approved mechanical means of closing scuppers may be acceptable.

Spillage Trays: See "Oil Pollution – Minor Leakages Onboard".

Main Engine(s): Immobilization is prohibited whilst alongside a terminal berth. Minor engine repairs may be effected after receipt of written permission from the Berthing Master and providing the repair will not affect the prompt sailing of the vessel in an emergency or upon cargo completion.

Maintenance Work: No chipping, scaling, hot work or work of any kind that would cause a spark is allowed while alongside a berth.

Ventilation: When loading or discharging cargo or ballast, all open ullage pipes and sighting ports shall have installed approved flame arresters.

Cargo tank lids shall be closed and secured throughout all loading or discharging operations.

Lights: Lights, electric fittings and hand torches must be of types approved by a recognised classification society or government authority for use in a vapour laden atmosphere.

Radio Equipment: Radio, radar or other electronic equipment must not be energized while a vessel is at berth except approved explosion proof equipment.

This does not mean that essential servicing of ship's radio equipment cannot be performed alongside berths. Suitable arrangements for ensuring safety during this work should be made between the Ship's Master and the Berthing Master and will require a work permit.

Stores: Inflammable or explosive ship's stores shall be kept in a safe place securely fastened.

Bilge and Dirty Ballast Water: Disposal of bilge and dirty ballast water over the side is strictly prohibited by the authorities and any pollution of the sea through these mediums will result in heavy claims and fines. The terminal will, in case of an oily discharge, take such steps as may be deemed necessary to fight the pollution before it spreads.

If the discharge is due to faulty equipment or material on the vessel or to negligence on the part of ship's personnel, the terminal shall be indemnified for any expenses incurred in connection with the preventative action taken. (See Oil Pollution – "Oil Spills").

International Code Flag 'B': International Code Flag 'B' shall be flown during the day and a red light exhibited by night by all vessels during cargo or ballast operations.

Transfer Cargo Operations: Transfer cargo operations shall not be started, or if started, shall be discontinued by the Berthing Master or Terminal Control if any of the following conditions prevail:

(a) During severe electrical storms.

(b) If fire breaks out at berth or on vessel.

(c) Should any condition develop which represents a hazard to the vessel or terminal facilities.

Fire-Fighting Equipment: Fire-fighting equipment of vessels alongside must be kept ready for use at all times.

Gas-Freeing: Gas-Freeing of vessels alongside sea island berths will not be permitted.

Earthing and Bonding: All metal on the shore side of an insulating flange should be electrically continuous to the sea island or inshore berths earthing systems and all metal to the seaward side should be electrically continuous to the vessel.

Insulating flanges are fitted on each loading arm.

Small Boats or Craft: Small boats or craft will not be permitted to moor alongside a vessel during cargo or ballast operations, unless special permission has been granted by the Berthing Master.

Permitted Entry: Only persons holding authorized passes will be permitted entry to the terminal or sea island. The terminal reserves the right to refuse admission.

Safety Responsibilities: Nothing in these regulations will relieve Masters of their responsibilities in observing the normal safety, fire prevention and security regulations. The Berthing Master is authorized to advise and request Masters to take additional measures to ensure a higher degree of safety if they find that circumstances warrant such action.

FIRE FIGHTING:

Responsibilities: The Fire and Safety Officer is responsible for all fire fighting operations at the sea island and the onshore terminal.

Fire Alarm: Do not hesitate to raise the alarm in the event of fire however small it may be.

The ship's fire alarm at the terminal will be one or more blasts of the ship's whistle or siren, each blast of not less than 10 secs. duration supplemented by a continuous ringing of the ship's bell and continuous sounding of the general alarm system.

The fire alarm at berths or elsewhere within the terminal or harbour area will be a continuous blast on the sirens sited on the onshore and offshore control buildings.

Action Ship – Fire On Your Ship:

1. Raise alarm.
2. Fight fire and prevent it spreading.
3. Inform terminal of details.
4. Cease all cargo operations and then close all valves.
5. Standby to disconnect loading arms.
6. Bring engines to standby.

Action Ship – Fire On Other Ship: You will be advised of necessary instructions to:

1. Cease all cargo operations and then close all valves.
2. Standby to disconnect loading arms.
3. Bring engines and crew to standby ready to unberth.

Action Shore: The operator in the control room will immediately contact the Fire and Safety Officer by phone or VHF radio. The Fire and Safety Officer will then direct operations.

1. Raise alarm.
2. Cease all cargo operations and then close all valves.
3. Fight fire and prevent fire spreading.
4. Standby to disconnect loading arms.
5. Inform all ships of details.
6. Terminal emergency procedure is immediately effective.

Emergency Situation: During an emergency situation on board a vessel alongside, the Berthing Master will be in charge of organising the preliminary fire-fighting/anti-pollution procedures assisted by the operators in the Control Room and at the berths until the Fire and Safety Officer at the terminal takes over the direction of all fire fighting operations.

The Berthing Master is to make use of all available means at his disposal, such as tugs, launches, terminal equipment and other facilities to assist the vessel and protect lives and terminal facilities.

OIL POLLUTION/ACCIDENTS:

Oil Spills: Oil spills from whatever source must be reported immediately to the Berthing Master or Terminal Control. Cargo movements will be ordered suspended upon such a report or upon observation of pollution by terminal personnel and they shall not resume until the source of leakage is determined and controlled and the pollution dispersed or contained. The terminal maintains adequate anti-pollution equipment to attend to minor spills and this will be mobilised promptly. Clean-up costs in regard to pollution known to be the responsibility of a vessel using the facility will be billed to that vessel. The terminal shall also be indemnified against any fines and claims for damages resulting from such pollution (See "Appendix V"). Vessels discharging oil into Bahamian waters are liable to fines not exceeding $120,000.

Minor Leakage Onboard: Spillage trays or other receptacles should be placed under the flange connection at the vessel's manifold. Oil absorbing material in suitable quantity should be available for immediate use in the event of oil leakage on deck.

Damage to Facilities: If a Master has reason to believe that damage has been caused to berth, other vessels, craft or terminal property by his vessel, he should immediately notify the Berthing Master in writing. (A Typical Accident Form See "Appendix VI").

APPENDICES:
Appendix I:

South Riding Point Holding Ltd.
South Riding Point Oil Terminal, Grand Bahama
Contractual Berthing Conditions

This Agreement is made between SOUTH RIDING POINT HOLDING LTD., its servants and Agents and its Sub-Contractors (hereinafter called "the Terminal") and the Owners and Charterers of the vessel ....(hereinafter called "the vessel").

In consideration of the Terminal permitting the vessel to berth at and to use the terminal and its facilities or providing to the vessel tug line handling services, ferry services or other ancillary services connected with the use of the terminal by the vessel, the undersigned Master of the ....for and on behalf of the Vessel agrees to the following conditions.

1. The Terminal shall not be liable for any loss or damage suffered by the vessel howsoever arising including negligence on the part of the Terminal in connection with or by reason of the use or intended use of the Terminal by the vessel.

2. The Vessel will indemnify the Terminal in respect of all liability to third parties including costs and any other expenses and interest arising out of claim in connection with or by reason of the use or intended use of the Terminal by the vessel howsoever arising including negligence on the part of the Terminal. The vessel will indemnify the Terminal in respect of any penalties and fines incurred by it in connection with or by reason of the use or intended use of the Terminal by the vessel. The vessel will indemnify each party referred to in this Agreement collectively as "the Terminal" in respect of any liability to any other party referred to as "the Terminal" by reason of the use or intended use of the Terminal by the vessel howsoever arising including negligence on the part of the Terminal.

3. The vessel will indemnify the Terminal in respect of any damage or loss including financial loss suffered by the Terminal in connection with or by reason of the use or intended use of the Terminal by the vessel, howsoever caused including negligence by the Terminal.

4. It is agreed that if the vessel sinks or grounds or otherwise becomes, in the opinion of the Terminal, an obstruction or danger in any part of the port or its approaches the Terminal may in its sole discretion take any steps it deems necessary to remove the obstruction or danger and any expenses of such removal shall be payable by the vessel's Owner or Charterer.

5. The obligations of the vessel hereunder shall be joint and several.

6. The obligations of the vessel hereunder shall be without right of limitation of liability.

7. If any one or more of the provisions or part of this Agreement should at any time for any reason be declared invalid or void or otherwise inoperative by a court of competent jurisdiction, such declaration or decision shall not affect the validity of this Agreement as a whole.

8. This Agreement cannot be varied other than in writing signed by all parties.

9. This Agreement shall be governed by and construed in accordance with English Law and all disputes arising hereunder shall be and hereby are referred to the High Court of Justice in England.

Appendix IIIA:

Safety and Fire Regulations

To be posted in prominent positions on board ship.

The following Fire Regulations and Smoking Restrictions should be brought to the notice of all personnel on board and must be strictly enforced.

SMOKING IS PROHIBITED while alongside berths EXCEPT in the following rooms in the after part of the vessel specified by Master.

Masters and Officers must ensure that these SMOKING RESTRICTIONS are strictly adhered to.

Only approved electric and steam galleys, in selected locations in afterpart of the vessel, agreed to by the Master and the Shore Authorities, are permitted.

CIGARETTE ENDS AND HOT MATERIALS MUST NOT BE THROWN INTO THE WATER AT ANY TIME.

No chipping or scaling is allowed whilst alongside. Overside hull painting is not allowed on jetty side of vessel.

All ship's scuppers on main deck must be plugged and cemented oil tight.

Approved mechanical means of closing scuppers may be accepted.

All vessels moored at these berths must have the eye of a steel hawser paid out to the water's edge and securely made fast on board on the offshore bow and quarter, to be of sufficient strength to enable tugs to take the vessel to a place of safety. Main engines must be available for use at all times whilst alongside the jetty.

Fire hoses on forward and after decks to be rigged and ready for instant use.

It is the responsibility of the Master to ensure that the mooring lines of his vessel are tight at all times.

Alarm in case of fire

1. The ship's fire alarm at the terminal will be one or more blasts of the ship's whistle or siren, each blast of not less than 10 seconds duration supplemented by a continuous ringing of the ship's bell and continuous sounding of the general alarm system.

2. The fire alarm at berths or elsewhere within the terminal or harbour area will be a continuous blast on the sirens sited on the onshore and offshore control buildings.

Overflow or escape of oil into the water

In the event of an overflow and/or escape of oil into the water, loading will be suspended immediately on the vessel concerned. Loading will not be resumed until the area has been cleared of oil and conditions declared safe.

Terminal safety and fire inspections

It is the duty of the Berthing Master to make periodical inspections on board vessels at berth in respect of any breach of the Terminal Safety and Fire Regulations.

Inspectors must be allowed free access on board all vessels at all times for this purpose.

IN ALL CASES OF EMERGENCY CONTACT SOUTH RIDING POINT CONTROL.

Appendix IIIB:

Instructions in case of fire

Ship's fire alarm at terminal

One or more blasts of the ship's whistle or siren each blast of not less than 10 seconds duration supplemented by a continuous ringing of ship's bell and continuous sounding of the general alarm system.

Terminal fire alarm

Continuous long blast on all fire sirens.

Action Ship

Fire on your ship

Raise alarm
Fight fire and prevent fire spreading
Inform terminal of details
Cease all cargo operations and then close all valves
Stand by to disconnect hoses or arms
Bring engines to standby

Fire on other ship at terminal

Cease all cargo operations and then close all valves
Stand by to disconnect hoses or arms
Bring engines to standby and crew to stand by ready to unberth

Action Shore

Fire on terminal

Raise alarm
Cease all cargo operations and then close all valves
Fight fire and prevent fire spreading
If required stand by to disconnect hoses or arms
Inform all ships of details
Terminal Emergency Procedure is immediately effective
In case of fire, terminal will direct movement of vessels.
Do not hesitate to raise the alarm.

Appendix IVA:

South Riding Point Holding Ltd.

P.O.Box F-2530 Freeport, Grand, Bahama.

The Master, s.s./m.v. ....

Dear Sir,

South Riding Point Transhipment Terminal Safety Requirements

Responsibility for the safe conduct of operations on board your ship while alongside our terminal rest with you as Master. Nevertheless, since our personnel, property and other shipping may suffer serious damage in the event of accident aboard your ship, we wish, before operations start, to seek your full co-operation and understanding on the safety requirements set out in the Ship/Shore Safety Check List.

These safety requirements have been drawn up by a number of international terminal operators in conjunction with a representative section of the international tanker industry. They are based upon the provisions of the codes of safe practice currently accepted by the oil and tanker industries. We therefore expect you and all under your command to adhere strictly to them throughout your stay alongside this terminal. We, for our part, will ensure that our personnel do likewise and co-operate fully with you in the mutual interest of safe and efficient operation.

In order to assure ourselves of your compliance with these safety requirements, we shall, from time to time, instruct a member of our staff to visit your ship and, after reporting to you or your deputy, join one of our officers in a routine inspection of cargo decks and accommodation spaces.

If we observe infringements on board your ship of any of these safety requirements we shall bring this immediately to the attention of yourself or your deputy for corrective action. If such action is not taken in a reasonable time we shall adopt such measures as appear to us most appropriate to deal with the situation and shall notify you accordingly.

If you observe any infringement of these requirements by terminal staff, whether on the jetty or on board your ship, please bring this immediately to the notice of our representative who is nominated as your contact during your stay in port. Should you consider any immediate threat to the safety of your ship arises from any action on our part, or equipment under our control, you are fully entitled to demand an immediate cessation of operations.

WE RESERVE THE RIGHT IN THE EVENT OF CONTINUED OR FLAGRANT DISREGARD OF THESE SAFETY REQUIREMENTS BY ANY SHIP, TO STOP ALL OPERATIONS AND ORDER THAT SHIP OFF THE BERTH FOR APPROPRIATE ACTION TO BE TAKEN BY THE CHARTERERS AND OWNERS CONCERNED.

Terminal Manager

Appendix IVB:

Ship/Shore Safety Check List

Vessel: .... Berth: ....

The safety of operations requires that all questions be answered affirmatively after checking by both Ship and Terminal representatives. If an affirmative answer is not possible, the reason should be given and agreement reached upon appropriate precautions between the Ship and the Terminal.

	Terminal Represent-ative	Ship Represent-ative
1. Is the Ship securely moored?		
2. Are emergency towing wires correctly positioned?		
3. Is there safe access between Ship and Shore?		
4. Is the Ship ready to move under its own power?		
5. Is there an effective deck watch in attendance on board and adequate supervision on the Terminal?		
6. Is the agreed ship/shore communications system operative?		
7. Have the procedures for cargo/ballast handling been agreed?		
8. Has the emergency shut-down procedure been agreed?		
9. Is fire fighting equipment on board and ashore ready for immediate use?		
10. Are cargo hoses/arms in good condition and properly rigged?		
11. Are unused cargo and bunker connections blanked?		
12. Are scuppers effectively plugged?		
13. Are sea and overboard discharge valves, when not in use, closed and lashed?		
14. Are all cargo and bunker tank lids closed?		
15. Is the agreed tank venting system being used?		
16. Are flame screens within the tank venting system in position and in good condition? (Give date of last inspection)		
17. Are hand torches of an approved type?		
18. Are portable R/T sets of approved design?		
19. Are the ship's main radio transmitting aerials earthed?		
20. Are electric cables to portable electrical equipment disconnected from power?		
21. Are all external doors and ports in the amidships accommodation closed.		
22. Are all doors and ports in the aft accommodation that are required to be in fact closed?		
23. Are unsafe air conditioning intakes closed?		
24. Are window-type air conditioning units disconnected?		
25. Are SMOKING requirements being observed?		
26. Are GALLEY requirements being observed?		
27. Are NAKED LIGHT requirements being observed?		
28. Is the quality of the Inert Gas satisfactory? (Give O_2 Content)		
29. Is ballast water in permanent segregated ballast tanks clean and suitable for overboard discharge?		
30. Are C.O.W. requirements being observed?		

We have checked with each other the items listed on this check list in the course of a joint inspection and have satisfied ourselves that the entries we have made are correct to the best of our knowledge.

South Riding Point Transhipment Terminal

The Master,
s.s./m.v. "..."

Dear Sir,

At .... hours on .... an oil spill occurred on board your vessel and a quantity of oil escaped into the sea, necessitating cleaning up operations by our personnel and equipment.

In accordance with Terminal Regulations, we hereby hold you responsible for any expenses incurred as a result of the oil spill and subsequent clean-up operation, in addition to fines which may be imposed by the Authorities.

You are requested to furnish the Terminal management with an extract of your "Oil Transfer Log" and a written reason for this incident.

Yours faithfully,

For: South Riding Point Holding Ltd.

South Riding Point Transhipment Terminal

....19..........

The Master,
s.s./m.v."..."
Dear Sir,

At .... hours on .... the vessel under your command was involved in an incident, as a result of which, the following damage was caused:

The foregoing report is based on preliminary examination and must be considered an interim statement of damage pending survey examination of the areas concerned.

In consideration therefore of "Conditions of Use of Sea Berths and Inner Harbour" and "Condition of Hire of Tugs", we hereby hold you responsible for this damage.

Please acknowledge receipt of this letter by signing the attached copies.

Yours faithfully,

For: South Riding Point Holding Ltd.

Signed: ....

cc: Ship's Agents.

Appendix VII:

South Riding Point Holding Ltd.
South Riding Point Transhipment Terminal

To: Master,
s.s./m.v. ".."
Date: ....

This serves to introduce Captain .... who is duty Berthing/Loading Master.

As Loading Master, he will be responsible and available at all times throughout your stay for all liaison aspects of your cargo operations and safety alongside.

Please bring all cargo, safety or documentation queries to his personal attention.

Your co-operation in this regard will serve to assist in our rendering to your vessel, an efficient dispatch from South Riding Point.

Terminal Manager

Appendix VIII:

South Riding Point Holding Ltd. South Riding Point Terminal Crude Oil Washing Check List

Vessel: .... Date: ....

On Arrival Yes No

1. Has terminal been notified? ....
2. Is oxygen analysing equipment tested and working satisfactorily? ....
3. Are tanks pressurised with good quality Inert Gas (max. 5% O_2)? ....
4. Is tank washing pipe-line system isolated from water heater and engine room? ....
5. Are all hydrant valves on tank washing line securely shut? ....
6. Are all valves to fixed tank washing machines shut? ....
7. Have tank cleaning lines been pressurised and leakages made good? ....

Signed:.................... Master/Chief Officer. Time and Date......................

Alongside

1. Is quality of Inert Gas in tank(s) satisfactory (max. 5% O_2)? ....
2. Is Inert Gas pressure satisfactory? ....

Signed:.................... Master/Chief Officer. Time and Date......................

Before Washing

1. Are valves open to machines on selected tanks? ....
2. Are responsible persons positioned around the deck to watch for leaks? ....
3. Are tank ullage gauge floats lifted on tanks to be washed? ....
4. Is Inert Gas System operating? ....
5. Are all tanks closed to outside atmosphere? ....
6. Have tanks positive Inert Gas pressure? ....

Signed:.................... Master/Chief Officer. Time and Date......................

During Washing

1. Are all lines oil tight? ....
2. Are tank washing machines functioning correctly? ....
3. Is quality of Inert Gas in tanks satisfactory (max. 5% O_2)? ....
4. Is positive pressure available on Inert Gas System? ....

Signed:.................... Master/Chief Officer. Time and Date......................

After Washing

1. Are all valves between discharge line and tank washing line shut down? ....
2. Has the tank washing main pressure been equalised and line drained? ....
3. Are all tank washing machine valves shut? ....

Signed:.................... Master/Chief Officer. Time and Date......................

NOTICE:
South Riding Point Holding Ltd.
P.O.Box F-2530 Freeport, Grand Bahama
South Riding Point Terminal.
To: Master
s.s./m.v. ....

Dear Sir,

During your stay at South Riding Point Terminal, your co-operation is requested with regard to shipboard visitations by Terminal staff.

With the exception of official visits necessary to the satisfactory performance of cargo and safety operations, none of our terminal staff should board your vessel.

We are particularly concerned in cases where food and drink have been unofficially provided by visiting ships and we would respectfully request that you bring to the attention of your crew, the need to disregard any requests of this nature.

We trust that your compliance and understanding will avoid any embarrassment for your vessel whilst alongside and that as a result our operating attentions will be rendered more efficient.

Thank you.

Terminal Manager

AUTHORITY: *Operator:* South Riding Point Holding Ltd., P.O.Box F-2530, Freeport, Grand Bahama. *Tel:* South Riding Point Terminal (809) 348-3471/4. *Telex:* 30-047, 30-067. *Contact:* Captain J. B. Moncrieff, Marine Operations Manager/Harbour Master. Captain D. M. Cummins, Marine Superintendent.

AGENT: Lucaya Shipping and Trading Company Limited, P.O.Box F-3240, Freeport, Grand Bahama Island, Bahamas. Tel: (809) 352-3581/2. Telex: 30711. Cables: Caytrade.

NOTES

Please also advise Shipping Guides Ltd.

Bahrain

GENERAL

ANCHORING: It is compulsory for all ships entering Bahrain waters for reasons other than berthing at Mina Sulman, ASRY, Bapco, Alba, or other private jetties to obtain a prior written permission from the Port Director before anchoring in Bahrain waters. All ship's Agents are required to submit to the Harbour Master at the end of each month, a list of all vessels managed by their Agency which entered Bahrain waters.

PORT OPERATIONS SERVICE: The following has been received from the Customs & Ports Directorate, State of Bahrain. (Harbour Notice 4/84).

The above service is to be established based initially in the radio room of Mina Sulman. All information concerning the movement of vessels within the area under the jurisdiction of the 'Bahrain Ports Authority' will be conducted through the Bahrain Ports Operations and Information Service, hereinafter referred to by its call sign 'Bahrain Port Control'. This service will be manned continuously throughout 24 hours, with a duty Pilot available for advice on request. Close liaison will be maintained between Owners/Agents, Marine Terminals of Bapco, Alba, ASRY and AIS Co. and other private wharves within the Mina Sulman area.

Communications: (a) All vessels having gross tonnage of more than 50 g.r.t. and any vessel engaged in towing shall carry fixed or portable VHF radio equipment capable of operating on port operation channel in addition to Channel 16.

(b) A Port Operations VHF radio channel will be introduced, Channel 74 (156.725 MHz). All vessels must monitor this Channel when transiting the port limits or approach channels, or at anchor and communicate with 'Bahrain Port Control' as required.

Reporting Procedures: The Master of the inward bound vessels shall on coming within VHF radio range of 'Bahrain Port Control' give the vessel's ETA at Sitra Beacon, and shall at the same time advise of his vessel's draft and any other information requested, and of any circumstances which may affect the seaworthiness or handling capacity of the vessel. To facilitate keeping track of a vessel's whereabouts, vessels should inform 'Bahrain Port Control' when passing the following seamarks as appropriate:

Deep Draft Channel	*N.E. Approach Channel via Sitra Inwards Buoy*
Bahrain Light Vessel	Sitra Inwards Buoy
No. 3 Beacon	Vidal Buoy
Bahrain Approach Buoy	No. 27 Buoy
No. 14 Buoy	Sitra Beacon
No. 27 Buoy	Middle Ground Buoy
Sitra Beacon	when berthed or at anchor
Middle Ground Buoy	
when berthed or anchored	

The Master of an outward bound vessel shall inform 'Bahrain Port Control' within 15 minutes prior to commencing navigation in the area, and again immediately prior to such navigation commencing. During the outward passage he shall report to 'Bahrain Port Control' when passing the above seamarks as appropriate.

The Master of a vessel berthed, moored or anchored within the area of jurisdiction and who wishes to move his vessel to another berth, mooring or anchorage within that area shall request permission from 'Bahrain Port Control' prior to moving and report when finally secured, anchored or moored.

Special Directions: (a) The deep draft channel is primarily for vessels confined by their draft to use it. No vessel inward bound shall proceed beyond No. 3 Beacon without seeking prior approval from 'Bahrain Port Control'. No vessel outward bound shall proceed beyond Bahrain Approach Buoy without seeking prior approval.

(b) The Master of any vessel proposing to anchor should inform 'Bahrain Port Control' of the position it is intended to anchor the vessel. This notice shall be given in sufficient time to enable 'Bahrain Port Control' to give a special direction to the Master to place the vessel in an alternative anchorage if required.

(c) Any vessel engaging in towing, except tugs engaged in berthing/unberthing operations shall inform 'Bahrain Port Control' of the length of tow, speed of tow and anticipated passage. Such vessels must seek approval before commencing such operation within the area of jurisdiction.

Interpretation: In these directions: 'Port Limits' means the area of water enclosed by straight lines drawn from the following positions:

A.	Latitude: 26° 13′ N.	Longitude: 50° 32′ E.
B.	Latitude: 26° 22′ N.	Longitude: 50° 32′ E.
C.	Latitude: 26° 22′ N.	Longitude: 50° 47′ E.
D.	Latitude: 26° 06.7′ N.	Longitude: 50° 47′ E.
E.	Latitude: 26° 06.7′ N.	Longitude: 50° 38′ E.

'Area of jurisdiction' includes the marine terminals of Mina Sulman, Bapco, Alba, ASRY and AIS Co. and all other private wharves within the Mina Sulman area, also the deep draft and N.E. approach channels.

Commencement: These directions shall come into operation on 15th July, 1984. A full V.T.M.S. "Vessel Traffic Management System" will be introduced based in the control tower at Mina Sulman in September of this year (1984). Notice of the commencement of this service will be promulgated by Marine Notice.

MINA SULMAN: 26.12 N. 50.37 E. (See Plan)

DOCUMENTS:

International Declaration of Health.
5 Crew Lists.
Ship's Report (given by Customs on arrival).
Cargo Gear Register (Blue Book).

Agents to submit cargo manifest 3 days before vessel's arrival.

Exports to Bahrain: Shipping documents for exports to Bahrain should include a Certificate of Origin bearing the stamp of a Bahrain embassy or consulate, where such representation does exist. Alternatively the stamp of any other Arab embassy or consulate will be acceptable.

Compliance with the above regulation will help process the clearance of goods without delay.

PILOTAGE: Mina Sulman Pilots board either at Sitra Anchorage (see "Sitra") or by special arrangement at Outer Middle Ground Buoy. Pilotage compulsory except for naval vessels and small locally-owned craft whose Masters are familiar with the port and control.

Port equipped with 5 tugs, 3×800 h.p., and 2×1,600 h.p., 3 pilot cutters and a number of mooring launches and work boats.

Pilot cutters mostly blue with white-painted wheel-house and cabin accommodation.

ANCHORAGE: Normal anchorage in vicinity of No. 27 Buoy. Approximate position Lat. 26° 10′ N., Long. 50° 47′ E. Sitra Anchorage now restricted anchorage and may only be used by special permission of Port Authorities.

MAX. SIZE: Vessels up to 300 m. may enter port subject to tide. Depth of channel 9.75 m. New berths dredged to 10.9 m. Finger pier, depth 30 ft. (9.1 m.).

HEALTH: Port Health Authorities board vessel on arrival at berth alongside Deep Water Jetty and grant pratique.

RADIO: Vessels intending call Mina Sulman should advise Agents via Bahrain Radio, call sign A9M, their ETA, draft, hatch distribution and any other requirements, giving as much notice as possible. Agent to give Coastguard 72 hours notice of ETA.

VHF: Vessels equipped with VHF should, when within range, contact Bahrain Port Control on Channels 16 or 74. VTM System in operation. Also see "General" before first port.

TUGS: 5 tugs available. Will usually join vessel between Channel Buoy Nos. 7 and 8 or 9 and 12 during final approach to Deep Water Jetty. Tugs fitted with VHF. Bollard pull up to 28 tons.

BERTHING: Finger pier 800 m. long, berthing on both sides with 10 berths each of 150 m. in length for vessels up to 9 m. draft and 3 general cargo berths each 200 m. in length with depth of 10.9 m.

Two container berths (Berth Nos. 15 and 16) each 300 m. in length and 10.9 m. depth equipped with 4 container handling gantry cranes up to 35 tons capacity with 38 m. outreach.

Berths for coastal vessels, length of quay 285 m. with depth of 7 m.

Small Ro/Ro ramp for vessels up to 5.5 m. draft. Width of ramp 15.5 m.

Each general cargo berth is provided with modern fork lift trucks, trailers and units to facilitate the movement of cargo.

Pallets are available to assist cargo handling. Shore mobile cranes of various capacities ranging up to 200 tons available from private companies. Cargo handling equipment of various types also available.

Storage Facilities: Storage facilities consist of 14 sheds (one of which is located in the container terminal area) having an area under roof of 1,000,000 sq.ft. in addition hard surfaced yards and the container terminal stacking/parking area provide extensive storage capacity.

Hyundai Jetty: Lat. 26° 11′ N., Long. 50° 39′ E. Length of jetty 175 m., depth alongside 9 m. Berthing permitted between 0600 and 1800 hrs.

GRAIN HANDLING: Two portable pneumatic suction/blowing units are used. Capacity 75 t.p.h. each. Wheat is discharged into 20 ton trailers, which takes about 8 to 12 minutes for each trailer.

STEVEDORES: Stevedoring gangs shall be ordered and paid for by ship's Agents.

Working Hours: The port will operate on a 2 shift basis 6 days per week. Additional work on Fridays and Public Holidays are subject to extra charges.

Saturday to Thursday – 0700 hrs. to 2300 hrs.

Working hours are subject to change at the discretion of the Port Authority. Requirements for Port Labour must be submitted by Ship's Agents to the Port Authority by 1400 hrs. for work during the first shift on the following day and by 1000 hrs. on the same day for work on the second shift.

Special overtime to finish and sail a ship may be granted after 2300 hrs.

CRANES: Smit International Middle East, Bahrain, operates a floating crane 400 tons lifting capacity, which is tug-assisted for mobilisation voyages between the various Gulf ports where normal discharge of heavy lifts is being carried out.

Smit International Middle East, Mina Sulman Industrial Area Road nr. 4308, Gate nr. 423, P.O.Box 5510, Bahrain. Tel: 727201. Telex: 8659 Sime Bn.

Also see "Berthing".

MEDICAL: As per present local regulations all crew for medical treatment have first to be reported to the Public Health Department from where patient, if required, will be referred to Government hospital or specialists.

FRESH WATER: Well water available and can be delivered on berths at Deep Water Jetty at rate of approximately 20 t.p.h. per hose. Fresh water also available by barge with capacity of 300 tons.

FUEL: Bunkers available alongside in Mina Sulman and also provided by barge of 8,700 barrels capacity, which is owned by the Bahrain Petroleum Company. All usual grades of commercial oil available. 48 hours' notice required. This can also be arranged by local Agents.

GANGWAY/DECK WATCHMEN: Not customary to employ deck watchman.

IDENTIFICATION CARDS: These cards necessary for any crew member wishing to proceed ashore. Identification card is surrendered to Immigration Authorities at main entrance to port in return for a pass. On return to port, the pass is surrendered and seaman's identity card returned to him.

REPAIRS: Good facilities for both hull and engine repairs which can be effected by the two principal slipway companies. Facilities exist to receive single vessels of 1,000 d.w.t., and a tower crane capable of a 15 tons lift at 40 ft. Also see "Dry Dock".

SURVEYORS: Available on request through Agent.

DRY DOCK: *Asry Dry Dock:* The dry dock measures 375 m.×75 m., the bottom structure being strong enough for double dockings.

This is the first repair dock in the world specially designed for shallow draft VLCCs. With the sill beam at 9 m., it can accept vessels of 34 ft. draft.

Four dockside arms, two per side, give access to almost the entire surface of a VLCC hull for cutting, welding, shotblasting and cleaning/painting purposes, without the need for scaffolding.

Manoeuvring Basin: The manoeuvring basin dredged to 10 m. allows ships of up to 32 ft. draft to dock at any time. If necessary, ships may lie directly on the basin's sandy, levelled bottom.

Jetties: The 2 finger jetties are 170 m. long × 21 m. wide and can accommodate at least 4 large vessels for in-water repairs.

Mechanical Shop: The mechanical shop is equipped with 36 major machine tools, plus additional supporting services.

Plate Shop: The plate shop is equipped with 45 machine tools and portable equipment, plus additional supporting services.

Pipe Shop: The pipe shop is equipped with 26 machine tools and portable equipment, plus additional supporting services.

Electrical Shop: The repair capability in the electrical shop is summarised as follows:

Motor rewinding
Transformer and operating coil rewinds
Generators (main and auxiliary), large motors; strip, inspect, clean, replace bearings and rebuild
Rewiring (limited facility)
Switchboards: clean and repair
Motor controllers: find fault and repair
Air conditioning equipment: servicing and repair
Engine and bridge control panels (limited repair facility).

Navigational equipment (radar, DF, UHF, gyro compass, auto pilot, echo sounder) repairs are carried out by manufacturers' agents, who are fully represented in Bahrain.

Cranes: Four rail cranes of 15 tons lifting capacity and 75 m. outreach are located on the 2 finger jetties and adjacent to the dry dock. In addition, 1 rail crane of 100 tons lifting capacity and 61 m. outreach is located adjacent to the dry dock.

These five rail cranes cover about 90% of Asry's outdoor production area. For the remaining production areas, 4 mobile cranes each of 20 tons capacity and 2 hydraulic lifting platforms of 80 tons each are available.

Inside the workshops, overhead cranes of 6, 15, 25 and 160 tons lifting capacity are available.

Floating Crane: A floating crane of 200 tons lifting capacity, specially designed to reach any point on the deck or superstructure of a VLCC in ballast condition, is available. This lifting equipment is installed on a pontoon which has an overall length of 35.5 m. and a beam of 23 m. The crane is of the luffing type, which permits the height of the hook to be maintained while the outreach can be adjusted in travel.

Tugboats: The yard has a fleet of 6 tugboats, each of 32 tons bollard pull, which have been specially designed to manoeuvre large ships both in the yard and at sea.

Each tugboat has an overall length of 33 m. and a moulded beam of 8.5 m., with a draft fore and aft of 2.55 m. and 3.05 m. respectively.

The main engine is rated at 2,400 b.h.p. at 500 revs. per minute in accordance with DIN 6270A, and provides each tug with a normal free navigation speed of 12.5 knots.

Tank Cleaning Station: Asry's tank cleaning station is the 35,000 d.w.t. tanker "White Beach", which has been fully converted for the purpose. It is able to receive, by a continuous segregation system, slops, dirty ballast and tankwashing water at a rate of up to 1,500 t.p.h.

The cleaning station is fully equipped to supply steam, electrical power, distilled water and compressed air. Temporary storage of bunkers is also available.

Asry repaired vessels totalling 22 million d.w.t. in 1979.
120 vessels repaired in 1979, of which 72 were VLCCs.
Largest vessel so far to enter dry dock was 411,000 d.w.t.
Largest vessel to be repaired was 508,000 d.w.t.
Total workforce is 1,400 persons.

REPATRIATION: It is possible for whole crews or just individual crew members to join or leave vessels at Bahrain. As much notice as possible should be given to Agents to enable arrangements to be made for their reception, hotel accommodation and transportation.

AIRPORT: Bahrain International Airport regularly served by main international airlines, with frequent services to Europe, U.S.A., Far East, and Australia. Also frequent inter-Gulf flights.

TIME: GMT plus 3 hours.

HOLIDAYS: Public holidays in accordance with Muslim calendar as follows: 3 days during Eid Al Fittr; 3 days during Eid Al Adha; 3 days during Muharram; 12th R'Awal Prophet's Birthday; Accession of H.H. The Amir, 16th December; 25th December; 1st January. Apart from 6 days, two during each of the religious anniversaries, all holidays will be worked in the port as on Fridays, the Sabbath day.

TELEPHONES: Can be provided at each berth on Deep Water Jetty. In case of emergency, dial 286 for ambulance; 301 for Duty Police Officer; 200 for Fire Brigade.

SERVICES: Bahrain well provided for services including repairs, stores and supplies, fumigation surveys, adjustments, radar and gyro compass repairs, professional diving, and underwater brushing.

SHORE LEAVE: Permitted.

AUTHORITY: Ministry of Finance, Customs and Ports Directorate, P.O.Box 453, Bahrain. *Tel:* 243555. *Telex:* 8642 Mina Bn. 8643 Harbour Bn. *Cables:* Stateport. *Contact:* Captain Saleh Al Musallam, Harbour Master. Eid Abdullah Yusuf, Director of Ports.

AGENT: Gulf Agency Co. (Bahrain) W.L.L., Awal Building, 1st Floor, Government Road, P.O.B. 412, Manama, Bahrain. Tel: 254228. Telex: 8211 (A/B "GAC BN"). FAX: (973) 259354. Cables: "Confidence".

SITRA: 26.09 N. 50.40 E. (See Plan)

Bahrain Port incorporates all the harbours on the N.E. Coast of the Bahrain Islands. The Port Limits extending approximately Westwards and Southwards from Bahrain Approach Buoy.

The Bahrain Government Harbour Master at Mina Sulman has jurisdiction over Bahrain Port including the marine terminals of Mina Sulman, BAPCO, ALBA, ASRY, AISCO and all other private wharves within the area.

Sitra Marine Area is situated at the entrance to the Port of Mina Sulman and the Khor Khaliya which is protected by the islands of Bahrain, Sitra and Muharraq, and the ASRY-AISCO Causeways.

Sitra Inner Anchorage lies on the Northern side of the Fairway between Sitra Beacon and Mina Sulman and is afforded some protection during the prevailing N.W. winds by Muharraq Island and the ASRY-AISCO Causeways.

OPERATORS:

1. *The Arab Iron & Steel Company (E.C.) – AISCO:* AISCO operates a plant producing iron pellets from imported ores.

Enquiries regarding its facilities should be sent to The Arab Iron & Steel Company (E.C.), P.O.Box 26912, Manama, Bahrain. Tel: 671809/672206. Telex: 9993 Aisco Bn.

2. *Aluminium Bahrain – ALBA:* ALBA operates a plant producing aluminium ingots from imported alumina and coke.

Enquiries regarding its facilities should be sent to Aluminium Bahrain, P.O.Box 570, Manama, Bahrain. Telex: 8253 Alba Bn. Cable address: Metalba, Bahrain.

3. *Bahrain National Gas Company B.S.C. – BANAGAS:* BANAGAS operates a plant producing refrigerated butane and propane which are exported over BAPCO's Wharf.

Enquiries regarding its facilities should be sent to Bahrain National Gas Company B.S.C., P.O.Box 29099, Rifa'a, Bahrain. Tel: 756222. Telex: 9317 Bangas Bn.

4. *The Bahrain Petroleum Company B.S.C. (Closed) – BAPCO:* The company operates the Bahrain Refinery and related facilities on behalf of the Government of the State of Bahrain and Caltex Bahrain. Petroleum products for Banoco, Caltex, Banagas and GPIC are handled at the BAPCO Terminal.

Enquiries regarding port information should be sent to The Bahrain Petroleum Company B.S.C. (Closed), Awali, Bahrain. Telex: 8218 Bapshp Bn. Cable address: Bapco, Bahrain.

5. *Gulf Petrochemical Industries Company (B.S.C.) – GPIC:* GPIC operates a plant producing refrigerated liquified ammonia and methanol which are exported over BAPCO's Wharf.

Enquiries regarding its facilities should be sent to Gulf Petrochemical Industries Company (B.S.C.), P.O.Box 26730, Manama, Bahrain. Tel: 731777. Telex: 9897 Kemia Bn.

See individual berths for limitations and procedures.

SPECIAL FEATURES:

1. The Sitra Marine Area encompasses the marine facilities provided by the following companies: BAPCO, ALBA, ASRY, AISCO.

BAPCO has 6 berths for ocean-going vessels and 1 berth where small vessels of up to 240 ft. in length and 16 ft. draft may be berthed.

ALBA has a jetty with 2 berths; the outside berth being used for bulk carriers unloading coke and alumina ore and the inside berth being for vessels loading metal products.

ASRY has 2 jetties 400 ft. apart, with a solid quay wall providing 6 berths as well as the drydock 375 m. in length by 75 m. wide.

AISCO has 1 jetty with offlying dolphin providing 2 berths, the Eastern Berth being utilised for offloading iron ore, whilst the Western side is used for loading.

2. BAPCO Marine Officers advise and assist Masters in berthing, unberthing, mooring and navigating their vessels in the Sitra Marine Area.

3. All vessels entering Bahrain Port must have accredited Agents. They should also establish radio contact with BAPCO via "Bahrain Radio" (A9M), at least 48 hours prior to arrival, giving a firm ETA, arrival draft, and their requirement for bunker fuels.

4. The laws of Bahrain are in force in the Port and crew members are advised, for their own protection, to abide by them.

5. All vessels must display international quarantine signals when approaching the Port and keep them displayed until Pratique is granted. The national flag of Bahrain is to be flown at the foremast head during the vessel's stay in the port.

6. Safety is a prime concern and Masters must comply with all Safety Regulations.

DOCUMENTS: Crew List 3 copies. Passenger List 3 copies. Customs Declaration 2 copies. Health Declaration 2 copies. Log Book for Inspection by Customs Officers.

Cargo and bunker documents are delivered to the vessel as soon as possible after the vessel has been cleared on quantity and quality. Delays are sometimes incurred. As a result, BAPCO reserves the right to unberth a vessel and deliver documents by launch so as to minimise berthing delays to subsequent vessels.

Early Departure Procedure (E.D.P.) is available on Master's request.

The Tanker Owners Voluntary Agreement concerning Liability for Oil Pollution: All tankers carrying or loading/discharging at Sitra Wharves any persistent hydrocarbon mineral oil, such as crude oil, fuel oil, heavy diesel oil and lubricating oil, whether or not carried as cargo, shall be in possession of a TOVALOP (Tanker Owners Voluntary Agreement concerning Liability for Oil Pollution) Certificate.

PILOTAGE: Pilotage is not provided between Bahrain Light Vessel and Sitra Anchorage. Pilotage is compulsory from Sitra Beacon inwards.

There are 2 Pilotage Authorities for Bahrain Port both of which co-ordinate through Bahrain Port Control.

1. The *Bahrain Pilots,* under the Bahrain Government's Harbour Master, handle all vessels bound for the Khor Khaliya. This includes the main Mina Sulman Wharfage, the wharves of Hyundai on the West side of the ASRY/AISCO Causeway and the private company wharves on the North Sitra Industrial Estate.

2. The *Sitra Pilots,* under BAPCO's Port Officer, the Port Captain Sitra, handle all vessels having business with the marine terminals of AISCO, ALBA, ASRY and BAPCO.

The Sitra Pilot will normally board the vessel in a position 0.5 miles South of Sitra Beacon from either an orange hulled pilot cutter, tug or a tow-boat displaying the normal pilot vessel signals.

The Sitra Pilots will only embark or disembark from vessels providing the regulation pilot ladder.

The Sitra Pilots will normally hand over control of the tugs to the ASRY Dock Master at a mutually agreed position close by ASRYs dock and jetties for completion of berthing. The ASRY Dock Master in consultation with Sitra Pilot will arrange for the number of tugs to be used in these operations.

For vessels bound for AISCO, ALBA or BAPCO's jetties the Sitra Pilot will decide on the number of tugs to be used in the berthing and unberthing operations. Normally, 2 tugs are used.

Harbour Pilotage: Under no circumstances will any vessel, irrespective of size, berth alongside Company wharves unless a Sitra Pilot is on board and the correct documentation signed. A Sitra Pilot will also be on board a vessel for the unberthing operation. However, under special circumstances certain small vessels may be allowed to unberth without a Pilot on board, providing the Pilot has given permission immediately prior to unberthing and B.P.C. have been informed.

The services of the Sitra Pilot are provided without charge.

Boarding: The Company Mooring Master may board the vessel from either a pilot cutter, tug or a tow-boat displaying the normal pilot vessel signals.

If no berth is available, vessels should anchor in the prescribed anchorage until such time as a berth is available. Every endeavour will be made to give the Master berthing instructions prior to the boarding of the Mooring Master, and to this end, Masters are requested to maintain a continuous watch on the VHF. In cases where it is impossible to give prior berthing instructions, the Master and Chief Engineer are requested to co-operate with the Company by getting the vessel's engines ready for use with the least possible delay.

ANCHORAGE: The normal anchorage for arriving vessels waiting orders or tide is 1 mile South of No. 27 Buoy.

The whole of the navigable waters to the West of Sitra Beacon are restricted for anchorage unless specific permission has been granted by Bahrain Port Control. Pilotage is compulsory West of Sitra Beacon.

The area South of a line joining Sitra Beacon and Sitra Middle Ground Buoy is the fairway to Mina Sulman, and the approaches to ALBA, AISCO, ASRY and BAPCO terminals and as such *anchorage is prohibited.*

The area North of this line joining Sitra Beacon and Sitra Middle Ground Buoy and bounded on the North by ASRY Drydock and AISCO, is Sitra Inner Anchorage.

Vessel may ONLY anchor in Sitra Inner Anchorage after specific permission has been granted by Bahrain Port Control, as this area is also the approaches to the ASRY Drydock and AISCO jetty. Permission will be granted for vessels working with ASRY, working barges, or taking bunkers by barge.

Vessels should not immobilise their engines without having received on board written permission from the Port Authority.

A CONTINUOUS WATCH ON VHF CHANNEL 74 MUST BE MAINTAINED.

APPROACHES: *General:*

1. Without accepting any responsibility, the following suggestions are made for the benefit of Masters who are not familiar with Bahrain waters.

2. The buoyed channel from Sitra Anchorage to the Bahrain Light Vessel is primarily for vessels confined by their draft to use it. Vessels intending to transit this channel must obtain clearance from Bahrain Port Control prior to entering.

3. The buoyed channel has a min. depth of 13.25 m. (43 ft. 6 in.) at Chart Datum. This permits unrestricted use at all states of the tide for vessels drawing up to 12.2 m. (40 ft.).

4. Vessels in excess of 12.2 m. (40 ft.) and up to a maximum of 13.4 m. (44 ft.) are restricted to tidal ranges.

5. Vessels with drafts of less than 9.2 m. (30 ft.) are requested to make use of Sitra Inward and Vidal Buoys.

6. The colour of beacon structures and buoys are often obliterated by Guano.

7. For details of the buoys, lights and beacons see the section marked "Sitra Channel Marks". The entrance and near approaches to Mina Sulman are marked by aids not described herein.

8. The "Alteration of Course" positions in the following directions are based upon a radius of turn of 5 cables. This may necessitate an increase in engine revolutions, together with full helm in some vessels.

(a) Inward Under 9.2 m. (30 ft.)

(i) From a position (Lat. 26° 27.8′ N., Long. 51° 00′ E.) 2.5 miles S.E. of No. 3 Beacon (Lat. 26° 28.5′ N., Long. 50° 57.4′ E.) a course should be set to position 0.75 miles North of "Sitra Inward" Buoy (Lat. 26° 21.2′ N., Long. 50° 49.7′ E.) (Qk. Fl. (9) 15 sec.) leaving the "Caisson Wreck" Buoy (Lat. 26° 24.2′ N., Long. 50° 52.7′ E.) (Qk. (6) + L. Fl. 10 sec.) at least 0.5 miles to starboard.

(ii) From the position above a course should then be set towards No. 16 Buoy (Lat. 26° 12.9′ N., Long. 50° 46.3′ E.) (Fl. Y. 6 sec.).

(iii) When the vessel has reached a position with No. 16 Buoy, 1.5 miles ahead, course can be adjusted to due South, passing Westwards of "Vidal" Buoy (Lat. 26° 14.1′ N., Long 50° 47.2′ E.) (Fl. (2) R. 10 sec.) until "Sitra Beacon" (Fl. 3.3 sec.) bears due West.

(iv) If instructed by B.P.C. or the Pilots to proceed in to meet the Pilot, course should be altered to pass South of No. 18 Buoy (Lat. 26° 10.3′ N., Long. 50° 43.9′ E.) (Qk. R.) to the pilot station 0.5 miles due South of Sitra Beacon; thus keeping clear of the Deep Water Channel.

(v) All vessels, unless otherwise instructed should proceed to an anchorage South of No. 27 Buoy (V. Q. (6) + L. Fl. 10 sec.).

Inward Over 9.2 m. (30 ft.):

(i) Vessels wishing to utilise the Deep Water Channel should follow the reciprocal of the courses described for the "Recommended Deep Water Departure Channel".

(ii) Vessels with drafts of between 9.2 m. (30 ft.) and 12.2 m. (40 ft.) may be required by B.P.C. to depart from the marked channel at certain points to allow freedom of movement for vessels with drafts in excess of 12.2 m. (40 ft.).

(b) Deep Water Departure Channel

(i) The Pilot will normally leave vessel after having crossed the Sitra Middle Ground Bar; 2 cables South of "Sitra Beacon" (Fl. 3.3 sec.) with the vessel proceeding to close North of No. 18 Buoy (Qk. R.).

(ii) When No. 18 Buoy comes abeam, course should then be altered to 090°(T) which will bring Sitra Beacon dead astern, bearing 270°(T) to pass South of No. 27 Buoy.

(iii) As No. 27 Buoy (South Cardinal Yellow above Black Pillar Buoy) (V. Q. (6) + L. Fl. 10 sec.) comes abeam to port, course should be altered to 022°(T).

(iv) When Buoy Nos. 21, 23 and 25 are sighted in line bearing 344°(T) course should be altered to 344°(T).

(v) On course 344°(T) Buoy No. 25 (Green Cone) (Fl. G. 5 sec.) and Buoy No. 23 (Green Conical) (Qk. Fl. G.) will be passed close on the port side and Buoy No. 16 (Yellow Can) (Fl. Y. 6 sec.) on the starboard side.

(vi) As No. 21 Buoy (East Cardinal) (V. Q. (3) 5 sec.) comes abeam to port, course should be altered to 015°(T), which should bring Buoy No. 12 (Yellow Can) (Fl. Y. 2 sec.) dead ahead and Buoy No. 21 dead astern. The bearings of these buoys should be watched closely to estimate and correct for cross set which is sometimes quite strong on this course and the next. On this course No. 14 Buoy (Yellow Can) (Fl. Y. 10 sec.) will be left to starboard.

(vii) On No. 19 Buoy (Green Conical) (Fl. G. 3 sec.) coming abeam, course should be altered to 002°(T) bringing Buoy No. 15 (Green Conical) (Occ. G. 5 sec.) dead ahead. Buoy No. 12 (Fl. Y. 2 sec.) will then be left close to starboard and No. 17 Buoy (Green Conical) (Qk. Fl. G.) will be left to port.

(viii) In order to pass over a cable Eastwards of Buoy No. 15, course should be altered to 016°(T) as Buoy No. 10 (Yellow Can) (Fl. (3) Y. 10 sec.) comes abeam to starboard and then altered to 356°(T) as Buoy No. 15 comes abeam to port. This course would pass 3.5 cables West of Bahrain Approach Buoy. It may be advisable to reduce engine revolutions shortly after steadying on course 356°(T), in order to be able to increase revolutions, if required to provide better steerage on the next course over the Bar.

(ix) When the Bahrain Approach Buoy bears 051°(T) course should then be altered to 051°(T). As this heading is approached, it should be found that Buoys No. 8 (Red Can) (Fl. R. 2 sec.) and No. 6 (Red Can) (Fl. (3) R. 6 sec.) are in line to starboard, as Bahrain Approach Buoy comes abeam at 2.5 cables, and then should commence to open. Buoys No. 13 (Green Conical) (Fl. G. 5 sec.) and No. 11 (Green Conical) (Q. G.) are parallel to the course on the port side of the vessel, give clearance on the 13.1 m. (43 ft.) patches and given the extent of the bar which should be traversed at Slow Speed.

(x) On No. 11 Buoy coming abeam to port, course should be altered to 054°(T) passing between No. 9 Buoy (Green Conical) (Fl. G. 10 sec.) and Buoy No. 4 (Red Can) (Q. R.), followed by Buoy No. 7 (Green Conical) (Fl. G. 5 sec.) to port.

(xi) When Buoy No. 2 (Red Can) (Fl. (2) R. 10 sec.) bears East, course should be altered to 071°(T) to pass close South of Buoy No. 5 (Green Conical) (Fl. G. 3 sec.).

(xii) Buoy No. 5 should be close abeam to port, when the course is altered to 057°(T) and speed reduced in readiness to cross the spit which extends in a Southerly direction from No. 3 Beacon (Fl. 6 sec.) and which has a minimum depth of 13.25 m. (43 ft. 6 in.) at Chart Datum.

(xiii) When Buoy No. 1 (Green Conical) (Q. G.) bears 040°(T), course should be altered to 040°(T) bringing the Bahrain Light Vessel (Gp. Fl. (3) 20 sec.) on the starboard bow. 1.5 miles after Buoy No. 1 has been left to port, the minimum depth of water is greater than 50 ft., and it is safe to go full ahead.

(xiv) Masters can expect to have to make adjustments from time to time, to the recommended courses, due to set. Effects of tide and current should be watched for at all times.

Sitra Channel Marks:

Bahrain Light Vessel	26° 33′ 00″ N. 51° 03′ 30″ E.	A light vessel painted Red with the word 'Bahrain' in white on both sides of the vessel.	Gp. Fl. (3) every 20 secs. Range 15 miles. Racon.

Alba Beacon	26° 09′ 14″ N. 50° 40′ 23″ E.	Pile structure, 20 ft. high.	Scintilating Fl. Green.
AISCO North	26° 11′ 17″ N. 50° 41′ 22″ E.	Green Conical.	Quick Fl. Green.
AISCO South	26° 11′ 07″ N. 50° 41′ 33″ E.	Green Conical.	Fl. Green 3 secs.

RESTRICTIONS: Berthing carried out night and day.

Explosives: Merchant vessels carrying explosives are not permitted to enter the Sitra Inner Anchorage, unless permission has been granted and anchorage allocated. Masters of such vessels will be advised by Bahrain Port Control to anchor in the Explosives Anchorage in a position 1.5 miles S.E. of Sitra Beacon.

Merchant vessels carrying explosive material are not permitted to enter the limits of BAPCO's Oil Wharves including the ALBA facilities.

Tidal Information:

The Standard Port for the area is Mina Sulman.

		High Water		Low Water	
No.	Place	Mean Springs	Mean Neaps	Mean Springs	Mean Neaps
		Standard Port		Standard Port	
4252	Mina Sulman	2.4 m. (7.9 ft.)	1.9 m. (6.2 ft.)	0.6 m. (2.0 ft.)	1.0 m. (3.3 ft.)
		−0030 hours		−0030 hours	
4251	Sitra	2.2 m. (7.2 ft.)	1.7 m. (5.6 ft.)	0.4 m. (1.3 ft.)	0.8 m. (2.6 ft.)
		−0037 hours		−0037 hours	
4250a	Bahrain Approach Buoy	2.1 m. (6.9 ft.)	1.7 m. (5.6 ft.)	0.4 m. (1.3 ft.)	0.8 m. (2.6 ft.)

For vessels with drafts in excess of 12.2 m. (40 ft.) the following notes are recommended:

1. During Neap Tides vessels with drafts up to 12.8 m. (42 ft.) can navigate the channel at all stages of the tide.

2. *Tidal Sailings:* The rise of tide must be utilised to pass through the shoal areas between Bahrain Approach Buoy and No. 3 Beacon over the HW period at reduced speed. Departing vessels should be underway from No. 27 Buoy not later than 3.5 hours before the next predicted HW at Mina Sulman, or at a time not later than that which would allow vessels to make the passage between Bahrain Approach Buoy and No. 3 Beacon at a reduced speed of 8 knots, having the full benefit of the tide, and passing Bahrain Approach Buoy 1.5 hours before the predicted HW at Mina Sulman.

MAX. SIZE: See individual berths for limitations.

HEALTH: Bahrain Port Health Regulations are based on International Sanitary Regulations adopted by World Health Organisation, May 1951.

In accordance with International practice, quarantine signals must be prominently displayed by all vessels approaching Bahrain Port.

Pratique is normally granted by the Bahrain Government Port Health Officer or the Agent's Representatives, or for healthy vessels scheduled for immediate berthings in the Sitra Marine Area by the BAPCO Pilot.

No persons, excepting the Bahrain Coast Guard, Agents' Representatives and Pilots are permitted to leave or board a vessel until Pratique has been granted.

A radio message should be sent to the Government Port Health Officer, Bahrain, advising last Bill of Health and present health conditions aboard.

Rat guards should be properly placed on all mooring ropes as soon after berthing as practicable.

Bahrain Port is not classed as a "Plague Port" but all crew members must have in their possession valid certificates of vaccinations and inoculations against cholera in accordance with current Health Regulations.

The Bahrain Government Port Health Officer is available by arrangement through vessel's Agent. The Port Health Officer, in addition to official duties, will provide consultation and treatment for other than quarantine purposes.

Derat and Derat Exemption Certificates are obtainable in Bahrain. Requests should be made through the vessel's Agent.

RADIO: The company does not operate a coast radio station, long distance radio communication being routed through Bahrain Radio.

All vessels are requested to keep the company, on cable address "Bapcoship Bahrain", fully advised regarding ETA. Vessels fitted with telex may contact BAPCO by telex through A9M on Telex: 8218 Bn (answerback being BAPSHP) but messages to the vessel from BAPSHP will all be relayed through Bahrain Radio for onward transmission.

It is requested that vessels provide an ETA, arrival and departure drafts, not later than 48 hours steaming time from Sitra.

Long distance radio communication should all be routed through Bahrain Telecommunication Company's Coast Station "Bahrain Radio" (A9M) of P.O.Box 14, Manama, Bahrain, to which a regular watch should be maintained.

All communications to the Company should be quoted in GMT, and the appropriate letters, GMT, inserted after the time.

Bahrain Radio (A9M) (SELCAL 4650)

Type	*Time (GMT)*	*Frequencies in kHz*		
		Calling	*Working*	*Listening*

Bahrain Radio is equipped with Marconi Spector "ARQ" and "FEC" equipment type U2221. The equipment conforms to CCIR Recommendation 476. There are 4 operating positions with answerbacks 8474A A9M BN, 8474B A9M BN, 8474C A9M BN, and 8474D A9M BN. For direct contact ships should call in the Master (ARQ) mode as A9M monitors in the Slave mode. During a link call A9M will work as Master once contact has been established. Bahrain Radio accepts telex tapes from local clients to be passed on to ships fitted with radio telex on Telex: 8221 Bahrad Bn. The address should include the ship's name, call sign, and SELCAL number.

Sitra Port Control

Call sign "Bapco Terminal".
R/T, VHF Continuous Ch. 16, 74 Ch. 6, 8, 9, 12, 14
R/T, H/F On demand 2182 2182, 2621, 2806

When within 50 miles of Bahrain, communication should be established on VHF with BAPCO Terminal.

Vessels must maintain a continuous watch on VHF Channels 16 and 74.

A separate radio message should be sent to the Government Port Health Officer, Bahrain, advising last Bill of Health and present health conditions on board.

The Radio and Radar equipment of any vessel must *not* be operated whilst alongside Company wharves.

VHF: See "Radio".

BAHRAIN PORT CONTROL: A Vessel Traffic Management System has been established and is responsible for co-ordinating and regulating the flow of marine traffic in all waters within the port limits and the Deep Draft and N.E. Approach Channels.

It is required that all vessels in excess of 50 g.r.t. will inform Bahrain Port Control, on VHF Channel 74, prior to leaving a berth or anchorage, or immediately after berthing or anchoring, and when passing the following sea marks inwards and outwards:

Deep Draft Channel	*N.E. Approach*
Bahrain Light Vessel	—
No. 3 Beacon	—
Bahrain Approach Buoy	Sitra Inwards Buoy
No. 14 Buoy	Vidal Buoy
No. 27 Buoy	No. 27 Buoy
Sitra Beacon	Sitra Beacon
Middle Ground Buoy	Middle Ground Buoy

TUGS: The assistance of Company tugs is normally available on a 24 hour basis.

When assisting in berthing and unberthing operations, the tugs are under the direct orders of the Sitra Pilot.

The Company normally has 2 tugs on station. Each tug is fitted with fire pumps and monitors and can provide limited assistance fighting fires.

The Sitra Pilot will decide upon the number of tugs to be used in berthing and unberthing operations. Normally, 2 tugs are used in each instance.

If the assistance of a tug is required for purposes other than berthing or unberthing, the request should be directed to the Port Captain, Sitra, via the vessel's Agents.

Towboats: Normally there are 3 tow-boats of 365 h.p. on station. Primarily intended for other harbour duties, these tow-boats are available for assisting in the berthing/unberthing of the smaller class of vessel.

BERTHING: Berthing and unberthing operations are conducted on a 24 hour basis at the discretion of the Sitra Pilot; wind, weather, tide and other circumstances permitting.

Full power must be available on the main engines and the vessel must be sufficiently ballasted for the operation envisaged. The Sitra Pilot will decline to berth vessels if they are not properly equipped with satisfactory mooring lines, or if deck appliances are inoperable, or if steering gear, telegraphs and whistles are not in an efficient condition. The Master should notify the Pilot of any defects or peculiarities pertaining to his vessel.

Minimum Manoeuvring Drafts for Tankers: Due to the exposed location of the wharves, vessels are required to be sufficiently ballasted with clean ballast water ballast before coming alongside.

Acceptable ballast drafts are those calculated by the following IMO formulae:

Draft amidships (2.0 + 0.02L) m.
Trim not to exceed 0.015L.
Where L = Length overall.

Minimum tanker drafts normally acceptable are:

LOA	*Forward*	*Aft*
150 m. (490 ft.)	3.9 m. (12.8 ft.)	6.1 m. (20.0 ft.)
175 m. (570 ft.)	4.2 m. (13.8 ft.)	6.8 m. (22.3 ft.)
200 m. (650 ft.)	4.5 m. (14.8 ft.)	7.5 m. (24.6 ft.)
225 m. (730 ft.)	4.9 m. (16.0 ft.)	8.1 m. (26.6 ft.)
250 m. (820 ft.)	5.2 m. (17.0 ft.)	8.8 m. (28.9 ft.)

Ballast draft should be sufficient to completely immerse the propeller. Pilots may decline to berth vessels if they are not sufficiently ballasted.

Trim: Whilst alongside the berth the period of undesirable trim shall be minimised.

Anchors: The "Offshore" anchor should be cleared and lowered to the waterline, ready for letting go, before approaching the berth. Anchor buoys are NOT to be used.

Handling Mooring Lines: BAPCO provides a shore gang for handling mooring lines on the wharves. This service is directed by the BAPCO personnel on the wharf.

Vessels berthing at BAPCO wharves must be equipped with *at least* 5 lines forward and 5 lines aft, in addition to backsprings fore and aft. These lines must be of sufficient length to enable moorings to be "doubled up" in bad weather. Method of mooring will be at the discretion of the duty Pilot.

Constant tension winches to be set on manual brake.

BAPCO TERMINAL: Two main wharves were constructed, lying 146° – 326° to handle ocean-going vessels, with a special services coastal tanker wharf lying 023° – 203°.

Whilst bunkers (fuel oil, marine diesel and gas oil) are available on all berths, the main wharves handle all normal petroleum products with specialities handled on particular berths for dependent clients:

	Berth Nos.
BANOCO/CALTEX	
Asphalt	2,4,7
Pressurised LPG	4, 7
Blended Fuel Oil	2, 4
Drummed Asphalt	4
Caustic/T.E.L. Imports	4
BANAGAS	
Butane/Propane (Vapour Return/Main)	1
(Main/Vapour Return)	2
GPIC	
Ammonia/Methanol	1
Methanol/Ammonia	2

No. 1 Island Wharf: No. 1 (Island) Wharf consists of 1 main central platform supported on steel piles with 4 inter-connected mooring dolphins, 2 positioned to the North-West and 2 to the South-East; giving the wharf an overall length of 281 m. (923 ft.). This wharf, which is supplied by submarine pipe-lines, provides 2 berths protected by 4 breasting dolphins each side. The latter precludes berthing freighters.

Limitations:

Berth	*LOA*	*Charted Depth*	*Sailing Draft*	*Max. Berthing Draft*	*Berthing Displace-ment*
5	Min: 165 m. (540 ft.)	14.00 m. (46 ft. 0 in.)	13.40 m. (44 ft. 0 in.)	10.67 m. (35 ft. 0 in.)[4]	71,500 L. Tons
6	Max: 274 m. [1](900 ft.)	13.25 m. (43 ft. 6 in.)	13.25 m. (43 ft. 6 in.)[3]	12.19 m. (40 ft. 0 in.)	[2]

Notes:

1. Maximum distance manifold to ends of 145 m. (475 ft.).
2. Approximates to 110,000 d.w.t. in ballast.
3. 13.40 m. (44 ft.) permitted only under suitable tidal conditions.
4. Can be exceeded with suitable rise of tide to max. 12.19 m.

No. 2 Wharf: No. 2 wharf is a pile driven 'T' head structure with 3 interconnected dolphins, 2 positioned to the N.W. and 1 to the S.E., giving the wharf an overall length of 508 m. (1,666.5 ft.), and providing four berths. Both outside berths (Nos. 1 and 2) and the N.W. Inner Berth, No. 3 are protected by berthing beams. This wharf is connected by a road trestle 518 m. (1,680 ft.) to a causeway 3 miles from the main island of Sitra.

Limitations:

Berth	*LOA*	*Charted Depth*	*Sailing Draft*	*Berthing Displace-ment*
1	250 m.[1] (820 ft.)	12.80 m. (42 ft. 0 in.)	12.19 m. (40 ft. 0 in.)	58,000
2	250 m.[1] (820 ft.)	12.95 m. (42 ft. 6 in.)	12.34 m. (40 ft. 6 in.)	58,000
3	170 m. (560 ft.)	11.89 m. (39 ft. 0 in.)	10.36 m.[2] (34 ft. 0 in.)	33,000[3]
4	160 m. (525 ft.)	11.89 m. (39 ft. 0 in.)	10.36 m. (34 ft. 0 in.)	

Notes:

1. May be exceeded dependent upon configuration of vessel and vessel utilising other berth.
2. 10.97 m. may be permitted under suitable tidal conditions.
3. Approximates to 25,000 d.w.t. cargo import.

Coastal Tanker Wharf: This wharf is a pile driven structure, fendered on its Eastern side only and connected by a catwalk to the Causeway. At its outer end is a warping dolphin.

Limitations:

Berth	*Vessel LOA*	*Charted Depth*	*Draft Never To Exceed*
7	73.1 m. (240 ft.)	5.48 m. (18 ft. 0 in.)	4.88 m. (16 ft. 0 in.)
	or with special permission		
	73.1 – 79.2 m. (240 – 260 ft.)	4.88 m. (16 ft. 0 in.)	4.26 m. (14 ft. 0 in.)

BAHRAIN NATIONAL GAS CO.:

General: Butane and propane are stored at Sitra storage tanks at 0.5 p.s.i.g., and −5°C and −42°C, respectively. Maximum storage capacity is 188,000 bbls. (29,890 cu.m.) per product.

Product is pumped to the loading arms via a 16 in. insulated loading line by 2 pumps, each with a capacity of 5,000 b.p.h. There is a 10 in. vapour return line. The vapour return line can be routed to a tank or to flare as required. Note that if during the loading, pressure on the vapour return line exceeds 1.25 p.s.i.g. at the flare, then a control valve may shut against the vessel. This may happen without prior warning.

The loading line and the vapour return line are in the configuration as per plan (see "Plan" – Sitra Wharf No. 2). Loading and vapour return operations are accomplished via chiksan type arms, the arms having 12 in., 150 A.S.A. rating, and 8 in., 150 A.S.A. rating flanges respectively.

As propane and butane cargoes are loaded through a single shore system it may be necessary for the shore tank to be switched in order that the loading system content is displaced to the vessel with the other product. Masters are requested to maintain an accurate assessment of the cargo loaded at all times and inform the wharf staff as required.

Vessels MUST advise Terminal personnel of any need to shut down loading, even on an emergency basis, so that the Terminal emergency shut down system can be activated BEFORE on-board valves are shut to the loading hoses/arms.

Atmospheric venting is not permitted alongside the wharves. Vessels which are "hot" will be required to load a quantity of coolant, unberth and purge and cool down in the holding anchorage.

Communications: Vessels intending to load LPG at Sitra will be contacted approximately 72 hours prior to arrival, and will be required to furnish the following information to BAPSHP BN:

1. Names of last 3 ports of call and ETA at 72, 48 and 24 hour intervals to No. 27 Buoy.
2. Arrival draft, departure draft, and berthing displacement.
3. State of readiness to berth/load and composition of vapours in ships tanks. If "hot", quantity required for cooling down procedure.
4. Order of loading, disposition of cargo to load and maximum loading rate.
5. Disposition of cargo already on board, and if intend co-mingling.

6. Ships particulars:
(a) Length overall.
(b) Distance bow to liquid connection.
(c) Distance bow to vapour return connection.
(d) Maximum freeboard of manifold during cargo operations.
(e) Minimum freeboard of manifold.
7. Bunker requirements.
8. Radio "Porthealth Bn" with present health conditions.

This information should be updated every 24 hours or sooner should any major alterations to the original be made.

Arrival Procedure: VHF communications should be established with:
(a) BAPCO Terminal to obtain the latest berthing schedule.
(b) Bahrain Port Control to whom vessels should pass their intended passage route and timings from Bahrain Light Vessel to No. 27 Buoy, and obtain clearance.

Should the berth be unavailable, vessels will be directed to the Sitra Holding Anchorage, which is 1 mile South of No. 27 Buoy. Vessels carrying out cooling down procedures will also use this designated anchorage.

LPG vessels will not under normal conditions use the Sitra Inner Anchorage but if special circumstances warrant then permission must be first obtained from Bahrain Port Control.

Berthing and unberthing operations are at all times governed by prevailing weather conditions and the larger freeboard of LPG vessels will be taken into account when considering berthing prospects.

Mooring arrangements will be generally similar to those outlined for BAPCO Berths, but particular attention should be given to extra moorings when warning of imminent weather change is received.

GULF PETROCHEMICAL INDUSTRIES CO.:

General: Ammonia and methanol are manufactured and stored at the GPIC plant situated 2 miles from the berths on the Southern side of the causeway. Ammonia is stored in 2 tanks at atmospheric pressure and at a temperature of −33°C with a total capacity of 40,000 tonnes. Methanol is stored in 2 nitrogen blanketed tanks at atmospheric pressure and ambient temperature with a total capacity of 40,000 tonnes also.

The product pipe-lines, together with the ammonia vapour return, and the control and instrumentation pipes, are routed along a maintenance causeway on the North side of the main causeway to close Westwards of the Coastal Tanker Berth after which they are carried on top of piles close South of the wharf road trestle to the North corner of No. 4 Berth.

The 16 in. ammonia loading line and the 10 in. vapour return line terminate at a combined 10 in. and 6 in. chicksan type arm. Methanol is similarly routed through a 16 in. loading line to a separate 10 in. chicksan type arm.

Both products can be loaded each utilising 2 pumps at a maximum capacity of 1,200 tonnes per hour.

Methanol is a typical hydrocarbon product and is handled similarly to other products on the wharf.

Ammonia is a toxic product and should be handled with additional caution. The GPIC office on the wharf contains breathing apparatus sets and other equipment for emergencies.

Arrival Communication: Vessels intending to load ammonia or methanol will be required to provide the following information to GPIC (Telex: 9897, Answerback Kemia Bn) via Bahrain Radio:
1. Names of last 3 ports of call.
2. ETA at 72, 48 and 24 hour intervals to No. 27 Buoy.
3. Arrival draft, departure draft and berthing displacement.
4. State of readiness to berth/load and composition of vapours and temperatures of ship's tanks. Noting for ammonia loadings that the vapour return line can only be utilised if the tanks are filled with gaseous ammonia.
5. Order of loading, disposition of cargo to load and maximum loading rate requested.
6. Disposition of any cargo already on board.
7. Ship particulars:
(a) Length overall.
(b) Distance bow to liquid connection.
(c) For ammonia loadings: Distance bow to vapour return.
(d) Maximum freeboard of manifold during cargo operations.
(e) Minimum freeboard of manifold.
8. Loading arms terminate with flanges of:
(a) Ammonia liquid – 10 in. × 300 ASA.
(b) Vapour return – 4 in. × 150 ASA.
(c) Methanol – 10 in. × 150 ASA.

Vessel requested to inform if suitable sized and constructed adaptors not on board, giving manifold size flange required.
9. Any deficiencies in vessels equipment, safety appliances.
10. Bunker requirements.

Vessels are required to radio "Porthealth Bn" with present health conditions.

Arrival Procedure: VHF communications should be established with:
(a) Bahrain Port Control to whom vessels should pass their intended passage route and timings from Bahrain Light Vessel to No. 27 Buoy, and obtain passage clearance.
(b) BAPCO Terminal to obtain the latest berthing schedule.

Both on VHF Channel 74.

Should the berth be unavailable, vessels will be directed to Sitra Holding anchorage, which is 1 mile South of No. 27 Buoy.

All the normal BAPCO Terminal procedures and regulations will apply in conjunction with additional safeguards.

Access to the "T" head will be restricted.

Loading Masters: GPIC provide Loading Masters, independent of BAPCO, who will make all necessary arrangements, inspections and checks for the loadings.

The BAPCO Wharf Superintendent and his delegates have the responsibility for the overall safety and security of the wharf and access to the wharf will be restricted during ammonia loading operations.

Loading Information: As the loading pumps for ammonia have to be cooled down prior to operations the ship's maximum acceptable loading rate, up to 1,200 tonnes/p.h. cannot be changed after receipt of arrival telex.

The max. loading rate utilising 2 shore pumps is 1,200 tonnes/p.h.

Before commencement of any cargo operations the GPIC Loading Master and the vessels Loading Officer must mutually agree on the procedures for Normal and Emergency Stoppage.

Vessels must advise the GPIC Loading Master of any need to shut down loading, even on an emergency basis, so that the Terminal shut down systems can be activated before on-board valves are shut against the loading arms.

In the event of an emergency disconnection the loading arms will automatically rise about 2 m. above its current operating position with an arm full of product, leaving 1 quick closing valve connected to the vessel.

Prior to commencing operations the GPIC Loading Master and the ship's Loading Officer will mutually agree on the correct sampling procedure for the vessel.

Gas masks, breathing apparatus and first aid equipment must be checked for full serviceability and be ready to hand prior to commencing any operations.

Prior to and on completion of loading, the loading arms will be purged with nitrogen to displace the product on to the vessel.

During ammonia loadings the vapour return line should be used to assist in the displacement of the shore tanks. However, this will only be carried out if the ship's tanks are filled with gaseous ammonia. It is not permitted for the ship to vent inert gas or other vapours into the vapour return line.

ALUMINIUM BAHRAIN:

General: Berthing and unberthing operations are conducted on a 24-hour basis at the discretion of the Sitra Pilot; wind, weather, tide and other circumstances permitting.

Owing to the confined area of operations and the strong cross currents experienced on the Inner Berth some arriving vessels may have to anchor South of No. 27 Buoy for slack water.

Full power must be available on the main engines and the vessel must be sufficiently ballasted for the operation envisaged. The Sitra Pilot will decline to berth vessels if they are not properly equipped with satisfactory mooring lines, or if deck appliances are not operable, or if steering gear, telegraph and whistles are not in an efficient condition. The Master should notify the Pilot of any defects or peculiarities pertaining to his vessel.

Due to exposed location, vessels alongside the Inner Berth may experience considerable surging in rough weather and careful watch should be kept on mooring ropes. Slack lines present a hazard to the safety of vessels moored alongside. It is recommended that at least half hourly routine checks on moorings are carried out. The use of shore storm moorings are mandatory for vessels moored at ALBA Inner Berth. Vessels requesting additional lines to be run out, etc., will be given every assistance by shore staff.

Anchors: The "offshore" anchor should be cleared and lowered to the waterline, ready for letting go, before approaching the berth. Anchor buoys are not to be used.

Gangways: Vessels shall provide an efficient gangway, which shall be adequately lighted during the hours of darkness and be of sufficient length to provide safe access when the vessel is discharged.

Mooring Charges: BAPCO will make a charge for the use of tugs/tow-boats and services rendered during berthing and unberthing operations, and for tugs utilised holding/repositioning vessel if required during periods of inclement weather.

Smoking: Smoking is strictly prohibited on the ALBA jetty except at approved "Smoking Points". The Port Captain, Sitra has approved vessels berthed alongside the ALBA jetty as "safe places" for smoking except during bunker operations. This approval may be withdrawn by ALBA's Marine Superintendent or his delegate if any condition arises which in his opinion is likely to prove hazardous.

The Master shall be responsible for ensuring that the crew of the vessel are informed of the safe places so approved and that they comply with the regulations.

Swimming: Swimming is not permitted in the vicinity of the ALBA jetty.

Vessels' Engines: The main engines and all gear must be in an operable condition and in a state of immediate readiness whilst alongside the jetty.

Fire Wires: Vessels berthed at the ALBA Jetty must have the eye of a wire hanging over the offshore bow and quarter to enable tugs to connect up readily in an emergency. The wire shall be suitable for the intended purpose and shall have sufficient scope on deck for free running. These wires must be tended to keep the eyes at sea level.

Shore Leave: Shore leave may be taken by *bona fide* crew members in accordance with the Regulations prescribed by the Government of Bahrain, and in accordance with the Agents' Notice to Masters.

All persons landing from vessels at ALBA's berths must use transport provided by the Agent between the ALBA Storage Island and ALBA Security Gate where they must show their shore leave pass, BAPCO 2564. It is not permitted to walk along the causeway between the Storage Island and ALBA Security Gate. All persons going ashore must hand in either their valid passport or Seaman's Continuous Discharge Certificate to the Immigration Officer and be cleared by the Customs Officer, both of whom are located in BAPCO's Sitra Shipping Office.

Communications: Vessels should provide their Agent through Bahrain Radio with:
1. ETA at least 72 hours in advance.
2. Names of last 3 ports of call.
3. Arrival drafts fore and aft.
4. State of readiness to berth/load/discharge.
5. Bunker requirements.

This information should be updated should any major alterations to the original be made.

They should also radio "Porthealth Bn" with present health conditions.

When within VHF range communications should be established with:
(a) Bahrain Port Control
and
(b) BAPCO Terminal to obtain the latest berthing schedule from Sitra Pilots.

During cargo operations while a vessel is alongside ALBA jetty, VHF Channel 8 is used for contact with the wharf staff. Masters are requested to maintain a watch on this channel. There are no facilities for providing vessels alongside with telephones.

ALBA Wharf: Description: The ALBA wharf is a pile driven, "L" shaped structure, 171 m. (562 ft.) long with a reinforced concrete decking. A mooring dolphin is situated 47.5 m. (165 ft.) to the N.W. and a warping/mooring dolphin 60 m. (197 ft.) to the S.E. These dolphins give the wharf an overall length of 281 m. (924 ft.).

Depths at this wharf are as follows:

Outer Berth: 10.35 m. (34 ft.) at Chart Datum.

Inner Berth: Forward: 9.15 m. (32 ft.) at Chart Datum. Aft: 10.35 m. (34 ft.) at Chart Datum.

Limitations: The Outer Berth is provided with fendering to accept vessels of up to 35,000 d.w.t., with normal max. LOA of 200 m. (650 ft.). Large vessels must have a minimum of 76 m. (250 ft.) of parallel sides in order that the vessel can rest against the fenders without touching the decking. Small vessels with LOA of between 40 m. (130 ft.) and 97 m. (320 ft.) may be berthed on the Northern or the Southern set of 3 fenders.

The Inner Berth is designed to accept vessels of up to 12,000 d.w.t., with a max. LOA of 165 m. (540 ft.) and with a max. beam of 21 m. (68 ft.).

Facilities: Bulk carriers will be unloaded on the Outer Berth by 2×10 ton capacity grab equipped cranes, with max. outreach of 28.6 m. (94 ft.).

Metal exports will be loaded at the Inner Berth using ship's gear or, possibly, on the Outer Berth where the jetty cranes will be used.

Special Project – Petroleum Pitch: For several years the Inner Berth will be occupied by a large tanker loading/storing petroleum pitch. This vessel is additionally moored with ground tackle, both fore and aft.

During this period tankers will be berthed on the Outer Berth to load by ship to ship transfer.

These vessels will be required to have the same minimum manoeuvring drafts as those required for BAPCO and have less than the maximum berthing displacement of 45,000 tonnes.

ARAB IRON & STEEL COMPANY:

Berthing/General: Under normal circumstances, berthing and unberthing operations are conducted on a 24 hour basis at the discretion of the Sitra Pilot; wind, weather, tide and other circumstances permitting.

Owing to the confined area of operations for ore carriers arriving at the maximum permitted drafts for the berth, and the strong cross currents experienced on the berth, arriving vessels may have to anchor South of No. 27 Buoy for slack water.

Full power must be available on the main engines and the vessel must be sufficiently ballasted for the operation envisaged. The Sitra Pilots will decline to berth vessels if they are not properly equipped with satisfactory mooring lines, or if deck appliances are inoperable, or if steering gear, telegraphs and whistles are not in an efficient condition. The Master should notify the Pilot of any defects or peculiarities pertaining to his vessel.

Approaches: The area surrounding the wharf and its approaches have been dredged for deep drafted vessels.

To assist in the pilotage, leading beacons and marker buoys have been installed. The beacons, rear (Gp. Fl. (2) 2 sec.) 12 m. and front (Qk. Fl.) 9 m. are situated parallel and 300 m. to the West of the wharf centreline, and provide clearance for maximum drafted vessel turning from the Main Fairway into the dredged area. The buoys, AISCO South (Fl. Y. 3 sec.) and AISCO North (Fl. 3 sec.) mark the Eastern edge of the dredged area for unloading berth approaches.

Anchors: The "offshore" anchor should be cleared and lowered to the waterline, ready for letting go, before approaching the berth. Anchor buoys are not to be used.

Gangways: Vessels shall provide an efficient gangway, which shall be adequately lighted during the hours of darkness and be of sufficient length to provide safe access when the vessel is light.

Gangways shall not obstruct the ship unloader or ship loader railways, or obstruct the movement of these appliances.

Main Deck Access: The area between the ship's hatches and the dockside rail shall be prohibited for personnel access during the ship loading/unloading operations. All personnel shall be informed accordingly and suitable barriers installed and "No Entry" notices clearly posted.

Under no circumstances shall ship's crew ascend the shore loader/unloader or pass under the conveyor belts.

Illumination: Proper illumination shall be provided on the vessel's working decks, hatches, holds, and other working areas during the hours of darkness.

Swimming and Fishing: Swimming and Fishing or any other recreational activities from or on the jetty are strictly prohibited.

Fire Wires: Vessels berthed at the AISCO jetty must have the eye of the wire hanging over the offshore bow and quarter to enable tugs to connect up readily in an emergency. The wire shall be suitable for the intended purpose and shall have sufficient scope on deck for free running. These wires must be tended to keep the eyes at sea level.

Shore Leave: Shore Leave may be taken by bona fide crew members in accordance with the Regulations prescribed by the Government of Bahrain, and in accordance with the Agents' Notice to Masters.

All persons landing from vessels at AISCO's berths must hand in either their valid passport or Seaman's Continuous Discharge Certificate to the Immigration Officer and be cleared by the Customs Officer who are located at AISCO main entrance.

All persons landing from and rejoining vessels lying at AISCO jetty must use transport provided by the Agent between the Jetty and the Security Gate.

Access to the plant area shall be strictly prohibited.

Fire Points: The jetty is provided with fire fighting water and six hydrant points located along the berth.

Mooring Charges: BAPCO will make a charge for the use of Pilot., tugs/towboats and services rendered during berthing and unberthing operations.

Communications: Vessels should provide their Agent through Bahrain Radio with:

1. ETA at least 72 hours in advance.
2. Last 3 ports of call.
3. Arrival drafts fore and aft and berthing displacement.
4. State of readiness to berth/load/unload.

This information should be updated should any major alterations to the original be made.

They should also radio "Porthealth Bn" with present health conditions.

When within VHF range communication should be established with:
(a) Bahrain Port Control, to whom vessels should pass their intended passage route and timings from Bahrain Light Vessel to No. 27 Buoy and obtain passage clearance.
(b) BAPCO Terminal to obtain the latest berthing schedule from Sitra Pilots.

Whilst alongside vessels will be provided with a telephone to communicate with the plant operators. In an emergency, vessels may utilise VHF Channel 68 to communicate with AISCO Terminal.

AISCO Wharf: Description: Situated to the North of Sitra Anchorage, and on the South side of the pelletising plant, is a 300 m. finger jetty constructed on concrete piles with a 35 m. wide concrete deck connected to the island by a 135 m. trestle. There are 2 mooring dolphins, one situated 75 m. to the South of the jetty, on the jetty centreline, and the other 79 m. to the North of the discharge berth. The jetty consisting of 2 berths, the discharge berth for iron ore on the Eastern side, and a loading berth for pellets on the Western side. 2 shore grab cranes, each with capacity 1,500 t.p.h. are available.

Parameters:

	Unloading	*Loading*
Length	300 m.	300 m.
Depth of water alongside at CD	12.8 m.	12.8 m.
Max. deadweight in tonnes	100,000	80,000
Max. displacement in tonnes	130,000	100,000
Max. freeboard to top of hatch	18.4 m.	16.5 m.
Max. outreach of appliances	29.5 m.	19.6 m.

BALLAST: The discharge of dirty ballast within the territorial waters of Bahrain is strictly prohibited. As a further measure to avoid pollution by oil of the Marine environment, Masters of tankers are requested not to pump any oil overboard within the Gulf area.

Vessels should arrive with all ballast clean.

In special circumstances limited quantities up to 200 tons slops may be accepted at a certain charge per barrel. The use of these facilities is entirely at vessel's risk.

In the event of a vessel spilling oil in Sitra Harbour the Company will, at its discretion, clean up the oil and recover costs by charging the vessel.

RESIDUES: Limited slop tank facilities for oily residues at all berths.

LOADING/DISCHARGING: *Readiness:* The following will apply in regard to Notice of Readiness.

Notice of Readiness to load is a warranty on the part of the Master that the vessel is in all respects ready to load and that the tanks, pipes, pumps and accessories of the vessel are fit to receive the cargo to be loaded.

The Master or his representative is required to hand to the Company, a written Notice of Readiness to load. Receipt of such Notice of Readiness by the Company does not necessarily imply acceptance.

The Company will make every effort to accept Notice of Readiness when tendered on arrival, provided vessel is in all respects ready to load. The Company will endeavour to load vessels upon arrival and/or as promptly as a berth is available.

Arrival, where used above, means when the vessel passes Sitra Beacon when proceeding straight to the berth or passing North Range Beacon on departure from Mina Sulman, or the time of anchoring in the area South of No. 27 Buoy providing that the presence of the vessel is made known to BAPCO Terminal on VHF or BAPCOSHIP (Tel: 755662) via Bahrain Radio, at the time of anchoring.

Responsibility: Loading will not start until the vessel's Loading Officer reports the vessel is ready to receive cargo and the Company's Loading Master is satisfied with the preparations for loading. Any inspection made by the Company's Loading Master in this regard is performed without the Company assuming any liability.

All operations on board the vessel in connection with loading and discharging are the responsibility of the vessel.

A Company Loading Master will be available throughout the loading to offer advice to the Master on loading procedures and loading hazards.

Warning is given of the danger of closing a valve against an incoming oil stream. This procedure will create excessive pressures which may result in damage to the loading hoses, vessel's pipe-lines or Terminal facilities. Vessels will be held liable for damages resulting from failure to observe this precaution.

Hose Handling: Without assuming any liability on behalf of BAPCO, BAPCO employees will assist in connecting and disconnecting hoses to vessels. A ship's officer must be present, and the ship's deck officer on duty must approve the hose connection on board.

All unused cargo, bunker and ballast lines must be effectively and positively isolated during loading.

BAPCO has air operated hose handling rigs on Berth Nos. 1, 2, 3, 5 and 6.

BANAGAS has separate liquid and vapour return chicksan arms for RLPG on Berth Nos. 1 and 2.

GPIC has combined chicksan arms for ammonia liquid and vapour return, and separate chicksan arms for methanol, on Berth Nos. 1 and 2.

The vessel's hose rigging derricks should be in a constant state of readiness to give additional assistance as necessary. BAPCO employees will not operate ship's derricks or winches.

For convenience, vessels should have fittings conforming to the templates or provide adaptors. This is not mandatory, but expedites hose rigging and guarantees a good connection.

Cargo Inspection Service: The service of the Bahrain Government, Ministry of Development and Industry, Oil Inspection and Gauging Inspectors are available for the inspection and certification of the condition of a vessel's tanks, pipes, pumps and appurtenances. the Agent will, upon request, arrange for the services.

This Cargo Inspection Unit also carries out quantity and quality checks as required.

BAPCO will not issue any certificate purporting to state that vessel's tanks, pipes, pumps and appurtenances are clean or acceptable for receiving cargo. In the event a BAPCO Representative either alone or accompanied by the Bahrain Government Petroleum Inspector, inspects the vessel, BAPCO will make no representation nor assume any responsibility in connection with the condition of vessel's tanks, pipes, pumps and appurtenances, nor will BAPCO assume any liability for contamination of cargo aboard ship caused by same.

Loading Rates: This table prescribes the approximate maximum loading rates of products available at the wharves:

Product	*Up to bbls.p.h.*	*Sea Lines*	*Hoses No. × Size (in.)*
Motor gasoline	12,000	3	2×8
Naphtha	12,000	2	2×8
Jet fuel (JP4)	12,000	2	2×8, 1×12
Kerosene	8,000	2	2×8, 1×12
White diesel	15,000	3	2×8, 1×12
Black diesel	4,000	1	1×8
Fuel	30,000	3	2×12, 1×8
Press. LPG	340	1	1×3
RLPG	10,000		12 in. chicksan
Ammonia	1,200 t.p.h.		10 in. chicksan
Methanol	1,200 t.p.h.		10 in. chicksan

Loading rates of kerosenes and jet fuels are restricted due to static electricity hazards. These rates, dependent upon individual tank pipeline diameter and ship's current loading pattern, will be made available by the BAPCO Loading Master.

A maximum pressure of 150 p.s.i. is allowed on the loading hoses.

Discharging Rates: The discharge rates will be governed by the vessel's pumps, which must be limited to 150 p.s.i. at the manifold.

MEDICAL: Advance notice to Agents preferable. Good hospital and medical facilities.

Emergency hospital cases will be treated as such, and will be handled by the vessel's Agent or by Company facilities, whichever is first available. Under normal conditions, the vessel's Agent should handle all personnel from vessels other than "Company" vessels.

Heat Exhaustion: Experience over many years has shown incidence of heat stroke and heat exhaustion cases among the crews of vessels visiting Bahrain during the hot season, with some fatalities. The Company Medical Authorities have prepared notes on this subject which may be of assistance to Masters, but skilled medical assistance should be called for immediately a case of heat exhaustion or heat stroke is observed.

To enable heat exhaustion cases to be treated expeditiously a Heat Exhaustion Unit is located in the Port of Sitra Shipping Offices at the Wharf Gate.

DENSITY: Average 1030.

FRESH WATER: Limited quantities of well-water available at BAPCO's Wharves. It is saline and is mainly used for washing purposes. The use of this water in boilers and evaporators unless pretreated, will cause scale formation.

There is a nominal delivery charge.

Only in cases of extreme emergency will vessels be berthed at BAPCO Oil Wharves for water alone, and this at an additional docking charge.

There is no water available on the ALBA or AISCO Wharves except by barge.

Water is made available from lighters in the Sitra Anchorage. Requirements should be requested well in advance through the vessels' Agents.

FUEL: *Facilities:* Bunkers can be supplied at all oil berths and can be loaded simultaneously with bulk cargo.

Bunker quantities are measured by "Brodie" positive displacement meters.

Chief Engineers are requested to avail themselves of the opportunity of checking the opening and closing counter readings on the meters supplying bunkers to the vessel.

Product	*Bunkering Rates are approximately* *Bbls./hr.*	*Tons/hr.*
Fuel oil	up to 2,500	up to 360
Marine diesel	up to 1,500	up to 200

Bunker Barge Service: BAPCO operates a bunker barge service principally to supply bunker fuels to vessels at Mina Sulman. This service is also available to vessels in the Sitra Marine Areas, but delays may occur due to adverse weather conditions. This service only operates to the West of Sitra Beacon except under special circumstances when vessels may be bunkered in the Explosives Anchorage.

This service is maintained by the barges "BAPCO 1", "BAPCO 2" and "BAPCO 3", and applications for use should be via the vessel's Agent and it is desirable to give as much notice as possible. The minimum notice for fuel oil and marine diesel deliveries is 48 hours, week-ends excluded.

"BAPCO 1": This self-propelled barge has the following capabilities of loading/discharging:

Maximum Capacity		*Marine Diesel*	*Fuel Oil*
Fuel oil	bbls.	1,800	6,350
	tonnes	240	965
Diesel	bbls.	5,200	2,800
	tonnes	730	430
Discharge	bbls.p.h	50 – 750	100 – 1,500
Rates	t.p.h.	10 – 100	30 – 200

"BAPCO 2" and "BAPCO 3": These dumb barges have the following capabilities each:

		Diesel Gas Oil
Capacity	bbls.p.h.	1,300
	tonnes	170
Discharge	bbls.p.h.	50 – 760
Rates	t.p.h.	5 – 100

Lubricating Oils and Greases: A full range of Caltex lubricants and greases are available at Bahrain.

In order that lubricating oils may be promptly delivered, Masters of vessels or their Agent's are requested to telex their requirements at least 48 hours prior to their arrival to "Caltex Bn", Telex: 7039.

Empty lubricant containers are not accepted at Bahrain.

Drummed Products: Limited quantities of gasoline, kerosene and diesel gas oil in drums are available at short notice.

To facilitate prompt delivery Masters are requested to radio "Bapco Bahrain" at least 48 hours prior to their arrival for orders exceeding ten drums.

All supplies are in non-returnable steel drums.

GANGWAY/DECK WATCHMEN: An officer must be on deck during all loading or discharging operations. A deck watch must be maintained for moorings and hose connections.

TOBACCO ALLOWANCE: No restriction.

WINE AND/OR SPIRIT ALLOWANCE: Ship's requirements. Bond sealed but can be re-opened upon application. Liquor trafficking between vessels alongside Wharves or between vessels and shore strictly prohibited.

IDENTIFICATION CARDS: Discharge Book or Passport to be deposited with Immigration when going ashore.

CONSULS: Embassies are established in Manama, Bahrain.

SURVEYORS: The American Bureau of Shipping, Norske Veritas, Hellenic Register and Lloyd's Register of Shipping have Surveyors stationed in Manama, Bahrain.

REPAIRS: Local marine repair companies can undertake limited repairs of general nature.

Also see "Mina Sulman".

REPATRIATION: Facilities for crew change (except Eastern Block) and repatriation by sea or air.

AIRPORT: An international airport served by regular airlines located on Muharraq Island, about 15 miles from Sitra.

TIME: GMT plus 3 hours. No changes during year.

HOLIDAYS: Holidays do not affect operation of Port, which operates 24 hours a day, 7 days a week. Friday is the official day of rest.

TELEPHONES: No facilities for placing telephones on ships.

NAVIGATION: Port Captain will be available for advice concerning navigation of channel.

Navigation Warnings: Attention is drawn to the service provided by the Middle East Navigational Aids Service (MENAS) in promulgating navigation warnings covering the whole of the Gulf area.

Mariners are requested to report any hazard/obstructions encountered, observed failure of or alterations to navigational aids, etc., to:

Middle East Navigational Aids Service,
Post Box 66, Bahrain,

or if the information is urgent, radio/cable to

Megulite, Bahrain or to Telex: 8246 Menas Bn.

Printed Navigation Notices:

(a) The notices promulgate all navigational information of a permanent or semi-permanent nature.

(b) Each notice, which is serially numbered, remains in force until specifically cancelled by a later notice, when the information in the notice is:

  (i) Known to have been promulgated in British Admiralty Notice to Mariners.
  (ii) No longer valid.
  (iii) Considered sufficiently promulgated.

(c) These printed notices are distributed to various Agents, Port and Harbour Authorities, where they can be viewed.

Radio Navigation Warnings:

(a) The warnings relate to navigational information which may immediately effect the safe navigation of ships at sea.

(b) These warnings are serially numbered, with the prefix "NAV" and authenticated by the signature "Megulite".

(c) The warnings are broadcast by Bahrain Radio (A9M) on 487 kHz on receipt and at 0518, 0918, 1318 and 1718 GMT. For further details consult the latest edition of "Admiralty List of Radio Signals" Volume V.

(d) Each radio warning is rebroadcast for a period of from 24 hours to one month, depending upon the nature of the information it contains. At the end of which period it is either self-cancelling or superseded by a new warning.

WEATHER: *Winds:* The direction and strength of winds in this area vary and change at very short notice without any prior indication. However, the prevailing wind is from the N.W.

For a more complete description of winds in the Gulf, refer to the "Sailing Directions".

Weather and Temperature: The local weather during the period May through September is hot and very humid with temperatures up to 45°C in the shade. Masters should be aware of the possibilities of crews experiencing heat exhaustion or heat stroke.

Weather during the remaining months is pleasant with temperatures ranging between 10°C to 25°C.

Visibility: The visibility is generally good but at times sand and fine dust is held in suspension in the atmosphere and visibility is greatly reduced. This haze can provide deceptive visibility. Fog, with or without dust, can occur in the mornings.

SHORE LEAVE: Shore leave may be taken by *bona fide* crew members in accordance with the Regulations prescribed by the Government of Bahrain, and in accordance with the Agents' Notice to Masters.

All persons landing from vessels at BAPCO's berths must use transport provided by the Agent between the "T" berths and BAPCO's Security Gate where they must show their shore leave pass, BAPCO 2564. It is not permitted to walk along the trestle and causeway. All persons going ashore must hand in either their valid passport or Seaman's Continuous Discharge Certificate to the Immigration Officer and be cleared by the Customs Officer, both of whom are located in BAPCO's Sitra Shipping Office.

All persons landing from and rejoining vessels berthed at the Island Wharf must use the Agent's launch, landing on the steps on the South side of the Sitra Shipping Office.

GENERAL:

Anchors: The offshore anchor should be cleared and lowered to the waterline, ready for letting go, before approaching the berths. Anchor buoys are not to be used whilst moored alongside in Sitra.

Rat Guards: Every vessel berthed at Company wharves must fit adequate rat guards to all mooring ropes and wires.

Gangway: Every vessel berthed at the wharves shall provide an efficient gangway, which shall be adequately lighted during the hours of darkness and be of sufficient length to provide safe access when the vessel has discharged ballast.

Where a safe and efficient gangway to the wharf cannot be installed due to wharf/ship configuration, an accommodation ladder shall be provided on the offshore side. Hose connections, in this instance, must be made by the ship's crew and the loading operations may be commenced providing suitable methods of communication are established. Delays due to the inability of wharf staff to board the vessel shall be for vessel's account.

Alternative Access/Egress: All vessels shall provide an alternative means of access/egress from the vessel for emergency use. This will normally take the form of a pilot ladder on the offshore side of the vessel, and as such should be constantly tended to 2 ft. above the waterline.

Fire Wires: All vessels berthed alongside BAPCO Berths must have the eye of a wire hanging over the outside bow and quarter, to enable tugs to connect up readily in an emergency. The wire shall be suitable for the intended purpose and shall have sufficient scope on deck for free running. These wires must be tended to keep the eyes at sea level.

Engines: The main engines and all gear must be in an operable condition and in a state of immediate readiness whilst the vessel is alongside the wharves.

Port Police and Company Security: The Bahrain State Police maintains launch patrol in the vicinity of the wharves, and ex-officio have access to wharf installations in the course of their duty.

The Company maintains security guards and officers on its wharves to enforce the regulations of the Bahrain Government and to safeguard its own interests.

The Company security officers are fully recognised by the Bahrain Government and have the full powers of a police officer.

Masters are required to co-operate with any request made to them by a security officer.

Swimming: Not permitted in the vicinity of the wharves.

Publications and Charts: The following British Admiralty or U.S. Hydrographic publications are recommended for use in Bahrain waters:

British Admiralty
No. 3790 – Ras Laffan to Ras Tannura.
No. 3792 – Approaches to Mina Sulman and Al Manama.
No. 3796 – Mina Sulman and Approaches.
No. 3798 – Bahrain Outer Approaches to Mina Sulman.
The current edition of "The Pilot".
U.S. Hydrographic Office
No. 62411 – Ras Tannura to Ras Laffan.
No. 62412 – Approaches to Jazirat Al Muharraq.
No. 62413 – Sitra Anchorage.
The current edition of "Sailing Directions for the Gulf".
Bahrain Survey Directorate
No. 1501 – Approaches to Mina Sulman.

Launch Services: The Company does not provide launches for general use. Transportation of ship's personnel between vessel, the mainland of Bahrain and the wharves is provided by the vessel's Agents.

Tank Cleaning and/or Gas Freeing: Tank cleaning and/or gas freeing are not permitted alongside the wharves.

Fishing: Fishing is not permitted from the wharves or from vessels alongside as nylon lines constitute a safety hazard to personnel travelling on the launches and foul launch propellers.

Spares: Deck and Engine Room spares are not normally available in Bahrain.

Provisions: Supplies of provisions are available in Bahrain. All requests should be routed through the vessel's Agent prior to the vessel's arrival.

Laundry: Local laundry services are available.

SAFETY: The Company is primarily concerned with Safety, and Masters of vessels are requested to provide the maximum co-operation. Detailed regulations concerning safety are contained in the Sixth Schedule of the Bahrain Port Ordinance 1965 and certain of these regulations are summarised below for convenience:

Smoking: Smoking is strictly prohibited within 280 m. (900 ft.) of the wharves, and on board vessels alongside except in those enclosed spaces aboard ship specifically designated by the Master as "Smoking Areas". Failure to comply with this regulation can involve cessation of loading operations and unberthing pending complete investigation, and receipt of written assurance from the Master that effective controls have been established.

The Master shall be responsible for ensuring that the crew of the vessel is informed of the safe places so approved and that they comply with the Regulations.

The Company reserves the right in unusual circumstances to prohibit smoking at any time in any place on or adjacent to the Company's wharves during loading operations.

Fire Wires: Whilst alongside, vessels must have the eye of a wire hanging over the offside bow and quarter to enable tugs to connect up readily in an emergency.

Funnel Sparks: Whilst alongside, vessels must not blow boiler tubes, and every precaution must be taken to prevent sparks escaping from the funnel.

Vessels' Engines Alongside Wharves: The main engines and all gear must be in an operable condition and in a state of immediate readiness while vessels are alongside the wharves.

Trim of Vessels Alongside Wharves: During loading or discharging operations the loading officer must ensure that at no time does the vessel assume a trim which will, in case of emergency, preclude the unberthing of the vessel under her own power.

Scupper Plugs: All scuppers must be plugged and cemented prior to mooring alongside wharves.

Ullage Screens: During loading or discharge of highly volatile cargoes, all ullage pipes and sighting ports, when necessary to be left open, are to be protected by a fine mesh copper screen or gauze plug.

Fire Hoses: Whilst a vessel is within BAPCO's Terminal Area, her fire hoses shall be connected and kept ready for instant use.

Craft Alongside Vessels at Wharves: Once a vessel is berthed, no craft are allowed alongside. This applies to any local craft, agents' launches, etc.

Suspension of Loading: In the event that Safety Regulations are violated Sitra Pilots and Loading Masters are authorised to shut down loading operations.

Vessels Carrying Bulk Sulphur: Owing to the hazardous nature of this cargo, vessels having bulk sulphur on board are not allowed alongside the oil wharves and will be bunkered by barge as available.

Gas Venting: During loading, tanks must only be vented through the vessel's permanent venting system.

Tank lids must be closed prior to berthing and must be kept tightly closed throughout the period of loading. This includes permanent ballast tanks. During loading/discharge all openings must be protected by a fine mesh copper screen or gauze plug.

Radio Silence at Wharves: Vessels' radio and radar equipment, including the main VHF installation, must not be operated whilst alongside Company wharves.

Permission may be granted for the use of certificated intrinsically safe hand-held radios for the use of cargo operations only.

PORT REGULATIONS: Port Captain should be contacted for any queries not covered by lists of regulations provided on arrival.

SHIPMASTER'S REPORT: December 1979.

Anchorage: East of No. 27 Buoy, good holding ground with thick mud. Inner Anchorage thick mud and VLCC's not dragging with 6 shackles out, in force 7 winds.

Fuel: HVF and Diesel available from barge which holds about 900 L/t (BAPCOSHIP). Barge will not come alongside after 1800 hrs. or in rough weather but will stay alongside pumping after 1800 hrs. if already there. Will only bunker in inner anchorage.

AUTHORITY: The Bahrain Petroleum Company B.S.C. (closed), Awali, Bahrain. *Telex:* 8218 Bapshp Bn. *Cables:* Bapco Bahrain. *Contact:* The Port Captain.

The Harbour Master, Bahrain.

AGENT: See "Mina Sulman".

People's Republic of Bangladesh

CHALNA (Khulna): 22.35 N. 89.32 E. (See Plan)

PORT LIMITS: *To the North:* A line drawn due East-West from a point in position Lat. 22° 38′ 00″ N., Long. 89° 20′ 00″ E. to a point in position Lat. 22° 38′ 00″ N., Long. 89° 40′ 00″ E. *To the South:* A line drawn due East-West from a point in position Lat. 21° 27′ 00″ N., Long. 89° 20′ 00″ E. to a point in position Lat. 21° 27′ 00″ N., Long. 89° 40′ 00″ E. *To the East:* A line joining the point in position Lat. 22° 38′ 00″ N., Long. 89° 40′ 00″ E. to a point in position Lat. 21° 27′ 00″ N., Long. 89° 40′ 00″ E. *To the West:* A line joining the point in position Lat. 22° 38′ 00″ N., Long. 89° 20′ 00″ E. with the point in position Lat. 21° 27′ 00″ N., Long. 89° 20′ 00″ E.

DOCUMENTS: See "Chittagong".

ARRIVAL ADVICE: Inward ships must present themselves at Pussur fairway buoy at least 3 hours before HW at Hiron Point to enter on a particular day.

The Master should send the following information to port via Khulna Radio call sign S3E and pilot station call sign S3K 24 hours prior to arrival at Khulna Fairway Buoy.

1. ETA Khulna Fairway Buoy.
2. Fresh water draft.
3. Speed available.
4. Vessel's length.
5. Vessel's gross tonnage.
6. Fresh water requirements.
7. Flag of vessel.
8. Local Agent.

APPROACHES: Approaching from the East vessels should carefully monitor soundings and try to stay between the 10 and 20 fathom lines and alter course to North when at swatch of no ground. Vessels should sight Chalna Fairway Buoy Fl. (2) 10 sec. on this course and should then contact pilot station for further instructions. Due care should be taken to appreciate the tide condition because vessels have been known to drift North/Northwest during strong floods and run aground in the shallows. Approaching from the West, vessels should manoeuvre to keep to the South of the 20 fathom line and steer a course of about 045°(T) when Western end of swatch of no ground is reached. This course will take the vessel to Chalna Fairway Buoy. Due care should be taken to guard against Northerly set during flood times. When approaching from S.E. or S.W. similar action as before should be taken on reaching the edges of swatch of no ground. Due care should be given to avoid the wreck of m.v. "Cherry Laju" in position Lat. 21° 26.7′ N., Long. 89° 30.2′ E.

PILOTAGE: Compulsory. Master should in addition to usual ETA to Agents keep in touch with pilot vessel stationed at Hiron Point about 45 miles from the base calling S3K. Pilot vessels are equipped with radio and maintain regular watches on 500 kHz from 0600 to 0800, 1000 to 1200, 1400 to 1600 and 1800 to 2000 hrs. local time. If a message is not being picked up, by Khulna Radio call sign S3E, it should be relayed through Chittagong Radio or the pilot vessel.

Ships over 17 ft. draft are usually piloted on the flood to cross the bar and the pilot vessel, which has been in contact with the incoming ship, leaves from Hiron Point in time to coincide with the arrival of the vessel at the pilotage ground, situated about 5 cables S.W. of Z4 Buoy where ships can anchor. The channel from Fairway up to the Z4 Buoy has been marked with lighted buoys and pilotage is carried out by the Master.

In rough weather and especially during the monsoon, ships are led into calm waters by the pilot vessel, which maintains close radio contact, and Pilots board inside the river.

Night navigation is allowed for vessels up to 450 ft. in length subject to the following conditions:–

(a) Ship's radar, gyro-compass, steering system should be in perfect working order.
(b) Weather conditions should be good.
(c) Booking for sailing should be done at least 24 hours in advance.
(d) Minimum manoeuvring speed should be 10 knots.
(e) Maximum draft allowed 21 ft.
(f) A boat will be employed with a searchlight to remove all country boats, barges and any other obstacles in the channel within the harbour limit.

ANCHORAGE: Chalna port consists of a sheltered deep-water anchorage at Mongla on Pussur River.

Depth of water 19 ft. to 45 ft. at LLWD. Distance from sea 65 miles.

RESTRICTIONS: Entrance to the Pussur River is about 6 miles wide at the mouth and has a bar over about 5 miles where the depth is 3 fathoms.

MAX. SIZE: Ships drawing up to 7 m. can cross the bar in all seasons. In S.W. monsoons vessels up to 7.77 m. can be accommodated on spring tide. Also see "General".

HEALTH: On arrival at the mouth of the Pussur River, vessels are required to radio "Quarantine" Khulna, giving health report, to avoid difficulties with Port Health Authorities.

RADIO: At present coast station Khulna Radio of Telegraph and Telephone Dept. maintain 24 hours W/T watch on 500 kHz call sign (S3E). In addition to the T & T system, the port has harbour control station (call sign S3K) at Mongla and pilot station (call sign S3K) at Hiron Point to maintain 24 hours W/T watch on 500 kHz. The station at Hiron Point guides incoming and outgoing vessels from fairway to pilot grounds and vice versa and remains in touch with Khulna Radio, Mongla S3H and ships anchored at Hiron Point for movement of Pilots, mooring of vessels, etc.

VHF: The pilot station and harbour control of Khulna and Mongla are equipped with VHF Channel 16.

TUGS: 3 powerful tugs available to assist in emergency. Not required for berthing.

BERTHING: 8 swinging moorings and unlimited anchor berths. 5 jetties also available.

CRANES: Cranes of 3, 5, 40 and 100 tons are available at the new jetties.

STEVEDORES: Plenty of labourers available.

TANKERS: Oil is not handled at the port at the present time.

DENSITY: The density of water at the Outer Bar varies from 1005 to 1025 and at Mongla from 1002 to 1015.

FRESH WATER: Available by barges.

FUEL: Fuel oil can be arranged in limited quantities if sufficient advanced notice given.

FIRE PRECAUTIONS: Fire fighting tugs are available.

CONSULS: None.

REPAIRS: Minor repairs can be arranged through Khulna shipyard.

DRY DOCKS: A dry dock for sea-going vessels is under construction at Chittagong.

SURVEYORS: Lloyds/NKK. P&I Club and private surveyors are available at Khulna.

TIME: Six hours difference exists between GMT and local time.

HOLIDAYS: Eid-ul Azha, Moharram, Eid-I-Miladun Nabi, Independence Day, Jamat-ul-Bida, Eid-ul-Fitr, depending on the sighting of moons calculated in the basis of moon months.

POLICE/AMBULANCE/FIRE: Police telephone number 222 and for other purposes Assistant Harbour Master's telephone No. 61460 is available.

TELEPHONES: No arrangement is available at the anchorage for placing telephones on board the vessels.

SHORE LEAVE: Crew members of foreign vessels are allowed to disembark ashore subject to Immigration permission.

GANGWAY/DECK WATCHMAN: On receipt of orders from the Master the Stevedores will arrange to supply watchmen by day and night.

Piracy: Acts of piracy have taken place at the port.

HATCHES: Opening and closing of hatches is normally carried out by the stevedores.

CARGO GEAR: Goods loaded and unloaded by the ship's gear, handling equipment and crane available at the port jetty.

REPATRIATION: Local shipping Agents are responsible for arranging repatriation of the crew.

AIRPORT: Jessore, which is 70 miles from the port.

IDENTIFICATION CARDS: Seaman's book is sufficient for identification.

REGULATIONS: Crew members are not allowed to undertake chipping/painting of vessels whilst in the port. This is to be done by licenced contractors.

DELAYS: No unusual delay in the port.

GENERAL: Port of Chalna Authority

INSTRUCTIONS FOR MASTERS OF VESSELS:

1. As these are fresh water drafts, the incoming ships should give necessary allowance. The outgoing ships may have to leave anchorage a day earlier to take advantage of next A.M. tide at Outerbar.
2. Inward ships must present themselves at Fairway Buoy at least 3 hours before high water at Hiron Point to enter on a particular day.
3. Masters should send the following information to Port Khulna, via Khulna Radio (call sign S3E) and pilot station S3K, 24 hours prior to arrival at Chalna Fairway Buoy: (a) ETA Pussur Fairway Buoy; (b) fresh water drafts on arrival; (c) anticipated fresh water drafts at the time of sailing; (d) speed available; (e) length; (f) gross tonnage; (g) fresh water requirements; (h) nationality; (i) local Agents.

   In addition to Khulna Radio (call sign S3E) Harbour Control Station (call sign S3H) and pilot station (call sign S3K), maintain 24 hours W/T watch on 500 kHz. The ships are strictly to follow the instructions given by the Pilot while crossing the Outer Bar and anchor 5 cables S.W. of Z4 Buoy at Hiron Point and wait for the Pilot. The time of crossing the Outer Bar is given by the pilot station under instructions from the Pilot. QTG service available. VHF on Channels 16 and 11 available at pilot station Hiron Point, Harbour Control Mongla and Port Control Khulna.
4. *Important:* Ships due to enter must keep W/T and VHF Channel 16 watch while crossing Outer Bar and International Radio watch while waiting for Pilot at Hiron Point and in the vicinity of Fairway Buoy. Whilst navigating in Port Limits, W/T and VHF Channel 16 watch would be maintained as advised by Pilot.
5. All vessels entering port shall display their signal letters and the mooring/anchor berth in addition to pilot flags. They are also to display their signal letters while waiting for Pilot at Hiron Point and/or in the vicinity of Fairway Buoy.
6. The Port can reduce these declared drafts without notice.
7. Ship Owners and their Agents are advised to consult the Harbour Master's Office regarding incoming and outgoing deep draft vessels well in advance.
8. *Outward Ships* of deep drafts will leave the anchorage with the first of flood at Mongla.
9. Vessels entering or leaving Port must have full power on main engine and deck machinery and both anchors must be available for use at all times.
10. Masters are advised to manoeuvre with great care and make good lee while receiving and disembarking Pilots. A neat and clean pilot ladder as specified in Merchant Shipping (Pilot Ladders) Rules 1967. Manropes and boat ropes should be ready on lee side. A responsible Officer must be present on the deck near the pilot ladder while Pilot boards/disembarks and a lifebuoy must be kept handy near the pilot embarkation/disembarkation point for emergency use and also bulwark ladder for climbing down on deck.
11. In spring tides, ships of less than 10 knots shall not be permitted to transit the river. However, if permission is given under special circumstances, a suitable tug will have to be hired from the Port to escort the vessel within the Port limits. Requests for the tug must be made at least 24 hours in advance.

12. In adverse weather if boarding is not possible at Hiron Point, the pilot vessel will lead incoming ships up to Sibsa (Akrampoint), where the Pilot will board in sheltered water.
13. Vessels of 600 ft. length or more are required to have a tug standing-by during in and outward river passage and if the length is more than 650 ft. a tug may be required to standby throughout her stay in the Port at the discretion of Port Authority.
14. The length of vessels entering the Port is restricted to 750 ft. and may be increased depending on the season and circumstance of the case and normally only 2 vessels of more than 600 ft. can be accommodated at a time.
15. Masters of the visiting vessels are advised to ensure that while their ships are in the anchorage, no Officer or crew travels to and from ships in native boat, sampan or any other boat, not authorised by the Port Authorities to ply in the anchorage for carrying passengers.
16. Masters of the visiting vessels are also advised to post 3 watchmen on duty, one on the forecastle, one aft and one on gangway all the time the ships are at the anchorage. The watchmen shall be provided with lifebuoys for use in emergency.
17. While the vessels are in Port, the Masters are to ensure that no ship's crew is employed for chipping, painting and working overside.
18. In port limits, wireless communication with any station except those operated by Port or Khulna Radio (S3E) is strictly prohibited.
19. In case of *emergency* whilst at anchor/mooring in harbour limits, the Assistant Harbour Master should be immediately contacted: (a) by use of lamp signal to signal tower; (b) by W/T on 500 kHz, call sign S3H; (c) VHF Channel 16.
20. Masters of vessels are advised that more than 8 barges or 4 flats (one flat being equivalent to 2 barges) should not be allowed to lie alongside. Under adverse conditions, this permissible number may further be reduced.
21. Whilst in anchorage limits, adequate anchor watch should be maintained and power on main engines and deck machinery should be available on immediate notice, specially during spring tides and inclement weather.
22. Fire hoses should be rigged and water kept running when working cargo of jute, jute goods and any other inflammable cargo.

Deputy Conservator, Port of Chalna Authority, Khulna.

Requirements and Instructions for Securing to Single Swinging Buoy.

1. Wire snotter. Length = 1 m. wire size = 10 mm.
2. Slip wire with eyes. Length = 100 m. Wire size = 20 mm.
3. Nylon mooring rope. Length = 100 m.
4. 1 mooring shackle.
5. 1 small shackle, 5 tons.

Procedure for Preparing Chain for the Buoy (See "Plan")

(a) Secure port anchor and break the chain.

(b) Pass the mooring shackle through the last open link.

(c) Pass the wire snotter through the 5th transverse link, counting from the chain end and then connect the eyes of the snotter with the small shackle.

(d) Lower the chain through the fair lead or panama lead from the port side, 2 transverse links into the water.

(e) Lower the slip wire from the port side down to the water level.

(f) Keep the nylon rope ready on the starboard side for lowering to the mooring party.

(g) When the vessel is close to the Buoy pass the nylon line to the mooring boat and make fast the vessel to the buoy with the nylon mooring rope.

(h) Connect the chain.

(i) Pass the slip wire and make it fast, keep it slack so that the weight is taken by the anchor chain.

(j) Let go the mooring rope and take it onboard.

AUTHORITY: Port of Chalna Authority, P.O. Customs House, Khulna, Bangladesh. *Telex:* 27241 Monport BJ. *Cables:* Port Khulna. *Tel:* 62331. *Contact:* Captain S. Y. Kamal, Chairman, Captain Azizul Hasan, Harbour Master. *Tel:* 60503.

CHITTAGONG: 22.19 N. 91.48 E.

DOCUMENTS: *Before Vessel's Arrival:*

2 copies Freight Manifest.
2 sets Bill of Lading.
3 copies Stowage Plan.
15 copies Passenger List.
4 copies Cargo Manifest.
3 copies Hatch Lists.
1 copy Exception Lists.
2 copies Passenger Money Manifest.
2 copies Special Cargo List.
2 copies Hazardous Cargo List.
2 copies Heavy Lift Cargo List.

With vessel:

1 set Arrival Papers as per booklet available from Agent.
2 copies Cargo Manifest.
Last Port Clearance.
Passenger Lists, disembarking and transit — 6 copies each.
Crew List 8 copies plus 2 for Immigration Police.
List of Favour Parcels 2 copies.
Currency declaration of ship's money, officers and crew, together with the personal property list.
Ship's Stores Lists on local Customs forms – 3 copies.
Cargo Clearance Certificates.
Derat Exemption Certificate.
International Load Line Certificate.
Radio Safety Equipment Certificate.
Safety Equipment Certificate.
Record of Safety Equipment Certificate.
Load Line Certificate.
Ship's Article.
Ship's Register.
Light Dues Receipt.
Radio Telegraphy Certificate.
Safety Construction Certificate.
Voyage Licence.
Exemption Certificate of Crew Members.
I.P.B. Permission of Foreign Nationals.
Gear Register Book with Annealing Certificate
Authority Letter of Supernumerary.
Store List.

PILOTAGE: Pilotage is compulsory. Pilots board and leave vessels 1.5 miles W.S.W. of No. 1 Sea Buoy.

Inward ships must present themselves at Fairway Buoy at least 3 hours before high water to enter on a particular tide, both day and night.

Night navigation possible for outward and inward movements of vessels upto 164.60 m. and 137.15 m. LOA respectively.

APPROACHES: Since South Patches lightvessel is missing, it is advisable to make for Elephant Point/Cox's Bazaar, and then shape course to pass West of South Patches. Due allowance must be made for the state and rate of tide. In this area, the tide runs in a North–South direction.

Once it is ascertained that the vessel is West of South Patches, course can be shaped to pass 8–9 miles off Kutubdia Lighthouse. The buoys indicating the channel to Chittagong Outer Anchorage are mostly out of place or missing and cannot be relied upon. The buoys are unlit and without radar reflectors and navigating in their vicinity during hours of darkness can be hazardous.

Vessels must reach pilot grounds at mouth of River Karnaphuli 3 hours before high water of a particular tide. Both tides used for handling vessels.

ANCHORAGE: The Anchorage is considered safe and the holding ground is good. The bed of the river is soft mud and is harmless in case of grounding.

Holding ground off Kutubdia fairly good but strong tides render it necessary to pay-out extra length of cable.

Spring tides at outer anchorage are very strong (6 to 8 knots) and at times of freshets the rate may be more. It is advisable to keep engines ready at all times during Spring tides, and maintain continuous and efficient anchor watches.

Ship Masters approaching Chittagong Roads are advised not to attempt to cross bow of vessels at anchor/underway to avoid drifting on them resulting in probable collision in view of the prevailing strong current at Outer Anchorage. However, if it is inevitable to cross, Ship Masters may do so with caution by giving a wide berth to the vessel at anchor/underway considering the minimum velocity of the current being 6 knots and other marine factors.

RESTRICTIONS: Night sailings both inward and outward are permitted, however with restriction on the vessels of up to 164.6 m. length for outward and 173.2 m. for inward. Night sailing not permitted for vessels with the bridge on the bow, vessels with the bridge aft are allowed but only up to 152.4 m. in length.

Draft: Normally between 7.32 m. and 9.14 m., depending on state of Karnaphuli draft restrictions. Published monthly.

Power Lines: The minimum clearance of Power Transmission Lines crossing over the River Karnaphuli from CPA Dock Office Tower – 21 (approx. Lat. 22° 18.04′ N. Long. 91° 48.47′ E.) on the opposite bank of the River Karnaphuli is 52 m. from jetty level and the transmission lines are charged at 132 kV. Mariners are advised to navigate with caution.

MAX. SIZE: Anticipated safe drafts are predicted three months in advance. The depth of water over the Outer, Inner and Gupta Bars is maintained at 4.42 m. at low water throughout the year. The bars are situated at distances of half, one and 4.75 miles from the entrance. In order to calculate the draft for entering and leaving port, the depth of 4.42 m. over the bars is added to the height of water in the tide tables for day tides. Also see "Tankers".

Shipmaster's Report: 1985.

Vessel with deep draft must go in on full tide and advice on this should be sought from a local source (Agent), and not rely on tables only, as local factors may affect the tidal situation considerably.

HEALTH: All vessels must send the standard quarantine messages by radio. Vessels which have touched ports between Port Sudan and Durban, on the East Coast of Africa including these two ports, or any other yellow fever port or other port on the continent of Africa, or ports which are declared from time to time as quarantine areas, are suspected vessels on account of yellow fever or jigger, or other infectious disease as the case may be and may not have communication with the shore till declared by the Port Health Officer, who attends only between sunrise and sunset, except in special circumstances. The incubation period for yellow fever is 9 days, but vessels arriving later than 9 days are still not free from quarantine because there is no incubation period for jigger.

RADIO: Chittagong Radio Control. MF/RT distress frequency 2182 kHz. SSB equipment with 200 mile range also available.

Arrival Advice: ETA advice should reach Agents 72 hours and confirmation cable at least 24 hours before arrival at the Pilot Station. While advising ETA Masters should bear in mind that W/T messages generally take minimum 12 hours to reach Agents.

The radio message should contain the following information:

1. Name of vessel.
2. ETA Pilot Station.
3. g.r.t.
4. n.r.t.
5. d.w.t.
6. Length.
7. Date and Hour sailed last Port of Call.
8. Quantity and description of cargo to discharge.
9. Next Port of Call.
10. Classification of Vessel and Nature of cargo carried.
11. Name of Master.
12. Max. arrival fresh water draft.

VHF: *Port VHF Service:* The Harbour Master can be contacted by R/T during office hours on any working day on frequency 156.8 MHz. (International Channel 16). Calls may be connected to the public telephone system via Channel 27.

Private VHF Service:

(i)	Location:	Port Office.
	Call Sign:	"Port Radio Control".
	Position:	Lat. 22° 19′ 30″ N., Long. 91° 50′ 00″ E.
	Watchkeeping:	From 0830 – 1700 hrs. continuous.
	Frequency:	156.80 MHz.
(ii)	Location:	Port Signal Station.
	Call Sign:	ARH 24.
	Position:	Lat. 22° 14′ 03″ N., Long. 91° 50′ 34″ E.
	Watchkeeping:	(i) Duration of daylight Flood tide: beginning every hour. (ii) Duration of night Flood tide only when ship-movements are being performed: every half hour.
	Frequency:	156.80 MHz (Channel 16) (short range about 7 miles from Pilot Station to Anchorage).
(iii)	Location:	Pilot Vessel: Capt. Fuhrmann P.V. Rahnuma
	Call Sign:	AQEG.
	Watchkeeping:	(i) Duration of daylight Flood tide: every half an hour. (ii) As above.
	Frequency:	156.80 MHz (Channel 16).
(iv)	Location:	Patrol Tugs Kandari 7 and Kandari 8. (S. T. Khalid – under repair).
	Call Sign:	AQEF.
	Watchkeeping:	(i) Duration of daylight Flood tide: every half an hour. (ii) As above.
	Frequency:	156.80 MHz (Channel 16).
(v)	Location:	Sea-Tug "Suljuq".
	Call Sign:	AQEP.
	Watchkeeping:	Duration of daylight Flood tide and in emergencies.
	Frequency:	2182 kHz.

Remarks: Vessel should shift to some other Channel after contact has been made on Channel 16 (International Frequency 156.80 MHz).

A cable to be sent to Port Health Officer before arrival requesting free pratique, stating issuance date of Derat (Exemption) Certificate.

RADAR: No service available.

BERTHING: Chittagong port has 17 jetties (including 2 pontoon jetties) provided with shore cranes and railway tracks and with transit sheds. Vessels up to 186 m. LOA with day's draft may be berthed at a concrete main jetty. Depth of jetty berths range from 7.01 m. to 9.14 m. and depth at moorings ranges from 6.24 m. to 9.19 m. and above. Besides above jetties, there are jetties for the following:

Grain Silo Jetty: Grain silo has storage capacity of 170,000 tonnes, equipped with necessary equipment for unloading, storing from ship's tackle direct. Vessels up to 186 m. LOA can take berth at the jetty.

T.S.P. Jetty: Triple Super Phosphate Complex having storage capacity of 127,500 tonnes has been constructed adjacent to TSP Jetty and is equipped with necessary equipment for unloading/storing rock phosphate from ship's tackle direct. Vessels up to 175.25 m. are able to berth at TSP Jetty.

Cement Clinker Jetty: Cement clinker plant having storage capacity of 40,800 tonnes is adjacent to Chittagong Cement Clinker Jetty. The jetty is equipped with necessary equipment for unloading/storing cement clinker direct from ship's tackle. Vessels up to 175.25 m. are able to berth at the Cement Clinker Jetty.

Further there are 9 river moorings, out of which River Moorings Nos. 4, 5 and 6 are equipped with pontoons and shore connections for oil in bulk and River Mooring No. 7 for crude oil discharge in bulk. River Moorings Nos. 2, 3 and 8 are for dry cargo for overside work. River Mooring No. 9 is for repair of vessel/lay-by berth. River Mooring No. 10 for LASH vessels.

Container yard of 14,108.55 sq.m. and back-up yard facilities are available for handling container/container cargo vessels. Further there is one lighter jetty for vessels up to 70 m. with dry cargo and 5 lighter jetties for coastal and inland vessels/tankers.

CRANES: Variety of cargo handling equipment, maximum lifting capacity 125 tons.

TANKERS: Crude oil tankers up to a draft of 10.36 m. can be handled at the Outer Anchorage.

Clean tankers enter the river and berth at petroleum jetties inside the port, restricted to length of 170.73 m. overall, and subject to published river draft.

Tankers up to 60,000 d.w.t. discharge into lighters at Kutubdia anchorage where depth is 7 fathoms.

Also see "Shipmaster's Report" – May 1986.

TUGS: Available, under direction of Pilot.

MEDICAL: Doctors and Hospital facilities available.

DENSITY: From 1000 to 1004.

FRESH WATER: Available from quays. Also available at outer anchorage. Require 3 – 4 days notice. Capacity of water barge about 500 tons. Supply daylight hours only.

FUEL: All grades available at oil berths. Otherwise supplied by barge. The Government have occasionally suspended sale of bunkers to foreign vessels.

DRY DOCK: Construction of a Dry dock is in progress.

REPAIRS: Facilities for repairs available. Ships' engines may not be dismantled or immobilised whilst at berths or moorings without the prior sanction of the Port Authority.

HATCHES: Opened by ship's crew.

CUSTOMS ALLOWANCES: 200 cigarettes or 0.5 lb. of tobacco and 1 bottle of wine/spirit per week per man or 2 pints of beer per day.

REPATRIATION: Possible.

STEVEDORES: Available through Agent. Working hours: Monday to Thursday and Saturday day shift, 0730 – 1200 and 1330 – 1700 hrs. Night shift, including Friday 2000 – 2400 and 0000 – 0400 hrs. Friday, day shift, 0700 – 1200 and 1400 – 1700 hrs.

HOLIDAYS: Eid-e-Milad, Shaheed Day, Independence Day, Bengali New Year, May Day, Buddhu Purnima, Shabe Barat, Jamatul Wida, Eid-ul-Fitr, Durga Puja, Revolution Day, Eid-ul-Azha, Muharram, Victory Day, Christmas.

POLICE/AMBULANCE/FIRE: Call "Port Control" Channel 12 and 16 call sign, "S2YA" or Tel: 505021/505041.

CARGO GEAR CERTIFICATES: International Cargo Gear Test Certificates not more than 12 months old must be presented to the Dock Labour Inspector before a vessel is allowed to use derricks/winches. Annealing and testing of gear at Chittagong is an expensive process. In certain cases dispensation can be obtained at the discretion of the Dock Labour Inspector.

AIRPORT: Patenga Airport about 5 miles from city.

SHORE LEAVE: Allowed, prior permission from Immigration arranged by Agent.

GENERAL: *Berthing Priority:* All concerned are reminded that vessels loading/carrying cargo/mixed-up cargo or loading/carrying cargo in less than 3 holds, or unequally stowed in more than 3 holds, or with in-operative ships derrick, will be classed as Grade-II ships and shall be given berth conveniently, and if required, shall be shifted to another berth/mooring or outer anchorge convenient to the Port Authority.

Frequent breakdown in the machinery and engine of a ship, will also entail her being classed as Grade-II ship and the consideration for priorities will rest on the Administration.

This will be strictly followed with effect from January 1st, 1984, and no further consideration will be entertained from that date.

Hydrological and Hydrographical Data: The width of the navigation channel (5.49 contour) varies from place to place. Effective width is between 243.90 m. to 304.88 m. A minimum channel width of 250 m. is maintained.

Tidal Works:	
At Patenga	3.35 m.
At Khal (Channel) No. 10	2.74 m.
At Sadarghat	2.29 m.

Max. velocity of current opposite Khal (Channel) No. 10:

Spring Tides (S.W. Monsoon):	4.5 to 5.5 knots
Neap Tides (S.W. Monsoon):	2.5 to 3.5 knots
Spring Tides (Winter Months):	upto 3 knots
Neap Tides (Winter Months):	upto 2 knots
Freshet Ebbs (Winter Months):	upto 8 knots

Meteorological Data:

Temperature: 32.10°C Max., 13.40°C Min.

Rainfall: 24.25 Max., 0.10 Min.

Normal Pressure:

1018.80	Max.	0000 GMT.
1000.90	Min.	at 0600 hrs.
1016.20	Max.	0300 GMT.
1002.30	Min.	0900 hrs.
1013.00	Max.	1200 GMT.
1000.00	Min.	1800 hrs.

The following cautionary notice has been issued by the Chittagong Harbour Master:

"Shipmasters trading to Chittagong are informed that a hot sultry day/afternoon, followed by "Still" air conditions in the early evening, usually result in thunderstorms. The peculiarity of these thunderstorms is that they approach from the North and West in the form of a line squall, and are accompanied by intense lightning activity, thunder, rain and cyclonic rotation winds which may reach a velocity upwards of 50 knots.

When percursory signs of such a "North-Wester" storm exist shipmaster's must exercise great caution, have a responsible Officer on watch and attend carefully to moorings. Vessels at fixed moorings and pontoon jetties must exercise extreme caution when a North-Wester storm is blowing."

Mooring: Vessels moored alongside the pontoon jetty and vessels moored alongside each other must ensure that adequate numbers of rat guards are used to prevent movement of rats between ship/shore and ship/ship.

TIME: GMT plus 6 hours.

DEVELOPMENTS: Two multi-purpose berths of length 450 m. and 10.0 m. depth with back-up facilities are under construction downstream of No. 13 Berth to cater for the increased flow of containers. Berths due for completion in 1986. More cargo handling equipment will be procured in phases (16 forklift trucks, 8 tractor-trailer units, 27 cranes – including 19 × 6 tons and 1 × 30 ton mobile).

For maintenance or dredging of the navigational channel CPA is going to acquire a hopper dredger. Outer and inner bars to be dredged to 9.1 m. and 7.1 m. respectively.

SHIPMASTER'S REPORT: September, 1979
Pilotage: Pilot boards 2 miles W.S.W. of No. 1 Sea Buoy.
Radio: Chittagong Radio Co.
Radar: No Radar service.
Restriction: Normally up to 7.5 m. depending on state of Karnaphuli draft restrictions, published every 4 months.
General: At the anchorage vessels should strictly guard against river thieves who board the vessel to steal hawsers, drums and dunnage.

SHIPMASTER'S REPORT: May 1986.

The route from Singapore to Chittagong was passing Pu. Perak, South Preparis Channel thence West of South Patches thence passing Kutubdia Island keeping to the deepest water. When Kutubdia Island Light bearing 109.5°×7 miles course altered 014° to make for position: Lat. 22° 05.6′ N., Long. 91° 46.2′ E. and from there into the Outer Anchorage. In this last area the minimum chartered depth is 8.5 m. therefore with the vessel on even keel draft of 10.95 m. (FW) required to stage across the shallows on the tide.

The S.W. monsoon had set in giving Westerly force 4 winds in the Anamdan Sea and S.W. force 4 – 5 in the Bay of Bengal with a confused S.W./N.W. swell. There was a strong Southerly – going current in the Bay of Bengal. The swell decreased considerably after passing South Patches.

The vessel anchored to await HW to cross the shallows in position Kutubdia Light bearing 046°×15.04 miles. There was another vessel anchored nearby on the position previously chosen. Unable to raise Chittagong on VHF from this position. After anchoring the wind veered N.W. and several squalls passed in the next few hours with gusts up to force 9 – 10. These having passed through Chittagong Anchorage earlier.

The next morning proved fine with light winds and little swell and with HW at Chittagong 0840 hrs. (3.4 m.); Kutubdia Is. 0642 hrs. (3.25 m.); Normans Point 0717 hrs. (3.60 m.) aimed to cross the shallows with one metre under keel clearance and pass position: Lat. 22° 03′ N., Long. 91° 45′ E. at 0700 hrs. at the top of HW, allowing 0.25 m. for swell and 0.2 m. for squat at 6 knots. The density off Kutubdia Island was 1015.

The under keel clearance was not identified as the Sal Accord ceased to function under 2.0 m. (its minimum) and the chart recorder trace disappeared into the base line noise even at minimum settings. The seascape hovered around the one metre but when crossing the bar later did not give the same 1 ft. under keel clearance that was known from the tide guage.

Lightening Operations: The vessel anchored in Chittagong outer anchorage 'A' at 0840 hrs. in position Patenga Beacon 091°×3.1′. There were quite a few ships anchored in and outside this anchorage, mostly lightening, but there was room to have sufficient water under the vessel at LW and have 5 cables clear of other ships. Estimate the maximum current was 4 knots but no problems experienced with 6 shackles in the water.

The first coaster arrived at 1050 hrs. with the Agent and Shore Officials onboard. After ullaging and sampling the cargo, gas/oil parcel, was started at 1310 hrs. Several coasters were used working both sides of the vessel and 11 trips were made. The vessels varied in size from 850–1,000 tons with one coaster of 1,500 tons.

Hoses were brought out with the first coasters and appeared in good condition but one set had obviously been used recently for black oils and although this was pointed out to the Shore Supervisor they were not changed. During the lightening to one of the coasters at the start, there was a blockage, which was found to be that one length of the hose had the inside stripped causing the blockage, this was changed and no further problems. The decks were well manned throughout the operations and there was no evidence of any smoking on the coasters. The discharge rates varied as the the requirements of the different vessels, but each side was given a separate line and tank so that quantities could be accurately measured onboard.

These coasters usually only use car tyre fenders when lightening vessels. Their shoulder is well padded with tyres and then more spread at intervals along the sides. The first coasters arrived with additional fenders made up from floating hoses. Originally one for each side. One being sufficient for the smaller vessels as their parallel body is short when in the light condition and subject to the most movement. I would have preferred two of these fenders for the larger vessel M.T. 'Doel' but the wire pennant parted while being brought off. As it happened the M.T. 'Doel' was well handled throughout and with their ropes being well tended there were no problems in just using one fender. The coasters, because they normally use the tyre fenders, were not well protected on the quarters but this was soon rectified by moving some of the tyres and having additional ones supplied. The hose fenders were fitted with polypropylene rope pennants shackled to a wire strop attached to each end of the hose. These did give problems caused by snatching with the movement and was solved by having them made fast to the coaster and ends passed over to us when they left to pass to the next vessel.

The weather was variable during the lightening but mostly the wind Southerly force 4/5, this being near fore and aft caused the coasters to lay well alongside and to pitch rather than corkscrew, thus there was no danger from their superstructures. Once the wind veered to the N.W. and freshened to force 7 gusting to force 9 giving a rough sea. Luckily there were no vessels alongside at the time. This occurred at the change of tide and caused the vessel to sheer about as the squalls came through the anchorage. The rain squalls can be easily seen on the radar at 30 miles and seem to occur in the early evening, so the radar can give adequate warning.

The River Passage and Berth: Once the lightening has been completed the vessel has to wait for a daylight high tide to cross the bar into the river. The berthing programme can be obtained from Port Control by VHF after 1600 hrs. on the previous evening. On this occasion the notified Pilot boarding time was given as 0730 hrs. We had planned on being ready to weigh anchor at 0645 but at 0600 hrs. Port Control ordered us to heave up and come in for the Pilot. We were ready so we weighed and the Pilot boarded at 0704 hrs. (pilot ladder needs to be 3 m. above the water as the Pilot boards from a large tug). We then had to wait along with the other vessels at the pilot station all stemming the current until 0825 hrs. when there was sufficient water on the bar for us to cross. The Pilot had been keeping in contact with the Signal Station on VHF as the Signal Station monitors the tide guage.

Once the bar is crossed the river passage is quick. When off the berth the vessel is turned short round to starboard and may require the use of the starboard anchor. The turn is helped by a tug but this pushes and does not make fast. Once the vessel is round and stemming the tide the port anchor is made ready and when in position for the berth it is let go. The starboard head line is then run to the port head buoy. Then the port head line to the starboard buoy and the vessel is heaved across the berth into position while the after lines are run in the same fashion. Engines are required to prevent the vessel falling back on to the aft buoys. The final moorings are 3 lines each side to the opposite buoy thus 6 lines crossed each end.

The hoses come from a floating pontoon that is moored with another that is brought round to be between the pontoon and the ship. Access is by boat from shore. 4 extra men are supplied at the berth to help with the moorings and there are 2 mooring boats and a launch. 6 watchmen were supplied at the anchorage from the start and stayed with the ship in the anchorage and on the berth. The watchmen did a fair job and the vessel had no problems with thieves.

The Agents' telex was only working intermittently but found we could pass messsages via their branch office in Dhakra. Also found that the 3 VHF stations for the port had calling frequency VHF Channel 16 they then went to the working channel, mostly Channel 12, but often they had to be contacted on the working channel. Chittagong Radio calling is Channel 16 and working 24/26; was weak but workable.

While lightening there was difficulty for the Supervisors as there is no direct contact with the installation other than making a link call. However, one of the coasters has VHF and if it can be persuaded to keep it on then some sort of contact can be maintained.

AUTHORITY: Chittagong Port Authority, Bandar Bhaban, P.O.Box 2013, Chittagong, Bangladesh. *Telex:* 66264 Port BJ. *Cables:* Potasraya.

NOTES

Please also advise Shipping Guides Ltd.

Barbados

BRIDGETOWN: 13.06 N. 59.38 W. (See Plan)

DOCUMENTS:

8 copies Crew Lists.
5 copies Passenger Lists.
1 copy Health Certificate.
4 copies Ship Particulars.
1 copy Vaccination Report on Crew.
1 copy Vaccination Report on Passengers.
Derat Certificate.
2 copies Manifest.
1 copy Bill of Lading.
1 copy Clearance from Last Port.
2 copies Ship Stores List.
2 copies Crew's Declaration List.
1 copy Animal Declaration List.

Vessel should be entered within 24 hours and articles deposited in Shipping Office if staying longer than 48 hours.

Immigration:

1. List of passengers: a) in-transit; b) landing.
2. All disembarking passengers must fill out an E/D Card.
3. List of Crew, and if necessary, list of crew who will be landing.

PILOTAGE: Pilotage is compulsory for all vessels entering Bridgetown Harbour, except in cases of warships where pilotage is optional. Agents of vessels intending to visit the port are required give ETA as early as possible and to submit details on Form A in accordance with the Barbados Harbour's Regulations, 1961, and in advance of the vessel's arrival. Notification of arrival and request for services on Saturday should be known to the Harbour Master by 1100 hrs. local time on the previous Thursday if there is to be no delay. Notification of arrival and requests for services on Sundays should be made known to the Harbour Master by 1400 hrs. on the previous Friday if there is to be no delay.

Pilot Station: Located 0.8 km. West of Fairway Buoy (Admiralty Chart No. 502). There is no alternative station in bad weather. Usual Jacob's ladder in good condition should be rigged on port side of vessel when approaching the harbour.

Signal for pilot boat – International Code Letter "G" by day. Blue light by night. Call and watch on VHF Channel 12 – 156.60 MHz and HF – SSB 2182 kHz. Pilotage vessels, (power driven launches) are approximately 10 m. in length and painted grey.

ANCHORAGES: Quarantine Anchorage as indicated Admiralty Chart 502. Explosive anchorage as indicated on chart. Carlisle Bay Anchorage see Chart 502.

RESTRICTIONS: Bridgetown Deep Water Harbour offers 24 hours service to ships with draft up to 9.6 m. A harbour for small craft (careenage) caters to ships up to draft 4.11 m. high water.

Tankers: May enter and leave any stage of tide, day or night, except Needham's Point where daylight berthing only.

MAX. SIZE: Max. length permitted in Deep Water Harbour 244 m. Vessels of greater length allowed to berth if fitted with bow thruster (up to 293 m.). Draft 9.6 m. Oil Carriers Pier outside Deep Water Harbour max. draft 11.6 m.

Also see "Tankers".

HEALTH: Pratique may be obtained by radio or from Pilot or Health Officer on arrival. In case of suspected disease Port Doctor should be notified by radio through Agents.

Procedure for Granting of Pratique:

1. The radio request should be sent not more than 18 hours and not less than 4 hours before the expected time of arrival.
2. The message should be addressed to the Shipping Agent, who will inform the Medical Officer of Health (Port) of the contents of the Message.
3. The Medical Officer of Health will inform the Shipping Agent whether or not pratique is granted, and the Shipping Agent will inform the Master, by radio, of the decision.
4. The Medical Officer of Health will inform the Officer on duty at the Signal Station whether or not radio pratique has been granted, and the Officer on duty at the Signal Station will inform the Berthing Master and the Public Health Inspector of the decision of the Medical Officer of Health.
5. The Berthing Master on boarding a ship which has been granted radio pratique will authorise lowering of "Q" flag, if still flying.
6. The Berthing Master on boarding a ship which has not requested radio pratique will inquire as to the presence of any illness in the ship; if there is no illness, he will grant pratique in his capacity of Visiting Officer, *and will ensure that the "Q" flag is lowered.*
7. If radio pratique has been refused or if the Berthing Master is informed that there is illness in the ship, the "Q" flag *must* be kept flying and the Public Health Inspector will board the ship, and if satisfied will grant pratique; if he is not satisfied he will refer the matter to the Medical Officer of Health (Port).
8. Disembarking passengers (not passengers in transit) and any Crew members being signed off will be kept segregated on the ship until their Vaccination Certificates have been inspected by the Public Health Inspector.
9. No person except the Berthing Master, the Public Health Inspector, the Medical Officer of Health or the Immigration Officer will be permitted to board a ship before pratique has been granted. The granting of pratique is indicated by the lowering of the "Q" flag.

   Notes: From the foregoing it will be seen:
   (i) that healthy ships will be granted pratique either by radio or by the Berthing Master;
   (ii) that ships with any illness on board will be granted pratique by the Public Health Inspector or the Medical Officer of Health;
   (iii) that the Public Health Inspector will board a ship for the following reasons only:
      a. when radio pratique has not been granted and the Berthing Master cannot grant pratique;
      b. to inspect Vaccination Certificates of disembarking (not in-transit) passengers and signed off crew members.
   (iv) that to avoid misunderstanding and delay the "Q" flag must be lowered as soon as pratique is granted.
10. A ship with disembarking passengers may be granted pratique and permitted to work e.g. load or unload cargo, *provided* that disembarking passengers are kept segregated *on the ship* until Vaccination Certificates have been inspected and immigration formalities completed.

RADIO: Cable and Wireless, Barbados Radio: Call sign 8 PO. 24 hours watch is maintained on 500 kHz. ETA to include name and nationality of Master, number and nationality of crew. Name of last and following ports of call and quantity and grades of cargo to be discharged, if any.

VHF: Barbados Radio VHF Channels 16 and 26. Barbados Port Department VHF Channels 12 and 16.

TUGS: Two tugs available namely "Barbados" and "Culpepper" 1,700 and 1,500 h.p. respectively. 2 tugs for vessels of 20,000 n.r.t. or over, and 1 tug for vessels of 10,000 n.r.t. or over or 167.64 m. in length. The tug will meet the ship at the entrance to the harbour. For vessels under 550 ft. in length having bow thrusters the tug will be optional.

BERTHING: Harbour is situated on the North-Western side of Carlisle Bay, approximately 0.75 miles (1.21 km.) N.W. of the Molehead of the careenage. The harbour is dredged to 9.75 m. LWOST and was constructed by joining Pelican Island to the Mainland by reclamation, providing 702 m. of quay space and 829 m. of protective breakwater, and offering berths for eight ocean-going vessels. All berths are equipped to supply fresh water, bunker fuel and telephone service.

Berth	*Length* (m.)	*Width* (m.)	*Depth* (m.)	*Remarks*
No. 1	152	23	9.7	
Nos. 2 and 3	366	15	9.7	
No. 4	184*	24	9.7	Container berth. *215 m. with dolphins.
Breakwater	522 outer arm	9.3	9.7	Passenger vessels.
	307 inner arm	—	9.7	Bulk sugar and molasses.
Shallow Draft	156	15.2	6.7	Inter-island vessels, max. draft 6.8 m.
Bulk Handling Facility	dolphins	—	11.5	Max. LOA 183 m.
Black Rock	—	—	—	Max. LOA 122 m., max. draft 7.5 m.
Spring Garden	—	—	—	Max. LOA 103 m., max. draft 4.9 m.

Cold Storage Facilities: Cold Storage facilities of the Port of Bridgetown are supplied by BICO Ltd., who are sub-contracted by the Barbados Port Authority to handle all locally consigned and Trans-shipment reefer cargoes .

The facility abounds the Harbour perimeter and has four receiving doors.

4×20 ft. reefer Containers may be stripped simultaneously or 2×20 ft. and 2×40 ft. Containers. The receiving rate is in excess of 350 tonnes per day.

Storage capacity is 2,100 tonnes frozen (−18°C), 300 tonnes chilled cargo (+2°C).

Cargo movements are effected by seven Clark 1.5 tonne capacity Forklift Trucks.

Power supply is guaranteed by 'Ring' circuit feed supplemented by standby generator.

CONTAINER HANDLING FACILITIES: The extensions to the Harbour were completed in 1978 and included the provision of a Container Berth, a Container Shed and an open land area for the development of a Container Stacking Park and other ancillary requirements for the making of a Container Terminal.

Phase I of the development of this area was completed in 1980 and included the paving and lighting of the area adjacent to the Container Quay for the provision of a Container Park, a Container Control Office and an area for the stuffing and unstuffing of Containers.

Phase II of the development of the Terminal was completed in 1981.

In January, 1981, a new Container handling unit, the Ferranti 830 L Straddle Carrier, was introduced to the Terminal which was followed by another unit in 1982 and 2 Valmet Straddle Carriers in 1985. These units are capable of handling fully laden 40 ft. Containers.

These units supplement 2 Lancer Boss 2500 CH sideloaders for the handling of fully laden 20 ft. Containers and one Lancer Boss Front end loader with adjustable spreader for handling empty Containers.

In addition, there are ample Tractor Trailer units to cope with the present movement of Containers.

During 1982, the 'old Container Park' was re-opened to provide further space for the stacking of trans-shipment Containers and also the North Gate was opened to facilitate the free movement of Containers to and from the Port.

The Terminal is geared to handle 75,000 Container movements annually.

The Container Terminal consists of the following:

a. Container Berth
b. Container Shed (C.F.S)
c. Container Park

The Container Berth is 188 m. long, with one breasting dolphin providing an additional 36 m. of berthing space.

This berth can accommodate a vessel up to 205 m. in length and a maximum draft of 9.60 m.

The Container Shed (C.F.S.) has a floor area of 5,314 sq.m. and is used for the storing of Cargo to be stuffed into Containers or for Cargo unstuffed from Containers.

The Container Park can accommodate a total of 1,384 Containers in lane stacked positions (2 high).

The full Container Park can stack 320 Containers, the empty Container Park can stack 744 Containers and the Trans-shipment Park can stack 840 Containers (2 high).

The Container Control Office directs the movement of the Seven Container Handling Units in the delivery, receiving and spotting of containers by means of UHF communication equipment.

A new Engineering Workshop completed in early 1984 ensures that equipment at the Terminal is readily available and that 'downtime' is kept to a minimum.

BULK HANDLING FACILITIES: *Grain:* The bulk unloading facility of Barbados Mills Limited is primarily used for wheat, corn and soyabean meal. It consists of a 6 storey workhouse, 14-"Lippe" type metal silos each with a capacity of 1,000 tonnes and a 669 sq.m. flat storage warehouse of re-inforced concrete capable of receiving and storing 2,400 tonnes.

The dock consists of a 557 sq.m. apron on steel piling with 4 breasting dolphins of similar construction in line with the end of the dock and parallel to the shoreline. There is a lightweight steel catwalk between the dolphins and the dock apron.

Grain enters the Terminal by means of a 762 mm. wide covered conveyor belt running 68.5 m. to the workhouse where it is cleaned of tramp metal, sticks, dust, etc. and weighted before being directed to one of the silos or the flat storage.

The conveyor belt has a capacity of 200 tonnes per hour and is equipped with one tonne hopper mounted dockside over the belt to accommodate self-discharging vessels. In addition the facility has a drag conveying system for conventional bulk vessels and an electrically driven portable suction system that can be used separately or in conjunction with the drag system

Diesel powered skid steer tractors with buckets are used for clean-up of the holds.

Sugar and by-products: All sugar from Barbados' six sugar factories is transported to the Bulk Sugar Terminal at the Bridgetown Port in special trucks with bins, which are the property of Sugar Transport Limited.

The Bulk Sugar Installation at the Bridgetown Port has a capacity of 81,284 tonnes and is 171 m. long with a width at floor level of 43 m.

The Bulk Sugar Installation has been in operation since 1961, and is serviced by a fleet of 27 sugar trucks with bins.

Barbados Molasses Terminals were resited at the Bridgetown Port from Needham Point in 1963, commencing operations in 1964. There is a capacity of 11,356 cu.m., and this is stored for local consumption and export. There is a storage charge from July 1st to the start of the following crop.

In 1981, a new tank was constructed to facilitate T/S Molasses. This tank has a capacity of 20,000 tonnes, and is presently leased to the United Molasses Company of England which is a subsidiary of the Tate & Lyle Group of Companies for handling T/S Molasses within the Caribbean region.

Barbados Fancy Molasses is owned and operated by Jason Jones Ltd., DaCosta & Musson Ltd., Plantations Trading Company Ltd., and Evelyn Roach, Ltd.

There is a capacity of 14,006 cu.m. of which 99.5% is for export and the balance for local consumption.

Description of the Bulk Sugar Installations: The storage shed has a capacity of 81,284 tonnes of sugar and is 171 m. long with a width at floor level of 43 m. The side retaining walls are 4.6 m. high and the roof slopes from the top of these walls to a height of 31 m. at the apex.

Sugar is delivered from the factories in 7 tonne containers fitted to road lorries and is received at the reception area at the East end of the store. After weighing, the container is discharged through a side top-hung door on the container into a reception hopper. This hopper feeds a 1.65 m. conveyor belt which runs the full length of the store underground through a reinforced concrete tunnel. At the Western end of the store the conveyor, used for both reception and reclamation of sugar, rises above ground level through an enclosed steel gantry which slopes upwards to the top of a distribution and weigher tower. Here the sugar falls on a second conveyor belt which slopes back up to the top of the store and extends some 122 m. through the store at a high level. This conveyor is fitted with a mobile take-off and high speed thrower capable of throwing the sugar some 15.25 m. in any direction.

In the floor of the store and over the tunnel carrying the reception/reclamation conveyor belt, 57 louvred hoppers with 0.46 sq.m. openings are spaced along the entire length of the store. During shipment, sugar is run at a controlled rate on to the underground belt which carries it to the top of the weigh tower where it is diverted into the feed hopper of an automatic 10 tonne Servo-Balans scale. After weighing, the sugar falls on to a third which carries the sugar 165 m. through an underground tunnel to a transfer house near the breakwater. At this point the conveyor system turns through an angle of 45° and the sugar is transferred to a fourth conveyor which rises out of the ground from the transfer house and continues 152.5 m. in a covered steel gantry to the first of the three towers which house the power and control units for the ship outloaders. These towers, which are 38 m. apart, each carry 18.25 m. cylindrical boom, with 1.65 m. conveyor belt, which can be raised and lowered like a crane jib and can be slewed through an arc of 80°. A high speed thrower is suspended in the hold of the ship from a telescopic chute at the end of each boom.

During shipment a loading rate of 500 tonnes per hour can be maintained through one outloader or this loading rate can be distributed between two or three outloaders if necessary.

The conveyor system enables sugar to be recirculated within the store if desired. When a ship is loading at the same time as sugar is being received, however, the freshly delivered sugar must go direct to the ship mixed with additional sugar from store.

The store is open along the eaves of the roof and forced ventilation is possible by running extractor fans installed on both sides of roof near apex.

STEVEDORES: Gangs must be ordered before 1500 hrs. on day preceding date of arrival and 1000 hrs. on Saturday for Sunday or following Monday. Average rate of cargo discharged:

Bag Stuff, 22 tonnes (weight) per hour.
General Cargo, 12 tonnes (weight) per hour.
Ships specially equipped for handling palletised cargo, 30 tonnes/p.h.
Average rate of loading of cargo: General cargo 12 tonnes; Bag Stuff 18 tonnes.

CRANES: 1 × 91,000 lbs. "Manitowoc-4100". Radius 60 ft.

MEDICAL: Agents should receive advance notice of required medical attention as soon as possible. Modern 800 bed hospital. Private clinics and usual medical facilities available.

TANKERS: Vessels arriving during darkness for Needham's Point Terminal should anchor in Carlisle Bay. Services of a Pilot are not compulsory but a Pilot must be taken to berth and unberth. Daylight berthing only.

Oistin: Submarine discharge. Max. LOA 172 m. Max. draft 10 m.

Needham's Point: Mobil Oil Barbados Ltd. Multi-buoy mooring Max. LOA, 198 m. Max. draft, 11.6 m. Depth at MLW, 12.19 m. Nature of bottom, sand on coral. Daylight berthing only. Vessels may berth and unberth any stage of tide. No fuel or dirty ballast facilities. Fresh water available by tug. Product handled, crude oil. Sealine taken aboard on starboard side. One 12 in. (30 cm.) pipe-line, length 498.35 m. connected to 1×10 in. hose. Pumping rate 300 t.p.h. max. pressure, 50 p.s.i.

Esso Standard Oil S.A. Ltd.: 2 berths. Esso Jetty outside breakwater. "T"-Head finger jetty. Max. LOA, 244 m. Max. draft, 11.6 m. Depth at MLW 55 ft. Vessel berths port-side alongside.

Deep-water Harbour Oil Pier: Max. LOA 244 m. Max. draft 9.14 m. Depth at MLW, 9.75 m. Vessels berth either side alongside.

Fuel and fresh water available. No facilites for receiving dirty ballast.

Berth	*Grade Handled*	*Pipe-line (in.)*	*Length (ft.)*	*Load/ Discharge Rate (t.p.h.)*	*Hoses (in.)*
Esso Jetty	Bunker C	1×16	2000	400	1×8
	Marine Diesel	1×12	2000	270	1×8
	Light Marine Diesel/gasoil	1×8	2000	150	1×8

Max. Pressure 100 p.s.i.

DENSITY: 1025.

FRESH WATER: Easily available. Delivery 20 t.p.h. per hose. Delivery by hose-pipe through hydrants installed in each berth.

FUEL: Modern bunkering facilities are supplied by Esso Standard Oil on a 24 hour basis, however, a minimum of 24 hours advance notice is required. This may be done through an Esso branch in the previous port of call. Bunkering is done alongside at the bunker pits, which are supplied with Bunker "C" fuel, marine gas oil and marine diesel oil. A blend of Bunker "C" and diesel intermediate fuel can also be supplied, as well as marine lubricants. Small yachts and schooners can also be bunkered, and at the Esso Bay Street Jetty, fishing boats and pleasure craft can be supplied with diesel fuel. Loading and discharge facilities consist mainly of an 8 in. pipe-line for gas oil, a 12 in. pipe-line for marine diesel and a 16 in. pipe-line for fuel oil. These pipe-lines run underground for approximately 1 km. from the Bridgetown Port to a bulk terminal at Holborn, Fontabelle. Pumps located at the terminal are used for deliveries to the Port.

The speed of delivery to the Bridgetown Port varies widely depending on the size of the vessel being bunkered. Pumps are rated to deliver from a minimum of 25 tonnes/p.h. to a maximum of 300 tonnes per hour.

There are 16 refuelling points along the berth of the Bridgetown Port. These permit any vessel with a maximum draft of 9.6 m. to be refuelled at any point within the port.

GANGWAY/DECK WATCHMEN: Watchmen's services necessary.

OPENING/CLOSING HATCHES: By stevedores.

SHIP CERTIFICATES: Load Line Certificate, Certificate of Registry, Safety Certificates.

CUSTOMS ALLOWANCES: Two packages or 100 cigarettes per person. Wines and spirit allowance at discretion of Customs Officer.

IDENTIFICATION CARDS: Desirable for entrance to port from shore leave.

CONSULS: Consulates, Embassies and High Commissions:

Austria
Belgium
Brazil
Canada
China
Colombia
Cyprus
Denmark
Dominican Republic
Ecuador
Finland
France
Germany F.R.
Iceland
Israel
Italy
Japan
Netherlands
Norway
Sweden
United Kingdom
United States
Venezuela

REPAIRS: Minor repairs can be carried out by Central Foundry Ltd.

SURVEYORS: Lloyd's Register, Bureau Veritas, A.B.S., N.K.K., G.L. and Det Norske Veritas.

REPATRIATION: Facilities for crew changes available.

TIME: GMT Minus 4 hours. DST (Daylight Saving Time) 1 hour advanced is now being used from 16th April to 22nd October every year.

HOLIDAYS: New Year's Day, Good Friday, Easter Monday, May Day (1st Monday in May), Whit Monday, Kadooment Day – Crop Over Festival (1st Monday in July), Caricom Day (1st Monday in August), United Nations Day (1st Monday in October), Independence Day (November 30th), Christmas Day (December 25th), Boxing Day (December 26th).

AIRPORT: Served by regular lines. Distance from harbour about 13 miles (20.92 km.). Island is served by flights from Europe and from North America.
TELEPHONES: All berths equipped with telephones.
BANKS: The following international banks service Barbados: Some are located within very close proximity to the Bridgetown Port.

Barbados National Bank
Bank of Nova Scotia*
Barclays Bank International Ltd.*
Canadian Imperial Bank of Commerce
Chase Manhattan Bank
Citibank N.A.
Royal Bank of Canada

The main offices are located in Bridgetown. Service hours are:
0800 – 1300 hrs. Monday through Thursday.
0800 – 1300 hrs. and 1500 – 1730 hrs. on Friday.
**Extended hours Monday through Thursday 0800 – 1500 hrs.*

SHIP SUPPLY SERVICE: The Barbados Port Authority operates 2 tugs and 1 heavy duty launch which is used when requested by Agents for transporting to super-carriers, stores and crews which are sometimes changed at this port. Service available on 24 hours basis and advance notice required.

The Ship Chandlers are as follows:

J. N. Goddard and Sons Limited,
Broad Street,
Bridgetown.
and
Hanschell Larsen & Company Limited,
Kensington,
Fontabelle,
St. Michael, Barbados.

The cost of tug hire is BAR$600.00 per hour and that of the launch is BAR$150.00 per hour.

Ships can lie safely on 100 fathoms depth at a distance of 2 miles West of the Signal Station.

SHIPMASTER'S REPORT:
Pilotage: Compulsory. Pilot boards 0.5 miles West of breakwater. Ladder usually required on the port side.
Restrictions: Vessels able to enter and leave at any stage of the tide. Pilots usually commence berthing and unberthing operations at daybreak.
Max. Size: Max. draft 32 ft.
Tugs: Available. Use of tugs depends on which berth the vessel uses and which side to and size of vessel.
Radio: Barbados Radio.
VHF: Pilot on Channels 16 and 12.
Berthing: Vessel berthed at Berth No. 2 which is close to the entrance. Bulk handling facilities available. There is ample equipment for handling palletised cargoes, and ample storage space for breakbulk and palletised cargoes, there is also storage space for containers and sufficient equipment for handling 20 ft. and 40 ft. containers. Accommodation ladder required.
Services Available: Fresh water, fresh provisions, repair facilities, machine shop, airport, Lloyd's Surveyor, laundry services, telex, bunker fuel oil, diesel oil, lubricating oil, doctor, hospital, groceries and meats.

AUTHORITY: Barbados Port Authority, University Row, St. Michaels, Barbados, W.I. *Tel:* 436-6883. *Telex:* 2367 Portman WB. *Cables:* Portman. *Contact:* Mr. P. B. Parker, General Manager. Captain H. L. Van Sluytman, Harbour Master.

AGENT: Hanschell & Harrisons Shipping Ltd. P.O.Box 304, Bridgetown, Barbados. Tel: 69918 or 60720. Telex: 2267 Shipagnt. Cables: Shipagent Barbados.

NOTES

Please also advise Shipping Guides Ltd.

ANTWERP: 51.14 N. 04.23 E. (See Plan)

DOCUMENTS:

Ship's Register.
2 Lists Passengers in Transit.
2 Lists Passengers Disembarking.
2 Personal Effects Lists.
3 Crew Lists indicating full date and place of birth, nationality and No. of Identity Document (Seaman's Book or Passport).
2 Stores Lists indicating alcoholic beverages in bottles and size of bottles.
International Health Declaration.
Manifests and usual ship documents.

PILOTAGE: Access to River Scheldt is:

(a) Via Wielingen and Scheur Channels (West) (Wandelaar Station) where Belgian sea pilot cutter is stationed near A.1. Buoy. Cutter has black hull with a white number on bow, yellow funnel with black top, red flag with white letter "P".

(b) Via Oostgat Channel (North) (Steenbank Station) where Dutch sea pilot cutter is lying near the Middelsteen Bank Buoy.

The pilot cutters of both cruising stations can be called by the signals of the international code. They can also be contacted on VHF Channel 6.

ETA: Pilot cutter Wielingen or pilot cutter Oostgat should be given at least 4 hours notice before arrival at the pilot cutter, respectively via Ostend Radio (OST) to "Pilotage Ostend" or via Scheveningen Radio (PCH) to "Pilotage Flushing".

In case pilot service is suspended because of weather conditions, Flushing Pilot Station can be contacted on VHF Channel 14. At Flushing, the Sea Pilot disembarks and the River Pilot boards the vessel and pilots her to the riverside berths or to the locks. For vessels bound for a berth in the docks, the dock Pilot takes over in the lock until the vessel is moored in berth.

DEEP SEA PILOTAGE: See "Brixham" or "Cherbourg".

ANCHORAGE: There is sufficient anchorage for deeply loaded vessels at all times around the A.1 buoy, and for smaller vessels around the MSB buoy. There are unlimited possibilities for anchoring at Flushing Roads. Anchorage on the river is limited.

RESTRICTIONS: No restrictions on night entry. Tankers larger than 2,000 g.r.t. destined for berths on the river upwards of Boudewijn-Van Cauwelaert-Locks are not allowed to transit during hours of darkness.

LOCKS: *Right Bank:* Royers Lock, length 590 ft., width 72 ft. 2 in., depth at high tide 36 ft. 4 in.

Van Cauwelaert Lock, length 885 ft., width 115 ft., depth at high tide 49 ft. 2 in.

Boudewijn Lock, length 1,180 ft., width 147 ft., depth at high tide 50 ft. 10 in.

Zandvliet Lock, length 1,639 ft., width 187 ft., depth at high tide 60 ft. 8 in.

Kattendijk Lock, length 360 ft., width 81 ft. 4 in., depth 20 ft. 7 in.

Left Bank: Kallo Lock, length 480 ft., width 165 ft., depth 52 ft. 6 in.

Also see "Developments".

MAX. SIZE: At HW, under normal weather conditions and depending on tidal conditions vessels up to 885 ft. (270 m.) may enter on a maximum draft of 48 ft. (at spring tide corresponding to 43 ft. at dead tide) (this on condition that a speed of 12 knots can be reached). For vessels of more than 270 m. LOA, subtract 6 in. draft for length from 270 m. to 280 m. and 3 in. per 10 m. length over 280 m. Larger vessels can be admitted under certain conditions. It is however advisable to check in each case what maximum draft will be allowed for a specific vessel.

In the near future pilotage services will handle vessels up to 300 m. LOA without subtractions.

Vessels with a draft up to 36 ft. can enter on all stages of the tide.

HEALTH: No special requirements to obtain free pratique. Vaccination Certificates must be valid. Recent Derat Certificate required. In case of contagious illness aboard, advise Agent.

RADIO: Cable Agents ETA Flushing, max. fresh water draft, and requirements via Ostend Radio-OST or OSU (radio telephone). Radio Antwerp-OSA operates only on medium frequency.

RADAR/VHF: A radar chain established from Hansweert to Doel, but only used to help Pilot determine position. Masters can keep close contact for information, day and night, on the following Channels: Pilot cutter Channel 6 – Flushing Radio Channel 14 – Zandvliet Radio Channels 12 and 14, when in appropriate sector – Harbour Office Channel 18 – A radar chain, using, depending on the zone, the VHF Channels 19, 21 or 4 for communication, is established between Hansweert and Doel, but only used to assist the Pilot to determine position.

Vessels not equipped with VHF can rent a portable portaphone. The Scheldt Information Service gives information by VHF within an area extending from the sea to the mouth of the river Rupel, situated upstream of Antwerp. On every full hour plus 5 minutes until that hour plus 10 minutes, vessels should switch to Channel 16 to listen to the traffic list and navigation reports, issued by Antwerp Radio.

On every full hour plus 55 minutes, Flushing Radio (Channel 14) and Zandvliet Radio on every hour plus 35 minutes (Channels 12 and 14) transmit information regarding visibility, water level, hindrances, anchorages, etc.

As soon as one of the stations reports a decrease of visibility under 3,000 m., visibility reports are transmitted by Antwerp Radio on every hour plus 48 minutes.

TUGS: Tugs for berthing at a riverside berth or entering the lock are ordered at river Pilot's request according to weather conditions and tide. Generally at Lieftkenshoek for Van Cauwelaert and Baudouin Locks and between Saftingen and North Ballast Fort for Zandvliet Lock. For supertankers, tugs may join at Bath. Ship's lines are usually used for towage. If ship asks for tug lines there will be an extra charge per line.

The number of tugs required in the dock area shall be mentioned on the "hailing bill". Eventually, "according to dock Pilot's advice" can be mentioned.

Tugboats on the Scheldt belong to private companies. There are 26 tugboats. They can assist the vessels up to the entrance in the lock. Inside the dock area the service is supplied by the Port Authority (municipal tugs).

33 tugs available, up to 2,200 h.p.

BERTHING: Deeply loaded vessels normally moor at their berth in the docks 2 hours after high water or earlier, depending on geographical location of the berths.

BULK HANDLING FACILITIES: *Container Terminals:* Private terminals with gantries from 40 tons to 70 tons lifting capacity.

Leopolddock : 1 terminal with 2 gantries (45 tons)
Churchilldock : 3 terminals with in total 4 gantries.
Delwaidedock : 4 terminals with in total 9 gantries.

3 container cranes at railroad container terminal; 9 quay-cranes (32 tons and 35 tons) suitable for container handling; 4 mobile container cranes.

Grain:

1. Sobelgra Terminal at sixth harbour dock has 5 elevators with capacity of 400 t.p.h. each for unloading and 2 loading towers of 400 t.p.h. each for loading seagoing vessels. Elevators are combined with conveyor belts for direct transhipment or storage in silo (106,000 tons). Water depth 48 ft. in dock for seagoing vessels, 24 ft. in dock for barges. Quay length 1,200 ft.
2. Grain handling plant of S.A. des Magasins a Grains (SAMGA) at Lefebvre Dock. Quay length 500 m., draft 32 ft. fresh water, silo 120,000 tons, 5 elevators on quay plus use of floating elevators. Discharge rate 1,100 t.p.h. Loading rate 1,400 t.p.h. into barges.
3. Smaller installation of De Trouw (silo 10,000 tons) and De Molens van Antwerpen (silo 4,000 tons).
4. Cargill Terminal for seeds at Canaldock B1: Storage capacity 30,000 tons.

Potash: Plant situated at Quay Nos. 152/160 in the Albert Dock, can accommodate vessels up to 35 ft., fresh water draft. Loading rate up to 6,000 tons per day. Storage capacity 322,000 cu.m.

Ore/Coal/Phosphate:

Stocatra: Terminal at Delwaidedock (Quays No. 750-762), quay length 1,000 m. Depth 55 ft. (+600 m. for barges); 2×50 tons travelling and 5×25 tons bridges and conveyor belt system. Discharge rate 2,500 t.p.h.

SGM: Terminal at Canaldock: 5 bridges of 25 tons for non-ferrous ores. Quay length 500 ft., depth 50 ft., max. discharge rate 3,000 t.p.h. average discharge rate 2,400 t.p.h. Also see "Report-December 1984".

Coal Terminal Vloeberghs: 3 cranes 10 tons. Quay length 300 m., Several smaller installations for coal.

Sulphur: Transhipment installations of Duval Sales (Antwerp Tank Cleaning) near Boudewijn Lock with covered storage over 100,000 sq. ft.

Soda: The Solvay concern has built specialised warehouses on the South Quay of the 5th Harbour Dock, comprising 14 silos with a capacity of 6,700 tons of soda products. This installation is equipped with 10 cranes, 3 transporter bridges and 4 km. of conveyor-belt.

Fertilizers: Besides quays of chemical plants such as Bayer and BASF there are specialized terminals for fertilizers mainly at 3rd Harbour Dock (Manuport) and Canaldock B1 (Manufert) and Ferchimex (the latter used for fertilizer, sulphur, phosphates etc.).

Total covered warehousing space for chemical fertilizers is 38,405 sq. m.

Other specialized installations include:

Refrigerated storage:	449,000 cu.m.
Tank storage capacity:	9.9 million cu.m.

CRANES:

Container cranes	(35/53 t)	15
Quay cranes	(2.5/100 t)	480
Floating cranes	(5/800 t)	17
Mobile cranes	(5/90 t)	45
Loading bridges	(15/25 t)	16
Grain elevators:	on quay	16
	floating	1

TANKERS: Five important refineries and oil storage installations, located at Antwerp have a total tank storage capacity of 6,947,000 cu.m. The total quantity of crude oil refined amounts to nearly 40 million tons yearly. In the vicinity of the Van Cauwelaert Locks, S.I.B.P. and Esso have important plants. R.B.P. is established in the 4th Port Basin, whereas Belgian Refining Company and Nafta (B) have their installations along the Canal Dock B-2. In the Southern sector of the port, on the River Scheldt and of an earlier construction, the Oil Terminal Antwerp South is situated with restricted length of 650 ft.

Chemicals, Minerals and Edible Oils:

Installation	*No. of Berths*	*Quay No.*	*Max. draft FW* ft.	in.	*Storage Capacity* cu.m.
Havenbehandelingen S.A.	2	273/275	36	0	290,000
Noordnatie S.A.	2	239/241	35	0	175,000
Panocean-Eurotank NV	7	387/399	36	6	459,000

LPG Terminal: Antwerp Gas Terminal at Left Bank for LPG tankers.

The first phase of the construction of AGT is now completed. It includes construction of 4 spheres of 3,300 cu.m. each and 3 jetties. These are the Main Jetty, the Secondary Jetty and the Barge Jetty. Each jetty is "T" shaped and is equipped with Wiese loading arms provided with an emergency shut-off/disconnecting device. The minimum water depth at the Main Jetty is 11.85 m. enabling tankers handling up to 75,000 cu.m. to berth.

Antwerp Cleaning and Storage CY NV: This terminal situated between the Boudewijn Lock and the Bayer plant, is able to receive ballast water from tankers and other seagoing vessels, and is fitted with separators with a capacity of 600 t.p.h.

Installation	No. of Berths	Quay No.	Max. Draft FW ft.	in.	Bunkers ex-Installation	Rate tonnes per hour load/disch.	Shore facilities for dirty ballast	Spares Stores

STEVEDORES: To enable Agents to order gangs, important to obtain ETA Flushing before arrival. Latest time to order gangs, normal day shift 0800 – 1545 hrs. before 0630 hrs. same day. First shift 0600 – 1345 hrs., before 1400 hrs. previous day; second shift 1400 – 2145 hrs. before 1230 hrs. same day; night shift 2200 – 0545 hrs. before 1500 hrs. same day. First shift Monday, 0600 – 1345 hrs. before 1400 hrs. previous Friday. Failure to give exact ETA may result in losing 12 hours to 24 hours and the cost of gang's idle time. No work performed on Saturday and Sunday unless overtime paid.

MEDICAL: Ample medical attendance in the port. Hospital facilities available.

DENSITY: Fresh water in the docks, slightly brackish in the river.

FRESH WATER: All berths supplied by shore connections. Fresh water also available by barge.

FUEL: All grades available. Minimum 24 hours advance notice preferred. All grades can also be supplied by barge. Tankers may not refuel by barge concurrent with working cargo or ballast.

FIRE PRECAUTIONS: No floating objects allowed alongside during loading/discharge/ballasting.

GANGWAY/DECK WATCHMEN: Not compulsory but recommended in general and specially for ships berthed at river quays because of rise and fall of tide.

OPENING/CLOSING HATCHES: Normally opened/closed by crew. Stevedores usually helping lift beams. Tramp vessels according to charter party.

SHIP CERTIFICATES:

Registered Tonnage Certificate.
Derat Certificate.

CUSTOMS ALLOWANCES: 200 cigarettes or 20 cigars or 250 gm. tobacco per man. Spirits 0.25 litres per head.

IDENTIFICATION CARDS: Required.

REPAIRS/DRY DOCKS: The Mercantile-Beliard N.V. owns within its premises 8 private drydocks for vessels up to about 150,000 t.d.w., and 19 private repair berths.

Besides carrying out general repairs, conversion and dry-docking of ships, the yard can carry out licensed repairs and are spare parts suppliers for the following diesel engines:

Burmeister & Wain; Doxford; Fiat; Gøtaverken; Mann; Pillstick and Sulzer. They also are an approved repair centre for Lips and Kamewa propellers.

Dimensions of Private Dry Docks:

No.	Length (m.)	Width (m.)	Depth (m.)
1	146.30	18.50	5.85
2	166.40	21.15	6.50
3	192.60	26.00	7.25
4	206.60	27.00	7.75
7	225.00	29.78	8.25
5	255.00	39.40	8.70
8	270.00	37.29	8.25
6	312.35	50.00	9.20

Facilities:

Gritblasting machines for ship's sides and ship's bottom.
Tank cleaning (2 barges available).
Tank storage barges.
Testing plant for anchor chains and cargo gear (up to 300 tonne test capacity).
Dynamic balancing plant for motors, turbines, up to 11 tonne.
Lifting capacity in drydocks and workshops.
Floating crane and heavy mobile cranes.
Specialised fuel valve repair shop.

Apart from above yard, various smaller repair firms are available to carry out deck and engine repairs. They have qualified labour, specialised workshops but no drydock facilities. For example Messrs. Longueville Bros., Messrs. Locomar Inc. and Messrs. S.K.B.

SURVEYORS: American Bureau of Shipping. Tel: 232.28.66; Bureau Veritas. Tel: 233.79.30/31; Det Norske Veritas. Tel: 232.69.16; Germanischer Lloyd. Tel: 233.74.16; Lloyd's Register of Shipping. Tel: 232.09.40; Registro Italiano. Tel: 233.78.60.

REPATRIATION: All arrangements for crew changes and repatriation can be made.

AIRPORT: Zaventem Airport (distance 50 km.) served by regular airlines. Antwerp Airport Deurne (distance 15 km.) only regular service with Amsterdam and London (3 flights per day). Plans to extend.

TIME: Summertime: April to September (April to October) GMT plus 2 hours. Remainder of year, GMT plus 1 hour.

HOLIDAYS: New Year's Day; Easter Monday; 1st May; Labour Day; Ascension Day; Whit Monday; 21st July; Assumption (15th August); 1st November; 11th November; Christmas Day. Plus the replacement days when New Year's Day; 1st May; 21st July; Assumption; 1st November, 11th November or Christmas Day fall on a Saturday or a Sunday. Cargo work can be arranged when labour available and at surcharge 100%.

POLICE/AMBULANCE/FIRE: Harbour Police Tel: 232.18.40; Alarm and Accidents Tel: 906; Ambulance Tel: 900; Fire Tel: 900.

TELEPHONES: At shipyards and oil terminals telephone is placed on board or in the vicinity without extra cost for local calls. Long-distance calls at special request.

SHIP SUPPLY SERVICE:

Ship-to-Shore Supply Operators:

Alpina Transports & Affretements n.v., Ankerrui 2, B-2000 Antwerp. Tel: 03/231.66.90. Telex: 33759.

Clayton of Belgium n.v., Rijksweg 30, 2680 Bornem. Tel: 03/889.11.31. Telex: 31715.

p.v.b.a. World Wide Offshore, Westdijk 72, 2100 Deurne. Tel: 03/886.99.11. Telex: 34472.

DEVELOPMENTS: The navigable channel and estuary are dredged continuously. The aim of the present plans is to increase the draft allowed as follows: Incoming vessels up to 48 ft. in one tide; 50 ft. in two tides: Outgoing vessels in one tide 43 ft.

On the right bank the construction of the Delwaidedock (quay length 4,700 m.) is complete. The first terminal has been in operation since 1981.

New Lock (Berendrecht Lock) South of Zandvliet Lock under construction.

When completed in 1987, this lock will be able to accommodate fully laden vessels of up to 125,000 d.w.t. and partly laden vessels of up to 250,000 d.w.t. With a length of 500 m. between outer gates, a width of 68 m. between walls and 17.75 m. water depth.

Other terminals for containers/general cargo and for ores are under construction. South of this dock a special Ro-Ro terminal was built for loads up to 2,000 tons.

At the left bank the lock (Kallo Lock) is finished. The construction of docks is continuing.

Other works/investments recently finished, under-way or planned for the near future include: new bridges over the locks; a high bridge over the docks at Quay Nos. 100 – 101; new dredging equipment; new quay cranes (12 tons at 42.5 m. reach) of which 12 are already delivered, 6 ordered. The port recently acquired a 800 ton capacity self propelled floating jack.

Private companies are setting up new container gantries, bridge cranes, etc.

Plans to build a container terminal on the River Scheldt, construction to commence Spring 1987.

Forest products terminal to be built at Vrasene Dock. Length 300 m. Ro-Ro of 60 m. to be built. Operations to start late 1986.

Additional Port Authority Floating Cranes of 30 tons capacity available from mid-1986.

ADD SMR.

REPORT: December 1984.
Bulk Handling Facilities:

1. Societe Generale des Minerais (S.G.M.)
Canaldock B.1 Berths:
LOA: No restriction (see "Remarks").
Draft: 54 ft. fresh water at berth (see "Remarks").
Beam: Discharge coal: No restriction.
Discharge ores: Crane Nos. 1 – 3 outreach 41.6 m. (see "Remarks").
Crane Nos. 4 – 5 outreach 49.0 m. (see "Remarks").
Clear height from waterline to top of hatch coaming:
Crane Nos. 1 – 3: 17 m.
Crane Nos. 4 – 5: 21 m.

2. Stocatra
Delwaidedock Berths
LOA: No restriction (see "Remarks").
Draft: 55 ft. fresh water (see "Remarks").
Beam: No restriction (see "Remarks").
Clear height from waterline to top of hatch coaming: 24 m.

Remarks:

Drafts are based on fresh water.

For vessels over 270 m. (884 ft. 10 in.) LOA, drafts have to be reduced as follows:

LOA 270 m. (884 ft. 10 in.) up to 280 m. (917 ft. 8 in.): 6 in. per 10 ft. (3.05 m.) exceeding 270 m.

LOA over 280 m.: 6 in. per 10 ft. exceeding 270 m. and 3 in. per 10 ft. exceeding 280 m.

The maximum LOA allowed is 300 m.

The maximum beam in the Zandvlietlock is 45 m.

Sailing: Maximum draft allowed is 12.19 m. from Zandvlietlock.

Tankers: (Oil-gas-chemicals) – empty or loaded – not gas free.

As from 1.11.1984 the regulations below and the tanker checklist are applicable.

Regulations:

14th August, 1984 – Royal Decree for the Assessment of the Minimum Requirements with which some Tankers, which intend to call at a Belgian port, have to comply. (Free translation) (*).

Article 1 § 1. The Owners and Operators, their employees, mandatories or representatives, of oil, gas and chemical tankers with a Belgian port as destination (loaded or in ballast but not yet free of vapours or dangerous residues) must notify the following information:

(a) Name and call sign of the vessel.
(b) Nationality of the vessel.
(c) The overall length and draft of the vessel.
(d) Port of destination.
(e) ETA in the port of destination or at the pilot station.
(f) General nature and quantity of the cargo.
(g) In case of carriage of chemicals in bulk, whether or not the vessel is in possession of a fitness certificate in accordance with the IMO Code for the construction and equipment of vessels carrying dangerous chemicals in bulk or in case the vessel carries liquefied gas in bulk, whether the vessel is in possession of a fitness certificate in accordance with the IMO Code for the construction and equipment of vessels carrying liquefied gases in bulk.
(h) Any defects or incidents which may affect the normal and safe manoeuvrability of the vessel, are detrimental to a safe and fluent navigation, or constitute a hazard to marine environment and surroundings.

§ 2. The Masters of such vessels can be put in charge of these notifications.

§ 3. When the destination of the vessels is a Belgian coastal port the data mentioned in §1 must be notified to the Maritime Control of Traffic of the Ostend Pilotage before Belgian territorial waters are entered. When the destination of these vessels is another Belgian port, this data must be notified to Flushing Radio before Belgian or Dutch territorial waters are entered.

Article 2 § 1. Before entering Belgian or Dutch territorial waters the Masters of the vessels referred to in Article 1 have to truthfully and accurately fill in the check-list to this decree and to hand a copy of it to the Pilot for his information.

§ 2. If additional copies of this list are requested by the competent Authorities they have to be transmitted to them without delay.

Article 3. During the navigation in territorial waters the Masters of the vessels referred to in Article 1 and which intend to call at a Belgian port or which have left this port have to:

(a) Notify the competent Authorities of all defects and incidents which are liable to reduce the manoeuvrability of the vessel under normal safe conditions, to detrimentally influence the safe and fluent navigation or constitute a hazard to the marine environment and surroundings.
(b) Establish as soon as possible a radio-telephonic communication with the appropriate coastal stations, preferably in VHF, more particularly with the nearest radar station – if it exists – and maintain this communication.
(c) Call upon the services of radar stations particularly in conditions of restricted visibility.

This decree will be effective on 1st November, 1984.

(*) This decree results from the directive 79/116/EEC of the Council of European Communities of 21st December, 1978, modified by the directive 79/1034/EEC of same council of 6th December, 1979.

AUTHORITY: Port of Antwerp General Management, Town Hall, B-2000 Antwerp. *Tel:* 03-231.16.90. *Telex:* 31.807.
Contact: F. Suykens, General Manager.
Branch Office: Kolveniersstraat 19, 2000 Antwerp. *Tel:* 03-231.17.72.
Contact: Dr. C. Verschueren, Principal Adviser.

AGENT: Muller-Thomsen Antwerpen N.V., 9 Ankerrui, B-2000 Antwerp. Tel: (03) 2338920. Telex: 71303. Fax: (03) 2338574. Cables: Mineral.

BRUSSELS: 50.51 N. 04.22 E. (See Plan)

DOCUMENTS: Same as Antwerp and to be handed to Agent at Antwerp Roads, where clearance obtained.

PILOTAGE: Notice of ETA Antwerp Roads should be given 24 hours beforehand to Antwerp Agent, who will apply for upper Scheldt Pilot. This Pilot takes over at Antwerp Roads and brings ship up Rivers Scheldt and Rupel to Wintam Lock. Canal Pilot boards Wintam Lock. Boatmen service on canal optional, but advisable for ships over 164 ft. length and according weather conditions. Boatmen for possible mooring Wintam Lock Entrance always available. All locks equipped with VHF. Call and answer on Channel 13.

ANCHORAGES: Use of anchors strictly regulated on canal and only permitted certain areas in emergency.

RESTRICTIONS: Ships proceed upstream from Antwerp to Wintam day and night accordance state of tide, direction of current, length and draft.

MAX. SIZE: Overall length: 344 ft. 06 in.; Extreme breadth: 48 ft. 02 in.; Max. draft: 19 ft.

HEALTH: See "Antwerp".

RADIO: See "Antwerp".

VHF: All locks and tug boats equipped with VHF.

TUGS: Normally tug joins vessel Wintam Lock. Ship's lines always used. Although not compulsory, towage advisable in accordance length and draft or weather conditions.

BERTHING: No specific requirements for berthing in canal. Owing to dense traffic, ships should moor strongly.

The Brussels' Harbour extends over a length of 12.5 km. between Brussels (Sainctelettesquare) and Grimbergen (Pont-Brule).

The Inner Port offers: 14 km. of quays and mooring berths 220,000 sq.m. of wharf areas. 390,000 sq.m. of storage areas. 169,000 sq.m. of warehouses.

Materials Quay: Length: 710 m. Number of berths: 15. Depth: 3.5 m. 2 cranes of 2 tons lifting power, owned by the Canal Company.

Barges Quay: Length: 710 m. Number of berths: 15. Depth: 3.5 m. Equipment: 1 crane of 2 tons lifting power owned by the Canal Company. 1 private installation for cargo handling.

Shipowners Quay: Length: 920 m. Number of berths: 15. Depth: 6.5 m. Equipment: 3 cranes of 2 to 4 tons lifting power owned by the Canal Company. 6 private installations for cargo handling.

Steamers Quay: Length: 920 m. Number of berths: 15. Depth: 6.5 m. Equipment: 7 private installations for cargo handling.

Factories Quay: Length: 2,000 m. Depth: 6.50 m. (along the quay wall: 3.20 m.)

Leon Monnoyer Quay: Length: 1,800 m. Number of berths: 20. Depth: 6.5 m. Equipment: 11 private cranes from 3 to 10 tons lifting power. 9 private installations for cargo handling.

Heembeek Quay: Length: 360 m. Number of berths: 4. Draft: 6.5 m. Equipment: 9 private installations for cargo handling.

Industrial Harbour Section: Length: 6,000 m. Number of berths: 60. Draft. 6.5 m. Equipment: 59 private installations for cargo handling, (electric cranes from 1 to 10 tons lifting power, grain elevators, belt conveyors, suction devices.)

Maritime Canal: Length: 20 km. Draft: 6.5 m. Equipment: 26 private installations for cargo handling.

SPECIALISED CARGO HANDLING FACILITIES: Private cargo handling facilities exist in the whole of the Industrial Maritime Canal for grain, coal, fertilisers, liquid chemicals and L.P.G.

BRIDGES: Ships can reach outer harbour with clearance of 100 ft. and pass under fixed bridges to inner harbour with clearance of 20 ft. Road bridges open on demand. Railway bridges open according timetables, which subject to change.

STEVEDORES: Arrangements made by Agents.

MEDICAL: No notice required for medical attendance. Hospital facilities available. In case of accident or emergency call phone number 900. No particular inoculations or certificates required.

TANKERS: Oil usually imported by tank barges. No slop facilities. Max. draft permitted for wine tankers, gas tankers and acid carriers: 19 ft.

DENSITY: Canal is fresh.

FRESH WATER: Fresh potable water delivered from shore in Wintam Lock at average rate of 10 t.p.h. during passage through lock, and in outer harbour at maximum rate of 20 t.p.h. according diameter of hose.
FUEL: All grades available. At least half a day notice should be given.
FIRE PRECAUTIONS: The usual precautions to be taken by tankers and ships handling inflammable or dangerous goods.
GANGWAY/DECK WATCHMEN: Services of shore watchmen optional.
OPENING/CLOSING HATCHES: Carried out by ship's crew.
IDENTIFICATION CARDS: Required.
CONSULS:

REPAIRS: No shipyards in Brussels, but in Boom and Temse, not far from Brussels, and Antwerp. Minor deck and engine repairs by small shipyard on canal.
REPATRIATION: Arrangements for repatriation can be made with Maritime Authorities on Antwerp Roads or at Brussels with the Harbour Authorities. Consuls in Brussels arrange for crew changes or repatriations (Consulates closed Saturdays, Sundays and Holidays).
AIRPORT: Brussels Airport served by regular airlines. Air terminal situated in town centre, directly connected with Airport by special railway.
HOLIDAYS: Official Holidays: January 1st (New Year), Easter Monday, May 1st (Labour Day), Ascension Day, Whit Monday, July 21st (National Holiday), August 15th (Assumption Day), November 11th (Armistice Day), December 25th (Christmas). Most offices closed on Saturdays.
POLICE/AMBULANCE/FIRE: General call, Ambulance/Fire: 900; Police: 906; Fire: 02/511.55.55. – 512.22.22. Police 02/513.28.40.
TELEPHONES: Only placed for warships at one particular berth.
GENERAL: Bus 47 near left bank and street-car 58 near right bank of outer harbour, lead to town centre (10 minutes). General Information Office situated on de Broukeresquare (town centre). Ship stores can be obtained, but no bonded stores.
SHORE LEAVE: Crew members allowed ashore without restriction.
REGULATIONS: At night only main gate of outer harbour on right bank is open.
DEVELOPMENTS: Complete schedule for modernising canal, including building a larger lock, widening and deepening canal.
AUTHORITY: "S.A. du Canal et des Installations Maritimes de Bruxelles" (Port of Brussels Authority), Place des Armateurs, 6, 1210 Bruxelles. *Tel:* 02/425.10.00. *Telex:* 62207. *Cables:* Bruportus. *Contact:* General Manager.

Harbour Master: Rue de L'Avant-Post 2, Boite 1, 1210 Brussels. *Telex:* 64361.

GHENT: 51.02 N. 03.44 E. (See Plan)

PORT LIMITS: As a rule, the Notice of Readiness must be given in writing and will generally not be accepted by the receivers before the ship has berthed. Exceptionally, when the berth is occupied, the notice can be tendered as soon as the vessel has dropped anchor at Flushing or Terneuzen Roads, or has moored at a waiting berth. Strictly speaking, ports limits are at the border between the city of Ghent and the town of Zelzate, i.e. at about 3 km. from the Dutch border.
DOCUMENTS:
Documents Needed for Customs:
1 Cargo Manifest No. 125.
1 Store List.
1 Crew List, with the list of personal effects of the crew, such as cameras, guns, cigars, cigarettes, tobacco, alcohol.
Documents Needed for the Water Bailiff:
1 Crew List.
1 Passenger List.
Tonnage Certificate.
Oil Register.
Certificate for Civil Liability when the ship carries more than 2,000 tons of oil in bulk.
PILOTAGE: For seaward approach, position of pilot-cutters and ETA-messages: see "Flushing". Pilotage is compulsory for all ships, except those in ballast having a draft of less than 22 decimetres (7.2 ft.). All vessels proceeding to Ghent have to pass the locks at Terneuzen. The Canal-Pilot normally boards a ship bound for Ghent when she passes Flushing. Ships coming from the North always have a Dutch Sea-Pilot on board who brings the ship to the Terneuzen Locks where a Dutch Canal-Pilot takes over.

Pilotage Regulations: Reporting of the ETA at one of the pilot stations at sea in the estuary of Scheldt must take place in the following manner:
1. The ETA must be reported not less than 6 hours before that time.
2. For the pilot station "Wandelaar", via Ostend-Radio (OST) or via other appropriate communication channels. The message is to be addressed to "Pilotage Ostend".

The text of the message is to consist of:
(a) The words "ETA Pilot Wandelaar".
(b) The ETA as a group of 4 digits in GMT.
(c) The draft of the ship, stating the units used.
(d) The Port of Destination.

3. For the pilot station "Steenbank" via Scheveningen-Radio (PCH) or via other appropriate communication channels. The message is to be addressed to "Pilotage Flushing".

The text of the message is to consist of:
(a) The words "ETA Pilot Steenbank".
(b) The ETA as a group of 4 digits in GMT.
(c) The draft of the ship, stating the units used.
(d) The Port of Destination.

ANCHORAGE: The roads of Terneuzen offer a safe and spacious anchorage outside the fairway, at the so-called Pit of Terneuzen. Depth is at least 49 ft.
RESTRICTIONS: Navigation day and night. There are no restrictions for entering the locks at LW for vessels with a draft not exceeding 32 ft.
MAX. SIZE: In normal practice, length 256 m., breadth 34 m., draft 12.25 m. Fresh water. Also see "Shipmaster's Report".
RADIO: All cables to Agents, receivers, etc. to be sent via Ostend Radio (call sign OST), eventually via Scheveningen Radio (PCH) for vessels coming from the North. Also see "Pilotage".
VHF: Contact pilot-cutters via Channel 6, Flushing Radio via Channel 14 and Terneuzen Harbour via Channel 11. All communications with the Harbourmaster's Office in Ghent should go via Channel 5.
RADAR: See "Antwerp".
TUGS: Tugs needed for entering the locks usually meet the vessels near Buoy 23. The Master decides whether to use own lines or not.
BERTHING: The Alderman Siffer Dock, Port Arthur Quay, Petroleum Dock (Texaco), Rodenhuize Dock and the Sidmar Quay can all accommodate ships with a deadweight up to 80,000 tons. The older docks (Noord-, Midden- and Zuiddok, and the Fore Harbour) have depths ranging from 7 m. to 8.75 m.
CRANES: All the docks mentioned above are equipped with handy, powerful cranes, the majority of which are owned by the Port Authority.

At the Sifferdok there are 4 multi-purpose cranes of 40 tons and 2 tobogans owned by N.V. Stukwerkers Havenbedrijf. The Sifferdok, Middendok and Zuiddok each have two bulk-handling gantry cranes of 10 tons. Two floating cranes of 25 tons are also available.

At the Port Arthur Quay there are 10 cranes of 5 tons, 8 cranes of 15 tons and 2 tobogans owned by Manuport.

BULK CARGO FACILITIES:
Sifferdok: The installations of Euro-Silo at the end of the dock offer facilities for all kinds of grain and derivatives. Quay length: 475 m. Storage capacity: 130,000 tons heavy grain. A warehouse for flat storage of 40,000 tons of heavy grain. Equipment: 2 pneumatic discharge towers of 500 t.p.h. each; 2 screw unloaders of 700 t.p.h. each; 2 mobile cranes for grab discharge of barges; 2 train unloading stations of 500 t.p.h. each. 2 mobile and 1 fixed loading tower of 600 t.p.h. each; 2 loading stations for trains of 600 t.p.h. each. The Compagnie Belge de Manutention (CBM) situated on the left bank of the Sifferdok specializes in the handling of bulk cargoes such as pyrites, ores, phosphates, coal, cokes etc. Equipment: 2×15 ton and 3×10 ton cranes for grab discharge and 2 mobile cranes of 40 tons. Also mechanical shovels for the discharge of bulk goods into rail-wagons. Storage capacity: 2,500,000 tons.

The same commodities are also handled by CBM in the Zuid- and Middendok; grab discharge with 10 ton cranes.
Rodenhuizedok: The new grain silo "Ghent Grain Terminal" can accommodate vessels up to 80,000 tons. For unloading there are 2 mobile pneumatics and 1 fixed tower with a total capacity of 1,800 t.p.h. For loading there is 1 mobile post and 1 fixed post with a total capacity of 1,600 t.p.h. Vertical storage capacity of the silo is 60,000 tons. Horizontal storage capacity 250,000 tons. Quay length: 670 m.
Sidmar: Steel plant situated on the right bank of the ship-canal to Ghent, with 1,050 m. quay length of which it is the exclusive user. Maximum depth at terminal: 13.50 m. Equipment: for the loading of steel sheet and coils, 1×25 ton and 1×35 ton crane. For grab discharge: 2 portal cranes of 25 tons each and 1×15 ton crane.
SPECIALISED CARGO HANDLING FACILITIES: Specialised berths where equipment for handling fertilisers is available are No. 27 (Grootdok) and No. 83 (Sifferdok); cranes for grab discharge, funnels and conveyor belts.

Liquid chemicals are currently handled at the U. Kuhlmann factory in Rieme on the left bank of the ship-canal, most commonly liquid sulphur and propylene. No berths for LPG-carriers exist in Ghent.

Containers can be handled on the right bank of the Sifferdok (see "Cranes").

2 Roll-on/roll-off berths exist on the right bank of the Sifferdok, each with a fixed concrete ramp. One double berth is situated at Quay No. 101/102 and has a ramp on each side of 20 m. width.

Fruit Terminal at Sifferdok Dock, Quay 100 with discharge capacity of 4,000 cartons per hour.
TANKERS: There are 3 tanker berths for seagoing vessels, 2 owned by Texaco in the Petroleum Dock and 1 owned by Ghent Tanking Co. in the Rodenhuizedock. Each berth can accommodate ships of 70,000 tons with a draft of 12.25 m. maximum.

Texaco have load/discharge lines of 10 in., but all kinds of fittings are available. They also have 2 tanks for the reception of dirty ballast (120,000 bbls.) and 2 tanks for the reception of oil residue (10,000 bbls.).

The diameter of load/discharge lines at the jetty operated by Ghent Tanking Co. is 8 in. No tanks for ballast or slop discharge available. Vessels to discharge with own pumps.

BRIDGES: There are 3 bridges across the Ghent/Terneuzen Canal, namely at Sluiskil, Sas-van-Ghent and Zelzate. They open day and night, on signals by Pilots.

High tension cables cross the canal at the Rodenhuize and Langerbrugge power-stations. Maximum air draft permitted: 48.90 m.

STEVEDORES: Will be advised by Agents of ETA. Gangs must be ordered by noon in order to commence at 0600 hrs. next working day (morning shift); by 1700 hrs. to commence at 0750 hrs. next morning (normal working day); by 0700 hrs. to commence at 1400 hrs. same day (afternoon shift); by 1300 hrs. to commence at 1325 hrs. (half working day).

MEDICAL: Agents to be advised by radio or cable if urgent medical assistance required. Ample hospital facilities available.

DENSITY: Water in the docks and the Ghent-Terneuzen Canal is practically fresh.

FRESH WATER: (For seagoing vessels). Supply by barge. Within normal working hours at 230 Fr. per cu.m.; outside normal working hours at 245 Fr. per cu.m., with a supplement ranging from 2.785 Fr. to 5.570 Fr. Minimum of 10 cu.m. always charged. Rate of delivery: ±40 t.p.h.

FUEL: All grades are delivered either by barge or truck. At least 24 hours notice required. Supplement on Sunday 8.355 Fr.

REPAIRS: Practically all kinds of deck and engine repairs are possible. Radio and electronic apparatus can also be repaired.

DRY DOCKS: There are 2 dry docks for ships with following dimensions.

(1) length: 120 m. breadth: 13 m. draft: 5 m.
(2) length: 70 m. breadth: 11 m. draft: 3.90 m.

SURVEYORS: All major Classification Societies have branch offices in Antwerp.

GANGWAY/DECK WATCHMEN: Not compulsory, but recommended. Cost per watchman: Fr. 4.087 (morning shift), Fr. 5.053 (afternoon shift).

HATCHES: Opening and closing is normally done by crew, if not otherwise specified by Charter-Party.

CUSTOMS ALLOWANCES: 200 cigarettes or 50 cigars or 250 gm. tobacco or 100 cigarillos. Wine is practically free. Spirits, one opened bottle per crew member.

CARGO GEAR: Either shore or ship's gear may be used. Public property: 85 cranes with lifting capacity from 2.5 to 15 tons. Two floating cranes of 25 tons. Two multipurpose cranes of 40 tons. Two container gantry cranes of 55 tons. Private property: 39 cranes and 27 bridge-cranes of 15 tons.

REPATRIATION: All arrangements for crew changes and repatriation can be made.

AIRPORT: Brussels or Antwerp.

TIME: Summertime, GMT plus 2 hours, from beginning of April to end of September. Otherwise, GMT plus 1 hour.

HOLIDAYS: New Year; Easter Monday; Labour Day (1st May); Ascension; Whit Monday; National Day (21st July); Assumption (15th August); All Saints (1st November); Armistice (11th November); Christmas Day. Work on these days possible at special overtime rates.

POLICE/AMBULANCE/FIRE: Dial 900 for any emergency. Dial 906 for Police assistance. Harbour Master's Office: 51.04.57 or by VHF, Channels 5 and 11.

TELEPHONES: Only placed on board visiting warships.

SERVICES: All kinds of special services are available, e.g. tank-cleaning, reception of waste oil, discharge of tank-washings or slops, compass adjusting, etc.

SHORE LEAVE: No restriction of any kind. Seaman's book is sufficient.

BANKS: *Banks near to the Port:*

Bank Brussel Lambert — open from 0900 hrs. until 1230 hrs.
Muidepoort 8 — 1400 hrs. until 1600 hrs.
9000, Ghent — Friday until 1700 hrs.
Tel: 51.02.39

Kredietbank — open from 0900 hrs. until 1230 hrs.
Doorzelestraat 7 — 1400 hrs. until 1630 hrs.
9000, Ghent
Tel: 25.61.41

Generale Bankmaatschappij — open from 0900 hrs. until 1230 hrs.
Stapelplein 31 — 1400 hrs. until 1600 hrs.
9000, Ghent — Friday until 1700 hrs.
Tel: 23.13.86

A.S.L.K. — open from 0900 hrs. until 1230 hrs.
Voormuide 39 — 1330 hrs. until 1600 hrs.
9000, Ghent — Friday until 1830 hrs.
Tel: 25.62.06 — Saturday 0900 hrs. until 1200 hrs.

SHIPMASTER'S REPORT: July 1983.

Sifferdok: The berth we were allocated in 'Schepen Sifferdok' (the top corner as shown on the Chart, Berth Nos. 95, 94, 93) has insufficient water alongside to take a ship with a recommended draft of 12.25 m. We arrived at this berth on the night of 11th July, with a draft of 12.25 m. and could not approach nearer than 5 m. forward and 10 m. aft and the ship lay at an angle until sufficient cargo had been discharged by long reaching shore cranes to enable the vessel to come alongside properly.

The Port Booklet states that the maximum water in the dock is 13.5 m. and the maximum permitted draft of vessel is 12.25 m. It is not possible to berth at that draft. Soundings taken by hand lead indicated depths of 36 ft. – 39 ft. at 5 m. off the quay and future callers at this port should be aware of this problem should they be allocated this berth in Sifferdok. Pilots maintained that the situation had been like this for many years.

(Editor's Note: March 1986. Depth now restored to 12.5 m. at Quays 93-94-95).

Terneuzen: Terneuzen locks to come into the canal system to Ghent, authorities are extremely strict on the draft being 12.25 m. or less. i.e. They are critical about the draft here and Masters should be warned when loading max. cargo for Ghent not to go over 12.25 m.

AUTHORITY: Havenbedrijf Der Stad Gent, Vliegtuiglaan 1, B-9000, Gent. *Tel:* (091) 51 04 57. *Telex:* 11460. *Contact:* Captain A. De Wilde, Director General.

AGENT: See "Antwerp".

LIEGE: 50.38 N. 05.35 E.

APPROACHES: Depth on Albert Canal from Antwerp to Kanne, 3.2 m., and from Kanne to Liege, 3 m. Depths on River Meuse range from 2.4 m. at Namur to 3 m. in Liege. Merksem Bridge on Albert Canal, 6.7 m. air draft and Arches Bridge on River Meuse has 6.8 m. air draft at normal times. At times when water is high make enquiries at the "Office de la Navigation" (Tel: 041-67.70.48).

MAX. SIZE: *Largest Vessel:* LOA 97.2 m. Max. beam 11.7 m. Max. draft 1.8 m. – 2.8 m.

BERTHING: 22.1 km. of public quays; 8 km. of private quays; port facilities at Monsin are now operational. One sheltered dock, 110 m. long, 26 m. breadth equipped with 4 warehouses, 10,000 sq.m. total storage area, good road and rail connections. 170 berth marina.

Ro/Ro Facilities: Ramp at the Port de Seraing for loads up to 1,200 tonnes.

BULK HANDLING FACILITIES: All quays have facilities to load and discharge bulk cargoes. Silos for storage of sand and gravel also available.

TANKERS: Facilities at Wandre. Storage capacity of 240,000 cu.m.

Liquefied Gas Terminals: Facilities for storage (6,650 cu.m.) and distribution of butane and propane.

CRANES: 110 gantry and mobile cranes.

FRESH WATER: Available.

AIRPORT: At Bierset, distance 20 km.

DEVELOPMENTS: Albert Canal is being improved.

AUTHORITY: Port Autonome de Liege, Quai de Maestricht 14, B-4000 Liege, Belgium. *Tel:* (041) 235907/9. *Telex:* 42656 Port Lg B. *Contact:* R. Planchar, General Manager. R. Janssens, Business Manager. A. Lejeune, Harbour Master.

NIEUWPOORT: 51.09 N. 02.43 E. (See Plan)

DOCUMENTS: Immigration requires:

- Ship's Papers
- 2 Crew Lists
- 2 Passenger Lists
- Passport or Seaman's Books

PILOTAGE: Compulsory. Pilot station at inner end of West Pier.

ANCHORAGES: Good anchorage available in roads.

MAX. SIZE: Largest vessel 82 m. LOA, 5 m. draft.

VHF: Pilots operate on Channel 9.

TUGS: No tugs available.

BERTHING: Harbour entrance formed by two parallel piers running N.W. – S.E. giving access to inner harbour through straight channel. Wharf of 1,200 m. length. Depth in channel and harbour 3 m. at MLWS. Tidal range 4 m. – 5 m.

Yachting harbours with a capacity of 2,000 yachts.

CRANES: 3 ton and 5 ton cranes available.

MEDICAL: Hospital facilities at Veurne (10 km.).

FRESH WATER: Available.

FUEL: Light and heavy gas oil available. No coal.

REPAIRS: Small repairs only.

AIRPORT: Middlekerke, 10 km., distant.

AUTHORITY: Maritime Commissioner (Harbour Master), Langestraat 89, 8450 Nieuwpoort, Belgium. *Tel:* 058-233045. *Contact:* The Harbour Master.

OSTEND: 51.14 N. 02.55 E. (See Plan)

DOCUMENTS:
2 Crew Lists or Passenger Lists.
4 Cargo Manifests.
2 Copies Bills of Lading.
3 Freight Lists prepared by Agents.
2 Customs Provision Lists prepared by Agents.
General Declaration prepared by Agents.
Customs Declaration outward bound prepared by Agents.

PILOTAGE: *(a)* From Pilot boat between "S.W. Akkaert" and "A.1" lightbuoys. Black hull, white number forward on both sides of hull, yellow funnel black top. Displays by day at top of mast, red square flag with letter "P" in white; by night lights prescribed by International Regulations. Contact pilot boat: Channel 6 VHF. Morse or flag signal: G.8. In low visibility: sound signal G.8 to be made at least 3 seconds after usual fog signal. Pilot boat answers with sound signal "H" at least 3 seconds after sounding prescribed fog-signal.

Anchorage awaiting Pilot: Between S.W. Akkaert, N.E. Akkaert and A.1 Lightbuoys. Depths at least 18 m. MLLWS. Advice from pilot boat VHF Channel 6. If Pilot boat not on station, shipping informed by Ostend Radio in radiotelephonic frequency 2761 kHz (108 m.) announced on 2182 kHz (137 m.) on following hours: 0103 – 0803 – 1303 – 1603 and 2103 GMT.

(b) From Pilot Station Ostend. ETA to "Pilot Station Ostend" via "Radio Ostend" at least 2 hours before arrival. Harbour Pilot boat will meet as far as Lat. 51° 15′ 30″ N., Long. 2° 30′ E. Pilot boat shows by day: red square flag white "P"; by night: international prescribed lights. Anchorage: Lat. 51° 15′ 30″ N., Long. 2° 30′ E. Depths: at least 7 m. MLLWS. Pilot Station Ostend operates VHF Channel 9 (only for Pilotage matters).

RESTRICTIONS: Any restrictions imposed are shown on mast of signal station at end of Eastern harbour entrance pierhead.

MAX. SIZE: Entrance of lock to Commercial Docks restricted to max. length 124 m., max. beam 57 ft. 6 in. and draft max. 24 ft. Entrance to lock of Fishing Port restricted to ships with max. length 90 m., max. beam 50 ft. and max. draft 23 ft. Harbour channel restricted to 30 ft. draft.

HEALTH: Pratique obtained from Belgian Pilot. Any advice on health matters also obtainable from Pilot services.

RADIO: Ostend Radio – OST.

TUGS: Government tug 1250 h.p. available, meets outside harbour. Tug lines optional; (if demanded from Government tug) charge according to tariff (59/701100).

BERTHING: According draft. Any specific instructions given by Harbour Pilots or Agents.

BULK HANDLING FACILITIES: Ro/Ro berths in timber dock and on deep water quay with facilities for loading and unloading containers.

STEVEDORES: ETA advices week-days before 0600 hrs. For Saturday or Sunday work advise before 1500 hrs. Fridays. All stevedoring arrangements made by Agents.

MEDICAL: Advance notice to Agents for medical attention 6 hr. before arrival. Hospital services available. Medical information can be obtained on R/T via Ostend Radio.

TANKERS: Only small coastal tankers. Only discharge in Fishing Port. Max. length 285 ft., max. beam 50 ft., max. draft 23 ft., or Ostend-Bruges canal, max. length 312 ft., beam 57 ft., max. draft 21 ft. (16th May – 16th October); max. 18 ft. (16th October – 16th May).

FRESH WATER: Available quayside in docks. Rate delivery approx. 15 t.p.h.

FUEL: All grades.

GANGWAY/DECK WATCHMEN: Not necessary. If required, cost approx. ±5,500 frs. per shift of 8 hrs.

OPENING/CLOSING HATCHES: Normally carried out by crew. Can be done by stevedores but will then be charged.

CERTIFICATES: Load Line, Tonnage, Radar and Radio Certificates.

TOBACCO ALLOWANCE: 200 cigarettes or 100 cigarillos or 50 cigars or 250 gm. tobacco. Fresh supply weekly.

WINE AND SPIRIT ALLOWANCE: 1 litre per man in opened bottles.

CARGO GEAR: No additional requirements.

CONSULS:
Austria
Chile
Denmark
Finland
France
Germany (F.R.)
Great Britain
Guatemala
Monaco
Norway
Portugal
Sweden
Uruguay

REPAIRS: All types deck and engine repairs.

DRY DOCKS: In Fishing Port 2 slipways available, one 1,000 tons deadweight, the other 500 tons; one of approx. 3,000 tons is planned. One floating dry dock of 5,700 tons in Government berths.

REPATRIATION: Through Immigration Officers and Maritime Police, Tel: 500925 and 500926.

AIRPORT: 3 miles from port, served by regular airlines.

TIME: Local time GMT plus 1 hour all year round.

HOLIDAYS: New Year (1st Jan.); Easter Monday (changeable); Labour Day (1st May); Ascension Day (changeable, in May); Whit Monday (changeable); Independence Day (21st July); Our Mary Ascension Day (15th Aug.); All Saints' Day (1st Nov.); Armistice Day (11th Nov.); Christmas Day (25th Dec.). Cargo work can be arranged on those days at sufficient notice.

POLICE/AMBULANCE/FIRE: Police Tel: 701111 and 701057; Ambulance Tel: 900; Fire Tel: 701010 and 701086.

TELEPHONES: No arrangements for placing on board.

SERVICES: Compass adjusting, radio and radar repairs.

DEVELOPMENTS: New deep water quay with max. depth 8.0 m. LLW, to be increased to 10 m. in the near future. Fresh water alongside.

AUTHORITY: Stad Oostende, Havendirectie, Slijkensesteenweg 1, 8400 Ostend. *Tel:* 059-321669, 059-321687. *Telex:* 81281 (Osthav B). *Contact:* Ghys Raphael, Harbour Master – Director.

ZEEBRUGGE: 51.20 N. 03.12 E. (See Plan)

BRUGES: 51.13 N. 03.13 E.

PORT LIMITS: A line drawn between the seaward end of the East and West jetties.

DOCUMENTS:
1 List of Dangerous Goods.
2 Crew Lists or Passenger Lists.
4 Cargo Manifests.
2 copies Bills of Lading.
3 Freight Lists (prepared by Agents).
2 Customs Provision Lists (prepared by Agents).
1 General Declaration (prepared by Agents).
1 Customs Declaration, outward bound (prepared by Agents).
Certificate of Registry.
Tonnage Certificate.
Bill of Health.
Derat Certificate.
Oil Record Book.
Certificate of Insurance in respect of Civil Liability for Oil Pollution Damage.
Safety Certificates.

PILOTAGE: Compulsory. Notice of ETA and request for a Pilot must be made at least 6 hours in advance to "Pilotage Oostende", through Oostende Radio, Channel 16. Message to contain ETA Pilot, draft and destination. Direct calls to pilot vessel should be made on Channel 6.

The Pilot boards the vessel near the A1 Buoy (14 miles N.W. of the port, co-ordinates Lat. 51° 22.5′ N., Long. 02° 53.5′ E.) or for small vessels near the Zand-1 Buoy (Pas van het Zand).

From Zand-1 Buoy (entrance "Pas van het Zand"). Applications to pilot station "Wandelaar", via Ostend Radio, VHF Channel 16.

Pilotage Service Addresses: Ostend: Sir Winston Churchillkaai 2, B-8400 Oostende. Tel: 059-70.77.01/02/03.

Zeebrugge: Loodswezenstraat 30, B-8380 Zeebrugge-Brugge 5. Tel: 050-54.50.72.

ANCHORAGE: Safe anchorage in Zeebrugge Roads for vessels drawing up to 9.70 m. Vessels drawing more than 9.70 m. will be anchored if needed around "A1" Buoy.

RESTRICTIONS: Vessels with a draft of over 11.0 m. are dependent on tide for entry.

Access Channel: "Pas van het Zand", beaconed; 4,600 m. long, 300 m. wide; depth Z (−12 m.) LLWS over a width of 300 m.; direction N.W./S.E.

By the end of 1986 a continuous depth of Z (−12.50 m.) will be available from "A1 Buoy" to and into Zeebrugge Harbour.

TIDES: *Tidal Currents:* Rising tide: direction S.W./N.E., average velocity: 2 knots. Outgoing tide: direction N.E./S.W., average velocity: 2 knots.

Tidal Differences: Mean tide: +4.35 m. at HW; +0.70 m. at LW; +4 m. from 50 minutes before HW to 1.20 hours after HW; +3 m. from 1.40 hours before HW to 2.50 hours after HW.

Spring tide: +4.70 m. at HW; +0.40 m. at LW.

Neap tide: +3.82 m. at HW; +1.05 m. at LW.

MAX. SIZE: Vessels up to 350 m. and 55 m. beam can be accepted. Max. draft is 14 m. (keel clearance 1.80 m.).

For Bruges: Max. beam 19 m., max. draft 5.90 m.

HEALTH: Pratique is normally given at pilot station provided health situation satisfactory. Any advice on health matters also obtainable from pilot service.

RADIO: Ostend Radio (VHF Channel 16) used for all messages.

VHF: Pilotage: A1 Buoy on Channel 6, port entrance on Channel 9 (continuous watch). Port Control: (V.T.S.): Channel 71 (continuous watch). Lockmaster and inner port: Channel 13 (continuous watch). Tugs: Channel 71 (continuous watch) working on Channel 71, 13 and 8.

TUGS: Tugs join the vessel near "Zand-Buoy".

Tugs available on 1 hour's notice; extra tugs available on 4 hours notice.

From "Zand-Buoy" 3 tugs are permanently available ranging from 1,500 h.p. to 4,000 h.p. (17 to 38 tons bollard pull). Applications to Zeebrugge Port Control VHF Channel 71.

Towage service address: Unie van Reddings-en Sleepdiensten (U.R.S.) c/o Ruys & Co., Leopold II dam, 8380 Zeebrugge-Brugge 5. Tel: 050-54.42.60. Telex: 81332.

Salvage: Via Ostend Radio, Via Port Control VHF Channel 71; or via URS.

BERTHING FACILITIES: Outer Harbour:

Harbour Mole:

Quay No.	*Length* (m.)	*Depth at LLWS* (m.)
1, 2, 3	450	10.5
3, 5, 6 (part)	375	9.0
6 (part), 7, 8, 9, 10	746	7.2

Cranes: 6×8 ton, 2×8 – 16 tons and 2×3 ton.

Quay No. 6 and 7 used by North Sea Ferries. Two pontoons each with a ramp connected to a central platform. Two Ro-Ro ships can be loaded/discharged at the same time.

Car Ferry Terminal: Quay Nos. 11, 12 – 2 public ro/ro berths. Quay No. 13 – 1 private berth.

Ramps: 2×53 m. Width of the bridge, including 2 separate protected footpaths for passengers: 7.10 m. Max. load capacity: 400 kg./sq.m. (heavy articulated loads to a maximum of 60 tons with an axle load of 20 tons over 4 wheels).

Berths: 2, on both sides of a line of 6 dolphins with a diameter of 10 m., linked with a gangway length: 145 m. Water depth: 7 m. at LLWS.

Ships: Max. length allowed, no limitation. Max. beam allowed: 21.20 m. with the ship's axis in line with the ramp axis (ships of 33 m. beam, however, can berth obliquely, or out of axis).

Western Peninsula: Area: 18 ha. Total quay length: 1,615 m., of which 1,525 m. with a water depth of −13 m. (LLWS), quay height 8 m. above LLWS.

West Quay: Quay No. 13: 90 m. of connecting quays. Quay No. 14, 15: 725 m. for Ocean Container Terminal Zeebrugge (15 ha). Gantry cranes: 2×45 ton, 1×30 ton. Storage area 10,000 TEU. Straddle carriers: 10×35 ton. Forklifts 15×2 ton - 30 ton, 1 trailer tractors, 2 tractors, slots for reefer container.

North Quay: Quay No. 16: 205 m. for OCZ and waiting quay.

East Quay: Quay No. 17, 18: 595 m.; Quay No. 17 used by Sea-Ro. 2 Ro-Ro berths equipped with MacGregor pontoons (50 m.×33 m.). Quay No. 18 for discharge and loading of refined petroleum products.

Quay No. 18A: Jetty for lighters with refined petroleum products.

The Train Ferry Terminal (T.F.T.): Area: 4 ha. Quay No. 19: Berth for train ferry ships. Length: 195 m. Width: 25 m. Water depth: −6.70 m. LLWS. 1 ramp, length: 50 m. Width: 9.6 m. Max. size: 193 m. LOA, 18.5 m. width. Draft 4.0 m.

The Short-Sea Container Terminal (S.C.T.): Area: 9.5 ha. Quay Nos. 21, 22, length 270 m. Terminal for loading/discharging container vessels. Water depth: −7 m. LLWS. Quay height: 7.30 m. above LLWS.

2 berths for container vessels. 2 gantry cranes (Peiner) of 30 ton SWL. 2 Peiner straddle carriers (30 tons). Fork lift trucks and tractors. Capacity 2,200 TEU's.

The Swedish Quay: Area: 12.4 ha. Quays: No. 41, 42, 43 and 44. Length 825 m. Water depth: −14 m. to −18 m. LLWS. Quay height: 8 m. LLWS. Includes Sea-Ro terminal.

Sea-Ro Terminal: Area: 12.4 ha. Equipped with ramp (Quay No. 44). 1 mobile crane (40 tons). Fork lifts (5 tons – 30 tons). Trailers (up to 60 tons).

The Britannia Harbour: (former working harbour). Quay No. 52 and 53 equipped with a pontoon for Ro-Ro vessels. Water depth −8 m. to −5 m. LLWS.

Other Installations: Bunkering station: 5 tanks, total capacity: 20,450 cu.m. (bunkering from lighter, however, is possible on all quays).

Gas freeing station (near Bunkering station), capacity : 4,000 cu.m. in gaseous nitrogen.

Maritime station: Equipped for the embarkation and disembarkation of cruise-ship passengers (hall, banking services, refreshment rooms, etc.).

Tank storage for molasses, 10 tanks with a total capacity of 87,350 tons.

Inner Port at Zeebrugge: The water level in the inner port is at Z (+3.50 m.) LLWS.

Pierre Vandammelock: Length: 500 m., width 57 m., sill depth: Z (−15 m.) LLWS. The water depth in the lock is (15 m. +3.50 .) = 18.50 m.

The Old Sealock: Length: 210 m., width: 19.70 m., sill depth: −5.50 m. LLWS. The usable water depth in the lock varies between 5.50 and 9 m.

The Connection Dock: Length: 3,200 m. from P. Vandaamelock to Baudouin Canal. Width: 210 m. at sealock exit, widening to 400 m. in first section, 600 m. in front of East quay of North inlet basin, and again 400 m. in front of West quay of same basin to Baudouin Canal Depth: from sealock to North inlet basin Z (−15 m.) from North inlet basin to Baudouin Canal Z (−5 m.)

The North Inlet Basin: Length: 1,130 m. with a width which varies between 275 m. (South end) and 225 m. (North end). Depth Z (−11 m.)

Quays: East Quay Nos. 101, 102, 103, 104: Length 830 m. Belgian New Fruit Wharf 400 m. quay (101, 102) has 2 fully insulated sheds. Sea-Ro Terminal for new cars (Quay No. 103) equipped with a Ro-Ro pontoon.

Cranes: 2 electric travelling cranes 8 – 16 ton, 2 mobile Gottwald cranes 8 ton, mobile Gottwald crane 20 ton and 2 cargoveyors.

West Quay Nos. 107, 108, 109, 110, 111: Length 1,130 m. Combined Terminal Operators (CTO) Quay Nos. 107, 108, 109 (part) has 600 m. quay. Equipped with a Ro-Ro pontoon and a general cargo warehouse (6,000 sq.m.), forklifts 3 – 42 tons, tugmasters, flatbeds, bagging installation. Zeebrugse Behandelings Maatschappij (ZBM) has 530 m. quay (No. 109 part, 110, 111).

Cranes: 1 electric crane 40 ton, 3 electric cranes 8 – 16 ton, 2 mobile Gottwald cranes 40 ton.

The Prince Philip Dock: Length: 560 m., width: 200 m., depth: 8.40 m.

North Sea Ferries (disused): Ro-Ro platform length 24 m., width 7.8 m. max. load 60 ton, 20 ton per axle.

The Former Ferrydock: Length: 500 m. Width: 130 m. Depth: 8 m.

The Baudouin Canal: Length between the old sealock and the bridge at Dudzele: 5.5 km. Width at water surface: 70 m. Width at bottom: 22 m. Depth: 6.40 m. Quays, with a length of 450 m., in front of the coke and glassworks.

The Turning Area behind the Old Sealock: Length: 500 m. Width: 175 m. Depth: 8 m.

Inner Port at Bruges:

The Baudouin Canal: Length between the bridge at Dudzele to the entrance of the West dock: 4,950 km. Width at water surface: 125 m. Width at bottom: 77 m. Depth: 8 m.

The East Dock: Length: 370 m. Width: 90 m. Depth: 8 m.

The West Dock: Length: 550 m. Width: 90 m. Depth: 8 m.

The Industrial Dock: Length: 1,080 m. Width: 125 m. Depth: 8 m.

The Junction Lock: Length: 115 m. Width: 12 m. Sill depth: 4 m.

Quays: Cranes: 2×5 ton, 2×8 ton.

Berth No.	*Dock*	*Length*
1 – 2 – 3 (Quenastkaai)	East Dock	389 m.
4 – 5 (Kaap Hoornkaai)	East Dock	228 m.
6 (Albertakaai)	East Dock	148 m.
7 – 8 – 9 (Graaf Visartkaai)	West Dock	315 m.
10 – 11 –12 – 13 – 14 (Julius Sabbekaai)	West Dock	520 m.

BULK HANDLING FACILITIES: *Cereals:*

Borlim nv: Head Office: Lanceloot Blondeellaan, B-8380 Zeebrugge-Brugge 5. Tel: 050-54.48.61.

Storage capacity: 9 silos, total capacity: 35,000 tons. Discharge capacity: 150 t.p.h. Loading capacity: 300 t.p.h.

DENSITY: 1025.

FRESH WATER: Available from the berths, rate 30 t.p.h.

FUEL: All grades of fuel and lubricants available. Can be supplied ex-wharf or by barge provided advance notice given. There are 5 tanks (total capacity 20,450 cu.m.).

Bunker Station: Belgische Bunkeroliemaatschappij, Administrative Office: Wetstraat 33, B-1040 Brussels.

Head Office: Zeebrugge Shipping and Bunkering Co., Minister Beernaertstraat 9, B-8380 Zeebrugge-Brugge 5. Tel: 050-54.42.60. Telex: 81.138.

The bunkering station situated at the end of the mole delivers all grades of marine fuel. Supplies can be effected directly ex-wharf (Quays Nos. 1 and 2) or by barges and tank lorries throughout the port. The depot is offering 24 hour service.

Operators are Messrs. Belgische, Bunkeroliemaatschappij.

STEVEDORES: 24 hours notice required to arrange gangs.

MEDICAL: Hospital at Bruges, Blankenberge and Knokke. Facilities available without prior notice.

TANKERS: Length of quay: 595 m. with depth 13.1 m. at LLWS. Discharging facilities for Zeetank.

Zeetank: Discharging rate: gasoil 500 t.p.h., fuel 800 t.p.h. Manifold 136 m. from South end of quay.

Additional Storage: Refined products:

Company	*No. of Tanks*	*Total Capacity* (cu.m.)
Zeetank	11	146,000
Petrover	4	12,500
Detavernier	3	5,500
L. Francois	2	4,000
Groep Rosseel	2	4,000
Lambert & Dauw	3	3,500
Traen Gebr	9	10,000
Glue		
Merckx	–	4,200
Molasses		
Tameco	–	29,700

Cleaning Station: Euroservices nv, Minister Beernaertstraat 9, B-8380 Zeebrugge-Brugge 5. Tel: 050-54.42.61. Telex: 81.138.

The nitrogen plant operated by Euroservices nv offers gasfreeing and cleaning facilities for liquid gas carriers. The station is equipped with a ground flare and provides the necessary equipment to change grade with the shortest delay. 24 hour service is guaranteed (Quay No. 1).

Fire Fighting Equipment: The ship's fire fighting equipment must be kept ready for use at all times whilst the ship is at the jetty. Fire hoses must be stretched forward and aft, and connected to the fire main, complete with nozzles and ready for immediate use. The vessel's fire fighting water supply must always be available with, if practicable, 1 pump maintaining pressure on the main.

It is also recommended that during unloading operations, 2 charged fire extinguishers should be placed in the immediate vicinity of the manifold, one on each side.

Fire Fighting Outline: In all cases of fire, either on the ship or on the jetty, first aid fire fighting will be undertaken by the personnel on the scene with whatever equipment is available. The direction of all fire fighting aids including tugs fire fighting equipment etc. will be exercised by the Master and/or Senior Texaco personnel present until the arrival of the fire brigade, when overall direction of the fire fighting will be assumed by the senior officer of the fire fighting brigade present. Senior Texaco personnel present will then provide advice and assistance where possible to the fire brigade.

GANGWAY/DECK WATCHMAN: Available. Only required when handling explosives.

OPENING/CLOSING HATCHES: Normally by crew.

CERTIFICATES: Registry, tonnage and usual certificates.

CUSTOMS ALLOWANCES: Each crew member 200 cigarettes or 200 gm. tobacco. Officers: 1 open bottle of spirits.

CONSULS: Norway, Sweden, Netherlands.

REPAIRS: *Ships' maintenance and repairs:* Slipway on the transverse quay of the Prince Philip Dock in the inner port at Zeebrugge.

Management: MBZ. Operated by: nv Valcke Freres, Tijdokstraat 26, B-8380 Zeebrugge-Brugge 5. Tel: 050-54.41.79. Telex: 81.426.

Actual maintenance of ships is done by the company commissioned by the shipowner.

Slope: Length: 248 m., width of the cradle: 17.50 m., capacity: ships up to 1,000 tons.

Transfer area: Length: 85 m., width: 25 m.

Equipment: Tower crane: Lifting height: 30 m., max. reach: 30 m., lifting capacity: 1.8 tons with jibs at 29 m., 6 tons with jibs at 11 m.

Several ships can use the slope and the transfer area simultaneously.

Area of the adjacent grounds: 3.8 ha., which can be used by various ship repairers.

SURVEYORS: Available from Antwerp.

AIRPORTS: *Ostend Airport:* Situated at 30 km. from Bruges and Zeebrugge. Especially suited for regular daily flights to the U.K. (Gatwick and Southend). Also charters and private business flights.

Brussels Airport: 120 km. from Bruges and 135 km. from Zeebrugge (to be reached via E5-motorway and Circular road R1 around Brussels) or by rail (1.5 hour ride).

More than 50 airline operators have landing rights at Brussels Airport. An average of 200 take-offs and landings take place every day, of which 80% to and from European airports and 20% to and from outside Europe. These flights are either direct or indirect via the closest transit airports of Amsterdam, Paris, London, Frankfurt.

CARGO GEAR: Discharge of general and containers is usually by shore gear. Heavy lifts by mobile crane or ship's gear.

REPATRIATION: Brussels Airport. All facilities exist for changes of crews and repatriation of seamen.

TIME: GMT plus 1 hour. Summertime GMT plus 2 hours.

HOLIDAYS: None.

POLICE/AMBULANCE/FIRE: All emergency services are available through the Port Control, VHF Channel 71. Ambulance and Fire: Tel: 900. Police: Tel: 901.

TELEPHONES: This service is available aboard ships at all berths by prior arrangement through the Agents.

SHORE LEAVE: When Immigration and Customs requirement have been satisfied there is no restriction.

IDENTIFICATION CARDS: Seaman's Book is sufficient.

REGULATIONS: Port regulations and regulations concerning the handling of dangerous goods and explosives must be observed.

DELAYS: None.

SHIP SUPPLY SERVICE: *Off-Shore Facilities:* Facilities for supply of fresh water or stores and for transport of personnel by sea-going tugs available from Zeebrugge.

Contact: Ruys & Co. Zeebrugge. Tel: 050-54.42.60. Telex: 81930.

DEVELOPMENTS: A new LNG terminal, length of jetty 320 m., depth (−11.5 m.) LLWS will be finished Summer 1986.

A deep draft bulk handling quay with a water depth of 18.5 m. will be built in the inner port of Zeebrugge.

AUTHORITY: Maatschappij van de Brugse Zeevaartinrichtingen NV (MBZ), Louis Coiseaukaai 2, B-8000 Brugge, Belgium. *Tel:* 050-44.42.11. *Telex:* 81201 Porbrg B. *Cables:* Ports Brugge. *Contact:* B. M. Michiels, General Manager. R. van Havere, Harbour Master.

Harbour Master's Office: Carferry Building 301, Doverlaan 7, B-8380 Zeebrugge-Brugge 5. *Tel:* 050-54.42.63, 050-54.41.70 (Port Control), 050-54.69.29 (Port Administration) *Telex:* 81.205 Porzrg B.

Sealock Operations: Kapitein Fryattstraat 1, B-8380 Zeebrugge-Brugge 5. *Tel:* 050-54.40.12.

AGENT: See "Antwerp".

NOTES

Please also advise Shipping Guides Ltd.

Belize

BELIZE: 17.29 N. 88.11 W. (See Plan)

PORT LIMITS: Usually upon arrival at English Caye Pilot Station for vessels arriving from North and East and at anchorage in Belize Harbour for vessels arriving from South inside the reef.

DOCUMENTS:

Crew Lists – 5 copies for local use plus 10 Spanish copies for Consular Clearance.

Passenger Lists – 5 copies for local use plus 10 Spanish copies for Consular Clearance.

Stores List – 3 copies for local use plus 10 Spanish copies for Consular Clearance.

Manifests – 8 copies.

Customs Documents – Clearance for last port and crew declaration.

Health Documents – International Declaration of Health plus one copy crew vaccination list.

Ship's Papers and Certificates should be available on request.

PILOTAGE: A Pilot is always on station at English Caye. Contact can be made with the pilot station on VHF Channel 16. Vessels consigned to Eurocaribe can make contact on Channel 16 VHF.

ANCHORAGES: Depths in harbour anchorage area vary due to a natural slope; for example, a vessel drawing 14 ft. can anchor within 0.25 miles; 16 ft. 0.5 miles; 20 ft. 1 mile and so on Southward. Masters should refer to Pilot for this information.

MAX. SIZE: Size and length, within reason is not a problem. Tankers bringing oil to the Esso storage depot secure to buoys fore and aft. Max. draft 19 ft. 6 in.

PRATIQUE: Granted by Customs after boarding in harbour or at berth.

RADIO: Most ships' Agents man their own radio stations and usually stand-by on Channel 16 VHF with alternative Channels 6, 11, 12, 13 and 14. Eurocaribe on VHF Channel 16 working 6, 11, 12, 13 and 14.

TUGS: Tugs are not normally necessary but small tugs are available.

BERTHING: Main berth – length 220 ft., depth 17 ft. (approx.). Ro-Ro berth is 70 ft. wide, vessel lies alongside dolphins.

STEVEDORES: Gangs usually require 2 hours notice during normal working hours. Work rates average between 3 and 10 tons per gang hour.

MEDICAL: Hospital facilities are available.

TANKERS: Undersea pipe-line 8 in. in diameter.

Hand-pump discharging rate 250 to 300 g.p.m., also gravity flow. Normal discharge rate 2,000 barrels per hour.

DENSITY: Density varies with outflow from rivers during wet season (July-December).

FRESH WATER: Very scarce and expensive if vessel cannot berth at dock.

FUEL: Light diesel oil 45/48 available subject to Government Approval. Can be supplied at buoys with 8 in. dia. pipe (reductions to 4 in. available or by barge). Also available by truck if vessel able to dock.

FIRE PRECAUTIONS: None.

CONSULS:	Belgium	Lebanon
	Denmark	Nicaragua
	El Salvador	Norway
	Holland	Sweden
	Honduras	Germany F.R.
Embassies:	France	Panama
	Mexico	United States
High Commission:	British	

REPAIRS: Only small minor repairs possible.

SURVEYORS: Lloyds and A.B.S.

GANGWAY/DECK WATCHMEN: Not required.

HATCHES: Stevedores open and close hatches except McGregor type.

CUSTOMS ALLOWANCES: 200 cigarettes plus 1 bottle spirits (0.20).

CARGO GEAR: Ship's gear; heavy lift cranes are available up to 30 tons for vessels which can reach the dock.

REPATRIATION: Possible, regular air services to and from Miami, New Orleans, and neighbouring Republics.

AIRPORT: Belize International Airport 10 miles from Belize City.

TIME: Normally GMT minus 6 hours.

HOLIDAYS: Public Holidays: New Year's Day*; Baron Bliss Day (9th March); Good Friday; Holy Saturday; Easter Monday*; Columbus Day (12th October); Labour Day* (1st May); Commonwealth Day (24th May); St. George's Caye Day* (10th September); Independence Day* (21st September); Carib Settlement Day (20th November); Christmas Day* (25th December); Boxing Day* (26th December).

*No work whatsoever, all other days subject to overtime rates.

POLICE/AMBULANCE/FIRE: All emergencies dial 90.

EMERGENCY CO-ORDINATION CENTRE: None. Eurocaribe Ltd. have successfully handled salvage operations.

SHORE LEAVE: Possible.

IDENTIFICATION CARDS: Seaman's book sufficient.

REGULATIONS: None.

DELAYS: Discharge and loading operations occasionally delayed by weather (rain) and sometimes by shortage of equipment (trailers, etc.).

BANKS: Barclays Bank International Ltd., P.O.Box 363, Albert Street, Belize City. Tel: 7211/2. Telex: 217.

Atlantic Bank Ltd., 6 Albert Street, Belize City. Telex: 216.

Royal Bank of Canada, 60 Market Square, Belize City. Tel: 3232. Telex: 229.

Bank of Nova Scotia, P.O.Box 708, Belize City. Tel: 2601. Telex: 218.

STORING: See "Prelims".

1. Yes.
2. Vessels may store by barge during loading and discharging.
3. Yes.
4. Yes.
5. Prior arrangements must be made.
6. Possible to use riggers, however, it is best to use crew.

GENERAL: Starboard anchor usually used to make lee for operations on portside if vessel is at anchor. It is necessary for vessels to provide toilet facilities for stevedores. Feeding of Supervisors and Customs Officials is normal.

SHIP SUPPLY SERVICE: There are numerous small crafts each individually owned, which ply between the wharves and ships anchored in the harbour. These craft provide ship to shore transport of personnel, and/or essential stores and/or sick crew members.

AUTHORITY: Belize Port Authority, P.O.Box 633, Belize City, Belize, Central America. *Tel:* 2439, 2449. Contact: Mr. A. Coye, Port Commissioner and Chief Executive.

AGENT: Eurocaribe S.S. Ltd. P.O.Box 281, 14 Fort St., Belize City, Belize, C.A. Tel: 2100, 45286. Cables: "Eurocaribe Belize". Radio call sign: Eurocaribe, Belize. Telex: 224 BZ A/B Eurocarib.

NOTES

Please also advise Shipping Guides Ltd.

People's Republic of Benin

COTONOU: 06.20 N. 02.32 E. (See Plan)

PORT LIMITS: The area contained within an arc of a circle of 1 mile radius centred on the red light at the West Jetty.

DOCUMENTS: (Also see "Shipmaster's Report".) Once berthed the ship must be able to produce to the Port Authorities:

6 copies Crew List.
4 copies List of Ports of Call.
6 copies Passenger List, and passengers in transit.
3 Customs Declarations (personal effects list).
2 Maritime Declarations of Health.
3 Lists Provisions and Stores, including foodstuffs.
10 copies Manifest.
1 Bill of Lading.
1 Declaration of Arms and Ammunition.
3 Lists of Dangerous Cargo (unloading or in transit).
Also international documents of ownership and safety.

PILOTAGE/APPROACHES: Vessels must advise ETA to Port Authority "Dirport Cotonou" 24 hours prior arrival weekdays, and before midday Saturday for Sundays and before midday on day preceding holidays. Cable address pilot station "Commandant du Port, Cotonou". Telex: 5004 "Dirport Ctnou". On approach to port vessels may also call pilot station on 2182 kHz or VHF Channel 16. Permanent radio watch kept by port Coast-Guard Station. Pilot services permanent and operate night and day, Sundays and holidays, except for nights of 24th and 31st December from 1800 – 0600 hrs. Ships drawing more than 30 ft. must enter on high tide. On arrival in approaches, ships coming from West or South must steer a Northerly course in direction of lighthouse, and take Pilot about half a mile from fairway. If arriving from East, vessels should take Westerly course in direction of fairway and take Pilot about half a mile from fairway. Pilot boat is small cutter with black hull and white superstructure, by day carries flag "H" and by night carries statutory lights for pilot boats. Piloting obligatory for ships over 100 net tons.

Fairway Buoy: Position Lat. 06° 20.4′ N., Long. 02° 26.8′ E. Light-flash "A" (· –) 10 secs.

ANCHORAGES: In cases of bad weather or of waiting for Pilot, ship must anchor approx. 1 mile to South of lighthouse. Sound anchorage with sand bottom and depth 14 m. Forbidden to anchor within radius of 700 m. from red light of West Jetty.

Prohibited Anchorage: All the area to the West of the meridian of the West breakwater red light.

RESTRICTIONS: No restrictions on hours of entry or departure.

MAX. SIZE: See "Berthing" and "Tankers".

HEALTH: Free Pratique generally given by Agent.

RADIO: Advisable give Agent 72 hours notice of ETA. Thereafter re-confirm 36 hours prior arrival.

RADAR/VHF: No port radar service. VHF Channel 16. R/T 2182 kHz.

TUGS: Tug assistance performed by Port Authority of Cotonou and compulsory for every vessel over 500 g.r.t., mooring, unmooring, at berth or shifting. Extra charge for using tug's lines. Vessels with length over 100 m. require 2 tugs.

BERTHING: Berthing quay 620 m. long, 10.0 m. depth, which will accept alongside a minimum of 4 ships working together. Harbour dredged up to 11 m. below chart datum and will permit almost all sizes of ships to work safely. Railway line runs 4 m. side of quay, under ship tackles, and used only for heavy lifts. Berthing priority only given cargo ships and tankers which have specially reserved berths. Other ships berth dependent on berths available and in order of arrival. As well as 2 tanker berths there is loading berth for bulk palm-oil, one waiting berth at harbour entrance, and 4 quays with warehouses for import/export traffic.

New Quay: Length 660 m. Depth alongside 11.0 m. Two conventional berths (360 m.), one container berth (200 m.) and one Ro/Ro berth.

Facilities include a container storage area of 65,000 sq.m., 2 warehouses of 6,000 sq.m. each, 1 transit warehouse of 4,000 sq.m. and an open storage area of 60,000 sq.m.

STEVEDORES: Ship must advise Agent in advance of number stevedore teams required, and specify number of hours work required. This must be done 24 hours in advance on weekdays, and before midday Saturday for Sundays, and before midday on day preceding holidays. Loading and unloading rate: Working days – 600 tons for bagged cargo. 400 tons for other cargo. Sundays and holidays, half above rates. Days counted as 24 hours starting from first break following berthing. For ships having to handle smaller quantities, assessment of time calculated in multiples of 300 tons for bagged cargo and 200 tons for other cargo, per 12 hours. Loading and unloading operations can be carried out on Sundays and public holidays if ship's Master wishes, with exception of Labour Day (May 1st), 26th October, 30th November, 31st December and Independence Day.

MEDICAL: Well-equipped modern hospital in Cotonou.

FRESH WATER: Supplies available at all berths on quay by pipe-line of 100 mm. with reduction of 70 mm. (rate 25 t.p.h.).

FUEL: Fuel oil of 1,500 seconds viscosity available at Berth No. 1 and at the Fishing Quay. Rate 50 to 80 cu.m.p.h.

FIRE PRECAUTIONS: Port has following safety equipment: 2 tugs equipped with fire hose of 50 cu.m.p.h. 2 motor pumps of 30 cu.m.p.h., 1 draining pump of 150 cu.m.p.h. In addition special security watches are kept on dangerous merchandise in classes 1a, 1b, 1c, 1d and 111c. Normal watch up to 5 tons, double watch from 5 tons to 16 tons. Motor pump standing by from 16 – 50 tons. Tug standing by for quantities above 40 tons for inflammable liquids (flashpoint less than 55°C) and above 50 tons for other dangerous cargo.

WATCHMEN: (See "Fire Precautions".) Recommended that a watchman be on board. Can be arranged by Agents.

OPENING/CLOSING HATCHES: Carried out by stevedores

CUSTOMS ALLOWANCES: 200 cigarettes and 3 opened bottles of spirits for each crew member.

REPAIRS: Workshops for small repairs. No tank-cleaning facilities.

DRY DOCKS: Only hauling gear of 250 tons for careening small ships and trawlers.

TANKERS: 2 tanker quays for ships of 215 m. length and 31 ft. draft. (Depth at seaward berth 11.0 m.). Unloading carried out by 100 mm. pipe-line. Loading of petroleum products carried out by pumping (80 cu.m.p.h.) or by gravity (50 cu.m.p.h.). Products are aviation spirit 100/130, "Super" petrol, low-grade petrol, Kero Avtur, and gas oil.

Seme Terminal: The offshore terminal consists of 4 mooring buoys. Vessel moors on an approximate heading of 253°(T). Max. LOA 270 m. Max. draft 14.7 m. Max. size 80,000 – 120,000 d.w.t.

CONSULS:

West German Embassy	31-2967
Chinese Popular Embassy	31-4424
U.S.A. Embassy	31-2650
French Embassy	31-2224
French Consulate	31-2638

Niger Consulate	31-3334
Belgian Consulate	31-2486
Netherlands Consulate	31-3037
Consulate of Sweden and Norway	31-2433
Zaire Embassy	31–4983.

AIRPORT: 5 km. from port, served regularly by DC8 for European destinations (5 departures a week for Paris).

TIME: GMT plus 1 hour.

HOLIDAYS: January 1st; January 16th; Easter Sunday 1st April; Labour Day (May 1st) – no cargo work; 26th October; 30th November; 31st December – no cargo work; Assumption; November 1st (All Saints' Day); 25th December (Christmas); Tabaski and Ramadan at the beginning of Lunar Year (Moslem holidays).

POLICE/AMBULANCE/FIRE: Harbour Police 31-3942; First Aid 17; Hospital 31-2713 and 31-2717; Fire Brigade 18.

TELEPHONES: A telephone can be placed on board at request of ship's Master.

SHORE LEAVE: Crew must carry shore pass.

SHIPMASTER'S REPORT: 1978.

Documents: Before a vessel can be registered certain items are needed by Agents, who can send pilot boat to collect from anchorage.

	Regi-stra-tion	*Port Health*	*Police*	*Agent*	*Customs*
Crew Lists	4	1	2	2	1
Passenger List	4	1	1	2	1
Ports of Call	4	1	1	1	1

Crew Declaration	2	–	–	–	1
Animal List	2	–	–	–	1
Arms & Ammunition	2	–	2	1	1
Vaccinations List	2	1	–	–	–
Cargo Plans	3	–	–	–	–
Hatch List	2	–	–	–	–
Cargo Manifests	15 (or as many as available for photo copy)				
Dangerous Cargo	3	–	–	–	–
Health Declaration	2	1	–	–	–

Registration: There does not appear to be a firm set of priorities but some cargo can be worked at most berths while others are restricted to a single berth. Two tankers can discharge or load at the South end of the East Mole which may also be used for containers.

Radio: Cotonou Radio was erratic and, on 2182, very poor via land line to the Agency Office. VHF is available on 16, 14 and 12 with Port Control and some Agents having their own sets or use that of a vessel alongside.

Consuls: There is no British representation in Benin. All requirements can be obtained by driving to Lagos to the High Commissioner.

Developments: A 40 tonne fork lift for containers etc. has been added to the cargo gear available but there are no cranes.

Shore Leave: A Shore Pass (Visa de Passage) is required but single items are given to Senior Officers only, all others must share between 2 or 3 persons. It takes 24 hours to obtain a valid pass via Agent from Police.

AUTHORITY: Port Autonome de Cotonou, B.P. 927, Cotonou, Benin. *Tel:* 312890, 315280, 314387. *Telex:* 5004 Dirport. *Cables:* Dirport. *Contact:* A. Babadjide, Port Director.

SOCOMAR

Bermuda

HAMILTON, (incl. Freeport): 32.15 N. 64.50 W.

(See Plan)

NAVIGATIONAL WARNINGS: (Circulated by the Department of Marine & Ports Services)

Government Notice No. 196 (27.4.79)

The attention of all mariners is drawn to the dangers and hazards of close approach to the reefs which surround Bermuda, especially to the North and West of the Islands. They extend in places to a distance of 12 miles from the visible land and are virtually unmarked by navigational aids at their extremities.

Ships on passage with no intention of calling at Bermuda are advised to give the Islands a berth of at least 30 miles, observing that little distance is lost on the passage by so doing and nothing is gained by a closer approach. On the contrary, stranding or shipwreck has occurred all too often through the years with pollution of the surrounding reefs and beaches and destruction of the ecological life as well as possible ruin of the economy of the Islands.

Ships making for Bermuda are advised to do so from the East and South as the only entrance to the sheltered waters is at the S.E. of the Islands off St. George's. Here Pilots are available and can be embarked in daylight hours. Entry at night is dangerous and prohibited and close approach in dark hours should not be attempted without local knowledge.

Government Notice No. 197 (27.4.79)

Ships approaching Bermuda should contact the Bermuda Harbour Radio which is manned day and night on Channel 16 (VHF) or 2182 kHz or 500 kHz W/T giving vessel's name, call sign and position. Only after clearance has been given and instructions issued should ships – in daylight only – approach within 3 miles of St. David's Head on a heading between 240° and 300°. On no account should any other approach be made without local knowledge and large scale charts.

Pilots are available in this area for those who require them and are compulsory for all commercial vessels making entry to these Islands.

Notice to Boatmen. Admiralty Notices to Mariners:

1114. North Atlantic – Bermuda Islands – Caution (15.6.79).

5. Mariners are advised to navigate with extreme care in the approaches to Bermuda Islands, owing to the existence of extensive reefs which encircle the Islands and which are a constant hazard to navigation. North Rock Lt. (32° 28.5′ N., 64° 46′ W. approx.) and then outer seabuoys may not be reliable through lack of maintenance due to inaccessibility, except in very calm weather.

NOTICES: Implementation of IMO-adopted Area to be Avoided.

(1) Mariners are advised that at 0001 hrs. GMT on 1st December, 1985 an Area to be Avoided (ATBA) will be established covering the offshore reefs on the Northern coasts of Bermuda.

(2) The limit of a Restricted Area is to be:
(a) Gibbs Hill Light (Lat. 32° 15.1′ N., Long. 64° 50.0′ W. approx.).
(b) Lat. 32° 11.97′ N., Long. 64° 51.35′ W.
(c) Lat. 32° 08.00′ N., Long. 64° 53.00′ W.
(d) Lat. 32° 12.00′ N., Long. 65° 10.00′ W.
(e) Lat. 32° 24.00′ N., Long. 65° 10.00′ W.
(f) Lat. 32° 39.00′ N., Long. 64° 53.00′ W.
(g) Lat. 32° 39.00′ N., Long. 64° 38.00′ W.
(h) Lat. 32° 32.57′ N., Long. 64° 29.75′ W.
(i) Lat. 32° 32.00′ N., Long. 64° 29.00′ W.
(j) St. Davids Light (Lat. 32° 21.8′ N., Long. 64° 39.0′ W. approx.).

Bermuda Department of Marine and Port Services.

DOCUMENTS:
Ship's Register.
Derat Certificate.
Clearance from Previous Port.
5 Crew Lists.
5 Passenger Lists.
2 Provision Lists.
2 Crew Personal Effects Lists, i.e. cameras, binoculars, cigarettes, etc.
5 copies Cargo Manifest if discharging.

Cruise Ships: Customs require:

(Note: Forms may be secured in advance for prospective vessels.)

*2 Crew Lists
1 Crew Declaration
*2 Lists of All Disembarking Passengers
*2 Lists of All Transit Passengers
*2 Lists of All Non-United States Citizens in Transit (on ships from and returning to the United States)
1 Stores List
1 Declaration of Health
Clearance from Vessel's Last Port of Call
1 Bermuda Vessel Report (Customs No. 49).

(**Note:* Plus 1 of each of these forms for Agents)

N.B.

1. A facility for examining disembarking passengers and luggage must be provided. No passenger or luggage is to be allowed to board the tender without Custom's approval.

2. All passengers on vessels from, and returning to, the United States who are not U.S. Citizens must be seen by the Customs Official.

3. All disembarking passengers and luggage must be seen by the Customs Official.

4. Persons purchasing a ticket in Bermuda must complete an Immigration Embarkation Card which should be lodged with the Purser on embarkation. Similarly persons arriving by air and leaving by sea must lodge their duplicate immigration cards with the Purser on embarkation. It is required that the Purser pass all such cards to the Duty Customs Official prior to the vessel's departure.

PILOTAGE: Pilot ordered by Agent on receipt of vessel's ETA (72, 48 and 24 hrs.). Pilot boards vessel approximately 2 miles East of Island with St. David's Lighthouse bearing 240° True. Boats black hull varnished superstructure.

If vessel's ETA alters, Bermuda Harbour Radio which in direct contact with Pilot station can be contacted by VHF Channels 10, 12, 16, 26. Pilotage is confined to daylight hours only with exception of vessels calling for medical aid – some of which handled off-shore.

ANCHORAGES: Grassy Bay and Great Sound. These anchorages are used mainly by passenger liners as they are close to Hamilton Harbour and are protected from heavy weather. Also used by large vessels carrying out extensive repairs.

RESTRICTIONS: Restricted by draft of 26 ft. Daylight piloting only.

MAX. SIZE: Largest ship to enter to date, length 690 ft., draft 26 ft.

HEALTH: Pratique granted on 24-hour basis and can be obtained by wireless by sending message via VRT to "Health Bermuda" requesting Free Pratique be granted. If any suspected disease or fever on board advise "Health" as well as Agent.

RADIO: Commercial radio station operated by Cable & Wireless Ltd., call letters VRT Bermuda. Bermuda Harbour Radio, controls channel traffic, call sign ZBM Bermuda.

VHF: Operated by Bermuda Harbour Radio. Contact on Channels 10, 12, 16, and 26.
Bermuda (VRT) on Channels 16, 26 and 28.
VTM system in operation.

TUGS: 3 tugs available, 2×1,200 i.h.p. and 1×1,800 i.h.p. Tugs normally join vessel in harbour if requested. Tugs not compulsory and ordered depending on the size of the vessel and weather conditions. Tug's lines used during normal tug operations.

BERTHING: Docks and tugs are agreed upon between Agent and Pilot prior ship's arrival.

Hamilton

Berth	*Length of Berth*	*Max. Draft*	*Remarks*
No. 1	510 ft.	26 ft.	Port layout allows ships in excess of 510 ft. in length to be accommodated.
Nos. 5 and 6	620 ft.	26 ft.	Primarily a passenger berth.
No. 7	650 ft.	26 ft.	A small Ro/Ro ramp is provided at Berth No. 7 West.
No. 8	450 ft.	23 ft.	Berth Nos. 7 and 8 provide facilities for container operations, with approx. 5.5 acres of open area.
No. 8 East	250 ft.	16 ft.	

Drafts are governed by depth of water in channel approaches to the Harbour, i.e. 26 ft. MLW.

Freeport (Bermuda Government)			
Commercial	800 ft.	32 ft.	Bulk cement and Shell Company of Bermuda bunkering facilities. Max. length of vessel 600 ft.
Esso Oil Terminal	—	32 ft.	Two dolphins, centre platform and walkways. Vessels up to 700 ft. in length can be accommodated. Berth owned and operated by Esso Bermuda. Also see "Tankers".
Murray's Anchorage	—	36 ft.	
The Great Sound	—	34 ft.	
Five Fathom Hole	—	Unlimited	

STEVEDORES: Ordered by Agent after receipt of ETA. Average discharge general cargo 10 t.p.h.

Gangs and Priorities: Basically Bermuda operates with a maximum of 3 gangs although this can reduce when breakbulk or refrigerated cargo are being handled, or for the tying-up and letting-go of cruise ships. Gang Allocation Rules (BSA No. 97 15-3-79) are:

1. The first vessel to arrive to have all available gangs.
2. The second vessel to arrive to have 1 gang on arrival.
3. The third vessel to arrive will get labour from 1 or 2 when it becomes available.
4. When it is necessary for full utilisation of labour, all vessels must work maximum overtime in order to retain gangs.

Hours of Work (Longshoremen):

Straight time	Monday/Friday	0800 – 1200 hrs.
		1300 – 1700 hrs.
Overtime	Monday/Friday	1800 – 2200 hrs.
Double time	Monday/Friday	2200 – 0800 hrs.
	Saturday	0800 hrs. to Monday 0800 hrs.
	Public Holidays	

Meal hours (double time)
0700 – 0800; 1200 – 1300; 1700 – 1800 hrs.
When working a unit or units between 2400 hrs. to 0800 hrs., when required by the Union, 1 half hour from 0400 hrs. to 0430 hrs. may be taken for a meal time.

Note: Normally the Port stops Sunday/Friday inc. at 2200 hrs.

Work stops at 1600 hrs. on Saturday until 0800 hrs. on Sunday unless the vessel is being worked through to a finish for sailing that night or the next day.

Good Friday and Christmas Days are 'No work' days on the Bermuda waterfront.

CRANES: 1×250 ton "Coles" Colussus, 1×225 tons, 1×100 ton (P&H), 1×60 ton U.S. Navy floating crane (by special arrangement).

MEDICAL: No advance notice required for medical attention if other than critical cases. First-class hospital facilities available. Vaccination Certificates required for all seamen.

TANKERS: Shell bunkering Berth, Freeport, Ireland Island. Discharge lines 8 in. and 10 in. No slop discharge facilities.

Esso: *Berthing:* The berth was rebuilt in 1980 about 40 ft. further out (the old pier debris was left in place). Ships are moored to 4 buoys, forward and aft centreline and offshore on the beam also to bollards on the shoreline and on the 2 breasting dolphins. Ships normally approach from the North with 2 tugs alongside forward and aft. The anchor may be dropped and 3 – 4 lengths of chain run out. A launch will take the mooring ropes, usually to the forward buoy first, to the aft buoy and then to the breasting dolphins. When the ship is in position, all other moorings are sent out; those to the shoreline last. The minimum number of ropes is: 2 to each of the offshore buoys, 1 to the fore and aft buoys and to 4 bollards ashore, 2 or 4 spring lines to the dolphins.

Caution: The ropes to the buoys must be kept taut at all times; particular care must be paid to these moorings during the hurricane and Winter seasons. Occasionally ships may be berthed heading N.E.

Cargo: Two or more 8 in. hoses are used for the discharge of cargo. The ship's cargo boom may be used to connect or support the hose. Maximum pressure on the hose 100/120 p.s.i.g. There are several cargo lines. Tankers carrying more than one grade to St. George should arrange the cargo to permit discharging two or more grades simultaneously. Hand radios are used during the cargo operations.

Requirements for Vessels Using the Esso Oil Terminal:

1. Tankers and Large Vessels for Bunkers:
   (a) It is an Oil Terminal requirement that a Pilot remains on board at all times while alongside the Terminal.
   (b) It is a Terminal requirement that all vessels on completion of either discharging or bunkering/ballasting leave the berth and proceed either to sea, or wait daylight.
   (c) One tug is mandatory for berthing and unberthing and a second tug depending upon weather and other conditions decided by the Master and Pilot, and the Agent will be informed accordingly.
   (d) Tug requirements for unberthing outside normal working hours must be discussed well in advance between Master and Pilot (and Agent informed) as it may take up to 6 hours before the second tug is available at the Terminal. Weather conditions, especially at weekends during the winter months, must be assessed and if any likelihood of strong Northerly winds, precaution should be taken of ordering a tug(s) or if necessary have a tug standing-by in readiness.
   (e) Max. draft alongside not to exceed 32 ft. (9.75 m.) and/or length 700 ft., 38,000 d.w.t. unless under exceptional circumstances and permission authorised by Esso Management.
2. Liquid Gas Carriers and Smaller Vessels for Bunkers:
   (a) It is mandatory to have a tug for berthing liquid gas carriers but depending upon conditions prevailing at the time, the Master and Pilot will decide whether or not a tug is advisable for unberthing.
3. General:
   The over-riding factor must be for the safety of the ship at all times and the Pilot with his local knowledge and skill will advise the Master (who probably is unfamiliar with Bermuda waters) as to the advisability of the necessary assistance required.
   Pilot detention will be paid at an hourly rate from the time the vessel is secured alongside as this is not in his normal line of duty. He is retained at the request of the Terminal as a precautionary measure should the ship have to be moved at short notice.

Also see "Berthing".

DENSITY: 1025.
FRESH WATER: Available alongside at Berths Nos. 6-7, by truck (capacity 4 tons), or by barge. Order prior arrival to avoid delay.
FUEL: Grades available from Shell or Esso: Bunker "C" fuel oil, viscosity 100 SSF at 122° F. Diesel oil. Viscosity 3616 at 100° F.
GANGWAY/DECK WATCHMEN: Not required.
OPENING/CLOSING HATCHES: Usually carried out by stevedores.
TOBACCO/WINE ALLOWANCE: Customs allows about 1 carton cigarettes and limited amount of spirits per man.
IDENTIFICATION CARDS: None required.
CONSULS:

Belgium
Bolivia
Chile
Denmark
Finland
France
Germany (Federal Republic)
Greece
Italy
Netherlands
Norway
Portugal
Sweden
United States

REPAIRS: All types minor deck and engine repairs can be carried out. Also major temporary repairs. Electronic repairs possible.
DRY DOCKS: Only yacht slipways available.
REPATRIATION: First-class facilities available for repatriation and crew changes.
AIRPORT: Distance from airport 10 miles. Connections to all parts of world. Average 15/20 flights per day.
TIME: Local time GMT minus 4 hours (October-April). GMT minus 3 hours (0200 hrs., last Sunday in April – 0200 hrs. last Sunday in October).
HOLIDAYS: New Year's Day; Good Friday; Bermuda Day (May 24th); Queen's Birthday (celebrated annually in June) June 11th; Cup Match (Thursday and Friday before first Monday in August); Labour Day (1st Monday in September); Remembrance Day (November 11th); Public Holiday (November 12th); Christmas Day, Boxing Day (December 26th).
POLICE/AMBULANCE/FIRE: Police 2-2222; Ambulance 2-2000; Fire 00; Air Sea Rescue 7-1010.
TELEPHONES: Can be placed on board vessel when alongside.
GENERAL: Port of Freeport, Ireland Island, situated in the Port of Hamilton at the old British Dockyard is used mainly by the Royal Navy and Shell Bunkering.

SHIPMASTER'S REPORT:
Approaches: Approach was made at night from Southward. Gibbs Hill Light sighted at 29 miles. First radar echo was made at 34 miles. St. David's Lt. Ho. Occ. 5 sec. can be easily confused with St. David's House Lt., Gp. Fl. 2 and they are hard to pick out against background lights. Mills Breaker and Kitchen Shoal Buoy are both good lights and are conspicuous on the radar. Lobster pots marked by unlit buoys can be troublesome.
Pilotage: There are 10 Pilots who operate on a rotation basis. Least depth is in the Dundonald Channel and Two Rocks Passage approaching Hamilton. Passenger Vessels over 26 ft. anchor in Grassy Bay just North of the Dundonald Channel. Official max. draft is 26 ft. although I was told by the Harbour Master that they will take ships up to 26 ft. 06 in.
Berthing: Vessel berths starboard side to, swinging on anchor with tug assistance. During a long stay vessels often have to shift up and down the wharf to make room for other ships making short calls. At one time the bow was overhanging the end of the quay by 100 ft. but even in this position ship can be well secured.
Cargo Operations: Labour force consists of around 40 men which can just make up two freezer gangs. When a container ship arrives she takes priority and one gang is lost. At weekends a few additional men are available from other jobs within the stevedoring firm and a third general gang can be made up. Stevedore stressed that cargo be restricted to two hatches when possible especially in ships with beams and hatches. Locker stow should be avoided when possible. Average on freezer was approximately 9 t.p.h.

Hours of work are: 0800 – 1200, 1300 – 1700 and 1800 – 2100 hrs. This applies every day except Saturday when work finishes at 1700 hrs. General cargo gangs can be worked until 2200 hrs. but all freezer gangs finish at 2100 hrs. to allow time for Receivers to clear the wharf of cargo by 2200 hrs.
Fresh Water: Not readily available in large quantities due to a water shortage. Price when available is 6 dollars a ton. We managed without buying any in spite of a prolonged stay.
Currency: Stated in Pilots Book to be pounds. It is in fact Bermuda Dollars which are equivalent to American dollars and readily interchangeable.
Stores: Very expensive and would suggest only plan on buying essentials from supermarket in small quantities.
Discharge Averages:

No. 1 Palletised Milk Powder	20.0	t.p.h.
No. 2 Cartons of Apples (Locker)	6.2	„
No. 3 UTD Centre Meat & Butter	10.8	„
No. 3 MTD Centre Meat	8.8	„
No. 4 UTD Centre Meat & Butter	8.0	„
No. 4 UTD (P) Meat	11.0	„
No. 4 UTD (S) Cartons Cheese	7.6	„
No. 5 UTD Carton Meat (Full Deck)	8.5	„

AUTHORITY: Harbour Master, Marine and Port Services Department.
AGENT: Meyer Agencies Ltd., P.O.Box HM 510, Hamilton 5, Bermuda. Tel: 55214, 54176.

Shipping, Insurance, Travel Agents. Marine repairs, tug and barge operators, stevedoring operators.

ST. GEORGE'S: 32.22 N. 64.41 W. (See Plan)

DOCUMENTS: Also see "Hamilton".
Ship's Register.
Derat Certificate.
Clearance previous Port.
5 Crew Lists.
5 Passenger Lists.
2 Provision Lists.
2 Crew Personal Effects Lists, i.e. cameras, binoculars, cigarettes, etc.
5 copies Cargo Manifest if discharging.

PILOTAGE: Pilot ordered by Agent on receipt of vessel's ETA. Pilot boards vessel approximately 2 miles East of Island with St. David's Lighthouse bearing 240° True. Boats black hull, varnished superstructure. If vessel's ETA alters, Bermuda Harbour Radio is in direct contact with Pilot station can be contacted by VHF Channels 10, 12, 16, 26. Pilotage day only. Except medical cases which are handled offshore.
ANCHORAGES: *(a)* Five Fathom Hole, located at Eastern end of Island and is point where Pilots embark/disembark. Used by vessels not required to enter or those awaiting daylight. *(b)* Murray's Anchorage, used instead of Five Fathom Hole during times of heavy weather (daylight hours only). Also, by vessels unable enter St. George's Harbour and wishing to take on water, carry out repairs, etc. A stand-by anchorage for vessels waiting berth at Esso Oil bunkering pier and for vessels leaving this pier and awaiting daylight. *(c)* St. George's Harbour, when weather conditions such that Five Fathom Hole and Murray's Anchorage unsuitable to land ill/injured persons vessel proceeds directly to St. George's Harbour and anchors.
RESTRICTIONS: Entry to St. George's Harbour restricted by draft of 30 ft. Murray's Anchorage restricted by draft of 38 ft.
MAX. SIZE: Largest ship to enter to date – length 628 ft. However, size controlled by max. draft of 30 ft., displacement and weather conditions.

HEALTH: Pratique granted on 24 hour basis and can be obtained by wireless by sending message via VRT to "Health Bermuda" requesting Free Pratique be granted. If any suspected disease or fever on board advise Health as well as Agent.
RADIO: Commercial radio station operated by Cable & Wireless Limited, call letters VRT Bermuda, also on VHF 16, 26 and 28. Bermuda Harbour Radio controls Channel traffic, call sign ZBM Bermuda.
VHF: Operated by Bermuda Harbour Radio. Contact on Channels 10, 12, 16, and 26.
VTS: System to be installed at the signal station at Fort St. George.
TUGS: Tugs normally join vessel in harbour if requested. Tugs not compulsory and ordered depending on the size of the vessel and weather conditions. Tug's lines used during normal tug operations. Also see "Hamilton".
BERTHING: Dock and tugs agreed upon between Agent and Pilot prior ship's arrival.

St. George's as a Port of Discharge: Stevedores advised the 51st meeting (1974) of The Bermuda Shipping Association that as St. George's is no longer being used for cargo all gear and equipment have been removed from the port. In the event of discharge taking place at St. George's there will be an 'item of cost' for transport of gear and equipment from Hamilton to St. George's. Similarly an 'item of cost' is applicable to discharge at Freeport (Dockyard).

Berth	*Length*	*Max. draft*	*Remarks*
Penno's Wharf	750 ft.	28 ft.	Cargo-handling berth. Possibly to be extended Eastwards 330 ft. into the Hunter's Wharf area.
Hunter's Wharf	335 ft.	28 ft.	Wooden jetties. Two dolphins to Eastwards of berth allow accommodation of vessels up to 600 ft. in length with draft limitations ". . . to the Eastward (400 ft. at 28 ft. then gradual shelving Eastwards to 24 ft. at the 600 ft. point)".
Ordnance Island	160 ft.	26 ft.	No cargo-handling facilities. Capable of berthing 620 ft. cruise ships.

STEVEDORES: Ordered by Agent after receipt of ETA. Average discharge general cargo 10 t.p.h.
Also see "Hamilton".
MEDICAL: No advance notice required for medical attention if other than critical cases. First-class hospital facilities available. Vaccination certificates required for all seamen.
TANKERS: Esso Oil Pier: Discharge lines 8 in. and 10 in. No slop discharge facilities.
DENSITY: 1025.
FRESH WATER: Delivered by barge. Order prior arrival to avoid delay.
FUEL: Grades available: Bunker "C" fuel oil, viscosity 122 SSF at 122°F. Diesel oil, viscosity 3616 at 100° F.
GANGWAY/DECK WATCHMEN: Not required.
OPENING/CLOSING HATCHES: Usually carried out by the stevedores.
TOBACCO/WINE ALLOWANCE: Customs allow about one carton cigarettes and limited amount spirits per man.
IDENTIFICATION CARDS: None required.
CONSULS: See "Hamilton".
REPAIRS: All types minor deck and engine repairs can be carried out. Also major temporary repairs.
DRY DOCKS: Only yacht slipways available.
REPATRIATION: First-class facilities available for repatriation and crew changes.
AIRPORT: Distance from airport 2 miles. Connections to all parts of world. Average of 15/20 flights per day.
TIME: See "Hamilton".
HOLIDAYS: See "Hamilton".
POLICE/AMBULANCE/FIRE: Police 7–1122; Ambulance 2–2000; Fire "00"; Air Sea Rescue 7-1010.
TELEPHONES: Can be placed on board vessels when alongside.
GENERAL: Esso Oil Berth, within Port of St. George, is purely a bunkering and petroleum discharge pier situated on the Southern side of Murray's Anchorage.
AUTHORITY: Harbour Master.

AGENT: Meyer Agencies Ltd., P.O.Box GE 48, St. George's 1, Bermuda. Tel: 7-1255 (6 lines). Telex 3361 Meyer BA.
Shipping, Insurance, Travel Agents. Marine repairs, tug and barge operators, stevedoring operators.

NOTES

Please also advise Shipping Guides Ltd.

Bolivia

GENERAL: Bolivia is completely land locked with no ocean ports.

The country has special port facilities or 'in transit zones' in Brazil at Belem and Santos; in Argentina at Rosario; and to the Pacific at Matarani, (and shortly Ilo) in Peru also Arica and Antofagusta in Chile.

In 1975 Chile offered a corridor 5 to 7 miles wide at the Pacific to Bolivia, and negotiations are at present being conducted on this subject. Whether this zone will include the port of Arica is not yet known.

(1) A newly installed in-transit zone at Rosario (Argentina) is expected to divert present Bolivian imports and exports from Buenos Aires. The new area covers sheds 23/30, an area of over 5 hectares, and 945 m. of wharf. The present free zone, in the centre of the port zone, will eventually become the Northern sector of the port, with good railway connections to Bolivia. All Government Cargo is handled by the Bolivian Customs Office from Ocean Port, but all private cargo is looked after by forwarding agents on behalf of importers, whose job it is to arrange for despatch, pay port handling charges, rail freight, etc.

(2) There are also special port facilities at Matarani and Ilo in Peru, and a new road is being built which will bring La Paz to within one days road travel from the sea.

(3) The country borders to the East with the Paraguay River on a brief stretch near Corumba, on the Caceres Lagoon by Puerto Suarez, and where a new port – Sucre is to be opened shortly in connection with the movement of Iron Ore and Manganese down river. The river will normally permit vessels up to 11 ft. or 12 ft. draft, occasionally falling to 5 ft. or 6 ft. in the dry season (October/November).

DOCUMENTS: In each port there are Bolivian Customs Authorities under the control of the Bolivian Consul. At none of the 'in-transit ports' are any special Consular despatches or documents needed by vessels, other than those required by the particular country. It is only necessary to present separate manifests for cargo in transit to Bolivia.

However commercial invoices, and goods documentation does require consular intervention.

Shippers must vise Bills of Lading and Consular Invoices and also attach suppliers invoices, certificates of origin and insurance policy. Most imports are handled under letters of credit. Documents must be made out in Spanish. At Ocean Port, forwarding Agents replace the Bill of Lading with a railway bill or trucking bill. There is no exchange control or shortage of foreign exchange in Bolivia.

Claims are finally set up (shortages, condition, etc.) in Bolivia, and hook tallies, local port receipt to Bolivian Customs, railway or truck receipts, etc., all form part of the settlement.

CONTAINERS: It is possible to despatch sealed containers right through to Customs in Bolivia for opening there.

WEIGHTS AND MEASURES: All weights and measures are to be expressed in the metric system, except for lumber, in board feet.

FLAG: Three equal horizontal stripes of red, yellow and green.

NOTES

Please also advise Shipping Guides Ltd.

Brazil

GENERAL

VESSEL REPORTING SYSTEM:

A mandatory reporting system is operated by the Naval Command for the Control of Maritime Traffic (COMCONTRAM). The coordinates of the area covered by the system are:

(a) The border between Brazil and French Guiana
(b) Lat. 05° 00′ N., Long. 48° 00′ W.
(c) Lat. 05° 00′ N., Long. 40° 00′ W.
(d) Lat. 07° 40′ N., Long. 35° 00′ W.
(e) Lat. 06° 22′ S., Long. 16° 00′ W.
(f) Lat. 06° 22′ S., Long. 10° 00′ W.
(g) Lat. 34° 00′ S., Long. 10° 00′ W.
(h) The border between Brazil and Uruguay

In addition vessels are requested to report on a voluntary basis within the larger area of the Atlantic Ocean South of Lat. 23° 30′ N.

Requirement for Messages

Departure Message (type 1) which contains the vessel's sailing plan should be sent:

(a) As soon as a vessel is underway from a port within the reporting area.
(b) Prior to entering the reporting area.

Alteration of Route Message (type 2) should be sent when the original destination given in the departure message is changed.

Position Message (type 3) should be sent:

(a) When a vessel is 10 nautical miles off its pre-established route.
(b) When the navigational situation of the vessel has changed e.g. stopped, damaged.
(c) When a vessel sights a danger to navigation.

Arrival Message (type 4) should be sent:

(a) When the last point on the pre-established route close to the port of arrival is reached.
(b) When leaving the reporting area.

Form of Messages

Items of a message should be separated by a stroke (/).
Omitted items should be indicated by a dash between two strokes (/-/).
The end of a message should be indicated by two strokes (//).
Vessel type (message item D) is coded as follows:

CGO — General Cargo, Container or ro-ro.
BLK — Bulk Carrier.
PAS — Passenger.
TKR — Tankers in general (oil, chemical, gas, etc.).
TUG — Tug.

Date-time information (message items G, I, N, P, R, S) comprises six digits and the letter Z in the following order:

2 digits indicating day of month (01-31).
2 digits indicating hours (00-23).
2 digits indicating minutes (00-59).
"Z" indicating Zulu (GMT).

Geographical positions (message items L_0, L_1 . . . L_{15}, M) comprise:

4 digits indicating degrees and minutes of Latitude "N" or "S" as appropriate.

5 digits indicating degrees and minutes of Longitude "E" or "W" as appropriate.

Departure Message (type 1) should contain the following:

(A) Vessel's call sign.
(B) Vessel's nationality (abbreviated to 2 letters).
(C) Vessel's name.
(D) Type of vessel identified by 3 letter code as given above.
(E) "1" indicating a type 1 message.
(F) Port of origin/departure.
(G) Date and time of departure from a port in the area or of entering reporting area. Comprises 6 digits and the letter Z as given above.
(H) Port of destination.
(I) ETA at destination or reporting area boundary. Comprises 6 digits and the letter Z as given above.
(J) Speed. Comprises 3 digits indicating speed in knots to one decimal place of a knot.
(T) Whether there is a doctor on board. S indicates yes. N indicates No.
(L_0) Starting point of route, either close to port of departure or at reporting area boundary.
(L_1 . . . L_{15}) Latitude and Longitude of points on route where course changes are planned (maximum 15).
(S) Date and time of transmitting message (6 digits and the letter Z as given above) followed by the first 3 letters of the name of the month in English and the last 2 digits of the year.

Alteration of Route Message (type 2) should contain the following:

(A) Vessel's call sign.
(B) Vessel's nationality (abbreviated to 2 letters).
(C) Vessel's name.
(D) Type of vessel identified by 3 letter code as given above.
(E) "2" indicating a type 2 message.
(G) Date and time at the point where vessel changes direction to follow the new route. Comprises 6 digits and the letter Z as given above.
(H) Port of destination.
(I) ETA at destination or reporting area boundary. Comprises 6 digits and the letter Z as given above.
(J) Speed. Comprises 3 digits indicating speed in knots to one decimal place of a knot.
(L_0) Point where vessel changes direction to follow the new route.
(L_1 . . . L_{15}) Latitude and Longitude of points on route where course changes are planned (maximum 15).
(S) Date and time of transmitting message (6 digits and the letter Z as given above) followed by the first 3 letters of the name of the month in English and the last 2 digits of the year.

Position Message (type 3) should contain the following:

(A) Vessel's call sign.
(B) Vessel's nationality (abbreviated to 2 letters).
(C) Vessel's name.
(D) Type of vessel identified by 3 letter code as given above.
(E) "3" indicating a type 3 message.
(M) Position.
(N) Date and time of the position in (M). Comprises 6 digits and the letter Z given above.
(O) Number of the leg of the route along which the vessel is navigating when the position message is sent. Comprises 2 digits.
(P) New ETA at destination or reporting area boundary. Comprises 6 digits and the letter Z as given above.
(Q) New speed. Comprises 3 digits indicating speed in knots to one decimal place of a knot.
(U) If necessary, additional information on the incident which has necessitated the sending of a position message. The code of the general section of the International Code of Signals should be used.
(S) Date and time of transmitting message (6 digits and the letter Z as given above) followed by the first 3 letters of the name of the month in English and the last 2 digits of the year.

Arrival Message (type 4) should contain the following:

(A) Vessel's call sign.
(B) Vessel's nationality (abbreviated to 2 letters).
(C) Vessel's name.
(D) Type of vessel identified by 3 letter code as given above.
(E) "4" indicating a type 4 message.
(H) Port of arrival within the reporting area or port of destination outside the area.
(R) Date and time of arrival at the last point on the pre-established route close to the port of arrival and on leaving the reporting area. Comprises 6 digits and the letter Z as given above.
(S) Date and time of transmitting message (6 digits and the letter Z as given above) followed by the first 3 letters of the name of the month in English and the last 2 digits of the year.

Transmission of Messages

Reports, addressed to COMCONTRAM, are free of charge and should be sent to one of the following Brazilian coast radio stations:

Belem (PPL), Olinda (PPO), Rio (PPR), Juncao (PPJ).

DOCUMENTS:

Required prior to arrival:

Notice of arrival:

At least 24 hours prior to the anticipated arrival of the vessel, the following must be notified: the Captain of the Port, the Federal Maritime and Air Police, and Maritime Health. Likewise, the Cooperative of Health Inspector of Bahia (VHF radiotelegraph station, Channels 12 and 18) must be notified either directly or through the agency. (The Bahia Cooperative is a private institution, controlled by the Office of the Captain of the Port.)

Information on cargo for the port:

The agency should receive by airmail, at least 24 hours in advance of the anticipated arrival of the vessel, the following documents for distribution as indicated.

Documents	*Port Authority*	*Customs*	*Agency*	*Total*
Cargo manifest	1	1	2	4
Manifest of dangerous cargo	1	1	2	4
Freighted bills of lading	–	1	2	3
Stowage plan	1	–	1	2

All manifests not in the Portuguese language must be translated into Portuguese and put on a special form, (copia de traducao de manifesto de carga) copy of translated cargo manifest.

Request for port services:

At least 24 hours prior to arrival, the Brazilian Port Authority, Empresa de Portos do Brasil, S.A. (PORTOBRAS), must receive their berthing request, to obtain port services.

Additional requirements:

All communications with the above mentioned Authority must be made through a shipping broker. The Port Agent handles all cargo operations. The shipping broker may also be the Port Agent.

On arrival:

Type of Document	*Number and distribution of documents*					
Basic forms	*Port Captain(a)*	*Customs*	*Maritime Police*	*National Health*	*Agency*	*Total*
1. General Declaration(b)	1	1	1	–	1	4
2. Cargo Manifest(c)	–	1	–	–	1	2
3. Crew List	1	3	3	1	2(d)	10
4. Passenger List	1	3	3	2	2(d)	11
5. Ship's Store List	–	3(a)	1(f)	–	1	5
6. Crew Effects Declaration	–	3	–	–	–	3
7. Maritime Declaration of Health	–	–	–	1(g)	–	1
8. Mail List	–	–	–	–	1(h)	1
9. Health Pratique Book from preceding Brazilian Port	–	–	–	1	–	1
10. Entrance Declaration	1	–	–	–	–	1
11. Certificate of Customs Inspection	–	1	–	–	–	1
12. No-cargo Manifest	–	1	–	–	1	2
13. No Passenger Declaration	1	1	2	1	2(d)	8
14. List of Passengers in transit	1	–	1	1	–	3
15. Bills of Lading	–	1	–	–	1	2
16. Declaration of On-deck Cargo	1	–	–	–	–	1
17. In-ballast Declaration	1	–	–	–	–	1

(a) These documents are delivered to the Office of the Captain of the Port, where their contents are recorded. They are then sealed and returned for the vessel's departure operation.

(b) In addition to the special Entrance Declaration for the Office of the Captain of the Port, and the certification of Customs inspection.

(c) The manifest should include the number and contents of the containers, as well as an indication of unfreighted containers.

(d) One copy for the exit gate of the harbour.

(e) In the event that the next port of call should be Brazilian, an additional copy must be submitted, which is stamped by Customs.

(f) If the drugs are not included on the ship's store list, a list of medicinal drugs (narcotics) must be presented to the Maritime Police.

(g) Only for the first Brazilian port of call. There is a special form in the Portuguese language, but the LAFTA/OAS form will be accepted.

(h) For delivery to the Postal Authority.

Other requirements:

The landing card requirement provision is still current, but it is not always requested. The agency delivers blank forms. The cards are filled out on board, and a photograph of the passenger or crew member must be affixed. The cards must be presented to the Maritime Police within 48 hours after the arrival of the vessel, but in the meantime all interested persons may land. The cards must be returned to the Police before the vessel's departure.

Prior to Departure:

At least 24 hours prior to sailing, to avoid possible delays, the following documents must be processed:

Customs:

The original of the payment voucher covering the lighthouse and beacon fees, to obtain the clearance permit;

Captain of the Port:

A copy of the above mentioned voucher; Crew List, should there have been any crew changes; List of Passengers Embarked; upon presentation of these, the sailing permit is granted.

Maritime Police:

Passenger List or no-passenger declaration; Crew List, should there have been any crew changes.

Postal Service:

A certificate of mail delivery or a no-mail certificate must be obtained.

In the event that the next port of call is Brazilian, the local authorities check the sailing permit issued by the four agencies mentioned above; if the next port of call is foreign, the sailing permit issued by the Captain of the Port suffices.

Other Provisions:

The agency must, within seven days following the departure of the vessel, deliver a copy of the cargo manifest of freight embarked in the port, and a copy of each bill of lading issued to Customs, PORTOBRAS, and SUNAMAN.

FLAG: The Brazilian flag is a green ground with a yellow lozenge enclosing a blue sphere, with 21 white stars of which 5 form the Southern Cross and the motto 'Ordern & Progresso'.

This must be flown from the foremast when in Brazilian Ports, from 0800 hrs. to sunset daily.

The customs flag – blue with a white star – to be flown 24 hours a day after clearance is granted.

FREE PRATIQUE: Vessels must report ETA via Agent 24 hours in advance, confirming 12 hours prior to arrival. The message must report that sanitary conditions are satisfactory or otherwise and an indication of the number of passengers intending to disembark and/or in transit.

On arrival the Port Health Authority will board, and further to the documents previously mentioned will require to sight vaccination certificates.

The reception committee will only board by accommodation ladder, or gangway if the vessel is alongside, and must be met at the head of the ladder by a Ship's Officer.

PILOTAGE: This is compulsory for all vessels over 200 g.r.t. There are specific boarding points shown on the charts for each port and vessels must wait there, flying flag G, either at anchor or under way. A safe rope ladder must be provided and must be properly illuminated. Pilots should be ordered at least 2 hours prior to arrival by ship's Agent, or in the event of outlying ports 24 or 48 hours ahead (See each port).

VHF: Vessels in coastal regions to maintain watch on Channel 16.

STEVEDORES: Longshoremen are provided by the dock companies and paid for from the Port Charges. Stevedoring can be carried out either by ship's Agents or by contract. In all cases the number of men per gang and their salaries are fixed by Sunamen (Merchant Shipping Superintendency in the Ministry of Transport).

The vessel is legally the employer of the labour, and as a result the vessel is responsible for any damage to the cargo, ship or any third party, by the stevedores.

GENERAL BERTHING INFORMATION:

A berthing priority in Brazilian Ports is given as follows:–

(1) Warships, Brazilian or Foreign.

(2) Regular Passenger Liners for whom immediate berthing facilities are available. if requested at least 24 hours in advance.

(3) Cargo vessels, for whom there are special installations, are given preferential berthing rights.

(4) Vessels with perishable cargoes are given priority berthing.

(5) Vessels that can load and discharge simultaneously can obtain preference over others.

As soon as cargo operations finish, all vessels must leave their berth, or be removed by the Port Authority.

FUEL: A monopoly on supply is held by PETROBRAS, and owners requirements must be made well in advance to the Petrobras offices in New York, London or Rio de Janeiro. Supplies are not plentiful, and in certain ports only certain grades are available.

WATCHMEN: Services of Watchmen compulsory.

POLLUTION: Very strict penalties are enforced, and fines are the same, however little pollution is caused. No dumping of any oil is permitted within 50 miles of the coast.

Garbage: It is forbidden to dump any garbage in any harbour or river. In some ports garbage collection can be arranged.

CREW: Crew members wishing to join a vessel, must carry a letter of instruction for the ship's Agent. They must be signed on within 48 hours of arrival.

For Crew members joining from abroad it is advisable to be in possession of a two year multiple entry visa, as only U.S. consulates in Rio de Janeiro, Recife and Brasilia are authorised to issue visas.

Seamen's Missions:

Scandinavian Seaman's Mission
Flying Angel Club
German Seaman's Home

The above Missions are in Santos, and can arrange football matches, tours, etc. There are no Missions in other ports.

GENERAL: Operators and Masters of Liberian flag vessels should consult Agents well in advance respecting requirements for endorsement of seamen's books or passports.

ANGRA DOS REIS: 23.01 S. 44.19 W. (See Plan)

(A) *GENERAL CARGO SECTION.*
(B) *TANKER SECTION.*

(A) GENERAL CARGO SECTION

DOCUMENTS: See "General" before first port.

PILOTAGE: When requested by the Agents, a pilot launch meets incoming ships off the automatic lighthouses of Itacuatiba and the Lage Branca, depending on whether the ships approach from the East or West, respectively. Pilotage compulsory, 2 hours notice required. State ETA and position Pilot will be embarked.

ANCHORAGES: In the Bay of Ilha Grande; approximately midway between the ports of Rio de Janeiro and Santos; offering excellent anchorages, amongst which may be mentioned: Enseada das Estrelas, Enseada do Abraao, Enseada das Palmas, Enseada Sitio Forte and Enseada de Aracatiba.

The inspection area of the port health, federal receipt and maritime police authorities is covered by a radius of 300 m. around the point of co-ordinates 23° 00′ 42″ S., 44° 18′ 41″ W.

Anchorage for vessels of more than 31 ft. draft and 10,000 g.r.t. 23° 01′ 54″ S., 44° 19′ 18″ W.

Anchorages for vessels of less than 31 ft. or 10,000 g.r.t. 23° 00′ 48″ S., 44° 18′ 30″ W.

Anchoring prohibited in the approach channel and manoeuvring basin.

RESTRICTIONS: The Bay of Ilha Grande possesses two entrances, from the East and the West, permitting immediate access to the Port of Angra dos Reis from the direction of Rio de Janeiro or the Port of Santos, without any change of course. Both access Channels are adequately marked, enabling ships of up to 14 m. draft to navigate in complete safety as far as the port basin about 1 mile from the wharf, where they may lie at anchor and take on cargo from tenders tied up alongside There is another basin with a mud bottom even nearer the wharf, permitting anchorage and docking manoeuvres for ships of up to 10 m. draft.

HEALTH: Port doctor visits all ships on arrival and requires Maritime Declaration of Health, Derat Certificate, 2 Crew Lists. Vessels from another Brazilian port automatically receive Free Pratique and should not fly Quarantine Flag. If suspected disease or fever on board it is advisable to cable Agent before arrival.

QUARANTINE ANCHORAGE: 23° 06.47′ S., 44° 27.1′ W.

TUGS: Available: 4 tugs of up to 600 h.p.

BERTHING: A wharf 1,300 ft. in length, with 1,050 ft. available for tying-up. The wharf is being extended 600 ft. and will be dredged the entire length of the quay so as to receive ships of up to 10 m. draft.

CARGO FACILITIES: Two grain suckers each with capacity of 60 t.p.h. 2 electric cranes of 6 – 6.2 tons capacity, 1 crane of 3.2 tons capacity and 3 electric cranes of 1.5 tons capacity. Mobile cranes, 1 for 8 tons, 1 for 9 tons, 1 for 45 tons and 1 for 61 tons. Verolme have an 80 ton floating crane available for hire.

Also available for hire are 2 mechanical conveyors, each with 80 t.p.h. capacity.

MEDICAL: All facilities available. If doctor needed on arrival or making emergency call to land sick persons, cable ETA 12 hours before arrival.

FRESH WATER: Available. Vessels can be provided with up to 50 tons. Connection is 4 in. Pressure greater at night.

FUEL: No facilities for supplying large vessels. Small vessels can be supplied with diesel oil.

REPAIRS/DRY DOCKS: Various mechanical workshops for the execution of shipboard repairs, equipped with lathes, presses, planes, electric and acetylene welding, drills, power-saws and grindstones, etc. The large shipyards of Verolme with facilities to dry dock vessels up to 600,000 d.w.t. are situated in the Bay of Jacuecanga, near the port of Angra.

CUSTOMS ALLOWANCES: For each crew member, 2 cartons of cigarettes and 1 bottle wine or spirits.

WATCHMEN: Gangway watchmen strongly recommended for any vessels working cargo with shore labour on board. Watchmen from shore not necessary for coal, iron ore and oil cargoes.

CONSULS: There are no Consuls in this port. They are situated in Rio de Janeiro.

TIME: The local time is GMT minus 3 hours.

HOLIDAYS: 1st January; 1st May; 29th June; 7th September; 8th December; 25th December; 31st December, also local holidays January 6th, April 3rd and December 8th.

TELEPHONES: Not available.

AUTHORITY: Porto de Angra dos Reis, Pca. Lopez Trovao, Angra dos Reis, Rio de Janeiro, Brazil. *Contact:* Fernando Mauricio de Lima Cavalcanti, Manager.

(B) TANKER SECTION – TERMINAL MARITIMO DA BAIA DA ILHA GRANDE – TEBIG.

POSITION: 23° 03′ 38″ S., 44° 13′ 10″ W.

IMPORTANT FEATURES:

1. Anchorage – (see Brazilian Nautical Charts No. 1600, 1602 and 1609).

Anchorage for tankers: The anchorage for tankers waiting for berth is a circle with one mile radius, its centre near Ponta Acaia. Bearing 075° – 2.8 miles from Lage Branca light – (Lat. 23° 09′ 00″ S., Long. 44° 23′ 48″ W., shown on Brazilian Nautical Charts Nos. 1600, 1602 and 1609.

2. Anchorage for lighterage: The same as for waiting for berth.

3. Vessels are prohibited from anchoring in the areas near the Terminal piers, since these areas lie on the access channel for ships making for the Port of Angra dos Reis or leaving it through the Eastern bar.

4. There is no assigned anchorage for Port Authorities clearance (for the time being).

According to the Captain of the Port of Angra dos Reis, Free Pratique will be granted upon docking at the Terminal pier.

5. Display of quarantine signals on approach to Angra dos Reis must be continuously maintained until Free Pratique is granted. These signals are: sunrise to sunset: Quarantine Flag. Sunset to sunrise: Signal lights red over white.

6. In addition to quarantine signals the Brazilian Flag must be flown from vessel's foremast throughout the vessel's stay in port.

7. The access channel from anchorage to the manoeuvring area (near the pier) is about 8.75 miles long, 350 m. wide and 25 m. deep in a S.W. – N.E.'ly direction, beaconed with 18 resilient beacons (eight exhibit Fl. W. 5 sec. 3M. and ten exhibit Fl. R. 5 sec. 3M.).

8. The manoeuvring area near the pier is 0.6 miles Northward and nearly 1.3 miles East-Westward and more than 30 m. (90 ft.) depth.

9. Signals for emergency: Series of 7 short blasts followed by 1 long blast of the ship's whistle or siren.

10. The Terminal operates around the clock.

11. There are two "open L" shaped piers for accommodating oil tankers, projecting from Ponta do Leme into the sea, about 1,318 m. long in an East-Westerly direction.

12. Pilotage is compulsory when making for the pier and commences near Ponta Acaia.

DOCUMENTS: The Captain of the Port of Angra dos Reis authorises ship's clearance upon berthing alongside the Terminal piers.

The following documents are required for immediate inspection by the boarding officials:

Any and every document issued or related to ship's clearance at the Last Port of Call.

5 copies Crew List.
2 copies Stores List.
2 copies Personnel Effects.
3 copies Passenger List.
3 copies Cargo Manifest.
3 copies Bill of Lading.

APPROACHES: A vessel making for TEBIG approaching by the channel Westward of Ilha Grande should steer for Lage do Coronel light column (a truncated pyramidal concrete column painted in red and black horizontal bands 4 m. in height situated in the middle of the rock (Gp. Fl. (2) R. 10 sec. 10M.) (Lat. 23° 06′ S., Long. 44° 24′ W.), bearing more than 000° which will lead Westward of Lage do Pendao de Fora. When Lage Branca light-column bears 090°, course should be altered so as to make for the swept channel, beaconed with 18 resilient beacons (Fl. W. 5 sec. 3M. and Fl. R. 5 sec. 3M.) in a S.W. – N.E.'ly direction about 9 miles long, 350 m. wide and 25 m. deep, which leads to the manoeuvring area near the "L" shaped piers.

The "Terminal Maritimo da Baia da Ilha Grande – TEBIG" facilities are situated on the mainland, in front of the central part of Baia da Ilha Grande.

Its "L" shaped piers extend about 1,318 m. from Ponta do Leme in an East-Westerly direction and have berthing space for tankers up to 500,000 d.w.t.

PILOTAGE: Pilotage is compulsory when making for the piers.

Pilots moor, unmoor and supervise the movement of all vessels in the vicinity of the piers. Compulsory pilotage starts near Ponta Acaia in position Lat. 23° 09′ 00″ S., Long. 44° 23′ 48″ W.

Pilot will board the ship at this point from a launch or tugboat. Vessels must be equipped with satisfactory mooring equipment, lines, gear, etc., and ballasted to the satisfaction of the Pilot.

It is the responsibility of the Master to notify the Pilot of any special conditions, difficulties or peculiarities such as engine or boiler deficiencies, defective navigational equipment, mooring lines, tackle, gear, or lack of necessary equipment which might impose hazards in connection with the handling, mooring, unmooring, discharging and loading of vessel.

At the piers, vessels must be moored to the entire satisfaction of both the Pilot and Terminal Operators.

If the Master or the Officer of the Watch is in any doubts as to the Pilot's actions or intentions, or if he does not agree with Pilot's actions considering the safe navigation or manoeuvre of his ship it is the responsibility of the Master to take the necessary steps according to his best judgement and to notify the Captain of the Port, in writing, through the General Manager of the Terminal.

ANCHORAGE: *Anchorage for tankers waiting for berth:* Anchorage for tankers waiting for berth is within a circle with 1 mile radius, its centre near Ponta Acaia, with Laje Branca lighthouse bearing 075° (true), and 2.8 miles away (Lat. 23° 09′ 00″ S., Long. 44° 23′ 48″ W.), shown on Brazilian Nautical Charts 1600, 1602 and 1608.

Anchorage for Lighterage: Anchorage for lighterage is the same as for tankers waiting for berth (see above).

Prohibited Anchorage: Vessels are prohibited from anchoring in the vicinity of the Terminal piers since the place lies on the access channel for ships making for Angra dos Reis or leaving it by the Eastern bar.

Anchorage for Clearance: There is no assigned anchorage for Port Authorities clearance (for the time being).

According to the Captain of the Port of Angra dos Reis, Free Pratique will be granted upon berthing at the Terminal pier.

RESTRICTIONS: *Access Channel:* The swept access channel from anchorage to the manoeuvring area (near the pier) is about 9 miles long, 350 m. wide and 25 m. depth, running in a Southwest-Northeasterly direction and beaconed with 18 light beacons (Fl.W. 5 sec. 3M. and Fl.R. 5 sec. 3M).

Manoeuvring Area: The manoeuvring area near the pier is approximately 0.6 miles Northward and 1.3 miles East-Westward and more than 30 m. depth.

Tidal Amplitude and Streams: Local and diurnal tidal rise is approximately 1.20 m. (4 ft.) above MLWS at neaps and 1.70 m. (5.5 ft.) in HWS.

Tidal streams are West going during the in-going, tide, running nearly parallel to the pier, and East going during the out-going tide.

If the wind is fresh from N.E., South or S.W., the tidal stream follows the direction of the wind.

Tidal stream normally attains a rate from 1.0 to 2.2 knots.

There are no remarkable tidal streams in this whole area.

MAX. SIZE: See "Berthing".

HEALTH: Vessels entering are inspected by the Health and Customs Offices between 0730 hrs. and 1900 hrs.; but by previous application, a special visit may be granted outside this period on payment of an extra tax.

RADIO: Radio Messages prior to arrival: ETA must be radioed by all Petrobras chartered vessels bound for TEBIG, 72 and 48 hours prior to arrival, to Petrobras as well as to Agent through PPR Radio Station (Official Rio Coastal Radio Station).

Confirmation as well as any changes in the time of arrival must be radioed 24 hours prior to arrival.

When within VHF range, ships must contact TEBIG for instructions.

ETA radio messages must specify "local" or "GMT" time.

SSB listening around the clock.

VHF: TEBIG Central Radio Station is in the Control Room. Transceivers are monitored by Terminal Operators tuned to Channel 16 (Delta), 24 hours a day.

TUGS: *General:* TEBIG operates 4×3,720 h.p. tugs.

Mooring and unmooring assistance is provided by these tugs which are fitted with fire pumps, water cannons and foam monitors to assist in fighting fires.

At least one tug is on duty at all times in order to provide assistance should necessity of emergency or additional services arise.

Tug/Ship Communications: The tugs are equipped with VHF radiotelephones so that continuous communications between ship and tugs may be maintained during docking and undocking manoeuvres.

A 24-hour-a-day listening watch is maintained in order to comply with ship's or operational personal requests even if the vessel is already berthed.

Should a radio failure occur when docking/undocking and manoeuvres are in progress, the following whistle signals must be used:

Calling: 4 long blasts followed by 1 or 2 short blasts. Short blasts are intended to number the tugs needed, that is, one blast one tug, two blasts two tugs, and so on.

Before towing line is made fast: 2 short blasts – stand by for pushing on the bow or picking up ship bow line. 3 short blasts – stand by for pushing on the stern or picking up ship stern line.

After towing line is made fast: 1 long blast – pull to starboard. 2 short blasts – pull to port side. 3 short blasts – stop pulling.

Manoeuvring alongside ship: 1 short blast – pull. 2 short blasts – push.

Other ship's whistle signals for the tender craft:

Calling: 2 long blasts followed by 1 short blast – calling pilot launch. 1 long blast followed by 2 short blasts – calling motor launch.

Tugs will acknowledge orders received by sounding a short blast; since tugboats are equipped with radio-telephone, orders may be given by radio.

Unless otherwise ascertained, the Pilot gives orders to the fore tug sounding a mouth whistle and to the aft tug sounding the ship's whistle.

Launches:

Launches for Crew Members: The Terminal does not operate launches for crew transportation. Ships must contact Agent in order to have launches rented for such a purpose if needed.

Pilot's Launch: Pilots use either one of the manoeuvring tugs or pilot's station launch since TEBIG operates no launches for pilotage service.

Small craft for assistance in manoeuvres: Assistance in handling mooring lines is rendered to TEBIG by contract with specialised firm including operation of two small diesel powered launches.

BERTHING: TEBIG operates around the clock. Vessels may moor and unmoor at any hour except in severe adverse weather conditions.

Pier Facilities: There are two "L" shaped piers for accommodating oil tankers up to 500,000 d.w.t., projecting from Ponta do Leme into the sea, about 1,318 m. (3,954 ft.) long in an East-Westerly direction.

	Outer Berth	Inner Berth
Name:	P-1	P-2
Location:	South Side	North Side
Length:	570 m. (1,869 ft.)	570 m. (1,869 ft.)
Depth:	36 m. (118 ft.)	36 m. (118 ft.)
Loading Arms:	4×20 in. for oil and ballast 1×12 in. for diesel oil and fuel oil	4×16 in. for oil and ballast 1×12 in. for diesel oil 1×12 in. for fuel oil

Ship's manifold maximum heights above loading arms platform level:

Outer berth (P-1)	23.60 m. (77.5 ft.)
Inner berth (P-2)	20.60 m. (67.5 ft.)

Height of loading arm platform above MLWS: The height of the loading arm platform level referred to the MLWS is 7.20 m. (21.6 ft.).

Max. allowed d.w.t. for operating ships:

Outer berth (P-1)	Up to 500,000 d.w.t.
Inner berth (P-2)	Up to 350,000 d.w.t.

LOADING/UNLOADING: *Equipment:* The pier is equipped with the following lines for loading/unloading and/or bunkers (both berths):

3×42 in. oil lines about 9,500 m. long; 10.5 kg./sq.cm. (150 lb./sq.in.) maximum working pressure; 12,000 cu.m./h. maximum flow rate (each).

1×26 in. line for ballast, about 1,800 m. long; 10.5 kg./sq.cm. (150 lb./sq.in.) maximum working pressure and 7,500 cu.m./h. maximum flow rate.

2×20 in. lines for fuel oil, about 2,000 m. long; 10.5 kg./sq.cm. (150 lb./sq.in.) maximum pressure and 3,200 cu.m./h. maximum flow rate (each). Maximum working temperature for both lines: 75°C (167°F).

1×12 in. line for diesel oil, about 1,500 m. long; 10.5 kg./sq.cm. (150 lb./sq.in.) maximum working pressure and 1,100 cu.m./h. maximum flow rate.

1×8 in. line for drinking water, 3.2 kg./sq.cm. (45 lb./sq.in.) working pressure and 133 cu.m./h. maximum flow rate.

Auxiliary Facilities: Both berths are equipped with recording devices to measure continuously the ship's speed and her distance to the pier, referred to the pier longitudinal axis.

Both berths are also equipped with hydraulic powered accommodation ladders for easy access aboard ship.

Cargo/Ballast Operation:

General: The terminal is equipped with 2 slop tanks with a combined capacity of 45,000 cu.m. or 282,000 bbls. (22,500 cu.m. or 141,525 bbls. each).

Discharge into the sea of any amount of oil or oil based products, either alone or in combination with ballast water, is strictly forbidden and heavily fined.

TEBIG is particularly interested in having vessels complete the deballasting operation promptly after berthing in order to minimise time at berth.

Simultaneous loading/deballasting or unloading/ballasting is allowed on properly equipped vessels.

Hose Handling: Hoses are in use for fresh water supply only. For loading/unloading operations the Terminal is equipped with 11 quick release flange connection loading arms of 150 lb./sq. in. capacity.

Nominal Flow Rates: The terminal lines allow oil discharging at a rate of 25,000 cu.m.p.h. and loading up to 6,600 cu.m.p.h.

Cleaning Tanks:

Discharging of oily water resulting from conventional tank cleaning is not allowed as a rule. Provided previously scheduled and accepted by Terminal, crude washing may be authorised.

MEDICAL: In emergencies or cases of serious injury, TEBIG may assist with first aid. Medical treatment in case of serious illness must be requested by Masters to Agents.

Dental treatment is available in Angra dos Reis.

If the patient(s) cannot speak Portuguese or Spanish, an interpreter will be desirable for better understanding.

FRESH WATER: *Drinking Water:* TEBIG is equipped for supplying drinking water through universal quick release 2.5 in. universal manifold from a 8 in. line with a 133 cu.m.p.h. flowing rate. There are also threaded ended hoses with 2.5 in. thread and 7.5 pitch series, male and female.

Boiler Water: TEBIG auxiliary area is equipped with 2×1,550 cu.m.p.h. tanks (each) for own use as well as for supplying ships with boiler water through a 8 in. line.

FUEL: TEBIG is equipped with blending machines for mixing fuel oil and diesel oil in order to supply berthed tankers with any type of bunkers e.g. bunker C, marine gas oil, marine diesel oil and marine fuel with any grade of viscosity, and charging international prices.

Orders for bunkers must be placed 48 hours in advance and addressed to:

Divisao de Abastecimento de Navios, Departamento Comercial, Av. Republica do Chile, 65 – ZC – 06, Rio de Janeiro 20.000 – RJ – Brasil. Cable Address: Petrobrasecope. Telex: 031422 or 031423.

Departamento Comercial may also be contacted through Owner's Agent.

Lubricants: Orders for lubricants must be placed 15 days in advance and addressed to:

Petrobras Distribuidora, Praca 22 de Abril, 36 – 4°. andar, ZC, 06 Rio de Janeiro 20.000, RJ, Brasil. Telex: 031422, 031423 and 031424. Tel: 242-9381 and 242-4901.

Petrobras Distribuidora may also be contacted through owner's Agent.

CONSULS: There are no Consular representatives available in Angra dos Reis. The nearest city where such representatives can be found is Rio de Janeiro, where most of the maritime nations maintain Consulates. Agents may be able to contact Consulates if duly notified in good time.

REPAIRS/DRYDOCKS: *Ship Repairs:* There is a shipbuilding yard, Verolme Estaleiros do Brasil, in Baia de Jacuacanga (km. 83 Estrada Rio-Santos) which may be used by vessels to effect limited repairs only, since it main activity is shipbuilding.

There is no specialised personnel or well equipped workshops intended for ship repairs.

In case of emergency repair or those which cannot possibly be postponed and which Verolme yards cannot effect, the following workshops may be contacted for limited repairs.

Industria e Comercio Angrense Ltda. Rua do Comercio 495 – Loja 6.

Oficina Mecanica Tres Irmaos, Rua Arcebispo Santos 209 – Fundos.

Electronic Repairs: There are no workshops or specialised personnel for repairs in electronics available in Angra dos Reis.

Agents may be able to take the necessary steps in order to comply with orders placed for repairs in electronics if contacted in good time.

Compass and Radio Adjustments: Orders for compass and radio direction finder adjustments must be placed through Agents well in advance, considering that such services are not available in Angra dos Reis.

SURVEYORS: There are no classification societies representatives in Angra dos Reis. However they may be called from Rio de Janeiro and/or Santos upon Agent's request. ABS, LR and BV maintain offices and representatives in Rio de Janeiro.

Petroleum Inspection: No Petroleum Inspection Services are available in Angra dos Reis. They may be contacted in Rio de Janeiro or Santos at the following addresses:

Chas. Martin & Co., Rua da Lapa 200 – Conjunto 906, 20.000, Rio de Janeiro – RJ – ZC – 00. Tel: 242-4219, 245-5636.

E. W. Saybolt & Co., Rua Bras Cubas, 3, 11100 – Santos – SP. Tel: 4-6638.

Sociedade Brasileira de Superintendencia S/A (Redwood), Av. Presidente Vargas 466, 13° andar, Rio de Janeiro, RJ, 20.000. Tel: (021) 233-3522.

WEATHER:

Winds: Easterly winds predominate but due to the Ilha Grande high mountains they may blow from several directions. S.S.W. winds due to cold fronts may cause heavy seas and swells in exposed areas. S.S.W. winds often blow in the afternoon period. N.N.E. winds are not infrequent. Wind speed ranges from 3 knots to 30 knots in the Terminal area.

In the Autumn and Winter, cold fresh winds are common on the coast from Rio de Janeiro to Santos. In daytime the breeze tends to increase the East component, and at nightime the West component predominates.

In protected areas (harbours, bays and channels in this area) S.S.W. winds starts about noon, when fresh to moderate winds cause the temperature to decrease; wind force decreases at night and an interval of calm follows, before the arrival of the sea breeze from N.N.E., about 2000 hrs. (local time) until 1000 hrs. (local time).

Rain: The average annual rainfall is about 2,000 mm. in the area.

Visibility: The visibility in this area is generally fair to good.

During Autumn and Winter fog is moderately frequent in the early morning. In Summer time, dry haze is comparatively frequent, causing the visibility to be reduced.

Temperature: Local average temperature ranges from 18°C (64.4°F), in June and July, to 35°C (95°F), in December and January.

Pressure: The pressure over the area is about 1,015 mb. in good weather.

Humidity: Humidities are comparatively high, ranging from 76% to 81%.

SHORE LEAVE: Ship's personnel are not permitted ashore for any purpose whatsoever until Free Pratique has been granted. Luggage and packages are subject to Customs Officers and/or Terminal Watcher inspection. As a rule shore leave is permitted with the above stated restrictions. Vessels are not permitted to sail unless all crew members are onboard. In case of seamen left ashore for any reason whatsoever all expenses are for ship's account.

Passengers: Passengers will be permitted ashore if in possession of the required visas and documents.

GENERAL: *Charts:* No charts or Pilot Publications are available either at the Terminal or Angra dos Reis. If necessary, Agents must be contacted for placing orders in Rio de Janeiro.

The "Diretoria de Hidrografia e Navegacao" (Brazilian Navy Hydrographic Service) issues the following navigational publications:

Chart Numbers: 1600, 1601, 1602, 1603, 1604, 1605, 1606 and 1609 (soundings in metres) covering the area.

A Brazil Pilot of the Brazilian Coast (Roteiro).

List of Lights (Lista de Farois).

Flags: Display of quarantine signals on approach to Angra dos Reis and TEBIG facilities must be maintained until Free Pratique is granted. These signals are: sunrise to sunset: quarantine flag ("Q"). Sunset to sunrise: signal lights – red over white.

In addition to quarantine signals, the Brazilian Flag must be flown from vessel's foremast throughout the vessel's stay in port.

Vessels entering or leaving Brazilian ports must display their ensign when within 3 miles of the entrance to a port or anchorage and, by day, also display their call letters in flags of the International Code of Signals.

Cranes: Neither TEBIG and Angra dos Reis Port operate floating cranes. Verome Yards may rent a floating crane with 80 tons capacity. TEBIG does not operate barges or lighters.

Provisions and Stores: Orders for provisions and/or stores may be placed through Agents. Since some items are only obtainable in Rio de Janeiro, orders must be placed as soon as possible.

Laundry: No laundry facilities are available at TEBIG. There are however laundry facilities in Angra dos Reis which may be used through Agent, which must be contacted as soon as possible for such purposes.

Mail Services: No Post Office Agency is available at TEBIG. Mail must be sent care of Agent and posted in Angra dos Reis.

Cash Advances: TEBIG is not authorised to effect cash advances. Master must contact either Owner's Agent or FRONAPE for such purpose (FRONAPE must be contacted in the case of ships chartered by PETROBRAS).

Customs Watches: Brazilian Customs Officials may be assigned on board according to Customs Regulations in order to enforce the said regulations. Meals must be supplied to these Officials at regular meal times.

Contraband: Brazilian law is very strict in every aspect concerning smuggling. Masters are requested to instruct their crews about restrictions concerning trafficking goods of any kind including cigarettes, cigars, tobacco, alcoholic beverages, souvenirs, firearms, playing cards, narcotics. Trafficking in these articles or any others, between ships or between ships and Terminal employees or representatives, or anybody else is strictly prohibited and failure to comply with the law may result in several penalties.

Items as above stated must be kept sealed under lock and key.

Visitors: No visitors are allowed aboard ships berthed alongside unless duly authorised by Master and Terminal Superintendent and local Maritime Police. Unauthorised visitors will have to be reported to the Maritime Police.

National Holidays: All ships in port must be fully dressed on the following National Holidays: September 7th and November 15th.

Machinery in Readiness: When berthed alongside PETROBRAS' Terminal vessels must keep engines and propulsion machinery in readiness to leave the berth under full power on short notice.

No repairs are allowed which would interfere with this requirement.

Violation of this rule will entail towage from the berth at the vessel's expense and PETROBRAS will not accept any kind of responsibility for the resulting delay to the vessel.

Refuse and Garbage: All deck scuppers must be kept plugged and, as far as possible, discharging of waste water from lavatories on terminal side must be prevented.

TEBIG has no way to deal with ship's garbage or refuse. If absolutely necessary, Agent must be contacted for such a purpose.

Fishing and Painting: Use of pier for painting ship's hull is not allowed. It is also forbidden to fish on the terminal side of the ship.

General: Shore access to TEBIG is by car or by bus along BR-101 Highway km. 81 Jacuacanga.

TEBIG is 150 km. (about 93 statute miles) from Rio de Janeiro.

There is a regular bus service between these cities. There is international telephone service available (Long Distance Direct Dialling) DDD (0243 for Angra dos Reis). The piers are equipped with two hydraulic powered accommodation ladders which allow personnel to board the vessel safely.

At the ladder's end, a lifebuoy is fastened to a 27 m. (29 yd.) long safety line.

Telephone Numbers: Important telephone numbers of the Terminal:

Executive Assistant of the Terminal	02*
Operations Manager	03*
Operations Supervisor (around the clock)	15, 80 and 83
Operating Room (main) (around the clock)	15 and 80
Operating Room (auxiliary) (around the clock)	44
Pier (around the clock)	46
Traffic and Facilities Section	41*
Program and Control Section	04*
Safety Section	60**
Marine Section	50**
Medical Section	21**

*to be called in working hours only

**when needed out of working hours call 15, 80 or 83

SHIPMASTER'S REPORT: November 1981.

Port Name: Although called "Terminal Maritimo de Baia de Ilha Grande" orders for this terminal are given for "Angra dos Reis". Terminal called TEBIG.

Anchorage: Outside the port about 3 miles West of Laje Branca. Except in special cases officials will not board vessel in this anchorage as a result of difficulties experienced in the past with sudden changes of weather. In the approaches to the port, to South and North of the buoyed channel, anchorage is possible with a max. draft of 21 m. and port officials will board vessels here, shore leave being possible by shore launch for crew.

Pilotage: Pilots board off the seabuoy at the entrance to the buoyed channel to take vessel to terminal or inside anchorages. Outward bound the Pilot remains until the last pair of channel buoys. Pilots work ships for terminal only.

Channel Lights: These are neither very bright nor very reliable.

Pratique: There is no radio pratique and quarantine officials board with Customs and Immigration but ships should cable to Agents two days prior to arrival "Codicoes Sanitarias Abordo Satisfactorias".

Formalities: 2 each Crew Lists, showing vaccination dates; 2 each Store Lists and Personal Effects; 8 Crew Lists. Ship's Certificates taken ashore by Agent to effect Clearance.

Agents: Direct VHF communication from office to ships in anchorage or at terminal. Until recently weekend cables were erratic but telex is now installed.

Shore Leave: By minibus from berth to Angra dos Reis (30 minutes) – taxis not allowed inside terminal gate (30 minutes walk from berth). No passes required.

Crew Changes: Easily possible (via Rio de Janeiro, 3 hours by car) – sometimes difficulties with Customs for crew joining and leaving bringing/taking radio/cassette players, Customs escort sometimes being required or ambiguous fines imposed.

Fresh Water/Bunkers: Available at terminal. Lighter fuel oils are sometimes a mixture of heavier fuel and diesel oils.

Tugs: Three terminal tugs of 4,000 h.p. each always available, fourth tug for larger ships (also 4,000 h.p.) berthing is sent from Rio de Janeiro. Two ship's lines are used to bow and stern tug (and care should be taken sending these as tugs inclined to steam off with them) and tug's lines from shoulder tugs.

Berth: Single long finger pier, South side taking ships up to 500,000 d.w.t and North side up to 300,000 d.w.t. Ships on North side feel current flow tending to push them off the berth and short "semi-breast" stern lines are preferable to ones with long drifts. Main deck springs are sometimes impractical to the shore as centre dolphin section of the pier is about 260 ft. in length and in many ship's springs would be too short. Otherwise plenty of mooring hooks and general pattern is 2 springs, three breast and four head/stern lines.

Terminal: Communication by VHF; crude oil washing permission should be sought prior to arrival; usual check lists; terminal schedules of berthing and discharge are very variable.

AUTHORITY: Terminal Maritimo da Ilha Grande BR-101 km. 81 – Jacuacanga, Angra dos Reis – RJ *Tel:* 65-0358 PABX, Direct long distance dialling number DDD 0243 (for Angra dos Reis) followed by the telephone number (65-0358). *FAX:* 021.225.73 or 021.233.35. *Contact:* The Superintendent.

Head Office: Petroleo Brasileiro S/A – Petrobras, Avenida Republica do Chile, 65-ZC-06-Centro – Rio de Janeiro – 20.000 Brazil.

Divisao de Operacoes: Same address, as above, 12th Floor, (Operations Division).

Captain of The Port: Almte. Julio Cesar de Noronha, Avenue No. 39, Angra Dos Reis. *Tel:* (0243) 65-0365. *Contact:* Captain S. Silva, Captain of The Port.

ANTONINA (Barao de Tefe): 25.26 S. 48.41 W.

(See Plan)

Also see "General" before first port and "Paranagua".

PORT LIMITS: The limits of the port of Barao de Tefe extend from the Teixeira Point to the port quay.

DOCUMENTS: See "Paranagua".

Inspection carried out at Paranagua.

PILOTAGE: Compulsory in the port of Barao de Tefe and in the access channel. Also see "Paranagua".

ANCHORAGE: Only anchorage is in the vicinity of Teixeira Point (See DHN chart No. 1823). See "Paranagua" for quarantine and explosives anchorages.

Anchoring in front of the quay is prohibited.

RESTRICTIONS: *Access Channel:* This is marked on chart No. 1823 of the DHN (National Hydrographical Directorate), the channel is 120 m. wide, running in a S.E. – N.W. direction, starting at the Island of Teixeira and proceeding as far as the manoeuvring basin.

Critical Points: Itaucu de Baixo Rocks, Shallows of Fundao Grande and Joao Fernandes; average depth 5 m. Anchoring in the channel is forbidden, and to navigate it, it is necessary to have good visibility and daylight.

Tide: The average speed reaches 3 knots on the ebb tides, average height during Spring tides – 2.2 m., Neap tides – 1.7 m.

Berthing: Manoeuvring may only be effected in daylight and good visibility. Berthing always takes place on a rising tide.

TUGS: To be requested from Paranagua.

BERTHING: The area for manoeuvring is 280 m. wide in front of the quay, with a length of 700 m. Variable depth between 6.5 m. and 7.5 m.

Length of berth, Matarazzo Quay, length 200 m. (additional quay, length 150 m. planned, being 45 m. from Matarazzo Quay); depth alongside, 6.0 m. – 6.5 m.; Bollards 50 m. apart.

Facilities: 5 warehouses, 12,200 sq.m. without cold storage; 1 vertical silo at Matarazzo of 8,500 tons capacity (not in operation); open air areas, 7,500 sq.m.

Cranes: 1 of 6.5 tons on rails, 4 on tyred wheels of 9 and 3.5 tons, stacker trucks – 4 of 5 tons capacity, 4 of 2.5 tons and 5 of 2 tons. No rolling bridge, loaders or suction units available.

Railway lines extending 3,100 m. but no locomotives available; 6 wagons which are of the open type (28 ton capacity); 22 trucks on tyred wheels (3.5–7.0 tons capacity).

No ro/ro or container facilities. No barges, pontoons or lighters available.

STEVEDORES: See "Paranagua".

MEDICAL: Hospital available. Tel: 432-1244.

FRESH WATER: One hydrant at end of port quay, rate 30 cu.m.p.h. and 3 hydrants at Matarazzo Quay (100 m. apart), rate 30 cu.m.p.h.

No water boat available.

FUEL: Available to vessels alongside by road tanker.

REPAIRS: See "Paranagua".

AIRPORT: At Curitiba (Afonso Pena Airport) 65 km. away, or Paranagua for light aircraft 50 km. away.

HOLIDAYS: Local: 6th November (City Anniversary), 15th August (City's Patron Saint Day).

CUSTOMS: Tel: 432-1221.

POLICE/AMBULANCE/FIRE: Police, Tel: 355 or 432-1234; Fire Brigade from Paranagua is used.

TELEPHONES: Not available.

SERVICES: Foodstuffs available. Rubbish collection is the responsibility of the Agent.

GENERAL: Following received from a ship's Agent in 1980.

The port of Antonina is situated in the inner recesses of Paranagua Bay, about 15 miles from this port. Vessels demanding that port receive Free Pratique at Paranagua and proceed on voyage 1 hour before HW. As the channel has no light-buoys, navigation is only possible during day time. There are only 2 berths available at Antonina, and should both of them be occupied, vessels await in Paranagua, because there is no safe anchorage there.

Vessels have to turn around before docking, and for this reason only small vessels should go there.

Official Maximum Drafts: Spring tide – HW: 21 ft.
Neap tide – HW: 18 ft.
LW: 15 ft.

Stevedoring – Labour:

a) Number of gangs available: Not restricted.
Stevedores affiliated to their Union.

b) Working hours:

Normal hours:	0700–1100	1300–1700
Night hours:	1900–2300	0000–0400
Overtime:	1100–1300	1700–1900
	2300–2400	0400–0700

c) Number of men in regular gang:
Unitised cargo: 9 men.
Break-bulk cargo 11 men
Reefer cargo: 20 men

d) Labour available all year round.

e) Rigging and cleaning gangs available.

f) Capable supervision is available. In addition to normal stevedore supervisors, agency employees give ample assistance to ships' operations.

g) Average tons worked per hour per gang, loading: Bagged cargo: average of 40 t.p.h. General cargo: average of 10/20 t.p.h.

h) Average tons worked per hour per gang, discharging:
Bagged cargo: average 20 t.p.h.
General cargo: average of 10/15 t.p.h.

Equipment/Gear:

Shore gear, hooks, slings, etc., available.

Heavy lift slings available to handle maximum 120 tons.

Shore cranes:

1 electric crane – capacity 25 tons – Outreach 25 m.
4 electric cranes – capacity 6.3 tons – Outreach 25 m.
4 electric cranes – capacity 3 tons – Outreach 15 m.
6 electric cranes – capacity 3.2 tons – Outreach 25 m.
4 electric cranes – capacity 2 tons – Outreach 25 m.
1 automotive crane on tyres – capacity 30 tons – Outreach 20 m.
1 floating crane available, capacity 110 tons.

Cargo is discharged onto railroad trucks and trailers. Export cargo is brought alongside by trucks, railway cars or trailers.

Sideloaders also available.

No container spreaders available.

No lighters available.

Warehouse/Transit Cargo Sheds:

a) Within the port area there are 31 warehouses of concrete construction, with tile roofs, with a total of 87,310 sq.m. of storage.

b) A small refrigerated storage shed is available, used mostly for meat, fish, shrimps and fruit; its capacity is for 2,900 cu.m., and there are 9 chambers.
Temperature: Range of 14°/15°F. One chamber can be brought down to −13°F.

c) Free time period allowed on cargo discharged from vessels is 6 days.

d) Storage always paid by importer/exporter.

AUTHORITY: Administracao dos Portos de Paranagua e Antonina, Av. Conde Francisco Matarazzo, Antonina, Brazil. *Tel:* 432-1027.

Port Captain, Rua Marques de Herval 216. *Tel:* 432-1384.

ARACAJU: 10.55 S. 37.03 W. (See Plan)

LOCATION: On the right hand bank of the Rio Sergipe, 3.24 nautical miles from the entrance. D.H.N. Charts 1000 to 1003 cover this area.

PILOTAGE: Compulsory.

APPROACHES: The access channel is 100 m. long and 2.9 m. deep. Tidal variation 2.3 m.

BERTHING: Manoeuvring basin is 600 m. long with a depth of 12 m.

The quay consists of 96 m. (concrete) and 80 m. (wood) berthing space, with depths of 6 m. and 7 m. available. Warehouse of 1,200 sq.m. and 50,000 sq.m. open storage available.

CRANES: One 9 ton mobile crane available.

BULK HANDLING FACILITIES: There are 3 silos, with a capacity of 5,800 tons and one mechanical wheat loader, capacity 20 ton. A 40 ton weighbridge is also available.

FRESH WATER: Available, delivery rate 25 t.p.h.

CONSULS: Portugal (vice-consul).

REPAIRS: Can be undertaken.

AIRPORT: Nearest at Santa Maria, 13 km. distant.

TIME: GMT minus 3 hours.

HOLIDAYS: National: January 1st, April 21st, May 1st, September 7th, November 15th and December 25th.

Regional: December 8th.

Movable: Monday and Tuesday of Carnival, Ash Wednesday, Good Friday and Corpus Christi.

Commemorative: August 28th, October 28th, October 30th and November 2nd.

AUTHORITY: Administracao do Porto de Aracaju, Av. Joao Rodrigues, s/no., 49000, Aracaju, SE. *Tel:* (0792) 22-3314. *Contact:* Engineer Militino Rodrigues Ferreira, Administrator. *Tel:* (0792) 22-3217.

ARATU: 12.47 S. 38.30 W. (See Plan)

LOCATION: The port facilities of Aratu are located on the Eastern side of All Saints Bay in the Enseada do Caboto, between Marinho and Pereira Points, to the North of the Bar of Cotegipe and the Naval Base of Aratu, facing the Mare Island.

Its areas of administration and jurisdiction correspond to the Bay of All Saints, limited to the South by parallel 12° 50′.

DOCUMENTS: See "General" before first port and "Salvador".

PILOTAGE: Compulsory. Requests for Pilots are to be made to the Bay of Todos os Santos Pilots' Association at Serra da Raiz Building, 5th Floor, Room 510 – Rua da Grecia 8, Tel: 242-2221 or by Channel 16 VHF-FM of the coastal radiotelephone network.

Requests must be made 2 hours in advance, specifying the time of the vessel's entry.

APPROACHES: *Access Channel:* The access channel starts at Lat. 12° 58′ S., Long. 38° 31′ 55″ W. with a minimum depth of 18 m. (see Chart 1108 of the NHD). The channel is marked by 8 light buoys, 4 to starboard with red lights and 4 to port with white lights and by the lighthouse at Areia Point. To the North of the port of Aratu is the lighthouse of Cabrito Point which provides a good landmark day and night for vessels bound for the port of Aratu. The length of the channel is about 2 miles as far as the manoeuvring area, with a minimum width of 180 m.

The improvement of the nautical signalling arrangement in the access channel to the port is planned, based on a study carried out by a Dutch firm and under an agreement which will be signed with the SSN. The following points are fairly clear and serve for direction finding purposes:

(a) Furnaces of the Salvador Cement Company, at Sacopa Point, during the day;

(b) USIBA terminal which has a red light at its top, serving as a reference point both day and night.

(c) Construction at the top of the hill at Toque-Toque Point, during the day.

(d) Church of Nossa Senhora das Neves on the Southern part of the Island of Mare during the day;

(e) The lighthouses of Areia Point and Cabeto Point, both day and night.

Existing Dangers: The shoal to the West of Sacopa Point and the banks of the Island of Mare are being permanently dredged.

Manoeuvring Area: The area intended for berthing and unberthing of vessels is defined to the East and West by the 10 m. line, with variable width from 400 m. to 1,000 m., limited to the South by the 12° 46′ 09″ S. parallel. Minimum depth 12 m. Depth at Bar 20 m. Max. height of tide 2.8 m.

ANCHORAGE: The anchorage of Monte Serrat, must be used for visiting vessels and for manoeuvring. Anchorage is prohibited in the manoeuvring area and in the access channel (See chart).

The visiting areas of the Port Health Authorities, Federal Receipt and Maritime Police are those defined by a radius of one mile around the points of co-ordinates Lat. 12° 58′ 07″ S. and Long. 38° 32′ 18″ W. and Lat. 12° 55′ 56″ S. and Long. 38° 31′ 37″ W., as shown in chart 1.102 of the National Directorate of Hydrography.

Vessels may only come alongside the berth after having been visited by the authorities. The anchorage for free pratique coincides with the waiting area for Pilots and the permitted anchorage area (i.e. the anchorage area of Monte Serrat).

MAX. SIZE: Access to Bulk Terminal: Length 220 m. Draft 11.6 m. Beam – No restriction. Also see "Berthing".

HEALTH: See "Anchorage".

TUGS: Salvador tugs used.

BERTHING: To carry out operations of vessels going to the Port of Aratu and movement of their cargo and storage, the Port has specific Terminals, with an infrastructure capable of giving highly efficient operations as follows:

Cargo:

1. Solid Bulk Terminal – T.G.S.
2. Liquid Bulk Terminal – T.G.L.
3. Gas Products Terminal– T.P.G.

Solid Bulk Cargo Terminal – T.G.S.:

Finished in 1976, commenced operation in 1977 and has a basic formation of:

A berthing pier; berthing dolphins (2) – South side; access bridge; a storage area; silos and warehouses (private); various equipments.

This terminal will also be equipped with a berth for solid bulk. Beginning of operations is expected in 1988. This dock will be equipped with a pier of approximately 175.05 m. in length; draft of 12 m. for vessels of up to 40,000 g.r.t. over which electric portico cranes and special private facilities will be installed.

The mooring dolphins will also be built with access by means of passageways from the pier. For storage and handling of bulk solids, which will be performed at this site, a complete infrastructure will be prepared on the re-fill, including highway/railway access.

Handling of aggressive and/or corrosive solid bulk products currently operated at TGS, such as sulphur and fertilizer as well as alumina, will be transferred to this pier. In addition to these products, all bulk currently handled at the Port of Salvador which, due to physical/chemical difficulties could not yet be handled at Aratu, will also be transferred to this dock.

Mooring Pier:

Constructed in reinforced concrete on pipes and with the following characteristics:

Level +4.50 m.; width 37.50 m.;, length on the North side 153.20 m., on the South side 202.60 m.; distance between dolphins 286.60 m. (on the South berth).

North Berth: Depth 10.00 m.; largest permissible vessel 100,000 g.r.t.; distance between mooring points 24 m.; max. load on mooring point 50 tons (9); cylindrical fenders, external diameter 0.80 m.×1.50 m. (12).

South Berth: Depth 11.00 m.; largest permissible vessel 100,000 g.r.t.; distance between mooring points 24 m.; max. load on mooring point 50 tons (9); cylindrical fenders, external diameter 1.20 m. × 1.50 m. (24).

Note: In a later phase, after extension, the depths will be increased as will be permitted loads.

Mooring Dolphins:

There are 2 berthing dolphins in reinforced concrete on pipes situated on the South side of the pier with the following characteristics:

Distance from axis to axis, 286.60 m.; mooring capacity 100 tons; dimensions 10 m. × 10 m.

Access Bridge:

Constructed in protected reinforced concrete with the following characteristics:

Level +4.5 m.; width 9 m., length 200 m.; load projected – Class 36. This acts as support for the conveyor belts, pipes, electrical supply, passage of vehicles and service equipment, ambulances and fire fighting equipment.

Storage Open Area:

For storage of various solid bulk cargoes in the open air, destined for import and export, with the following characteristics:

Covered by asphalt concrete; total width 114 m.; total length 600 m.; total area 68,400 sq.m.; usable area 35,840 sq.m.; Permitted load 30 tons/sq.m.; max. static load 475,000 tons.

Note: By virtue of the diversification of solid bulk cargo moved and stored in the open air, the loads stated are subject to the action of wind and rain and special care is recommended with regard to positioning; protection and cleanliness at the storage area.

Silos and Warehouses (Private):

1. Alcan – Aluminio do Brasil Nordeste S.A.

Installations for receipt and storage of calcinated aluminium, connected to the T.G.S. transport system, and constituted basically by:

1 vertical metal Silo on a structure of reinforced concrete with top feed and discharge at the bottom through 9 outlets, capacity 10,000 cu.m.

1 conveyor belt "B10" width 48 in. and 141 m. long.

Note: Extension of these installations is planned by construction of more vertical silos.

2. Nitrofertil – Fertilizantes Nitrogenados do Nordeste S.A. Installations for receipt of urea by road vehicles and rail trucks, storage under cover and shipment connected to the transport systems of T.G.S. and constituted basically: By a discharge station for road vehicles and railway trucks under cover and containing 4 silos and two 401–V–48 in. and 402–V–48 in. transporters, both with a capacity of 300 t.p.h.

One warehouse constructed from reinforced concrete, with 50 m. width and 200 m. long and 40,000 tons capacity, equipped with 10 dehumidifiers, 1 transporter (403–V–48 in. – 300 t.p.h.) with receipt from a moving handling unit with two outlets for stacking area, 1 Kratzer of 750 tons per hour for recovery and loading to the transporter 404–V–54 in. – 730 tons, for shipment.

One external transport complex for shipment, of 730 t.p.h., including 4 transfer points and 3 conveyor belts 405–V–54 in., 406–Va–48 in., 406–Vb–48 in.

1 weighbridge for flow purposes installed in the transporter 404–V; 1 administrative office; 1 sub-station.

3. Caraiba Metais S.A.

Installations for the receipt of copper concentrate, phosphate rock and coke, covered storage and delivery for metallurgy, through a direct duct silo and road and rail system, in the future railway silo with feed in the shed by loader and constituted basically by:

1 covered shed with 15,000 sq.m. area and storage area of 79,600 tons (concentrated copper 42,000 tons, phosphate rock 35,000 tons and coke 2,100 tons).

T.G.S. Equipment:

The installations and equipment of T.G.S. are constituted by a semi-automatic system for movement of solid bulk cargoes by three lines of operation, that is to say:

Import Line: 1. Situated on the pier there are the following installations:

1 vessel discharger unit which is mobile with a nominal capacity of 970 t.p.h. lifting capacity on the hook of 25 tons, its own weight 900 tons, maximum load in the self-carrying silo of 600 tons, which uses grabs of the 'clam shell' or 'trimmer' large capacity type, with cycles of less than 60 seconds under normal conditions and two vibratory feeders for the Bla transporter with 700 t.p.h. each. Currently there are 7 grabs ranging between 4 cu.m. and 13.5 cu.m.

2. Connecting the pier and the storage area:

1 reversible conveyor belt Blb–48 in. – 1,200 t.p.h. – 1.6 m/sec. – 442 m.

3. Situated in the storage area:

1 belt transporter B2–48 in. – 1,200 t.p.h. – 1.6 m/sec. – 247 m.

1 mobile stacker, for piling bulk solid up to a height of 10.0 m., with a capacity of 1,200 t.p.h.

The recuperation of stored merchandise for delivery to the user is performed by means of mechanical shovels with direct feeding to trucks.

Railway wagon feeding is planned for the near future.

Quantity control of bulk products is performed by means of vessel draft and/or highway scale, 60 tons capacity, installed at the Port entrance.

Average unloading capacity (production) under normal conditions is 500 t.p.h.

Factors which reduce average production:

Specific weight granulometrical and aggregation of bulk products.

Improper stowage.

Necessary clean-up of terminal between operations with different bulk products.

Improper vessels (non-bulk carrying vessels).

Export Line:

1. Situated in the storage area:

1 mobile loader fed by shovel with a capacity of 12 cu.m. with 2 vibratory feeders of 700 t.p.h. each; 1 belt transporter B3–48 in. – 1,200 t.p.h. – 1.6 m/sec. – 238 m.; 1 transfer tower B2/Blb.

2. Connecting the storage area and the pier: 1 reversible belt transporter Blb (See "Import").

3. Situated on the pier: 1 transfer tower Blb/B7; 1 belt loader B7–54 in. – 1,200 t.p.h. – 1.6 m/sec. – 19 m.; 1 transfer tower B7/BB; 1 belt transporter B8–48 in. – 1,200 t.p.h. – 1.6 m/sec. – 331 m.; 1 belt transporter B9–48 in. – 1,200 t.p.h. – 1.6 m/sec. – 81.0 m.

One mobile shiploader, with a nominal capacity of 1,200 t.p.h. and equipped with a telescopic arm which includes a lifting movement and a 54 in. belt. There is a second shiploader on the opposite side.

The recovery of cargo stored for feeding the hopper is performed by means of mechanical shovel, storage being performed either directly from dump trucks onto storage area, arranging the material by mechanical shovel for area reduction, or by means of wagon/truck unloading line which is described below.

Wagon/truck unloading line: Located in the storage area, consisting of:

1 underground wagon/truck unloading station, with 220 cu.m. silo and 2 vibratory feeders, capacity 700 t.p.h.

1 B6-48 in. conveyor belt – 1,200 t.p.h. – 1.6 m./sec. 54.0 m.

1 B2 conveyoy belt (See "Imports").

1 Stacker (See "Imports").

General comments on the T.G.S.:

Maximum specific load permitted 3.88 tons per. cu.m.

Maximum granulometry – 400 mm. diameter.

Total length of the 8 conveyors – 1,848.0 m.

Currently, the conveyor system is regulated to the primary phase, that is:

Belt velocity – 1.6 m./sec.

Maximum belt volume capacity – 1,000 cu.m. per ton.

Maximum load capacity – 1,200 t.p.h.

In addition to the equipment already mentioned, the T.G.S. has at its disposal 3 sub-stations, 1 system control house with synoptic panel and 1 control building in the storage area.

In order to perform operations, pre-established teams are assigned in advance, depending on the nature of the operation to be performed, which act within Codeba facilities.

It should be noted that in operations for private facilities (Alcan, Nitrofertil, Urea and Caraiba Metais) both the equipment and the staff from the corresponding companies should work in a synchronised manner with the Codeba equipment and staff. For this purpose, the Terminal has an interlock system for basic functions and its own telephone communications system, which reaches specific areas, using VHF radio for remaining areas.

Liquid Bulk Cargo Terminal – T.G.L.:

Completed in 1978, commenced operation in 1979, and is composed basically of: A berthing pier; 10 berthing dolphins; access bridge; platform; storage area (tanks); installations and equipment.

Berthing Pier: In this terminal, the berthing is defined by the dolphins which are located at the side of the operations platform.

North Berth: Depth 10.6 m.; largest cargo vessel permitted, 35,000 g.r.t./220 m. length; distance between fenders (2) 66 m.; maximum load – mooring heads – 50 tons (6); cylindrical fenders (2) – external diameter 1.20 m. × 1.50 m.

South Berth: Depth 11 m.; biggest cargo vessel permitted 25,000 g.r.t.; distance between fenders (2) 66 m.; maximum load – mooring heads – 50 tons (6); cylindrical fenders (2) – external diameter 1.20 m. × 1.50 m.

Note: Near the berth there is a slope which limits the operations here to the following:

(a) Maximum vessel length – 120 m. (394 ft.)

(b) Ships over 105 m. length must be equipped with bow thruster.

(c) Ships of more than 80 m. (262 ft.) length must be assisted by a minimum of 3 tug boats and operations must be performed under favourable sea and weather conditions.

(d) Time of manoeuvring is at the Pilot's discretion.

Mooring Dolphins:

There are 10 mooring dolphins made of concrete on pipes with the following characteristics

Dimensions – 10 m. × 10 m.; maximum level – +4.60 m.; mooring capacity – 50 tons.

By virtue of the characteristics of the T.G.L. the dolphins are fitted with quick-release hooks to enable them, in case of necessity, to carry out prompt deberthing of the vessel.

Access Bridge:

Constructed of reinforced concrete on pipes with the following characteristics.

Level – variable +10 m.; width – 9 m.; length – 324.60 m.

Purpose – Access to the dolphins and platforms, passage for service vehicles, ambulance and fire fighting equipment.

Support – There are two series of concrete supports on the bridge, level +4.65 and +6.55 m. for support and passage of pipe-lines.

Platforms:

Platforms made of concrete on pipes.

Junction – On 3 levels with approximately 1,600 sq.m.

Pumping – On only one level with access by metal ladder with approx. 200 sq.m.

Operation – On two levels: upper level with 566 sq.m. and lower level with 2,068 sq.m.

For reasons of safety, vessels must not transmit forces to the operations platform of the T.G.L.

Storage Area (Tanks):

Due to contracts with pre-established duration, signed with companies specializing in movement and storage of liquid chemical products, tanks and miscellaneous facilities were built in addition to equipment and installations on the pier and TGL feedback, capable of guaranteeing full operation of transport and storage systems for chemical and petrochemical products from the area of their entrance, with a high degree of efficiency and operational flexibility.

Tank storage area operated by Tequimar – Terminal Quimico De Aratu S.A.

A complex of 40 tanks in carbon steel, carbon steel lined with stainless steel, some for multiple purposes and others for a specific product only which will be handled and stored within rigid guidelines of security, distributed in concrete construction ducts.

Installed capacity – with 40 tanks with 99,600 cu.m., thus:

2 tanks of 300 cu.m.; 12 tanks of 750 cu.m.; 12 tanks of 1,500 cu.m.; 8 tanks of 3,000 cu.m.; 2 tanks of 8,000 cu.m. and 4 tanks of 500 cu.m.

Dichloroethane: Pipeduct for Dichloroethane (EDC) with 35 km. length connecting the terminal to the Camacari Chemical Complex.

It is planned to increase the capacity by installation of more tanks in accordance with demand.

Tank accessories: Blanketing with N_2; heat installation with cooling serpentines; inlet and outlet valves motor-operated by remote tele-control; automatic level measuring with remote indicator; Automatic temperature measuring with remote indicator. central analogical computation system for control of stocks.

System of Loading and Unloading of Vessels:

Sleeves, 2 supports and 2 cranes for the movement of sleeves.

Pier lines with flanged connection valves.

10 pre-pumping tanks of 8 cu.m. on the pier – for sampling.

10 pre-pumping tanks of 8 cu.m. in the storage area – for sampling.

A complex of centrifugal ship-loading pumps with a nominal capacity of 250 t.p.h.

Simultaneous transfer operation in all the pier lines.

"Pig" device for internal cleansing and scraping of lines which handle various different products.

A complex of pumps, of the screw type of 60 cu.m/h. used for draining the lines, pumping of samples and other emergency operations. There are also two more pumps with a capacity of 120 cu.m./h. intended for services which require greater outlet, for example transfer of liquids from one storage tank to another.

Loading/unloading System for Truck Tankers:

The operations of loading and unloading trucks are performed on bases located on parallel lines on jetties, at the points near the tanks or group of tanks. These bases (12) compose the "islands" under which are installed the pumps which permit loading or unloading trucks on one side or the other of the bases, by means of loading arms.

All storage tanks are connected to the respective pumps.

Auxiliary Units:

There is in the port area a system of steam distribution, service air, drinking water, and nitrogen for all necessary operations and cleaning of pipe-lines in the terminal.

Drinking Water System:

A raised concrete storage tank with 15 cu.m. and one made of carbonic steel, with 500 cu.m. Feed is made by the distribution mains operated by Codeba with meters.

Steam System:

A tubular frame boiler, fed by diesel oil with a capacity of 2 t.p.h. of steam at a pressure of 6 kg./sq.cm.

The steam is intended for service stations and for cooling the Dutrex tanks and the lines with "steam-tracing".

One of the uses of steam is for the production of hot water for washing hoses. For this there are various water heating points distributed at the various points of consumption.

Compressed Air System:

The compressed air system consists of 2 (two) compressors of the two stage type with a capacity of 160 N cu.m./h. at a pressure of 7 kg./sq.cm.

It is intended for feeding service stations and its main function is the drying of hoses after washing.

Mask Air System:

The air system for breathing consists of various stations distributed within the loading areas for lorries and vessels.

Nitrogen System:

Nitrogen is stored in a pressurized tank of 17.6 kg./sq.cm. with a liquid capacity of 34 cu.m. The system with vaporiser was planned for a demand of 200 N cu.m/h., operating at a pressure of 5 kg./sq.cm.

Nitrogen is used to inert tanks which require "Blanketing". It is also used for cleaning lines and for moving the "Pigs".

Firefighting System:

The firefighting system is constituted by equipments and installations.

The water mains to combat fire using sea water through a ring of firefighting water which covers the tank area, the anchorage and those where work and administration is carried out. The capacity of the mains is 1,500 cu.m./h. being fed by 3 pumps of 500 cu.m./h. capacity each and a maximum pressure of 12 kg./sq.cm. Apart from the firefighting pumps, there is a "jockey" type pressurised pump of 50 cu.m./h. which maintains the mains continually pressurised at a pressure of 7 kg./sq.cm.

With a complex of extinguishers of CO_2 and chemical powder; a system for storage tank cooling; A system for foam firefighting; a system for fire alarm by means of local manually operated units; a system of communication of emergency by telephonic lines.

Port Services: In view of foreman type contracts signed for pre-determined durations with Codeba, Tequimar may perform foreman services on its connections and those of others. However, it is up to Codeba to inspect such services as well as to control access to berths and vessel mooring.

Installations and Equipment of Nordeste Terminais S.A.:

Nordeste Tank Storage Area:

A complex of 30 tanks in carbon steel, some for multi-purposes and others for specific products which will be operated and stored within rigid security guidelines and distributed in docks of containment made of concrete.

Installed Capacity: 16 tanks with 28,200 cu.m. and there are under construction another 14 similar tanks with a planned capacity of 6,600 cu.m.

Capacity under Construction: 8 tanks of 300 cu.m. and 6 tanks of 700 cu.m.

The capacity planned should bring up, after all phases of construction the total storage capacity to 63,000 cu.m.

System of Loading and Unloading of Vessels:

Sleeves, 2 supports and auxiliary arms for movement of sleeves.

5 pre-pumping 1 cu.m. tanks – for sampling on the pier.

5 pre-pumping 1 cu.m. tanks in the storage area, – for sampling.

A complex of chemical centrifugal pumps for loading vessels with a nominal capacity of 204 cu.m./h.

Simultaneous transfer operation in all the pier lines.

"Pig" – device for cleaning the interior of lines which use different products.

System of Loading and Unloading Lorries:

The unloading operations of tanker vehicles are carried out in localized bases on the bridges which are nearest the tank or group of tanks in question. The bases are constituted by "islands", equipped with 80 cu.m./h. and 204 cu.m./h. pumps which enable simultaneous discharge.

The loading operations of tanker trucks is centralised in a platform for loading tanker road vehicle's point in which it will be possible to load 6 tanker lorries at a time by independent lines at each storage point.

Drinking Water System:

A raised tank made of concrete of 5 cu.m. and another one in carbon steel of 500 cu.m. Feed is made by the distribution network operated by Codeba with meters.

Steam System:

A flame-tubular boiler with a capacity of 1,000 kg./hr.

The boiler is fed by BPF, the steam is destined for heating tanks with serpentines and service stations.

Compressed Air System:

Constituted by an Atlas Copco air compressor, continuously operated and which is used for feeding the service stations, cleaning and drying sleeves and tubes.

Breathing Air System:

Consists of various stations distributed in the loading areas for lorries and vessels.

The stations are formed by batteries of fixed cylinders with hoses and individual masks.

Nitrogen System:

Nitrogen is stored in a pressurised tank 17.6 kg./sq.cm. with a liquid capacity of 27,800 litres. The nitrogen converts the inert atmosphere in the tanks which require "blanketting".

Firefighting System:

Water; foam; chemical powder,

System of Industrial Safety:

Cooling of tanks; system of alarms; systems of communication of incidents.

General Information and Recommendations:

Both the piers of T.G.L. and T.G.S. were planned so as to enable future dredging to adapt to 20 m. for berthing of large bulk carriers up to 100,000 g.r.t.

Safety in operation of vessels:

It is important that safety rules be observed during operations with ships at the terminal.

a. Special attention must be given during berthing to ensure that the vessel is properly moored avoiding any collision with dolphins and platforms or the breaking of hoses.

b. One bow cable and one stern cable must always be available in the event of any vessel needing to be removed in the event of fire on board or on shore.

c. Any repairs which require cutting, welding or other services involving the usage of heat on board or on the pier must be avoided wherever possible.

Where such services are absolutely vital on board, a responsible person at the Terminal must be warned in advance so that the necessary precautions may be taken ashore.

d. It is fairly common for bunkering to take place from barges on the offside of vessels moored at the Terminal. This practice requires certain security measures and must be avoided at all costs during the loading and discharge of the vessels.

e. It is recommended that no movement of vessels takes place at T.G.S. whilst a tanker is mooring or unmooring at T.G.L.

f. Both at T.G.L. and T.G.S., mooring and unmooring of vessels must only be effected with the aid of tugs in accordance with the instructions of the Port Captain.

g. It is recommended that all vessels berth with the bow turned towards the Access Channel provided that this does not cause difficulties in ensuring a proper berthing and thus permitting a rapid departure in the case of emergencies.

h. Deballasting operations are only possible by using the adequate installation as owned by the Terminal and which is in perfect condition for usage, together with the collection of residue and at all costs contamination and pollution of the area must be avoided.

Before commencing discharge or loading operations and after having drawn up a movement plan for the liquid product, it is obligatory to carry out a general safety inspection and of the conditions of installation including the system of communication between vessel and land and as proof of this a "Declaration of Inspection" must be drawn up on the appropriate form signed by a representative of the vessel and by the responsible person for the operation within the Terminal. One copy of this declaration must be sent to Codeba.

Gas Products Terminal – T.P.G.:

The works began in July 1980 and operations began in 1983. The terminal consists of a pier for handling of liquefied gases, including only one mooring berth. The terminal is basically composed of:

Operations platform
Landing and mooring dolphins (6)
Access bridge
Access jetty
Storage area/facilities and equipment

Operations Platform:

Platform is reinforced concrete supported by tubes of reinforced concrete supported by tubes of reinforced concrete of 100 cm. diameter connected to the coast on the one hand by a land connection and by a bridge. It is protected by impact from the vessels by mooring dolphins – one at each end.

The platform will support the structures for the loading arms, tubes, pumps, auxiliary crane, the foam storage tank, the emergency gangway and operation and control buildings.

Main characteristics: area – 33 m. × 20 m. = 660 sq.m.; level – +4.50 m.; depth of the project – 10.9 m.; permitted vessel size – 20,000 g.r.t. length 180 m.

Mooring Dolphins:

The two mooring dolphins consist of a block of reinforced concrete of 18 m. × 10 m. × 1.80 m. supported by 6 concrete tubes 120 cm. diameter.

Each one of the 4 dolphins consists of a block of concrete 10 m.×10 m.×1.5 m. supported by 4 tubes of 120 cm. diameter.

All the dolphins are equipped with 10 mooring hooks of 50 tons each of the quick release type.

Each of the mooring dolphins will be equipped with 3 fenders made of rubber and in a cylindrical shape with a diameter of 60 cm. × 150 cm.

The mooring dolphins will be accessible by 4 concrete gangways and 4 metal ladders on the sea side.

Access Bridge:

The access bridge consists of a superstructure made of reinforced concrete supported by reinforced tubes of 100 cm. diameter.

Access Dock:

The access dock is built of hard stone which is resistant to sea water. The land connection and the access bridge will carry the necessary ducts and piping and the access path arranged for 2 lines of traffic, thus admitting free access for vehicles. The control of access to the pier to persons and vehicles will be the responsibility of Codeba.

Tank Park and Facilities of Terminal de Gases Ltda. – TEGAL

Tanking Park:

1 cryogen tank destined to storing ethene at 106° Centigrade and 15,000 cu.m. capacity.
Refrigerated sphere tank for butadiene at – 45° Centigrade and 3,200 cu.m. capacity.
1 sphere tank for MVC at ambient temperature. Capacity for 3,200 cu.m.
System of pumps. Flow: 250 cu.m./hr.
4 "islands" for trucks loading/unloading.
Flanged nets to connect land pipeducts.
Crane to move nets.

Tank Accessories:

Automatic level measuring.
Automatic temperature measuring.
Thermal insulation of lines.

Tegal complementary facilities:

Nitrogen System

N_2 is stored in pressurized tanks at 17.6 kg/sq.cm., with net capacity of 34 cu.m. Compressed air, potable water and steam are supplied by Tequimar through interconnecting lines.

Fire Defense System:

Water supply is made by Tequimar.

Other Facilities:

Control Room. Room for JPG pier operators.

Fertilizantes Nitrogenados do Nordeste, SA – Nitrofertil

This company has at TPG, complete facilities for the operation with Ammonia, which includes a sphere/reservoir with 30,000 cu.m. capacity.

Conventional Quay:

It will have a conventional quay section of approximately 175 m. in length with a depth of water of 12 m. for vessels up to 40,000 g.r.t., on which will be installed electric jib cranes and special private installations. There will also be 2 mooring dolphins with access by gangways from the quay. For storage and movement of solid bulk cargo which will be carried out here, there will be prepared a rear land area infrastructure including a road and rail access. For this quay, movement of solid bulk cargoes will be transferred and/or those of a corrosive nature, which are currently operated by T.G.S., for example sulphur and fertilizers, together with aluminium which will bring about a drop in the operations of T.G.S. Apart from this there will be a transfer of all bulk cargoes currently handled in the Port of Salvador which, due to physical and chemical difficulties cannot be operated in T.G.S. at the Port of Aratu.

PORT EQUIPMENT: The port has 3 loading shovels of 3 cu.m., 1 mobile crane up to 20 tons, 1 front stacker of 3.2 tons, 1 agricultural tractor, 1 bob cat tractor, 2 fast action fire fighting trucks, 1 pump and tank truck for fire fighting.

REPAIRS: There is a workshop under construction.

DRY DOCK: There is a naval dry dock in Aratu capable of handling vessels up to 45,000 d.w.t. It has dimensions 230 m. by 30 m. wide. Depth 11.5 m. However, the access channel will only allow vessels of up to 10 m. draft, though this is expected to be increased shortly.

FUEL: This is done by lighter and only at the solid bulk cargo terminal (T.G.S.).

FRESH WATER: Small quantities available.

AIRPORT: 2nd of July Airport at Salvador, 43 km. from the port.

CONSULS: See "Salvador".

TIME: GMT minus 3 hours.

HOLIDAYS: *National:* 1st January, 21st April, 1st May, 7th September, 15th November, 25th December.

Municipal: Fixed: 2nd February, 14th August. Movable: Good Friday.

Traditional: Movable: Carnival – Tuesday (Mardi Gras) and Ash Wednesday – Corpus Christi.

Fixed: St. John (June 24th), July 2nd, November 2nd.

GENERAL: *Useful Addresses:*

1. Terminal of Madre de Deus – Temadre. Baia de Todos os Santos. Products handled: oil and derivatives. Tel: 801-1821.

2. Dow Chemical Terminal – Baia de Todos os Santos. Products handled: chemical products. Tel: 801-1011 and 801-2211.

3. Terminal of Usina Siderurgica da Bahia – Usiba. Baia de Todos os Santos. Products handled: bulk ore. Tel: 594-8311.

4. Terminal of Fabica de Cimento Aratu. Baia de Todos os Santos. Products handled: cement and limestone. Tel: 594-9488.

5. Terminal of Equipetrol. Baia de Todos os Santos. Products handled: preinspection of rig structures. Tel: 594-8811.

6. Sao Roque Terminal (Petrobras). Estuary of the Paraguassu River. Products handled: rig parts and structures for oil drilling. Tel: 242-7997 and 242-7797.

7. Terminal of IMBASA – Industria de Mamona da Bahia, S.A. Baia de Todos os Santos. Products handled: vegetable oil (castor oil). Tel: 594-9133 and 594-9386.

DEVELOPMENTS: New dry bulk pier to be built. Length 190 m. width 15.0 m. Depth alongside 12.00 m. Max. size 40,000 d.w.t. Construction commenced in September 1985. Cargo to be handled will be sulphur, fertilisers and alumina.

AUTHORITY: Porto de Aratu, Baia de Todos os Santos, Enseada do Caboto, Municipio de Candeias, Estado da Bahia – Cep 43700 Brazil. *Tel:* (071) 801 – 1212/3/4/5. 801 – 1217 (operations). 801 – 1216 (management). *Telex:* 071-1637.

AREIA BRANCA (Salineiro Terminal):
04.50 S. 37.03 W. **(See Plan)**

LOCATION: In open sea 14 km. out from the continent, near to the town of Areia Branca.

CLEARANCE: The Health Authorities of the Port and the Federal Police do not have representatives in the town of Areia Branca. Therefore, in the event of there being a necessity, the ship's Agent must communicate, sufficiently in advance, with the Port Authorities of Natal, when representatives will be sent to Areia Branca, to carry out vessel inspections.

Addresses and telephones of Port Authorities:

Port Captaincy Agency – Rua Joao Felix, 12 – Areia Branca. Telephone: 332-2211.

Maritime Work Post – At the top of the CP-RN Agency Building at Areia. Branca. An Advocate is employed with duties and representation at Areia Branca, in the Maritime Work Delegation – Telephone 332-2022.

Federal Customs in Areia Branca: Telephones: 332-2425 and 332-2426.

PILOTAGE: Pilotage is obligatory, from the pilotage anchorage to any point in the Port area for vessels of more than 2,000 g.r.t. Pilots must be requested by radio, through the Agencia Maritima Ltd, Rua Cel. Aureliano, 37, P.O.Box 138, Tel: 222-1449 – or, at Rua Cel. Fausto No. 481, Tel: 332-2001 and 332-2011 at Areia Branca. Contacts must be maintained with the Marine Agency with regard to the taking on of Pilots and this must be done a minimum of 10 hours in advance of the arrival of the Pilot at the point of embarkation by virtue of the distance between the town and the point of embarkation and the dependency upon the tide.

ANCHORAGES:

(a) For vessels of any g.r.t., awaiting berthing orders or awaiting repairs – between parallels 04° 49′ 18″ S. – 04° 49′ 48″ S. and meridians 37° 02′ 54″ W. – 37° 03′ 48″ W.

(b) For vessels in quarantine –
As above.

(c) For pleasure craft – between parallels 04° 54′ 00″ S. – 04° 54′ 18″ S. and meridians 37° 07′ 24″ W. – 37° 08′ 12″ W. (Inner Area).

(d) In the event that the Island Port is not working, due to damage to its equipment, the anchorages mentioned above will be used where the vessels will receive salt directly from barges.
(1) Inner Area – Limits mentioned in (c) can be used with safety by vessels drawing up to 12 ft. of water.
(2) Outside Area – between parallels 04° 51′ 12″ S. – 04° 52′ 00″ S. and meridians 37° 04′ 00″ W. – 37° 05′ 12″ W. can be used with safety by vessels drawing up to 22 ft. of water.

(e) Restrictions: Anchoring is not permitted in the access channel nor in the manoeuvring area.

Also see "Berthing".

RESTRICTIONS: No night navigation.

Vessels not directly concerned with port operations, must travel at a minimum distance of 1,000 yards off the Island Port berthing dolphins.

APPROACHES: Access to the Terminal: The access to the terminal for vessels of medium tonnage is made by a channel 13 m. depth (length 15 km., width 1.2 km.) at minimum level. This channel goes to the mooring point from João da Cunha Reef.

Manoeuvring Basin: Length 2 km., depth of water 11 m., at minimum water level.

Lighting and Buoys: The lighting and buoys are as follows: One light buoy at the beginning of the access channel; along this channel and in the manoeuvring basin are distributed a further 10 unlit buoys.

Tidal Variation: From 0.10 m. to 3.90 m.

TUGS: 2×1,680 h.p., 20 tons bollard pull.

Normally there is no need for tugs for berthing or for unberthing except in the case of damage to machinery or when the action of the wind is sufficiently strong to throw the vessel against the dolphins (winds from the sector S.E. – S.W.), in which case the following regulations must be observed: vessels up to 10,000 g.r.t. must use 1 tug, in the event of the wind intensity being less than 25 knots, and 2 tugs if the wind intensity is greater than that level. Vessels over 10,000 g.r.t. must use 2 tugs, but it is not advisable to try to berth or unberth with winds greater than 25 knots.

BERTHING: *Manoeuvring Area:* This is a strip 400 m. long in front of the dolphins, between the meridians 37° 02′ 24″ W. – 37° 02′ 54″ W. Depth: from 12 m. to 23 m. It is expressly prohibited to anchor anywhere in this area which is reserved for berthing and unberthing operations.

Island Port Resources:

Berthing Quay

(1) For vessels:

Constituted by 3 dolphins, each with a mooring head and a hook. Distance between the end dolphins, 78.6 m. The system of berthing is completed by 3 buoys. Depth: 12 m.

Vessels berth port side to on 3 dolphins, using starboard anchor and moored to 3 buoys.

(2) For Barges:

Situated on the S.W. side of the artificial island there is a 195 m. long quay, for berthing barges. Depth: 6 m.

River Mossoro:

For vessels with less than 3.5 m. draft, dependent on the tide, entering or leaving the town of Areia Branca, there is a deviation due to the previously used channel being silted up, which makes it obligatory to have help from the local Pilots.

BULK CARGO FACILITIES: Cranes/Stackers/Rolling Bridges/Loaders/Suction Units:

The salt is transported from the storage area on the Island Port to the vessel's hold by means of a conveyor working at a speed of 1,500 t.p.h. At the end of the conveyor there is a rotary loader, supported on one side on a pivot on a metal transfer tower platform and on the other by a curved track structure. The loader permits only rotary movement (sector of 17°–22°) with also axial displacement and rise (with a range of 39 m.) which makes it possible to load two different vessel holds when necessary.

Transport Along the Quay:

The salt is unloaded from barges moored on the quay on the S.W. face of the island by 2 jib cranes, rolling bridge type, moving on a railway line and equipped with clam shell grabs, with nominal capacity each, of 350 t.p.h., connected with weighbridges, hoppers and mats for formation of piles. It is possible to discharge the salt directly in the piles (storage area) or into the equipment which forms them, or even directly into the loading mat which makes it possible in this case to effect direct transfer of the salt into the vessels.

The salt in the storage area is also moved by 2 loading shovels with a nominal capacity of 680 t.p.h. and 3 tractors.

Pontoons/Barges/Launches/Lighters:

The Rio Grande do Norte Docks Company (CODERN) has 5 self-propelled 452 h.p. barges with a capacity for transporting 520 tons of salt each, as well as 5 dumb barges with a capacity for transporting salt from Areia Branca and Macau to the Island Port.

The SOPORMAR (Maritime & Port Services Company) has 6 barges in operation between Macau, Areia Branca and the Island Port.

SPECIALISED CARGO HANDLING FACILITIES: No facilities for container or ro/ro traffic.

STEVEDORES: On working days, Sundays and holidays, the working timetable is as follows:

Day Period

0700 to 1100 – Normal Day
1100 to 1200 – Meal Break
1200 to 1600 – Normal Day
1600 to 1800 – Possible Overtime
1800 to 1900 – Meal Break

Night Period

1900 to 2300 – Normal Night
2300 to 0000 – Meal Break
0000 to 0400 – Possible Overtime
0400 to 0600 – Only to finish vessel
0600 to 0700 – Meal Break

Stevedores are carried out to the Island Port aboard launches which are hired by the ship's Agent. The journey from Areia Branca to the Island Port is made normally in a maximum of 2 hours. The time launches leave depends on the tide, by virtue of the limitations of the bar of the River Mossoro.

MEDICAL: In the Island Port, there is an infirmary for first aid treatment, where there is always a nurse on duty. There is no doctor on duty. Nearest hospital is at Mossmoro, 50 km. away.

FRESH WATER: In the Island Port there is an artesian well which permits a supply of water to berthed vessels via a pipe-line in the metallic structure at the berth. Capacity: 50,000 litres/hour. From the end of the pipe, supply is effected by means of 2.5 in. hoses.

FUEL: Supply of diesel oil to vessels is possible through the self-propelled barges of the Rio Grande do Norte Docks Company (CODERN). Supply will be made preferably with the vessel anchored. Each barge has a capacity to supply up to 20,000 litres of diesel oil. Orders must be made 48 hours minimum in advance in order that the Rio Grande do Norte Docks Company (CODERN) can take the necessary steps for topping up the tanks at the Island Port.

REPAIRS: Active shipyard authorised by SUNAMAM to construct vessels up to 1,000 tons gross carrying weight. They also carry out naval repairs and have workshops and underwater repair facilities.

The Salineiro Terminal has a workshop capable of carrying out small repairs.

EMERGENCY SERVICES: The Salineiro Terminal has 2 tugs used in port operations and which can be used in a situation of emergency in life saving and salvage operations. There is no organised service.

GANGWAY/DECK WATCHMEN: The Rio Grande do Norte Docks Company (CODERN) has a group of watchmen, 25 strong, which works between the Island Port and the office in Areia Branca, there always being a minimum of 6 at the Island Port.

AIRPORT: Nearest at Natal and Fortaleza, 300 km. distant, served by commercial flights.

TIME: GMT minus 3 hours.

HOLIDAYS: National: 19th January, 21st April, 1st May, 7th September, 12th October, 15th November and 25th December.

Movable Holidays: Monday and Tuesday of Carnival, Ash Wednesday, Good Friday and Corpus Christi.

Commemorative Days: 28th August (Banks), 28th October (Public Officials), 30th October (Business), 2nd November (All Saints), 28th January (Port Workers).

Municipal Holidays: 6th January (Foundation of the City), 21st November (City of Natal Celebration), 15th August (City of Areia Branca Celebration).

Local Holidays: 15th August – Our Lady of the Mariners; 8th December – Immaculate Conception.

POLICE: Tel: 332-2057.

TELEPHONES: No facilities exist for placing telephones on board vessels.

GENERAL: *Charts:* DHN Nos. 703 and 720 cover the port area.

AUTHORITY: Companhia Docas do Rio Grande do Norte, Rua Princesa Isabel 342, 59000, Natal, RN. *Tel:* (084) 222 3774 PABX. *Telex:* (084) 2114.

Local Office at Salineiro Terminal: Cais Tertuliano Fernandes 81, 59620, Areia Branca, RN. *Tel:* (084) 332 2121 PABX. *Contact:* Heinz Zech, Director.

BARRA DO RIACHO: 19.51 S. 40.03 W. (See Plan)

PILOTAGE: Compulsory. Agent reports direct to Pilot Association at Vitoria, through VHF Channel 16. Pilots maintain 24 hour watch.

APPROACHES: Access Channel: Depth 11.5 m., width 150 m.

RESTRICTIONS: Vessels up to 110 m. length can enter and sail day or night. Vessels from 110 m. to 190 m. can enter during daylight hours. Max. breadth 35 m.

The Manoeuvring Basin has diameter of 250 m.

TUGS: Two tugs are required for berthing and unberthing. Tugs have no lines on board. The tugs are requested from Vitoria.

BERTHING: Barra do Riacho Quay: Length 230 m., depth 10.7 m. Warehouse for export of cellulose 12,000 sq.m.

CRANES: Not available.

FRESH WATER: Available.

REPAIRS: No facilities.

MEDICAL: Hospitals at Vitoria and Aracruz.

AIRPORT: At Vitoria.

AUTHORITY: Companhia Docas do Espirito Santo, Empresa do Sistema Portobras, Av. Getulio Vargas No. 556, Vitoria, Espirito Santo, CEP 29000. *Tel:* (027) 222-1311. *Telex:* (027) 2118. *Contact:* Gerardus Maria Franciscus Zaeyen, Director-Presidente.

BELEM: 01.28 S. 48.29 W. (See Plan)

PORT LIMITS: Subject to Charter Party Terms, vessel normally considered an "arrived ship" when at Val-de-Caes Anchorage, Icoaraci Anchorage, or alongside the quay.

DOCUMENTS: See "General" before first port.

PILOTAGE: Pilot usually ordered through vessel's Belem Agent, ETA at least 72 hours in advance and confirming not less than 24 hours prior to arrival. Vessels can apply direct to pilot station (on condition that local radio station is operating). Telegraphic address "Praticagem – Salinopolis", and call sign of Salinopolis (or Salinas) Radio Station is PPL. Pilot boards at a point 7 miles North of Salinas Lighthouse; a red motor-launch is used. Launch carries a red flag with a black P; it also has a black P painted on each side and on cabin roof. If pilot boat not in position on arrival of vessel, position 7 miles North of the light is a safe anchorage. Masters who do not know area should approach Salinas with caution.

APPROACHES: The port is located on the right-hand side of the Bay of Guajara, running North/South, limited to the left by the island of Oncas 19 km. long and other similar islands which are in front of the River Para, with 3 wide entry channels being provided i.e.

1. Between the bar and the island of Fortim used by deep sea vessels and large coasters.

2. Between the islands of Arapiranga and Cotijuba which is used by small coasters and the typical local river craft known as "gaiolas".

3. The Carnapijo Channel behind the island of Oncas which provides communication at high tide with the Bay of Marajo which measures from between 3,200 m. and 4,000 m. long in front of the island of Oncas with a shallow which divides it in the middle into two channels, one to the West with 12 m. to 20 m. depth at the foot of the above island and the other to the East next to the city and where the current port is located with 9 m. to 10 m. depth minimum water level when dredged. Comprehensive considerations make it that this latter channel to the East deserves special studies which allow the following details to be presented:

Length	6,000 m.
Width	90 m. to 180 m.
Depth	6 m.
Average annual siltation	600,000 cu.m.

The Turning Basin: The port has a wide turning basin 1,000 m. long, 500 m. wide with a depth of water between 5 m. – 6 m., an annual siltation of 400,000 cu.m., fully equipped with buoys and lights under the control of the Technical Council of the Directorate of Hydrography and Navigation of the Brazilian Navy.

ANCHORAGE: Vessels with a draft greater than 26 ft. anchor off Icoaraci, 7 miles from the port where they work cargo.

Vessels that are impounded anchor off Val-de-Caes.

Vessels undergoing repairs anchor off the Naval base dock at Val-de-Caes.

Vessels with a draft of less than 26 ft. anchor at Val-de-Caes. Co-ordinates: Lat. 01° 24′ 01″ S., Long. 48° 30′ W.; Lat. 01° 21′ 03″ S., Long. 48° 29′ 03″ W. and Lat. 01° 08′ 09″ S., Long. 48° 28′ 03″ W.

Between Icoaraci and Val-de-Caes, there is a shallow spot at Tapana, which ships should approach with caution, although bottom is soft mud and sand.

HEALTH: Maritime Police, Customs and Port Health board vessel on arrival at whichever anchorage is used, or alongside. Pratique granted on the presentation of documents. If port *not* first Brazilian port of call. Port Health Authorities not required, although Police and Customs will still board. After first Brazilian port, Port Health only required in cases of illness or death. The use of quarantine "Q" flag not necessary. Also see "General" before first port.

RADIO: No VHF facilities in the area. Suggested that ship contacts Belem Agent through Barbados Radio, and this is also usual way that vessels are contacted by Belem. An alternative to Barbados Radio is the United States radio station at Chatham, Virginia.

TUGS: One tug, "Rio Acara", 700 h.p.

BERTHING: The quays are of cement and sand construction on a base of stones, which is, in turn, on a bed of hard clay. The quay height is a max. of +4.50 m. to accommodate the max. tidal rise of up to +3.20 m.

Soundings taken in 1979, for vessels alongside in relation to the hydrographic zero of the port are as follows:

Length of quay (m.)	*Draft (m.)*	*Location*
75	2.5	S. face and N. face of Marechal Hermes Dock
300	5.0 to 6.2	Quay wall – Mosqueiro & Soure Shed and Warehouses 1 and 2.
342	6.3 to 7.0	Quay wall – Warehouse 3, Maua Square and Warehouse 4.
385	6.7 to 7.5	Quay wall – Warehouses 5, 6 and 7.
100	8	Quay wall – Warehouse 8
261	7.5 to 8.5	Quay wall – Warehouses 11 and 12.
110	8.0 to 9.2	Quay wall – Ocrim Silo to the end of the Wall.

Quay Equipment: 25 electric cranes (2.8 – 12.5 tons), 6 mobile cranes on pneumatic tyres (5 – 25 tons), 2 steam cranes, ranging from 2.5 to 25 tons capacity. 1 self propelled floating crane of 200 tons capacity and 1 steam operated floating crane with capacity of 20 tons at 37 ft. There are facilities for handling containers.

74 Stackers (capacity 2,500 kg. – 25,000 kg.), 4 loaders (12,000 lbs. – 4 tons), 55 lorries, 8 trucks, 6 conveyor belts, 14 weighbridges (1.5 tons – 60 tons) and 8,000 pallets.

CARGO FACILITIES: 3 regular silos for grain, with a capacity of some 10,800 cu.m. 2 irregular silos with a capacity of 1,537 cu.m. Average hourly discharge rate 200 tons.

For grain suction there are 2 fixed towers, capacity 100 t.p.h. and 40 t.p.h. and 1 mobile tower with capacity 60 t.p.h.

The suction unit for 100 t.p.h. has the following characteristics: 1 mobile pneumatic suction tower for 100 t.p.h., 65 m. belt transporter of the elevated type with 200 t.p.h. capacity, including 2 end stations for drive of 40 h.p. each; 1 bucket-type elevator with 200 t.p.h. capacity, a height of 64 m., including an end drive station of 75 h.p.; 1 weighing tower with 200 t.p.h. capacity.

TANKERS: At oil terminal of Miramar (Val-de-Caes) 8 km. from Belem, vessels of 18,000 d.w.t. old "T" berth, length 76 m. may berth or unberth at any state of the tide, subject to draft. Max. depth alongside berth at LW 26 ft., the same as that of approach channel. Mooring at this berth is to buoys inside the line of the "T" jetty. 77 tanks for liquid fuel leased to Petrobras, Shell, Texaco, Esso, Atlantic, Salgema and Paragas.

New Berth: Close South of "T" shaped berth. Length of platform 40 m. Vessels moor to 4 dolphins. Berth equipped with 5 ton s.w.l. hand operated winches.

STEVEDORES: Stevedoring gangs for day shifts 0630 and 1230 hrs. and 1630 hrs. for night shift. Loading and discharging rates exceptionally good, particularly if vessel working at anchorages into lighters. Any delays to vessels alongside can usually be put down to the lack of official clearances in case of loading export cargo.

MEDICAL: Notice of required medical assistance should always be given in advance. There are a number of first-aid posts for minor complaints. Vaccination Certificates for smallpox are essential, and, although not required officially, yellow fever vaccinations recommended.

DENSITY: Strong outflow of Amazon and its tributaries is such that water at Salinas is only semi-salt. In the river itself, the water becomes slightly brackish, and half way to Belem, is absolutely fresh.

FRESH WATER: Fresh water only obtainable alongside main quay, and not at oil berth. Delivery rate 25 t.p.h. (2.5 in. line) Boiler water may be taken direct from the river at a point named Capim, near the entrance to Marajo Bay.

FUEL: See "General" before first port. Available, but due to Brazilian Custom's Laws, as much advance notice as possible should be given in order to obtain correct documentation. A minimum of 1 weeks' notice recommended.

GANGWAY/DECK WATCHMEN: The employment of gangway watchmen recommended.

HATCHES: Hatches normally opened and closed by stevedores, but if it is raining they are inclined to shelter before closing.

CUSTOMS ALLOWANCES: Custom's Authorities do not normally search ship's crews, and reasonable quantity can remain in the possession of crew members. However, no attempt should be made to take more than a reasonable amount ashore.

IDENTITY CARDS: Foreign crew members not permitted to go ashore without presentation of identity card on which is a photograph of holder and personal details. These cards are provided by the Agent upon arrival. The identity card must be delivered on disembarkation to the Federal Police who will return it to the crew member on re-embarkation.

CONSULS:

REPAIRS: Deck and engine repairs of all types can be carried out by the Brazilian Naval Dockyard, or by repair shops of the Companhia Docas do Para.

DRY DOCKS: At Naval Base, there is a dry dock measuring 730 ft. by 74 ft. with a depth over the sill of 25 ft. There are also several small floating docks, but they are not adequate for sea-going vessels.

REPATRIATION: There are 3 international flights each week from Belem. Miami 1 flight per week, Wednesday. New York 2 flights per week, Monday, Friday. In addition, daily flights to Rio de Janeiro. Airport of Val-de-Caes is about 4 miles from the city centre.

TIME: Local time GMT minus 3 hours. Summertime (1st December – 28th February) GMT minus 2 hours.

HOLIDAYS: New Year's Day (1st January); Carnival (variable); Labour Day (1st May); Corpus Christi (25th May); Independence Day (7th September); All Souls' Day (2nd November); Proclamation of the Republic (15th November); Christmas Day (25th December). Work could be carried out on these days, but costs would be prohibitive.

POLICE/AMBULANCE/FIRE: Maritime Police Tel: 234996; Ambulance Tel: 222523; Fire Brigade Tel: 23-3119.

TELEPHONES: Telephones can be put on board vessels alongside main quay.

GENERAL: Tidal action in the Guajara Bay is extensive, with the "Pororoca" phenomenon which comprises the meeting of tidal water with masses of fresh water coming from the Brazilian Equatorial rivers. The tidal wave takes 3 hours 40 minutes to come from the Salinas Lighthouse to the South end of the port of Belem. Systematic measurements at times of spring tides show that the average height of water reaches 3.22 m. at high tide and in the quadratures 2.42 m. Maximum high and low water levels recorded are +4.21 m. and −0.37 m. respectively.

During the ebb, the waters coming up the Bay of Guajara are predominantly picked up by the Western channel current, with great speed, thus explaining the great depths at that point, and also in the Western channel the average ebb and flow speeds are 1.30 and 1.74 m. per second, respectively, and in the East channel they are respectively 1.19 and 2.10 m. per second. At the extreme Southern point of the berthing quays the average flow speed record was 2.77 m. per second.

AUTHORITY: Companhia Docas do Para, Avenida Presidente Vargas, 41-20 Andar, CEP 66.000, Belem, Para, Brazil. *Tel:* 223-0056, 223-2066. *Contact:* Raul da Silva Moreira, Director-President.

CABEDELO: 06.58 S. 34.50 W. (See Plan)

DOCUMENTS: See "General" before first port.

PILOTAGE: Contact Pilot's Headquarters by radio via vessel's Agent located at Joao-Pessoa (18 km. from Cabedelo). The messages are relayed by Natal Radio PPN or Cabedelo Radio. All messages are delivered by National Telegraph – Telegrafo Nacional. Pilots' launches painted red with capital "P".

Pilots may be requested through VHF (Channels 06, 12, 14, and 16 – 156.30 MHz, 156.6 MHz, 156.70 MHz and 156.8 MHz).

ANCHORAGE: While waiting for the Pilot, vessels should anchor 0.8 miles E.N.E. of the light beacon. At the anchorage in the vicinity of the breakwater the depth of water is from 9.0 m. (29 ft. 06 in.) to 15 m. (49 ft.) at low tide, and at the anchorage located South of the docks the depth of water is 5.50 m. (18 ft. 09 in.) at low tide.

RESTRICTIONS: For Masters calling at Cabedelo for first time it is preferable not to enter during darkness.

MAX. SIZE: Max. length 210 m., draft spring tide 30 ft., neap tide 28 ft.

HEALTH: Also see "General" before first port. If Master suspects contagious disease aboard he must report to Agent who will contact Brazilian Health Authorities at Joao-Pessoa.

VHF: See "Pilotage".

TUGS: None available.

BERTHING: Berthing takes place in accordance with vessel's draft. Master must always give Agent vessel's draft arriving off Cabedelo. Length of quay, 602 m.

Berth Length (m.)	*Depth (m.)*	*Remarks*
125	9	Tankers, veg. oil, minerals, containers, general cargo
135	9	General cargo, minerals, containers, wheat
142	9	General cargo, minerals, containers, refrig.
110	7.5	General cargo, bulk cargo and containers
90	7.5	General cargo and bulk cargo.

STEVEDORES: Advise Agent ETA at Cabedelo 48 hours prior to arrival to make arrangements with dock and stevedores for discharging or loading.

CRANES: 5 Portal cranes. 1×1.5 tons, 2×3.2 tons, 1×5 tons and 1×6.3 tons.

MEDICAL: For urgent cases recommended that vessel call at Joao Pessoa instead of Cabedelo as Joao Pessoa has better facilities.

TANKERS: Cabedelo not a loading port for petroleum products. Messrs. Esso-Brasileira de Petroleo and Petrobras Distribuidora S.A., have tanks for reception of gasoline, diesel and other petroleum products which are carried by Brazilian fleet of tankers "Fronape" – Frota Nacional de Petroleiros. At Cabedelo only Berth No. 1 is suitable for discharging petroleum products or to bunker vessels since pipe-line is only connected to Berth No. 1. Tankers enter and sail during dark hours from Cabedelo. Length of berth 200 m. Depth alongside 9 m.

DENSITY: Varies from 1020 to 1025 at HW.

FRESH WATER: Supplied by pipe-line alongside quays at rate of 50 cu.m.p.h.

FUEL: Available. Suppliers Messrs. Esso-Brasileira de Petroleo. Pipe-line at Berth No. 1 where vessels can bunker alongside. Pipe-line fuel oil, 8 in.; pipe-line diesel, 8 in.

GANGWAY/DECK WATCHMAN: Watchmen available. Masters have option to choose suitable times when their services are required.

OPENING/CLOSING HATCHES: By stevedores. Crew assist when stevedores not familiar with modern hatches.

CUSTOMS ALLOWANCES: 1 carton cigarettes per crew member at Customs discretion and 1 bottle of whisky or any other kind of spirit, subject to Customs discretion.

IDENTITY CARDS: Foreign crew members not permitted to go ashore without presentation of identity card on which is a photograph of holder and personal details. These cards are provided by the Agent upon arrival. The identity card must be delivered on disembarkation to the Federal Police who will return it to the crew member on re-embarkation.

CONSULS:

France – (083) 221.2010
U.K. (083) 224.7005

Other consulates at Recife 110 km. from Joao-Pessoa about 1.5 hours by road.

REPAIRS: Minor repairs only.

DRY DOCKS: None.

REPATRIATION: Repatriation can be arranged via Recife or direct from Joao-Pessoa to Rio de Janeiro, Sao Paulo and Brasilia.

AIRPORT: 9 km. from Joao-Pessoa. Utilised by National Lines whose planes make regular calls.

TIME: GMT minus 3 hours throughout the year.

HOLIDAYS: *National Holidays:* Fraternidade Universal (January 1st); Tiradentes (April 21st); Labour Day (May 1st); Brazil's Independence Day (September 7th); Nossa Senhora Aparecida (October 12th); Commemoration of the Republic (November 15th); Christmas Day (December 25th).

State Holidays: Nossa Senhora da Conceicao (December 8th); Sexta Feira da Paixao (Movable); Sagrado Coracao de Jesus (Movable); Emancipacao Politica de Cabedelo (December 12th).

Work is possible during holidays and Sundays, except on Good Friday, Labour Day and Independence Day.

POLICE/AMBULANCE/FIRE: Police (located at Joao-Pessoa) 190. Cabedelo has a small Police Station but no telephone available. Ambulance is available. Fire Brigade (locate at Joao-Pessoa).

TELEPHONES: Facilities for placing telephones on board.

AUTHORITY: Administracao do Porto de Cabedelo, Av. Presidente Joao Pessoa, Cabedelo, Paraiba, Brazil. *Contact:* Afonso Augusto de Toledo Navarro, Administrator.

CARMOPOLIS: 11.03 S. 37.01 W. (See Plan)

LOCATION: Terminal Maritimo de Carmopolis, (Tecarmo), operated by Petroleo Brasileiro SA, PETROBRAS, is located on the N.E coast of Brazil at the Atalaia Velha Beach, Lat. 11° 00′ 30″ S., Long. 37° 04′ 00″ W. about 9 km. South of Aracaju City, capital of the State of Sergipe.

The mooring site is an open roadstead seaberth. It is located about 3.8 miles from the beach and at the end of a submarine pipe-line marked by 1 lighted buoy, 4 miles Southwards from the bar entrance to the port of Aracaju. The geographical position of the berth is: Lat. 11° 02′ 35″ S., Long. 37° 00′ 57″ W.

DOCUMENTS: See "General" before first port.

ESSENTIAL REQUIREMENTS: *Most essential requirements to be met by vessels loading:*

1. The ocean terminal consists of a conventional berth, i.e., tankers are moored with the ship's two anchors ahead and the terminal's six mooring buoys round the stern (See plans).

2. The terminal is intended to load ships with crude produced in the nearby shore and sea oil fields.

3. Loading is effected by a 26 in. diameter submarine pipe-line with a length of 7,500 m. from the mainland. It divides into two strings of hoses (North and South) through a "T" reducing piece.

4. Ship's manifold should be preferably equipped with one 10 in. flange (ANSI).

5. Amidships, derrick or crane with a minimum capacity of 5 tons must be provided to hoist and connect the nominated string of hoses, normally on starboard side. Only one string is connected.

6. Ship's windlass (chain cables, brakes, windlasses, etc.) must be in perfect operational condition so that anchor and chains can be dropped, heaved in, and adjusted, etc.

7. A forward winch must also be prepared for heaving in the pick-up wire of the hose.

8. Maximum permitted draft for the terminal is 15 m. so that a 3 m. bottom clearance is assured to face extreme operating sea conditions.

9. The mooring was designed to accommodate vessels up to 65,000 d.w.t. however, in special favourable circumstances a 115,000 d.w.t. tanker has been moored. Ship's LOA (300 m.) and longitudinal position of ship's manifold are also limiting factors.

10. By daylight a Mooring Master will board the vessel about 1 mile S.E. of the terminal sea buoys. He will advise on all manoeuvres relative to berthing, connecting and disconnecting hoses, etc. When arriving at night or for awaiting berth, Masters are requested to use the recommended anchorage. However, if weather conditions permit, ships may unmoor at night.

11. One terminal loading supervisor and 9 working men will stay aboard.

12. Vessels are requested to have a pilot ladder long enough to reach the terminal's launch, rigged alongside the accommodation ladder, in order that the shore personnel may transfer to it after 2 m. or 3 m.

13. Being an open roadstead, vessels must keep engines on standby during their stay in the mooring. Steam must be kept on deck in case adjustments to anchor cables or mooring lines are found necessary.

14. No ballast discharging facilities exist at the terminal. Vessels must arrive with necessary clean ballast. Brazilian laws are very strict with regard to the pollution of coastal waters and fines are heavy.

15. Any emergency should also be immediately transmitted by radio telephone on Channel 16. When operating the vessel's and the Terminal's radiotelephones will remain to Channel 12, set apart for such use.

16. Under no circumstances should vessels drop their anchors in the area between the sea buoys and the shore and the nearby submarine pipe-lines (North and South) from the oil production platforms.

REMARKS:

Non-compliance of just one of the above stated conditions (items 5, 6, 8 and 14) could result in rejection of the ship as being unsuitable for this terminal.

ARRIVAL:

Mooring Turn: Arrival time is considered to be the time the vessel reaches the anchorage or the time the Mooring Master boards the vessel, whichever occurs first. However, Notice of Readiness will not be considered as the time of arrival unless the vessel is in all respects ready to load. Tankers are loaded in turn except when the Terminal Superintendent grants priority to a particular vessel out of turn, in special circumstances only.

PILOTAGE: No Pilots exist in Carmopolis. All manoeuvres will be undertaken by the vessel's Master, with the help of a Carmopolis Mooring Master, who will board the vessel in the anchorage area and advise the Master on all operations such as mooring, connecting hoses, unmooring, loading, etc. It is important to emphasise that the services of the Mooring Master are afforded without charge and upon the express undertaking and condition that PETROBRAS shall not be liable for any damage or injury resulting from any advice, assistance or actions given or made by such Mooring Master. In the event it becomes necessary to disregard the Mooring Master's advice, in order to ensure safety of the vessel, the Master must forward a full written report of the circumstances for delivery to the Captain of the Port through the Terminal. It is the responsibility of the Master to notify the Mooring Master of any special conditions or peculiarities such as defective navigation equipment, tackle, gear or lack of necessary equipment which might impose hazards related to handling, mooring and loading the vessel.

Vessel must be moored to entire satisfaction of the Mooring Master. The Mooring Master may require the vessel to unmoor at anytime he deems necessary for the safety of the vessel or mooring or both or for an infringement of terminal or port regulations.

Unsatisfactory conditions will be reported to the Terminal Superintendent who is empowered to reject the ship unless the reported deficiencies have been remedied.

APPROACHES: As it is an open roadstead the access to the terminal can be easily and safely approached either from the N.N.E. or from the S.S.W.

The shore line runs of 035°/215°. Between the Sergipe and Vaza-Barris Rivers the coast is almost a straight dune-covered sand beach which offers a very few notable natural landmarks.

Tankers must be aware of the existence of 4 oil fields with fixed production platforms which constitute in themselves good marks. Marking the bar of the port of Aracaju, located about 5 miles N.W. of the terminal berth, is a light exhibited from a conical white framework tower enclosing a central cylinder, 41 m. high, with a range of 14 miles (international No. G0230). There is a radio-beacon at the local airport with signal letters AR (· – · – ·) transmitting continuously on 355 kHz. Its geographical co-ordinates are: Lat. 10° 59′ 27″ S., Long. 37° 04′ 22″ W. Near to the terminal offices are 4 steel towers and a chimney of a natural gas plant.

RESTRICTIONS: Mooring at the buoys will be effected in daytime only. Nevertheless loading and connecting hoses may sometimes be effected in night-time under certain conditions.

MAX. SIZE: The berth is designed to accommodate tankers up to 65,000 d.w.t., however, under favourable circumstances and vessel Master's discretion a 115,000 d.w.t. tanker has been moored. The ship's final draft is usually 15 m. (49 ft.). This draft will usually afford a safe bottom clearance 3 m. (10 ft.) even under the most severe sea conditions in which the loading operation is feasible. Depth is 18 m. (MLWS).

ANCHORAGE: The advisable anchorage site either for awaiting berth or daylight is determined by the following geographical co-ordinates: Lat. 11° 04.1′ S., Long. 36° 59.0′ W. Depth is 25 m. (82 ft.) MLWS.

Occasionally Mooring Master will board arriving tankers whilst still underway nearby the anchorage area. This anchorage provides vessels with ready access to the berth. Holding ground in this area is very good, as the bottom is varied in character (mud and fine sand). It is recommended that vessels should stay at anchor for periods of not longer than 24 hours with the anchor in the same place, otherwise it will be difficult to heave up anchor.

IMPORTANT:

Under no circumstances should vessels drop their anchors in the area between the berth and the shore due to submarine pipe-lines.

ETA: Vessels bound for Aracaju or TECARMO should advise their ETA 48 hours prior to arrival to radio station "PPS" (Official Coastal Radio Station) as well as to their Agent in Aracaju-SE (Cruz Irmaos & Cia.) whose cable address is Cruzirmaos, via the following coastal radio stations: Amaralina Radio (PPA) in Salvador – BA; Olinda Radio (PPO) in Recife – PE; or Rio Radio (PPR) in Rio de Janeiro-RJ.

When vessel is within 50 miles of the terminal contact may also be made by VHF radiotelephone on Channel Delta/16 (156.8 MHz). The terminal keeps a 24 hour listening watch on this Channel.

VHF: The radio and communication centre is located in the Oil Control Building. There is a VHF set operating 24 hours a day on Channel 16. Portable sets are taken aboard for the sake of safety and controlling the loading. No signal lamp (Aldis lamp) exists.

TUGS: There are no tugs available to assist berthing and unberthing.

BERTHING: The berth is of a conventional type, i.e., vessels are moored with two anchors ahead and synthetic mooring lines to the 6 sea buoys round the ship.

Ships are loaded by means of a 26 in. diameter submarine pipe-line dividing into two strings of hoses (by a "T" piece) either of which will normally be picked up on the starboard side. The end of the submarine line is 3.8 miles off-shore in 18 m. of water. Both north and south strings are 10 in. and support a maximum pressure of 225 p.s.c. Only one string is connected to the ship The 10 in. hoses are connected to the ship's manifold, through a quick release connecting device, the flanges being of normal 10 in. ANSI pattern.

MOORING: Vessels moor using both anchors forward with 2 lines to each buoy.

Turnround: To promote the economical operation of the vessel, Masters are requested to co-operate with installation representative in minimizing their in-port time. Any delays which are considered unnecessary or extensive should be reported to the loading Operating Supervisor so that corrective measures can be taken in due time.

HOSES: There is a submarine pipe-line from shore installations direct to the terminal, which are divided into 2 flexible hoses long enough to reach the ship's manifold. Usually, only 1 hose is connected, of 10 in. diameter. The nominal loading rate is about 3,000 cu.m.p.h. (18,870 bbls.p.h.). Shore labour used to connect hoses. Hoses are lifted on the starboard side.

The Mooring Master will guide the terminal's workmen in lifting, connecting and lowering the hose. As soon as the vessel is securely moored, one of the strings of hoses must be lifted to the rail by ship's gear (crane or boom). Sundry hose securing and connecting equipment (strops, gaskets, quick-release device, etc.) will be supplied by the terminal and put aboard the ship soon after arrival. Hose will normally be lifted and connected on the starboard side.

LOADING: At the beginning and during the loading operation tankers are requested to observe the following:

(a) Pumping will not start without the ship's and Mooring Master's permission.

(b) The max. allowed pressure established by the ship will be maintained.

(c) During operations a constant lookout by responsible men is required on the moorings and in the manifold area to keep watch on the connections.

Also see "Hoses".

MEDICAL: Medical treatment and/or hospitalisation, if required are provided at Aracaju private hospitals. Dentists are also available in Aracaju. Agent will make such arrangements.

For emergency cases (injury etc.), Petrobras first aid may be requested by the Master.

BALLAST: Vessels should arrive at Carmopolis with minimum clean ballast to enable manoeuvring under prevailing weather conditions. Masters are encouraged to take advantage of the favourable weather which prevails most of the time to minimize ballast. Early radio contact with the terminal must be established in order to obtain the latest weather information so that he can decide on appropriate ballast. The terminal is particularly interested in having vessels complete the deballasting operation promptly after berthing in order to minimize time at berth. Simultaneous loading and deballasting is encouraged on properly equipped vessels. Vessels requiring excessive time to complete the deballasting operation will be given Letters of Deficiency.

To avoid any possible pollution of the local waters, all tankers calling at the terminal to load must do necessary tank cleaning prior to arrival. Before arriving at the loading berth Masters must assure themselves that all tanks, pipe-lines, and pumps are free of oil. All tank cleaning should be preferably done 50 miles off the Brazilian coast. The terminal does not have facilities to receive any significant amount of oily ballast. If, after mooring a vessel is found to have oily ballast water aboard, it will be sent to sea to accomplish the necessary tank cleaning. A new Notice of Readiness to load must then be given.

WEATHER: *Weather conditions:* Local weather and sea conditions may be considered as fair for tanker operations.

Rain: The annual precipitation averages 1,103 mm. April, May and June are the rainy season.

Visibility: Usually the visibility condition in this area is fair, except during squalls.

Temperature: Actual temperatures ranging one year from a Low of 18.2°C in June to a high of 30.8°C in February.

Pressure: The annual average atmospheric pressure is 1013.2 mb.

Relative humidity: During most of the year the relative humidity of air is about 82%.

Remarks: Weather forecasts as well as Notice to Mariners are transmitted by PWZ and PPR coastal radio stations. For details refer to Brazilian Navy H.O. publication (Radio Aids) DH.8.

Winds and Waves: Winds blowing from shore to sea are practically non-existent. Those blowing from 040° to 160° counter-clockwise are not worth mentioning. From October to March Eastern winds will prevail (070° to 110°), and between May and August SE winds will prevail, i.e. (120° to 160°). In April and September, winds will blow either from the East or the S.E. 78% of wind force will be about 2 and 4 on the Beaufort Scale. i.e. slight to moderate breeze. Seldom fresh gales (force 8) have been observed. 19.7% of periods of calm and the rest 2.3% is of light air occurences (force 1 to 3).

Essentially all waves near the Aracaju area are caused by the prevailing local winds. However, the changeable periods in which they occur, when the waves will give the false impression to the swell. 60% of the recorded waves were between 0.5 m. to 0.9 m. high. During one full year period of observations the studies have demonstrated that only 1.4% of the operational time, the terminal will be closed for tanker loading, periods in which the waves are equal or higher than 2 m.

Currents: Currents recorded in the terminal area are made up of diversified and simultaneous causes acting in different grades of strength and combination. The causes were identified as being winds, tides, salinity and also temperatures, none of them was outstanding enough to be regarded as the final prevailing cause. The currents chiefly run parallel to the coast, but they do not vary greatly in set and drift. This lack of constancy affords evidence that it cannot be attributed to the Brazil current. Maximum recorded speed of current was one knot. It has been reported that upon N.E. winds and at ebb tides the current sets to S.S.W. with speeds higher than usual.

Tides: The mean HW interval is 4 hours 46 minutes. Tidal velocity rarely exceeds 2 knots and the tidal range varies from 1.99 m. at Spring to 1.05 m. At Neaps.

CARGO: The cargoes are called Sergipano Crude Oil of an average API 33, temp. 90° F., Plataforma Crude Oil of an average API 40.3, temp. 90° F. or Carmopolis Crude Oil of an average API 23.4, temp. 90° F. No heating required.

SURVEYORS: *Petroleum Inspection:* Petroleum inspectors are not available in Aracaju, but may be requested.

Chas. Martin & Co., Rua da Lapa 200, conj. 906, 20.000 – Rio de Janeiro. Tel: 242-4219, 245-5636 and 225-3507.

E. W. Saybolt & Co., Rua XV de Novembro 70, P.O.Box 826, Santos. Tel: 341984. Telex: (013) 1004.

FUEL: No bunkers available at Aracaju Terminal.

FRESH WATER: No water available.

TIME: GMT minus 3 hours.

AIRPORT: There is an airport at Aracaju.

CUSTOMS ALLOWANCES: Brazilian Laws are strict with regard to smuggling, and Masters are requested to instruct their crew not to retain cigarettes in carton lots, cigars, tobacco, alcoholic drinks, drugs, souvenirs, etc.

By no means will any commercial transactions be tolerated be it either among terminal employees, crew members or anyone else.

GENERAL:

Charts and Publications: (a) Brazilian Charts: 1003 and 1000 and 60 (Brazilian Navy Hydrographic Office).

(b) Foreign Charts: No. 24210 and 24211 of the US NOO and No. 1396, 3286 and 3977 of the H.D. (U.K.).

(c) Brazilian HO publications: Sailing Directions DH 1-9, List of Lights DH 2, Radio Aids DH 8.

No supply of charts, sailing directions or other publications are available in Aracaju, however if ordered in advance by Agent they may be obtained.

Bonded Stores: Cigarettes, beverages or other goods are not available in Aracaju.

Cash Advances: No cash advances are effected by the terminal. As a rule, the ship's agent will be able to handle this service when previously requested by radio.

Classification Societies: In Aracaju, there are no A.B.S. or L.R. surveyors, however, they may come from Rio de Janeiro upon Agent's request.

Consulates: No consular representatives exist in Aracaju.

Lubricating Oil: Supplies of lubricating oil are expensive and available only in emergencies and in very small quantities. Purchase and delivery are difficult.

Mail: There is regular Post Service in Aracaju. Letters should be sent care of the ship's Agent. In turn, the letters will be delivered to the ship upon arrival.

Provision and Stores: Limited. Provisions and stores are ordered through the ship's Agent or through shipchandlers in Aracaju.

Radio and Radar Repairs: Small radar and radio repairs may be effected in Aracaju provided that prior notice has been given to ship's Agents.

Agency: Ships Agent: Cruz Irmaos & Cia., Av. Barao do Rio Branco, 186/1208, P.O.Box 1, 49.000 – Aracaju-S.E., Brazil. *Tel:* (079) 222 6722. *Cable Address:* Cruzirmaos.

AUTHORITY: Petroleo Brasileiro S.A. – PETROBRAS, Avenida Republica do Chile, 65 – Centro – Rio de Janeiro – 20.035 – Brazil.

Divisao de Operacoes: Same address, as above, 12th Floor (Operations Division).

Terminal: Terminal Maritimo de Carmopolis – TECARMO. Av. Melicio Machado Km. 2, Aracaju, Sergipe, Brazil CEP 49000. *Tel:* 079-2231901. *Telex:* (0792) 127.

FORNO: 22.54 S. 43.10 W. (See Plan)

PORT LIMITS: The port is situated in Arraial do Cabo, on the North coast of the State of Rio de Janeiro, and its limits are comprised by: on the sea side, waters of the Anjos; the creek, and by the intersection of the mountain range with the foot of Fortaleza Hill. Its entrance is located in the alignment of the last point of Santa Cruz Street (Rua Santa Cruz), and on the opposite side, terminates at the shelter breakwater quay commencement point.
APPROACHES: The access channel is 700 m. wide, with a bar (minimum depth 12 m.) between Cabo Frio and Ilha dos Porcos.
PILOTAGE: Optional.
ANCHORAGE: The anchorage area is situated beyond Anjos Creek.
BERTHING: Manoeuvring Basin: Depths of 12 m. – 13 m. available.

Quay: length 220 m., depths from 6 m. up to 10 m. by the Dukes of Alba.

Also see "Tankers".

CRANES: 2 jib cranes with a capacity of 5 – 6.3 tons. Other equipment includes 1×7 ton stacker truck and 1 tanker truck with 10,000 litres capacity.
TANKERS: *Caustic Soda:* One tank with a capacity for storage of 14,500 tons, used previously for molasses with a pipe system which extends up to the Dukes of Alba and which permits loading of vessels at the rate of 300 t.p.h.; there is a receiving bridge for the product when transported by lorries, and pumping houses.

Liquid Bulk Cargo: Pipes located at the Dukes of Alba, used for receiving fuel oil for the Companhia Nacional de Alcalis, Esso Brasileira de Petroleo and Petrobras Distribuidora. The same berthing area is frequently used also for vessels carrying chemical products such as caustic soda intended for Dow Quimica S/A., whose bulk cargo is moved by pipe-line connected to the storage tank.

FRESH WATER: The port has available a tank with a capacity for 40,000 litres.
AUTHORITY: Porto do Forno, Rua Santa Cruz, 28910 – Arraial do Cabo – RJ. *Tel:* (0246) 43-0063 and 43-0070. *Contact:* Gustavo Gurgulino de Souza, Director.

FORTALEZA: (including Mucuripe), Ceara: 03.41 S. 38.33 W. (See Plan)

PORT LIMITS: From the end of the mole on a true bearing of 235° to the meridian of 38° 29.8′ W., thence to the coast.
DOCUMENTS: See "General" before first port.
PILOTAGE: By Associacao de Praticagem do Porto de Fortaleza. Address: Rua Dragao do Mar, 372. Tel: 212088. The Pilots board ships about 0.5 miles N.W. from the breakwater, call by International Code Signals.

Pilot may be ordered through the vessel's Agent or Fortaleza Radio (PPC). One hour before arrival specifying time of arrival and from which point the Pilot is required.

ANCHORAGE: Vessels awaiting Pilot may anchor W.N.W. of the breakwater head, distance 0.5 miles. Water depth 32 ft.
RESTRICTIONS: Access channel Length 1,000 m., width 100 m., depth 10 m.
MAX. SIZE: Up to 27 ft. draft depending on the tide.
HEALTH: The inspection area for Port Health and the other authorities is within 1,430 m. of position Lat. 03° 42′ 24″ S., Long. 38° 29′ 18″ W.

All ships must be visited by Port Health Inspector. If vessel has passengers in transit for another Brazilian port, another visit will be required at port where passengers disembark. If ship's health condition satisfactory, Inspector will give Free Pratique immediately. Radio pratique available if Master able to declare satisfactory health condition before arrival. Free Pratique is valid for subsequent ports in Brazil.

If there is a crew member to be hospitalised, the Health Inspector will issue pass to hospital on request of Master or Agent who will be made responsible for all expenses incurred.

Inoculations for International Certificates can only be given by an employee of the Port Health Authority.

Ships are inspected by Custom House and Health personnel at the anchorage.

VHF: Port Radio on Channels 9, 10, 13 and 16.
TUGS: One tug 1,680 h.p. available.
BERTHING: 1,054 m. of berthing length, depth 3.6 m. – 10.0 m. Berths for five vessels. One grain elevator, capacity 150 t.p.h. Four lighters available capacity up to 70 tons each.

Berth No. 1. 106 m. long, 18 ft. deep.
Berth No. 2. 150 m. long, 20 ft. deep.
Berth No. 3. 170 m. long, 22 ft. deep.
Berth No. 4. 530 m. long, 33 ft. deep.
Berth No. 5. 160 m. long, 33 ft. deep.

Vessels are advised to take a Pilot and use a tug if available due to the peculiar port variations.

Vegetable oils can be loaded in drums, 18/20 t.p.h. or ex-barge at 100/125 t.p.h.

CRANES: A 100 ton floating crane is on order. 7 diesel cranes 9 ton – 50 ton capacity. 5 electric cranes 3.5 tons – 12.5 tons capacity. No. 3 Berth has a travelling suction tower with 2 tubes, operating at 120 t.p.h.
TANKERS: *Petrobras:* Berthing platform length 90 m., width 28 m., depth 11.0 m. (1st phase), 12.0 m. (2nd phase). Capacity 34,000 g.r.t. (1st phase), 50,000 g.r.t. (2nd phase). Length of access bridge 853 m., width 3.7 m.

Loading Lines (planned): 1×18 in. (crude); 1×16 in. (fuel oil); 1×12 in. (asphalt); 1×10 in. (diesel oil and Naphtha); 1×12 in. (petrol/alcohol); 1×12 in. (aviation kerosene); 1×12 in. (kerosene/diesel oil); 1×8 in. (LPG); 1×6 in. (LPG vapour); 1×6 in. (drinking water); 1×10 in. (ballast); 3×12 in. (not designated) and 1×4 in. (steam).

Lines available (1st phase): 1×6 in. (drinking water); 1×8 in. (fire water line); 1×12 in. (diesel/kerosene); 1×12 in. (petrol/alcohol) and 1×16 in. (fuel oil/asphalt).

FRESH WATER: 20 hydrants on the quay spaced 50 m. to 80 m. apart. Connections 2 in. Rate 20/30 t.p.h.
FUEL: Boiler fuel available from 7 connections (6 in. and 8 in.), rate 45 t.p.h., spaced along the quay. Diesel oil is available by road tanker. Also see "General" before first port.
REPAIRS: Two workshops available for machinery repairs. No electronic repairs possible.
TELEPHONES: Available on board through the Ceara Dock Co.
CONSULS: None at Fortaleza.
IDENTITY CARDS: Foreign crew members not permitted to go ashore without presentation of identity card, on which is a photograph of holder and personal details. These cards are provided by the Agent upon arrival. The identity card must be delivered on disembarkation to the Federal Police who will return it to the crew member on re-embarkation.
REPATRIATION: Can be arranged.
AIRPORT: Only internal services from local airport.
POLICE/AMBULANCE/FIRE: Maritime Police Tel: 24.14.94; Ambulance 21.34.34 and 21.22.22; Fire 23.13.81.
SHORE LEAVE: Allowed under control of Maritime Police.

SHIPMASTER'S REPORT: January 1981.
Tugs: One available of 1,600 h.p., used for all berthing/unberthing operations.
Berthing: Berth No. 5 has been dredged to take ships with a draft of 10 m. Deep laden grain ships lighten at this berth by using shore cranes to discharge into lorries before shifting under the sucker towers.

A dredger is based at Fortaleza and works continuously.

Cranes: There are now 2 travelling suction towers for handling grain, each with 2 tubes, at Berth No. 3 where max. draft is 8 m.

AUTHORITY: Companhia Docas do Ceara, Praca Amigos da Marinha Esplanada do Mucuripe, C.P. 1099, 60.000 Forteleza-CE. *Tel:* 224.20.33. *Contact:* Livio Silva de France, Director/President.

ILHEUS (Malhado): 14.47 S. 39.02 W. (See Plan)

PORT LIMITS: The Port is limited by the line which goes from the estuary of the river Almada to the Ilheus Grande, and then as far as the Southern end of the Pororocas Parcel.

From there towards the Pernambuco Morro, and then going along the Pontal Coast towards the Airfield, and from this point to the Southern extremity of the Island of Frades, and then turning towards Pedra Point, and going from there following the left bank of the River Cachoeira, then continuing along the coast to the estuary of the River Almada.

DOCUMENTS: See "General" before first port.
PILOTAGE: Pilotage is controlled by the Captaincy of the Port. It is compulsory for foreign vessels of any large tonnage; for oil tankers; for propane carriers; for vessels of any size carrying explosives and for chartered, oceangoing tug boats, whether Brazilian or foreign, that are not captained by a Brazilian officer or that do not include in their crew a Brazilian officer of the category of Nautical Officer or Master of Short-haul Cabotage. The Pilotage zone goes from the Ilheus Grande anchorage ground, marked on Chart No. 1201 of the DHN, to final berthing place.
Request for Pilot: The request for a Pilot must be made with at least 4 hours advance notice. Pilot service in Ilheus is provided by the Pilots Association of Ilheus, with offices in the Banco Economico Building – Room 406 – Tel: (073) 231-2206.
ANCHORAGE: Marked on charts (DHN Chart No. 1201).
Normal Anchorage: At the beginning of the access channel, with a depth of 12 m. Anchoring in the 100 m. stretch along the Wharf and in the Access Channel is forbidden.
Quarantine Anchorage: An area of 500 yards radius with its central point located at Lat. 14° 45′ 30″ S., Long. 39° 01′ 00″ W.
RESTRICTIONS: *Access Channel:* Length 1,000 m., width 200 m., depth 10 m.
Manoeuvring Basin: Length 560 m., width 200 m., depth 10 m.
Navigation Dangers: The passage between the Itaipins reefs and the Ilhote de Itapitanga should be avoided. When sailing South of the Parcel dos Pororocas, the Ilheus Lighthouse should no be sighted at less than 270° until the Ilhote de Ipitanga/Ilheus Grande line has been crossed.
HEALTH: Port doctor visits all ships on arrival and requires Maritime Declaration of Health, Derat Certificate, 2 Crew Lists. Vessels from another Brazilian port automatically receive Free Pratique and should not fly Quarantine Flag. If suspected disease or fever on board it is advisable to cable Agent before arrival. Vessels can receive Pratique at any time.
TUGS: Three private companies own tugs.

BERTHING: There is a total of 432.5 m. of quay available (3 berths), depth alongside 10 m. The wharf extends 110 m. West from the breakwater. Loading rates for bagged cargo of cocoa and coffee approximately 30/45 t.p.h. per gang. Discharge of bulk wheat by grab. Tankers moor partially off the quay to a stern buoy.

PORT EQUIPMENT: 1×24 ton mobile crane; 1 bucket loader of 1.6 cu.m., 1 bucket loader of 1.25 cu.m., 2 portal cranes of 6.3 tons and 3 portal cranes of 3.2 tons; 25 fork-lift trucks of 2 tons – 30 tons capacity.

STEVEDORES: Arranged by Agent.

MEDICAL: All facilities available. If doctor needed on arrival or making emergency call to land sick persons, cable ETA 12 hours before arrival.

TANKERS: Almirante Jeronimo Goncalves Terminal owned by Frota National de Petroleiros. Buoy mooring. (Pipe-line 2,600 m. length – 12 in. diameter).

There is a wooden pier used solely for the movement of liquified gas, length 49.5 m., depth 7.0 m.

FRESH WATER: Available. Rate 50 t.p.h.

FUEL: Supplied by Petrobras road tankers.

WATCHMEN: Compulsory.

HATCHES: By stevedores.

CUSTOMS ALLOWANCES: Only sufficient tobacco for daily use. No alcohol to be taken ashore.

IDENTIFICATION CARDS: Necessary to go ashore.

CONSULS: Only in city of Salvador.

REPAIRS: Workshop belonging to Port Administration. Minor repairs only.

REPATRIATION: Can be arranged via Rio de Janeiro.

AIRPORT: Situated at Pontal, 3 km. from the port.

HOLIDAYS: *National:* 1st January, 21st April, 1st May, 7th September, 12th October, 15th November, 25th December.

Municipal: Fixed: 23rd April, 28th June, 2nd July, 15th August.

Movable: Good Friday and Corpus Christi.

Traditional: Movable: Carnival – Tuesday (Mardi Gras) and Ash Wednesday.

Fixed: 2nd November, 24th June.

POLICE/FIRE/AMBULANCE: Police tel. 2530; Ambulance 2417.

TELEPHONES: No connection to vessels can be made.

TIME: GMT minus 3 hours.

SERVICES: Diving service available.

SHORE LEAVE: Allowed with identity card.

SHIPMASTER'S REPORT: December 1982

Pilotage: Pilot is ordered by vessel's Agent and can be confirmed by VHF on Channel 16. Locality of pilot station marked on chart. Pilot boat is wooden motor boat with white superstructure.

Tugs: Two tugs available (one of 125 h.p. and the other 130 h.p.) assist when going alongside.

Berthing: The pilot boat also assists in bringing the lines ashore. There is a total of 432.5 m. of quay available. Tankers and also general cargo vessels sometimes moor partially off the quay to a stern buoy.

AUTHORITY: Port of Ilheus (Pormal), Avenida Almirante Aurelio Linhares No. 432, Ilheus, Bahia, Brazil. *Tel:* (code 073) 231-3318, 231-3212. 231-1962 (Management). *Telex:* 073-2118.

AGENT: See "Salvador".

IMBITUBA: 28.14 S. 48.39 W. (See Plan)

DOCUMENTS: See "General" before first port.

PILOTAGE: Compulsory. Pilot ordered by ship's Agent. The Pilots have a launch with VHF equipment which is normally moored within the port. The point for awaiting the Pilot is in the anchorage, in the outer part of the port, (Chart 1.908 of the Directorate of Hydrography and Navigation). The launch is painted red and marked with the letter 'P' in black.

ANCHORAGE: The anchorage, near the port, is on the alignment Silo-Ponta da Ribanceira, with a depth between 8 m. and 12 m., and a sandy bottom. It is sheltered from South, North and West winds, but not so from Easterly winds.

RESTRICTIONS: The port is situated in an open inlet, with a width of approximately 3,000 m., but presenting in its external area the shallow water characteristic of the Rocks of Imbituba, with the lowest depth of 8.7 m., and the Rocks of Aracaju, with the lowest depth of 6.9 m. The sea above the rocks is normally shallow, and it is dangerous to navigate over the rocks, even for vessels of small draft.

MAX. SIZE: There is no major restriction with regard to the length of vessels. The manoeuvring basin, inside the port, is 315 m. long and more than 10 m. deep. Vessels of a length of 175 m. operate normally in the port.

HEALTH: See "Itajai".

RADIO: Messages from vessels at sea for Agents or from the latter to vessels must be sent via the Empresa Brasileira de Correio e Telegrafos, which has a Coastal Station at Florianopolis (PPF).

TUGS: One tug, "Mar de Espanha", length 28 m., beam 8.3 m., draft 3.7 m., displacement 276 tons and power 1,680 h.p. It has VHF equipment, and its use is advisable when berthing and unberthing.

BERTHING: ETA to be advised not less than 24 hours prior to arrival. Priority of berthing is based, in principle, on the time of arrival of the vessel. The port has, at the moment, 4 berths.

Berth No. 1 for shipment of coal, 160 m. long with 9.5 m. depth of water.

Berth No. 2, 148 m. and 9.5 m., for general cargo, and which is an extension of Berth No. 1.

Berth No. 3, 245 m. and 10 m., for bulk cargo and generals.

Berth No. 4 with approximately 24 m. and 7 m., exclusively for ro-ro vessels which berth bow on or stern on.

There is also provision for construction of Berth No. 5 with approximately 250 m. and 10 m., for bulk and general cargoes, and as an extension of Berth No. 3.

CARGO HANDLING FACILITIES: Berth No. 1: A system of storage (silo – 3,000 tons capacity), belt with a loading capacity of 350 t.p.h. of coal and a shoot system (8,000 tons) and three cranes with grabs, with a capacity of loading of 650 t.p.h. of coal, totalling a nominal capacity of 1,000 t.p.h.

Berth No. 2: Uses derricks or cranes of the ship, with the possibility of assistance from port cranes.

Berth No. 3: Conveyor belts and loaders/unloaders, with a discharge capacity of phosphate rock of 500 t.p.h. (special equipment for this type of solid bulk cargo) or coal at 1,500 t.p.h., in the future there will be a similar system for loading coal, with capacity of 3,000 t.p.h.

Ships derricks or cranes used for moving general cargo, with the possibility of assistance from port cranes.

Berth No. 4: Special Ro-Ro system, for a single vessel, berthing bow or stern on.

Coal: Movement capacity – 15,000 tons per day.

Storage Capacity: 125,000 tons of fuel coal (the port already has an area for future storage of fuel coal with an approximate capacity of 500,000 tons) and 240,000 tons of metallurgical coal.

Stackers: 3 with a capacity of 1.8 tons, and 2 with capacity of 4 tons.

Loading Shovels: 1 with rigid scoop, 250-B, of 2.5 cu. yd.; 1 articulated 1.900 of 2.5 cu. yd.; 7 articulated Caterpillar 966-C of 5 cu. yd. and 1 articulated Caterpillar 966-C of 6 yd.

Tractors: 4 on crawler tracks.

Lorries: 1 Euclyd and 1 Mercedes Benz, both tipper type.

Locomotives: 4 diesel-electric of 300 h.p. and 1 steam. The locomotives of the Dona Tereza Cristina Railway line also operate within the port, when necessary.

Mills: 2 for coal, with a capacity of 350 tons per hour.

Tanks: There are 2 metal tanks with 2,607 cu.m. and 1,590 cu.m. capacity, intended for storage of bulk liquid caustic soda.

STEVEDORES: Stevedoring service is carried out by port employees, with the addition per shift of personnel of the Imbituba Union of Stevedores, Imbituba and Laguna loading and discharge tallymen, Imbituba trimmers and workers in the Port Services of Imbituba. Working is 24 hours a day every day in the port, with the following shift arrangement:

By Day: Common day work from 0730 hrs. to 1100 hrs., lunch from 1100 hrs. to 1230 hrs., common day work 1230 hrs. to 1630 hrs.; first extension from 1630 hrs. to 1830 hrs., 2nd extension from 1830 hrs. to 1900 hrs.

By Night: Common night work from 1900 hrs. to 2300 hrs., meal break from 2300 hrs. to 2400 hrs., common night work from 0000 hrs. to 0400 hrs., 1st extension from 0400 hrs. to 0600 hrs., 2nd extension from 0600 hrs. to 0700 hrs.

It is necessary to make a prior agreement between the Master of the vessel and the Agent to ensure the necessary number of shifts, and the availability of other resources for loading or discharge.

CRANES: Port: 2×8 ton and 2×8.2 ton.

Coal: 6×10 ton, 1×5.7 ton, 2×1.2 ton and 2×3.4 ton.

MEDICAL: The Agent must be advised in advance as to the need for medical assistance. The town of Imbituba has a hospital (Caridade Sao Camilo) with 100 beds.

DENSITY: The density of water is constant as the port is open to the sea.

FRESH WATER: Berth Nos. 1 and 2: 3 in. pipes, 10 take-off points, with a feed rate of 6 t.p.h. per point.

Berth No. 3: 1.5 in. pipe (provisional), 1 take-off point, delivery rate of 5 t.p.h.

Berth No. 4: 1.5 in. pipe (provisional), 1 take-off point, delivery rate of 5 t.p.h.

FUEL: Contact Texaco, Tel: (0473) 46-1688 in Itajai.

WATCHMEN: Not compulsory, but advisable.

OPENING/CLOSING HATCHES: This is done by port personnel or by the stevedores.

REFUSE COLLECTION: Drums on Berth Nos. 1 and 2. There is no refuse collection on Berth Nos. 3 and 4.

CONSULS: At Rio Grande or Florianopolis.

AIRPORT: *Local Airport:* To the South of the city, 6.5 km. from the port, is a runway which is privately owned, and running N.E. – S.W. Length of runway 1,230 m., width of runway 30 m., and width of the safety strips 35 m. The runway is tarmacadamed and DC-3 type aircraft can operate on it. It has lights and white-painted triangles. It also has a wind sock.

Florianopolis Airport: About 100 km. from the port, on national highway BR-101.

TIME: GMT minus 3 hours.

HOLIDAYS: *National:* 1st January, 21st April, 1st May, 7th September, 12th October, 15th November, 25th December.

Municipal: 2nd November, 8th December.

Movable: Good Friday and Corpus Christi.

GENERAL: *Rail Connections:* This is by the Dona Tereza Cristina Railway Line which connects the port of Imbituba with: Visconde de Barbacena (25 km.); Capivari (46 km.); Tubarao (50 km.); Guarita (53 km.); Posto (55 km.); Jaguaruna (67 km.); Morro Grande (77 km.); Esplanada (85 km. with a branch line to Urussanga); Icara (97 km.); Pinheirinho (107 km. with a branch line to Posto Mina-Uniao – 1.7 km., with sub-branches to Minao do Msto and Mina Uniao; Rio Maina – 6 km.; Rio Fiorita – 17 km.); and Posto Sangao (110 km.).

Road Connections: Avenida Renato Ramos da Silva starts next to the main entrance to the port, and connects to the national highway BR-101, which is at a distance of approximately 6 km. from the port entrance.

Tidal Amplitude: 1.8 m. (maximum).

DEVELOPMENTS: Berth No. 5 is under construction as is a stockage system (500,000 tons), conveyor belts and loaders/unloaders for handling coal, which, when ready, should have a capacity of 3,000 t.p.h. The whole of the manoeuvring basin has been dredged, providing a depth of 9.5 m. along Berth Nos. 1 and 2, 10 m. along Berth No. 3 and 7.0 m. along Berth No. 4.

The breakwater was reinforced and increased by 250 m. and is now about 1,000 m. in length.

A new crane, with capacity of 16 tons is being installed at No. 3 Berth.

AUTHORITY: Companhia Docas de Imbituba, Av. Graca Aranha, 226-8° Andar, Castelo, Rio de Janeiro, CEP 20030, Brazil. *Tel:* (021) 2404445. *Telex:* (021) 23568 EACB BR. *Cables:* Imbitubadocas.

At Imbituba: Av. Getulio Vargas S/N, Imbituba, Sta. Catarina, Brazil, CEP 88780. *Tel:* (0482) 550080. *Telex:* (0482) 421 DOIM BR. *Contact:* General Manager.

ITAJAI: 26.54 S. 48.39 W. (See Plan)

DOCUMENTS: See "General" before first port.

PILOTAGE: Compulsory. To await or to receive Pilot, anchor from 0.5 to 2 miles East of South Breakwater.

Pilot Service has VHF Radio; telegrams can also be addressed to Pilots Service in Itajai (Servico de Praticagem-Itajai), but customary to send all advices to Pilot Service via Agents.

Pilot Service has 2 launches painted red with a "P" on side and on funnel. Launches always anchored inside port. In case of bad weather, vessel must wait for instructions in Porto Belo Bay, South of this port, and in case of bad weather on sailing, if impossible to disembark Pilot in entrance of bar, must be done in Porto Belo Bay.

ANCHORAGE: Waiting anchorage situated in Enseada de Cabecudas, up to 2 miles distant from South Light, depth of 9 m. in position Lat. 26° 55′ S., Long. 48° 37′ W.

RESTRICTIONS: Vessels can enter or sail at any tide with a max. draft of 18 ft. Vessels with a max. draft of 26 ft. may enter or sail at HW. Tanker movements in daylight only. Max. speed allowed in the access channel is 5 knots.

Depths: Depth at Bar – 8.5 m. Access Channel – width 100 m., depth 8.0 m. Manoeuvring Basin – width 250 m., depth 8.0 m.

MAX. SIZE: Max. length 185 m. for dry cargo vessels. For tankers, max. length 160 m.

HEALTH: When coming from abroad, vessel will be visited by Health Authorities, who issue Free Pratique after inspection. When coming from another Brazilian port, Free Pratique issued in previous port is sufficient. This document must stay on board, to be presented in subsequent ports. In case of sickness on board, after receiving Free Pratique, must contact Agent who notifies Health Service.

RADIO: For telegrams (radio) direct from vessel to Agent, or vice-versa, Departamento de Correios e Telegrafos radio station in Santos or Florianopolis, with prefixes: Santos PPS, Florianopolis PPF.

TUGS: One tug "Anapolis", 1,680 h.p.

BERTHING: Previous communication required, time of priority based on time of arriving at bar. Length at quay, 740 m., depth alongside 8 m.

Storage:

Warehouse AZ-1	Capacity 33,500 cu.m.
Warehouse AZ-2	Capacity 53,500 cu.m.
Warehouse AZ-3	Capacity 33,500 cu.m.

Refrigerated Warehouse: Capacity 4,700 cu.m.

Open Storage: 36,000 sq.m. (paved area).

Oil Storage: 23 Tanks. 14,060 cu.m. (petrol); 6,988 cu.m. (diesel oil); 941 cu.m. (Paraffin); 6,686 cu.m. (fuel oil). 28 Gas Tanks – 3,112 cu.m.

Chemical Products: Sodium Sulphate – 6,000 tons, Caustic Soda (Dow Chemicals) – 12,000 tons.

Equipment: Stacker Trucks: 13×8 tons, 4×3 tons, 5×3.5 tons, 3×5 tons, 3×7 tons and 1×37 tons for containers.

Trucks: 1×30 tons, 3×25 tons, 14 tons, 1×10 tons, 1×2 ton, 2×2.5 tons, 2×90 h.p. tractors, 1×70 h.p. tractor and 1×52 h.p. tractor.

CRANES: 1×20 tons mobile crane for containers and 2×1.5 tons, 1×4 tons, 1×5 tons and 2×3.2 tons Portal cranes.

STEVEDORES: When vessel arrives in morning, advisable that Master advises in advance number of gangs he will need so that Agency can make arrangements.

When discharging dry bulk cargo (grain or salt) trucks with special equipment used.

Average for loading: *(a)* Timber 240 tons/gang day. *(b)* General Cargo 100 tons/gang day. *(c)* Bags and Tobacco 200 tons/gang day.

For discharging: *(a)* General Cargo 220 tons/gang day. *(b)* Bulk 240 tons/gang day.

Hours as follows: 0700 to 1100 hrs.; 1230 to 1630 hrs.; 1900 to 2300 hrs.; 2400 to 0430 hrs.

MEDICAL: In urgent cases, advise Agent requirements in advance. Hospital available (573 beds). Normally no special vaccination required, nor presentation of certificates.

TANKERS: 5 oil terminals where vessels 155 m. length and 22 ft. draft discharge.

Shell Terminal:
Fuel oil 10 in. for discharging 8 in. for loading.
Diesel 6 in. for discharging 4 in. for loading.
Gasoline 6 in. for discharging.
Kerosene 6 in. for discharging.

Esso Terminal:
Fuel oil 8 in. for discharging 4 in. for loading.
Diesel oil 6 in. for discharging 4 in. for loading.
Gasoline 6 in. for discharging.
Kerosene 4 in. for discharging.

Atlantic Terminal:
Diesel 6 in. for discharging.
Gasoline 6 in. for discharging.
Kerosene 6 in. for discharging.

Ipiranga Terminal:
Diesel 6 in. for discharging.
Gasoline 6 in. for discharging.
Kerosene 6 in. for discharging.

Heliogas Terminal:
Gas 6 in. for discharging liquid 4 in. for discharging vapour.

DENSITY: During low tide whole port is influenced by fresh water of River Itajai – Acu, situation changing completely at high tides.

FRESH WATER: Available, supplied direct by hydrants (13×3 in.) along quay. Average supply 10 cu.m.p.h.

FUEL: See "General" before first port.

WATCHMEN ON GANGWAY: Not compulsory, but recommended.

OPENING/CLOSING HATCHES: By stevedores.

CUSTOMS ALLOWANCES: Customs can liberate one or two cartons of cigarettes and one or two bottles of spirits, dependant on time vessel remains in port.

IDENTITY CARDS: Foreign crew members not permitted to go ashore without presentation of identity card, on which is a photograph of holder and personal details. These cards are provided by the Agent upon arrival. The identity card must be delivered on disembarkation to the Federal Police who will return it to the crew member on re-embarkation.

CONSULS: Argentina, Sweden and Chile.

REPAIRS: Almost all repairs on engines or deck possible.

REPATRIATION: Repatriation, normally made by Agents via Rio de Janeiro and/or Sao Paulo.

AIRPORT: Situated about 10 km. from port. Daily regular flights to Sao Paulo, Porto Alegre, and Rio de Janeiro by Varig.

TIME: 2nd Mar. – 30th Nov. GMT minus 3 hours. 1st Dec. – 1st Mar. GMT minus 2 hours.

HOLIDAYS: New Year's Day (January 1st); Good Friday; Tiradentes (April 21st); Labour Day (May 1st); Corpus Christi; Proclamation of the Republic (November 15th); Independence Day (September 7th); Christmas Day (December 25th).

Regional Holidays: June 6th and December 8th.

POLICE/AMBULANCE/FIRE: Police 440123; Ambulance 443811; Fire Brigade 193.

TELEPHONES: There are no facilities for placing telephones on board.

DEVELOPMENTS: Container area to be paved.

AUTHORITY: Empresa de Portos do Brasil S.A., Administracao do Porto de Itajai – API. Av. Cel. Eugenio Muller, 622, P.O.Box 244, 88.300 Itajai – SC. *Tel:* (0473) 44-0722 (23 lines). *Telex:* (0473) 121. *Contact:* Luiz Antonio de Matos.

Port Captain: Av. Cel. Eugenio Muller, 106. *Tel:* 44-2435.

LAGUNA: 28.30 S. 48.46 W. (See Plan)

LOCATION: The port is situated in the State of Santa Catarina on the left bank of the connecting channel of the Lake of Santo Antonio with the Atlantic Ocean.

PILOTAGE: Compulsory. Tel: 44-0075.

ANCHORAGE: Recommended anchorage is at the entrance off the bar.

APPROACHES: The area is covered by D.H.N. Chart No. 1901. The access channel is 1,300 m. long, 80 m. wide and 6.2 m. depth. Tidal range 0.84 m.

BERTHING: The manoeuvring basin measures 300 m. × 120 m., with a depth of 5.5 m. The quay is 300 m. long, depth alongside 5.5 m. Port used by fishing vessels only.

Freezer Installations: Ice Factory. Capacity 120 tons/day. Ice Garner. Capacity 400 tons. Freezing Tunnel (2) with capacity of 24 tons/day at −30°C. Freezer Capacity 800 tons at −30°C. Waiting Freezer. Capacity 160 tons at −8°C.

EQUIPMENT: 1 Electric Crane.

FRESH WATER: 715,000 litres capacity reservoirs.

FUEL: Diesel oil available. 3 storage tanks.

REPAIRS: Workshop for repairs in the port area.

HOLIDAYS: In addition to National holidays, local holidays are 2nd February, 13th June and 18th June.

AIRPORT: Nearest commercial airport is at Florianopolis, 130 km. away.

AUTHORITY: Administracao do Porto de Laguna, Avenida Getulio Vargas 728, P.O.Box 39, 88790, Laguna, SC. *Tel:* (0486) 44-0183. *Contact:* Eng. Darcy Eduardo Coninck de Almeida Pedrosa, Port Administrator.

Port Captain: Avenida Brito Peixoto 72, Laguna. *Tel:* 44-0196.

MACEIO: 09.40 S. 35.44 W. (See Plan)

PORT LIMITS: Limited to the North by the shore, to the South by the mole, to the West by the Atlantic Ocean and to the East by the access mole (Lat. 09° 41′ S., Long. 35° 44′ W.). The Marine terminal of Salgema (Lat. 09° 41′ S., Long. 35° 46′ W.). is located between the beaches of Trapiche and Ouricuri where can be seen the distinctive cylindrical tanks for storage of the products of Salgema Industrias Quimicas S/A. There is a mole emerging from Trapiche beach extending seawards 145°, for about 1,000 m., and at the end of which is a quay. From the mole and extending Southwards is a submarine pipe-line for disposal of residues from the terminal.

The Sugar Institute (IAA) accepts Notice of Readiness only after having been signed by Surveyor to the effect that holds are in all respects ready to receive cargo.

DOCUMENTS: See "General" before first port.

Port Health, Customs and Maritime Police board vessels alongside. However vessels from Eastern bloc countries are boarded at the anchorage.

PILOTAGE: Not compulsory. However, for tankers, propane carriers, nuclear vessels, those carrying explosives and foreign vessels in general, pilotage is compulsory.

A request for a Pilot can be made via the ship's Agent, 12 hours in advance, specifying the time of entry of the vessel, and from which point pilotage is required, via radio station Amaralina (PPA) or Olinda (PPO). The Pilot boards and leaves vessels 0.25 miles to the West of the Peixe-Pau Buoy and 1 mile from the mole light.

Pilots' Association: Rua Sa e Albuquerque No.467-Room 17, Jaragua-Maceio-AL. Tel: 223-2203 and VHF radio on Channels 9, 13 and 16. Listening Channel is 16. Vessels may anchor off Peixe-Pau Buoy in bad weather.

ANCHORAGES: Vessels anchor outside the area marked as "Anchoring forbidden" on the Chart 901 of the DHN.

Quarantine Anchorage: To the seaward of the Peixe-Pau Buoy.

Vessels are not permitted to anchor in the port basin.

RESTRICTIONS: Max. permitted speed between the Peixe-Pau Buoy and the port is 6 knots.

No restrictions on length. On approaching the port attention must be paid to the shallows existing to the N.W. of the Peixe-Pau. The average depth is from 10 m. to 15 m. Vessels may enter day and night. Pilot refuses to berth tankers after nightfall.

MAX. SIZE: Vessels have loaded up to 33 ft. draft.

HEALTH: No Health Authorities board vessel. In event of suspected disease or fever on board, advise Agent by cable so that Port Authority may take appropriate action.

RADIO: Radio Olinda (Recife), call sign PPO. Radio Amaralinha, call sign PPA.

TUGS: One tug available, bollard pull 20 tons.

BERTHING: 6 Berths (4 for general cargo and 2 for sugar) available day and night, weather permitting.

Sugar Terminal: Facilities for loading bulk molasses. Projected loading capacity 1,000 t.p.h. of bulk sugar, 300 t.p.h. molasses.

Sugar Wharf: 250 m. length. General cargo wharf 500 m. length. Depth alongside 33 ft.

One quay for loading the products of Salgema Industrias Quimicas S/A (Maritime Terminal of Salgema). This quay is located at the end of a mole some 1,000 m. long starting at Trapiche beach and extending seawards 140° (Lat. 09° 41′ S., Long. 35° 46′ W.).

The average depth of water in the port is 10 m., and at the Salgema Terminal 8.8 m.

In order to be admitted with safety into the port and terminal, vessel's length must not exceed 250 m. and 157 m., respectively.

The sugar quay has 10 bollards and the general cargo quay 16. At the Salgema Terminal Quay, only 1 vessel is berthed at a time.

Cargo Handling Facilities: There are 6 warehouses, 5 being 80 m.× 80 m. for general cargo and 1 of 200 m.×50 m. for Demerara sugar (200,000 tons).

There is a tank with a capacity of 4,000 cu.m. for alcohol and another for molasses with the same capacity. There is a refrigerated store with a capacity of 200 tonnes.

There is an open storage area covering the whole extension of the general cargo quay measuring 20,400 sq.m.

There are 5 stacker trucks, 4 with a capacity of 2 tons and 1 of 7 tons.

There are 2 mechanical sugar loaders with total capacity for shipment of 4,000 bags per hour, and 1 bulk sugar mechanical loader of 1,000 t.p.h. capacity.

There is 1 mechanical grain suction unit with capacity for unloading 100 t.p.h.. There is 1 bulk grain distributor with scales for loading lorries.

STEVEDORES: ETA required 24 hours before arrival to arrange gangs. When work required Saturdays and Sundays, ETA must be sent on Friday. Loading/discharge – General: 8 t.p.h. per gang. Sugar 20 t.p.h. per gang. Grain 60 t.p.h.

CRANES: 4×3.2 ton and 2×6.3 ton capacity electric cranes.

MEDICAL: No advance notice needed except if vessel due to arrive on Saturday/Sunday in order to arrange doctor and/or hospital. Hospital facilities available.

TANKERS: 1 tanker berth. Max. draft 33 ft. 1 pipe-line 8 in. for gasoline and one 6 in. for diesel/kerosene.

Tanks: Petrobras, 9 tanks with total capacity of 38,929 cu.m.

Atlantic, 9 tanks with total capacity of 14,482 cu.m.

I.A.A., 1 tank for molasses with capacity of 7,000 tonnes.

FRESH WATER: Fresh water available. Pipe-line from water tower by gravity. Rate about 5 t.p.h. 11 points at the general cargo wharf and 5 at the sugar wharf.

FUEL: Diesel fuel oil and fuel oil 'A' (PPF) is supplied by Esso, Texaco, Shell, Atlantic and Petrobras, by gravity from tanker trucks. The availabilities are minimal, as the storage capacity is small, at times there being no products available. Orders must be placed 24 hours in advance. Also see "General" before first port.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: Normally carried out by stevedores.

CUSTOMS ALLOWANCES: One carton cigarettes to be declared. One bottle alcohol, open, to be declared.

IDENTITY CARDS: Foreign Crew members not permitted to go ashore without presentation of Identity Card, on which is a photograph of holder and personal details. These cards are provided by the Agent upon arrival. The Identity Card must be delivered on disembarkation to the Federal Police who will return it to the Crew member on re-embarkation.

CONSULS:

Norway	2276	Portugal	2449
Italy	3302	France	2126
Spain	2640		

REPAIRS: Small repairs only can be effected.

REPATRIATION: Carried out by Recife Consulates.

AIRPORT: Airport at Palmares, distance 30 km. Served by Varig, Vasp and Transbrazil.

TIME: GMT minus 3 hours.

HOLIDAYS: Work prohibited on Labour Day only. Other days on which work is considered overtime and charged as such are: 1st January, Good Friday, 7th September, 15th November and 25th December.

Local Holidays: 16th September and 27th August.

POLICE/AMBULANCE/FIRE: Police 221-5348; Ambulance 241-2288 and 241-1488; Fire Brigade 223-2447 and 193.

TELEPHONES: Telephone on quayside. If telephone required onboard 48 hours notice required.

GENERAL: Prevailing winds: Summer months – N.E. Rainy season – S.E. with strong South winds during July/August/September and strong undertow during August/September.

DEVELOPMENTS: The Salgema marine terminal is being built across the bay. It will consist of a jetty 1,300 m. long. The loading platform will allow 18,000 d.w.t. vessels to load in 11 m. depth.

Loading Caustic Soda	12 in. line	330/350 cu.m./hr.
Ethylene Chloride	10 in. line	330 cu.m./hr.
Ethylene Cryogenic	8 in. line	330 cu.m./hr.

AUTHORITY: Administracao do Porto de Maceio, Rua Sa de Albuquerque, Jaragua, 57000 Maceio, Alagoa, Brazil. *Contact:* Lafayete Pacheco Neto, Administrator.

MANAUS: 03.08 S. 60.00 W. (See Plan)

DOCUMENTS: See "General" before first port.

PILOTAGE: Pilots join vessel at Belem and make the round voyage back to Belem. Vessels entering via North Channel take a Pilot at Santana. No Pilots from Barra Norte to Santana.

ANCHORAGES: Suitable places can be indicated by the Pilot.

Anchorage for vessels over 3,000 g.r.t. Lat. 03° 09′ 00″ S., Long. 60° 01′ 48″ W.

Anchorage for vessels of less than 3,000 g.r.t. Lat. 03° 09′ 00″ S., Long. 60° 02′ 12″ W.

Vessels impounded or requiring considerable repairs Lat. 03° 08′ 30″ S., Long. 60° 02′ 30″ W.

Vessels in quarantine Lat. 03° 08′ 48″ S. Long. 59° 55′ 48″ W.

RESTRICTIONS: Passage across Barra Norte to be made at HW only. Berthing and unberthing preferably takes place at Manaus in daylight.

MAX. SIZE: Entry to the Amazon via the North Channel; max. draft 30 ft. Via Belem; draft 29 ft. with a length up to 175 m. and draft 24 ft. with a length up to 210 m.

HEALTH: See "General" before first port. All ships must be visited by Port Health Inspector. If vessel has passengers in transit for another Brazilian port, another visit will be required at port where passengers disembark. If ship's health condition satisfactory, Inspector will give Free Pratique immediately. Radio Pratique available if Master able declare satisfactory health condition before arrival. Free Pratique is valid for subsequent ports in Brazil.

If there is a crew member to be hospitalised, the Health Inspector will issue pass to hospital on request of Master or Agent who will be made responsible for all expenses incurred.

Inoculations for International Certificates can only be given by an employee of the Port Health Authority.

RADIO: Salinopolis Radio or Rio Radio. There is also Barbados Radio Station at Belem.

TUGS: 1×210 h.p. and 1×1,680 h.p.

BERTHING: Arranged by Agent who asks permission from local Port Authorities to provide a berth. All berths suitable for vessels able to navigate the river.

Two floating stages in "T" jetty form.

Easterly stage 272 m. long. Floating roadway 252 m.

There are 3 cranes on this stage.

Westerly stage 275 m. long. Floating roadway. No cranes.

Water depth 35 m. – 45 m. at both stages.

Warping buoys must be used when leaving stages as there are no tugs.

A third stage is planned.

A stone jetty 500 m. long will shortly be available for year round operations, when it has been fitted with Portal cranes.

Moageria Berth: Used for the discharge of bulk grain, one tube, rate 30 t.p.h.

CRANES: Ten fixed electric cranes with capacity 1.5 – 7.0 tons. Three mobile cranes, capacity 4, 6 and 15 tons. 2×25 ton Hyster lift trucks for containers.

STEVEDORES: Available.

MEDICAL: Doctors and hospital facilities available.

TANKERS: *Copam Refinery Berth:* A floating pontoon with buoy moorings ahead and astern. Vessel berths starboard side to, using port anchor.

Facilities for crude discharge. Products only loaded. No dirty ballast facilities.

No. 1 Terminal: Vessel lies to 4 buoys, and picks up a floating line, normally attached to the bank. Available for products only.

DENSITY: Fresh water.

FRESH WATER: Not suitable for drinking purposes.

FUEL: Bunker C and Diesel. Available ex-barge or at the terminals.

Petrobras Distribuidora S.A., Av. 7 de setembro, 1251 s/511. Tel: 232-5482.

Shell do Brasil S.A., Rua Ferreira Pena 222. Tel: 232-5881.

Texaco do Brasil S.A., Av. Presidente Castelo Branco 720. Tel: (092) 234-2980.

Esso Brasileira de Petroleo S.A., Rue Recife, Adrianopolis. Tel: (092) 232-1886.

Also see "General" before first port.

IDENTIFICATION CARDS: Required.

GANGWAY/DECK WATCHMEN: Compulsory.

OPENING/CLOSING HATCHES: Performed by stevedores.

CUSTOMS ALLOWANCES: 200 cigarettes per man. Only normal daily consumption wine/spirits allowed.

CONSULS: Following countries are represented at Manaus:

Belgium
Bolivia
Colombia
Denmark
Ecuador
France
Germany F.R.
Great Britain
Italy
Japan
Panama
Peru
Portugal
U.S.A.

REPAIRS: Very limited facilities available.

REPATRIATION: Can be arranged.

AIRPORT: Regular daily international flights from Manaus Airport.

TIME: GMT minus 5 hours.

HOLIDAYS: *National Holidays:* 1st January, 21st April, 1st May, 7th September, 12th October, 15th November, 25th December.

Municipal Holidays: Good Friday, Corpus Christi, All Soul's Day, 8th December (Devotion to Our Lady the Patroness Saint of Manaus).

POLICE/FIRE/AMBULANCE: Civil Police Tel: 22113; Maritime Police 22315; Fire 21155; Ambulance 21112.

TELEPHONES: Arrangements can be made for telephone connections on board.

SHORE LEAVE: Allowed.

SHIP SUPPLY SERVICE: Contact: Helijet Aero Taxi Ltd., Km. 4, Estr. T. Tapajos. Tel: (092) 236-2150 and (092) 236-7611 for helicopter air-lift service.

AUTHORITY: Administracao do Porto de Manaus, Rua Tagueirinha No. 25, CEP 69.000 Manaus, Amazonas, Brazil. *Telex:* (0922) 109 APMN BR. *Contact:* Fernando Lima Barbosa Vianna, Administrator.

NATAL: 05.47 S. 35.12 W. (See Plan)

LOCATION: Port situated on East bank of Potengi River, 2 miles from sea.

PORT LIMITS: The port area is considered to be the estuary of the River Potengi between the parallels 05° 45′ 36″ S. and 05° 46′ 42″ S.

DOCUMENTS: See "General" before first.

Clearance: The visiting area for the Health Inspector of the Ports, Federal Customs & Maritime Police is close to the point of receipt of the Pilot (05° 45′ 06″ S. – 35° 11′ 18″ W.). In special cases, these Authorities may permit visits to be made with vessels already berthed. Also see "Health".

APPROACHES: *Access Channel:* This is shown on Nautical Chart 802 (DHN). Width 90 m. to 400 m. Minimum depth: 7 m. in relation to the Reduction Level of the Nautical Charts. Critical Points: The area between the entrance to the bar and the Manimbu Light.

Tides: Average speed on ebb: 3.5 knots at high tide and 1.3 knots at periods of low tides. Average speed of the rising tide: 1.5 knots coming up river.

PILOTAGE: Pilotage is obligatory from the point of receipt of the Pilot (05° 45′ 06″ S. – 35° 11′ 18″ W.) up to any point in the port area.

Request for the Pilot must be made to the Pilots' Association of the Rio Grande do Norte (Rua Silva Jardim, No. 1 – Ribeira Tel: 222-1613), with a minimum of 3 hours in advance of requirement. The Pilots' Association has VHF, working on Channels 6, 8, 10, 11, 12, 13 and Channel 16 (for calling up), throughout 24 hours. Normally the Pilot will be on board within 2 hours, when the request has been made on working days, during the period between 0800 hrs. and 1800 hrs. Normally Pilots go out to vessels in a red launch with the letter "P" painted in black. When very strong winds are blowing, it is recommended that Masters manoeuvre vessels in order to allow the Pilot's cutter to come alongside on the lee side.

ANCHORAGES:

(a) For vessels of more than 3,000 g.r.t. – between the access channel and the right bank of the River Potengi, with effect from the parallel of 05° 45′ 30″ S. to parallel 05° 46′ 00″ S.

(b) For vessels of up to 3,000 g.r.t. – between the access channel and the left bank of the River Potengi, with effect from parallel 05° 46′ 30″ S. to parallel 05° 46′ 48″ S. On anchoring, this must be done leaving a free area of a minimum of 80 m. in the access channel to the Almirante Ary Parreiras Base.

(c) For quarantine vessels – the area between parallels 05° 45′ 24″ S. – 05° 45′ 36″ S. and meridians 35° 11′ 06″ W. and 35° 11′ 24″ W.

(d) For pleasure craft – between the access channel and the right bank of the River Potengi, going from parallel 05° 45′ 48″ S. to the parallel of 05° 46′ 00″ S., near to the yacht club.

RESTRICTIONS:

(a) The maximum speed permitted for navigation in the River Potengi for vessels of over 20 g.r.t. is 8 knots.

(b) The access channel to the port in the area included between the bar and the Manimbu Light does not permit simultaneous traffic of vessels going in opposite directions.

Manoeuvring Area: Between the parallels of 05° 46′ 30″ S. – 05° 46′ 06″ S., in an area of 300 m. starting from the port quay and from the line which joins the North end of the quay to the North dolphin of the Terminal for PETROBRAS fuel. Depth: from 6 m. to 11 m. It is expressively prohibited to anchor any vessel in this area, which is reserved for the manoeuvres of berthing and unberthing.

MAX. SIZE: Length 520 ft., draft up to 23 ft. 6 in. at spring tides.

HEALTH: Official visit made on vessel's arrival if between 0700 hrs. and 1900 hrs. Visits can be arranged at other times.

The inspection area of the Port Health, Federal Receipt and Maritime Police authorities is 04° 45′ 06″ S. and 35° 11′ 15″ W.

TUGS: Not available.

BERTHING:

(1) *Port Quay:* 400 m. long with 13 berthing bollards. Presents a depth of 8 m. in front of warehouse A-2 and 7 m. in front of the rest of the quay, in relation to the reduction level of the Nautical Charts.

(2) *The PETROBRAS Fuel Terminal:* Situated 200 m. downstream from the port quay, has a distance between dolphins of 100 m. and a depth of 8 m. in front of them (starting from a distance of 20 m. in the direction of the port quay, the depth decreases to 7 m.).

There are no special rules; however, the process will be most rapid and safe if berthing is made port side to on an ebb tide and unberthing being effected on a rising tide.

STORAGE FACILITIES:

(1) *Within the Port:*

Warehouses: 3 for general cargo. Usable total area: 3,945 sq.m. Total capacity: 18,200 cu.m.

Cold Store: 1 with a usable area of 925 sq.m. and a capacity of 140 tons. It is rented for operation to the Companhia de Produtos do Mar (PRODUMAR).

Open Storage Areas: 2 with a usable area of approx. 10,000 sq.m.

Covered Storage Areas: 2 with an area of 800 sq.m.

(2) *In the Vicinity of the Port:*

Warehouses: 3 belonging to the Firma Comercio e Industria de Fibras, situated in the Avenida Hildebrando de Gois, 117 to 137. Usable total area: 2,400 sq.m. Total capacity 12,000 cu.m.

Silos: 2 belonging to Natal Industrial S.A. and operated by the firm Moinho Natal. Total capacity: 4,800 tons.

PORT EQUIPMENT:

Cranes: 2 electric, jib type with a capacity for 2 tons.
2 on wheeled tyres, with a capacity for 8 to 9 tons (but these are out of operation).

Stackers: 16 Yale type, 8 of them in operation and 8 out of action.

Rolling bridges: None.

Loaders: None.

Suction Units: 2 mobile on tyred wheels, with a real capacity of 10 t.p.h. From the suction units, the wheat is carried out along a subterranean gallery and from this, by a cargo transfer unit, and a transport platform to the silos of Moinho Natal.

The Port Administration has 5 trucks, 3 tractors and 2 lorries.

STEVEDORES: On working days, Sundays and Public Holidays the following is the work timetable:

Day period	*Night Period*
0700 to 1100 – Common Day	1900 to 2300 – Common Night
1100 to 1300 – Meal Break	2300 to 2400 – Meal Break
1300 to 1700 – Common Day	0000 to 0400 – Common Night
1700 to 1900 – Possible Overtime	0400 to 0600 – Possible Overtime
	0600 to 0700 – Meal Break

LOADING: When loading sugar bags, only canvas-bottomed slings to be used. Shippers will not permit loading with ordinary rope slings. Suitable slings can be hired from shore. Six slings required for each working gang.

TANKERS: Oil berth suitable for vessels up to 520 ft. length.

CUSTOMS ALLOWANCES: One opened bottle spirits and 200 cigarettes per crew member per week.

FRESH WATER:

(1) *On the Port Quay*

The supply of water is made by the Companhia de Aguas e Esgotos do Estado do Rio Grande do Norte (CAERN).

There are 12 hydrants spaced 22 m. apart with a discharge capacity of 6 t.p.h.

(2) *At the PETROBRAS Oil Terminal:*

The system of water supply is via one hydrant.

FUEL: There are no oil barges. Supply of diesel oil for vessels moored at the Port Quay is made by means of tanker lorries. Vessels can also be bunkered at the Fuel Terminal of PETROBRAS, which has a 4 in. pipe and capacity for supply of 30 to 40 t.p.h.

Orders can be made via the local ship's Agency, with a minimum of 48 hours' notice in advance.

MEDICAL: Hospitals and doctors available.

CONSULS: France, Italy, Lebanon, Portugal and Spain.

REPAIRS: There is a Naval Base at Natal, which apart from providing service to naval vessels, also deals with merchant vessels requiring repairs. The Base has seven departments, Mechanical, Naval Carpentry, Electricity, Electronics, Sails, and Painting, and a Docking System comprising two floating docks and one office ship. The Goias Dock has a capacity for vessels up to 1,000 tons and 4.80 m. draft. There is a ballasting service.

The City of Natal Dock has a capacity for vessels up to 2,800 tons and 5.80 m. draft.

Apart from other facilities, the Base has maintenance, refrigeration and kitchen services, which can be placed at the disposal of vessels during repairs to their own installations.

POLICE/AMBULANCE/FIRE: Police: Tel. 222-3656, Fire: Tel. 231-3581 or 193.

TELEPHONES: No facilities exist.

HOLIDAYS: *Local Holidays:* 6th January – Holy Kings; 21st November – Our Lady of Presentation (Padroeira).

AIRPORT: There is the Airport of "Augusto Severo" (20 km. distance from the port) situated in the Municipality of Eduardo Gomes. There are direct flights to Fortaleza, Recife and the rest of the country.

EMERGENCY CO-CORDINATION:

(a) 2 corvettes and 1 tug of the Grupamento Naval do Nordeste – These will be put into action by the command of the Third Naval District in cases of emergency on the request of the ship's Agent or his legal representative.

(b) Tugs of the concerns which operate in support to the PETROBRAS platforms, actioned by the Captaincy in accordance with the RTM, and on request of the interested party.

GENERAL: *Garbage:* There is no collection of rubbish by the Port Administration. It is the responsibility of every vessel to deposit their rubbish in a container on the quay which is collected daily by a lorry of the Department of Urban Cleansing of the Prefecture of Natal.

AUTHORITY: Companhia Docas do Rio Grande do Norte (CODERN), Av. Hildebrando de Gois, Ribeira, Natal, Rio Grande do Norte, Brazil CEP – 59.000. *Contact:* Ivan Reis de Lima, Administrator.

NITEROI: 22.53 S. 43.07 W.

LOCATION: The port of Niteroi is situated in the inlet of Sao Lourenco, on the East coast of the Bay of Guanabara. The area is covered by D.H.N. Chart Nos. 1510, 1511 and 1512.

APPROACHES: The access channel is 1,400 m. long, 70 m. wide and 6 m. deep.

PILOTAGE: Compulsory.

ANCHORAGE: See D.H.N. Chart Nos. 1510, 1511 and 1512.

MAX. SIZE: 20,000 g.r.t.

BERTHING: The manoeuvring basin is 430 m. long, 250 m. wide and 6 m. deep. The quay is 450 m. long, 7 m. depth with 20,000 sq.m. of open storage. There are 2 warehouses with a capacity of 3,300 sq.m.

CRANES: 1×1.5 tons electric jib crane, 1×46 tons mobile crane and 1×36 tons mobile crane.

BULK HANDLING FACILITIES: At the S.W. extremity of the port, in the external quay area, there is a wheat silo which is the property of Moinho Atlantico and comprises of 13 cylindrical cells with a static capacity for storage of 15,000 tons. Its construction is of reinforced concrete. This silo is connected by a Radler type elevated transporter to a pneumatic suction unit of the "Buller", type with a nominal capacity of 120 t.p.h.

PORT EQUIPMENT: Stacker trucks: 6 with a capacity of 2 to 7 tons; winch: 1 of 60 tons; tractor on wheels: 1; rolling bridges: 4 of 1,500 kg.

FRESH WATER: Available ex-quay, 14 hydrants with 2.5 in. dia., rate 20 cu.m./h. Also there are 2 barges, each with 100,000 litres capacity.

FUEL: Available from Petrobras.

REPAIRS: Can be undertaken.

DRY DOCKS: "Almirante Guilhem" Floating Dock: Length 200 m. Inner width: 34 m. Clear width between fenders: 32.80 m. Moulded depth 15.60 m. Height of keel blocks: 1.75 m. Max. draft over keel blocks: 7.75 m. Lifting capacity: 15,000 tons. Cranes: 10 ton capacity.

Slipways: 1. 100 m. (length)×12.5 m. (width)×5,200 tons capacity. 2. 60 m.×9.5 m.×1,000 tons capacity. 3. 50 m.×8.3 m.×500 tons capacity.

Above facilities operated by ENAVI. Tel: 719-9292. Telex: (021) 32049 ENAV.

HOLIDAYS: National Holidays: 1st January; 21st April; 1st May; 7th September; 12th October; 15th November and 25th December.

Regional Holidays: 24th June and 22nd November.

Movable Holidays: Monday and Tuesday of Carnival, Ash Wednesday, Good Friday and Corpus Christi.

Commemorative Holidays: 28th January (port workers); 28th August, 28th October; 30th October; 2nd November (All Saints).

TIME: GMT minus 3 hours.

AIRPORT: Santos Dumont and the International Airport of Rio de Janeiro.

GENERAL: Niteroi Port Authority serves traditionally the specific areas of the municipality of Niteroi, apart from acting as a support base for the oil rigs which operate in the Campos Basin. It is able to receive roll-on/roll-off type vessels and this port acts as an important alternative for vessels of this sort which are intended for the Rio de Janeiro region.

AUTHORITY: Porto de Niteroi, Av. Feliciano Sodre, 215, 24.030 – Niteroi – RJ. *Tel:* (021) 722-4535 and 718-3182. *Contact:* Engineer Antonio Manne, Manager.

OBIDOS: 01.51 S. 55.35 W.

LOCATION: Located on the left bank of the River Amazon in the town of Obidos, State of Para.

MAX SIZE: 7,000 d.w.t.

BERTHING: Length of berth 35 m. Depth alongside 10.0 m. One warehouse of 420 sq.m. Open storage area of 600 sq.m. Floating pontoon of 39 m.×6.5 m. 1 mobile crane and 2 stacker trucks available.

Marginal quay available for small vessels.

AUTHORITY: Companhia Docas do Para, Avenida Presidente Vargas 41 – 20 Andar, Belem, Para, Brazil. *Tel:* 223-0056, 223-2066.

PARANAGUA: 25.30 S. 48.30 W. (See Plan)

(★) Indicates information received from a ship's Agent in 1981.

PORT LIMITS: The port is limited by co-ordinates Lat. 25° 29′ 45″ S. and 25° 30′ 12″ S. Long. 48° 32′ 06″ W. and 48° 30′ 00″ W. which also include commercial and inflammable berths.

DOCUMENTS: Also see "General" before first port.

The visiting areas for the Port Health, Federal Receipt and Maritime Police are those mentioned as areas 1, 2, and 3. See "Anchorages". Normally visits are made at the quay, after berthing.

Documents for clearance inwards of foreign vessels:

a) Certificate of registration.
b) Classification document for the vessel in the port of registration.
c) International Load Line certificate.
d) Safety certificate for passenger vessels or Safety construction certificate for cargo vessels.
e) Safety equipment certificate for cargo vessels.
f) Safety certificate for radio-telegraphy or radio-telephony on cargo vessels.
g) Exemption certificate, in respect of the foregoing certificates, where applicable.
h) Safety certificate for nuclear vessels.
i) Certificate or other financial guarantee in respect of the International Convention governing Civil Responsibility in Damage caused by Oil Pollution, 1969.

Federal Receipt and Port Health Clearance.

Bill of Lading for postal purposes, where the vessel carries mail.

Copy of the payment docket in respect of the tariff for using lighthouses.

Crew list.

Written declaration from Master or Owner stating name and address of legal representative in the port.

Cargo manifest.

National Vessels:

(1) Up to date equipment roll, accompanied by extra-roll licences and those for extra tonnage.
(2) List of Crew members in duplicate.
(3) Inscription and Registration Pass Book (CIR) or pass books of personal inscription (CIP), for verification as deemed necessary;
(4) List of passengers;
(5) Load Capacity Sheet, for checking the categories of Crew members taken on board and checking the functions effected corresponding to the upper category;
(6) Cargo manifest;
(7) Terms of Inspection in dry dock and afloat or Certificate of Regularisation of the vessel;
(8) Provision of Register of the Maritime Tribunal, with statement of the name of the Master and his category or Document of Registration (CP-1);
(9) Ship's Log.
(10) Certificate of authorisation of the vessel's line or of extraordinary voyage, issued by the Superintendency of the National Mercantile Marine (SUNAMAM), except for "tramp" vessels.
(11) Certificate of Safety of Passenger vessels, for deep sea vessels and long distance coasting;
(12) Certificate of Safety of Construction of cargo vessels, for deep sea vessels and long distance coasting;
(13) Certificate of Safety Equipment on cargo vessels for deep sea vessels and coasters;
(14) Certificate of Safety of radio telegraphy and radio-telephony on cargo vessels, deep sea and coasting vessels;
(15) Certificate of Exemption, corresponding to the certificates mentioned above;
(16) Freeboard Certificate.
(17) Certificate or other financial guarantee corresponding to the International Convention covering Civil Responsibility for Damages caused by Oil Pollution, 1969;
(18) Passes issued by the Delegation of Federal Receipt (Customs), Port Health, Federal Police and Postal Authorities when the vessel carries mail bags (only for vessels destined for foreign countries);
(19) List of relatives of the Master and the Crew;
(20) Authentic Xerox copy of the last payment form of pension contributions to the INPS or FUNRURAL, paid by the Charterer or Owner;
(21) Certificate of Tonnage or tonnage calculation notes.

(★) *Documents required on arrival and amount of each:*

Negative Cargo Manifest from each port of call where no cargo loaded for Paranagua	–	–	1	–	1

PILOTAGE: Pilotage is compulsory for foreign vessels and tankers, propane carriers and those carrying explosive cargo under the Brazilian flag, of any GRT, from the point at which the pilot boards, shown on DHN Chart No. 1821, approaching the port by the South East or Galheta channels as far as the berth.

Pilotage is optional for vessels of Brazilian flag of less than 500 GRT and for national or foreign support craft whilst they are operating in the port of Paranagua with Brazilian crews or which have in their crew a Brazilian mariner of the category of Nautical Official or Master of Coasting.

Pilotage can be requested via the Ship's Agent, 4 hours in advance, stating time of entry or departure of vessel. Vessels approaching Paranagua should contact Paranagua Radio, Channel 16 VHF, two hours prior to arrival in the Pilot waiting area.

The Pilots' Association maintains permanent watch on Channel 16 VHF, passing traffic on VHF Channels 10 and 13. (Tel. 422-0530, 422-1560 and 422-1570). The greatest restriction for Pilots is the condition of the sea, which in Galheta Channel, with the sea above force 4 – makes the passage of the pilot cutter difficult.

ANCHORAGE: Vessels must anchor in the areas circumscribed by the coordinate points mentioned below:

(a) Area "1" intended for vessels of less than 180 m. in length and a draft of less than 9.45 m. = 31 ft. Priority of anchorage is accorded in this area to vessels within these limits which have to be bunkered by TEFRAN-SEPAR, with fuel and lubricant oils for their own consumption.

Point	*Latitude South*	*Longitude West*
A	25° 29′ 32″	48° 31′ 28″
B	25° 29′ 51″	48° 31′ 28″
C	25° 30′ 01″	48° 33′ 31″
D	25° 29′ 40″	48° 33′ 31″

(b) Area "2" to the South of the Galheta Channel: intended for vessels in one of the following situations, or of the types and sizes mentioned below, with the order of priority being observed for anchorage.:

1. Vessels of any size in quarantine;
2. Vessels of any size operating with explosives;
3. LASH type vessels;
4. Vessels which require to bunker with fuel oil and/or lubricants, for their own use; and
5. Vessels over more than 180 m. overall length.

Point	*Latitude South*	*Longitude West*
A	25° 29′ 45″	48° 26′ 14″
B	25° 30′ 10″	48° 26′ 14″
C	25° 29′ 46″	48° 27′ 10″
D	25° 30′ 07″	48° 27′ 10″

Area "2" to the North of the Galheta channel: intended for vessels in one of the following situations, or of types and sizes mentioned below, observing the order of priority for anchoring in which they are located:

1. LASH type vessels.
2. Vessels requiring to bunker with fuel oil and/or lubricants for their own consumption; and
3. Vessels of more than 180 m. overall length.

Point	*Latitude South*	*Longitude West*
A	25° 29′ 08″	48° 26′ 17″
B	25° 29′ 30″	48° 26′ 17″
C	25° 29′ 34″	48° 29′ 43″
D	25° 29′ 10″	48° 29′ 43″

OBSERVATION: 1. Vessels which anchor in these areas must be positioned as closely as possible to the port of Paranagua, i.e. as close as possible to the Western limit of the area; and

2. Whilst a vessel with specific priority is in these areas, and another arrives with greater priority, it will go to another area, allowing the arriving vessel to take up position.

(c) Area "3" intended for vessels to be subjected to Health inspection by the Port health Inspectorate or authorised body. The Ship's Agents, consigners of vessels involved in such cases, must, after obtaining from the pilot the estimated time of anchorage in this area, inform the corresponding authorities, sufficiently in advance, so that appropriate action may be taken.

Point	*Latitude South*	*Longitude West*
A	25° 29′ 46″	48° 27′ 10″
B	25° 30′ 07″	48° 27′ 10″
C	25° 29′ 48″	48° 28′ 00″
D	25° 30′ 03″	48° 28′ 00″

(d) Area "4" intended for vessels with an overall length less than 140 m., and a draft less than 6.1 m. (20 ft.).

Point	*Latitude South*	*Longitude West*
A	25° 29′ 16″	48° 30′ 19″
B	25° 29′ 30″	48° 30′ 19″
C	25° 29′ 16″	48° 31′ 28″
D	25° 29′ 32″	48° 31′ 28″

(e) Area "5" intended for vessels of overall length more than 180 m. and draft less than 9.14 m. (30 ft.).

Point	*Latitude South*	*Longitude West*
A	25° 29′ 45″	48° 26′ 14″
B	25° 30′ 12″	48° 26′ 14″
C	25° 30′ 05″	48° 24′ 45″
D	25° 30′ 26″	48° 24′ 45″
E	25° 30′ 20″	48° 24′ 20″
F	25° 30′ 30″	48° 24′ 46″

(f) Area "6" anchorage for the port of Antonina.

Point	*Latitude South*	*Longitude West*
A	25° 28′ 34″	48° 37′ 41″
B	25° 28′ 51″	48° 37′ 41″
C	25° 28′ 30″	48° 38′ 37″
D	25° 28′ 47″	48° 38′ 37″

(g) Area "7" intended, exclusively, for the anchorage and berthing of barges used in transport of "off-shore" platform structures.

Point	*Latitude South*	*Longitude West*
A	25° 32′ 28″	48° 22′ 09″
B	25° 32′ 42″	48° 22′ 14″
C	25° 32′ 28″	48° 22′ 35″
D	25° 32′ 43″	48° 22′ 16″
E	25° 32′ 54″	48° 22′ 10″

(h) Area "8" intended for vessels of overall length more than 180 m. and draft less than 8.20 m. (27 ft.)

A	25° 29′ 26″	48° 24′ 34″
B	25° 29′ 44″	48° 24′ 48″
C	25° 30′ 00″	48° 23′ 42″
D	25° 30′ 17″	48° 23′ 54″

(i) The anchorage for sport and recreation vessels must be effected, preferentially, in area 1 or in the River Itibere, and Cotinga Point, in accordance with the buoy restrictions. More ample details are available from the Captaincy of Ports Regulations.

RESTRICTIONS: The access channels – Galheta and South East are marked on charts 1821 and 1822 of the National Brazilian Hydrographical Dept; the Galheta Channel, normally used, is dredged to a depth of 12.00 m. (39.37 ft.) with a width of 200 m., and a length of 12 miles. The official depth of the channel is 11.28 m. (37 ft.) at high Spring tides and 9.45 m. (31 ft.) at low tides. The critical points of the channel are between the pairs of buoys 3–4 and 7–8, where there are currents running across the channel, and with a heavy sea, waves break making the departure of pilot cutters difficult. In the S.E. Channel, the depth varies from 7.62 m. (25 ft.) to 6.4 m. (21 ft.)

Tides: There is a difference of approximately one hour between the tide in the port and at the bar. At the Galheta Bar, the current may reach a speed of 4 knots during Spring tides. Also see "Berthing".

MAX. SIZE: See "Berthing".

HEALTH: Authorities visit vessels at the anchorage. Port Health Service Tel: 422-0594.

(★) *Note:* Compulsory Sanitary Inspection, prior to docking, is carried out at special anchorage, for vessels proceeding direct from the following countries: U.S.A., Mexico, all Central America, Trinidad, Colombia, Venezuela, Guyana, Suriname, French Guyana, all African countries, all Asiatic Countries, Australia, Polynesia.

Special areas are provided for vessels according to their lengths and drafts. Also for Sanitary Inspection special areas are provided in the vicinities of Ilha das Cobras (Cobras Island).

RADIO: Paranagua Radio, call sign PPG. VHF Channels 24, 25, 26 and 27 for vessels navigating close to the port.

TUGS: 4 private tugs owned by Wilson Sons S.A.: 1 × 2,170 h.p. (bollard pull 33.4 tons), 1 × 1,200 h.p. (bollard pull 18.5 tons), 2 × 1,680 h.p. (bollard pull 18.4 tons).

2 private tugs owned by CIA. de Navegacao das Lagoas.

BERTHING: Manoeuvring Area: **(A)** The areas for vessel manoeuvres have a width of 700 m. along the whole length of the quay with varying depths:

1) Section "A"
10.06 m. = 33 ft., at low tide.
11.28 m. = 37 ft. at high tide

2) Section "B"
In section "B", between the mooring heads, from Numbers 01 to 18:
11.28 m. = 37 ft., at full Spring tide
10.67 m. = 35 ft., at full Neap tide
7.62 m. = 31 ft., at low tide

3) Sections "B" and "C"
In Section "B", from mooring head number 18 as far as Section "C", and all along that section
9.45 m. = 31 ft., at high tide
7.62 m. = 25 ft., at low tide

4) Inflammables Quay
a) Pier No. 2 – Internal berth
Max. drafts:
9.14 m. = 30 ft., at Spring high tides
8.23 m. = 27 ft., at Neap high tides
7.01 m. = 23 ft., at low tide
Max. vessel overall length = 176 m.
b) Pier No. 2 – External berth
Max. drafts:
11.28 m. = 37 ft., at Spring high tides
10.67 m. = 35 ft., at Neap high tides
9.45 m. = 31 ft., at low tide
c) Pier No. 1 – Propane berth
Max. drafts:
5.79 m. = 19 ft., at Spring high tides
5.18 m. = 17 ft., at Neap high tides
3.96 m. = 13 ft. at low tides
Max. overall length of vessels = 145 m.

At Section "B" berths use of pontoons is obligatory for vessels of drafts greater than 27 ft. At the section "C" berths, it is convenient to use pontoons for vessels with drafts greater than 25 ft.

(B) *Restrictions:*

(i) Max. passage 50 m. = 164 ft.

(ii) Max. speed over the bottom = 9 knots

(iii) Vessels cannot move with trim or list when at the max. draft.

(iv) The max. depths at Spring and Neap tides shown above can only be used from 3 days before to 3 days after two days of full or new moon and two days of fourth crescent or waning moon, respectively. Nevertheless, the Tide Table must be consulted for the day in question in order to ensure a sheet of water over the keel of the ship greater than or equal to 8% of the depth at Spring tides or equal to 15% at Neap tides.

(v) Vessels with drafts between 35 ft. and 37 ft., inclusive, at Neap and Spring high tides, can only be moved with tugs, without using their propellers, along Section "B" of the channel (area facing Warehouses 01 and 02).

(vi) At the internal berth of Pier No. 2, night manoeuvres can only be effected with adequate illumination so that the whole berth and the area next to the deck and bridge are clearly visible, and at the discretion of the Master of the vessel.

(vii) At the internal berth of Pier No. 2, vessels can only manoeuvre during ebb tides and when the current is equal to or less than four tenths of a knot, i.e. the manoeuvres will be effected from commencement of ebb to a maximum of 2 hours afterwards; when the draft of the vessel is equal to or less than 22 ft., manoeuvres can be effected during 2 hours prior to ebb maximum until the completion of ebb.

(viii) In berthing manoeurvres at the internal berth of Pier No. 2, the minimum distance at which the end of the vessel (bow or stern) must be to the bridge is 10 m.

Traffic in port:
(a) No crossing or overtaking is permitted by vessels in the access channel if visibility is less than 2 miles.
(b) Crossing or overtaking is not permitted when one of the vessels has a draft exceeding 7.92 m. (26 ft.), between pairs of buoys 1-2 and 13-14. The vessel which has the current running at its stern, in this event, has preference in the manoeuvre, the other vessel being required to wait for it to pass.

Stay in Port:
After completion of operations, vessels must unberth within 1 hour, except where request has been made previously to the Port Administration and approval has been given.

BERTHING FACILITIES:
(a) Quays:
(1) Commercial Quay: Total length 2,106 m. with the following depths:
420 m. with a depth of 10 m.;
1,170 m. with a depth of 8 m.;
516 m. with a depth of 12.0 m.;
Mooring bollards every 25 m.
(2) Inflammables Quay – Secondary Pier (for Propane Carriers) berthable only on the outside, for vessels with max. length of 145 m. and draft up to 19 ft.
Principal Pier (Pier No. 2) – berthable on both sides, external and intenal. Length of 184 m. and 174 m., bollards spaced 46 m., apart.
(b) Warehouses/Cold Stores/Silos/Open storage areas:
(1) Warehouses: 21 warehouses for general cargo, with total area of 56,400 sq.m. and total volume of 282,000 cu.m.
(2) Cold Stores: One cold store for 7,000 tons, operated by a private company on rental.
(3) Silos: Two vertical silos with total capacty of 110,000 tons.
Four horizontal silos with capacity of 68,000 tons.
Privately-operated silos:
One vertical of 10,000 tons.
Nine horizontal silos, total of 285,000 tons.
(4) Open areas: General cargo – 27,000 sq.m.
Heavy lifts 14,000 sq.m.
Containers 22,000 sq.m.
Fertilizers 3,000 sq.m.
Next to the port area are many warehouses, providing a rear-area with a capacity of 1,000,000 tons.

Also see "Bulk Handling Facilities".

BULK HANDLING FACILITIES:
Cargill (Berth 12): One loading tower of 500 t.p.h., movable over a distance of 150 m., capacity 20,000 tons (horizontal silo). Also capacity for 3,000 tons of bulk oil with capacity of 150 t.p.h.

Sanbra (Berth 6): At warehouses 6, 6a and 6b. 2 fixed loading towers, each 100 t.p.h., capacity 12,000 tons. Also two slightly movable elevators, with a total loading capacity of about 100 tons.

At the same berth there is a loading tower, movable over 180 m., with a loading capacity of 500 t.p.h. which is connected to a silo of 60,000 tons.

Gransol (Berth 4): At warehouses 4 and 5. One loading tower, 400 t.p.h., movable over a distance of 150 m. and one fixed, loading rate 100 t.p.h. Storage capacity 10,000 tons. 2×12.5 ton portal cranes for containers at Shed 5.

Socopar (Berth 2): One loading tower, 300 t.p.h., movable over 110 m. Storage capacity 64,000 tons.

Port Silo (Berth 1): (Operated by the Port Administration) one loading tower, 300 t.p.h., movable over 150 m. Storage capacity 10,000 tons.

Cargill and Sanbra can handle vessels loading to 42 ft. by using pontoons. Other installations, even with the use of pontoons, can only handle vessels loading to 30 ft.

The new grain terminal at warehouse No. 13 with capacity of 164,000 tons and 2 loading towers, movable over 200 m., loading capacity 1,500 t.p.h. each. There are two additional vertical silos each with capacity of 110,000 tons.

Cold Store: Capacity 7,000 tons.

(★) *Liquid Bulk:* Liquid bulk cargoes consist mostly of soya bean, castor, peanut and cotton seed oil. Messrs. Cargill have their own storage tanks and a loading installation capable of delivering 200 t.p.h. All other shippers effect their shipments through portable pumps connected to tank-trucks. Loading capabilities of portable pumps: 30/50/80 and 100 t.p.h. Shippers provide the pumps and hoses and particulars are:

Hoses: Lengths 32 ft., 50 ft. and 100 ft. Diameters 2 in. and 4 in.

STEVEDORES: *Working Hours:* Daywork: 0700–1100 and 1300–1700, overtime 1100–1300 and 1700–1900.
Nightwork: 1900–2300, 0000–0400. Overtime possible 2300–2400 and 0400–0600.

Same working hours are valid for Sundays and holidays with 20%–100% surcharge.

CARGO HANDLING EQUIPMENT:
Cranes: 18 jib cranes on rails, capacities 1.5, 3.2, 6.0, and 12 tons. Two wheeled (Lorain) cranes, capacity 136 tons and 30 tons.
Port Authority heavy lift floating crane: 110 tons capacity.
Stacker Trucks: 8×7 tons, 8×5 tons, 15×3.5 tons, 18×2.5 tons and 1×2 tons.
Rolling Bridges: 3×1.5 t.p.h. (2 at Warehouse No. 8 and one at the cold store).
Grabs: 31×2 cu.m. – 3.8 cu.m.
Tractors: 42×45 h.p. – 105 h.p.
Ro/Ro: 1 Ro/Ro ramp but dredging is required.
Side Loaders: 2×36 tons (for containers).
Suction Units: 2 fixed in the vertical silo (Warehouse No. 1). Rate 75 t.p.h. each.

There are no barges, lighters, workboats or pontoons.

MEDICAL: All facilities available. Crew members should hold valid International inoculation certificates.

TANKERS: 2 berths, length 185 m. (outside) and 174 m. (inside). Depth alongside 9.0 m.–11.0 m. Bollards 46 m. apart. ((★) Max. drafts 31 ft. and 26 ft. respectively).

Propane Quay: Length 142 m., depth 5.79 m. Bollards 46 m. apart.

Dirty Ballast: Petrobras Terminal has tanks (capacity 4,500 cu.m.) for dirty ballast and contaminated oil. At Commercial Quay collected free of charge by road tankers.

DENSITY: Salt water at entrance of the bar. Brackish water inside the Bay, which varies with the tides: At HW: between 1013 and 1024.
At LW: between 1012 and 1013.

FRESH WATER: 47 hydrants at 45 m. intervals available along the quays, rate 27 t.p.h. There is a water barge with capacity of 400 tons., pumping rate of 80 t.p.h.

FUEL: Bunker C, fuel oil, diesel oil, Navy Special and all types of marine fuel available. Rate of supply for vessels at the Inflammables Quay: Diesel oil: 50 t.p.h. and fuel oil and mixtures: 200 t.p.h.

Bunkering of vessels in the roads or berthed at the Commercial Quay is by private barge – Empresa Transportadora "Estrela" Ltda., 1 self-propelled barge for diesel oil, capacity 185 tons, rate of supply 70 t.p.h., 1 dumb barge for fuel oil and mixtures, capacity 590 tons, delivery rate 140 t.p.h. Requests for bunkers must be made 72 hours minimum in advance through the Agencies.

FIRE PRECAUTIONS: *Fire fighting facilities:* 4 conventional fire-fighting tenders. 1 chemical spraying vehicle.

REPAIRS: Small structural and machinery repairs possible in the port. 3 firms available.

DRY DOCKS: None.

SURVEYORS: Principal classification societies are represented in the town:

Lloyd's Register of Shipping;
American Bureau of Shipping;
Bureau Veritas;
Nippon Kaiji Kiokai;
Registro Italiano Navale;
Germanischer Lloyd;
Det Norske Veritas;
Brazil Salvage S.A.

Marine Surveyors: P & B – Consultoria Navel e Industrial Ltda. Inspect Consultoria e Peritagens Ltda.

GANGWAY/DECK WATCHMEN: At least 1 watchman is compulsory on board every vessel alongside 24 hours per day.

OPENING/CLOSING HATCHES: By stevedores.

AIRPORT: Curitiba, 80 km. from the port for national connections. Paranagua, for medium distance carriers. Air taxi service also available.

TIME: Local time 3 hours behind G.M.T.

HOLIDAYS: National: 1st January; 21st April; 1st May; 7th September; 2nd November; 15th November and 25th December. Local: 29th July and Corpus Christi (movable).

POLICE/AMBULANCE/FIRE: Civil Police 422-0101 and 422-0172. First aid 422-0111. Fire 193. Maritime Police 422-0382.

Consulate General for the U.S.A. – Main office in Sao Paulo, Rua Padre Joao Manoel, 20 Tel: 37-5574.

REPATRIATION: Possible.

TELEPHONES: Request for installation should be made to the Traffic Section of the Port Administration.

SERVICES: Cleaning services available. Electronic repairs possible. Rubbish collected daily from drums on quay. Deratting service available. Divers available.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: I.D. Card, Seamans Book or passport sufficient.
DELAYS: Normally no delays.

GENERAL:
(★) *Preferential Docking:* Port Administration regulations for Preferential Docking are as follows:
1. Preferential docking is granted to vessels operating with cereals and meats in bulk at the following berths equipped with special mechanical installations:
Berth 1 – Vertical Silo, belonging to Port Administration
Berth 2 – Vertical Silo, belonging to Soceppar
Berth 4/5 – Horizontal Silo, belonging to Gransol
Berth 6 – Horizontal Silo, belonging to Sanbra
Berth 12 – Horizontal Silo, belonging to Cargill
Berth 13 – Horizontal Silo, belonging to Port Administration
2. Preferential docking is granted to vessels discharging solid bulk cargoes (fertilisers, salt, minerals) using shore cranes and grabs at berth 11. Upon arrival of such vessels, should this berth be occupied, they may dock at any other berth, shifting to berth 11 when it becomes available and only if Port Administration feel this necessary.
3. Preferential docking is granted to vessels operating exclusively with containers at berth 14.
4. Preferential docking is granted to vessels operating exclusively with liquid gas and liquid bulk cargoes at the special inflammable berths.
5. For vessels operating general cargo, docking will be granted at any berth according to time of arrival and in compliance with above mentioned preferential dockings.
6. When a general cargo vessel docks at any preferential berth, this will be done on a conditional basis, having to vacate this berth upon arrival of any other vessel with preferential docking for that particular berth, provided there is another berth available. All expenses due to shifting will have to be paid by the interested party.
7. Any vessels operating bulk and general cargo and docked at preferential berth will have to vacate this berth upon completion of loading/discharging the cargo, giving right to a preferential docking, if and whenever another vessel with the same rights should be awaiting this berth but only according to clause 6.
   a) Vessels docked at a preferential berth for a specific cargo may load/discharge simultaneously any other cargo provided this does not interfere or prejudice the loading of that specific cargo.
   b) All vessels have a right to a maximum of three loading berths being allowed to shift from one berth to another without losing their priority and will do so according to clause 6.
8. All vessels are entitled to up to three dockings.
   a) Only under special circumstances duly justified and only with the Port Administration consent may a vessel dock more than the times established in item 8.
9. A vessel may only dock when its cargo is ready for shipment and port dues (export/import) are duly paid for up to the following percentages:
   a) General and bulk cargo:
      1. Up to 50% of declared general cargo.
      2. Up to 50% of cargo declared at each loading berth.
      3. For the specific case of coffee the following percentages will be observed, duly verified by I.B.C. (Brazilian Coffee Institute):
      Up to 5,000 bags coffee declared 100%
      Up to 10,000 bags coffee declared 50%
      Up to 20,000 bags coffee declared 35%
      Up to 30,000 bags coffee declared 30%
      Up to 50,000 bags coffee declared 25%
      Up to 100,000 bags coffee declared 20%
      Over 100,000 bags coffee declared 15%
      For vessels arriving and initiating operations on a Monday morning or the day following a holiday, docking will be granted on a conditional basis, providing she has a minimum of 2,000 bags of coffee ready for immediate operation and if by 1100 hours she did not fulfil above mentioned percentages she will have to undock having to cope with all expenses and placed at the end of the line of vessels awaiting a berth.
   b) Above mentioned percentages may be altered by the Port Administration at any moment and at their discretion.
   c) So as to be able to comply with mentioned rules, all agencies must declare, without forfeit, to the Port Administration when requesting normal docking or with priority, vessel's complete bookings.
   d) Any vessels not maintaining normal loading/discharging rates will be forced to undock taking last place in line of vessels awaiting berth.
10. After load/discharge operations are completed, any auxiliary operations will have to be carried out at anchor unless duly authorised by Port Administration.
11. In order to provide proper service for vessel's discharge, all agencies are obliged to hand over to Port Administration vessel's cargo manifest and a non-negotiable copy of all bills of lading, as well as furnishing time of arrival and any alteration of same.
12. Any vessels undocking voluntarily due to lack of cargo will maintain first place in line of vessels awaiting berth.

DEVELOPMENTS: New quay with length 350 m. and depth 13.0 m. to be constructed. These new berths will provide one additional berth for bulk carriers and one berth for container vessels.
AUTHORITY: Capitania dos Portos do Estado do Parana, Rua Benjamin Constant 535, Paranagua-PR. CEP. 83.220 Brazil. *Tel:* 422-3033. *Contact:* Captain Ronald Cardoso Guimaraes, Port Captain.
Paranagua Port Authority Benjamin Constant 707, Paranagua-Re, CEP 83.200 *Tel:* (041) 422-3223.
Administracao dos Portos de Paranagua e Antonina, Av. Governador Manoel Ribas, S/No. Paranagua, Brazil. *Tel:* 422-3311, 422-0282.

PELOTAS: 31.47 S. 52.20 W. (See Plan)

LOCATION: The port is located on the Northern edge of the Sao Goncalo channel.
PILOTAGE: Available through Associacao dos Praticos da Lagoa dos Patos – Rua General Bacelar, 444 Rio Grande – RS. Tel: 21349.
APPROACHES: The access channel is 80 m. wide with a depth of 5.1 m.
TUGS: Delegates Services Administration tugs are used.
BERTHING: Manoeuvring basin: 120 m. wide, depth 5.1 m.
Quay: 500 m. long, depth 6.5. m.
CRANES: 3 mobile cranes, with capacities of 5 – 8 tons. Twelve stacker trucks with 1.8 tons capacity each.
BULK HANDLING FACILITIES: One Samrig type silo with a capacity of 6,880 tons.
STORAGE: 3 warehouses with an area of 7,160 sq.m., 440 sq.m. of covered storage and 14,012 sq.m. of open storage available.
FRESH WATER: 7 hydrants spaced 65 m. apart with a discharge rate of 18 t.p.h.
FUEL: Available.
AIRPORT: 10 km. distant.
TIME: GMT minus 3 hours.
HOLIDAYS: National: 1st January, 21st April, 1st May, 7th September, 15th November and 25th December.
Regional: 2nd February.
Movable: Monday and Tuesday of Carnival, Ash Wednesday, Good Friday and Corpus Christi.
Commemorative Days: 28th August (Banks), 28th October (Public Officials), 30th October (Commercial) and 2nd November (All Saints).
CONSULS: Italy (Consular Agency) and Portugal (Vice-consul).
AUTHORITY: Porto do Pelotas, Rua Conde de Porto Alegre, 1. 96.100 – Pelotas – RS. *Tel:* (0532) 2.1125 and 2.1134. *Contact:* Engineer Decio Mariante, Director.

PONTA DA MADEIRA: 02.34 S. 44.23 W. (See Plan)

LOCATION: The Ponta da Madeira Terminal is located on the East side of the Sao Marcos Bay, on Sao Luis Island, in the following position: Lat. 02° 34′ S., Long. 44° 23′ W.

The Terminal is located approximately 8 km. South of Sao Luis City, which is the capital of the State of Maranhao. The Terminal is connected by highway to the city.

The Ponta da Madeira Terminal belongs to and is administered by Companhia Vale do Rio Doce.

The Terminal loads ore from Serra dos Carajas, which reaches the Terminal by means of the Carajas Railway.

The Terminal's main installations are as follows:
Car Unloading Station,
Stockpile Area,
Screening and Crushing Station,
Sampling and Weighing Stations,
Shiploader Dock,
Tug Berth,
Industrial and Administrative Buildings.

DOCUMENTS: Crew members and passengers can only disembark after the ship has been visited and cleared by Customs and Federal Police Officers.

Required documents for such inspection are as follows:
Customs:
Crew List, including each crew member's job title, place and date of birth and identification document's number.
Ship's Supplies and Spare Parts List.
Personal Effects List (personal items and baggage).
List of Passengers in transit or disembarking, including ship's name, passenger's name, place and date of birth.
Stores List.
Maritime Police:
General information concerning the ship.
Complete Crew List, including each crew member's name, passport number or identification document's number, citizenship and date of birth.
List of Guns on Board.
List of Narcotics on Board.
Complete list of passengers, including passenger's name, passport number, citizenship and date of birth.
List of Stowaways, if any.

Passengers and crew members must have valid passports to receive authorisation to land.

Ship Masters shall warn all crew members that Brazilian Laws are very strict in every aspect concerning smuggling and that such laws are strictly enforced by Customs Officers.

Masters shall make sure that all items, except cigarettes, tobacco, alcoholic beverages and personal souvenirs are stored in a room, which will be sealed by Customs Officers, during ship's stay at the Ponta da Madeira Terminal.

Also see "Health".

After Port Authorities clearance, the ship's holds will be inspected by the Terminal's and Master's Representatives. Therefore, the ship's holds must be completely dry, clean and ready to be loaded, so that loading may be authorised.

Should the ship's hold be in a satisfactory condition, the corresponding "Inspection Certificate" shall be signed by the Terminal's and the Master's Representatives. Otherwise the Notice of Readiness will be invalid until the ship is presented in compliance with all conditions.

Ore/oil and OBO ships shall present the Gas Free Certificate to the Loading Inspector immediately after docking. Such certificate will be issued by the Ship Master or by an Inspector accredited by the Ship Owner.

PILOTAGE: Pilotage is obligatory in the Sao Marcos Bay area, between the Pilot's waiting point and any docking and mooring point.

The Pilot shall be requested, via Embratel's Coastal Radio Stations, through the ship's Agent 48 hours in advance, specifying: Ship's arrival time, boarding point and the type of pilotage required. The request shall be confirmed 4 hours in advance.

There is a Pilotage Office at the Terminal, equipped with VHF radio and telephone. The office of the Sao Marcos Bay Pilots Association is located at Avenida Marechal Castelo Branco No. 605, Room 321, Bairro de Sao Francisco. Tel: (098) 227-1828.

The Pilot boarding Point (as shown on Nautical Chart No. 413) is in the following position: Lat. 02° 31′ 18″ S., Long. 44° 23′ 06″ W.

At night, the pilot boat will display lights in accordance with international regulations.

ANCHORAGE: *Outer Anchorage Area:* If all Inner Anchorage Area's anchorage points are occupied, ships shall anchor in the Outer Area located North and N.E. of the channel's Entrance Buoy No. 2. The bottom is formed by fine and coarse sands.

Inner Anchorage Area: The Inner Anchorage Area, shown on Nautical Chart No. 413, is located approximately 1 mile West of Medo Island, forming a rectangle between the following co-ordinates: Lat. 02° 30′ 00″ S. and Lat. 02° 31′ 24″ S., Long. 44° 23′ 25″ W. and Long. 44° 25′ 28″ W.

Depths vary between 14 m. and 56 m. The bottom is fine to coarse sand.

Tidal stream measurements in this area have velocities between 1.9 and 2.9 knots during Spring tides.

NAVIGATION AIDS: *Radio Beacons:* The following Radio Beacons are in operation in the area:

Location	*Characteristics*
Sao Marcos Lighthouse	RC 300 kHz – continuous. Modulation A 2A and A 3E Signal – SM Location – Lat. 02° 29′ S., Long. 44° 18′ W.
Sao Joao Lighthouse	RC 320 kHz – continuous. Signal – Al. Location – Lat. 01° 17′ S., Long. 44° 54′ W.
Sao Luis Airport	RC 280 kHz – continuous. Signal – SLI. Location – Lat. 02° 35′ S., Long. 44° 14′ W.

For ships approaching, the Radio Beacon installed in the Sao Marcos Lighthouse shall be used.

Racon: A Racon is installed in the Sao Marcos de Fora Lighthouse, operating in the "X" and "S" bands, symbol "C" – "Charlie", active 18 secs. and inactive 12 secs.

Lighthouses: The following lighthouses are presently in operation in the Sao Marcos Bay area: Sao Joao, Mangunca, Pirajuba, Pirarema, Alcantara, Ilha do Medo, Ponta de Areia, Sao Marcos, Amacagi and Santana.

In addition to these, the Sao Marcos de Fora Lighthouse is installed close to the channel's entrance (Lat. 01° 48′ 00.19″ S., Long. 43° 52′ 40.90″ W.). It consists of a 30 m. high cylindrical tower, with a heliport at its top. In the heliport's Northern corner, on a steel structure, the main and the spare lights and the Racon are installed.

The location and characteristics of these lighthouses are shown on Nautical Charts and also in the light lists.

NOTE: An anchored floating platform is provisionally installed in the vicinity of the Sao Marcos de Fora Lighthouse, with a 16 m. high metallic tower, painted with horizontal white and red stripes. Atop the tower there is a lighting device which will display, at night, 2 white flashes in a period of 15 secs., with a range of 10 miles. From July 1986 onward, the Şao Marcos de Fora Lighthouse will be in operation.

Lighted Buoys: The access Channel, the Turning Basin and the Inner Anchorage Area are marked by 28 lighted buoys with radar reflectors.

APPROACHES: *Access Channel:* The Ponta de Madeira Terminal's Access Channel is 55 miles long in the S.S.W. general direction, divided into the following sectors:

From Buoy Nos. 1 and 2 up to No. 6 – 7.8 miles long in the direction 208° – 028°.

From Buoy No. 6 up to after No. 14 – 11.6 miles long in the direction 238° – 058°.

From Buoy No. 16 up to Nos. 19 and 24 – 33.6 miles long in the direction 213° – 033°.

The channel's width is 1,000 m. along almost its entire extension, except for the sectors below, which have a minimum width of 500 m.:

From Buoy Nos. 1 and 2 up to Nos. 3 and 4.

from Buoy Nos. 5 and 10 up to Nos. 7 and 14.

Between Buoy Nos. 15 and 22.

The channel's minimum depth is 23 m. (75.5 ft.).

NOTE: The Access Channel is being dredged to the minimum depth of 23 m. Such dredging was scheduled to be completed by March 31st, 1986.

From April, 1986 onward, the minimum depth of the whole Access Channel will be 23 m.

Previously, the minimum depth was 17.8 m. between Buoy Nos. 1, 2, 3 and 4.

Turning Basin: The Turning Basin is limited by the berth to the East, by the parallel 02° 34.5′ S. to the South, and by Buoy Nos. 23 and 25 to the West. The Turning Basin is 0.8 miles wide and approximately 2 miles long.

The Turning Basin's depth varies from 23 m. in the docking area to 35 m. close to Buoy No. 25. The bottom is generally sandy.

Depths: In the area corresponding to the channel's first sector, between Buoy Nos. 1 and 6, the lowest depths shown outside the channel are 16.9 m. at 350 m. N.W. of the channel's West bank and 17.9 m. at 600 m. E.S.E. of its East bank. Ships entering the channel, if they expect to pass by loaded ships leaving, may navigate out of and close to the channel, being aware of the depths indicated on the Nautical Chart No. 410.

Breakwaters: 2 breakwaters have been built, in order to lessen the tidal streams in the ships manoeuvring and docking area. The South Breakwater is 312 m. long, from Ponta da Madeira, and the North Breakwater is 980 m. long from Boqueirao Beach.

RESTRICTIONS: The ships shall arrive at the Terminal with a draft compatible with docking, in accordance with the shiploader's normal position, with a max. air draft of 22.4 m. The draft marks shall be clearly visible.

MAX. SIZE: The min. depth along the dock's berthing face is 23 m. (75.5 ft.).

HEALTH: *Free Pratique and Quarantine:* Should a ship be in a satisfactory sanitary condition, the Master may request Free Pratique from the Maritime Authority at least 48 hours prior to the ETA.

After receiving Free Pratique, the ship may be visited in the Inner Anchorage Area if the ship has to wait before docking or, otherwise, after docking. In the latter case, the ship may be loaded after the Authorities visit.

The following documents must be submitted to the Port Health Officers:

Health Certificate, filled out in accordance with Sanitary Regulation No. 2 issued by the World Health Organisation.

Ship's medical records.

Crew and passengers vaccination certificates against yellow fever as well as their passports or identification papers.

Complete crew list.

Free Pratique request.

List of passengers in transit or disembarking.

The Ship's Master shall be ready to present, upon request, derat or exemption certificates and the Health Certificate issued by the authorities at the last port of call.

Should the ship's sanitary conditions be considered unsatisfactory, the ship must wait in the Quarantine Anchorage area indicated by the Port Captain. In this case, the quarantine ("Q") flag must be continuously displayed, in accordance with International Signal Code. In this case, the ship's personnel cannot land.

Quarantine Anchorage Area: Lat: 02° 36′ 24″ S. Long: 44° 23′ 18″ W.

RADIO: Long distance radio communication shall be done via Embratel, by contacting one of the RENEC – National Coastal Station Networks, with priority and in the frequencies indicated below:

No. 1 PPL (Belem), on 8, 12 and 16 MHz.
No. 2 PPO (Olinda), on 8, 12 and 16 MHz.
No. 3 PPR (Rio de Janeiro), on 8, 12, 16 and 22 MHz.

The ETA shall be based on the Sao Luis legal time (GMT minus 3 hours).

Arrival Advice: The following arrival information shall be transmitted, through the Coastal Stations to the Ponta da Madeira Terminal and to the Ship's Agent.

15 days before the estimated date of arrival, or when leaving the last port of call, for trips shorter than 15 days, inform the ETA.

5 days before the date of arrival, inform:
- ETA.
- Cargo Plan and Loading Sequence.
- Arrival Draft and Departure Draft.
- Air Draft.
- Deballasting Time.
- Required Quantity of Fresh Water (150 ton maximum).

48 hours before arrival, inform the Port Captain:
- ETA.
- Free Pratique request or Quarantine Message.
- Request instructions Concerning Anchorage Area.

24 hours before arrival, inform.
- ETA.
- Any modification concerning prior messages.
- Gas Free Condition.

At least 4 hours before arrival, vessel shall contact Station PPB Sao Luis Radio (4,143.6 kHz), and the Ponta da Madeira Terminal (calling Channel 16-156.80 MHz, working – Channel 12-156.60 MHz. and Channel 13-156.65 MHz.) and the Ship's Agent.

VHF: See "Radio" and "Tugs".

TUGS: 2×38 ton bollard pull, 1×25 ton bollard pull and 2×18 ton bollard pull. 4×40 ton bollard pull tugs under construction.

Tugs must be used for turning, docking and undocking manoeuvres by ships operating at Ponta da Madeira Terminal.

The ship's lines will be passed to the tug's release hooks during the manoeuvres.

Communications between the tugs and the Pilot shall be done via VHF Channel 13 (156.65 MHz.).

The tugs and the mooring boats are operated by the Servedoce Consortium.

BERTHING FACILITIES: The berthing dock has been designed to operate with 20,000 d.w.t. to 280,000 d.w.t. ships.

The Terminal's Administration must be previously consulted about operation with ship's above 280,000 d.w.t. and below 20,000 d.w.t.

The dock lies in the North-South direction, and it is approximately 200 m. from Ponta da Madeira's West end.

The dock's structures are made of reinforced concrete, supported by concrete piles with metallic sleeves, distributed as follows:
- 4 breasting dolphins.
- 6 mooring dolphins.
- Shiploader's runway.
- Support of the shiploader's pivot.
- Tugboat berth.
- Access bridge, service road and walkways.

The 4 breasting dolphins are located in front of the shiploader's runway (170 m.). The mooring dolphins, 3 to the North and 3 to the South, are away from the berthing alignment. The total distance between the outer mooring dolphins, in the North-South direction, is 490 m. The elevation of the breasting dolphins floor is +11.60 m. and that of the mooring dolphins is +11.0 m. in relation to the Tidal Datum shown on Nautical Chart No. 413.

Shiploader: The Terminal is equipped with a linear type shiploader with the following characteristics:

Nominal loading capacity 16,000 t.p.h.
Width of the belt conveyor 2,200 mm.
Maximum range from the docking alignment 46.30 m.
Boom elevation in the horizontal position 35.50 m.
Transverse travel 244.00 m.
Slewing angle (for each direction) 46° 56′ 42.5″
Vertical inclination angles +20.43° and −21.74°
Maximum air-draft 22.40 m.

Fenders: The 4 breasting dolphins are equipped with floating cylindrical rubber fenders, 7.5 m. long and with a diameter of 3.50 m.

Mooring Equipment: The 4 breasting dolphins are equipped with 2 sets of 3 quick release hooks for 80 tons each and a capstan to hoist mooring lines.

The 6 mooring dolphins are equipped with 1 set of 4 quick release hooks for 100 tons each and a capstan to hoist mooring lines.

MOORING/UNMOORING: *Manoeuvres:* In the Turning Basin, it is recommended that ships over 100,000 d.w.t. manoeuvre only when the tidal streams are below 3 knots. Ships under 100,000 d.w.t. may manoeuvre with streams up to 4 knots.

Docking and undocking manoeuvres shall be done at low speed, preferably in countercurrent direction.

The mooring lines must be sufficiently long to reach the most distant dolphins.

Care must be taken with mooring lines passing from ship's stern to the mooring boats, in order to avoid accidents with the propellers of the ship and the boats.

Ponta da Madeira Terminal's personnel are available and qualified to handle the ship's mooring lines during docking and undocking manoeuvres.

The anchor on the ship's dock side shall be kept in the hawsepipe, in order to protect the dock's structure.

All work required during ship's docking, loading and undocking operations, as well as those of opening and closing hatches and cleaning the ship's decks shall be done by the ship's crew members. It is strictly forbidden to throw garbage or wastes overboard.

The ship shall dock with enough ballast to permit the start of loading operations immediately thereafter, within the maximum air-draft condition of 22.4 m. Deballasting shall be done during the loading operation, at compatible flow rates, observing the air-draft limit.

The ship shall dock with the hatches open for the loading operation. Should it be raining, the Ship's Master shall wait for the Terminal Administrations's instructions to open the hatches.

The gangway ladder shall be ready to be placed on the dolphin, during the docking operation.

Soon after mooring, gangway must be lowered from the ship to the dock and ratguards must be placed on the mooring lines.

While docked, the ship's engines shall remain on stand-by and ready for use. Any maintenance operation which may interfere with this condition can only be performed after Terminal Administration's authorisation.

Immediately after docking, the Loading Plan and Loading Sequence must be formally presented to the Terminal's Loading Inspector.

Ships are recommended to dock starboard side to in order to keep the bow to the North, thus avoiding a turn after undocking.

During the docking operation, deballasting can only be done after the Loading Inspector's authorisation.

Repair work in the deck area which may affect the loading operation is not allowed.

Moored ships shall be in conditions considered as satisfactory by the Master, Pilots and by the Terminal.

Mooring lines must be permanently tended so as to keep the ship in position. Mooring lines must be conveniently taut at all times.

All cables with similar functions, breast lines, spring lines and head lines shall always be of the same type, size and material.

If fibre tails are used on the wires, the same size and type of tail shall be used on all lines run in the same direction.

Undocking: In order to make the ship's docked period of time as short as possible, long before the loading operation is completed, the following shall be planned:

The Pilot's boarding.
The tugs shall be ready.
The mooring boats shall be ready.
The mooring personnel shall be ready at the dock.
The water hoses shall be disconnected.
All supplies needed shall be taken on board.
The gangway ladder shall be removed.
The mooring lines shall be loosened.

In respect to the departure draft, the Port Captain's requirements must be strictly observed.

LOADING: On rainy days, only the hold being loaded shall be open. Should the Terminal Administration consider the rain too heavy, the loading operation may be interrupted. In this case, the hold shall be covered.

Ore distribution in the ship's hold is entirely the Master's responsibility. The Master shall send a representative to observe the loading operation.

The Master shall control the ship's draft, mainly during the final loading stages.

The total cargo loaded will be determined by the ship's displacement.

Shiploading operations are performed around the clock, Saturdays, Sundays and Holidays included.

When the loading operation is completed, the ship shall undock soon after the checking. Ships cannot remain docked under any circumstances, unless otherwise authorised by the Terminal Administration.

MEDICAL: Sao Luis has hospitals prepared for emergency treatment and surgery.

DENSITY: 1017.6 at LW. 1019.3 at HW.

FRESH WATER: At the Agent's request, the Terminal may supply fresh water up to a limit of 150 metric tons per ship, at a rate of 20 – 40 t.p.h. Hose connectors with a diameter of 2.5 in. are available on the breasting dolphins.

FUEL: The Terminal do not plan to provide bunkers to ships. PETROBRAS may fuel undocked ships by means of two barges with a capacity of 800 cu.m. each. The Ship's Agent shall request bunker services.

FIRE PRECAUTIONS: The Terminal has a Fire Brigade, duly equipped and trained for fire fighting. There are hydrants and fire fighting guns at the docks.

The tugs operating at the Terminal are equipped to fight ship's fires.

Should a fire occur on board, the ship must undock, for safety. Therefore, while moored, the ships must always have 2 towing cables lowered, one fore and one aft, on the offshore side, with the eyes about 3 m. above the water. Thus, during an emergency, tugs may undock the ship.

The fire brigade personnel are not trained to fight fires on board. The Terminal shall not be deemed responsible for any kind of loss and/or damage to the ship's equipment or injury to personel.

REPAIRS: Minor repairs possible at Sao Luis.

SURVEYORS: There are no classification society surveyors in Sao Luis.

REPATRIATION: Possible.

AIRPORT: Tirical Airport is 26 km. from the Terminal and provides regular jet connections to several Brazilian cities.

TIME: GMT minus 3 hours. Note: From November 2nd to March 1st, daylight saving time (GMT minus 2 hours) may be adopted throughout Brazil.

EMERGENCY CO-ORDINATION CENTRE: The Brazilian government, complying with the 1979 Rescue and Salvage International Convention, and its corresponding duties, requests all foreign ships entering South Atlantic to send information concerning their navigation to COMCONTRAM (Command of the Merchant Ships Traffic Naval Control, through EMBRATEL's Coastal Station Network in accordance with PORTOMARINST N. 337801-A, dated January 3rd 1983, by Ports and Coasts Directorship.

Foreign ships in operation in Brazilian waters, as well as Brazilian ships, must report their course.

SHORE LEAVE: Possible.

WEATHER/TIDES: *Meteorological Conditions:* Local climate, in accordance with the Koppen classification, is the Aw type, i.e., tropical with only one rainy season (from December to May).

Temperature varies throughout the year between 23° C. and 31° C. and is usually around 27° C.

The relative humidity is evenly high throughout the year. They monthly average varies from 75% to 85%.

The mean annual rainfall is 2,250 mm. During the rainy season, the monthly average is 325 mm., with 15 rainy days per month. In the dry season (April to November), the monthly average is 50 mm., with 5 rainy days per month.

Winds blow predominantly from the N.E., with a frequency of 25%. The velocity and freqency of the winds are as follows:

Beaufort Scale 2 (4 to 6 knots) = 39%
3 (7 to 10 knots) = 31%
4 (11 to 16 knots) = 15%
5 (17 to 21 knots) = 1%

Visibility is usually good in the Sao Marcos Bay area. The occurrence of fog is very rare. However, some mist may occur, which brings a slight reduction in visibility.

The Sao Marcos Bay area is not subject to hurricanes or tornadoes. Heavy but short rain storms, however, are common in the rainy season.

Weather forecasts are broadcasts by Belem Radio – PPL – Coastal Station at the following times: GMT 0130, 0800 and 1930; The station's frequencies are 4,265.0 kHz, 8,502.0 kHz and 12,979.5 kHz, in A1.

The PPL station operates on 4,125 kHz in A3J (telephone communication).

Tides: The Sao Marcos Bay has semi-diurnal tides.

The tide tables issued by the Diretoria de Hidrografia e Navegacao for the Itaqui Port shall be used. The Itaqui Port is approximately 1,200 m. South of Ponta da Madeira.

Based on measurements taken at Itaqui Port, the following data was collected:

HAT (Highest Astronomical Tide) 7.00m.
MHWS (Mean High Water Springs) 6.27 m.
MHWN (Mean High Water Neaps) 5.02 m.
MSL (Mean Sea Level) 3.43 m.
MLWN (Mean Low Water Neaps) 1.84 m.
MLWS (Mean Low Water Springs) 0.59 m.
LAT (Lowest Astronomical Tide) 0.20 m.
HWF&C (High Water Full and Change) VII h 21 m.

The tides phase and height vary along the Access Channel. In the channel's initial sector, around buoys Nos. 1 and 2, tides occur 75 minutes before Itaqui and the height is 60% of the tide height in the Itaqui Port.

Nautical Chart No. 410 presents instructions for tide forecasting along the Access Channel, in relation to the Tide Forecast for the Itaqui Port.

Tidal Streams: The water flows in the Sao Marcos Bay are governed by the tides. Predominant winds, due to their medium force, only cause small deviation in the tides induced streams.

The minimum stream velocities occur at slack water, and the maximum occurs 3 to 4 hours after high tide and 2 to 3 hours after low tide.

The stream flows N. and N.E. during ebb tide and, after slack water, their direction is reversed flowing S. and S.E. during flood tide.

In the Turning Basin, the flood tide streams vary from 4.3 knots at spring tide to 3.7 knots at neap tides. Ebb tide streams vary from 5.1 knots at spring tides to 4.2 knots at neap tides.

Nautical Chart No. 413 presents tables which enables the navigator to forecast streams, direction and velocity in the Turning Basin, as a function of the Tide Forecast Table for the Itaqui Port.

In the Access Channel, the stream flows in the direction 040°-220° to 060°-240°, at velocities as high as 2.5 knots. Currents flow faster inside the Sao Marcos Bay, reaching 5.1 knots in the Turning Basin.

Waves: Waves, in that area, are caused by local winds. In the Turning Basin Area, waves of 1.10 m. in periods of 6.0 seconds may occur.

GENERAL: *Power Supply:* Power will not be supplied to ships by the Terminal.

Supplies: The Agent must provide supplies for the ship. Supplies must be embarked before the end of shiploading or while the ship is undocked.

Garbage: The Terminal is not equipped to receive garbage from the ships.

Dirty Ballast or Oily Residues: Terminal is not equipped to receive dirty ballast or oily residues.

Cleaning Tanks: The Terminal's personnel are not available to clean holds. This service is controlled by the Maritime Labour Office by means of qualified companies.

Crew, Passengers and Visitors on Board: Authorisation for shore leave shall be given by the Ship's Master, after clearance by Port Authorities.

Crew members must carry their personal identification documents whilst ashore.

Only those persons duly authorised by the Terminal Administration may have access to the docks.

Crew members leaving the Terminal may use taxis requested by means of the Terminal's Guard Service. Private cars may not circulate in the Terminal's area.

Pollution: Brazilian laws are very strict in respect to action which may cause pollution. Restrictions, penalties and fines are stated in the laws. While ships are docked, neither blowing of tubes nor tank washing is allowed.

Authorities: All ships bound for Ponta da Madeira Terminal will be boarded as soon as possible in the Inner Anchorage Area or soon after docking, by the following Authorities representatives:

Port Health Officers.
Customs Officers.
Federal Police (Immigration) Officers.

Such Officers will visit the ship before loading operations are authorised, at any time of day or night, Saturdays, Sundays and Holidays included.

These Authorities keep offices for their representatives within Ponta da Madeira Terminal's area.

Docking Time: Docking time is considered as the time when, after passing the cables, the gangway ladder is lowered to the dock.

Notice of Readiness: As ships arrive, if they have to wait in the Outer Anchorage Area, they shall, soon after anchoring, send the Notice of Readiness to the Agent, who will send the communication to the Terminal. When ships go to the Inner Anchorage Area or directly to the Terminal, the Notice of Readiness communication shall be sent as the ships pass by parallel Lat. 02° 31′ 18″ S.

Nautical Charts: The Access Channel, the Turning Basin, the anchorage area and the berthing dock are included on the following Nautical Charts:

Diretoria de Hidrografia e Navegacao (DHN) – Brasil, Charts Nos. 400, 410 411, 412 and 413;

United States Hydrographic Office – HO, Charts Nos. 24.270 and 24.271.

British Admiralty, Charts Nos. 3958 and 535.

On Nautical Charts issued by the Brazilian navy, depths are indicated in metres and are referred to the Tide Datum level adopted for the chart of largest scale.

AUTHORITY: Companhia Vale do Rio Doce, Ponta da Madeira Terminal, P.O.Box 511, ZIP – 65.000 – Sao Luis. Maranhao – Brazil. *Tel:* (098) 221-5189, (098) 222-8847, (098) 222-8567. *Telex:* (098) 2193. *Contact:* Candido Cotta Pacheco, Superintendent. Head Office: Companhia Vale do Rio Doce, Av. Graca Aranha 26, P.O.Box 2414, 20005 Rio de Janeiro RJ Brazil. *Tel:* 272-4477. *Telex:* (021) 23162 and 22071. *Cable:* Valeriodoce Rio.

PORTO ABC NORTE: 02.48 S. 50.30 W.

SHIPMASTER'S REPORT: October 1985.

LOCATION: On the Rio Pacaja about 263 nautical miles from Belem.

VESSEL: 7,405 d.w.tonnes, LOA 116.44 m., beam 17.23 m., draft 7.52 m. 10×5 – 10 ton derricks and 1×60 ton derrick. Flush tweendecks. Vessel loaded logs and lumber.

PILOTAGE/CLEARANCE: Sea Pilot boards at Salinopolis Pilot Station. Clearance is made at Belem Anchorage with the usual formalities for Brazil.

Two River Pilots accompany the vessel to Porto ABC Norte and back to Belem. These Pilots are excellent. As no charts of the rivers exist, they draw their own charts.

Two checkers, 1 Custom's Officer and 1 representative of Banco do Brasil accompany the vessel. During the trip up and down and including the time at the loading berth the bonded store will be opened by the Custom's Officer when requested by the Master.

TUGS: No tugs available.

BERTH: Wooden berth about 80 m. length, depth alongside depends on season. In October we sounded 7 m. The vessel sailed with 5.80 m. draft and even keel.

CARGO: Logs with weight up to 8 tonnes and length 12 m.

Lumber sawn in packets.

Average weight of logs and lumber about 1.4 tonnes/cu.m. All loading is done by ships own gear.

MEDICAL: First aid station at Sawmill, no doctor available.

GENERAL: *Stores:* Supplies not available.

Transport: There is 1 small private plane owned by ABC Norte.

PORTO ALEGRE: 30.05 S. 51.15 W. (See Plan)

This information does not apply to Tramandai Oil Terminal which is listed separately.

DOCUMENTS: See "General" before first port.

PILOTAGE: Porto Alegre is situated 164 miles up the Lagoa dos Patos, a large fresh water lake, and vessels must take on a Pilot after receiving Pratique at Rio Grande, which lies at sea entrance of lake. Pilot and authorities board after arrival at Rio Grande Inner Anchorage. Pilots arranged by Agent upon receipt of vessel's radioed ETA via Rio Grande Radio (PPJ). Since 40-mile channel between Rio Grande and Lagoa dos Patos is unlit, vessels should proceed from Rio Grande only by daylight, allowing 3 hours to negotiate channel. Vessels over 12 knots may leave Rio Grande for Porto Alegre not later than 1700 hrs. in Summer, or 1500 hrs. in Winter. Vessels under 12 knots not later than 1600 hrs. in Summer or 1400 hrs. in Winter. Entry must be made to Rio Grande at least 3 hours before these times to allow for clearance.

RESTRICTIONS: Vessels approaching Porto Alegre from the Lagoa should do so only by daylight since 30 miles access channel leading from the Lagoa to Porto Alegre poorly lit. If necessary, vessels should anchor off Itapoan Lighthouse at head of the Lagoa, to await daylight before proceeding. On arrival at Porto Alegre, Free Pratique must again be obtained, and crew lists, store lists, etc., again presented to authorities, who usually visit vessel in berth alongside.

MAX. SIZE: Not recommended that vessel of more than 215 m. LOA attempt to reach Porto Alegre. Max. safe draft is 17 ft. at any time.

ANCHORAGES: Inner harbour. Not normally used unless port congested. If vessels are too late for transit they must anchor at either end of the lagoon overnight.

HEALTH: Vessels receive clearance on passing Rio Grande. No yellow flag required. Also see "General" before first port.

RADIO: All messages should be routed via Rio Grande Radio (PPJ).

VHF: On arrival at Porto Alegre, vessel can use the VHF station Porto Alegre Radio (PPP). Tel: (0512) 210322 or (0512) 141. Also VHF Channels 16, 23, 24, 25, 26, 27 and 28.

Also, at short distances, when arriving at the port or manoeuvring within the port area, vessels are able to use the radio station (as yet without call sign) of the Porto Alegre Port Administration, Tel: (0512) 245733. Also transmitting on VHF with 1 Watt, on Channels 16, 9, 10, 11, 71, 12, 13 and 14.

TUGS: 1×1,680 h.p. and 4 small low-powered tugs 220, 250, 280 and 320 h.p.

BRIDGES: Vessels proceeding up-river from Porto Alegre to oil berth must pass under bridge with lifting-span. Span is lifted when approaching vessel sounds prolonged blast on siren.

BERTHING: The berths are on the East bank of the river, and the jetties stretch over a distance of 8 km.

Maua Quays: Berths "A", "A1" to "A7" and "B", "B1" to "B7". Length, 1,482 m. Depth 17 ft.

Navegante Docks: 2,433 m. long.

Cesa Grain Berth: 2 belts loading rate 100 t.p.h. each. 3 grain elevators, rate 100 t.p.h. each.

Between Maua and Navegante there are several small jetties but none capable of handling ocean-going vessels.

CRANES: *Maua Quays:* 7×3 ton portals (narrow gauge), 2×6.25 ton cranes (wide gauge), 1×12.5 ton (wide gauge), 4×3 ton portals (narrow gauge).

There are no cranes available at Navegante Docks.

STEVEDORES: *Working Hours:* 0730 – 1130, 1300 – 1700. Overtime 1700 – 1900, 1900 – 2300 and 0000 – 0400 hrs.

MEDICAL: Full facilities available. Crew members should hold valid international inoculation certificates.

TANKERS: Proceed to oil and LPG berths on Gravatai River for discharge. These berths accessible only to small tankers of up to 1,600 d.w.t. Also see "Tramandai".

DENSITY: Fresh water at all times, unaffected by tides.

FRESH WATER: Available from hydrants at all berths. Delivery rate up to 25 t.p.h.

FUEL: Available, delivered by road tanker. Also see "General" before first port.

GANGWAY/DECK WATCHMEN: Vessels at anchor and alongside must have a watchman.

OPENING/CLOSING HATCHES: Usually done by stevedores.

CUSTOMS ALLOWANCES: Each crew member allowed to keep out of bond 1 carton of cigarettes and 1 bottle of wine or spirits.

IDENTIFICATION CARDS: Necessary.

CONSULS:

British
German F.R.
French
Spanish
Belgium
Danish
Italian
Norwegian
Swedish

REPAIRS: All light deck and engine-room repairs possible. No dry-docking facilities available except for small vessels of up to 300 ft. LOA.

TELEPHONES: Connections available from warehouses A, A2, A4, A6, B, B2, O, O2 and D4.

DEVELOPMENTS: 2 new dredgers are being used to deepen the channels leading to Porto Alegre, permitting a working draft Rio Grande/Porto Alegre of 20 ft.

A new grain elevator with a capacity of 60,000 tons is expected to be ready shortly.

AUTHORITY: Administracao do Porto de Porto Alegre, Av. Maua S/No., Porto Alegre, Rio Grande do Sul, Brazil CEP 90000. *Tel:* (0512) 24-5733. *Telex:* (051) 2540 *Contact:* Roberto Schramm Barreto, Port Administrator.

PORTO TROMBETAS: 01.28 S. 56.23 W. (See Plan)

LOCATION: The Porto Trombetas Bauxite Terminal is situated on the right bank of the Trombetas River, State of Para. The Trombetas River is a left hand affluent of the Amazon River.

Geographical location:

Lat. 01° 27′ 31″ S., Long. 56° 22′ 48″ W.

The shortest route through the fairway from the North Bar of the Amazon River (North Entrance) to Porto Trombetas is approximately 575 nautical miles.

The distance between the Port of Belem, capital of the State of Para, and Porto Trombetas is approximately 880 km. by air and 611 nautical miles down river.

The distance between the Terminal and Oriximina, the nearest town to Porto Trombetas, is 42 nautical miles.

DOCUMENTS:

At Anchorage on Fazendinha Roads: At anchorage on Fazendinha Roads (see "Anchorage") Port Authorities will board vessel for clearance and the following documents should be delivered to the Agent, assisting Port Authorities and Master:

1 copy Health Maritime Declaration.
2 copies Vaccination List.
5 copies Crew List.
3 copies Store List.
3 copies Crew Personal Effects.
3 copies Bonded Stores List.
Last Port Clearance.

Documents to be Presented:

Derat or Exemption Certificate.

General Declaration Form, which the Agent will present to the Master (to be filled in during clearance).

After Customs and Sanitary Guards Inspections (which takes about 1.5 hours) the Agency will deliver to the Master the Fazendinha Clearance to be presented to Port Trombetas Authorities.

A new set of the above mentioned documents less Health Maritime Declaration and Vaccination List must be ready to present at Porto Trombetas during the clearance there.

At Porto Trombetas:

(a) Documents required:
6 copies Crew List.
2 copies Store List.
2 copies Crew Personal Effects List.
6 copies Passenger List.
1 copy Ballast Declaration.
At hand to show:
Ships Data,
Fuel, Diesel, Water Quantities on Arrival,
Derat or Exemption Certificate,
Gas Free Certificate (if ore or oil vessel),

(b) Cargo papers: Master will receive copies of each of the documents listed below:
Notice of Readiness.
Bill of Lading (non-negotiable copy).
Cargo Receipt.
Stowage Plan.
Statement of Facts.
Draft Survey Result.
Manifest of Cargo.

Master shall approve and sign the Notice of Readiness, Bill of Lading, Draft Survey Result, Statement of Facts and Cargo Receipt, as required by the Shippers and Agents.

(c) Clearance: Ship's Agents will furnish clearance papers for sailing as well as the cargo manifest.

(d) From Trombetas the envelope of cargo documents destined to Ansanav Santana will be delivered to such Agents together with a Sailing Information Form (given to the vessel's Master by Santana Agent on the up river call at Fazendinha).

PILOTAGE: Pilot service is available between Porto de Santana and Porto Trombetas. They will board and disembark in the vicinity of Porto de Santana. The Pilots will stay on board at Porto Trombetas.

ANCHORAGE: *Anchorage at Fazendinha for Visit of Authorities and Embarkation/Disembarkation of Pilots:* In order to avoid any delay due to entrance to Porto de Santana, the Port Captaincy of the State of Para and Federal Territory of Amapa has officially determined the Fazendinha area for visit of Authorities and embarkation/disembarkation of Pilots.

Such area is located around Lat. 00° 04′ 06″ S., Long. 51° 06′ 45″ W.

Whenever passing by the port of Macapa, vessels bound for Porto Trombetas are supposed to contact Messrs. "AMSANAV SANTANA", through VHF Channel 16.

Messrs. AMSANAV SANTANA will arrange the visit of Authorities and embarkation of Pilots.

RESTRICTIONS:

Draft Restrictions:

Amazon River North Bar:
37 ft. fresh water at high tide.
32 ft. fresh water at low tide.

Trombetas River:
36 ft. fresh water from August to December (ebb tide season).
37 ft. fresh water from January to July.

Remarks: These figures are subject to further confirmation with Shippers and vessel's Agent.

RADIO: *Arrival Advice:* For Agency purposes vessel proceeding to Porto Trombetas shall send ETA North Bar of the Amazon River to Messrs. "AMSANAV BELEM". For your guidance, one notice is required 72 hours prior to such arrival which means vessel's passage along Entrance Buoy located at Lat. 01° 14′ 30″ N., Long. 49° 37′ 16″ W. This procedure will allow sub-Agents at Belem to convey Pilots to Fazendinha Anchorage Area accordingly. After passing along the mentioned entrance buoy, vessel shall proceed via North Channel of the Amazon River up to Fazendinha Anchorage Area located at Lat. 00° 04′ 06″, Long. 51° 06′ 45″ W. During such sailing to Fazendinha Anchorage Area vessel will receive from Messrs. "AMSANAV BELEM" all information regarding eventual changes in position of buoys, operations of lights and other aids.

When passing along Macapa (about 8 miles before Fazendinha Anchorage Area) Master is expected to be in contact with Messrs. "AMSANAV SANTANA" through VHF Channel 16. At that time all instructions for vessel's anchorage at Fazendinha in order to receive visitation of Authorities will be forwarded by Messrs. "AMSANAV SANTANA".

When leaving Fazendinha Anchorage Area, Master will be requested to inform local sub-Agents of ETA at mouth of the Trombetas River to be re-transmitted to "DOCENAVE" Porto Trombetas.

Before entering the Trombetas River, Master must obtain "Confirmation for Entrance" from Shipper's Dock Master through VHF Channel 16.

TUGS: One tug of approximately 30 ton bollard pull and one line handling boat are available for berthing and unberthing.

BERTHING:

Bauxite Loading Terminal: The bauxite loading terminal is equipped to load ore carriers up to approximately the Panamax Size.

The maximum loading rate is 6,000 tonnes p.h. but the average loading rate is estimated at 4,200 tonnes p.h. (also see Shipmaster's Report – May 1986). The pier is 100 m. long and the maximum permissible air draft (the distance from the waterline to the top of the hatch coaming) is 13.50 m. at the high water period. The mooring system consists of four concrete dolphins upon metal piling and four mooring buoys.

Accommodation for Vessels:

(a) One vessel can be berthed at the loading dock. Two waiting vessels can be secured to mooring buoys about 1.8 miles downstream from the berth. A secondary waiting area is located West of the mouth of the Trombetas River in the vicinity of Lat. 01° 54′ S. and Long. 55° 40′ W. There is good holding ground in this area and some protection from canaranas and other floating debris.

(b) The movement of all vessels within the Trombetas River system is under the control of MRN. Up-bound vessels are not permitted to enter the Trombetas River without prior clearance from MRN. Such approval can be obtained by contacting MRN or DOCENAVE on VHF. In case such permission has not been received, the vessel shall anchor at the secondary waiting area in the Amazon River until it is granted. This is necessary because there are two areas within the Trombetas River where vessels are not permitted to pass. Vessels will normally be loaded at Porto Trombetas in order of arrival, provided that they are within their lay-day period as previously agreed with MRN.

Berthing and Unberthing: For berthing and unberthing the width of the channel in front of the terminal is currently 300 m.

Manoeuvring of vessels should be performed at Master's and Pilot's discretion.

Fendering: No fenders are needed for docking. The terminal is equipped with permanent fenders.

Anchor: The use of vessel's anchor during manoeuvring is permitted at Master's and Pilot's discretion.

Loading Hours: 24 hours a day, Sundays and holidays included.

Hold Condition: No cleaning crews are available.

Holds should be cleaned prior to arrival and they will be inspected before acceptance of vessel.

Loading Operation: The bauxite is transferred from the stockpile to the ship's holds through a conveyor belt system and automatic shiploader.

The shiploader boom moves horizontally around its hinge with an angle of 53° 24′ 44″ to each side.

The loading operation usually starts soon after the vessel is alongside and cleared by the Authorities.

The air draft (that is, the distance from the waterline to the top of the hatch coaming) is 13.5 m. (minimum) in July and 19.0 m. (maximum) in December.

The stowage factor for dried bauxite is 25 cu.ft. per ton up to 28 cu.ft. per ton depending on moisture content of the bauxite.

Careful check of vessel's draft and trim should be made by the ship's officers at all times during loading operations. Cargo is belt trimmed only.

The cargo weight should be determined by the "ship's displacement" method (light versus loaded draft survey).

Tonnage on the conveyor belt system between stockpile and ship is approximately 275 tons. This tonnage must be discharged into the holds to complete the loading.

MRN reserves the right to require any vessel to undock after loading and completing the necessary formalities in order to permit another vessel to berth or for any other reason.

NAVIGATION: *Nautical Charts:*

(a) The Nautical Charts issued by the Hydrographic Navigation Offices (Brazilian Navy) and listed below are used to navigate from the Amazon River North Bar to Porto Trombetas:

200	Maraca to Machadinho Island.
210	Vicinities (approach) of the North Bar to the Amazon River.
220	From the North Bar to Porto de Santana.
201	North Bar of the Amazon River.
202	Bailique Island to Ponta do Capinal.
203	Ponta do Capinal to Pedreira Islands.
204	Pedreira Islands to Santana Island.
205	Macapa to Santana Island.
4101A	Macapa to Mangabal Island (Santana Island included).
4101B	Mangabal Island to Comandai Island.
4102A	Gurupa to Almeirim.
4102B	Almeirim to Prainha.
4103A	Prainha to Costa do Ituqui.
4103B	Costa do Ituqui to Meio Island (Santarem included).
4104A	Meio Island to Santa Rita Island (Obidos included).
4401A	Obidos to Paru Lake (entrance Trombetas River included).
4401B	Paru Lake to Caipuru Lake (Oriximina included).
4402A	Caipuru Lake to Bacabal.
4402B	Bacabal to Erepecu Lake (Narrow Channel of Bacabal and Porto Trombetas).

All charts and publications can be altered by Notice to Mariners (Brazilian Navy information service).

(b) All nautical charts are available through the vessel's sub-Agents if required in advance.

Navigation Inwards:

(a) Undoubtedly the greatest difficulty for navigators coming from the sea is to cross the Amazon River North Bar sand banks.

Bulk carriers navigating to Porto Trombetas will be in ballast, for this reason there should be no need for them to await the high tide, in so far as at low tide, it is possible for them to cross the bar with 9.75 m. (32 ft.) draft.

(b) With adequate nautical charts, good radar and calibrated direction finder, an experienced navigator should be able to enter the North Bar of the Amazon River to Macapa without major difficulties.

Navigation Outwards:

(a) Navigation from Macapa to Ponta do Ceu offers no problem and it will not be necessary even to reduce speed.

(b) The critical section for navigation is from Ponta do Ceu to the open sea as, in addition to the 32 ft. draft, ships have to take advantage of the tide to cross banks of the North bar, where they are affected by the adverse action of a strong current.

Under such conditions ships have to be equipped with such facilities which will permit accurate positioning.

If it is necessary to wait for a suitable stage of the tide, the river provides good bottom to anchor at several places along the navigable routes.

Navigation Aids:

(a) Radio Beacon:

A radio beacon is installed at Ponta do Ceu.

The main details are:

Frequency:	290 kHz.
Signal Letters:	EH
Working Hours:	Continuous
Geographical Position:	Lat. 00° 45′ 40″ N. Long. 50° 06′ 58″ W.
Range:	300 miles.
Signal:	Ao and A^2 (1,020 H2)
Character of Signal:	(EH . . .), Twice in Ao during 10 seconds and A^2 (1,020 H2) during 5 seconds.

(b) Racon:

Racon (letter M – Morse Code) is located at Bailique Lights position (Lat. 00° 59′ 24″ N., Long. 49° 56′ 53″ W.) with a range of about 25 miles.

Mineracao Rio do Norte S.A. MRN is not responsible for the location and operation of the navigation aids.

Tidal Information: The Hydrographic Navigation Office of the Brazilian Navy based on data furnished by the National Astronomical Observatory publishes an Annual Tide Table for the majority of Brazilian ports, including the North Bar of the Amazon River – the Brigue Island, Lat. 00° 55′ N., Long. 50° 05′ W. and Porto de Santana.

(See DG 16 – 14 Tabuas de Mare (Tide Tables DG 16 – 14).

Outer Bar Tide: With reference to data published in the tide tables, Ilha do Brigue – Lat. 00° 55′ N., Long. 50° 05′ W., Charts 210, 202 and 201, the tidal time is local time (GMT minus 3 hours) and the tidal amplitude figures are shown in metres.

In position "E", Lat. 01° 34′ N., Long. 49° 09′ W., tidal time at and about this position is 4 hours earlier than shown in the tide tables for Ilha do Brigue. Tidal amplitude is 48% of the figures shown in the tide tables. In position Lat. 01° 09′ N., Long. 49° 36′ W., tidal time at and about this position is about 2 hours earlier than indicated in the tide tables for Ilha do Brigue. Tidal amplitude is 63% of the figures shown on the tide tables.

On Banco do Meio, tidal time at and about this position is 1 hour earlier than shown in the tide tables for Ilha do Brigue. Tidal amplitude is equal to the figures shown in the tide tables. Tidal currents in the area indicated as "Canal Grande do Curua", are reported to coincide with the direction of the axis of channel in that area.

Outer Bar Tide Current: On the Nautical Chart No. 210 information about tide current is furnished (see upper left side of the chart).

GENERAL CARGO WHARF: MRN handles general cargo at a general cargo wharf 350 m. downstream from the shiploader.

MEDICAL: Medical service may be arranged at the MRN Hospital, in emergency. Health conditions in the region are good. No epidemics or tropical diseases are recorded in the region.

BALLAST: Vessels are not allowed to discharge salt ballast into the Trombetas River. Salt ballast can be discharged into the Amazon River up till Almeirim Island.

POLLUTION: No facilities are available at the terminal to receive slops, salt water or contaminated ballast.

Discharge of any material other than clean ballast will be subject to heavy penalties as prescribed by the Brazilian law. It is not permitted to discharge salt water ballast into the Trombetas River.

TANKERS: Tankers discharge bulk fuels at a floating pier situated about 400 m. upstream from the Terminal.

FRESH WATER: Available subject to prior consultation with MRN.

FUEL: Not available.

CONSULS: None.

REPAIRS: Small repairs can be undertaken by MRN workshop in extreme emergency only.

SURVEYORS: There is no Classification Society surveyor at Porto Trombetas. Whenever needed a surveyor can be appointed, who will come from any other Brazilian port by plane.

P & I Club: Not available at Porto Trombetas. Administrative assistance and legal advice on matters concerning ship's civil liability to third parties can be obtained from a representative in another Brazilian port who will come by plane.

AIRPORT: The nearest international airport is Manaus (capital of the State of Amazon). There is a domestic airline service between Manaus and Santarem, Belem and Santarem, and Santarem-Porto Trombetas.

TIME: Local time is GMT minus 4 hours.

IDENTIFICATION CARDS: Crew and Passengers: There are no restrictions by the local authorities, but crew members and passengers should carry their identification papers when on shore. Visits to the industrial area require prior approval of MRN.

GENERAL:

Weather:

(a) Rain: during the rainy season precipitation is usually heavy but of short duration.

(b) Wind: from July to December, East and E.S.E. winds predominate and they are usually moderate with occasional strong gusts.

From January to June calmness predominates followed by N.E. winds backing to S.W. with persistent showers. The predominant wind speed is 10 knots.

(c) Haze is rare in the Amazon River, but it is more frequent in the Trombetas River, particularly early in the morning.

Tide and Current: In the Porto Trombetas region, the current may reach 2 knots during high water season (January to July).

Temperature: An average of 30°C.

Mail: Ship's and crews' mail should be addressed to: Mineracao Rio do Norte S.A., MRN legal domicile:

Avenida Almirante Tamandare, 1.114
Belem – Para – Brasil
CEP 66.000.

Telephone: Telephone communication between Porto Trombetas and the rest of Brazil and also international calls are available.

Telephone number: (091) 544-1462
(091) 544-1335

Telegraph: There is no public station in Porto Trombetas. Telegrams from Porto Trombetas must be sent through the vessel's Agent.

Services:

Ship chandlers and laundry not available.
Derat and Fumigation not available.
Electricity not available for supplying vessels.

Porto Trombetas Port Captaincy: The Brazilian Navy has installed an Agency at Porto Trombetas with the purpose of controlling all vessels destined to the port.

MRN recommends that the Brazilian Pollution Regulations be carefully observed.

The Port Captaincy is located in the vicinity of the shiploader and for any communications, this Port Authority can be reached at the following Telex and Telephone numbers:

Telex: (091) 1470
Telephone: (091) 544-1462
(091) 544-1335

Agency:

All ships will be attended by Vale do Rio Doce Navegacao S.A. – DOCENAVE through its regional office in Porto Trombetas, and DOCENAVE's sub-Agents in Belem and Porto de Santana (Agencias Mundiais Ltda.):

DOCENAVE's head office:
Rua Voluntarios da Patria, 143
Rio de Janeiro, State of Rio de Janerio
22.270, Brasil
Telephone: (021) 286-8002
Telex: (021) 22142, 22249, 22730
Cable Address: "DOCENAVE RIO DE JANEIRO"

DOCENAVE's regional office:
Trombetas, State of Para
68.270 Brasil
Telephone: (091) 544-1335
Telex: (091) 1470
Cable Address: "DOCENAVE PORTO TROMBETAS"
Manager: Mr. Marcos Sant'Anna
*Home Phone: (091) 544-1335

DOCENAVE's sub-Agents:
Agencias Mundiais Ltda.
Av. Presidente Vargas, 121, 2° andar
P.O. Box 190
Belem, State of Para
66.000 Brasil

Cable Address: "AMSANAV SANTANA"
Manager: Mr. Assis de Souza
*Home Phone: (621) 5669

SHIPMASTER'S REPORT: November 1980.

Vessel visited Porto Trombetas on November 23rd until 25th, 1980 for loading a full cargo of bauxite ore. This port is situated on the righthand side of the Trombetas River, State of Para, a lefthand affluent of the Amazon River, approximately 575 nautical miles from the open sea.

All vessels destined for Porto Trombetas are cleared inwards at Santana, Federal Territory of Amapa, as being the first Brazilian port of call.

On arrival at Porto Trombetas, State of Para, the vessel was visited again by Customs and Federal Police in order to clear the vessel for this "Port of Call". Again several documents were needed. On departure from Porto Trombetas a "Harbour Master's Clearance" is received which has to be handed over to the Santana Authorities, usually via the River Amazon Pilots leaving the vessel in Santana, in exchange for a clearance from that port, delivered by pilot launch.

SHIPMASTER'S REPORT: May 1986.

Please see a comparison report over tidal predictions for Barra Norte (Rio Amazonas) for the 23rd May 1986. First method: Admiralty Tide Table Vol. 2/1986 NP 202/86.

Second method: Tabuas dos Mares De-16-21/1986.

There is an error of 3 hours 41 minutes between the two predictions, note also the difference in predicted heights.

Upon arrival at Barra Norte, we only had in our possession the Admiralty Tide Tables. Referring to the time of HW given by these tables and using the rose of currents printed on Brazil chart 210, we were expecting a current setting in direction 310° at about 1.2 knots (HW+5) then later 270° at about 1.8 knots and 238° at about 2.2 knots. The correct currents were for these times: 050° – 4.1 knots, 040° – 2.2 knots, 030° – 5.5 knots, using the HW times of Tabuas dos Mares.

The difference between the two predictions is, of course prejudical in order to perform a safe and good navigation, keeping in mind that the navigator has no landmark for several hours.

Tidal predictions for May 23rd 1986 at Barra Norte – Rio Amazonas:
Admiralty tide tables:

	Time		*Height*		
Standard Port	HW	LW	HW	LW	
Georgetown	0433	1051	3.2	0.2	
Guyana	1709	2302	2.9	0.7	
Seasonal change	Standard port		–	–	negligible
Differences	+0245	+0251	–0.3	–0.1	
			–0.3	–0.2	
Seasonal change	Secondary port		–	–	
Secondary port	0718	1342	2.9	0.1	
	1954	0153 (24 May)	2.6	0.5	

Tabuas dos Mares: 23rd May 0546 – 0.8, 1059 – 5.8, 1812 – 0.5, 2344 – 5.6.

Loading: The loading rate of bauxite during my call was about 1,100-1,200 tonnes/hr. We loaded about 55,000 tonnes.

Agents Questionnaire to Master:

Fazendinha Anchorage, May 24th 1986.
To the Master
M.V. .... ,
Fazendinha

Re.: North Channel – Amazon River

Dear Captain:

Please kindly report your observations during your transit in North Channel – Amazon River, (Nautical Chart No. 201 – 6th ed.). Any other information will be of good advice.

North Channel: Report on 23rd May 1986.

Buoy No. 2 (Sea Buoy).	Lat. 01° 15.1′ N., Long. 49° 34.8′ W.
Buoy No. 4.	Lat. 01° 09.2′ N., Long. 49° 39.1′ W.
Buoy No. 6.	Lat. 01° 05.0′ N., Long. 49° 43.8′ W.
Buoy No. 8.	Lat. 01° 01.2′ N., Long. 49° 46.0′ W.
Buoy No. 1.	Lat. 01° 06.1′ N., Long. 49° 44.2′ W.
Buoy No. 3.	Lat. 01° 00.3′ N., Long. 49° 47.4′ W.
Buoy No. 10.	Lat. 00° 58.1′ N., Long. 49° 48.2′ W.

Radio Beacon Ponta do Ceu: Good, but have given bearings totally erroneous during one hour (from 1400 to 1500 LT).

Racons: Guarah Light (range). First echo (weak) 31 nautical miles.

Bailique Light (range). First echo 24 nautical miles.

Lighthouses: Guarah Light; Bailique Light; Marinheiro Light; Ponta do Ceu; Santarem Light. Generally all good but probably too weak in case of restricted visibility due to rainfall.

Remarks: Regret absence of fairway buoys or pillars on each side of the North Bar. Buoy No. 2 and following are too small and difficult to find on the radar. Navigator on duty 5 hours between Barra Norte and Buoy No. 2 without a good fix.

It would be helpful if Agent sent by radio at least 2 days before arrival the following information concerning tides.

1) Time of HW and LW at North Bar (we received it but at the time we were in North Bar (23rd May). The times given in the cable were for the 24th May).

2) The direction and force of current following the current rose printed on chart 210 (Brazilian chart).

Cable should be in the following form: 23rd May HW . . . LT LW . . . LT. Current HW 070/3.6 HW+1 050/4.1, HW+2 040/5.5, etc.

It should be noted that the predicted times and heights in the Admiralty Tide Tables are erroneous.

It should also be noted that for deep draft vessel, the most difficult and narrow navigation is from Buoy No. 2 to Santana Anchorage, and without Pilot (specially between Buoy No. 2 Buoy No. 10).

OPERATORS: Mineracao Rio do Norte S.A. – MRN

Legal Domicile:
Avenida Almirante Tamandare, 1.114
Belem – Para

Municipio de Oriximina
PARA
CEP 68.270
Telex: (091) 1470
Telephone: (091) 544-1462
(091) 544-1335
Cables: "RIONORTE".
Contact: Captain Jorge A. Chaves (Dock Master).

Main Office:
Praia do Flamengo, 200 – 6° andar
Rio de Janeiro
CEP 22.210
Telex: (021) 23352
Telephone: (021) 205-9112
Cable: "RINORTE".

RECIFE (Pernambuco): 08.04 S. 34.52 W. (See Plan)

PORT LIMITS: West of Longitude 34° 50′ W. and between Latitudes 08° 00′ S. and 08° 07′ S.

DOCUMENTS: Most of the documents required by the local authorities are presented by the vessel's Agents after arrival.

Master must have on hand, on arrival, the following documents:
7 Crew lists.
1 International Health Declaration completed and signed.
Clearance from last port of call.
Manifests of the cargo to be discharged.
Copies of bills of lading of the cargo to be discharged.

PILOTAGE: Compulsory. Pilots board the vessel at Southern end of Banco Ingles, at approximate position Lat. 08° 05′ S., Long. 34° 50′ W. Vessels must give accurate ETA to their Agents, not to the Pilot Association, however when within VHF range, vessel should communicate with the Pilot Association, if no instructions have been received from the Agents or the Pilot does not board upon arrival.

ANCHORAGES: Most favourable position for ships to await pilot boat is 1.5 miles in direction 303° from "Picao", also just outside the 6 fathom line. In fine weather ships can sail to a position 8 cables from "Picao" in same direction just South of buoy. Anchorage in fine weather between above-mentioned places; in bad weather more than 1.5 miles in direction 303° from "Picao" and North and South of line, in water of 7 and 8 fathoms depth.

RESTRICTIONS: Vessels only enter port at night in cases of necessity. 3 ft. under keel clearance required when heavy swell running.

The port is situated between 2 channels, 1 to the North, the other to the South, which are the main fairways of the port. The Southern Channel is 850 ft. wide by 32 ft. 6 in. deep and the Northern Channel is 32 ft. deep but with variable width.

Tankers: May enter and leave during daylight only (0500 – 1800 hrs.). Also see "Tankers".

MAX. SIZE: Vessels 220 m. in length can enter, max. draft 31 ft. Also see "Tankers".

HEALTH: Free Pratique is granted by radio at any time, day or night. Masters must radio to "Saporto Recife", informing sanitary conditions of the vessel, reporting any case of sickness and requesting Free Pratique.

RADIO: A very powerful radio station "PPO"-Olinda Radio now available, operating on radiotelephony and radiotelegraphy, with VHF and HF in all maritime frequencies.

RADAR: No facilities available.

TUGS: Pilot brings vessels to inner harbour where tugs available to help to go alongside; not practice for tugs to meet vessels on Outer Roads. 3 tugs available, largest 1,680 h.p. Vessels up to 5,000 g.r.t. require 1 tug. Vessels over 5,000 g.r.t. require 2 tugs.

BERTHING: Vessels arriving at Recife Roads with 26 ft. can enter port on low tide and can go alongside from Sugar Terminal to Warehouse No. 9, over 26 ft. it is better to wait for high tides to enter, 31 ft. being the max. draft for entering Recife.

Depth alongside wharves:

Berth Nos. 1 – 2	31 ft.
Berth Nos. 3 – 6	30 ft.
Berth Nos. 7 – 14	28 ft. – 30 ft.
Berth No. 15	27 ft.

At anchorage (pool) in port, max. draft is 31 ft. Depth between 32 ft. and 26 ft., the max. rise of tide being 5 ft. Distance from the quay side, 200 m. Manoeuvring space is 1,640 ft. or 500 m. with a depth of 28 – 30 ft. max.; 590 ft. or 180 m. with a depth of 26 ft.

SPECIAL CARGO FACILITIES: *Cereals:* Silos with unloaders. Silos capacity: 25,000 tons (CAGEP), 23,500 tons (Moinho Recife).

Capacity of unloaders: 400 t.p.h. (Berth No. 1), 150 t.p.h. (Berth No. 9), 150 t.p.h. (Berth Nos. 9 – 10).

Sugar: Sugar Terminal: warehouse capacity 200,000 tons, capacity of loader 1,000 t.p.h.

Molasses: Tanks: capacity to store 14,000 tons, capacity of loader 120 cu.m.p.h.

Cranes:

1 Crane with capacity of 25 tons (Berth No. 2).
4 Cranes with capacity of 3.2 tons
3 Cranes with capacity of 5 tons
15 Cranes with capacity of 1.5 tons
3 Automobile cranes with elevated cab capacity of 8 tons, with 2 clamshell and 2 graiffers.

Fork Lifts:

1 special fork-lift for containers with capacity of 40 tons.
63 fork-lifts with capacity of 2.5, 3, 4 and 7 tons.

Floating Crane:

1 floating crane, capacity 100 tons.

STEVEDORES: Advise Agents of ETA at least 48 hours prior to arrival to make necessary berthing arrangements and hire dock labourers and stevedores in time.

MEDICAL: In *urgent cases* communicate with Agents immediately by means of Radio at least 48 hours prior to vessel's arrival if possible. It is necessary for vessel to enter port to enable sick person to land because on outer roads there is too much swell. Not necessary to Dock. Port Doctor must be advised by Agents and will board to see sick person and grant permission to land in Recife temporarily. Hospitals available also First Aid Stations equipped with ambulances. Port Authority also equipped with ambulance. Crews should always have yellow fever inoculation certificates.

TANKERS: Oil companies who keep petroleum products here are: Petrobras, Esso, Texaco, Shell and Atlantic. To discharge petroleum products tankers utilise 1×10 in. at Berth No. 1; 4×8 in. and 4×6 in. at No. 2; 2×8 in. and 2×6 in. at No. 3 and 1×8 in. and 1×10 in. at No. 4. Max. safe draft for a tanker to enter Recife is 30 ft. and entry must take place on high tide.

DENSITY: Low water density in Summer time 1028. High water density in Summer time 1027.

FRESH WATER: Supplied by Port Administration by means of pipe-lines in the docks. Vessels can be supplied alongside any quay; water fit for human consumption.

The local Port Administration has 1 water barge, capacity 210 tons, for supply to vessels inside the breakwater.

There are 71 hydrants, diameter 2.5 in., rate 15 – 20 t.p.h.

FUEL: Fuel oil and diesel can be loaded from network along the quay.

Berth No. 4: 3×8 in. and 3×6 in.
Berth No. 5: 4×8 in. and 4×6 in.
Berth No. 6: 3×8 in. and 3×6 in.

All with capacity 150 t.p.h. (fuel – 8 in.) and 45 t.p.h. – 50 t.p.h. (diesel – 6 in.)

Fuel oil and diesel also available by road trucks with capacity 30 tons at Berth Nos. 7 – 15.

Also see "General" before first port.

GANGWAY/DECK WATCHMEN: Compulsory.

OPENING/CLOSING HATCHES: Normally by stevedores but crew helps when stevedores not familiar with hatches of modern vessels.

CUSTOMS ALLOWANCES: One carton cigarettes and one bottle of spirits allowed each man at Customs discretion.

IDENTITY CARDS: Foreign crew members not permitted to go ashore without presentation of identity card, on which is a photograph of holder and personal details. These cards are provided by the Agent upon arrival. The identity card must be delivered on disembarkation to the Federal Police who will return it to the crew member on re-embarkation.

CONSULS: The following countries are represented in Recife/Pernambuco:

Argentina
Belgium
Costa Rica
Denmark
El Salvador
Ecuador
France
Germany (F.R.)
Great Britain
Guatemala
Honduras
Italy
Japan
Lebanon
Mexico
Netherlands
Norway
Portugal
Spain
Sweden
Switzerland
United States

REPAIRS: Available but limited to small mechanical equipment.

SURVEYORS: 1. Supervise and Superinspect are companies available to do cargo surveys.

2. Lloyd's Register, A.B., B.V., Salvage Association and U.S. Salvage are available at the port.

REPATRIATION: Facilities by air available.

AIRPORT: Situated 9 miles from docks. 228 flights per week.

TIME: GMT minus 3 hours.

HOLIDAYS: *National Holidays:* Fraternidade Universal (January 1st); Tiradentes (April 21st); Labour Day (May 1st); Brazil's Independence Day (September 7th); Nossa Senhora Aparecida (October 12th); Commemoration of the Republic (November 15th); Christmas Day (December 25th).

State Holidays: Nossa Senhora da Conceicao (December 8th); Nossa Senhora do Carmo (July 16th); Good Friday, Sao Joao (June 24th).

POLICE/AMBULANCE/FIRE: Harbour Police Tel: 2241024. Port State Fire Brigade Tel: 193. Ambulance (First Aid) Tel: 192. State Police Tel: 190.

TELEPHONES: Can be connected on board if requested.

BANKS: City Bank – Av. Marques de Olinda, 126. Tel: 224.7922. Telex: (081) 1093.

Bank of London – Rua Estreita do Rosario, s/no. Tel: 224.3729. Telex: (081) 1173.

STORING: See "Prelims".

1. Vessel can be stored only by trucks.
2. Vessel cannot store from barges. Storing must be done directly onto/from wagons and warehouses.
3. Trucks can proceed alongside at the berth.
4. Fork-lift trucks can be used on the jetty to handle stores.
5. As a rule, when cargoes go to the warehouses they must pay in advance a fee corresponding to one month's rent, which costs 1% of the value of the cargo. If the cargo remains another month then 2% of its value must be paid as a fee. If the owner of the cargo doesn't clear it through Customs in 3 months it will be confiscated. Certain kinds of cargoes, such as, fertilizers, wheat, corn, oil derivated goods and rollers have an anticipated dispatch and there will be 6 days free-of-charge for them to take them out of the port.
6. Local Riggers can be employed to assist with storing.

DEVELOPMENTS: Plans are underway to dredge the access channel to 11.5 m. It is also intended to construct new berths for general cargo and molasses tankers, and to modernise the existing berths.

AUTHORITY: Administracao do Porto do Recife – Portobras, P.O.Box 720, Praca Artur Oscar – s/no, Recife, PE, Brazil 50.000. *Tel:* 231.4044, 231.4144. *Telex:* 1018. *Contact:* Milton Pires de Souza, Administrator.

REGENCIA: 19.41 S. 39.41 W.

This terminal is located on the East coast of Brazil in the State of Espirito Santo, approximately 80 km. to the North of Vitoria. It consists of an oil storage area, a pipe-line both on land and underwater with a diameter of 16 in., 4 km. long and a set of buoys for mooring vessels. Its purpose is storage and passing to production of oil products from the fields of the State of Espirito Santo, principally the field of Lagoa Parda which is next to the terminal.

The set of buoys is designed to handle vessels up to 50,000 g.r.t., permitting a maximum draft of 13 m.

PILOTAGE: The area has Pilots to attend to the manoeuvring of vessels at the buoys.

TIME: GMT minus 3 hours.

RIO DE JANEIRO: 22.54 S. 43.12 W. (See Plan)

(A) GENERAL CARGO SECTION. (B) TANKER SECTION.

(A) GENERAL CARGO SECTION

LOCATION: The port of Rio de Janeiro is located geographically in the inlet on the coast (Western) of the Bay of Guanabara, in the city of Rio de Janeiro, capital of the state of Rio de Janeiro.

DOCUMENTS: See "General" before first port.

CLEARANCE: All clearance is taken care of at the Quarantine Anchorage (Pratique, Custom's, Immigration). Accommodation ladder must be rigged for this purpose.

Shipmaster's Report: Clearance also carried out alongside.

After clearance by the Customs a dark blue flag with a white five-pointed star in the middle must be shown day and night during vessels stay in port. Derat service is available. Inspection of the vessel will be made by inspectors to whom the valid derat or derat-exemption certificate must be shown.

PILOTAGE: The pilotage service is compulsory for national vessels of more than 42 ft. length and for foreign craft of more than 37 ft. length, in the following situation: From the Waiting Zone, in the anchorage (about 2 nautical miles to the North of Rasa Island), for any anchorage within the Bay of Guanabara.

Pilots board vessels at the following geographical point:

Lat. 2~~2~~3° 02′ S., Long. 43° 08′ W.

Requests for pilotage service may be made via the ship's Agent by telephone 24 hours ahead of the ship's arrival, or to Av. Rio Branco No. 4 – Room 1501, there being available a total of 33 Pilots.

Pilots may also be requested by cable, via Station PPR – Radio Rio, operating on frequencies 17,194; 13,105; and 8,364 kHz or via Channel 16 VHF for general call-up. For pilotage and other purposes, using Channels 14 and 12.

ANCHORAGE: In the Rio de Janeiro port area, the following areas are designated for anchorage of vessels coming into port.

Anchorage for vessels up to 22 ft. (6.7 m.) draft Anchorage No. 3. Within 300 m. radius of position Lat. 22° 51′ 1″ S., Long. 43° 10′ 8″ W.

Anchorage for vessels with 22 ft. (6.7 m.) draft or more within 800 m. radius of position Lat. 22° 51′ 5″ S., Long. 43° 08′ 6″ W.

Vessels impounded or requiring extensive repairs: position determined by the Port Captaincy for each specific case.

Vessels in quarantine: position Lat. 22° 50′ 7″ S., Long. 43° 08′ 6″ W.

Vessels carrying explosives and inflammable material: position Lat. 22° 51′ S., Long. 43° 11′ W.

RESTRICTIONS: Port is accessible to all vessels at all times and states of the tide. Attention must be paid to messages sent by Rio Radio about forbidden areas due to Marine exercises with live ammunition along the coast near entrance to the port.

Access Channel: Access to the port for large vessels is via a channel well dredged to a depth of 17 m., passing close to Copacabana Beach, and to the West of the island of Cotunduba. This channel goes as far as the port basin area, reaching also the oil terminals located inside the Bay of Guanabara. The safety depth located directly to the South of Leme Bridge is 20 m.

The Access Channels to Gamboa, Sao Cristovao, Caju and the Mineral and Coal Area are dredged, respectively, to depths of 10 m., 8.5 m., 6.0 m. and 12 m.

The total length of the main access channel is 18.5 km. There being a distance of 11.1 km. between the outer part of the Bay to the anchorages, and the other 7.4 km. in a Northerly direction, from the anchorages to the Almirante Tamandre Oil Terminal. Depths vary from 20 m. to 35 m.

Access Channel to the Quays:

	Length (m.)	Width (m.)
1. Maua Pier Quay	—	—
2. Gamboa Quay	3,000	250
3. Sao Cristovao Quay	4,000	150
4. Caju Quay	5,000	80
5. PMC Quay (Oil Mineral & Coal)	3,000	150

Manoeuvring Basin: Such basins are located in the actual access channels to the quays. Normally, vessels manoeuvre off the quay and in front of their intended berth. The areas available at the various quays are as follows:

	Length (m.)	Width (m.)
1. Maua Pier Quay	400	200
2. Gamboa Quay	3,000	250
3. Sao Cristovao Quay	1,000	150
4. Caju Quay	1,000	80
5. PMC Quay	760	200

MAX. SIZE: No limits for entering port. Draft limited by berth depth.

HEALTH: Vessels from another Brazilian port automatically receive Free Pratique and should not fly quarantine flag. If suspected disease or fever on board it is advisable to cable Agent before arrival. Also see "General" before first port.

RADIO/VHF: Rio Radio, call sign PPR. Working frequencies 17,194; 13,105; and 8,364 kHz. VHF marine radiotelephone is available. Channel 16 for general call, Channels 14 and 12 for Pilot and harbour purposes.

TUGS: There is adequate tow-boat service at Rio de Janeiro varying from 220 h.p. to 1,200 h.p., tariff being divided into sections – 200 h.p. to 600 h.p. and 601 h.p. to 1,200 h.p. The number of tugs to be employed in a service depends on the tonnage of the vessel and/or nature of the berth and respective approaches, as determined by the naval authorities. Ship's lines usually employed.

Requirements: The assistance of tugs for mooring and departure operations is governed by the following rules:

(a) Manoeuvring at the Gamboa and Sao Cristovao Quays:
vessels up to 2,000 g.r.t. no tug.
2,001 to 5,000 g.r.t. 1 small tug.
5001 to 15,000 g.r.t. 1 large and 1 small tug.
15,001 to 30,000 g.r.t. 2 large and 1 small tug.
over 30,000 g.r.t. 2 large and 2 small tugs.

(b) Manoeuvring at the Caju Quay (warehouses 31 to 33):
vessels up to 2,000 g.r.t. without tug.
2,001 to 5,000 g.r.t. 1 small tug.
5,001 to 15,000 g.r.t. 1 large tug and 1 small tug.
over 15,000 g.r.t. 1 large tug and 2 small tugs.

(c) Manoeuvring at the Mineral and Coal Quay:
vessels up to 2,000 g.r.t. without tug.
2,001 to 5,000 g.r.t. 2 small tugs.
5,001 to 15,000 g.r.t. 2 large and 1 small tug.
over 30,000 g.r.t. 3 large and 1 small tug.

(d) Manoeuvring at the Petroleum Terminals, Maua Pier and Docks:
vessels up to 4,000 g.r.t. 1 small tug.
4,001 to 15,000 g.r.t. 1 large and 1 small tug.
15,001 to 30,000 g.r.t. (loaded) 2 large and 1 small tug.
15,001 to 30,000 g.r.t. (in ballast) 2 large tugs.
over 30,000 g.r.t. (ballast) 3 large tugs.
over 30,000 g.r.t. (loaded) 3 large and 1 small tug.

The following must also be observed:

1. All vessels (tankers) manoeuvring at quays which are not terminals will be assisted by tugs as shown in section *(d)*.
2. The requirements in sections *(a)*, *(b)*, *(c)* and *(d)* will apply when the manoeuvre is effected under normal conditions.
3. In abnormal conditions, and according to the Pilot's judgement, other necessary measures will be adopted to ensure safety of the manoeuvre.
4. When a vessel is manoeuvring with the aid of a tug, the Pilot may call for a further tug with power compatible with the requirements of the manoeuvre.
5. A tug will be considered as large where its power is in excess of 600 h.p.

BERTHING: Berth usually accessible day and night. Ratguards obligatory.

For vessels loading iron ore, it is important that hatch coamings are not higher than 31 ft. above the water-line in order to pass under the loading belt.

Berth	*Length* (m.)	*Depth* (m.)	*Use*
1	150	9.1	General cargo, containers, steel
2	150	9.1	General, steel, chemical products, containers
3	150	8.3	General, steel, chemical products, containers
4	150	8.2	General, steel, containers
Maua 1	165	7.3	General cargo, containers
Maua 2	160	9.8	General cargo, steel, coal, minerals, containers, vehicles
Maua 3	160	9.2	General cargo, coal, chemical products, containers and new vehicles
Maua 4	160	8.3	General cargo, containers, steel, new vehicles
5	280	8.8	General cargo, steel, wheat, containers
7	150	9.1	General cargo, steel products, chemicals, containers
8	150	10.3	General cargo, steel, coal, containers
Frigorifico	150	8.5	General cargo, steel, containers
10	150	8.8	General cargo, steel, containers
11	150	9.1	General cargo, steel, containers
12	150	8.3	General cargo, steel, containers
Patio 8/9	150	9.2	General cargo, steel, fertilizer, coal, minerals, containers
13	150	7.4	General cargo, steel, containers
14	150	7.9	General cargo, steel, containers
15	140	9.0	General cargo, steel, lubricating oil, containers
16	140	8.8	General cargo, containers
17	140	8.2	General cargo, containers
18	140	7.2	General cargo, containers
22	240	7.1	General cargo, wheat, coal, minerals, salt, containers, ro-ro
Terminal de Sal	120	8.5	Coal, salt, containers
Parque de Carvao	790	8.0	General cargo, steel, fertilizer, chemical products, containers, ro-ro, new vehicles, coal, minerals, lube oil
30	100	7.0	General cargo, steel, containers, ro-ro
31	200	5.6	General cargo, containers
Parque de Inflamaveis	550	6.4	General cargo, steel, petroleum, vegetable oil, chemical products, containers
Parque de Minerio	480	12.0	General cargo, minerals, containers
Parque de Minerio	280	13.0	Steel products and minerals

Report: Companhia Docas do Rio de Janeiro advised the following in December 1982.

Quay	*Length* (m.)	*Depth* (m.)
Pier Maua	808	11.0
Cais da Gamboa	3,325	7.2–10.3
Cais de Sao Cristovao	1,325	6.0–8.5
Cais do Caju	1,300	5.2–6.4
Cais do PMC	483	11.7
Extension of PMC	282	12.0

CARGO FACILITIES:

Passenger Station: 1 with an area of 2,035.5 sq.m.

Storage Areas: Covered (14) with an area of 14,215.95 sq.m.
Open – (20) with an area of 1,149,298.40 sq.m.

Warehouses: Internal – 22 with a total area of 93,600 sq.m.
External – 9 with a total area of 66,724 sq.m.
Refrigerated: area of 27,864 sq.m., volumetric capacity of 66,240 cu.m. or 15,200 tonnes.
Passenger Station – 1 with an area of 2,033 sq.m.
English Mill Area – 1 with an area of 2,033 sq.m.
Containers: 1 warehouse with an area of 7,000 sq.m.

Silos:

Rio de Janeiro Mill:
1 with 24 cells with 6,000 tons capacity
1 with 40 cells with 12,000 tons capacity
1 with 17 cells with 20,000 tons capacity.

Da Luz Mill:
1 with 42 cells with an individual capacity of 320 tons and a total of 15,000 tons.

Guanabara Mill:
10 with 1,500 tons capacity each.
2 with 380 tons capacity each.

Observation: There are 5 suction units for wheat discharge, with a nominal capacity of between 70 t.p.h. and 160 t.p.h.

Terminals:

Minerals:

Movement capacity: 60,000 tons per day.
Storage capacity: 250,000 tons
Normal removal rate: 6,000 t.p.h.
Length of transport conveyors: 2,129 m.

Salt:

An area of 2,157 sq.m.

Containers:

Container handling occurs as far as Caju Quay, and the areas adjacent to internal warehouse Nos. 30, 31, 32. Warehouse No. 32 (internal) is used for containerised cargo and has a total area of 7,000 sq.m. on its two floors.

Container discharge can be effected on all quays intended for deep sea and coastal vessels, i.e. from the Maua Pier as far as internal warehouse No. 18.

When a container is discharged on to the quay, this occurs onto trucks which go to the Terminal Area which can accommodate up to 1,030 units. The equipment used for container discharge and handling comprises 3 Karricons with a 35 ton capacity, 1 travelift with 30 tons capacity and 2 van carriers with 30 tons capacity each.

Also, the Caju Quay has facilities for loading and discharge operations of "LASH" type vessels. At the end of this quay, there was recently constructed a terminal for Ro/Ro vessels for intermodal purposes. Also, on the Caju Quay, there is an area for storage of heavy lifts, covering 29,272 sq.m.

EQUIPMENT:

Cranes: Jib – 101 with capacities from 3 tons to 40 tons.
On tyred wheels: 10, with capacities from 30 tons to 150 tons.
Railborne: 1 of 12 tons.

Stacker Trucks: 160 with capacities from 3.5 tons to 37 tons.

Winches and Floating Cranes: Winch "Piaui" with 250 tons capacity; Winch "Presidente Castelo Branco" with capacity of 200 tons.

Tractors: On tyred wheels: 10 with capacity of 50 tons to 100 tons traction
Track Mobile (Road/Rail): 6 with capacity of 700 tons to 1,500 tons traction.

Lorries: 40

Trucks: 19, from 20 tons to 40 tons.

Mechanical Shovels: 8, from 2.5 cu. yards to 4 cu. yards.

Rolling Bridges: 196, from 1.5 tons to 2 tons.

Launches: 4 with power from 35 h.p. to 150 h.p.

Locomotives: 17, with capacity from 550 tons to 1,500 tons traction

Underground Crushers: (for minerals): 1 for 2,000 t.p.h. (discharging 2 wagons at once); 1 for 4,000 t.p.h. (discharging up to 6 wagons at once).

STEVEDORES: Cable Agent ETA 36 hours before arrival in order to arrange gangs required. When arriving during week-ends or on Monday, Agent needs ETA on Friday afternoon. Loading/discharge rates:

General cargo cases 7 to 8 tons per gang/hour.
Bags 15 tons per gang/hour.
Grain in bulk 1,000 tons per eight hours.
Coal in bulk 7,000 tons per day.
Loading iron ore 25,000 tons per day.

MEDICAL: All facilities available. If doctor needed on arrival or making emergency call to land sick persons, cable ETA 12 hours before arrival.

TANKERS: See "Section – B".

DENSITY: Salt water at entrance to bay. Further inland water often brackish, and density varies with tide.

FRESH WATER: Available alongside from 87 points, loading rate 50 t.p.h. Also available by barge, capacity 450 tons, loading rate 100 – 200 t.p.h.

FUEL: Available by barge at anchorage. Rate for fuel oil 350 t.p.h. and gas oil 200 t.p.h. Also see "General" before first port.

WATCHMEN: Gangway watchmen strongly recommended for any vessels working cargo with shore labour on board. Watchmen from shore not necessary for coal, iron ore, and oil cargoes.

CUSTOMS ALLOWANCES: Each crew member allowed 2 cartons of cigarettes and one bottle wine or spirits.

IDENTITY CARDS: Foreign crew members not permitted to go ashore without presentation of identity card, on which is a photograph of holder and personal details. These cards are provided by the Agent upon arrival. The identity card must be delivered on disembarkation to the Federal Police who will return it to the crew member on re-embarkation.

CONSULS: Most countries have consuls in Rio.

REPAIRS: All types deck and engine repairs can be effected. Five dry docks. Largest dry dock, length 259 m., breadth 34 m., max. draft 14 m.

AIRPORT: Santos Dumont, in the centre of the city, and Rio de Janeiro International, located on Governor's Island (Ilha do Governador).

POLICE/FIRE/AMBULANCE: Police 190; Maritime Police 263-3747; Ambulance 222-2121; Fire 232-1234.

HOLIDAYS: Requests for operational services for these days must be made in advance (minimum of 24 hours).

Fixed:

National: 1st January — Regional: 20th January
21st April
1st May
7th September
12th October
25th December

Movable:

Monday and Tuesday of Carnival
Ash Wednesday
Good Friday
Corpus Christi

Commemorative Days:

28th January (Port Day)
2nd November (All Saints')

Federal and State Government Departments, as well as banks, do not work on Saturday.

TIME: GMT minus 3 hours.

TELEPHONES: Available at warehouses 1–8 on request to the Brazilian Telephone Company.

SHORE LEAVE: Shore leave is permitted.

GENERAL: Vessels to fly signal letters when manoeuvring in port and special Brazilian Customs flag after reception.

DEVELOPMENTS: Caju Quay is being widened and dredged to 12 m. to provide 2 roll-on/roll-off berths, 1 sulphur and salt berth, and 1 heavy lift general cargo berth.

SHIPMASTER'S REPORT: 1980.

Clearance: Clearance of vessels undertaken at quarantine anchorage and alongside.

Identification Cards: Identification Cards required for foreign crews but no picture necessary. Cards must be shown when leaving and entering the dock.

Visitors: No unauthorised persons are allowed on board. If unauthorised persons found on board, heavy fines are imposed.

Entering and Leaving: When entering and leaving at night, the full name of the vessel has to be flashed on the Aldis Lamp to the naval signal station. No VHF communications available.

Ratguards: Should be in place when alongside.

Flags: At all ports in Brazil the Authorities are very strict about flying of flags (no tangles). The "G" flag and "H" flag should be flown when Pilot required or on board.

AUTHORITY: Companhia Docas do Rio de Janeiro, Rua Acre No. 21, 4° Andar, CEP – 20.081 Centro Rio de Janeiro, R.J. Brazil. *Tel:* (021) 233–4522. *Telex:* (021) 22.163–CDGB. *Contact:* Pedro Batouli, President.

Porto do Rio de Janeiro (Riopor), Av. Rodrigues Alves No. 20, 4° Andar, Rio de Janeiro, CEP – 20.081 R.J. Brazil. *Tel:* (021) 2912122. *Contact:* Arnaldo Soares da Silva, Manager.

(B) TANKER SECTION. All information refers to the "Petrobras Terminal" – TORGUA *unless otherwise stated.*

LOCATION:

TORGUA is an oil terminal consisting of four (4) different mooring sites all of them located inside Guanabara Bay.

These four (4) mooring sites are linked to Ilha d'Agua and then to the mainland (Duque de Caxias Refinery-Reduc) by submarine pipe-lines.

South Dock-Island (main)
Lat. 22° 49.2′ S. — East Berth (PP1) or
Long. 43° 09.2′ W. — West Berth (PP2)

North Dock-Island (secondary)
Lat. 22° 48.3′ S. — East Berth (PS1) or
Long. 43° 09′ W. — West Berth (PS2)

Butadiene Dock-Island
Lat. 22° 48.2′ S. — East Berth (PAB)
Long. 43° 09′ W.

Ilha Redonda Pier
Lat. 22° 48.1′ S. — West Berth (IR)
Long. 43° 07.2′ W.

IMPORTANT FEATURES:

1. Four mooring sites, in the vicinities of Ilha do Govenador (the largest of Guanabara Bay), are available for loading and discharging of crude oil, derivatives and LPG.

2. Pilotage is compulsory for any shifting inside the bay.

3. Safety Rules are strictly enforced.

4. Display of quarantine signal – "Quebec" flag – must be maintained until Free Pratique is granted.

5. Neither in port nor in Brazilian coastal waters may dirty ballast be pumped overboard.

6. Emergency signal consists of a series of short blasts followed by a long one on the ship's whistle or siren.

7. Tankers up to 135,000 d.w.t. operate at the terminal. Draft is 15.8 m. (52 ft.) or below at LW.

Remarks: Non-compliance of item 7 above stated will result in rejection of the ship as being unsuitable for this terminal.

DOCUMENTS:

Immigration and Maritime Police: The following documents have to be submitted to the boarding Maritime Police Officials:

1 Copy Crew List.
1 Copy General List.
3 Copies Passengers List.
3 Copies Passengers-In-Transit List.

Health: The following documents have to be submitted to the boarding Health Officials:

1 Copy Vaccination List.
1 Copy Certificate of Derat Exemption.
1 Copy Maritime Health Declaration.
1 Copy List of Drugs and Narcotics.
1 Copy Passengers-in-Transit List.
1 Copy Passenger List.

Customs: The following documents have to be submitted to the boarding Custom Officials:

3 Copies Crew List.
3 Copies Spare Parts List.
3 Copies Stores List.
3 Copies Provisions List.
3 Copies Drugs and Narcotics List.
(if not included in the Stores List).
1 Copy Cargo Manifest.
1 Copy Bills of Lading.
2 Copies Passengers List.

2 Copies Passengers-In-Transit List.
3 Copies Crew Personal Effects List.
3 Passengers Personal Effects List.

Note: Supplies, stores, cigarettes, cigars, tobacco, alcoholic beverages, arms, ammunitions, souvenirs, playing cards, drugs and narcotics, medicines (not in use) etc., must be kept under lock and key; the doors of the storage rooms will be sealed by the Customs Officials and the seal must be kept unbroken throughout the vessel's stay in port.

Any goods or personal effects omitted from the lists may be confiscated.

Extracts of Sea Protest drawn out from the Log Book must be submitted to the boarding Customs Officials in case of accident which has caused damage or loss of cargo or part of it.

Ship's Agent: The ship's Agent will need the following documents:
3 Copies Passengers List.
3 Copies Passengers-In-Transit List.
3 Copies Crew List.

The Agent will take care of necessary steps in order to grant the Disembarkation Cards.

Leaving Clearance: Masters must appoint their ship's Agent at Rio de Janeiro and have their International Safety Certificates in force. It is also necessary for vessels Leaving Clearance:
Leaving Permit from Customs.
Leaving Permit from the Captain of the Port.
Leaving Permit from the Maritime Police.
Leaving Permit from Brazil Mail (Passe de E.C.T.).

General: The Customs flag (blue with a white star) must be flown from the vessel's mast or yard throughout the vessel's stay in port.

Special licence from the Captain of the Port must be granted for passengers bound for foreign countries and so their names must be given and their passports must be delivered to Agents at least 48 hours before they apply for the vessel's leaving permit.

The number of disembarking passengers must be radioed to Agents at least 24 hours before the vessel's expected time of arrival.

APPROACHES: The safe access to the Terminal is made through a main (deep but narrow) channel swept to 17 m. (56 ft.) that begins between the Island of Cotunduba and the Point of Leme. It extends as far as the East neighbourhood of the South Dock-Island East Berth. As long as the ship does not exceed 11.3 m. (37 ft.) the access can also be undertaken through the North – South axis passing by Ilha Rasa and the bar's entrance (secondary entry, larger but shallower).

A long bridge (Rio-Niteroi), has been built, linking Ponta do Caju (West) to Ilha do Mocangue Grande (East) it crosses the swept channel. Three navigable spaces: – the central one 300 m. (980 ft.) wide; 50 m. (165 ft.) high at MLWS, the side ones with 200 m. (650 ft.) in width – will maintain the safe access for ships.

A shoal (reef) in 11.5 m. (38 ft.) deep lies about 0.3 m. E.N.E. of Lage Is. just after the bar's narrow entrance (between Sao Joao and Santa Cruz Points).

A wreck marked by a green buoy (CS) lies sunk nearly 1.3 miles Eastward of Cotunduba Is.

When approaching the coast of Guanabara Bay entrance, vessels should keep a particularly sharp lookout for fishing boats and small craft.

ANCHORAGE: Vessels should anchor N.E. of Ilha Fiscal for port authorities clearance (Lat. 22° 53′ S., Long. 43° 09′ W.). After Pratique has been granted they should change anchorage site while awaiting for a berth alongside.

Vessels should anchor clear of the 17 m. (56 ft.) swept channel. They must take care to avoid dropping their anchors on the route of submarine cable near to a line joining the islands of Villegagnon and Boa Viagem.

For further information refer to Brazilian Charts No. 1501, 1511 and 1512 (DHN-Navy Hydrographic Office).

Prohibited Anchorage: Under no circumstances should ships drop anchor Westwards and between South and North platforms due to the existence of submarine pipe-lines connecting Ilha D'agua to the platforms and to Ilha Redonda.

Ships are also prohibited from anchoring in the fairway of the ferry boats plying between Rio and Niteroi.

Also see "Pilotage".

READINESS: Arrival is usually considered the time the vessel reaches the anchorage area or the time the Pilot boards the vessel, whichever occurs first. Notice of Readiness will be accepted at the time the tanker is in all respects ready to operate.

PILOTAGE: Pilotage is compulsory after the ship's Free Pratique has been granted.

Request for pilotage service may be made either to the Harbour Pilot's Working Co-operative (pilot station VHF Radiotelephone – Channels 16 and 12. Listening period from 0600 to 1800 hrs. local time) or, through ship's Agent, 24 hours beforehand.

For tankers larger than 100,000 d.w.t. Pilots usually board the vessel outside the main channel's entrance. This will occur if weather conditions permit and in daylight only. Ships could also use, in most circumstances, a secondary entry channel with North-South axis passing through Ilha Rasa (larger but shallower) as long as their draft does not exceed 11.3 m. (37 ft.). In certain cases and at the discretion of the Pilot, according to the prevailing conditions, ships will use this channel with a draft up to 12.5 m. (41 ft.).

Ships may anchor 1.8 miles off the North of Ilha Rasa for awaiting the Pilot, who will board the ship and proceed by day or night according to ship's draft, visibility conditions, etc.

A pilot ladder must be safely rigged for immediate use and be long enough to reach the Pilot's launch. At night adequate lighting must be rigged so as to enable the Pilot to approach and board the vessel. In addition, a boat rope should be led along the side, from well forward.

A lifebuoy with 27 m. (15 fathoms) of rope must be conveniently placed in the vicinity of gangway for use in emergency. Vessels should always make a lee.

Tankers of 40,000 d.w.t. or over are requested to have a pilot ladder (preferably with a centre gripping line) rigged alongside the accommodation ladder in order that the Pilot may transfer to it after about 2 to 3 m. (6 to 10 ft.).

RESTRICTIONS: Ships usually moor and unmoor at any hour except when an unexpected event arises, such as breakdowns, gales, heavy squalls, etc.

See "Pilotage".

TIDES: *Tide and Tidal Currents:* The mean tide level at Rio de Janeiro is 0.69 m. (2.2 ft.), Spring range 1.38 m. (4.5 ft.). The usual rate of the tide is about 0.7 knots; Springs run at 1.5 knots. The ebb runs much longer than the flood, especially after heavy rains.

MAX. SIZE: Tankers up to 135,000 d.w.t. will operate in the terminal. Draft is 15.8 m. (52 ft.) at low water.

Berthing capacity is limited by structural resistance of installation, actual depth of the swept channel and weather conditions.

South Dock Island (Main)

East Berth (PP1) – Tankers drawing up to 15.8 m. (52 ft.) draft can moor and unmoor at any time.

Structural resistance of pier was designed to handle tankers up to 105,000 d.w.t. but under special conditions this limit can be extended to 135,000 d.w.t.

West Berth (PP2) – By day tankers drawing up to 12.8 m. (42 ft.) draft can moor according to the range of tide:
11.9 m. (39 ft.) draft to a range of 0.0 m. (0.0 ft.)
12.2 m. (40 ft.) draft to a range of 0.3 m. (0.98 ft.
12.5 m. (41 ft.) draft to a range of 0.6 m. (1.98 ft.)
12.8 m. (42 ft.) draft to a range of 0.9 m. (2.94 ft.)
13.1 m. (43 ft.) draft to a range of 1.2 m. (3.94 ft.)

By night only ships up to 22,000 d.w.t. will moor.

Leaving at night only enough ballast and with own power, up to 32,000 d.w.t.

Shifting ship from East to West Berth only by daylight, draft 12.8 m. (42 ft.), fair weather and wind speed up to 2 Beaufort;

North Dock-Island (Secondary)

East Berth (PS1) – Tankers up to 35,000 d.w.t. can moor either by day or night.

At low tide, the maximum draft permitted is 10.3 m. (34 ft.).

West Berth (PS2) – At night tankers up to 10,500 d.w.t. can manoeuvre. Whenever another tanker is already berthed to the Butadiene Dock-Island, night mooring to the North Dock-Island is not advisable. West-berthing will be undertaken with ebb tide, i.e. the set of the current is South, preferably.

At low water max. permitted draft is 8.2 m. (27 ft.).

Butadiene Dock-Island (PAB)

Manoeuvres will be undertaken at daylight only. Max. permissible draft at low water is 8.5 m. (28 ft.).

Ilha Redonda Pier (IR)

LPG tankers can moor by day only, limitations concerning draft is 9.14 m. (30 ft.) at most. Max. ship's LOA is 200 m. (656 ft.).

Advisable Draft for Safe Manoeuvring: Although the amount of ballast carried on vessels is at the Master's discretion, the table below is recommended as a guide:
Vessels of 30-40,000 tons, draft for'd 16 ft. aft 20 ft.
Vessels of 40-50,000 tons, draft for'd 18 ft. aft 24 ft.
Vessels of 40-70,000 tons, draft for'd 20 ft. aft 28 ft.
Vessels of 70-100,000 tons, draft for'd 24 ft. aft 32 ft.

Vessels over 100,000 tons, should have approximately one-third of the vessel's deadweight in ballast.

HEALTH: *Free Pratique:* Vessels must anchor N.E. from Ilha Fiscal for Port Authorities clearance. After Free Pratique is granted vessels must change anchorage for waiting.

Vessels must remain at anchorage clear of the 17 m. (56 ft.) swept channel, and take good care not to drop anchor in the vicinity of the submarine cables along a line joining Villeganon and Boa Viagem Islands.

RADIO: Vessels under charter to Petrobras bound for Rio de Janeiro should advise their ETA 48 hours prior to arrival to PPR as well as to their Agents when it will be the case, through PPR (Rio Radio – Government Coast Station). Confirmation or change of ETA should be cabled 24 hours before arrival. When within range, tankers may also call Torgua or Fronape VHF radio-telephone stations for instructions. All ETA's should indicate whether it is local time or GMT.

VHF: The terminal radio and communication centre is located in the Oil Handling Control Room situated at Ilha D'agua. There is a R/T set operating 24 hours a day, on Channel 16 (Delta) and manned by terminal operators.

It is strictly prohibited to use vessel's wireless transmitters in the port of Rio de Janeiro.

Non-compliance with this regulation may result in a fine being imposed on vessel by the authorities.

Transmitters: Radar and radio transmitting aerials must be switched off and grounded when ships are at berth. VHF communications with terminal and stand-by tug are permitted.

TUGS: Tugboat assistance is rendered by one Petrobras 1,430 h.p. tug boat. Private tugboats are also available. While rendering such assistance tugs act under the orders of the Harbour Pilot. All manoeuvring orders will normally be given by VHF telephone on Channel 13 (Alpha). However they usually keep watch on Channel 16 (Delta).

The tugs are usually stationed either at the terminal dolphin or "L" pier on Ilha D'agua and also in the Port of Rio de Janeiro. The Pilot in consultation with the Master, will decide the number of tugs required for each berthing or unberthing operation. Safety of the Terminal installations demands, at least, two tugboats, even for bow thruster equipped ships. In any case, all recommendations of Port Authorities must be followed.

BERTHING:
Petrobras: Torgua is an oil terminal consisting of four distinguished mooring sites located on different places inside the Guanabara Bay.

All these mooring sites are linked to Ilha D'agua and then to the mainland (Duque de Caxias Refinery – REDUC) by submarine pipe-lines. Three of them are dock-islands, i.e. island-type offshore platforms lying near to the Eastern edge (about half mile away) of Ilha D'agua (where storage tanks, operation controlling room and part of the administrative staff are placed). Two of these dock-islands are squared platforms (South and North) with two berths each (East and West). The South one is designed for larger tankers consisting of two mooring and two breasting dolphins on each side of the platform. It is normally used for the discharge of crude oil.

The North Dock-Island (smaller) has only two mooring dolphins on each side. Two berths (East and West) are also available. It is generally used for handling derivatives.

The third Dock-Island (the smallest and round shaped one) is actually the dolphin of the North Dock-Island square platform. It is known as the "Butadiene Pier" and only one vessel at a time can be berthed there (East) either for discharge of LPG or butadiene. Besides these three mooring sites there is a fourth located on Ilha Redonda (approx. 2 miles E.N.E. of Ilha D'agua). This installation comprises one single berth (West), head of a small pier. It handles LPG only. Four spherical storage tanks (7,000 tons) and 3 cylindrical (refrigerated) storage tanks (20,000 tons) can easily be seen from incoming vessels.

Other Terminals: *Manguinhos Terminal* – Operators: Refineria de Petroleo de Manguinhos. At Manguinhos terminal a draft of 36 ft. is permissible. Conventional buoy berth in which two ship's anchors and four buoys are used, one on starboard forward of the bow and three buoys aft. Two ship's lines run to each buoy. The terminal is situated in the inner harbour of Rio de Janeiro and close to the quays. Three 8 in. hoses from an underwater pipe-line are connected to the ship's manifold. Maximum back pressure is 100 p.p.s.i., at the ship's rail. Discharge rate is about 1,000 t.p.h. Care is to be taken that the vessel shall not exceed a draft of 40 ft. during discharge. Bunkering is permitted when discharging cargo.

Riberia Terminal	– depth alongside	30 ft.
Shell Terminal	– „ „	31 ft.
Texaco Terminal	– „ „	29 ft.

MEDICAL: Medical treatment and/or hospitalisation, if required, is provided in local clinics. Dentists are also available. For emergency cases (serious illness or injury) Torgua first aid may be requested by the Master, Internal Tel. No. 39.

A nominal amount is charged for any supplies or medicines furnished by the terminal.

CARGO INFORMATION:

Grades	Pipe-lines No.	Dia. in.	Volume cu.m.	cu.m. per hour	Hoses/Arms No.	Dia. in.	P.S.I.
South Dock-Island (main)							
			For Loading and Discharging				
Diesel oil	1	12	90	1,200	1	8	250

LPG vapour	1	8	3.2	—	1 6	6(V)	250
			For Discharge				
LPG liquid	1	12	5.6	800	1 3	10(L)	600
LPG vapour	1	8	3.2	—	1 2	6(V)	—

LOADING: Before any loading commences, the Officer on watch may be invited to be present at the sample taking from the shore pipe-line that will be used for the oil handling. Likewise, after the first 150 cu.m. have been loaded (about 20 minutes) a new sample will be taken. From such a sample the ship will receive 2 sealed and tagged bottles containing the cargo.

At the beginning of diesel and kerosene loadings the vessel should concentrate the product in a single tank. As soon as the innage reaches 0.70 m. high, then other tank valves may be switched. From that part of the cargo a sample is obtained and tested in the laboratory, if the results stand between acceptable stated specification limits, loading will go on without any drawbacks. During the loading of this first tank, the ship is requested to flush her pipes with the same grade being handled.

Discharge of high pour point (HPP) oils will be regarded separately (as far as minimum pumping temperatures are concerned) in conformity with oil and ship characteristics.

A time sheet form will be given to the ship's Master upon arrival. The form is regarded as a receipt for information on operational procedures, oil to be loaded, etc.

Hose Connection: Pier crews are on duty continuously to handle oil hoses/arms and mooring lines. Mooring lines on board vessel will not be handled by Petrobras personnel.

FRESH WATER: Facilities may be arranged to supply water in North and South platforms only. Water supplying barges are also available.

FUEL: The Terminal is equipped with blending valves and can deliver any type of fuel – as Bunker C fuel oil, marine gas oil, marine diesel oil and intermediates of any grade – concurrently with tankers working cargo, at international prices.

The supply rates are about 300 tonnes/h. for Bunker C, 180 tonnes/h. for MGO and 450 tonnes/h. for intermediates.

Orders for bunkers should be placed, a minimum of 48 hrs. in advance, to: Marine Fuel Division, Commercial Department. Telegraphic Address: Petrobrasecope. Telex number: 031422 or 031423. Rio de Janeiro – Brazil.

Lubricating Oil: Marine lubricant orders should be placed a minimum of 15 days in advance and subject to confirmation, to: Petrobras S.A., Lubricants Management, Praca 22 de Abril, No. 36-40 Andar. Tel: 242-9381, 242-4901. Cables: Petroedipe. Telex: 031422, 031423 and 031424 Rio de Janeiro, Brazil.

BALLAST: All ballast should be pumped out to the terminal slop tanks. Under no circumstances should it be pumped into the sea even if the ballast is said to be clean. As soon as the ship is moored, the Terminal Representative must be told of the quantity of ballast on board and the estimated time to pump it out. Right after discharging a sludge ballast of high pour point (HPP) oil, tankers are asked to flush the line with water from the main suction inlets. The Terminal Representative must be notified 30 minutes before the ship will be out of ballast.

There are two sludge tanks with a total capacity of about 17,000 cu.m. The terminal is particularly interested in having vessels complete the deballasting operation promptly after berthing in order to minimise time at berth. Simultaneous loading and deballasting is encouraged on properly equipped vessels.

REPAIRS: Repairs of all kinds can be effected in Rio de Janeiro. There are floating cranes with a capacity of 100 tons. Divers service may be obtained.

DRY DOCKS: Dry Docks to hold ships up to 33,000 d.w.t. are available.

GANGWAY/DECK WATCHMEN: Port watchmen are compulsory on all vessels coming from overseas throughout the vessel's stay in port.

SURVEYORS: Lloyd's Register of Shipping, American Bureau of Shipping and Bureau Veritas have representatives in Rio de Janeiro. Advance notice should be given in order to arrange for an appointment through Fronape or ship's Agent.

Cargo Inspectors: Chas. Martin & Co., Rua da Lapa, 200 – conj. 906, 20.000 – Rio de Janeiro – GB – ZC-00, Tel: 242-4219, 245-5636 and 225-3597.

E. W. Saybolt & Co., Rua Bras Cubas, 3 11.100 – Santos – SP. Tel: 4-6638.

SGS do Brasil S.A., Av. Pres. Vargas 446, 13° Andar, 20.071 – Rio de Janeiro – RJ. Tel: 223-1252. Telex: (021) 23.588.

TIME: The 30°W. (GMT minus 2 hours) is adopted for the oceanic islands including Fernando de Noronha. The 45°W. (GMT minus 3 hours) is adopted for all coastal states (for Estado do Para only the Eastward part of a line starting from the mouth of the Rio Jari through Rio Amazonas until the mouth of Rio Xiangu and through this river until the borderline of Estado de Mato Grosso).

SERVICES: Compass adjustment or radio direction finder calibration can be effected by competent hydrographers and extra-masters. Contact Agents or Pilot's station.

SHORE LEAVE: Ship's Crew is not permitted ashore for any purpose whatsoever until Pratique has been granted. Luggage and packages are subject to Customs Official and/or Terminal Watcher's inspection. As a rule shore leave is permitted with the above stated restrictions. Vessels are not permitted to sail unless all crew members are aboard. In case of Seaman left ashore for any reason whatsoever all expenses are for ship's account.

GENERAL:
Turnround: To promote the economical operation of their vessel, Masters are requested to co-operate with Terminal Representatives in minimising their in-port time. Vessels requiring excessive time to complete operations will be given Letters of Defficiency (Protest).

Gangway: All vessels using the port of Rio de Janeiro must provide a safe gangway. The use of rung ladders (sea ladders) is contrary to Port Regulations and Port Authorities will not board except by means of a safe gangway or accommodation ladder. A lifebuoy with 27 m. (15 fathoms) of rope must be conveniently placed in the vicinity gangway for use in emergency. It will be the responsibility of ship to provide and maintain this equipment.

At night, the gangway must be adequately lighted. In addition, a boat rope should be led along the side, from well forward. In the near future a special safe gangway will be provided in the South and North Dock-Islands.

Repairs: Repair and maintenance services for radar, radio, gyro compass, echo-sounder, etc., are available. The repair man should be contacted through ship's Agent.

Stores: Provisions and stores are available. Requisitions should be conducted through the Agents. Ship chandlers are normally permitted to visit ships when specifically instructed by Agent. Bonded stores not available.

Launches: Launch service for the transportation of personnel ashore must be arranged through ship's Agents.

Laundry: Laundry service is available throughout each working day. Such service should be requested in the vessel's ETA message to Agents.

Photographing: The taking of photographs within the boundary of the terminal premises is prohibited.

Ratguards: Ratguards must be fitted to all mooring lines.

Sea Pollution: Brazilian law is very strict in regard to the pollution of harbour and coastal waters. Vessels should not discharge dirty ballast, ashes, refuse, etc., into the water. Heavy fines are imposed for violations. All overboard discharge valves from cargo tanks and bilges are to be conducted with the greatest care and vigilance in order that errors or delays in handling cargo valves may not result in overflows. All deck scuppers should be plugged to avoid harbour contamination should an oil spill occur.

Similarly, any hull leakages will be subject to equal restrictions. To offenders, fines will be charged (besides resulting delay) according to ship's tonnage, i.e. 2% of the largest country's minimum wage per each ship's (gross) ton.

Emergency Towing Wires: Two towing wire ropes (fore and aft) should be hung overboard to the water's edge in such way that tugs can easily make fast if an emergency situation arises.

Shore Leave: Shore leave is normally permitted. Baggage and packages are subject to examination upon entering and leaving the Terminal property and vessels, either by Petrobras watchers or by Custom's Officers.

Cleaning: Several contractors in the area provide labour for tank cleaning and mopping. Masters having need of this service should submit their requirements to ship's Agent who will contact and request a contractor to go on board to discuss details and estimate cost of work to be effected.

It must be pointed out that the Master of the vessel is solely responsible for the fitness of the ship's tanks for loading his next cargo, and will therefore be held liable for any contaminations of the cargo after loading, due to inadequate tank cleaning. Therefore it is up to him to decide the degree of tank cleaning necessary. He may, of course, seek advice from petroleum inspectors in this respect, whenever there is any doubt.

Compass Adjustment & RDF Calibration: Compass adjustment or radio direction finder calibration can be effected by competent hydrographers and extra-masters. Contacts with Agents or through the Pilot Station.

Charts: Brazilian No. 1501, 1511 and 1512. U.S. No. 24161 and 24162; British Admiralty No. 541.

Customs Watches: Sometimes while vessel is in port, Brazilian Customs Officials are assigned on board to ensure compliance with Customs Regulations. Meals must be supplied to these Officials during regular meal hours.

Important Telephone Numbers (PABX):

Terminal's Executive Assistant	10*
Operation Manager	60*
Operation Supervisor	68
Marine Section	50*
Safety Section	40*
Medical Section	39

*To be used in working hours only.

DEVELOPMENTS: A new berth is being built on Pombeya Island and dredged to 12 m. This is intended to relieve Ilha de Braes Port.

AUTHORITY: Petroleo Brasileiro S.A. – Petrobras, Avenida Republica do Chile, 65 – 12 Andar, Rio de Janeiro, CEP 20.035, Brazil. *Contact:* Divisao de Operacoes (Operations Division), same address as above, 12th floor.

RIO GRANDE: 32.03 S. 52.05 W. (See Plan)

DOCUMENTS: See "General" before first port.

Shipmaster's Report: 1980.

Also required: 2 Arms and Ammunition Lists, 1 Narcotics List, 1 List of Loading Ports of the Last Voyage with dates of arrival and departure.

PILOTAGE: Compulsory for all vessels entering the Bar or requiring any shifting in the port area. Also compulsory for foreign fishing boats. The Pilot's boarding area outside the Bar is the circular area with one mile radius which centre is the Buoy No. 1 of the Approach Channel.

Requests for a Pilot to be made by Agent, normally 4 hours in advance. Vessels can contact Pilots by VHF Channel 16.

The Pilot's boat is easily identified as it is painted red and is well distinguished from the various boats used in the port.

Priority to enter the Bar: Priority to enter the Bar is established by the anchoring time or arrival time at the outer anchorage or the Pilot's boarding area and vessels should, when anchoring, inform the Port Captaincy, by the 500 kHz. frequency of the coastal station EMBRATEL "PPJ", the name of the vessel, port of registry, port of origin and date-hour of arrival.

When berth is not available and all the inner anchorage areas are occupied, vessels arriving at the Port of Rio Grande should stay outside the Bar.

Pilots: Associacao de Praticagem de Barra Estado R.S., Rua Carlos Gomes No. 742. Tel: (0536) 2-5615.

ANCHORAGE: The official anchorage for vessels arriving at Rio Grande or that have to wait outside the Bar is the circular area within one mile radius, of centre Lat. 32° 12′ S., Long. 52° 02′ W.

In order to increase the safety to navigation on the inner part of the channel, the Port of Rio Grande is divided into six areas as follows:

PERMITTED ANCHORAGE AREAS:

Area Alfa: Available for anchoring of up to maximum four vessels of 200 m. LOA, outside the channel. Vessels over 200 m. LOA have to wait outside the Bar to await berth. In special conditions the Harbour Master may grant permission for those vessels to anchor at that area, to load or discharge, using one floating elevator and one barge.

The area *ALFA* is limited by the following points:

A1 – Lat.: 32° 10′ 00″ S.
– Long.: 52° 05′ 27″ W.
A2 – Lat.: 32° 10′ 00″ S.
– Long.: 52° 05′ 03″ W.
A3 – Lat.: 32° 08′ 00″ S.
– Long.: 52° 05′ 48″ W.
A4 – Lat.: 32° 08′ 00″ S.
– Long.: 52° 06′ 06″ W.
A5 – Lat.: 32° 08′ 24″ S.
– Long.: 52° 06′ 06″ W.

Area Charlie: Available for the anchoring of a maximum of two vessels of up to 180 m. LOA, to load or discharge, using one non-self-propelled floating elevator, or two floating elevators of which one has to be necessarily self-propelled.

The area *CHARLIE* is limited by the following points:

C1 – Lat.: 32° 05′ 10″ S.
– Long.: 52° 05′ 30″ W.
C2 – Lat.: 32° 05′ 00″ S.
– Long.: 52° 05′ 48″ W.
C3 – Lat.: 32° 05′ 18″ S.
– Long.: 52° 05′ 33″ W.
C4 – Lat.: 32° 05′ 18″ S.
– Long.: 52° 05′ 50″ W.
C5 – Lat.: 32° 06′ 00″ S.
– Long.: 52° 06′ 06″ W.
C6 – Lat.: 32° 06′ 00″ S.
– Long.: 52° 05′ 45″ W.

Area Echo: Available for the anchoring of a maximum of 5 (five) liner vessels of up to 170 m. LOA.

The area *ECHO* is limited by the following points:

E1 – Lat.: 32° 04′ 37″ S.
– Long.: 52° 05′ 25″ W.
E2 – Lat.: 32° 04′ 51″ S.
– Long.: 52° 05′ 03″ W.
E3 – Lat.: 32° 04′ 15″ S.
– Long.: 52° 04′ 07″ W.
E4 – Lat.: 32° 04′ 00″ S.
– Long.: 52° 04′ 37″ W.

Area Golf: Available for the anchoring of vessels proceeding or coming from the Ports of Porto Alegre and Pelotas, inland vessels and vessels loading or discharging, using one non-self-propelled floating elevator, or two floating elevators of which one has to be necessarily self-propelled.

The area *GOLF* is limited by the following points:

G1 – Lat.: 32° 03′ 27″ S.
– Long.: 52° 02′ 30″ W.
G2 – Lat.: 32° 03′ 36″ S.
– Long.: 52° 03′ 13″ W.
G3 – Lat.: 32° 02′ 21″ S.
– Long.: 52° 02′ 24″ W.
G4 – Lat.: 32° 01′ 51″ S.
– Long.: 52° 02′ 24″ W.
G5 – Lat.: 32° 00′ 48″ S.
– Long.: 52° 02′ 40″ W.
G6 – Lat.: 32° 00′ 48″ S.
– Long.: 52° 03′ 06″ W.
G7 – Lat.: 32° 02′ 32″ S.
– Long.: 52° 02′ 52″ W.
G8 – Lat.: 32° 02′ 45″ S.
– Long.: 52° 02′ 57″ W.

PROHIBITED ANCHORAGE AREAS:

There are three areas where vessels cannot anchor, two located in front of the Terminals of the Super Port and used for manoeuvring of the vessels berthing or unberthing on those Terminals, and the third located on the fork of the main channel of approach to the New Port and channel of approach to Pelotas and Porto Alegre.

Area Bravo: Limited by the following points:

B1 – Lat.: 32° 08′ 00″ S.
– Long.: 52° 06′ 06″ W.
B2 – Lat.: 32° 08′ 00″ S.
– Long.: 52° 05′ 45″ W.
B3 – Lat.: 32° 06′ 00″ S.
– Long.: 52° 06′ 06″ W.
B4 – Lat.: 32° 06′ 00″ S.
– Long.: 52° 05′ 45″ W.

Area Delta: Limited by the following points:

D1 – Lat.: 32° 05′ 00″ S.
– Long.: 52° 05′ 46″ W.
D2 – Lat.: 32° 05′ 10″ S.
